# FOREWORD

We publish the *2012 Tax Statistics* document four months earlier than the previous four publications. This has been made possible by the SARS Modernisation Programme, which has enabled SARS to process taxpayer information faster.

The Tax Statistics Bulletin contains comprehensive data on tax revenue to aid policy makers and also inform the general public of policy choices that may be available to government in pursuit of financial stability and sustainability of our country. Editions of this document have been extensively referenced and used by the media, businesses, academia, various government and non-governmental organisations.

Publication of comprehensive statistics on tax contributes to fiscal transparency which is key to good governance. Information contained herein can also assist in the development of evidence-based and well-informed policy formulation. Fiscal transparency facilitates a more effective response to changing economic conditions thereby helping to modify the severity of economic and financial crises. The resilience of the South African economy displayed during the recent global economic crises and the robustness of the South African tax administration during this difficult period is evident from the tax statistics presented in the publication.

This publication has evolved significantly over the past and we have introduced many innovations based on extensive feedback. We would therefore like to thank all contributors to this publication as well as encourage users of this document to continue sending us feedback on ways to improve its usefulness.

# A BOUT THIS PUBLICATION

We have great pleasure in releasing the *2012 Tax Statistics* publication which builds and expands on the previous four editions (2008, 2009, 2010 and 2011). This 5<sup>th</sup> edition provides an overview of tax revenue collections and tax return information for the period 2007/08 to 2011/12 and the 2008 to 2011 tax years respectively.

The *Tax Statistics* publications provide tax revenue data at a more disaggregated level than statistics contained in other publications such as the National Treasury's Budget Reviews and SARS's Annual Reports. The objective of this publication is to make available, comprehensive tax revenue data that may serve to provide context to other published economic and demographic data. The feedback received indicates that this publication also provides valuable insights into socio-economic policies.

The publication is set out as follows:

- *Chapter 1: Revenue collections* provides a summary of aggregate tax revenue collection trends for the period 2007/08 to 2011/12.
- *Chapter 2: Personal Income Tax (PIT)* gives an overview of assessed personal income tax revenues of registered individual taxpayers. It also provides information on taxable income by income group, age, gender and source of income, as well as on fringe benefits, allowances and deductions.
- *Chapter 3: Company Income Tax (CIT)* gives an overview of corporate income tax revenues. Information on taxable income by income group, sector and type of business entity is provided.
- *Chapter 4: Value Added Tax (VAT)* gives an overview of VAT. It gives a breakdown of VAT receipts and refunds by sector and payment category as well as an overview of data on input and output VAT as derived from VAT returns submitted by vendors.
- *Chapter 5: Import VAT and Customs Duties* provides information on the customs value of imported goods by product type in terms of the Harmonised System<sup>1</sup>, to chapter level, as well as Import VAT, customs/import duty and *ad valorem* excise duty revenues on imported goods.
- The *Glossary* contains definitions of terms and abbreviations contained in the *2012 Tax Statistics*.

<sup>1</sup> The Harmonised System Nomenclature, also known as the International Convention on the Harmonised Commodity Description and Coding System (or Harmonised System), is the system according to which all internationally traded products, components or commodities are classified. This international system is currently used by over 200 countries and customs or economic unions, which account for about 98% of world trade.

# 2012 Tax Statistics

## WHAT'S NEW

In response to widespread consultation with stakeholders and feedback from individual users, additions and enhancements have been made to this publication. The data series and available information have been extended and reformatted as follows:

- An analysis of payment channels of SARS collections is provided in Chapter 1.
- Revenue collection tables on Mineral and Petroleum Resource Royalties (MPRR) per commodity per fiscal year have been included for the first time.
- The methodology to determine the number of liable taxpayers has been amended which has significantly changed the CIT assessed percentage in Chapter 3 and slightly altered the PIT assessed percentage in Chapter 2.
- A table by income grouping, which is effectively a table by taxable income to which deductions are added back, has been included in Chapter 2.
- A table that shows the effective CIT rate for various taxable income groups, has been included in Chapter 3.

## METHODOLOGY

- All statistics are based on the income, expenses, deductions and items as reported by taxpayers and traders in tax returns and on assessments documents.
- Data have been evaluated for reasonability and any identified outliers have been excluded from these statistics.
- Nominal figures are used throughout the publication.
- Disaggregated income tax data is based on assessed PIT and CIT returns as extracted from SARS's systems at the end of July 2012. Given the time delay in the submission of tax returns by some taxpayers and the time taken to assess such returns, statistics for later years tend to be less complete than that of earlier years.
- Information on the sector (industry) classification is based on the classification as declared by taxpayers and is based on their main source of income. Trade classification data is based on the classification as declared by the trader, based on the Harmonised System.
- Figures have not been rounded so discrepancies may occur between the numbers of the component items and the totals in the tables.
- A hyphen ("") in the tables indicates a zero value whilst a zero ("0") indicates that there is an amount that has been rounded-off to zero.
- The tax year for individuals starts on 1 March and ends at the end of February the following year. The tax year for companies coincides with the financial year of the company for financial reporting purposes.
- A distinction is made between a tax year and a fiscal year. The former is shown as a single year (e.g. 2010) whilst the latter with a forward slash (e.g. 2011/12).
- The methodology used for determining the number of taxpayers liable for assessment has been improved since the previous edition. This means that the percentage assessed proportions are not comparable with previous editions. There has been a greater impact on companies than on individuals due to the number of companies that were regarded as liable per the previous methodology that, under the new methodology, are not liable.
- Tables numbered with an "A" (e.g. *Table A1.1.1*) are included at the end of the relevant Chapter.

## About this publication

An electronic version of the full publication (as well as the Excel tables used in this publication) is available for download on both the websites of the South African Revenue Service (SARS) ([www.sars.gov.za/taxstatistics](http://www.sars.gov.za/taxstatistics)) and that of National Treasury ([www.treasury.gov.za/publications/tax%20statistics](http://www.treasury.gov.za/publications/tax%20statistics)).

We welcome your comments and suggestions to enhance the publication's utility in policy evaluation and developing new insights in South Africa's social and economic context. These can be provided via e-mail to [taxstatistics@sars.gov.za](mailto:taxstatistics@sars.gov.za).

## 2012 Tax Statistics

# 1 REVENUE COLLECTIONS

## KEY HIGHLIGHTS

For the 2011/12 fiscal year:

- Revenue collection statistics provide compelling evidence of the extent to which the South African economy recovered from the Great Recession which first manifested in 2008. The R742.6 billion tax revenue collected was R3.9 billion higher than the revised estimate set in the February 2012 budget and R68.5 billion (10.2%) higher than that collected in 2010/11;
- The tax-to-GDP ratio increased marginally from 24.5% in 2010/11 to 24.6% in 2011/12, still well below the peaks of 27.6% and 27.1% that were reached pre-crisis;
- The cost of revenue collection (an important indicator of the efficiency of a revenue administration) has remained almost constant, increasing marginally from 1.10% in 2010/11 to 1.11% in 2011/12;
- The individual tax register continues to grow strongly with the number of individuals registered for income tax increasing significantly from 10.3 million in 2010/11 to 13.7 million in 2011/12 (growth of 32.5%); this significant growth has been due primarily to the new policy which requires that all employers register all their employees regardless of their income;
- As at 31 March 2012, there were just over 2 million companies and 652 349 VAT vendors registered; and
- Capital gains tax of R6.8 billion was raised in 2011/12, down from the R9.1 billion raised in 2010/11. This decline is directly attributable to the post-recession slowing in the disposal of assets and decline in asset values.

## INTRODUCTION

In terms of the South African Revenue Service Act (No. 34 of 1997), SARS is mandated to:

- collect all revenues due;
- ensure maximum compliance with tax and customs legislation; and
- provide a customs service that will maximise revenue collection, protect the South African borders and facilitate trade.

In comparison with its international counterparts and despite general tax relief to both individuals and companies, South Africa withstood the Great Recession relatively well, maintaining sustainable budget deficits aided by resilient tax collections.

# 2012 Tax Statistics

This is mainly attributable to the Modernisation programme of SARS, responsive tax policy, and vigilant compliance-enhancing measures. Notwithstanding, the tax-to-GDP ratio remained well below pre-crisis levels with CIT being responsible for much of the contraction and return to the long-term ratio. Given the current uncertain economic climate, it has never been more important that SARS provides sustainable tax revenue to enable Treasury to maintain a healthy fiscal framework.

This chapter gives an overview of:

- South Africa's tax system;
- Tax buoyancy and elasticity;
- Tax register;
- Tax relief and rates;
- Revenue administration;
- Revenue performance;
- Tax revenue by main category; and
- Environmental taxes.

## SOUTH AFRICA'S TAX SYSTEM

South Africa has a residence-based system, which means residents are, subject to certain exclusions, taxed on their worldwide income, irrespective of where their income was earned. Non-residents are, however, taxed only on their income from a South African source. Foreign taxes are credited against South African tax payable on foreign income and the determination of taxable income of taxpayers may be subject to the provisions of tax treaties that South Africa has in place with other countries.

## TAX REGISTER

One of the strategic objectives of SARS is to grow the tax register and in doing so contribute towards reducing the tax gap. The level of growth in the register is influenced by socio-economic conditions, tax policy, legislative amendments and the overall compliance climate. Tax base broadening activities ensure that those entities not registered for tax, but are liable for registration, are registered. SARS has pursued increased registrations in a variety of ways including tax education, as well as outreach and enforcement initiatives.

The tax register (*Table 1.1*) comprises individuals, companies, employers and VAT vendors as well as importers and exporters.

- The number of individuals registered for income tax has increased significantly from 10.3 million in 2010/11 to 13.7 million in 2011/12, representing 32.5% year-on-year growth (a slowdown from the previous year's 74.7% year-on-year growth). This was primarily due to the new employer filing process that was introduced during 2010 where SARS required employers to register all individuals issued with an IRP5 regardless of income level;
- The size of the register of active CIT entities has reduced to 2.0 million in 2011/12 from 2.1 million in 2010/11 (a growth of -2.1%), while the overall register for companies grew between 2010/11 and 2011/12. A higher number of CIT entities during 2011/12 changed to inactive than the number of new registrants taken on board; and
- Year-on-year growth in the register of other entities has been moderate.

**Table 1.1: Tax register, 2007/08 – 2011/12**

Number	Individuals <sup>1</sup>	Companies (CIT) <sup>1</sup>	Trusts <sup>1</sup>	Employers <sup>1</sup>	VAT Vendors <sup>1</sup>	Importers	Exporters
2007/08	5 204 805	1 584 002	384 747	379 675	745 487	207 906	192 791
2008/09	5 540 646	1 834 009	392 260	393 974	737 885	228 350	194 286
2009/10	5 920 612	1 878 856	331 954	395 575	685 523	229 442	209 623
2010/11	10 346 175	2 078 182	326 649	386 428	664 267	238 779	217 359
2011/12	13 703 717	2 034 719	301 365	384 883	652 349	247 595	224 216
<b>Percentage year-on-year growth</b>							
2007/08	9.3%	30.0%	2.8%	8.8%	10.1%	5.3%	3.8%
2008/09	6.5%	15.8%	2.0%	3.8%	-1.0%	9.8%	0.8%
2009/10	6.9%	2.4%	-15.4%	0.4%	-7.1%	0.5%	7.9%
2010/11	74.7%	10.6%	-1.6%	-2.3%	-3.1%	4.1%	3.7%
2011/12	32.5%	-2.1%	-7.7%	-0.4%	-1.8%	3.7%	3.2%

1. Excludes cases where status is in suspense, estate and address unknown. The tax year for individuals starts on 1 March and ends at the end of February the following year. The tax year for companies is normally the financial year of the company for financial reporting purposes. The number of individuals registered for income tax has increased since 2010/11 due to the new employer filing process.

## TAX RELIEF AND RATES

### Tax relief

In response to the severe inequalities that exist in South Africa most of the tax relief was directed to lower income brackets. Buoyant revenue collections over the last decade, with the exception of the post-financial crisis period, allowed Government to grant substantial relief to taxpayers with R44.4 billion accruing directly to individuals during the 2007/08 to 2011/12 period. In line with international trends, indirect taxes, which by and large spread tax obligation wider and which are also generally easier to collect, were increased by R27.6 billion to contain the outflow from the fiscus to only R32 billion.

Table 1.2 sets out the tax relief over this period with negative values indicating relief to the taxpayer and positive values showing an increase in the tax obligation.

**Table 1.2: Summary effects of tax proposals, 2007/08 – 2011/12**

R million	Direct taxes				Indirect taxes				Total relief
	PIT	CIT <sup>1</sup>	Other	Total	Excise	Fuel levy	Other <sup>2</sup>	Total	
2007/08	-8 870	-2 785	-3 000	-14 655	1 395	950	-90	2 255	-12 400
2008/09	-7 700	-6 900	–	-14 600	1 350	1 250	1 500	4 100	-10 500
2009/10	-13 550	-1 000	–	-14 550	2 100	4 890	2 985	9 975	-4 575
2010/11	-5 400	-1 350	–	-6 750	2 250	3 600	450	6 300	-450
2011/12	-8 850	500	-750	-9 100	1 935	1 900	1 150	4 985	-4 115

1. Relief for business taxes in 2008/09 and 2009/10 of R2 billion for industrial policy was only implemented in October 2010.

2. The electricity levy was postponed and introduced in July 2009, as a result, the R2 billion was rolled over from 2008/09 to 2009/10.

More detail on the Budget proposals for a particular fiscal year is set out in the various Budget Review documents, which can be found at <http://www.sars.gov.za/home.asp?pid=292> or <http://www.treasury.gov.za/documents/national%20budget/default.aspx>.

## 2012 Tax Statistics

## Tax rates

During the period April 2007 to March 2012, the maximum marginal rates have remained mostly unchanged across all categories (*Table 1.3*). There was a 1% reduction in the CIT headline rate from 1 April 2008 while the Secondary tax on companies (STC) rate was reduced from 12.5% to 10.0% from 1 October 2007. Growth in tax revenue has been achieved by growth in taxable economic activities as well as an increase in compliance as opposed to increasing tax rates.

**Table 1.3: Maximum marginal tax rates, 2007/08 – 2011/12**

Percentage	PIT <sup>1</sup>	CIT	STC	VAT	Transfer duty	
					Natural person	Non-natural person
01 Apr 2007 – 30 Sep 2007	40%	29%	12.5%	14%	8%	8%
01 Oct 2007 – 31 Mar 2008	40%	29%	<b>10.0%</b>	14%	8%	8%
01 Apr 2008 – 31 Mar 2012	40%	<b>28%</b>	10.0%	14%	8%	8%

*1. An individual's tax year starts on 1 March and ends at the end of February the following year.*

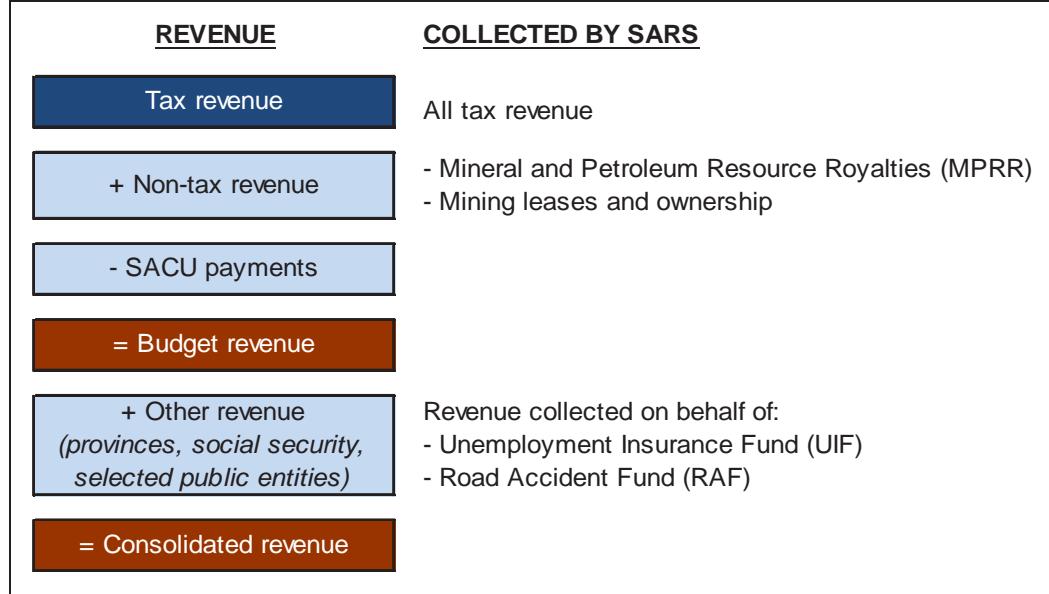

## REVENUE ADMINISTRATION

## Budget and consolidated revenue

Budget revenue comprises all revenue streams to the fiscus – both tax revenue and non-tax revenue – but excludes allocations of customs duties to Botswana, Lesotho, Namibia and Swaziland (BLNS) in terms of the South African Customs Union (SACU) agreement. Consolidated revenue goes one step further by including revenue collected by the provinces and selected public entities, as well as social security (*Figure 1.1*).

In addition to tax revenue, SARS also collects MPRR (included in non-tax revenue) as well as revenue on behalf of the Unemployment Insurance Fund (UIF) and Road Accident Fund (RAF). The portion collected by SARS is reflected in the Statement of Financial Performance published in the SARS Annual Report. About 89% of consolidated revenue is accounted for by tax revenue which is collected by SARS.

## Figure 1.1 Illustration of budget revenue and consolidated revenue

*Table 1.4 shows the total budget revenue and consolidated revenue.*

**Table 1.4: Total budget revenue and consolidated revenue, 2007/08 – 2011/12**

R million	Tax revenue <sup>1</sup>	% of budget revenue	% of consolidated revenue	Non-tax revenue <sup>2</sup>	Total tax and non-tax revenue	Less: SACU payments	Budget revenue	Other <sup>3</sup>	Consolidated revenue <sup>4</sup>
2007/08	572 815	102.1%	91.4%	12 693	585 507	-24 713	560 795	65 911	626 705
2008/09	625 100	102.7%	91.5%	12 616	637 716	-28 921	608 796	74 673	683 469
2009/10	598 705	103.3%	90.2%	8 889	607 594	-27 915	579 679	84 058	663 737
2010/11	674 183	100.7%	89.0%	13 460	687 643	-17 906	669 738	87 775	757 513
2011/12	742 650	100.4%	88.9%	18 913	761 562	-21 760	739 802	95 659	835 461

1. Mining leases and ownership has been reclassified as non-tax revenue. Adjustments have been made to previous years for comparative purposes.

2. Includes interest, dividends, rent on land, sales of goods and services, fines and penalties, sales of capital assets, financial transactions in assets and liabilities and mineral royalties. 2011/12 is unaudited.

3. Includes provinces, social security and selected public entities.

4. The audited figure for Consolidated revenue for 2011/12 was not available at the time of publication. The figure used is the estimate as provided in the Budget Review 2012.

## Cost of revenue collections

The cost of revenue collection is an important indicator of the efficiency of the collecting authorities and is generally used as a benchmark internationally. This ratio is calculated by expressing the cost of internal operations as a percentage of total tax revenue. This ratio as stated does not include the non-tax revenue collected by SARS such as the MPRR, UIF and RAF and hence SARS is more efficient than what the ratio reflects. Over the past years, the cost to revenue collection ratio varied between a low of 0.98% to a high of 1.17% (*Table 1.5*). The increase of the rate to 1.17% in 2009/10 was due to the global economic crisis which depressed revenue collections with no downward adjustment in cost structures possible. For the 2011/12 fiscal year, this rate was 1.11%, remaining in line with the prior year cost of collection ratio and fairly close to the international 1% benchmark.

**Table 1.5: Cost of revenue collections, 2007/08 – 2011/12**

R million	Tax revenue collected	Operating cost <sup>1</sup>	Operating cost as a % of tax revenue
2007/08	572 815	5 615	0.98%
2008/09	625 100	6 511	1.04%
2009/10	598 705	7 032	1.17%
2010/11	674 183	7 426	1.10%
2011/12	742 650	8 227	1.11%

1. SARS's operating cost as disclosed in the statement of financial performance for the controlling entity in the SARS: Own Accounts Financial Statements.

