## Expenditure trends

The bulk of spending in this programme goes towards compensation of employees and related goods and services items, mainly due to the labour intensive nature of the *Offender Development* and *Psychological, Social and Spiritual Services* subprogrammes. Over the medium term, the spending focus will be on providing offenders with opportunities for personal development and providing psychological, social work and spiritual care services, as reflected in the bulk of the spending in the *Offender Development* and *Psychological, Social and Spiritual Services* subprogrammes. Using funds allocated to these subprogrammes between 2014/15 and 2016/17, the department aims to increase the number of offenders taking part in skills training and further education and training college programmes, from a projected 6 863 in 2014/15 to 8 306 in 2016/17.

Expenditure on goods and services increased between 2010/11 and 2013/14 to provide for the purchase of additional material, supplies, transport costs and fuel for processing items and products in departmental

production workshops and agricultural activities. Payments for capital assets also increased over this period as a result of the ongoing replacement of equipment in production workshops and agricultural facilities countrywide.

The significant increase in expenditure in the *Correctional Programmes* subprogramme in 2013/14 is due to the department prioritising increased offender involvement in programmes. The increase in expenditure in the *Psychological, Social and Spiritual Services* subprogramme in the same year is due to an increase in the number of offenders using the services this subprogramme offers as a result of intensified awareness programmes. The increases in spending on clothing material and accessories and farming supplies in 2013/14 is due to the reclassification of budget items implemented from 1 April 2013.

The programme had a funded establishment of 2 245 posts, and 1 post is filled additional to the establishment. The 271 vacancies at the end of December 2013 can be attributed to natural attrition and the length of time it takes to finalise recruitment processes. The department expects to fill all vacancies in this programme in the last quarter of 2013/14, following the decentralisation of post advertisements to regions as part of the effort to expedite the filling of vacant posts. As such, the compensation of employees spending is expected to grow significantly between 2012/13 and 2016/17.

## Programme 4: Care

### Objectives

- Improve nutritional services to inmates by maintaining the provision of therapeutic diets at 10 per cent of the total inmate population over the MTEF period.
- Maintain the health and personal wellbeing of offenders by:
  - increasing the number of inmates tested for HIV from 50 per cent in 2012/13 to 90 per cent in 2016/17
  - increasing the percentage of inmates on antiretroviral therapy from 94 per cent in 2012/13 to 97 per cent in 2016/17
  - increasing the tuberculosis cure rate from a projected 75 per cent in 2013/14 to 85 per cent in 2016/17.

### Subprogrammes

- *Nutritional Services* funds the provision of appropriate meals to inmates within correctional centres and remand detention facilities according to the prescripts of the Department of Health. Key activities include: ensuring adherence to applicable legislation, policies, guidelines, norms and standards for nutritional services; facilitating the training of food service officials on the relevant departmental policies, procedures, and norms and standards; and monitoring the provision of the required resources in the food service units for the provision of food services. In 2012/13, 26 food service units were provided with the required resources (human, equipment and facilities). By the end of September 2013, 79 food service units had been provided with the required resources, against a 2013/14 target of 80 food service units. The subprogramme had a staff complement of 596 in 2012/13, and an estimated staff complement of 618 in 2013/14.
- *Health Services* funds the provision of primary health care services in line with the prescripts of the Department of Health, for inmates within correctional centres and remand detention facilities. Key activities include: ensuring adherence to applicable legislation, policies, guidelines, norms and standards for primary health care services and pharmaceutical services; and facilitating the development of health care professionals. In 2012/13, 65 per cent of inmates who were eligible for antiretroviral treatment were receiving treatment, and 96.8 per cent of inmates diagnosed with mental illnesses were placed under appropriate treatment. By the end of September 2013, 97.1 per cent of inmates who were eligible for antiretroviral treatment were receiving treatment, and 99 per cent of inmates diagnosed with mental illnesses were placed under appropriate treatment, against 2013/14 targets of 100 per cent. The subprogramme had a staff complement of 1 074 in 2012/13, and an estimated staff complement of 1 145 in 2013/14.
- *Hygienic Services* funds the promotion of a hygienic environment and inmates' personal hygiene in correctional centres and remand detention facilities in line with the prescripts of the Department of Health. Key activities include: ensuring adherence to applicable legislation, policies, guidelines, norms and standards for personal and environmental hygiene services; and facilitating the training of environmental hygiene

officials on the relevant departmental policies, procedures, norms and standards. In 2012/13, there were 11 management areas with effectively managed health care waste services. By the end of September 2013, there were 28 management areas with effectively managed health care waste services, against a 2013/14 target of 30 management areas. The subprogramme had a staff complement of 8 in 2012/13, and an estimated staff complement of 10 in 2013/14.

