STATISTICAL TABLES

2016 BUDGET REVIEW

Statistical tables

- 1 Main budget: revenue, expenditure, budget balance and financing, 2009/10 to 2018/19
- 2 Main budget: estimates of national revenue summary of revenue, 1998/99 to 2018/19
- 3 Main budget: estimates of national revenue detailed classification of revenue, 2012/13 to 2016/17
- 4 Main budget: expenditure defrayed from the National Revenue Fund by vote, 2012/13 to 2018/19
- 5 Consolidated national, provincial and social security funds expenditure: economic classification, 2012/13 to 2018/19
- 6 Consolidated national, provincial and social security funds expenditure: functional classification, 2012/13 to 2018/19
- 7 Consolidated government revenue and expenditure: economic classification, 2012/13 to 2018/19
- 8 Consolidated government expenditure: functional classification, 2012/13 to 2018/19
- 9 Consolidated government revenue, expenditure and financing, 2012/13 to 2018/19
- 10 Total debt of government, 1991/92 to 2018/19
- 11 Net loan debt, provisions and contingent liabilities, 2005/06 to 2018/19

Explanatory notes

The statistical tables present details of the main budget, consolidated national and provincial expenditure, consolidated government expenditure, the borrowing requirement and financing of government debt, total government debt, and provisions and contingent liabilities.

The tables are categorised according to government levels, from the main budget to the consolidated government account. The main budget consists of National Revenue Fund receipts, expenditure either voted by Parliament or allocated by statutory appropriation, and the financing of the deficit. It is the national budget, including transfers to other spheres of government.

Consolidated national, provincial and social security funds expenditure consists of the main (national) budget, and the provincial and the social security funds' budgets or expenditure. These budgets are aggregated and transfers between the three spheres of government are netted out to arrive at a total consolidated expenditure figure. The consolidated government revenue, expenditure and financing budget includes national, provincial and social security funds, the Reconstruction and Development Programme (RDP) Fund and national public entities. This is referred to as the consolidated budget.

While government revenues are concentrated at national level, a large proportion of expenditure has shifted to the provinces since 1994. Equitable share transfers to the nine provinces are included as a government statutory commitment on the National Treasury vote, while the local government equitable share is appropriated on the vote of the Department of Cooperative Governance and Traditional Affairs. The consolidated government account consists of all the activities of national and provincial government, and includes most of the listed public entities. The consolidation also includes several national government business enterprises.

More than 70 per cent of total national expenditure on the 2016/17 main budget consists of transfer payments to other levels of general government, which means that economic and functional classifications of national budget expenditure are not comprehensive. For analysis purposes, it would be preferable to present economic and functional classifications of general government expenditure, but this would require information on expenditure at all levels of general government and on its financing through revenue, balances brought forward and transfer payments (mainly from the national budget). This information is not readily available for local government. Historical data on general government finances is, however, published by the Reserve Bank in its *Quarterly Bulletin* and by Statistics South Africa.

Change in recording of extraordinary receipts and payments in the budget tables

Since 2014, the consolidated government accounts have been presented in a more transparent format in line with the International Monetary Fund's *Government Finance Statistics* manual (2014). This format provides details of operating activities, capital and infrastructure investment, as well as transactions in financial assets and liabilities. It includes all government transactions in the calculation of the budget balance. Previously, extraordinary receipts and payments were added to the budget deficit to calculate government's net borrowing requirement. In the new format, there is no longer a difference between the budget balance and the net borrowing requirement. These transactions are now referred to as National Revenue Fund receipts and payments.

Treatment of foreign grants to the RDP Fund

Before 1999/00, foreign grants were paid to the National Revenue Fund and expenditure was included in departmental appropriations. Since 1999/00, no foreign grants for RDP-related purposes have been included in national appropriations. All international technical assistance and other RDP-related grants are paid to the RDP Fund account, which is separated from government accounts. Departments incur expenditure on RDP-related projects through direct requisitions from this account. However, disbursements of foreign grants and technical assistance are included in the consolidated national and provincial expenditure estimates in Tables 5 and 6, and in the consolidated government expenditure in Table 7.