## Payment channels of SARS collections

Through its Modernisation programme, SARS migrated the majority of taxpayers onto an electronic platform thereby reducing the risk associated with cash collections at branch offices. A further two alternative payment channels to payments at branch offices were made available to taxpayers, namely:

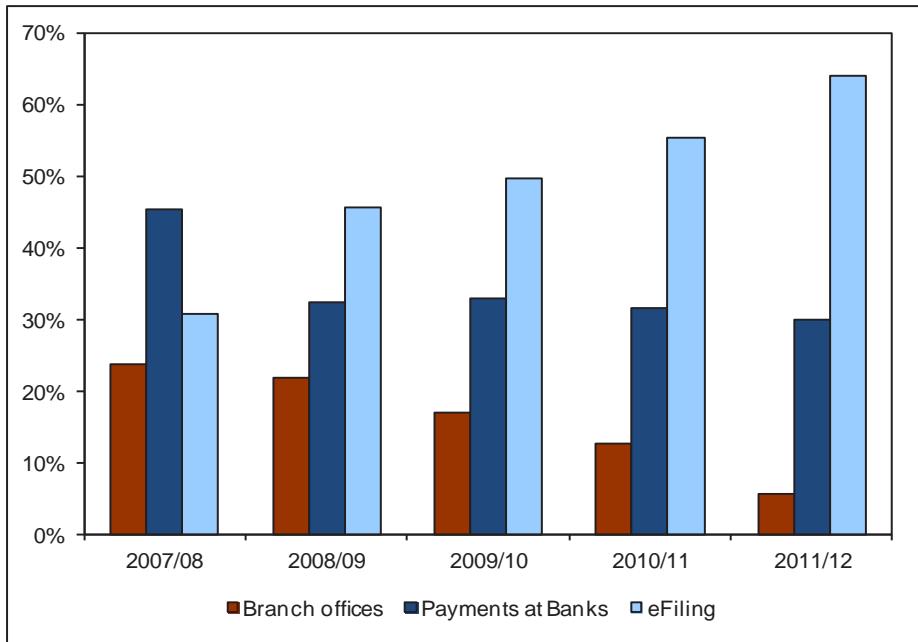

- an *eFiling* payment channel where the taxpayer has to register as an eFiling client to enable electronic payments via this channel; or

## 2012 Tax Statistics

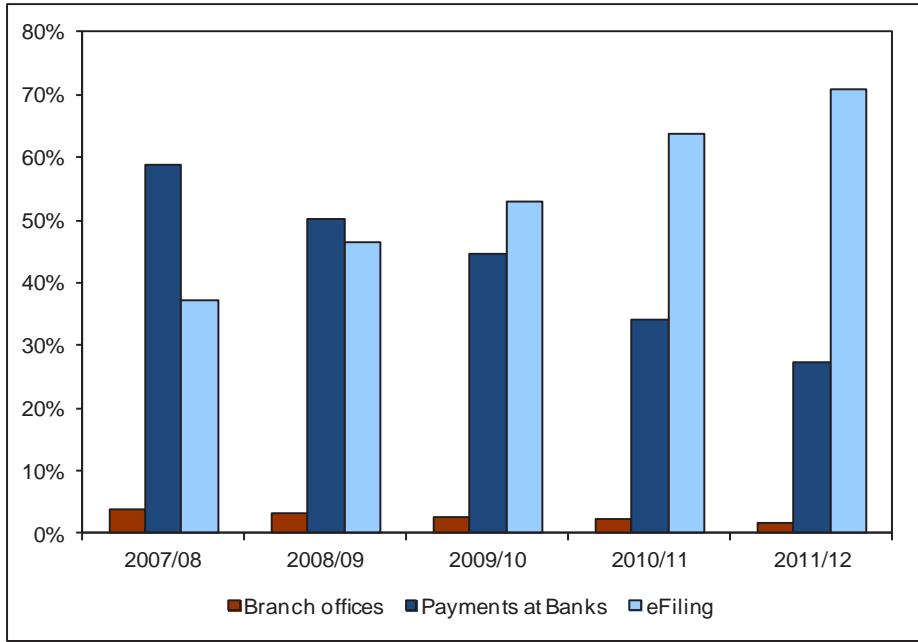

- a *payment at bank* channel where the taxpayer can make either an internet banking transfer or an over-the-counter deposit.

The eFiling channel accounted for 64.6% of the value of all payments in 2011/12, significantly increasing from the 30.8% of the value of payments that were processed in 2007/08 (*Figure 1.2* and *1.3*).

**Figure 1.2** Composition of main channels of payment (value), 2007/08 to 2011/12

**Figure 1.3** Composition of main channels of payment (count), 2007/08 to 2011/12

In terms of the Income Tax and Value-Added Tax Acts, the SARS Commissioner prescribed that SARS would no longer process any VAT or PAYE payments in excess of R100 000 at branch offices from the beginning of 2011/12.

This ruling further contributed to the continued growth in the use of electronic channels as the preferred method of payment and the rapid decline in payments made at branch offices. The value of payments at branch offices reduced from a high of 23.8% in 2007/08 to only 5.2% in 2011/12.

### Southern African Customs Union (SACU)

South Africa, along with the BLNS countries, is a signatory to the SACU agreement. The SACU countries apply a common external tariff and have similar customs and excise legislation, the same excise duties on imported and locally manufactured goods and the same import duties on imported goods. Excise and customs (import duty) revenues are pooled and distributed among the SACU members based on a revenue sharing formula.

The revenue sharing formula has the following three components:

- The *customs component* is calculated from the Cost-Insurance-Freight (CIF) value at border posts of goods imported from all other member states into the area of each as a percentage of the total CIF value of intra-SACU imports.
- The *excise component* is calculated from the value of each member state's GDP in a specific calendar year as a percentage of total SACU GDP in such a year.
- The *development component* is set at 15% of excise duties. The share accruing to each member country is calculated based on the country's GDP per capita compared to the average of SACU's GDP per capita. The development component ensures member countries whose GDP per capita falls below the SACU's per capita average are compensated by the other relatively better off member states.

South Africa administers this revenue pool and makes quarterly payments to the other SACU Member States (the BLNS countries). *Table 1.6* shows a summary of contributions to the SACU pool by the countries while *Table 1.7* shows how the revenues are allocated based on the revenue sharing formula and also provides the percentages of the GDP of each BLNS country which the allocated revenue represents.

**Table 1.6: Contributions to the SACU pool, 2007/08 – 2011/12**

R million	Botswana	Lesotho	Namibia	Swaziland	Total BLNS	South Africa <sup>1</sup>	Total contribution
2007/08	150	100	361	135	746	45 423	46 169
2008/09	312	110	446	64	932	43 173	44 105
2009/10	421	81	615	77	1 194	40 949	42 142
2010/11	433	185	601	55	1 274	49 917	51 192
2011/12	427	158	571	147	1 303	60 135	61 437
<b>Percentage year-on-year growth</b>							
2007/08	-13.8%	15.9%	-0.8%	-16.5%	-5.1%	12.0%	11.7%
2008/09	108.3%	9.9%	23.5%	-52.4%	25.0%	-5.0%	-4.5%
2009/10	35.0%	-26.5%	38.0%	19.1%	28.0%	-5.2%	-4.5%
2010/11	3.0%	127.7%	-2.3%	-28.3%	6.7%	21.9%	21.5%
2011/12	-1.5%	-14.5%	-5.0%	166.8%	2.2%	20.5%	20.0%

1. Contribution by South Africa includes collections on behalf of BLNS countries.

## 2012 Tax Statistics

**Table 1.7: Share received from the SACU pool, 2007/08 – 2011/12**

R million	Botswana	Lesotho	Namibia	Swaziland	Total BLNS	South Africa <sup>1</sup>	Total

2010/11	-27.8%	-46.6%	-30.4%	-49.3%	-35.9%	133.4%	21.5%
2011/12	35.2%	4.7%	19.4%	9.6%	21.7%	19.1%	20.0%

1. Includes amounts allocated to South Africa, the balance of the "surplus/deficit" for that fiscal year and allocations to the SACU Secretariat.

It should be noted that South Africa collects a significant amount of customs and excise revenues on behalf of BLNS countries and this is reflected under South Africa's contribution.

Customs duties are paid to South Africa on goods imported by BLNS countries from abroad and transported via South Africa in bond to the BLNS countries. Excise duty is collected at source and paid in South Africa on excisable goods exported from South Africa to BLNS countries.

The global financial crisis highlighted some of the limitations of the current revenue sharing arrangement and hence SACU initiated a review of the revenue sharing arrangement. This by and large was triggered by the Common Revenue Pool experiencing a deficit for the first time in 2010/11. The fiscal impact of this was felt across SACU economies, specifically by Member States where SACU revenues constitute the majority of national income.

## Mineral and petroleum resource royalties

The Mineral and Petroleum Resources Royalty Act (MPRRA) gives effect to section 3(2)(b) of the Mineral and Petroleum Resources Development Act (MPRDA). The relevant section of the MPRDA reads: *"As the custodian of the nation's mineral and petroleum resources, the State, acting through the Minister may in consultation with the Minister of Finance, determine and levy, any fee or consideration payable in terms of any relevant Act of Parliament"*. Resource royalties are not a tax; they instead represent compensation for the permanent loss of non-renewable commodities.

The exploration for and extraction of mineral and petroleum resources in South Africa have been the subject of various pieces of legislation over the years. These various pieces of legislation dealt with a myriad of issues, such as the ownership of mineral resources, the right to undertake exploration and mining operations, environmental and safety concerns relating to mining operations and State mining lease payments (where applicable).

The MPRRA became effective on 1 March 2010 and collections by commodity up to 31 March 2012 are shown in *Table 1.8*. The abnormal year-on-year growth is as a result of the Act not being applicable to the full financial years of taxpayers during 2010/11 while it was applicable to the full financial years in 2011/12.

**Table 1.8: Mineral and Petroleum Resource Royalties payments by commodity, 2010/11 and 2011/12**

R million	2010/11	2010/11 relative proportions	2011/12	2011/12 relative proportions	Year-on-year growth
Coal	258	7.3%	297	5.3%	15.3%
Copper	125	3.5%	79	1.4%	-36.4%
Diamond	110	3.1%	290	5.2%	162.9%
Gold and / or uranium	515	14.5%	817	14.6%	58.5%
Industrial minerals <sup>1</sup>	40	1.1%	299	5.3%	646.1%
Iron ore	1 675	47.1%	2 501	44.6%	49.4%
Manganese	104	2.9%	149	2.7%	43.8%
Platinum	481	13.5%	853	15.2%	77.3%
Zinc	69	1.9%	143	2.5%	107.3%
Other <sup>2</sup>	178	5.0%	183	3.3%	2.6%
<b>Total</b>	<b>3 555</b>	<b>100.0%</b>	<b>5 612</b>	<b>100.0%</b>	<b>57.9%</b>

1. Industrial minerals are geological materials which are mined for their commercial value, which are not mineral fuels and are not sources of metallic minerals. They are used in their natural state or after beneficiation either as raw materials or as additives in a wide range of applications (i.e. industrial minerals are all those minerals other than gold, PGMs, coal, iron ore, chrome, manganese, diamonds, etc.).

2. The commodities grouped under "Other" are: Chrome, Fluorspar, Nickel, Oil and Gas, Phosphates, Vanadium and Unspecified.

The MPRDA brings South Africa's mining legislation in line with prevailing international norms. All mineral rights will henceforth vest with the state as custodian of minerals resources on behalf of South African citizens. MPRRA which complements the MPRDA provides for the compensation to the State (as custodian) for the country's permanent loss of non-renewable resources. Whereas consideration for the extraction of mineral and petroleum resources was previously payable to the State only in certain cases (i.e. where mining was conducted on State land), the exploitation of all minerals and petroleum resources in South Africa will henceforth require consideration in the form of mineral and petroleum resource royalties payable to the State.

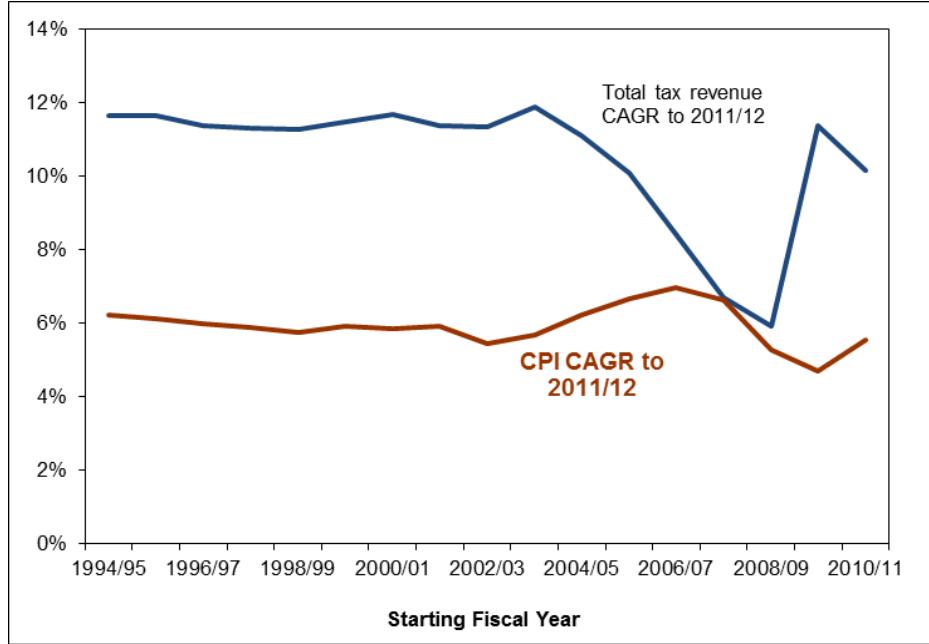

## REVENUE PERFORMANCE

Total tax revenue collected by SARS has increased from R113.8 billion in 1994/95 to R742.7 billion in 2011/12, representing an average year-on-year increase of 11.7%. The average year-on-year growth rate decreased from 15.6% for the period 2003/04 to 2008/09 to 5.9% between 2008/09 and 2011/12 due to the Great Recession. However, this growth rate has recovered, for the period 2009/10 to 2011/12, to 11.4% (*Table 1.9*). A comparison of compound annual growth rates (CAGRs) for total tax revenue and for CPI for the seventeen periods 1994/95 to 2011/12 appears in *Figure 1.4*.

# 2012 Tax Statistics

**Table 1.9: CAGRs of total tax revenue, 2003/04 – 2011/12**

**Figure 1.4 CAGR of total tax revenue vs. CAGR of CPI, 1994/95 – 2011/12**

## Tax-to-GDP ratio

Total tax revenue as a percentage of GDP is an important economic indicator as it indicates the share of a country's output that is collected by the government through taxes. It is used internationally by institutions such as the International Monetary Fund (IMF) and World Bank for comparative purposes.

The tax-to-GDP ratio decreased from a 27.6% high in 2007/08, a position it had maintained in the preceding three years, to 24.5% in 2009/10 as a result of the global financial crisis which led to revenue contracting. That reduction was mainly due to the decline in the contribution of CIT as a percentage of GDP which declined from 7.3% in 2008/09 to 5.6% in 2009/10 and further to 4.9% in 2010/11.

In 2011/12 the ratio increased marginally to 24.6%. The increase of the tax-to-GDP ratio for 2011/12 can be attributed to a slight increase in the contribution of CIT, to 5.1%.

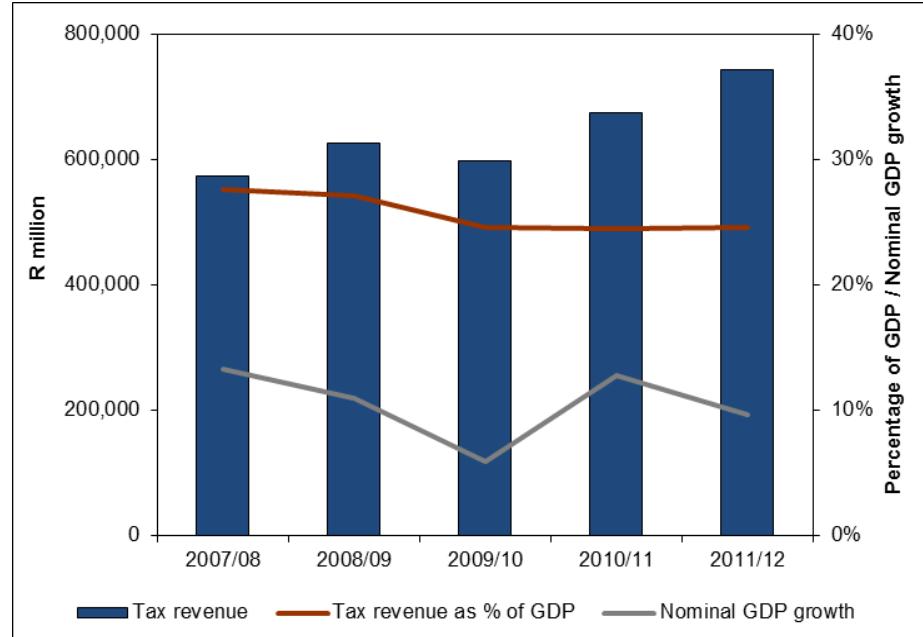

*Table 1.10* and *Figure 1.5* illustrate the change in tax revenue and tax revenue as a percentage of GDP since 2007/08.

**Table 1.10: Tax revenue as a percentage of GDP, 2007/08 – 2011/12**

R million	Tax revenue	Nominal GDP <sup>1</sup>	Tax revenue as % of GDP
2007/08	572 815	2 075 695	27.6%
2008/09	625 100	2 303 553	27.1%
2009/10	598 705	2 440 164	24.5%
2010/11	674 183	2 752 119	24.5%
2011/12	742 650	3 017 939	24.6%

1. Source: Statistics South Africa; Gross Domestic Product (GDP), 1<sup>st</sup> Quarter 2012.

**Figure 1.5** Tax revenue collections, tax revenue as a percentage of GDP and nominal GDP growth, 2007/08 – 2011/12

## Main sources of tax revenue

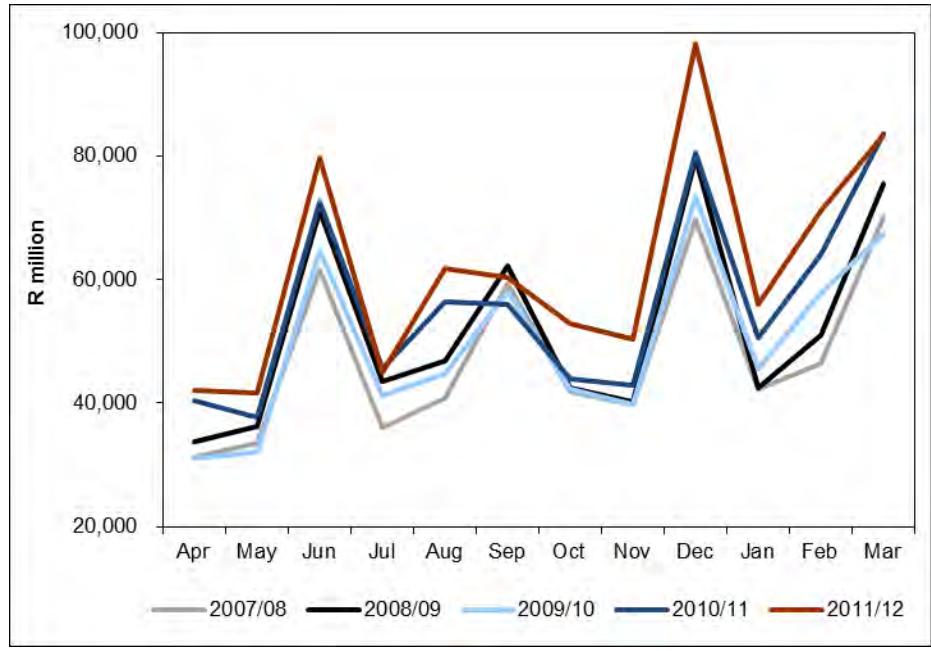

South Africa classifies revenue according to the Government Financial Statistics (GFS) classification developed by the IMF and the Standard Chart of Accounts (SCOA) as developed by National Treasury.

PIT, CIT and VAT combined account for around 80% of total tax revenue, with the fuel levy, excise and customs duties accounting for around 13% and other taxes accounting for the remainder. Most of the increase in nominal tax revenue has been due to a combination of factors such as inflation, high commodity prices, high wage settlements, increases in the value of imports, private consumption in the economy as well as improvements in tax administration and tax compliance, as opposed to increases in tax rates.

Figure 1.6 and Table A1.1.1 show the monthly and quarterly trends in the collection of tax revenues. The peaks in June, September, December and March are mainly due to provisional CIT payments from companies whose year-ends coincide with these months.