<sup>2</sup> Rand million.

## Expenditure trends

The bulk of spending in the programme goes towards goods and services, specifically agency and support services for outsourced catering services, and food and food supplies, and its two largest subprogrammes are *Nutritional Services* and *Health Services*. Using funds allocated to these subprogrammes between 2010/11 and 2012/13, the department managed to improve nutritional services to inmates by renovating 26 food service units and providing them with adequate resources (human, equipment and facilities), and to enhance access to health care services by increasing the number of inmates on antiretroviral therapy from 8 091 to 11 814.

Over the medium term, the spending focus will be on providing health care services to inmates in order to improve treatment for HIV and AIDS, tuberculosis and sexually transmitted infections, as well as to promote personal hygiene services. As a result, expenditure on medicine is expected to increase significantly from 2014/15 onwards to provide for improved access to treatment. The percentage of inmates tested for HIV will be increased from 50 per cent in 2012/13 to 90 per cent in 2016/17, and the percentage of HIV positive inmates on antiretroviral therapy will be increased from 96 per cent in 2012/13 to 97 per cent in 2016/17.

Between 2010/11 and 2013/14, the increase in expenditure in the *Hygiene Services* subprogramme was because more inmate clothing items were stocked in 2011/12 and 2013/14, while the increase in spending on consumable supplies in 2013/14 is due to a reclassification of budget items implemented from 1 April 2013. The decrease in expenditure on food and food supplies in 2013/14 was due to the department's initial consideration to use internal resources for catering services at large correctional centres where these services are outsourced. However, this did not happen because of capacity shortages.

The programme has a funded establishment of 1 904 posts, and 3 posts are filled additional to the establishment. The 164 vacancies at the end of December 2013 can be attributed to natural attrition and the length of time it takes to finalise recruitment processes. Vacancy levels are expected to drop in 2014/15 due to the decentralisation of post advertisements to regions in 2013/14 as part of efforts to expedite the filling of vacant posts.

## Programme 5: Social Reintegration

### Objectives

- Improve the effectiveness of the parole system by:
  - increasing the percentage of cases considered by correctional supervision and parole boards from 70.3 per cent in 2012/13 to 97 per cent in 2016/17
  - increasing the percentage of persons placed under the system of electronic monitoring from a projected 0.69 per cent in 2013/14 to 2.6 per cent in 2016/17
  - increasing the percentage of parolees without violations from a projected 79.6 per cent in 2013/14 to 82.9 per cent in 2016/17
  - increasing the percentage of probationers without violations from a projected 80 per cent in 2013/14 to 83 per cent in 2016/17.
- Facilitate the social acceptance and effective reintegration of offenders into society by:
  - increasing the number of victims who participate in restorative justice programmes (victim/offender mediations and victim/offender dialogues) from a projected 1 750 in 2013/14 to 2 500 in 2016/17
  - increasing the number of parolees reintegrated through halfway house partnerships from a projected 50 in 2013/14 to 140 in 2016/17.

### Subprogrammes

- *Parole Administration* funds the activities of correctional supervision and parole boards, and ensures that eligible offenders are considered for parole. In 2012/13, 1 215 victims of crime made representations at parole hearings, and correctional supervision and parole boards considered 70.3 per cent of eligible cases submitted by case management committees. By the end of September 2013, 748 victims of crime had made representations at parole hearings, and correctional supervision and parole boards had considered

82.1 per cent of eligible cases, against targets of 1 060 and 94 per cent in 2013/14. The subprogramme had a staff complement of 123 in 2012/13, and an estimated staff complement of 136 in 2013/14.