Adjustments due to transactions in government debt

As part of the state's active management of its debt portfolio, government bonds are repurchased or switched into new bonds. In the process, government may make a capital profit, which is a book entry change in the bond discount. As such, capital profit does not represent actual cash flow and is regarded as a "book profit", lowering the outstanding debt.

A premium may also be accrued, or payable, in managing the debt portfolio or when entering into new loans. Under the new format, premiums paid and/or received are included as National Revenue Fund receipts and payments, and no longer categorised as extraordinary receipts and payments.

Sources of information

The information in Tables 1 to 11 on national and provincial government and public entity finances is obtained from the following sources:

- Reports of the Auditor-General on the Appropriation and Miscellaneous Accounts
- Printed estimates of revenue and expenditure for the national and provincial budgets
- The Reserve Bank
- The South African Revenue Service (SARS)
- Monthly press releases of the National Treasury, published in terms of section 32 of the Public Finance Management Act (1999).

Main budget: revenue, expenditure, budget balance and financing (Table 1)

Table 1 summarises the main budget balances since 2009/10 and medium-term estimates to 2018/19. In line with the economic reporting format introduced in 2004/05, the revenue classification has been amended to show departmental sales of capital assets separately.

Repayments of loans and advances, which were previously shown as negative expenditure, have been reclassified as revenue. Given that revenue increased and expenditure decreased by the same amount, the national budget deficit is unaffected.

Appropriations by vote are divided into current payments, transfers and subsidies, payments for capital assets and payments for financial assets. Both current and capital transfers are included in transfers and subsidies, in line with the economic reporting format's requirements.

The deficit figures presented in this table differ from those presented in budgets before 1995/96 because a number of items that were previously regarded as "below-the-line" expenditure have been included in total expenditure. In addition, revaluations of foreign loan obligations are now excluded from expenditure, in keeping with international practice.

Under the "financing" item, domestic short-term loans include net transactions in Treasury bills and borrowing from the Corporation for Public Deposits. Long-term loans include all transactions in government bonds and foreign loans (new loan issues, repayments on maturity, buy-backs, switches and reverse purchase transactions).

Main budget: estimates of national revenue (Tables 2 and 3)

Table 2 presents a summary of revenue and the details are set out in Table 3. Main budget revenue collections are recorded on an adjusted cash basis as the revenue is recorded in the SARS ledgers. Tax revenue is classified according to standard international categories and departmental receipts according to the economic reporting format's requirements.

In Table 3, a large amount of data cannot be reclassified to align with the economic reporting format because departments capture these transactions in their ledgers as miscellaneous receipts.

Main budget: expenditure defrayed from the National Revenue Fund by vote (Table 4)

Table 4 contains estimates of expenditure on national budget votes for the period 2012/13 to 2018/19. In 2014/15, amounts included in the budget estimate, the adjusted appropriation and the revised estimate on each vote are shown. Following the 2014 elections, new departments were created, some functions were shifted between departments and some existing departments were renamed. Historical data has been adjusted to account for function shifts between departments. As a result, the figures presented for some departments may differ from their financial statements. Total expenditure, however, is not influenced by these changes.

Consolidated national, provincial and social security funds expenditure (Tables 5 and 6)

Tables 5 and 6 show the economic and functional classification of payments for consolidated national and provincial government and social security funds, including the Unemployment Insurance Fund, the Road Accident Fund and the Compensation Funds. Provincial expenditure estimates are preliminary because their budgets are tabled after the national budget. These estimates are based on preliminary information provided by the provinces and are subject to change before being tabled in provincial legislatures.

The functional classification

The functional classification in this annexure is aligned with the classification of government functions set out in the *Government Finance Statistics* manual. Since 2009, the functions have been classified at a more detailed level, which means that departmental programmes that were allocated to one function can be disaggregated to more due to the availability of detailed information. The historical data published in these tables has been reclassified accordingly. Chapter 5 of the *Budget Review*, which sets out the medium-term expenditure framework, outlines the budget allocations across these function groups.

To support this approach, data at programme and entity level is aggregated into spending categories, which provides for a higher level of aggregation than in the functional classification. For example, functional classification tables include local development and social infrastructure as distinct functions. The fiscal statistics are an outcome of the budget process and can only be used as a guide to categorise expenditure for budgeting purposes. They are not used as a framework for presenting budget allocations.