# 2012 Tax Statistics

**Figure 1.6** Net monthly tax revenue collections, 2007/08 – 2011/12

Revenue performance trends prior and subsequent to the financial crisis in 2008/09 indicate that the relative contributions of different taxes to the tax revenue portfolio have changed over the past six years (*Figure 1.7* and *Table A1.2.1*), with PIT contributing more and CIT less.

The slump in CIT during and following the financial crisis, where the relative contribution of CIT changed from 24.5% in 2007/08 to 20.4% in 2011/12, distorted the well-established composition trend with the relative contribution of PIT increasing significantly. The extent of the change is evident from the fact that while PIT contributed only R28.9 billion more to tax revenue than CIT in 2008/09, this gap has now widened more than threefold to R98.8 billion. PIT has increased from 29.5% of total tax revenue in 2007/08 to 33.7% in 2011/12 while the VAT percentage has dropped to 25.7% in 2011/12 from 27.2% in 2010/11.

**Figure 1.7 Composition of main sources of tax revenue, 2007/08 – 2011/12**

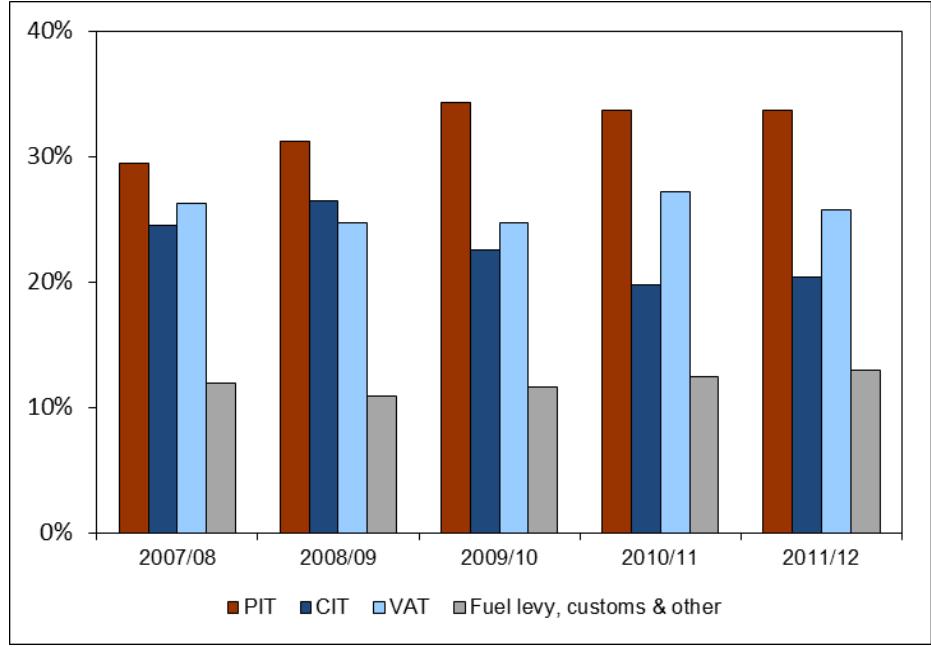

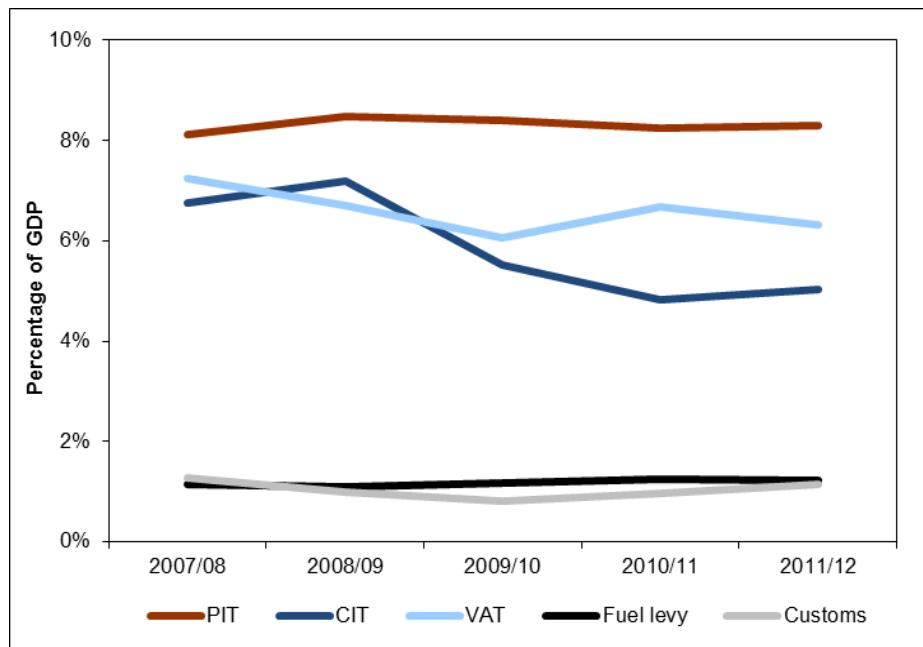

Figure 1.8 shows the main sources of tax revenue as a percentage of GDP.

From the figure, the effects of the global financial crisis and the lag effects of the recession can be clearly seen especially in the CIT contribution where the CIT collections as a percentage of GDP has declined from a high of 7.2% in 2008/09 to 5.0% in 2011/12. PIT as a percentage of GDP has been fluctuating at around 8%, while VAT as a percentage of GDP has decreased from 7.2% in 2007/08 to 6.3% in 2011/12.

**Figure 1.8** Main revenue sources as a percentage of GDP, 2007/08 – 2011/12

### Tax buoyancy and elasticity

Tax buoyancy is defined as the ratio of the percentage change in tax revenue to the percentage change in the economic tax base. The revenue changes are inclusive of the increment in revenue brought about by discretionary factors which include a change in the tax base, and changes in the calculation of taxable income (for example, income previously considered as exempt becomes taxable). Tax buoyancy therefore measures the response of tax revenue in relation to changes to the tax base. Tax elasticity, which is based on revenue changes after adjusting for discretionary effects, is a measure of the responsiveness of tax revenues to automatic changes in economic activity and tax administration.

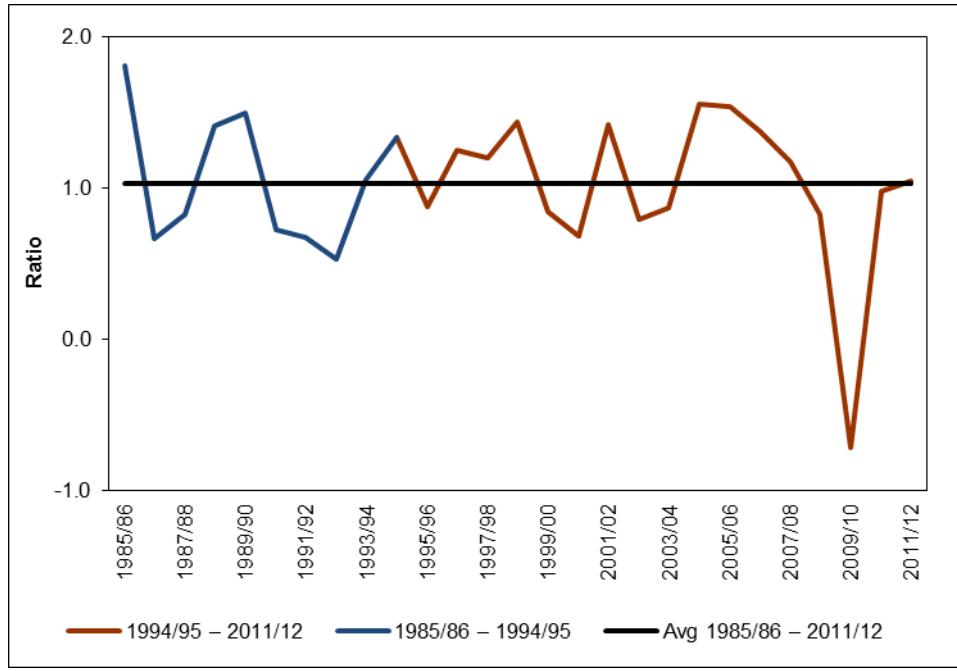

A tax buoyancy ratio of 1.0 indicates that tax revenue growth is increasing at the same pace as economic growth. A buoyancy ratio of less than one (more than one) shows tax revenue is growing slower (faster) than the economy. If government spending is to remain approximately proportional to the size of the economy, then the tax revenue buoyancy ratio determines whether sufficient funds are available to fund spending without a need to increase tax rates or introduce new tax products.

## 2012 Tax Statistics

Tax buoyancy ratios are dependent on several structural economic factors that impact on the tax base and thus tax revenue collections. Structural economic factors such as shifts in the domestic economy, (e.g. less growth in taxable salary income due to lower growth in employment levels versus higher payout of unemployment benefits or social grants), may reduce the tax buoyancy ratio of the tax system. Similarly, developments in the external economy (e.g. less external demand for mineral resources that impacts on the tax revenue due from the mining sector) may reduce the overall tax buoyancy ratio of the tax system. Lastly, tax effort and tax evasion also affect the tax base and thus the tax buoyancy ratio of the tax system.

An analysis of the total tax revenue to GDP buoyancy ratios from fiscal years 1985/86 to 2011/12 is provided in *Figure 1.9*. The buoyancy ratios before 1994/95 show more volatility compared to the long term average ratio of 1.1. This ratio was at its highest in 1984/85 when a buoyancy ratio of 3.0 was recorded after the growth in GDP plummeted due to relatively high increases in interest rates. This ratio was at its lowest in 2009/10 when it declined sharply to a negative -0.7 after tax revenues declined in nominal terms due to the global credit crisis. The buoyancy ratio has since recovered and has returned to the long term average of 1.1 for the 2011/12 fiscal year.

**Figure 1.9** Total tax revenue to GDP buoyancy ratio, 1985/86 – 2011/12

Measured tax buoyancy varies considerably from year to year and it is therefore more useful to measure buoyancy over a longer period. There are various techniques to do this. In the analysis below the tax revenue to GDP buoyancy ratio for each year was calculated before computing an average for each decade.

The long term trend is a decline in the average total tax revenue to GDP buoyancy ratio with the measure having stabilised over the past decade at slightly less than 1.0.

*Table 1.11* depicts the average buoyancy ratios for the seventies, eighties, nineties and 2000s.

**Table 1.11: Total tax revenue to GDP buoyancy ratio**

Fiscal years	Average ratio
1971/72 – 1980/81	1.20
1981/82 – 1990/91	1.36
1991/92 – 2000/01	0.99
2001/02 – 2010/11	0.97

## TAX REVENUE BY MAIN CATEGORY

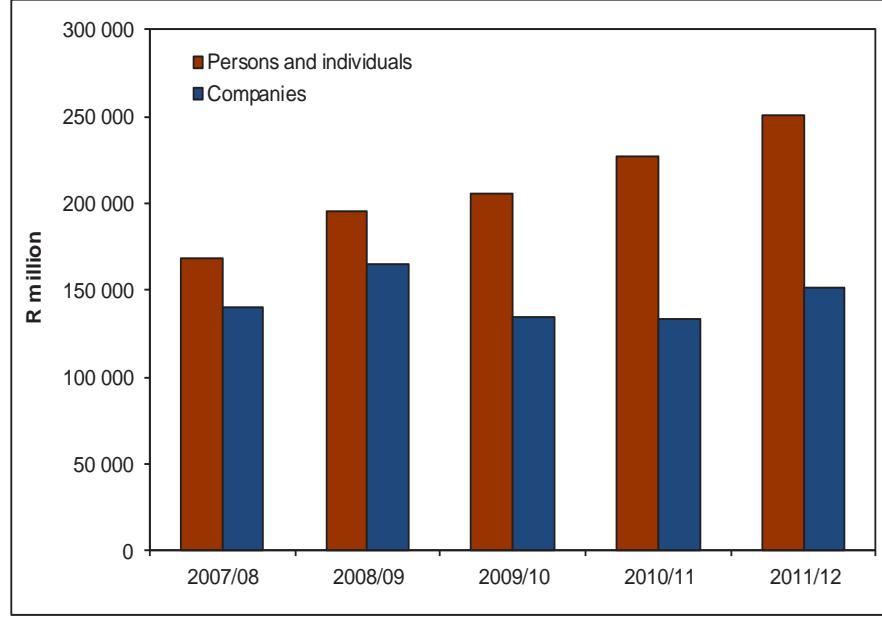

Tax revenue is divided into taxes on income and profits, taxes on payroll and workforce, taxes on property, domestic taxes on goods and services, taxes on international trade and transactions as well as a state miscellaneous revenue category. *Table A1.3.1* shows tax revenue by main category.

### Taxes on income and profits

Taxes on income and profits constitute the largest category of tax revenue, accounting for about 57% of total tax revenue. This category comprises taxes on persons and individuals, companies, secondary tax on companies, interest on overdue income tax, tax on retirement funds (abolished in 2007) and small business tax amnesty proceeds.

*Figure 1.10* and *Table A1.4.1* contain a summary of the taxes on income and profits, while *Tables A1.4.2* and *A1.4.3* provide further detail on taxes on persons and individuals and taxes on companies, respectively.

**Figure 1.10 Taxes on income and profits, 2007/08 – 2011/12**

Chapters 2 and 3 of this publication contain further detail on PIT and CIT respectively.

**Capital gains tax (CGT)** is raised on assessment and forms part of normal income tax liability. The revenue collected from CGT is reflected either under taxes on persons and individuals or taxes on companies and is based on the disposal value of assets.

## 2012 Tax Statistics

The cumulative liability raised for CGT since its inception on 1 October 2001 to the end of March 2012 was R42.9 billion as per *Table 1.12*. The peak in 2009/10 of R10.4 billion arose due to some taxpayers being forced into asset sell-offs due to the financial crisis. A decline in asset prices has led to taxpayers (especially individuals owning property in the housing market) electing to hold on to assets rather than liquidating them. This resistance to selling has driven the decline in CGT raised from 2009/10 and this situation is likely to persist until such time as asset prices recover more substantially.

**Table 1.12: Capital gains tax raised, prior to 2007/08 – 2011/12**

R million	Capital gains tax raised		
	Individuals	Companies	Total
Prior to 2007/08	1 850	3 241	<b>5 091</b>
2007/08	1 167	2 494	<b>3 661</b>
2008/09	3 807	4 136	<b>7 943</b>
2009/10	4 357	6 023	<b>10 380</b>
2010/11	2 012	7 049	<b>9 061</b>
2011/12	1 550	5 263	<b>6 813</b>
Cumulative	14 743	28 206	<b>42 949</b>

### Taxes on payroll and workforce

Taxes on payroll and workforce consist of the skills development levy (SDL) which is a compulsory levy aimed at funding training costs incurred by employers. SARS administers the collection of this levy in conjunction with the Department of Labour.

### Taxes on property

Taxes on property consists of donations tax, estate duty, securities transfer tax (STT) and transfer duty.

- *Donations tax* is levied at a flat rate of 20% on the value of the donation (R100 000 exemption available to natural persons).
- *Estate duty* is levied at a rate of 20% on the dutiable amount of the estate (there are certain admissible deductions allowed on the total value of the estate).
- *STT* is a tax levied at a rate of 0.25% on every transfer of a security.
- *Transfer duty* is the largest source of revenue in this category and is levied on the acquisition of property at a progressive rate for all persons including companies, close corporations and trusts (maximum of 8% on the value exceeding R1.5 million as from 23 February 2011).

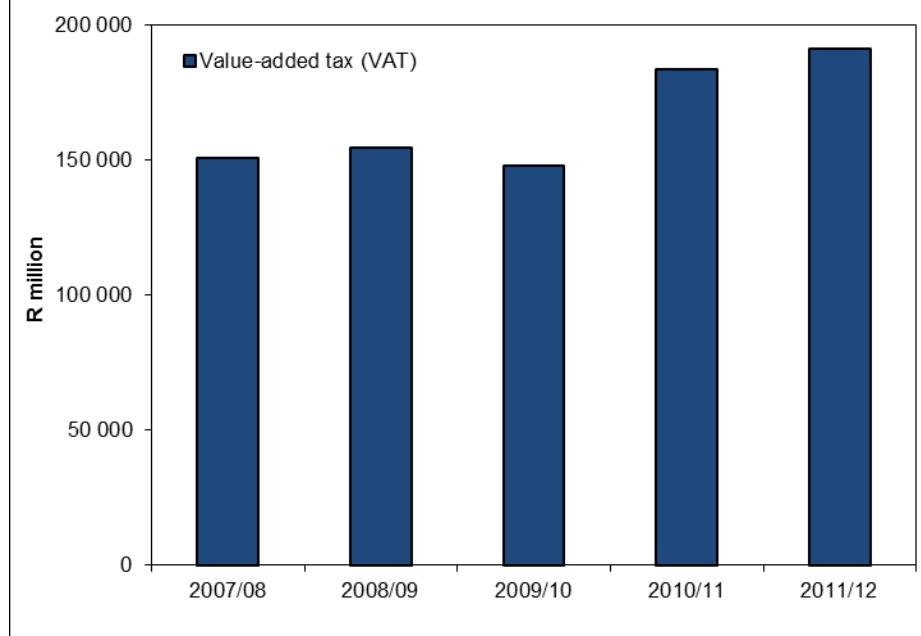

### Domestic taxes on goods and services

This category consists of VAT, turnover tax on micro businesses, specific excise duties, *ad valorem* excise duties, fuel levy, international air passenger departure tax, electricity levy and environmental taxes such as the plastic bags levy, incandescent light bulb levy and the recently introduced CO<sub>2</sub> tax on motor vehicle emissions. *Table A1.6.1* provides a summary of the domestic taxes on goods and services collections.

VAT is the largest source (72%) of revenue in this category (see *Figure 1.11*). VAT is levied a rate of 14% on goods and services, with certain exemptions and zero-ratings, and is also levied on the importation of goods and services into South Africa.

*Table A1.6.1 gives a breakdown of VAT collections between Domestic VAT payments, Import VAT and VAT refunds. Further detail is also provided in Chapters 4 and 5 of this publication.*

**Figure 1.11      Value-added tax (VAT), 2007/08 – 2011/12**

## Taxes on international trade and transactions

Taxes on international trade and transactions comprise of import related taxes. Customs or import duties are levies imposed on goods imported into South Africa and are imposed as a means to protect local producers. This category also includes miscellaneous customs and excise receipts that have not yet been allocated to the appropriate duty types as well as the diamond export levy which was imposed to stimulate the local diamond polishing industry. The strong surge in 2010/11 after the decline in 2009/10 is due to extensive importation of vehicles and capital equipment.

## State miscellaneous revenue

This is revenue received by SARS which cannot be allocated to specific revenue types.

## ENVIRONMENTAL TAXES

Climate change is a growing and increasingly serious global problem that requires a concerted and co-ordinated international response to reduce greenhouse gas emissions. As part of its response to influence and change behaviour, government has introduced several environmental taxes, based on the “polluter pays” principle.

The following environmental taxes have been introduced over the last few years:

- *International air passenger departure tax* is a tax imposed on international air travel and was introduced in November 2000 at a rate of R50 per passenger for passengers flying to BLNS countries and R100 per passenger for international flights. As from 1 October 2011, fee-paying passengers departing on international flights have been paying a tax of R190 per passenger and passengers flying to BLNS countries pay R100 per passenger.

# 2012 Tax Statistics

- *Plastic bags levy* was introduced in June 2004, at a rate of 3 cents per bag on certain types of plastic shopping bags, with the aim of reducing litter and encouraging plastic bag reuse. The levy was increased to 4 cents per bag in April 2009.
- *Electricity levy* was introduced in July 2009 at a rate of 2 cents/kWh, and it is applied to electricity generated from non-renewable sources<sup>1</sup>. The levy increased to 2.5c/kWh from 1 April 2011 with some of the revenue set aside to fund the rehabilitation of roads damaged as a result of the haulage of coal for electricity generation. In 2012, the levy was further increased to 3.5c/kWh and additional revenue funds energy-efficiency initiatives such as the solar water heater programme.
- *Incandescent light bulb levy* was introduced in October 2009 at a rate of R3 per globe to promote energy efficiency and reduce electricity demand. Energy-saving light bulbs last longer and require five times less electricity and result in lower greenhouse gas emissions.
- *CO<sub>2</sub> tax on motor vehicle emissions* was introduced in September 2010 for passenger vehicles and in March 2011 for double cabs, with the main objective of influencing the composition of South Africa's vehicle fleet to become more energy efficient and environmentally friendly. For passenger vehicles, the tax is levied at a rate of R75 per gCO<sub>2</sub>/km for each gram of emissions above 120 gCO<sub>2</sub>/km, and for double cabs it is levied at a rate of R100 per gCO<sub>2</sub>/km for each gram of emissions above 175 gCO<sub>2</sub>/km.