- *Supervision* funds the effective administration and supervision of offenders placed under correctional and parole supervision. There are 217 community corrections offices countrywide and a daily average supervision caseload of 63 054 offenders. In 2012/13, the percentage of paroles without violations stood at 84.9 per cent. By the end of September 2013, the percentage of paroles without violations stood at 94.2 per cent, against a 2013/14 target of 79.9 per cent. The subprogramme had a staff complement of 1 649 in 2012/13, and an estimated staff complement of 1 788 in 2013/14.
- *Community Reintegration* funds the reintegration of offenders into society, as well as stakeholder management in relation to community reintegration. Key activities include: establishing partnerships with non-profit organisations and other stakeholders in opening halfway houses; running public education and awareness programmes; and encouraging dialogue between victims and offenders in order to restore relationships. In 2012/13, the department developed a policy and procedure framework for halfway houses and successfully launched one halfway house pilot in Naturena, Johannesburg. By the end of September 2013, the department had achieved 3 service level agreements on halfway houses, against a 2013/14 target of 6 halfway houses. The subprogramme had a staff complement of 62 in 2012/13, and an estimated staff complement of 64 in 2013/14.
- *Office Accommodation: Community Corrections* funds the provision of community corrections offices to enhance community reintegration. Key activities include: maintaining community corrections offices lease agreements and procuring additional office space. At the end of 2012/13, a draft concept document on the decentralisation of community corrections offices was under development. By the end of September 2013, the document was circulated and branches and regions were consulted on it. The document is expected to be approved by the end of 2013/14. The subprogramme has no staff complement, as its activities are carried out by members in the *Facilities* subprogramme under the *Incarceration* programme.

2. Rand million.

## Expenditure trends

The bulk of this programme's spending goes towards compensation of employees and related goods and services items, due to the labour intensive nature of its largest subprogramme, *Supervision*. The focus of spending over the medium term will be on the effective supervision of offenders placed under the system of community corrections and the facilitation of their social reintegration into communities. As a result, using funds allocated to the *Supervision* and *Community Reintegration* subprogrammes, the department plans to increase the percentage of parolees without violations from a projected 79.6 per cent in 2013/14 to 82.9 per cent in 2016/17, and the number of parolees reintegrated through halfway house partnerships from a projected 50 in 2013/14 to 140 in 2016/17. Expenditure on contractors is also expected to increase over this period to provide for the rollout of electronic monitoring. Plans are under way to increase the number of persons placed under electronic monitoring from 150 in 2013/14 to 1 000 in 2016/17.

Between 2010/11 and 2013/14, expenditure in the *Parole Administration* subprogramme increased significantly due to the filling of vacant posts for correctional supervision and parole boards, while the increased spending on the *Office Accommodation: Community Corrections* subprogramme in 2013/14 provides for escalations in community corrections offices lease agreements and the procurement of additional office space. The increased provision under the *Community Reintegration* subprogramme from 2012/13 onwards is for the implementation of victim/offender dialogues in correctional centres and society, while the increases in spending on fleet services in 2013/14 is due to a reclassification of budget items implemented from 1 April 2013.

The programme had a funded establishment of 2 078 posts, of which 106 were vacant at the end of December 2013. These vacancies can be attributed to natural attrition and the length of time it takes to finalise recruitment processes. Vacancy levels are expected to drop in 2014/15 due to the decentralisation of post advertisements to regions in 2013/14, as part of efforts to expedite the filling of vacant posts.

Executive authority Minister of Defence and Military Veterans

Accounting officer Secretary for Defence

Website address [www.dod.mil.za](http://www.dod.mil.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Defend and protect the Republic of South Africa, its territorial integrity and its people, in accordance with the Constitution and the principles of international law regulating the use of force. Provide for military veterans' benefits.*

### Mandate

The Department of Defence derives its mandate from the Defence Act (2002), as amended by the Defence Amendment Act (2010), as well as the 1996 White Paper on Defence and the 1998 Defence Review. The department is required to provide, manage and employ defence capabilities that are commensurate with the needs of South Africa.

### Strategic goals

The department's strategic goals over the medium term are to:

- conduct ordered defence commitments in accordance with government policy and strategy
- provide mission ready defence capabilities
- provide sound defence direction
- ensure defence compliance with the regulatory framework.

### Programme purposes

#### Programme 1: Administration

**Purpose:** Develop policy, and provide management and administration for the Department of Defence; and provide for military veterans' benefits through the Department of Military Veterans.

#### Programme 2: Force Employment

**Purpose:** Provide and employ defence capabilities, including an operational capability, to successfully conduct all operations as well as joint, interdepartmental and multinational military exercises.

**Programme 3: Landward Defence**

**Purpose:** Provide prepared and supported landward defence capabilities for the defence and protection of South Africa.

**Programme 4: Air Defence**

**Purpose:** Provide prepared and supported air defence capabilities for the defence and protection of South Africa.

**Programme 5: Maritime Defence**

**Purpose:** Provide prepared and supported maritime defence capabilities for the defence and protection of South Africa.

**Programme 6: Military Health Support**

**Purpose:** Provide prepared and supported health capabilities and services for the defence and protection of South Africa.