Some of the most important differences between the key spending categories presented in Chapter 5 and the more detailed functional classification presented in the statistical tables are as follows:

- *Basic education and post-school education and training:* These two categories are grouped together as part of the education function in the statistical tables. This includes expenditure related to maintaining and supporting the South African school system, and assisting the higher and vocational education sector.
- *Defence, public order and safety:* This includes expenditure related to military health, which is classified as part of the health function in the statistical tables.
- *Economic affairs:* This function group includes spending on environmental protection, which is a separate category in the statistical tables.
- *Human settlements and municipal infrastructure:* In the statistical tables, expenditure related to this function group is mainly included as part of the housing and community amenities function.
- Agriculture, rural development and land reform: Agriculture forms part of the economic affairs function in the statistical tables, while rural development is included under housing and community amenities.
- *General public services:* In the key spending categories, transfers made to international organisations are classified within the category of the paying department. In the statistical tables, they are classified under general public services.

Consolidated government revenue and expenditure (Tables 7 and 8)

Tables 7 and 8 show the economic and functional classification of payments for the consolidated government budget. This consists of the consolidated national, provincial and social security figures presented in Tables 5 and 6, combined with general government entities, as well as some government business enterprises.

The government budget consolidation includes all entities controlled and mainly financed by government revenue, where such revenue is defined as either taxes, levies and administrative or service fees prescribed by government, or direct budgetary support in the form of transfer payments. This consolidation also includes several government business enterprises, based on the principle that they either sell most of their goods and services to government institutions or departments at regulated prices, and are therefore not businesses in the true sense of the word, or they are directly involved in infrastructure financing and development.

Accordingly, state-owned entities are broadly identified as one of the following:

- Enterprises that sell mainly to government departments or institutions, have no clear competitors and whose prices are therefore not clearly market related.
- Science councils that conduct research or fulfil a regulatory or advisory function, with governmentdetermined regulatory or administration fees.
- Government-regulated businesses that are primarily financed by a dedicated tax, administration fee or levy, (the level of which is dictated by government) or that are directly involved in the maintenance or extension of critical infrastructure.

To present consolidated accounts, all units must adopt the same accounting standards and policies. The format of the accounts, terminology used, classification, transaction coverage and accounting base (cash or accrual) must be the same. In this respect, the consolidated government budget is prepared on an adjusted cash basis of accounting. This is not strictly comparable to the financial information published in the consolidated financial statements, which has two components – a consolidation of departments using the modified cash basis of accounting and a separate consolidation of public entities that apply the accrual basis of accounting.

All transactions that occur between units being consolidated are eliminated. A transaction of one unit is matched with the same transaction as recorded for the second unit and both transactions are eliminated from the consolidation. For example, if a public entity sells a service to a government department and data for the two units is being consolidated, neither the sale nor the purchase of the service is reported. In this way, only transactions between government and non-government entities are recorded, without inflating total government revenue as a result of internal transactions.

Not all intra-entity transactions are eliminated, however, because in the accounting systems of government and many of its agencies, not all such transactions are identifiable. Only those that can be identified have been eliminated. These broadly include:

- Transactions involving transfers from one government unit to another, including transfers made by national departments to public entities and transfers between public entities (such as Water Trading Entity transfers to water boards).
- Purchases of goods and services from other government units included in the consolidation (such as transactions between the Trans-Caledon Tunnel Authority, water boards and the Water Trading Entity).

This process is not yet comprehensive. As data collection and recording procedures for transactions improve, additional intra-entity transactions will be identified and removed from the consolidated government budget.

A total of 163 national and provincial departments and 206 entities are included in the 2016 consolidated government budget. The National Treasury is committed to presenting a full consolidation of the whole of general government over time. This means that the consolidated account presented in this budget must still be extended to include local government accounts. A process has been initiated and initial data sets for local government have been published in the *Local Government Budgets and Expenditure Review*. However, considerable work remains to align this data with the consolidated account, after which it will be included in the consolidation.

A discussion on the consolidation procedures, as well as a detailed list of all entities included in the consolidation, is available in Annexure W2 of the *Budget Review* on the National Treasury website: www.treasury.gov.za.