Table 1.13 shows the environmental tax collections over the last few years.

**Table 1.13: Environmental taxes, 2007/08 – 2011/12**

R million	International air departure tax <sup>1</sup>	Plastic bags levy <sup>1</sup>	Electricity levy <sup>1</sup>	Incandescent light bulb levy	CO <sub>2</sub> tax on motor vehicle emissions	Total
2007/08	541	86	-	-	-	627
2008/09	549	79	-	-	-	628
2009/10	580	111	3 342	64	-	4 096
2010/11	649	150	5 103	151	626	6 679
2011/12	762	161	6 323	144	1 617	9 007

1. Air departure tax, Plastic bags levy and Electricity levy have been restated for 2010/11, largely due to a reallocation from Plastic bag levy to Electricity levy. This reclassification impacts the sub classification under Environmental levy only, and therefore has no impact on the revenue as reported.

<sup>1</sup> Coal, petroleum-based fuels, natural gas and nuclear energy.

## Revenue Collections

## 2 PERSONAL INCOME TAX

### KEY HIGHLIGHTS

For the 2011/12 tax year budget announcements included:

- The threshold for the top personal income tax bracket increasing to R552 000;
- Primary and secondary rebates increasing to R10 260 and R5 675 respectively;
- Corresponding tax thresholds increasing to R57 000 (below age 65) and R88 528 (age 65 and above).

Individual taxpayers' assessed data for the 2011 tax year show:

- Of the 4 726 730 taxpayers liable to submit returns, 4 522 692 (95.7%) have been assessed;
- Some interesting facts about assessed taxpayers:
  - 40.2% were registered in Gauteng;
  - 27.5% were in the 35-44 age group;
  - 55.7% were male;
  - 27.0% were employed in the Financing, insurance, real estate & business services sector;
  - 287 834 (6.4%) declared business income.
- Taxpayers submitted their returns through the various SARS channels:
  - 63% via eFiling;
  - 36% via Branch Front End Capturing (SARS staff assist taxpayers by capturing their returns at branch offices directly into SARS systems);
  - 1% submitted manual returns that were scanned.
- Of those assessed, 67.9% received refunds, 17.8% owed SARS some tax and 14.3% had a zero assessment;
- The assessed taxpayers had aggregated taxable income of R885.2 billion and a tax liability of R182.2 billion;
- 78.2% of taxable income for individuals was derived from salaries, wages and remuneration, pension, overtime and annuities;
- The largest allowance received was the travel allowance (R26.7 billion - 37.8% of total allowances assessed);
- Medical aid paid on behalf of employees was the largest fringe benefit (R33.0 billion - 78.8% of total fringe benefits assessed);
- Medical expenses amounting to R54.2 billion and contributions to retirement funding (pension and retirement annuity funds) amounting to R36.3 billion constituted the largest deductions (47.1% and 31.6% respectively of total deductions granted).

The PIT register as at 31 March 2011 grew by 74.7% to over 10.3 million individual taxpayers.

# 2012 Tax Statistics

## INTRODUCTION

Income tax is a tax levied on the taxable income (gross income less exemptions and allowable deductions) of a person and is determined for a specific year of assessment. Taxable capital gains also form part of taxable income.

Individuals generally receive most of their income as salary/wages, pension/annuity payments and investment income (interest and dividends). Some individuals, such as sole proprietors and partners, may also have business income which is taxable as personal income.

PIT is South Africa's largest source of revenue contributing 33.8% of total tax revenue collections for 2011/12.

This chapter gives an overview of:

- Provisional tax payments;
- Personal income tax rates;
- Tax returns and individual taxpayers data;
- Taxable income and tax assessed;
- Assessed individual taxpayers with business income; and
- Assessed individual taxpayers' allowances, fringe benefits and deductions.

## PROVISIONAL TAX PAYMENTS

Any person who receives income other than remuneration is a provisional taxpayer. For the 2011/12 tax year provisional tax payments contributed 6.2% to net PIT collections. The introduction of the 80% rule for all years of assessment beginning on or after 1 March 2008 (as set out in the Fourth Schedule to the Income Tax Act) requires taxpayers with taxable income in excess of R1 million, to settle at least 80% of their tax liability by the time they make their second provisional payment. This ruling increased the combined first and second payments and substantially reduced third payments. The change to the payment trends is reflected in *Table 2.1* below.

**Table 2.1: Provisional tax payments by provisional period, 2007/08 – 2011/12**

Period R million Fiscal year	1st Provisional period	Percentage change	2nd Provisional period	Percentage change	3rd Provisional period	Percentage change	Total
2007/08	3 433		4 551		4 608		12 592
2008/09	4 037	17.6%	6 381	40.2%	6 150	33.5%	16 568
2009/10	4 539	12.4%	8 358	31.0%	4 746	-22.8%	17 643
2010/11	5 814	28.1%	7 848	-6.1%	1 560	-67.1%	15 221
2011/12	5 813	0.0%	8 598	9.6%	1 165	-25.3%	15 575
<b>Percentage of total</b>							
2007/08	27.3%		36.1%		36.6%		100.0%
2008/09	24.4%		38.5%		37.1%		100.0%
2009/10	25.7%		47.4%		26.9%		100.0%
2010/11	38.2%		51.6%		10.2%		100.0%
2011/12	37.3%		55.2%		7.5%		100.0%

## PERSONAL INCOME TAX RATES

The personal income tax brackets have been adjusted upwards substantially to compensate taxpayers for the effect of inflation (fiscal drag), while the 40% top marginal income tax rate for individuals has remained in place over the last decade.

*Table 2.2* illustrates the increase in the personal income tax brackets between the 2008 and the 2011 tax years. The threshold of the top personal income tax bracket increased from R450 000 in 2008 to R552 000 in 2011, a cumulative increase of 22.7%. During this period, the ceiling of the bottom income tax bracket increased from R112 500 in 2008 to R140 000 in 2011, a cumulative increase of 24.4%.

**Table 2.2: Personal income tax (PIT) brackets, 2008 and 2011**

Tax year Rand	2008			2011			Marginal PIT rates	Cumulative percentage increase				
<b>Brackets</b>	0	–	112 500	0	–	140 000	18%	24.4%				
	112 501	–	180 000	140 001	–	221 000	25%	22.8%				
	180 001	–	250 000	221 001	–	305 000	30%	22.0%				
	250 001	–	350 000	305 001	–	431 000	35%	23.1%				
	350 001	–	450 000	431 001	–	552 000	38%	22.7%				
	450 001	and over		552 001	and over		40%					
<b>Rebates</b>												
Primary	7 740			10 260			32.6%					
Secondary	4 680			5 675			21.3%					
<b>Tax thresholds</b>												
Below age 65	43 000			57 000			32.6%					
Age 65 and over	69 000			88 528			28.3%					

The primary rebate increased by 32.6%, which resulted in a corresponding increase in the income tax threshold (the level of taxable annual income below which no income tax is payable) for individuals younger than 65 years from R43 000 to R57 000. For individuals aged 65 years and above, the income tax threshold increased by 28.3% from R69 000 to R88 528.

### Fiscal drag relief

The tax burden as an aggregate over all taxpayers (as indicated by the tax assessed as percentage of taxable income) over the period of review has remained relatively stable around 21%. This is indicative of the effectiveness of combating fiscal drag through tax relief. The extent of fiscal drag relief that has been granted over the years is better illustrated by means of an example.

*Figure 2.1* illustrates the impact of fiscal drag relief over time. An individual with taxable income of R100 000 in 1994/95 was paying tax at an effective tax rate of 33.8%, this would have increased to 39.8% in 2011/12 if their income had just kept pace with inflation and if no adjustments to the income tax brackets were made. The impact of the actual tax rate adjustments from 1994/95 for the same scenario results in a significant lowering of the effective rate to only 17.8%.

# 2012 Tax Statistics

**Figure 2.1 Example of tax relief granted to an individual with taxable income of R100 000 in 1994/95**

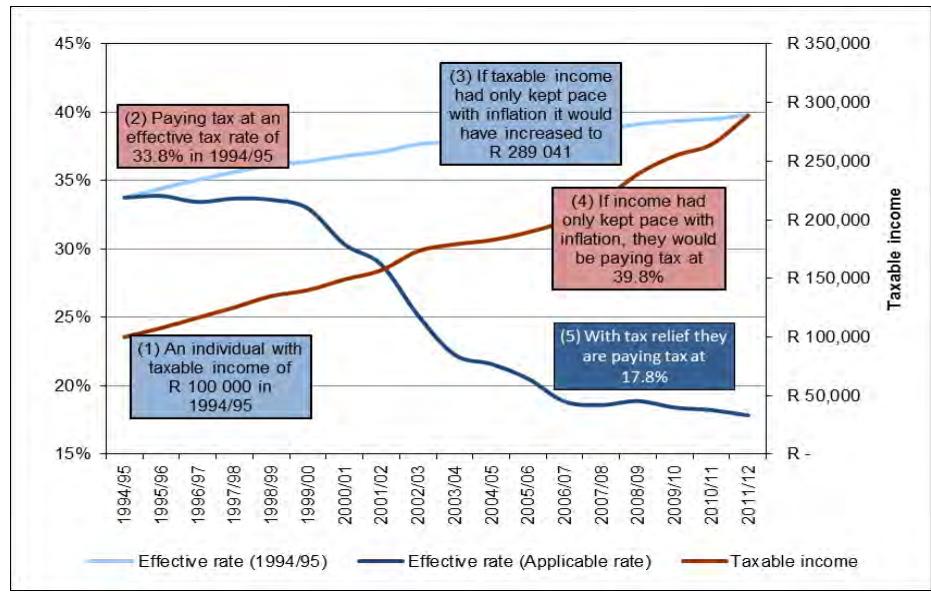

Table 2.3 shows the tax relief granted to individuals since 1994/95. Fiscal drag relief is much more prominent in the lower income groups due to the effect of the widening of the income brackets as a policy intervention to reduce income inequality and provide for more spending power amongst lower income groups.

**Table 2.3: Tax relief granted to individuals since 1994/95**

Taxable income	Tax at 1994/95 rates			Tax at 2011/12 rates	Effective rates		
	1994/95 <sup>1</sup>	2011/12 <sup>2</sup>	1994/95 <sup>1</sup>	2011/12	1994/95 <sup>1</sup>	2011/12 <sup>3</sup>	2011/12
22 000	63 572	2 385	18 100	3	10.8%	28.5%	0.0%
25 000	72 241	3 225	21 828	1 563	12.9%	30.2%	2.2%

200 000	577 925	76 765	239 272	152 652	38.4%	41.4%	26.4%
250 000	722 407	98 265	301 399	209 663	39.3%	41.7%	29.0%
300 000	866 888	119 765	363 526	267 455	39.9%	41.9%	30.9%
350 000	1 011 369	141 265	425 653	325 248	40.4%	42.1%	32.2%
400 000	1 155 851	162 765	487 780	383 040	40.7%	42.2%	33.1%
450 000	1 300 332	184 265	549 907	440 833	40.9%	42.3%	33.9%
500 000	1 444 813	205 765	612 034	498 625	41.2%	42.4%	34.5%
600 000	1 733 776	248 765	736 288	614 210	41.5%	42.5%	35.4%
700 000	2 022 739	291 765	860 542	729 796	41.7%	42.5%	36.1%
800 000	2 311 702	334 765	984 796	845 381	41.8%	42.6%	36.6%
900 000	2 600 664	377 765	1 109 050	960 966	42.0%	42.6%	37.0%
1 000 000	2 889 627	420 765	1 233 304	1 076 551	42.1%	42.7%	37.3%

1. Excludes the transitional levy.

2. 2011/12 based on 1994/95 adjusted by inflation.

3. This scenario assumes no fiscal drag relief with tax rates being kept at 1994/95 rates.

## TAX RETURNS AND INDIVIDUAL TAXPAYERS DATA

### Improved turnaround times and filing compliance

The SARS Modernisation programme offered significant improvements in processing turnaround times, improvements in service levels and increased efficiencies. (It is one of SARS's strategic objectives to divert resources from activities that can be automated to focus on more skills-intensive activities).

The improvement in filing compliance from 2008/09 to 2011/12 was notable. The on-time filing indicator registered an increase from 58% in 2008/09 to a level of 83.2% for the 2011 filing season (up from 80.7% in 2010). Among the key factors which have encouraged this growth in compliance are improvements in the ease of submission through electronic filing, pre-population of returns and third party validations, along with the introduction of penalties for outstanding returns. eFiling continues to grow and less than 1% of filers still make use of the paper-based channels to submit their returns, a massive improvement from the 98.8% that made use of paper based channels in 2006.

Faster turn-around times in assessing tax returns also enabled SARS to issue more rapidly income tax refunds of R12.7 billion (11.5% more than in 2010) which in turn benefited the economy. During 2011, SARS paid 85.4% of income tax refunds within 72 hours of the return being submitted compared to 74.3% in 2010.

### Tax register

During 2010 SARS changed its policy on registration requirements and stipulated that everyone who is formally employed must be registered by their employer for PIT, as opposed to only those who are above the tax threshold. This approach saw the number of individuals almost doubling since 2009/10 to 10.3 million taxpayers on register (*Table 2.4*).

**Table 2.4: Number of individual taxpayers, 2008 – 2011**

Date	Registered <sup>1</sup>	Percentage growth in register	Tax year	Liable to submit returns <sup>2</sup>	Assessed	Percentage assessed
31-Mar-08	5 204 805	9.3%	2008	4 298 718	4 123 231	95.9%
31-Mar-09	5 540 646	6.5%	2009	4 561 541	4 420 407	96.9%
31-Mar-10	5 920 612	6.9%	2010	4 766 975	4 584 519	96.2%
31-Mar-11	10 346 175	74.7%	2011 <sup>3</sup>	4 805 206	4 522 692	94.1%

1. Number of individuals registered as at 31 March of each year.

2. Liable taxpayers are those who are liable to submit a return for a specific tax year. Cases can be on register and active for other years, but may not be active for the specific tax year.

3. Compulsory for all employees of employer to be registered for income tax from 2011.

### Liable and assessed individual taxpayers

A change in the definition for calculating liable cases was made to improve the accuracy and completeness thereof. Liable cases per tax year are now defined as all those taxpayers that have been assessed for a tax year plus those that have submitted returns that have not been assessed plus the following taxpayers that have not submitted returns as yet:

# 2012 Tax Statistics

- taxpayers who received interest in excess of the tax thresholds;
- taxpayers who previously had business income; and
- taxpayers who had taxable income greater than R120 000.

The number of individuals liable to submit income tax returns increased from close to 4.3 million in 2008 to over 4.8 million in 2011. At the end of July 2012, the percentage of individual taxpayers assessed was 95.9%, 96.9%, 96.2% and 94.1% for the tax years 2008 to 2011 respectively. As the years progress the older years' percentage assessed moves closer to 100%, as outstanding assessments are finalised. It is important to note that the statistics in the rest of this chapter are based on assessments issued.

## TAXABLE INCOME AND TAX ASSESSED

*Table 2.5* shows a summary of the number of individual taxpayers assessed, their taxable income and tax assessed by taxable income group.

Tax assessed as a percentage of taxable income is relatively stable and points to the effectiveness of tax policy on fiscal drag relief to effectively counter inflation. The decline of nearly 1% in the effective rate in 2010 and onwards is mainly due to a slowing in the growth of taxable income and a reduction in average tax, the former largely as a result of the impact of the financial crisis on employment and remuneration levels and the latter as result of the adjustment of the tax rates in favour of taxpayers for 2010.

**Table 2.5: Assessed individual taxpayers: Summary of taxable income and tax assessed, 2008 – 2011**

Tax year	Number of taxpayers assessed	Taxable income (R million)	Average taxable income (R)	Tax assessed (R million)	Average tax assessed (R)	Tax assessed as a % of taxable income
2008	4 123 231	692 570	167 968	149 524	36 264	21.6%
2009	4 420 407	796 819	180 259	170 532	38 578	21.4%
2010	4 584 519	830 157	181 078	170 551	37 202	20.5%
2011	4 522 692	885 241	195 733	182 163	40 278	20.6%

## Distribution of tax liability across taxable income and income groups

Whilst the contribution to the fiscus by taxpayers mimics the income inequalities in South African society, significant upward social mobility is evident from the tax records.

In *Table 2.6* the distribution of taxpayers, taxable income and tax assessed across major taxable income groups is shown. The table shows that for the 2011 tax year nearly half of the assessed individual taxpayers have taxable income below R120 000. These taxpayers earned 10.8% of taxable income and contributed only 3.3% of the tax assessed. Over 47% of the taxpayers earned between R120 000 and R400 000 and were liable for over 40.1% of the tax assessed.

*Figure 2.2* provides a graphical representation of the percentage distribution of the number of taxpayers that have been assessed, their taxable income and their tax liability for the 2011 tax year. Greater detail by taxable income group is provided in *Table A2.1.1*.

**Table 2.6: Distribution of assessed individual taxpayers over selected taxable income groups, 2008 – 2011**

Percentage	Taxable income group	2008	2009	2010	2011
Taxpayers	<= 0	7.1%	6.4%	6.1%	4.6%
	1 – 60 000	16.1%	14.7%	14.4%	13.8%
	60 001 – 120 000	28.3%	25.4%	25.2%	24.0%
	120 001 – 400 000	41.3%	45.3%	45.9%	47.8%
	400 000 +	7.1%	8.3%	8.4%	9.7%

**Figure 2.2 Distribution of taxpayers in taxable income groups, 2011**

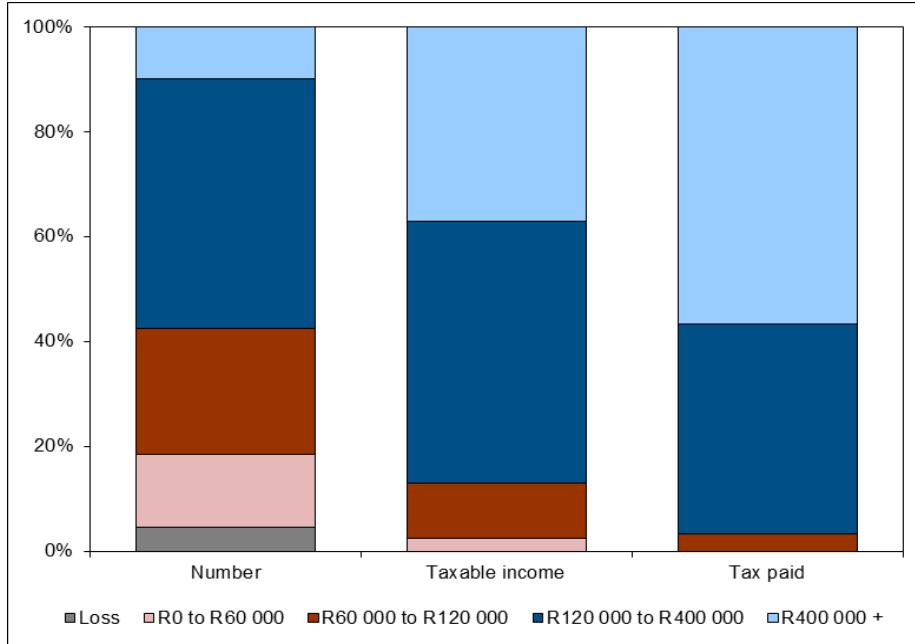

Table A2.1.2 reflects income included in the final taxable income calculation as per the assessment. It should be noted that interest exemptions and CGT exclusions have however not been taken into account. Income as reflected in the table is therefore based on taxable income to which all deductions granted have been added. The income as reflected is therefore not reflective of gross income. The difference between income and taxable income is 11.5% in the 2011 tax year but the difference was only 9.6% in the 2008 and 2009 tax years. This is mainly as a result of the manner in which employer medical scheme contributions on behalf of employees and medical deductions are accounted for, which changed in the 2011 tax year.