**Programme 7: Defence Intelligence**

**Purpose:** Provide defence intelligence and counter intelligence capability.

**Programme 8: General Support**

**Purpose:** Provide general support capabilities and services to the department.

**Selected performance indicators****Table 22.1 Defence and Military Veterans**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17

Percentage compliance with number of ordered commitments (internal operations) <sup>3</sup>	Force Employment	Outcome 3: All people in south Africa are and feel safe	100% (5)	100% (4)	100% (4)	100% (4)	100% (4)	100% (4)	100% (4)
Number of joint, interdepartmental and multinational military exercises conducted per year	Force Employment	Outcome 11: Create a better South Africa and contribute to a better and safer Africa and world	8	6	5	9	9	7	9
Number of landward sub-units deployed on border safeguarding per year	Force Employment	Outcome 3: All people in South Africa are and feel safe	-2	7	11	13	13	13	13
Number of force employment hours flown per year	Air Defence	Outcome 11: Create a better South Africa and contribute to a better and safer Africa and world	8 279	11 256	11 697	6 500	6 985	6 985	6 985
Number of hours at sea per year	Maritime Defence		8 286	14 088	7 339	22 000	12 000	12 000	12 000

1. This indicator has been changed. It previously measured the number of reserves used per year.

2. This indicator was introduced in 2011/12.

3. Internal operations include border safeguarding and operations in support of other government departments.

## The national development plan

A key objective of the national development plan is to reduce youth unemployment. The Department of Defence can continue to contribute to this aspect of the plan through its national youth service programme. The programme provides selected youth with basic soft skills such as discipline, entrepreneurial and vocational skills, before they are absorbed into government departments. These initiatives also contribute to broader social development and upliftment. 6 745 national youth service members have been trained since 2011/12. The department continues to recruit members and train them in its military skills development system as a means of force rejuvenation. 38 806 members have been recruited and trained since 2003. 13 524 members are set to be trained over the MTEF period.

Another objective of the national development plan is to strengthen South Africa's position in the SADC region and to increase trade and investment. The department continues to provide defence force support in operations to bring economic and political stability to the continent. This includes contributing to the SADC maritime security strategy by combating piracy along the east coast of Africa. Over the medium term, the South African National Defence Force will focus on the preparation of naval forces for operations in support of the maritime security strategy, including patrols to safeguard border posts conducted together with the South African Police Service.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on managing the department effectively, maintaining current defence capabilities, and executing ordered peace missions and border safeguarding patrols and implementing the maritime security strategy. Over this period, expenditure in the *Force Employment* programme is projected to increase due to the allocation of additional funding for border safeguarding, antipiracy operations and peacekeeping missions in foreign countries. The projected increase in expenditure in the *Maritime Defence* programme over the same period is due to the ongoing implementation of the maritime security strategy, which was introduced in 2013/14, to combat piracy on the east coast of Africa and the Mozambique Channel.

The projected increase in expenditure on goods and services over the medium term is mainly due to Cabinet approved additional allocations for peacekeeping commitments and border safeguarding. To improve operations in the South African Air Force and South African Military Health Service over the MTEF period, R341.9 million from the special defence account and R100 million from goods and services were reprioritised towards the *Air Defence* and *Military Health Support* programmes. Over the same period, expenditure in the *Administration* programme is expected to grow mainly as a result of increases in office accommodation, allocations for military veterans' benefits and the establishment of operational law structures. Due to the technical and sophisticated nature of defence equipment, the biggest spending under goods and services over the medium term is contractors and this is mainly related to aircraft upgrading and modification, and the maintenance of equipment. Specialised military health services are also outsourced to the private sector.

The growth projected in spending on transfer payments over the medium term is mainly due to expected increases in spending on armament acquisition projects and the payment of military veterans' benefits. The increase in the payments for capital assets between 2010/11 and 2012/13 was due to the completion of the new runway at the air force base in Waterkloof in 2012/13, while the further decrease projected to 2016/17 is due to the completion of a process to procure transport equipment in 2013/14 and 2014/15.

The increase in expenditure on compensation of employees between 2010/11 and 2013/14 was mainly due to the implementation of the military salary dispensation for regular and reserve force members. This is also the reason for the increase in spending over the same period in the labour intensive *Force Employment*, *Landward Defence* and *General Support* programmes. The department had a funded establishment of 76 538 posts and in totality there were no vacancies at the end of November 2013. Personnel numbers are expected to increase to 78 582 in 2016/17 to rejuvenate the landward forces and build capacity in the Defence Works Formation, which was established in 2012/13. This increase in personnel numbers over the medium term is expected to result in an increase in spending on compensation of employees over the same period.