Consolidated government revenue, expenditure and financing (Table 9)

Table 9 presents the new format of the government account, which distinguishes between government's operating activities and its plans to invest in capital and infrastructure.

The balance on the operating account shows the outcome of government's operating activities, which is a measure of the cost of ongoing operations. It is calculated as the difference between current revenue and current expenditure, and the resulting balance shows how much government must borrow to run its operations. The current balance demonstrates the sustainability of government operations.

Capital investment activities are presented in the capital account. Government's capital financing requirement is the outcome of this account, which is calculated as the difference between capital revenue and capital expenditure. This account will mainly be in deficit due to continuous investment in infrastructure and substantial capital outlays.

Total debt of government (Table 10)

Table 10 shows the major components of government debt. Net total loan debt consists of total domestic and foreign debt less the cash balances of the National Revenue Fund. Realised and unrealised profits and losses on the Gold and Foreign Exchange Contingency Reserve account are also disclosed. The projections for 2015/16 to 2018/19 are based on national budget data.

Net loan debt, provisions and contingent liabilities (Table 11)

Provisions are liabilities with uncertain payment dates or amounts. The provisions for multilateral institutions are the unpaid portion of government's subscriptions to these institutions, which are payable on request. Contingent liabilities are obligations, such as guarantees, that only result in expenditure when a specific event occurs. Amounts drawn in respect of guarantees and interest on these amounts, if guaranteed, are disclosed. The National Treasury published detailed information on provisions and contingent liabilities in the annual consolidated financial statements of national departments.

Excise duties that are collected by Botswana, Lesotho, Namibia and Swaziland.
 Revenue received by SARS in respect of taxation that could not be allocated to specific revenue types.
 Payments in terms of SACU agreements.

Main budget: estimates of national revenue

6) Payment to SACU partners in respect of a previous error in calculation of the 1969 agreement.

7) New item introduced on the standard chart of accounts from 2008/09.

8) Mineral royalties imposed on the transfer of mineral resources in terms of the Mineral and Petroleum Resources Royalty Act (2008), which came into operation on 1 May 2009.

 Mining leases and ownership has been reclassified as non-tax revenue. The historical years from 1998/99 have been adjusted for comparative purposes 10) Royalties, prospecting fees and surface rental collected by the Department of Minerals and Energy.

1) These figures were estimated by the National Treasury and may differ from data published by Statistics South Africa and the Reserve Bank. The numbers in this table are not strictly comparable to those published in previous years due to the reclassification of expenditure items for previous years. Data for the previous years has been adjusted accordingly.

Includes equitable share and conditional grants to local government.

 These figures were estimated by the National Treasury and may differ from data published by Statistics South Africa. The numbers in this table are not strictly comparable to those published in previous years due to the allocation of some of the unallocable expenditure for previous years. Data for the previous years has been adjusted accordingly.

Table 10 Total debt of government *1*)

5) Valued at appropriate foreign exchange rates up to 31 March 2015 as at the end of each period. Forward estimates are based on exchange rates prevailing at 31 January 2016, projected to depreciate in line with inflation differentials

6) The balance on the gold and foreign exchange contingency reserve account on 31 March 2016 represents an estimated balance on the account No provision for any profits or losses on this account has been made for subsequent years. A negative balance indicates a profit and a positive balance a loss

1) Debt of the central government, excluding extra-budgetary institutions and social security funds

2) As projected at the end of January 2016

3) Includes non-marketable Treasury bills, retail bonds, Ioan levies, former regional authorities and Namibian Ioans

4) Bank balances of the National Revenue Fund (balances of government's accounts with the Reserve Bank and commercial banks)

Bank balances in foreign currencies are revaluated using forward estimates of exchange rates

Table 10 Total debt of government 1)

5) Valued at appropriate foreign exchange rates up to 31 March 2015 as at the end of each period. Forward estimates are based on exchange rates prevailing at 31 January 2016, projected to depreciate in line with inflation differentials

6) The balance on the gold and foreign exchange contingency reserve account on 31 March 2016 represents an estimated balance on the account No provision for any profits or losses on this account has been made for subsequent years. A negative balance indicates a profit and a positive balance a loss