## 2012 Tax Statistics

*Table 2.7 illustrates the distribution of income and the granting of deductions in income groups (as opposed to taxable income groups). The largest portion of the R115 billion allowed as deductions in 2011 as per *Table A 2.7.1* was in the main granted to taxpayers in the R120 000 to R400 000 income bracket, with 14.2% of their income granted as a deduction.*

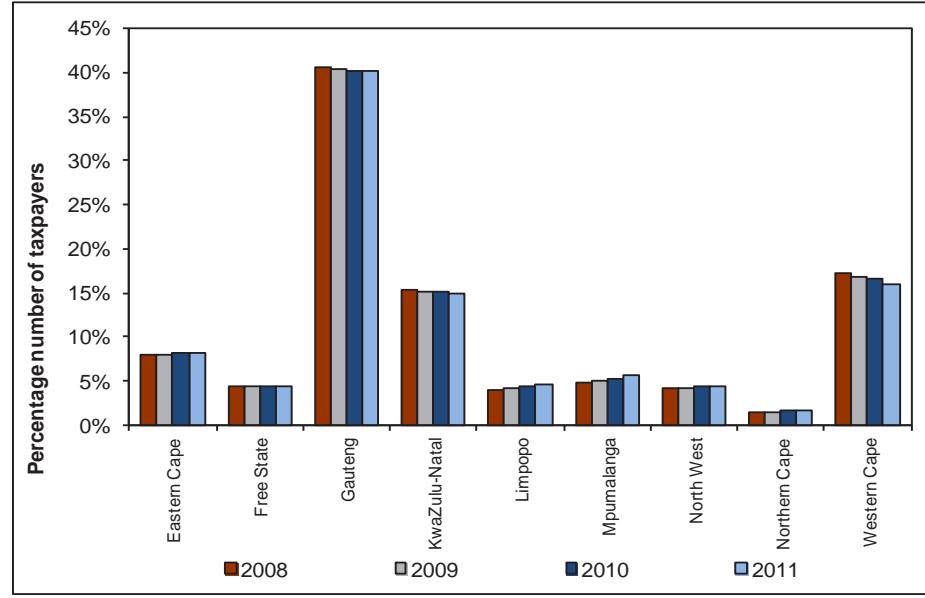

**Table 2.7: Taxpayers in income groups, deductions granted and taxable income, 2011**

Tax year	2011			
Income group	Number of taxpayers	Income before deductions (R million)	Deductions allowed (R million)	Taxable income (R million)
<= 0	189 316	-21 238	898	-22 136
1 – 60 000	542 167	18 140	1 780	16 359
60 001 – 120 000	928 224	84 211	9 557	74 654
120 001 – 400 000	2 309 846	502 994	62 454	440 540

400 000 +	679 437	72 818	606 619	10.7%
<b>Total</b>	<b>195 733</b>	<b>25 420</b>	<b>170 313</b>	<b>13.0%</b>

### By province

The distribution of taxpayers, taxable income and tax assessed between provinces/offices of registration shows that there is a slight decline in the percentage of taxpayers in the three largest provinces (in terms of numbers) and a corresponding increase in the remaining provinces. Over 71% of individual taxpayers were registered in three provinces (Gauteng, Western Cape and KwaZulu-Natal) and are responsible for close to 80% of the total tax assessed (*Table A2.1.3* and *Figure 2.3*).

**Figure 2.3 Percentage of assessed individual taxpayers by province, 2008 – 2011**

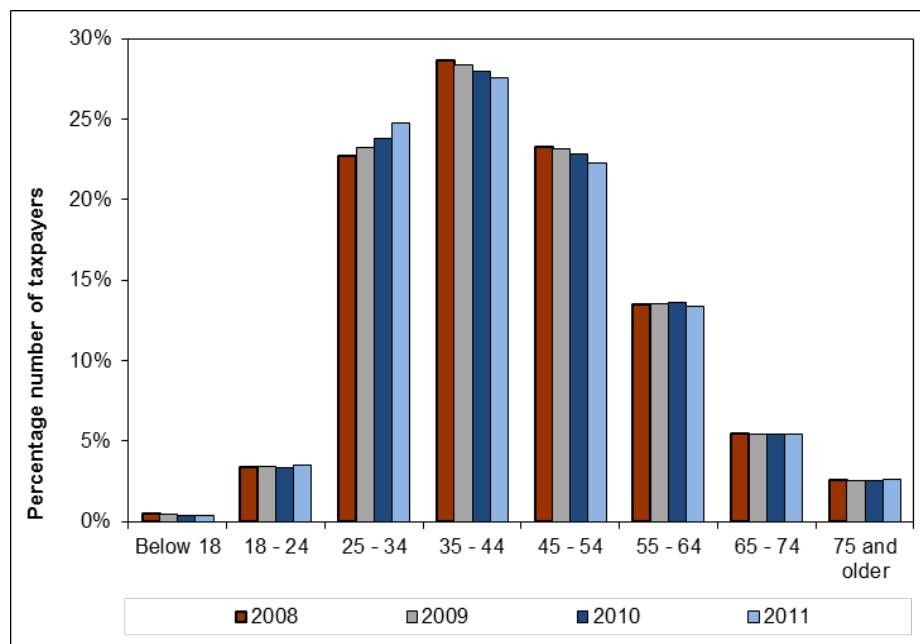

It should be noted that this is not necessarily representative of residence, economic activity or employment in provinces as taxpayers may reside or be employed in a different province to the office of registration. For example, a taxpayer may work and reside in Brits (North West), but may be registered at the Pretoria office (Gauteng). This taxpayer's taxable income and tax assessed would therefore be reflected in Gauteng and not in the North West province. It is however still interesting to note that the smaller provinces showed growth with the larger provinces' relative portions declining slightly over the period.

### By age group

*Table A2.1.4 and Figure 2.4 show a breakdown of assessed individual taxpayers by age group. The proportion of younger taxpayers in the age group 25-34 has grown, largely at the expense of the proportion in the 35-54 year age groupings. Note however, that the number of assessed taxpayers in the 35-54 year age grouping has increased over this period, but it has increased more slowly than that of other groupings. Close to 30% of the assessed taxpayers fall in the 35 to 44 age group. This group earns close to a third of the total taxable income and is also responsible for close to a third of the total tax assessed.*

**Figure 2.4 Percentage of assessed individual taxpayers by age group, 2008 – 2011**

### By gender

The percentage of female taxpayers has been steadily increasing over the last few years. For the 2011 tax year, as indicated in *Table A2.1.5 and Figure 2.5*, females account for 44.3% of the assessed individual taxpayers, earn 36.3% of the taxable income and contribute 29.6% of tax assessed. Females on average had taxable income of R160 702, and were liable for tax of R26 919 at an effective rate of 16.8% as opposed to the males who had an average taxable income of R223 550 and were liable for tax of R50 885 at an effective rate of 22.8%. From the aforementioned statistics it is evident that females on average earn 28.1% less than males as measured through taxable income, and are liable for 47.1% less tax than their male counterparts.

# 2012 Tax Statistics

Figure 2.5 Percentage of male and female assessed individual taxpayers by taxable income group, 2011

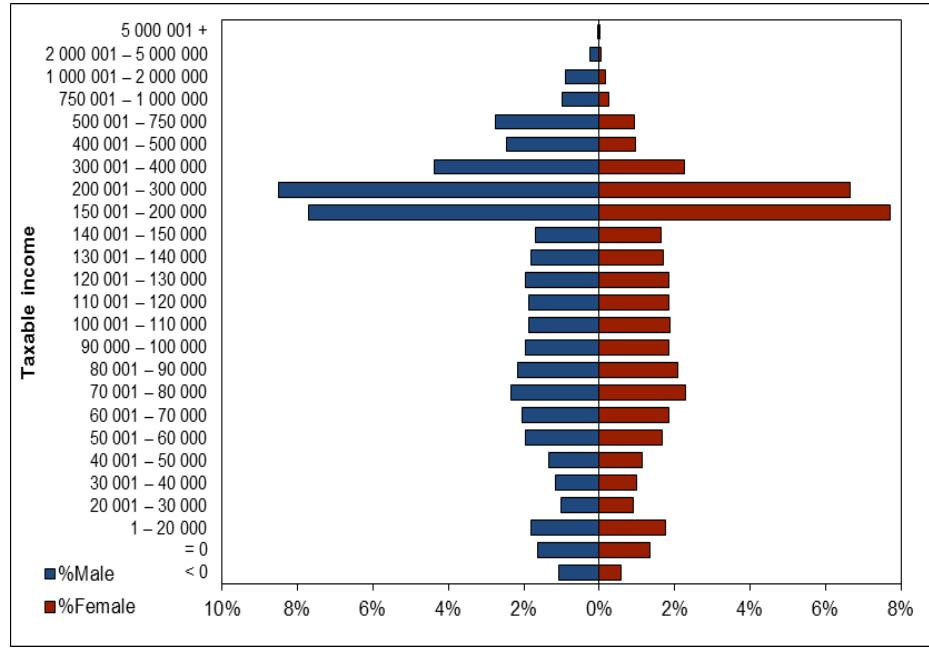

Table A2.1.6 shows that individuals with a taxable income between zero and R120 000 are nearly evenly split between females and males, but as the taxable income increases the proportion of females to males declines significantly. Only 19.9% with a taxable income of between R750 000 and R1 million in 2011 are female, and this proportion declines further to only 7.1% for those with a taxable income of over R5 million. The number of females as a percentage of the total assessed has increased from 42.5% in 2008 to 44.3% in 2011 as relatively more females than males enter the labour market and became liable for tax.

## By source of income

Figure 2.6 and Table A2.2.1 show selected sources of income. Over 3.9 million individual taxpayers in 2011 received income from salaries and wages or remuneration, pensions or annuities, whilst over 2.9 million of these taxpayers also received annual payments in the form of bonuses or leave pay.

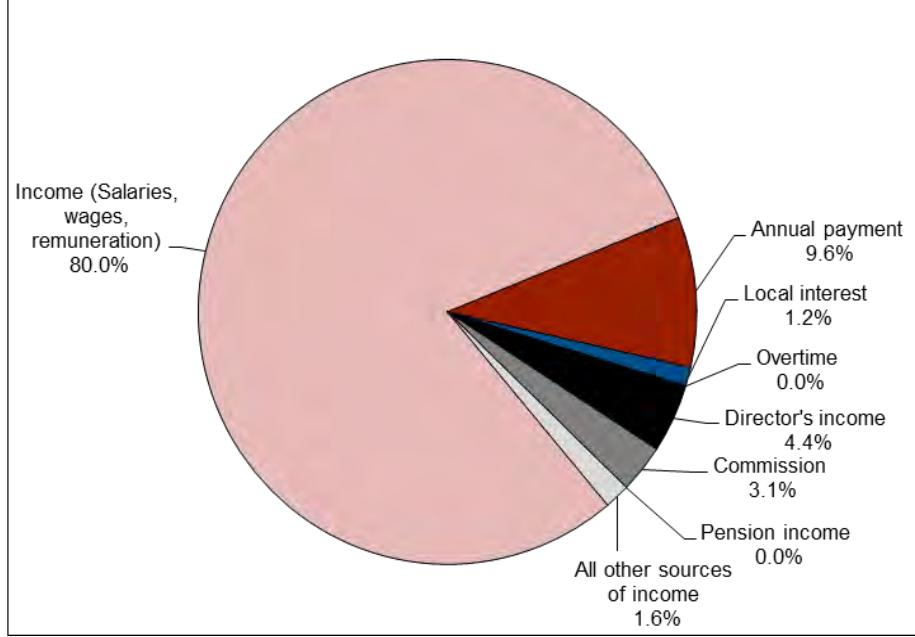

It must be noted that during the 2010 tax year income source codes 3603, 3607 and 3610<sup>1</sup> were consolidated into source code 3601. Table A2.2.1 reflects the consolidation of all the previous years for comparative purposes.

There were over 190 000 individual taxpayers' with interest income in excess of the exemption limit applicable for interest in 2011. The taxable portion of local interest as well as foreign interest income appears to declining. Local interest would also have declined significantly in line with the bank repo rate which declined rapidly from 12% in 2008 to 5.5% as at 31 March 2012.

<sup>1</sup> See Table A2.2.1 for detailed description of source codes.

**Figure 2.6**

**Assessed individual taxpayers' taxable income by source of income, 2011**

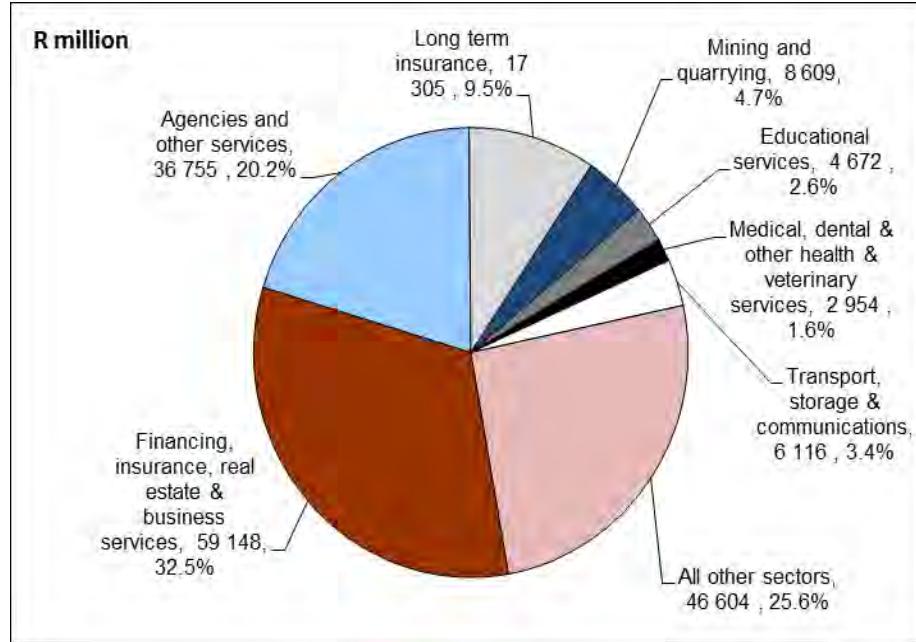

## By sector

In 2011, assessed individual taxpayers employed in the Financing, insurance, real estate & business services sector accounted for the largest number of taxpayers and also make the largest contribution to tax assessed, at 27.0% and 32.5% respectively. See *Table A2.3.1* and *Figure 2.7*.

**Figure 2.7**

**Assessed individual taxpayers' tax assessed by sector, 2011**

*Table A2.3.2* uses SARS's sector codes, as in *Table A2.3.1*, and reclassifies these codes according to the Standard Industrial Classification (SIC). It should be noted that the source of income codes used by SARS are not fully aligned with the SIC system used by Statistics South Africa.

## 2012 Tax Statistics

### ASSESSED INDIVIDUAL TAXPAYERS WITH BUSINESS INCOME

Table A2.4.1 gives a breakdown of the sectors in which assessed individual taxpayers with business income are active. Assessed individual taxpayers with business income amounted to 6.4% of total individual taxpayers in 2011 (9.0% of the total in 2008), the decline being mainly due to the impact of the global financial crisis on especially small businesses as well as an increase in the number of individuals in the formal labour market.

Individual taxpayers in the Financing, insurance, real estate & business services sector with business income contribute slightly more than a third of the total assessed taxable income of this group of taxpayers (38.4% in 2011). This equates to 27.8% of the total assessed individual taxpayers having business income and is followed by the Retail and Wholesale trade sectors with 15.8% of the total assessed individual taxpayers.

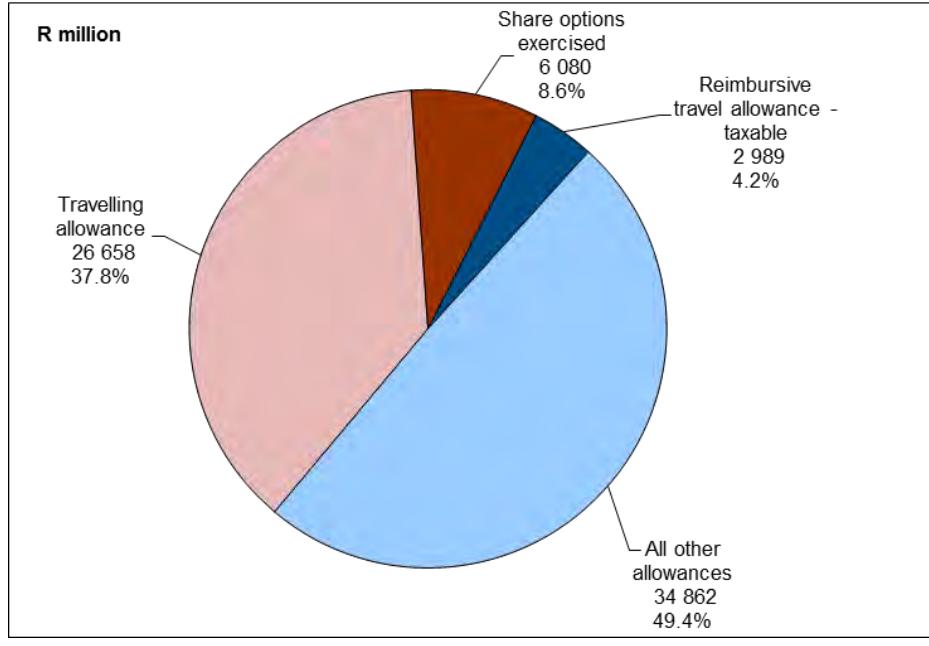

### ASSESSED INDIVIDUAL TAXPAYER ALLOWANCES, FRINGE BENEFITS AND DEDUCTIONS

#### Assessed individual taxpayers' allowances

The travelling allowance continues to be the largest allowance for individuals despite having been steadily decreasing in relative contribution from 49.4% in 2008 to 37.8% in 2011. This decline can be partly explained by the policy changes that were applied to the travel allowance to curb the abuse of travelling expenses as a mean to lower taxable income. The more significant allowances are shown per taxable income group in *Tables A2.5.2 to A2.5.4* and *Figure 2.8*.

It must be noted that during the 2010 tax year income source codes 3706, 3710, 3711 and 3712 were consolidated into source code 3713<sup>2</sup>. *Table A2.5.1* shows this consolidation of all the previous years for comparative purposes.

Figure 2.8 Assessed individual taxpayers' allowances, 2011

<sup>2</sup> See *Table A2.5.1* for detailed description of source codes.

## Assessed individual taxpayers' fringe benefits

*Table A2.6.1* provides a summary of fringe benefits. As from the 2010 tax year, fringe benefit source codes (3803 to 3809) have been consolidated into source code 3801<sup>3</sup>. For comparative purposes this new consolidated source code is shown at the bottom of the table. Total fringe benefits amounted to R14.0 billion in 2008, increasing to R41.9 billion in 2011.

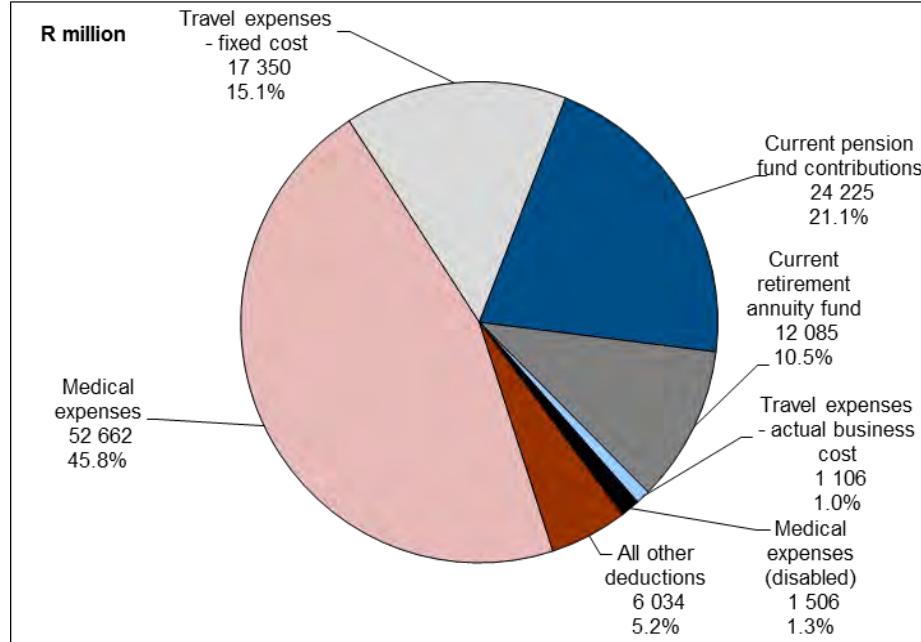

Medical scheme contributions paid on behalf of employees remains the largest fringe benefit claimed amounting to R6.6 billion in 2008 which increased to R33.0 billion in 2011. The abnormal increase in 2011 is due to a change in the treatment of employer contribution to medical schemes on behalf of employees, this is also reflected in the increase in medical deductions that was granted. The more significant fringe benefits are shown by taxable income group in *Tables A2.6.2* to *A2.6.4*.