### Infrastructure spending

Through its capital works programme, the department builds medical health facilities and security installations, upgrades infrastructure for disabled persons, and improves and upgrades accommodation and training facilities. The department funded 25 capital works building projects in 2013/14. Spending on capital works increases from R109 million in 2014/15 to R121 million in 2016/17 to provide for the relocation of the air force base in Durban

and the construction of training facilities. Five projects are expected to continue beyond the medium term, for which R344 million has been allocated.

The department also continued with 46 refurbishment projects in 2013/14, of which 20 are expected to be completed over the medium term. R3.8 billion has been allocated for their completion. The department has prioritised the refurbishments of its military bases, units, depots, ammunition sites, hospitals, accommodation facilities and energy saving devices. In addition, R28 million has been allocated over the medium term to demolish unserviceable infrastructure.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on developing comprehensive defence and military policy and strategy, and maintaining the administrative functions and services of the department. The bulk of the programme's allocation over the medium term is thus allocated to spending on compensation of employees and

in the *Office Accommodation* subprogramme, which is the largest in the programme and provides for accommodation charges, buildings leases and municipal rates.

The programme had a funded establishment of 4 082 posts, which is expected to decrease to 4 024 in 2016/17 as efforts are made to curtail spending on compensation of employees. There were 275 vacancies at the end of November 2013. However, expenditure on compensation of employees between 2013/14 and 2014/15 is projected to increase due to the establishment of the National Defence Force Service Commission and the office of the chief audit executive. The establishment of the commission will not have an effect on expenditure because funds for salaries of employees of the interim commission were previously allocated under goods and services. The establishment of the office of the chief audit executive is expected to increase expenditure in the *Inspection Services* subprogramme over the medium term. Spending on compensation of employees is expected to grow at an average annual rate of 5.7 per cent over the MTEF period, mainly to provide for inflationary adjustments.

Spending in the *Defence Foreign Relations* subprogramme increased between 2010/11 and 2013/14 to make up for the weakening foreign exchange rates. Its expenses are incurred in foreign currencies, such as the dollar, pound and euro. Spending in the *Legal Services* subprogramme over the same period increased due to the creation of an operational law structure to provide legal assistance during peace missions. In addition, the military ombud's office was also shifted from the *Ministry* subprogramme to this subprogramme in 2013/14. The significant increase projected in spending on property payments between 2012/13 and 2016/17 is due the reclassification of accommodation charges from contractors to property payments.

The *Military Veterans Management* subprogramme receives a Cabinet approved additional allocation of R2.1 billion between 2013/14 and 2016/17 to provide for military veterans' benefits. This is also the reason for the projected increase in spending on transfers and subsidies between 2013/14 and 2016/17.

## Programme 2: Force Employment

### Objectives

- Ensure successful joint force employment over the medium term by:
  - providing and employing 1 special operations capability in accordance with national requirements
  - ensuring full participation in the number of peace missions, as instructed by the president
  - conducting 25 joint, interdepartmental and multinational military force preparation exercises between 2014/15 and 2016/17, excluding special forces exercises
  - conducting 4 operations per year protecting the territorial integrity and sovereignty of South Africa, supporting other government departments and complying with international obligations on an ongoing basis.

### Subprogrammes

- *Strategic Direction* formulates and controls strategies, policies and plans for the employment of forces. Funding is based on the cost of operating a joint operations division headquarters. The joint operations division focuses on enhancing and maintaining comprehensive defence capabilities; promoting peace, stability and security in the region and continent; and supporting the people of South Africa in terms of the country's policies and international obligations for the promotion of peace, stability and security. In 2012/13 and 2013/14, the joint operations division in this subprogramme played an important role in the South African National Defence Force achieving the strategic military objective of promoting peace in Africa. This subprogramme had a staff complement of 142 in 2013/14.
- *Operational Direction* provides operational direction to joint and multinational task forces and joint tactical headquarters through an operational level headquarters. Funding is distributed according to the cost of running an operational headquarters and 9 tactical headquarters. In 2012/13, 10 command and control planning capabilities were maintained. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 515 in 2013/14.