## Assessed individual taxpayers' deductions

*Table A2.7.1* provides a summary of individual taxpayers' deductions allowed on assessment. The deduction in respect of pension fund and retirement annuity fund contributions collectively has declined slightly to 31.6% in 2011. The proportion of amounts allowed as deductions for medical expenses (excluding deductions allowed associated with disability) have increased marginally from 2008 to 2010. The exceptional increase of 45.8% in 2011 can be ascribed to the claiming of medical expenses by the taxpayers that now have a medical fringe benefit as explained in the paragraph above.

The more significant deductions are shown by taxable income group in *Tables A2.7.2* to *A2.7.8* and *Figure 2.9*.

**Figure 2.9** Assessed individual taxpayers' deductions, 2011

<sup>3</sup> See *Table A2.6.1* for detailed description of source codes.

## 3 COMPANY INCOME TAX

### KEY HIGHLIGHTS

Companies' assessed data for the 2010 tax year shows:

- Roughly a third of the 559 954 companies assessed had positive taxable income, a third had taxable income equal to zero and the remaining third was in a loss position;
- 221 large companies with taxable income in excess of R200 million were liable for 50% of the tax assessed; and
- The Financing, insurance, real estate and business services, Wholesale trade and Retail trade sectors collectively make up 53.1% of the assessed companies and are responsible for close to 41.9% of tax assessed.

### INTRODUCTION

All companies and close corporations are required to register as provisional taxpayers. CIT was the third largest contributor to tax revenue in 2010/11, accounting for 20%.

The current headline CIT rate is 28%, with certain sectors of the economy having different effective tax rates due to specific tax dispensations and deductions. Examples of these are the gold mining formula, farming deductions and valuation, and accelerated depreciation of capital assets for qualifying sectors. Small business corporations with a turnover of not more than R14 million qualify for a special tax dispensation in the form of a graduated income tax rate table as opposed to having a fixed rate. Micro businesses with an annual turnover of less than R1 million may also elect to pay only turnover tax.

As part of CIT, companies are required to pay CGT on the disposal of assets. Tax levied on dividends has been changed from STC which was payable at a rate of 10% to Dividend Withholding Tax (DWT) to be in line with international practice. Countries such as the United States and Ireland have a similar system. The DWT only came into effect on 1 April 2012 at a rate of 15% and the change thus does not impact the tax years covered in this publication.

This chapter gives an overview of:

- Provisional tax payments;
- Number of tax registered companies;
- Taxable income and tax assessed by taxable income group and by sector;
- Companies with assessed losses or profits; and
- Tax assessed by main sector.

## PROVISIONAL TAX PAYMENTS

Companies automatically fall into the provisional tax system – which is a system that requires taxpayers to provide for their final tax liability by paying two amounts during the course of the year of assessment with a third voluntary payment (topping-up) after the end of the tax year to avoid being charged with interest.

The first provisional tax payment must be made within six months of the year of assessment. The second payment must be made no later than the last working day of the year of assessment. The introduction of the 80% rule for all years of assessment beginning (or commencing) on or after 1 March 2008 (as set out in the Fourth Schedule to the Income Tax Act) requires taxpayers with taxable income in excess of R1 million, to settle at least 80% of their tax liability by the time they make their second provisional payment or incur significant penalties. The third payment is voluntary and may be made within seven months of the year of assessment where the year of assessment is February, and within six months of the year of assessment, for any other year of assessment. *Table 3.1* provides an illustration of the provisional payment timeline by companies' financial year-end whilst *Figure 3.1* shows the provisional tax payments by period for the 2011 tax year.

Table 3.1: Example of timeline for provisional tax payments

1. If the tax year of a company ends at the end of February, the third is then due seven months after the end of the tax year.

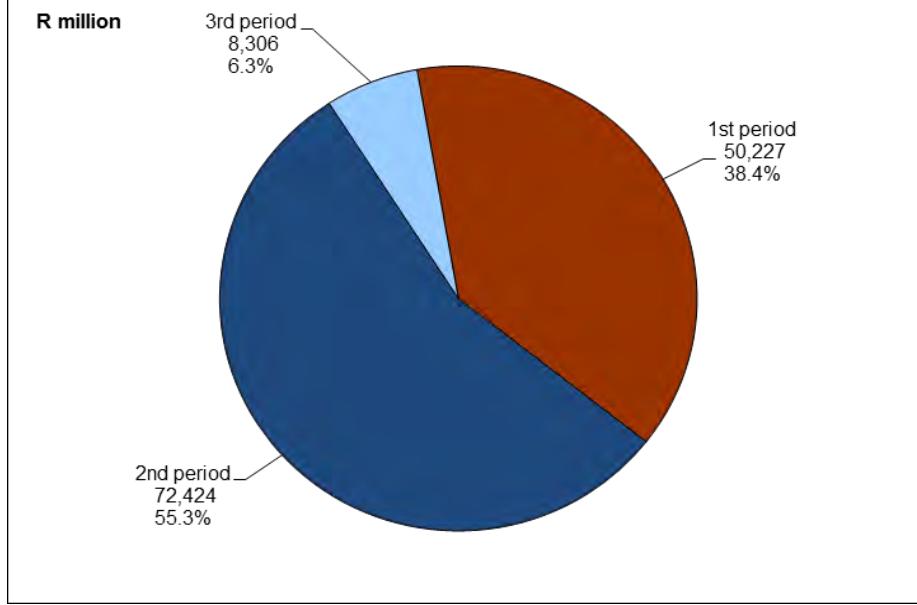

If the Commissioner for SARS is of the opinion that the taxable income estimate on the first or second provisional tax return has been understated, he may in terms of paragraph 19(3) of the Fourth Schedule to the Income Tax Act request a taxpayer to revise their estimate in line with their likely taxable income and require an additional payment to be made. This additional payment will then be captured as a first or second provisional payment (even though after the due date) and for reporting purposes it will be regarded as part of the first or second payment.

## Company Income Tax

As a result of more considered application of Paragraph 19(3) and due to improved compliance with the provisional tax rule (80% rule for second provisional tax payments), third provisional payments declined from 22.1% of provisional tax paid in 2008/09 to only 4.0% in 2011/12.

Figure 3.1 shows provisional tax payments by provisional period for the 2010 tax year.

**Figure 3.1** Provisional tax payments by provisional period, 2010

Taxes for a specific tax year are paid over a number of fiscal years as illustrated in Table 3.2. During the 2010/11 and 2011/12 fiscal year approximately 55% of the tax liability was paid in the current tax year and around 44% in the subsequent year.

**Table 3.2:** Provisional tax payments by tax year and fiscal year, 2007/08 – 2011/12

## 2012 Tax Statistics

Companies are allowed to choose their financial year ends. The year of assessment (tax year) of a company corresponds with its financial year.

Companies with February, March, June, September and December year-ends are significant provisional taxpayers (see *Figure 3.2*). The June and December year-end companies have contributed on average over 55% to the total provisional tax for a specific fiscal year. The provisional tax collected increased over the years from R143.1 billion in 2007/08 to R158.0 billion in 2011/12, 10% overall growth, but the impact of the global financial crisis still lingers and collections have still not reached the level that was reached in 2008/09.

**Figure 3.2** Provisional tax payments by company financial year-end, 2010

As a result of the increasing 1<sup>st</sup> and 2<sup>nd</sup> provisional tax payments, the 2009/10 and later fiscal years saw a significant decline in third payments from R36.7 billion in 2008/09 to R6.3 billion in 2011/12 (*Table 3.3*).

**Table 3.3: Provisional tax payments by provisional period by fiscal year, 2007/08 – 2011/12**

Period R million Fiscal year	1st Provisional period	Percentage change	2nd Provisional period	Percentage change	3rd Provisional period	Percentage change	Total
2007/08	49 132		63 441		30 499		143 072

2011/12	40.6%		55.4%		4.0%		100.0%

*Table A3.1.1* shows the provisional tax payments by company financial year-end and provisional period by fiscal year, whilst *Table A3.1.2* shows by tax year. *Table A3.2.1* shows a breakdown of the provisional tax payments by sector.

## NUMBER OF COMPANIES ON REGISTER

On 31 March 2011 SARS had nearly 2.1 million companies on register with most being inactive or dormant. With the base broadening through education, outreach and enforcement initiatives, it has resulted in a 10.9% increase in the number of companies registered since 31 March 2009.

The number of companies liable to submit returns grew from 719 326 to 791 573 between the 2008 and 2011 tax years. For 2008, 85.6% of the liable companies had been assessed whilst only 51.5% had been assessed for 2011 (*Table 3.4*).

**Table 3.4: Number of companies, 2008 – 2011**

Fiscal year	Registered <sup>1</sup>	Percentage growth in register	Number Tax year	Liable to submit returns <sup>2</sup>	Assessed	Percentage assessed
31-Mar-09	1 834 009	15.8%	2008	719 326	615 686	85.6%
31-Mar-10	1 878 856	2.4%	2009	747 042	607 471	81.3%
31-Mar-11	2 078 301	10.6%	2010	817 645	559 954	68.5%
31-Mar-12	2 034 719	-2.1%	2011	791 573	407 286	51.5%

1. Excludes cases where status is in suspense, estate and address unknown. The tax year for companies is normally the financial year of the company for financial reporting purposes.

2. These are companies that are active and not dormant.

There has been a change in the methodology for calculating liable cases. Liable cases per tax year are now defined as all those taxpayers that have been assessed for a tax year plus those that have submitted returns that have not been assessed plus companies that have been assessed in the past that have not submitted a return as yet.

## Provisional tax as indicator of completeness of assessments

Provisional tax collections for a specific tax year has been close to 100% of the final liability as per assessments issued and provisional tax collections for a tax year are known long before assessments for a tax year are known, which allows for fairly reliable extrapolations. The tax assessed as a percentage of the provisional tax payments received for the relevant tax year is therefore a better proxy to determine the completeness of the issued assessments.

*Table 3.5* shows the tax assessed for the specific tax year against the provisional tax payments received. From the table, for the 2009 to 2011 tax years, more provisional tax was paid than actual tax assessed. In some cases tax assessed is more than the provisional tax collections as additional taxable income may be identified during the assessment process if the taxpayer failed to take that additional taxable income into account at the time of making their provisional tax payments. The differences are addressed by collecting assessment payments or by refunding over payments.

## 2012 Tax Statistics

**Table 3.5: Provisional tax payments and tax assessed by tax year, 2008 – 2011**

R million Tax year	Provisional tax payments	Tax assessed	Tax assessed as % of provisional tax payments
2008	157 210	160 631	102.2%
2009	132 810	128 886	97.0%
2010	130 882	118 006	90.2%
2011	146 262	84 199	57.6%

The tables in the rest of this chapter (*Tables A3.3.1 to A3.9.2*) therefore reflect tax assessed as a percentage of provisional tax payment collections rather than the percentage assessed.

### DISTRIBUTION OF TAXABLE INCOME AND TAX ASSESSED BY TAXABLE INCOME GROUP

*Table A3.3.1* shows taxable income and tax assessed by taxable income group for all companies. Approximately a third of companies reported positive taxable income, a third reported negative taxable income and the remaining third reported zero taxable income.

*Table A3.3.2* shows that 50% of the company income tax assessed in 2010 was paid by large companies with taxable income exceeding R200 million. These companies represent only 0.1% of the total number of companies assessed for income tax purposes.

*Table 3.6* shows the effective tax rates for companies assessed in 2010. Although the statutory company tax rate is fixed at 28% selected companies are liable for company tax at different rates, these would for example include personal service providers, non resident companies, small business corporations (impact which can be seen in R1 to R1 million grouping), long term insurance companies, oil and gas companies and gold mining companies.

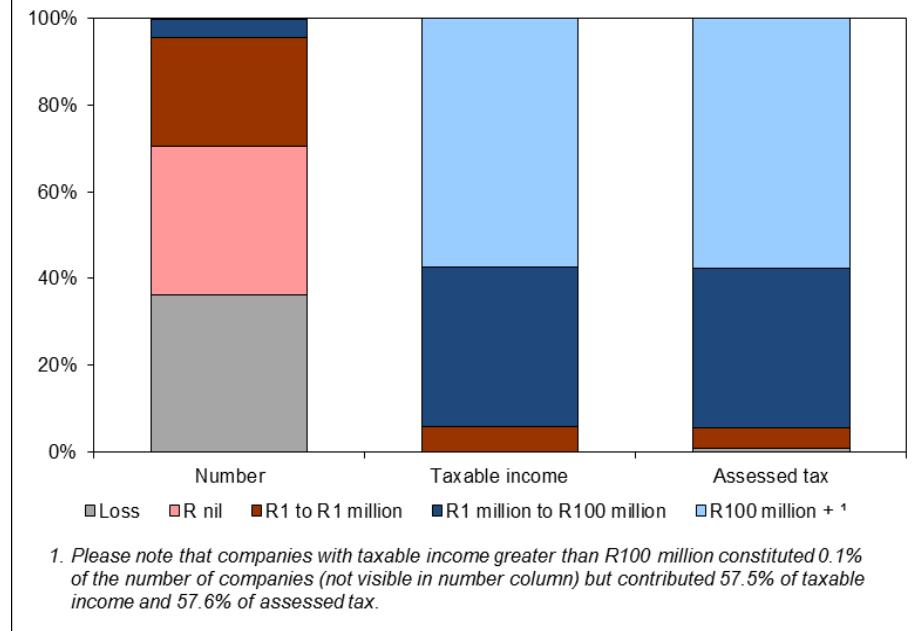

**Table 3.6: Number of companies, taxable income and tax assessed, 2010**

Taxable income	Number	Taxable income	Assessed tax	Effective rate
Loss	202 393	-375 850	775	N/A
R nil	193 357	-	36	N/A

R1 million to R100 million	23 626	153 644	43 591	28.4%
R100 million +	459	240 657	67 969	28.2%
<b>Total</b>	<b>559 954</b>	<b>418 560</b>	<b>118 006</b>	<b>28.2%</b>

*Figure 3.3* provides a distribution of the number of companies assessed and the tax assessed for the 2010 tax year.

# Company Income Tax

**Figure 3.3 Number of assessed companies, taxable income and tax assessed per taxable income group, 2010**

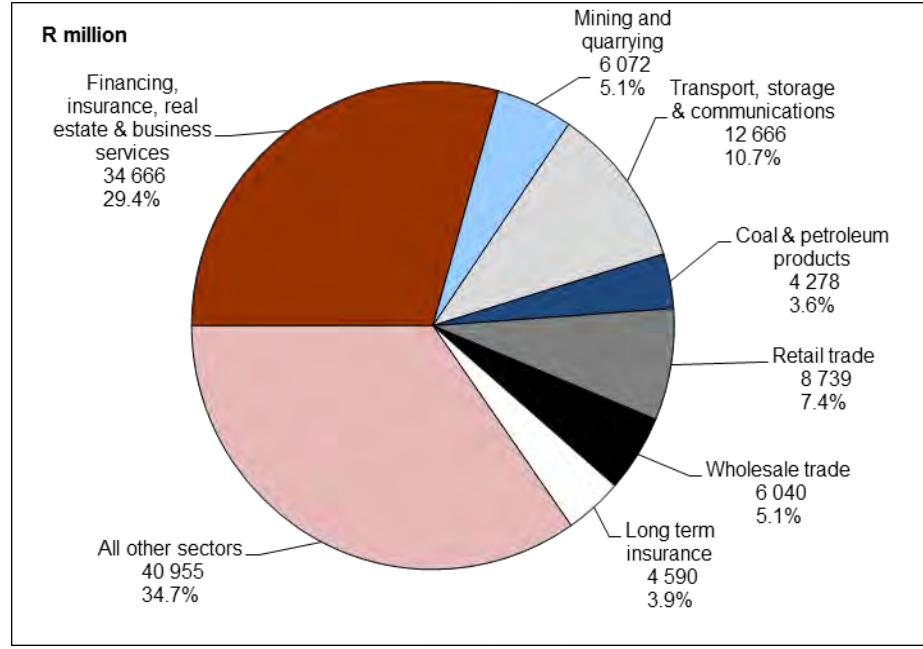

## TAXABLE INCOME AND TAX ASSESSED BY SECTOR

The Financing, insurance, real estate & business services sector is the largest sector, with over 35% of the total number of assessed companies. This sector accounts for 59% of net taxable income yet only contributes 29% of tax assessed in the 2010 tax year. The anomalous contribution can be explained by the extent of losses in other sectors where, for example, mining has a net taxable income of -5.9% yet is liable for 5.1% of the assessed tax.

Figure 3.4 shows tax assessed for the top sectors for the 2010 tax year.

**Figure 3.4 Companies tax assessed by sector, 2010**

# 2012 Tax Statistics

Table A3.4.1 shows the taxable income and tax assessed by sector for all companies.

Table A3.4.2 uses SARS's source of income codes as shown in Table A3.4.1 and reclassifies these codes according to the Standard Industrial Classification (SIC). It should be noted that SARS's source of income codes are not fully aligned with the SIC system used by Statistics South Africa.

Tables A3.4.3 to A3.4.5 shows the companies reporting positive, negative and zero taxable income respectively.

## COMPANIES WITH ASSESSED LOSSES OR PROFITS

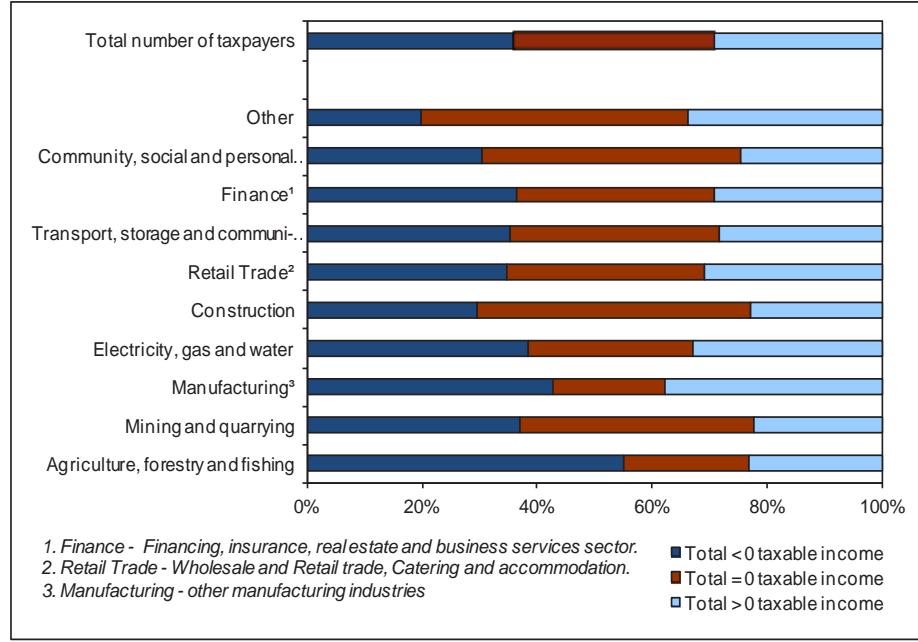

The Financing, insurance, real estate & business services sector is the sector which has the most number of companies with assessed losses followed by the Retail trade sector. For the 2010 tax year, these two sectors respectively accounted for 35.8% and 12.9% of all companies with assessed losses.

Table A3.5.1 shows the total number of companies with assessed losses or profits by sector.

## TAX ASSESSED BY MAIN SECTOR

Tables A3.6.1 to A3.9.2 show the number of taxpayers and tax assessed by main sector and taxable income group for each of the tax years. Figure 3.5 shows the distribution of taxpayers by main sector and taxable income groups for the 2010 tax year.

Figure 3.5 Number of taxpayers by main sector and taxable income group, 2010

# 4 VALUE-ADDED TAX

## KEY HIGHLIGHTS

For the 2011/12 fiscal year:

- VAT revenue collections improved moderately supported by growing real domestic household consumption;
- Domestic VAT payments increased by 7.4%, Import VAT increased by 23.9% while VAT refunds increased by 26.4%, the combined effect of the three resulting in year on year growth of 4.1%;
- Growth in domestic VAT payments came mainly from the Financing, insurance, real estate and business services sector, Agriculture, forestry & fishing and Coal & petroleum products sectors, offset by declines in the Vehicle, parts & accessories and construction sectors;
- VAT refunds grew in the Mining & quarrying, Coal & petroleum and Agriculture, forestry & fishing sectors due to increased capital expenditure. Furthermore, improved and faster processing of refunds were made possible by the introduction of modernised risk management algorithms;
- There were 652 349 registered VAT vendors of which 438 740 (67.3%) were active in making payments and receiving refunds:
  - 32.3% of VAT vendors were in the Financing, insurance, real estate and business services sector;
  - 87.1% of VAT vendors submitted returns on a bi-monthly basis;
  - Companies and close corporations made up 69.8% of VAT vendors; and
  - 46.3% of VAT vendors had a turnover of R1 million or less.
- Although only 8.9% of VAT vendors submitted returns on a monthly basis (others submit bi-monthly or bi-annually) they contributed 76.0% of VAT payments and received 88.2% of VAT refunds.

## INTRODUCTION

VAT is an indirect tax based on consumption of goods and services in the economy. Revenue is raised for the government by requiring traders or vendors to register and to charge VAT on taxable supplies of goods or services.

The essential characteristics of an indirect tax type such as VAT are as follows:

- The tax applies generally to transactions related to goods and services;
- It is proportional to the price charged for the goods and services;
- It is charged at each stage of the production and distribution process; and

# 2012 Tax Statistics

- The taxable person (vendor) may deduct the tax paid during the preceding stages, that is, the burden of the tax is on the final consumer.

The South African VAT system is destination based, which means that only the consumption of goods and services in South Africa is taxed. VAT is therefore paid on the supply of goods or services in South Africa, as well as on the importation of goods into South Africa.

This chapter only covers actual VAT payments and VAT refunds of registered VAT vendors. Import VAT collected from importers is dealt with separately in Chapter 5 and is based on declarations on Bills of Entry.

The mechanics of the VAT system are based on a subtractive or credit input method which allows a vendor to deduct the tax incurred on the vendor inputs (input tax) from the tax collected on the supplies made by the vendor (output tax). There are, however, some expenses upon which input tax cannot be claimed, such as the acquisition of motor cars and entertainment in most instances.

VAT charged on supplies made (output tax) less VAT paid to suppliers (input tax) is equal to the amount of VAT payable or refundable. VAT returns submitted result in either a payment, refund or a nil return.

VAT is currently levied at the standard rate of 14% on most goods and services and taxable supplies, whilst some provision is made for zero rating of supplies to assist the poor. A supplier of zero-rated supplies charges output tax at zero per cent. There is a wide range of basic food items as well as petrol, diesel and illuminating paraffin that are zero-rated. Exports are also zero-rated. Vendors making supplies at the standard or zero-rate are entitled to a deduction of input tax (at 14%) paid on goods or services acquired for the purpose of making such supplies.

Exempt supplies are not subject to VAT. An example of a VAT exempt supply is the rental of residential property. Unlike either standard-rated or zero-rated supplies, exempt supplies are not taxable activities, so a supplier of exempt goods or services is not allowed to claim input VAT in relation to the input side of those supplies.

This chapter gives an overview of:

- The number of registered VAT vendors;
- Domestic VAT: Payments and refunds;
- Input/output VAT; and
- Turnover of VAT vendors.

## NUMBER OF REGISTERED VAT VENDORS

The number of vendors registered for VAT purposes has been declining in the period under review. This was due to the introduction of additional registration and legislative requirements to improve authenticity of vendors thereby limiting the risk to the fiscus. For the purposes of *Table 4.1*, a vendor is regarded as active if a payment was either received or a refund was made to the vendor during the fiscal year.

**Table 4.1: Number of registered VAT vendors, 2008/09 – 2011/12**

Number Fiscal year	Registered <sup>1</sup>	Active vendors	Percentage of registered
2008/09	737 885	530 349	71.9%
2009/10	685 523	493 092	71.9%
2010/11	664 267	466 070	70.2%
2011/12	652 349	438 740	67.3%

1. As per register as at 31 March of each year.

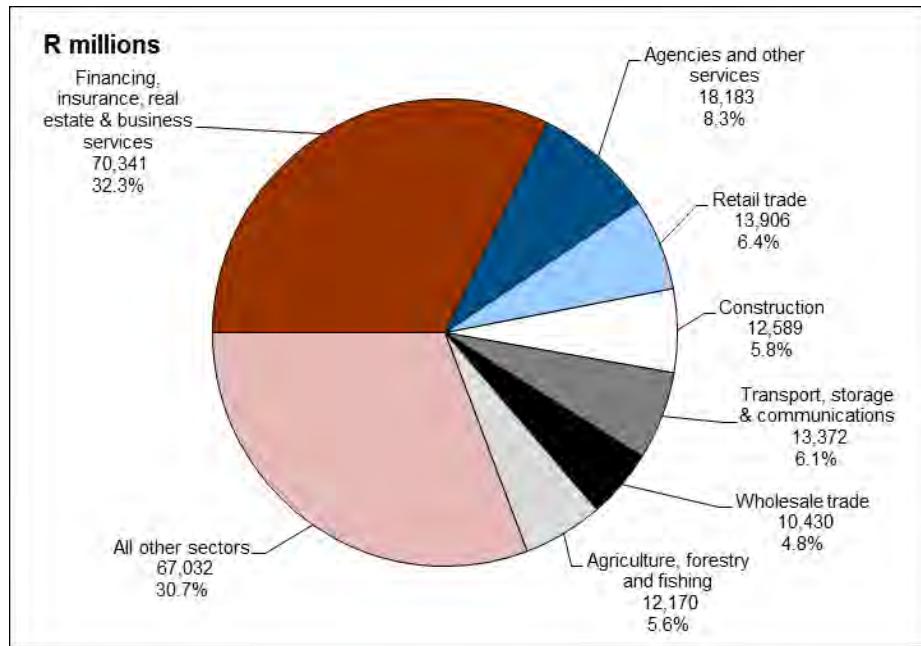

*Excludes coded cases where status is in suspense, estate and address unknown.*

## DOMESTIC VAT: PAYMENTS AND REFUNDS

### By sector

The largest number of VAT vendors for 2011/12 were in the Financing, insurance, real estate & business services sector (34.0%) followed by the Agriculture, forestry & fishing (13.3%) and the Retail trade (9.7%) sectors.

Vendors in the Financing, insurance, real estate & business services sector make the largest proportion of gross domestic VAT payments totalling R70 billion (32.3%) in 2011/12 (*Figure 4.1*). Only 0.5% of vendors are in the Mining & quarrying sector and contributed 3.2% of the total gross VAT payments for 2011/12 yet they received 24.7% of refunds. This makes the Mining sector a negative contributor to net VAT, due to the extent of mineral exports (zero- rated sales).

**Figure 4.1 Gross VAT payments by sector, 2011/12**

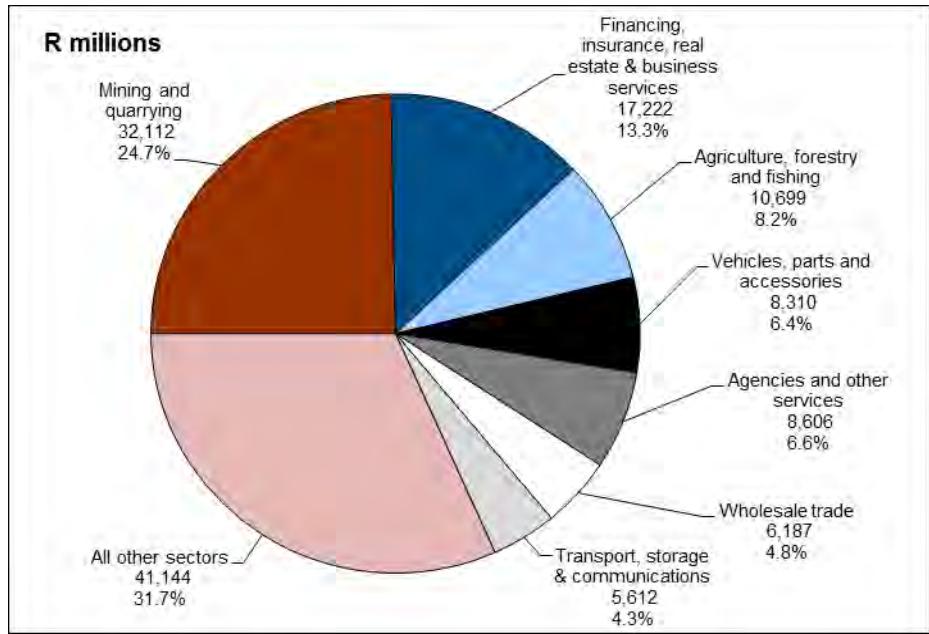

VAT refunds arise mainly when a vendor's input exceeds their output, which may occur as a result of the following:

- selling zero-rated items (exports or other zero-rated items);
- investing in capital projects; or
- restocking or selling merchandise below cost.

## 2012 Tax Statistics

VAT refunds were most prominent in the Mining & quarrying, Financing, insurance, real estate & business services and Agriculture, forestry & fishing sectors, as set out in *Figure 4.2*. *Table A4.1.1* shows the detailed number of vendors, payments and refunds per sector.

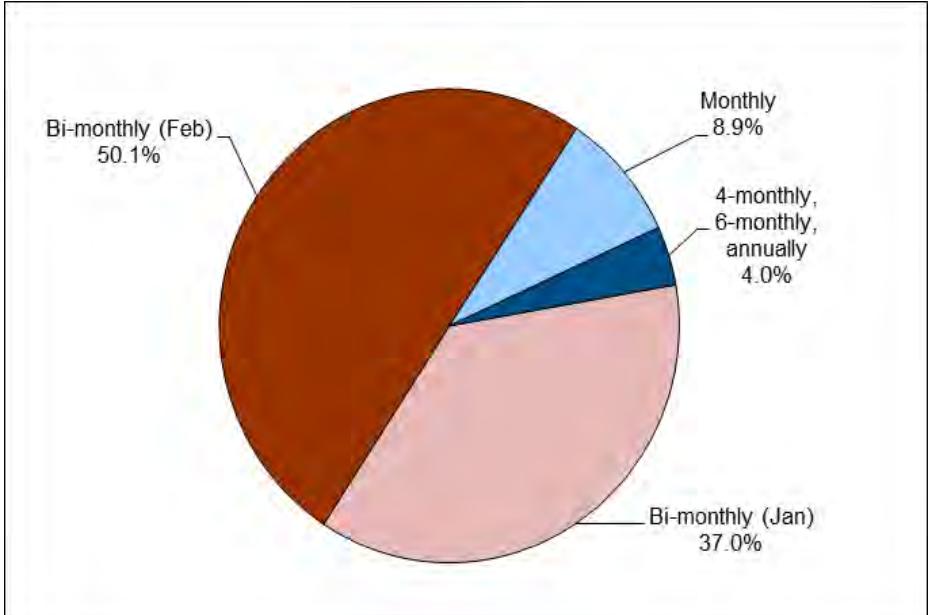

**Figure 4.2** Distribution of VAT refunds by sector, 2011/12

### By payment category

The VAT collected by the majority of vendors is usually paid over to SARS every two months, but in cases where the vendor's value of taxable supplies (turnover) in a 12-month periods exceeds R30 million, the vendor must account for VAT on a monthly basis. Certain farming enterprises are allowed to pay VAT on a bi-annual basis and small businesses with taxable supplies less than R1.5 million in any consecutive 12-month period may pay their VAT every four months.

**Figure 4.3** Distribution of VAT vendors by payment category, 2011/12

Close to 90% of vendors submit returns on a bi-monthly basis (*Figure 4.3*). However the 8.9% who submit on a monthly basis contribute over 76% of VAT payments and account for over 88% of VAT refunds.

Most vendors that submit monthly returns are from the Financing, insurance, real estate & business services sector followed by the Retail trade sector.

*Table A4.2.1* provides a summary of the VAT payments and refunds by payment category whilst *Tables A4.2.2 to A4.2.5* provide a breakdown of the payments and refunds by sector for the different payment categories.

### By type of enterprise

Companies and close corporations accounted for nearly 70% of VAT vendors for 2011/12 and contributed over 90% of the domestic VAT payments and close to 90% of the VAT refunds. Although individuals (sole proprietors) made up close to 20% of VAT vendors they only accounted for 3.1% and 1.7% of the total domestic VAT payments and refunds respectively.

*Table A4.3.1* shows a summary of domestic VAT payments and refunds by type of enterprise.

### INPUT/OUTPUT VAT

The input/output tables (*Tables A4.4.1 to A4.4.3*) indicate the values as per the actual VAT return submission (VAT201 form). The values for VAT payments and refunds do not tie-up exactly to the actual collections as shown in *Table A4.1.1* due to several reasons, including:

- adjustments may be made through the audit process;
- actual payments may not have been made and accrued to debt; and/or
- refunds may be delayed due to additional verification procedures.

The total values for output VAT and input VAT declared are the sum of all returns that also include the intermediate transactions between VAT vendors. As there is no output VAT payable on zero-rated goods and services, the output of these goods are not reflected in the output VAT, but the input VAT claimed thereon is included in the input VAT totals. Output VAT on exempt goods and services is either accounted for in total or partially while there is no claim for input VAT on these goods and services. In addition, changes in the use of goods and or changes in accounting practices as well as the write off of bad debts or the recovery of bad debts, is added to or subtracted from the total output VAT declared and input VAT claimed.

## 2012 Tax Statistics

Table 4.2 illustrates that, in 2011/12, for every R1 of domestic VAT payment there is a VAT refund of R0.59.

**Table 4.2: Relationship between domestic VAT payments and VAT refunds, 2008/09 – 2011/12**

Fiscal year	For each R1 Domestic VAT payment, there is VAT refunds of
2008/09	0.71
2009/10	0.59
2010/11	0.56
2011/12	0.59

The relationship between output and input VAT is best illustrated by calculating how much output VAT is declared to finally collect R1 in domestic VAT and how much input VAT is claimed to refund R1 in VAT.

For 2011/12 (*Tables 4.3 and A4.4.2*), for each R1 in domestic VAT collected:

- R3.33 in output VAT was declared ( $R740.8 \text{ billion} \div R222.4 \text{ billion}$ ) and
- R2.33 in input VAT was claimed ( $R518.4 \text{ billion} \div R222.4 \text{ billion}$ ).

Similarly for each R1 in VAT refunded (*Tables 4.3 and A4.4.3*):

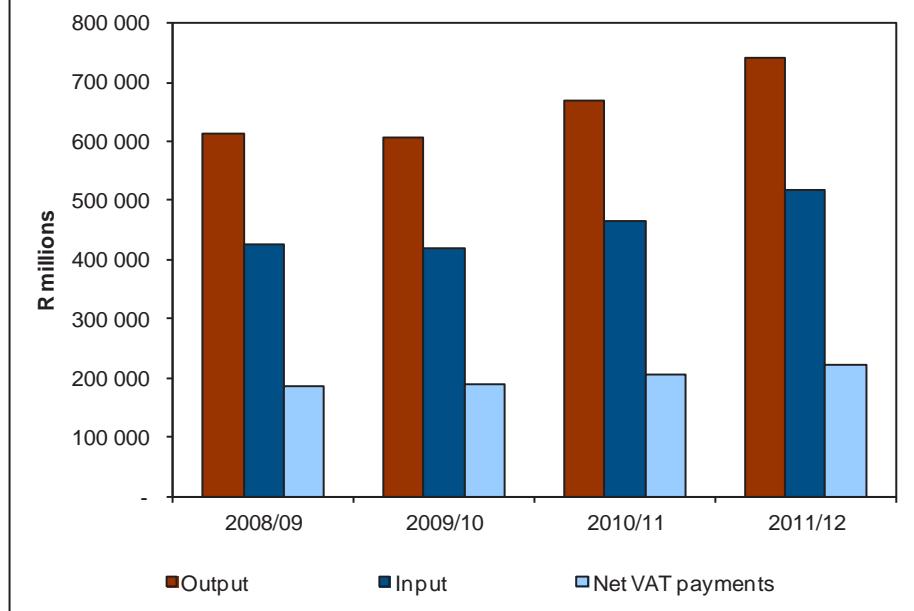

- R1.32 in output VAT was declared ( $R173.4 \text{ billion} \div R131.3 \text{ billion}$ ) and
- R2.32 in input VAT was claimed ( $R304.7 \text{ billion} \div R131.3 \text{ billion}$ ).

Table 4.3 illustrates that irrespective of whether the economy is growing or shrinking, the ratios move in a fairly narrow range. It is merely the quantum of the declarations that vary with the level of economic activity.

**Table 4.3: Output and Input VAT declared for each R1 domestic VAT collected and refunded, 2008/09 – 2011/12**

For each R1	Domestic VAT payments there is input claimed of	Domestic VAT payments there is output declared of	Net Domestic VAT payments	VAT refunded there is input claimed of	VAT refunded there is output declared of	Net VAT refunded
Fiscal year						
2008/09	-2.28	3.28	1.00	-2.35	1.35	-1.00
2009/10	-2.22	3.22	1.00	-2.27	1.27	-1.00
2010/11	-2.27	3.27	1.00	-2.40	1.40	-1.00
2011/12	-2.33	3.33	1.00	-2.32	1.32	-1.00

Certain sectors show significant departure from the aggregate ratios. For example, the mining sector which in 2011/12 claimed the most refunds of all sectors (R30.2 billion) declared only R0.53 in output VAT and claimed R1.53 in input VAT for each R1 in VAT refunds claimed. This is mainly due to the extent of their zero-rated export sales.

**Figure 4.4 Composition of Domestic VAT payments (output/input), 2008/09 – 2011/12**

The input and output relationship is also shown in *Figure 4.4* while *Tables A4.5.1* and *A4.5.2* show these ratios for each sector.

## DISTRIBUTION OF VENDORS BY TURNOVER GROUP

The turnover, as shown in *Table A4.6.1*, is based on a system calculated annualised turnover per vendor, which utilises the turnover as declared during the 12-month period of each fiscal year.

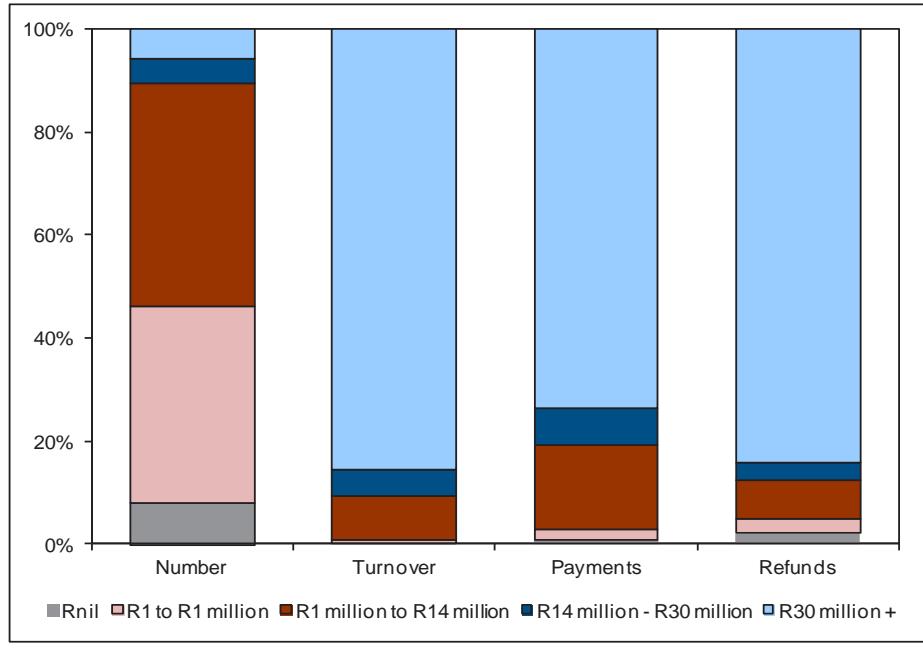

The manner in which the annualised turnover is calculated is described below:

- If a vendor, who is registered on a monthly basis, submitted all 12 returns on time for the period, the turnover would be calculated as the sum of the turnover declared on the 12 returns.
- However, if a vendor submitted fewer than the 12 required returns, the projected turnover would be calculated by dividing the turnover for the specific tax periods under review by the number of returns submitted and multiplying by 12 to obtain an annualised turnover, e.g. if a vendor submitted 10 returns, the turnover would be divided by 10 and multiplied by 12.

In 2011/12, close to 50% of VAT vendors had a turnover of R1 million or less. These vendors, however, accounted for only 3.0% of domestic VAT payments and 5.0% of VAT refunds. On the other hand, 1.9% of VAT vendors that had an annual turnover greater than R100 million accounted for 61.1% and 76.5% of domestic VAT payments and VAT refunds respectively.