- *Special Operations* provides and employs a special operations capability within the approved Special Forces mandate for the South African National Defence Force. Funding is distributed according to the number and size of units, systems, and equipment for operations, and maintenance requirements; and the number of Special Forces operations, force preparation exercises and training courses.
- *Regional Security* provides for the deployment of forces in support of South Africa's commitment to regional, continental and global security. Funding is distributed according to the number, size and duration of deployments, and the systems and equipment required for operations and maintenance. The South African National Defence Force participates in the United Nations (UN) peace support operation in the Democratic Republic of the Congo and the UN-African Union (AU) hybrid peace support operation in Sudan, provides training to the armed forces of the Central African Republic, and executes operations in support of the Mozambican Defence Force's counter piracy operations in the Mozambique channel. In 2012/13, the South African National Defence Force participated in 5 external operations. By the end of September 2013/14, the South African National Defence Force had participated in 3 external operations. The personnel involved are mostly provided by the 4 services of the South African National Defence Force: the army, navy, air force and military health service.
- *Support to the People* is discussed in more detail below.
- *Defence Capability Management* provides for the planning and control of joint, interdepartmental and multinational military force preparation exercises; development of the joint force employment command and control plan; and capability development management. Funding is distributed according to the need for exercise control equipment used in joint, interdepartmental and multinational military exercises, for contractual obligations in connection with the development of the joint force employment command and control plan, and for capability development. In 2012/13, 5 exercises were executed. In 2013/14, 5 of the planned 9 exercises took place. There were 4 cancellations.

## Expenditure trends

The spending focus over the medium term will be on conducting foreign peace support, border safeguarding, and antipiracy operations. These activities are conducted in the *Regional Security* and *Support to the People* subprogrammes. The latter subprogramme is discussed in further detail below. In 2013/14, the president approved new peace support operations for the Democratic Republic of the Congo and Central African Republic. An additional R150 million has been allocated over the medium term to the South African National Defence Force for the deployment of members as part of the United Nations Security Council approved force intervention brigade in the Democratic Republic of the Congo. The programme had a funded and filled establishment of 1 919 posts at the end of November 2013. Personnel numbers are expected to decrease to 1 776 in 2016/17 as efforts continue to be made to curtail personnel expenditure.

The projected growth in expenditure on goods and services and operating payments over the MTEF period is due to an expected increase in the number of peace support operations, designed to improve border security, and charter flights to deployment areas.

### Subprogramme: Support to the People

This subprogramme provides for the internal deployment of forces for border safeguarding and the support of the South African Police Service and other government departments. The South African National Defence Force is responsible for safeguarding landward borders and conducting search and rescue missions, and also provides assistance during disaster situations. In 2012/13, 11 landward sub-units were deployed on the borders. In 2013/14, 13 sub-units and 2 580 South African National Defence Force members were deployed. There was also a 100 per cent compliance with the number of authorised ordered commitments in respect of safety and security support, disaster aid and relief, and search and rescue operations.

## Expenditure trends

The spending focus over the medium term will be on border safeguarding and providing assistance during emergencies and national disasters. While the South African National Defence Force members deployed in support of internal and border safeguarding operations are funded by all the programmes, the spending on compensation of reserve force members and on those members stationed at border bases falls within the ambit of this subprogramme. Between 2012/13 and 2016/17, expenditure on compensation of employees and related goods and services for equipment, spares and transport increases significantly due to safeguarding operations on South African borders. The projected increase in expenditure on contractors between 2013/14 and 2016/17 is for the installation of communication platforms and systems at border bases and vehicle maintenance.

## Programme 3: Landward Defence

### Objectives

- Defend and protect South Africa and its territory over the medium term by:
  - providing 1 infantry capability, including Chief of the South African National Defence Reaction Force, for external deployment and for internal safety and security including border safeguarding
  - exercising 1 tank and armoured car capability and providing 1 squadron for internal deployment per year
  - exercising 1 composite artillery capability and providing 1 battery for internal deployment per year

- exercising 1 air defence artillery capability and providing 1 battery for internal deployment per year
- providing a sustained composite engineer capability for external deployment, as well as for internal safety and security, and exercising 1 field engineer capability per year
- providing 1 signal capability for external deployment and for internal signal support and exercising 1 composite signal capability per year.