## 2012 Tax Statistics

1. VAT exclusive.

# 5 IMPORT VAT AND CUSTOMS DUTIES

### KEY HIGHLIGHTS

For the 2011/12 fiscal year:

- Mainly as a result of strong imports in capital equipment and vehicles, Import VAT grew by 32.5% compared to the previous year;
- Machinery, mechanical appliances & electrical equipment contributed the most to VAT on goods imported (27.2%);
- Vehicles, aircrafts, vessels and associated transport equipment accounted for 31% of customs duties;
- The importation of associated transport equipment was the main contributor to *ad valorem* excise duties at 66.1%;
- Imports from Asia and Europe world zones accounted for more than 80% of the combined total Import VAT, customs duties and *ad valorem* excise duties; and
- The majority of imports originated from China and Germany at 20.5% and 11.9% of the combined total Import VAT, customs duties and *ad valorem* excise duties respectively.

### INTRODUCTION

VAT is levied on the importation of goods and services into South Africa, whilst customs duties are imposed on designated imported goods. Additional *ad valorem* customs duties are levied on a wide range of luxury or non-essential items such as perfumes, firearms and games. These import duties are levied with the aim of raising revenue from the upper end consumers and protecting the local market.

This chapter gives an overview of Import VAT, customs duties and *ad valorem* excise duties (Duty 1-2B).

### IMPORT VAT, CUSTOMS DUTIES AND AD VALOREM EXCISE DUTIES (DUTY 1-2B)

Import VAT is levied at a rate of 14% on the importation of goods into South Africa with certain imported goods being exempted in terms of the VAT Act of 1991. This includes goods destined for the SACU member countries (BLNS).

The value that is placed on the importation of goods is deemed to be the value of goods for customs duty purposes as well as any duty the Customs and Excise Act levies on the importation plus 10% of that value. However, if the goods originated from a SACU member country the value is not increased by the 10%.

# 2012 Tax Statistics

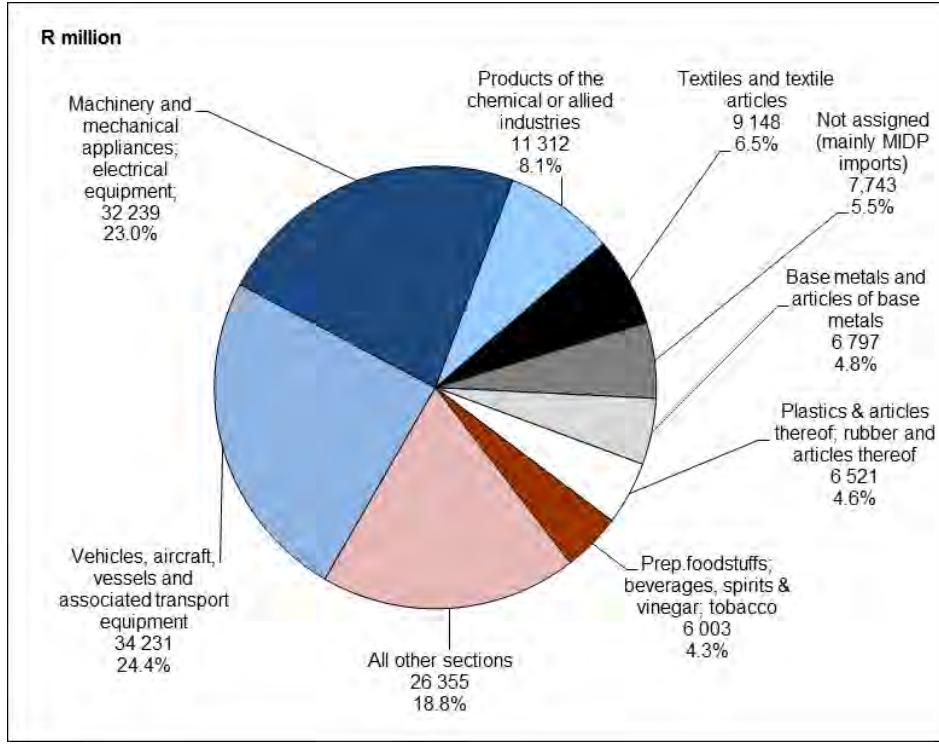

Customs values are set by the General Agreement on Tariffs and Trade (GATT) valuation code which has six valuation methods. The majority of goods are valued using method one, which is the actual price paid or payable by the buyer of the goods. The "free-on-board" price forms the basis for the value, but allows for certain deductions (such as interest charged on extended payment terms) and additions (such as certain royalties).

These customs values are declared to Customs on a Bill of Entry (BOE) at the time of importation. The tables in this chapter reflect the values as processed on these BOE transactions and will therefore differ from the actual cash payments received.

## By customs section

Table A5.1.1 shows the customs value of imports, import VAT, customs duties and *ad valorem* excise duties by customs section while Figure 5.1 shows the top combined import VAT, customs duties and *ad valorem* sections.

Figure 5.1 Import VAT, customs and *ad valorem* duties by section, 2011/12

The Machinery & mechanical appliances, electrical equipment section accounts for the largest **customs value** of goods imported in 2011/12 (20.0%), followed by Mineral products (16.8%) & vehicles, aircraft, vessels & associated transport equipment (13.1%).

**Import VAT** for 2011/12 was largely collected from the importation of Machinery & mechanical appliances, electrical equipment (27.2%), Vehicles, aircraft, vessels & associated transport equipment (20.4%) and Products of the chemical & allied industries (10.2%).

The largest contributor of **customs duties** for 2011/12 was vehicles, aircraft, vessels & associated transport equipment (31.0%), Textiles & textile articles (16.4%) and Prepared foodstuffs, beverages, spirits & vinegar (9.7%).

## Import VAT and Customs Duties

**Ad valorem excise duty** revenues (Duty 1-2B) for 2011/12 were mostly collected from the importation of Vehicles, aircraft, vessels & associated transport equipment (66.1%) and Machinery & mechanical appliances, electrical equipment (30.5%).

### By world zone and selected trade blocs

Imports from Asia and Europe accounted for 83.1% of the combined total Import VAT, customs duties and *ad valorem* excise duties followed by the Americas at 12.7%.

Table A5.2.1 contains the combined total of Import VAT, customs duties and *ad valorem* duties (Duty 1-2B) by world zone for 2011/12, as well as selected trade blocs.

### By country of origin

The top 5 countries of origin (i.e. China, Germany, UK, USA and Japan) account for over half of the combined total Import VAT, customs duties and *ad valorem* excise duties for 2011/12.

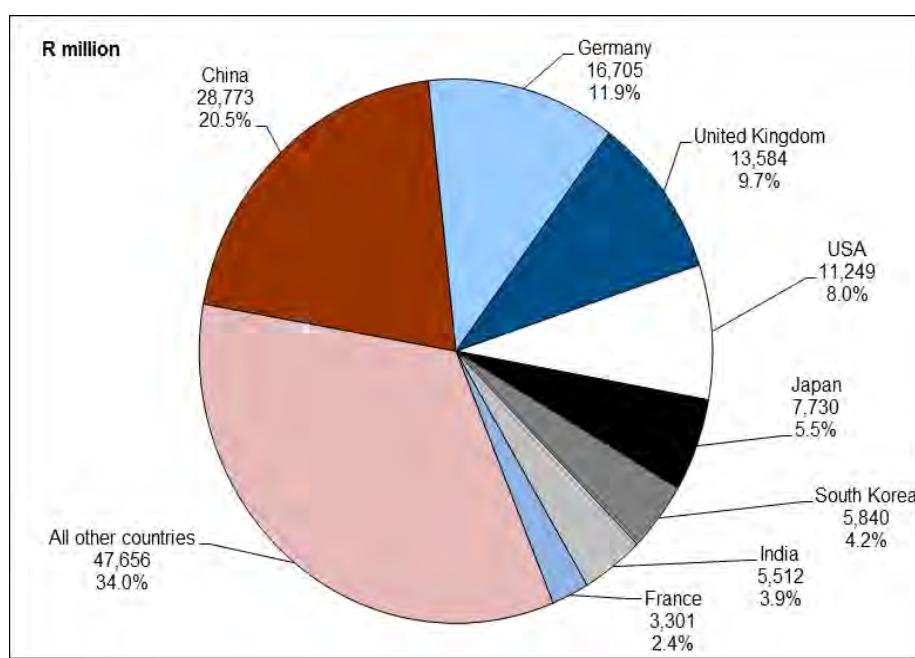

During 2011/12, China and Germany continued to be the largest originators of goods coming into South Africa making up 20.5% and 11.9% of the combined total Import VAT, customs duties and *ad valorem* excise duties respectively.

From China, the imported goods with the highest customs value and Import VAT were computers; the goods incurring the most customs duties were footwear whilst the largest contributors to *ad valorem* excise duties were cellular phones and videophones.

From Germany, the imported goods with the highest customs value and Import VAT were Motor Industry Development Programme (MIDP) automotive parts, while the goods attracting the most customs duties and *ad valorem* excise duties were motor vehicles.

Table A5.3.1 and Figure 5.2 show the Top-25 countries by origin sorted on the 2011/12 combined total of Import VAT, customs duties and *ad valorem* duties (Duty 1-2B).

**Figure 5.2 Import VAT, customs and *ad valorem* duties by country of origin, 2011/12**

1. As per Bill of Entry processed and not actual revenue collected.

2. Duty 1-2B refers to the ad valorem excise duties on imports.

3. The majority of the not assigned group constitutes MDF imports.

2. Total of import VAT, Customs duties and Duty 1-2B.

# GLOSSARY

*Ad valorem* excise duties

These duties are levied on certain selected locally manufactured goods. The duties are levied at the same rate of duty on imported goods of the same class or kind and are levied on those items specified in schedule 1 Part 2B of the Harmonized System.

Air passenger departure tax

Is a tax imposed on international air travel. As from 1 October 2011 fee-paying passengers departing on international flights pay a tax of R190 per passenger. Passengers flying to Botswana, Lesotho, Namibia and Swaziland (BLNS countries) pay R100 per passenger.

BLNS countries

South Africa is one of the five signatories to the Southern African Customs Union (SACU) agreement with Botswana, Lesotho, Namibia and Swaziland (so called BLNS countries).

Capital gains tax (CGT)

This tax was introduced in October 2001 and forms part of the income tax system and is based on capital gains made upon the disposal of assets.

CO<sub>2</sub> tax on motor vehicle emissions

The main objective of this tax is to influence the composition of South Africa's vehicle fleet to become more energy efficient and environmentally friendly.

Company income tax (CIT)

Comprises provisional and assessed taxes paid by companies (net of refunds).

Cost of revenue collection

Is an indication of the efficiency with which revenue is collected.

Customs duties/import duties

These are levies imposed on goods imported into South Africa. Import duties are imposed as a means to protect certain local producers. They also include anti-dumping and countervailing duties.

Diamond export levy

The objective of the levy is to stimulate the local diamond polishing industry. The levy rate is 5% calculated on the value of the unpolished or rough diamond as released for export from the Diamond Exchange and Export Centre.

Direct taxes

Taxes charged on taxable income or capital of individuals and legal entities.

## 2012 Tax Statistics

Donations tax

This tax is levied at a flat rate of 20% on the value of the donation. The first R100 000 donated in each year by a natural person is exempt from donations tax. In the case of a taxpayer who is not a natural person, the exempt donations are limited to casual gifts not exceeding R10 000 per year in total. Dispositions between spouses and donations to certain public benefit organisations are exempt from donations tax.

Duty 1-2B

Refers to the *Ad valorem* excise duties on imports.

Electricity levy

This is a levy applied to electricity generated from non-renewable and nuclear energy sources at 2.5c/kWh from 1 April 2011. Some of this revenue is set aside to fund the rehabilitation of roads damaged as a result of the haulage of coal for electricity generation.

Employees' tax

Is a tax that employers must deduct from the employment income of employees – such as salaries, wages and bonuses - and pay over to SARS monthly. It is withheld daily, weekly, or monthly, when these amounts are paid or become payable to the employees. See *Pay-as-you-earn (PAYE)*.

Environmental levy

Introduced with the purpose of protecting and conserving the local and global environment. See also *Plastic bags levy*, *Incandescent light bulb levy*, *electricity levy* and *CO<sub>2</sub> tax on motor vehicle emissions*.

Estate duty

Is calculated at a rate of 20% on the dutiable amount of the estate. Certain admissible deductions from the total value of the estate are allowed.

Excise duties

Are levied on certain locally manufactured goods and on their imported equivalents. This duty is levied as a specific duty on tobacco and liquor products, and as an *ad valorem* duty on cosmetics, televisions, audio equipment and motor cars. Relief from excise duty is available where excisable products are exported.

Gross domestic product (GDP)

A measure of the total national output, income and expenditure in the economy.

Great Recession

Reference to the recession that started in December 2007 in terms of the Great Depression of the 1930s. Generally, the Great Recession lasted longer and was more severe than prior recessions. However, the severity of economic decline has not eclipsed the levels reached by the Great Depression.

## Glossary

Fiscal drag	Is the effect of inflation on effective tax rates. When salaries are adjusted to compensate for the effect of inflation on the value of money, the taxpayer is pushed into a higher income tax bracket where higher rates apply. In this way the individual's effective tax rate is increased, even though real incomes may not be increasing.
Fiscal year	Is the financial year of government i.e. from 1 April to 31 March of the subsequent year.
Fuel levy	Is a specific excise tax imposed in terms of the Customs and Excise Act. Relief is available through a diesel refund system for farming activities, forestry, mining, offshore vessels, harbour vessels, locomotives used for rail freight, and large electricity generation plants.
Harmonised system	Is essentially, the system according to which all internationally traded products, components, or commodities are classified and is also known as the International Convention on the Harmonised Commodity Description and Coding System (Harmonised System).
Incandescent light bulb levy	Was introduced as from 1 October 2009 to promote energy efficiency and reduce electricity demand. Energy-saving light bulbs last longer, require five times less electricity and result in lower greenhouse gas emissions. The environmental levy of about R3 per bulb (between 1 cent and 3 cents per watt) is levied on incandescent light bulbs at the manufacturing level and on imports.
Income tax	Is a tax on income and profit and is levied on individuals, companies and trusts. It is the national government's main source of income and is imposed by the Income Tax Act 58 of 1962.
Indirect taxes	Are taxes imposed on goods and services (e.g. VAT) rather than on individuals or companies. See also <i>Direct taxes</i> .
Input VAT	Is when a vendor buys goods or services from another supplier, VAT is charged on the purchase price.
Marginal income tax rate	The rate of tax on an incremental unit of income.
Mineral and petroleum resource royalty	A levy imposed on exploration and extraction of minerals and petroleum resources. This levy took effect from 1 March 2010.

# 2012 Tax Statistics

**Motor Industry Development Programme (MIDP)**

Is a programme that was implemented on 1 September 1995. This programme has been reviewed twice since then and will continue until 2012. The MIDP consists of three distinctive key areas: Light motor vehicle manufacturers; Medium and heavy motor vehicle manufacturers; and Local Component manufacturers. Participants save money in the form of a reduction on import duties due to the incentives of the MIDP programme.

**National Revenue Fund**

The fund is the consolidated account of the national government into which all taxes, fees and charges collected must be paid.

**Non-tax revenue**

Is income received by the government in the form of interest and dividends (from parastatals, public entities) and as a result of administrative charges, licences, fees, and sales of goods and services.

**Output VAT**

Is the VAT charged by a vendor when they sell their own goods or services.

**Pay-As-You-Earn (PAYE)**

Is a tax that employers deduct from the employment income of employees this ensures that an employee's income tax liability is settled in a continuing fashion, at the same time that the income is earned. See also *Employees tax*.

**Personal income tax (PIT)**

Comprises all assessed and provisional taxes as well as PAYE paid by individuals (net of refunds).

**PGMs**

Platinum group metals (PGMs) are found as a compound which includes six pure metals with high melting points: platinum (Pt), palladium (Pd), rhodium (Rh), iridium (Ir), osmium (Os) and ruthenium (Ru); as well as gold and base metals such as nickel, copper and cobalt. In addition to their oxidation and reduction properties, these metals have the ability to stay stable at high temperatures and are extremely resistant to corrosion.

**Plastic bags levy**

Is a tax on certain types of plastic shopping bags. The levy aims to encourage the reuse of these bags.

**Primary rebate**

Is a reduction in income tax that is available to all taxpayers.

**Progressive tax**

Is a system of taxation that collects proportionately more from the rich than from the poor.

Provisional tax (companies)	For any given tax year, are paid in three instalments: the 1 <sup>st</sup> due six months into the company's tax year; the 2 <sup>nd</sup> at the end of the tax year; and the 3 <sup>rd</sup> six months after the end of the tax year (unless the tax year ends at the end of February, then the third is due seven months after the end of the tax year). The majority of provisional tax payments from companies are received during March, June, September and December.
Provisional tax (individuals)	Is a system that makes taxpayers provide for their final tax liability by paying two amounts during the course of the year of assessment, and a third payment 7 months after the end of the year of assessment.
Provisional tax (paragraph 19(3))	Paragraph 19(3) of the Fourth Schedule to the Income Tax Act allows the Commissioner to call upon the taxpayer to justify an estimate made by the taxpayer, or to provide particulars of income and expenditure or any other particulars that may be required for the year of assessment in respect of which the provisional tax payment is being made. If the Commissioner is not satisfied with the estimate, he may increase it to an amount that he considers reasonable.
Provisional tax (80% rule)	The 80% rule requires taxpayers with taxable income in excess of R1 million to settle at least 80% of their tax liability by the time they make their second provisional payment. This change was implemented for companies with year ends after 1 March 2009.
Residence based tax system	Is a system where residents are taxed on their worldwide income, irrespective of where their income was earned.
Secondary tax on companies (STC)	Tax on dividends declared by a company, calculated at the rate of 10% (12.5% prior to 1 October 2007) of the net amount of dividends declared.
Securities transfer tax (STT)	Is a tax levied on every transfer of a security and is levied at a rate of 0.25%. This tax was known as Uncertificated securities tax prior to 1 July 2008.
Skills development levy (SDL)	Is a compulsory levy to fund training by companies. The rate is 1% of a company's total payroll and is payable by employers that are registered with SARS for employees' tax purposes and which have an annual payroll of more than R500 000 (R250 000 before 1 August 2005).
Southern African Customs Union (SACU)	An agreement that allows for the unrestricted flow of goods and services, and the sharing of customs and excise revenue between South Africa, Botswana, Namibia, Lesotho and Swaziland.

## 2012 Tax Statistics

Specific excise duty	Is a tax on each unit of output or sale of goods, unrelated to the value of the goods e.g. alcoholic beverages or cigarettes.
Stamp duty	Was levied on leases of fixed property and until June 2008 on the registration of transfer of unlisted marketable securities. This tax was abolished with effect from 1 April 2009.
Tax amnesty	A period allowed by tax authorities during which taxpayers who are outside the tax net, but should be registered for tax purposes, can register for tax or disclose previously unreported taxable income without incurring penalties.
Tax base	The aggregated value of income, sales or transactions on which particular taxes are levied.
Tax buoyancy	It is a measure of the ratio of change in tax revenue given the change in the tax base (GDP).
Tax on retirement funds (TRF)	Was a tax levied on the gross interest, net rental and foreign dividend income of retirement funds i.e. pension, provident and retirement annuity funds. This tax was abolished in 2007.
Tax-to-GDP ratio	For public finance comparison purposes, a country's tax burden or tax-to-GDP ratio is computed by taking the total tax payments for a particular fiscal year as a fraction or percentage of the GDP for that year.
Tax revenue	In terms of the System of National Accounts (SNA), tax revenue is defined as "a compulsory, unrequited payment to government".
Tax year	Is the 12-month period for which tax is calculated. For individuals it starts on 1 March and ends at the end of February the following year, and for companies it is normally the financial year of the company for financial reporting purposes.
Taxable income	Refers to the income of an individual or a company which is subject to tax. This is not the same as actual income, as exemptions may apply and deductions may be claimed such as medical expenses in the case of individuals or depreciation, in the case of companies.

## Glossary

### Transfer duties

From 23 February 2011 to date this duty is payable by all persons when they acquire property as per a graduated rate that starts at 3% of the value above R600 000 and ends at a rate of 8% of the value exceeding R1.5 million.

### Turnover tax

Is a simple tax that was introduced for micro businesses with a turnover not exceeding R1 million per annum. The objective is to reduce the tax compliance and administrative burden by simplifying and reducing the number of returns that have to be filed. This tax was introduced with effect from 1 March 2009.

### Uncertificated securities tax

See *Securities transfer tax*.

### Value-added tax (VAT)

Is levied at a standard rate of 14% on most goods and services subject to certain exemptions, exceptions and zero-ratings, provided for in the VAT Act (1991). VAT is levied on the supply of all goods and services rendered by registered vendors. VAT is also levied on the importation of goods and services into South Africa.