## Subprogrammes

- *Strategic Direction* directs, orchestrates and controls the South African Army in achieving its mission to prepare and provide supported landward capabilities for the defence and protection of South Africa. Funding is based on the costs of operating the South African Army headquarters and managing centralised funds for scarce commodities and specialist services. In 2012/13, the South African Army prepared forces for combat by conducting 708 learning programmes and managing 192 units. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 750 in 2013/14.
- *Infantry Capability* provides combat ready infantry capabilities through training, preparing, exercising and supporting mechanised, motorised, specialised and airborne infantry units. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. In 2012/13, 41 battalions were maintained. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 16 202 in 2013/14.
- *Armour Capability* provides combat ready armour capabilities through training, preparing, exercising and supporting tank and armoured car units. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. In 2012/13, 9 regiments were maintained. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 1 375 in 2013/14.
- *Artillery Capability* provides combat ready artillery capabilities through training, preparing, exercising and supporting composite and light artillery units. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. In 2012/13, 7 regiments were maintained. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 1 447 in 2013/14.
- *Air Defence Artillery Capability* provides combat ready air defence artillery capabilities through training, preparing, exercising and supporting air defence artillery units. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. In 2012/13, 5 regiments were maintained. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 1 035 in 2013/14.
- *Engineering Capability* provides combat ready engineering capabilities to ensure mobility and establish infrastructure during exercises and deployments. This entails training, preparing, exercising and supporting field and construction engineer units. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. In 2012/13, 9 battalions were maintained. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 2 395 in 2013/14.
- *Operational Intelligence* provides combat ready operational intelligence capabilities to enable successful planning and execution of operations. This entails training, preparing, exercising and supporting intelligence units. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. In 2012/13, 2 units were under command and provided intelligence members for deployment as part of border safeguarding operations. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 676 in 2013/14.
- *Command and Control Capability* provides combat ready tactical command and control capabilities for integrated forces during force preparation and force employment. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the

number of force preparation exercises and training courses. In 2012/13, 2 brigades were used to support exercises during formal and force training; and operational planning support was provided to the joint operations division. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 480 in 2013/14.

- *Support Capability* provides first, second and fourth line support capabilities to units and bases, and ensures support to deployed combat units through training, preparing, exercising and supporting first and second line maintenance units and workshops. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. In 2012/13, external operations were mainly supported through second line units that consist of 2 maintenance units and 2 workshops. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 9 242 in 2013/14.
- *General Training Capability* provides general training capabilities through basic military training, junior leader training, common landward training, and command and management training at the training depot and decentralised units, the South African Army Gymnasium, the combat training centre and the South African Army College. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. 4 216 members were trained in 2012/13 and 996 had been trained by the end of September 2013/14. This subprogramme had a staff complement of 1 652 in 2013/14.
- *Signal Capability* provides combat ready signal capabilities to ensure command, control and communications during exercises and deployments. This entails training, preparing, exercising and supporting signal units. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. In 2012/13, 24 signal units were maintained. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 3 983 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on preparing and providing forces for increased internal and external deployments, according to government requirements, and border safeguarding operations. In this regard, the South African Army will continue to train and prepare its forces to comply with strategic military objectives. The *Infantry Capability* and *Support Capability* subprogrammes are responsible for providing prepared forces and support services for deployments and are therefore the largest spending subprogrammes over the medium term. Due to the labour intensive nature of the programme, 68.6 per cent of the budget in 2014/15 is allocated to spending on compensation of employees. Personnel numbers are expected to increase from 39 237 in 2013/14 to 41 158 in 2016/17 to rejuvenate the landward forces and to provide mission ready

forces for operational deployment. Landward defence assets and equipment will be maintained and managed to support deployments, and conventional landward defence capabilities will also be maintained. The programme had 94 vacancies at the end of November 2013.

Over the medium term, the budget allocated to this programme also provides for increased maintenance requirements of the South African Army's ageing operational vehicle fleet, the modernisation of landward defence equipment and the procurement of critical ammunition. Expenditure on goods and services will therefore increase between 2013/14 and 2016/17 to provide for spares and the maintenance of vehicles, equipment, and the development of systems. This is also the reason for the projected increase in spending on contractors. R6.8 billion is allocated to transfers to departmental agencies and accounts over the medium term for the acquisition of new infantry vehicles, military support systems and equipment.

## Programme 4: Air Defence

### Objectives

- Defend and protect South Africa and its airspace over the medium term by providing:
  - 4 helicopter squadrons and 1 combat support helicopter squadron per year
  - 3 medium transport squadrons, which will include 1 VIP squadron, 1 maritime and transport squadron, 1 light transport squadron and 9 reserve squadrons per year
  - 1 air combat squadron per year
  - 24 hour air command and control capability.

### Subprogrammes

- *Strategic Direction* provides strategic direction to the programme by formulating and controlling strategies, policies and plans through the air force office to prepare and provide the capabilities required by the chief of the South African National Defence Force. Funding is based on the cost of operating the air defence headquarters. The air force provides support by executing flights during border safeguarding tasks, authorised safety and security support commitments, disaster aid and disaster relief ordered commitments, and authorised search and rescue commitments. In 2012/13, 20 policies were formulated. In 2013/14, 7 policies were formulated and the capability was maintained as required. This subprogramme had a staff complement of 38 in 2013/14.
- *Operational Direction* provides operational direction to the programme by means of an air command. Funding is based on the cost of operating the air command. The air force ensures that the daily availability targets for aircraft are met and that planned flying hours are flown. In 2012/13, the objectives in respect of the number of flying hours and aircraft available were issued to all units. 12 reports were received from each unit on their achievement of the objectives. In 2013/14, the capability was maintained as required.
- *Helicopter Capability* provides and sustains operationally ready light utility helicopters, medium transport helicopters and combat support helicopters crewed by appropriately qualified personnel. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. In 2012/13, 5 squadrons were maintained. The capability was maintained as required in 2013/14. This subprogramme had a staff complement of 519 in 2013/14.
- *Transport and Maritime Capability* provides and sustains operationally ready transport and maritime aircraft crewed by appropriately qualified personnel. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. In 2012/13, 15 squadrons were maintained. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 403 in 2013/14.
- *Air Combat Capability* provides and sustains operationally ready fighter aircraft crewed by appropriately qualified personnel. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. In 2012/13, 1 combat squadron was maintained. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 181 in 2013/14.

- *Operational Support and Intelligence Capability* prepares, develops, provides and supports protection, intelligence systems and counter intelligence support to the South African Air Force through protection squadrons, intelligence subsystems and intelligence training unique to the air force. Funding is distributed according to the number and size of squadrons, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses.
- *Command and Control Capability* supplies and maintains operationally ready command and control elements in support of air battle space operations. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. The air force and the Air Traffic and Navigation Services Company deploy and integrate a network of radar, observation posts and electronic warfare sensors across the country to detect and monitor compliance with published restrictions, and to monitor and control the South African National Defence Force's air traffic. In 2012/13, the availability of 2 control centres, air defence radars, and 7 mission ready air traffic service units was an average of 98 per cent. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 511 in 2013/14.
- *Base Support Capability* provides air base infrastructure facilities to squadrons and resident units on bases, including the maintenance of all relevant systems and personnel, to support flying operations. Funding is distributed according to the number and size of air force bases and units, systems and operating equipment requirements, maintenance requirements, and the number of training courses. In 2012/13, 8 air bases and 1 air station was maintained. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 5 442 in 2013/14.
- *Command Post* renders command and control over all missions flown. Funding is distributed according to the number and size of command posts and deployments, and readiness and aircraft chartering requirements. In 2012/13, all air missions were tasked as per operational requirements, along with 86 chartering requirements. In 2012/13, 71 chartering requirements were fulfilled. 1 chartering requirement was fulfilled in 2013/14. This subprogramme had a staff complement of 108 in 2013/14.
- *Training Capability* provides for the general education, training and development of air force personnel. Funding is distributed according to the number and size of units, systems and operating equipment requirements, maintenance requirements, and the number of force preparation exercises and training courses. 1 966 South African National Defence Force members were trained in 2012/13, and a further 507 had been trained by the end of September 2013. This subprogramme had a staff complement of 382 in 2013/14.
- *Technical Support Services* establishes, maintains and prepares optimised technical and tactical logistic support capabilities to provide support to system groups and manage air service units. Funding is distributed according to the number and size of units, systems and equipment operating requirements, maintenance requirements, and contracted human resources and product system requirements. In 2012/13 and 2013/14, the technical support services unit expanded the inhouse maintenance capability of the air servicing units through increased training of technical personnel, skills transfers and the upgrade and proper maintenance of workshop equipment. This subprogramme had a staff complement of 2 231 in 2013/14.

## Expenditure estimates

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on creating capacity to supply and support prepared forces, integrate new air defence equipment and systems, and prepare deployable air systems. Because of an increase in deployments and presidential commitments, R341.9 million was reprioritised from the special defence account over the medium term to improve the South African Air Force's operational capability. This has resulted in an increase in spending over the MTEF period in the *Helicopter Capability and Transport* and *Maritime Capability* subprogrammes.

The projected decrease in expenditure in the *Transport and Maritime Capability* subprogramme in 2016/17 is due to the expected finalisation of the acquisition of a maritime surveillance aircraft in 2015/16. This is also the reason for the projected decrease in transfer payments over the medium term. Personnel numbers are expected to decrease to 9 989 in 2016/17 in an effort to curtail personnel expenditure. As a result, spending on compensation of employees is expected to grow at an average annual rate of 3.6 per cent over this period. There were no vacancies in this programme at the end of November 2013.

Expenditure on goods and services is projected to increase at an average annual rate of 9 per cent over the medium term due to an increase in operational activities, particularly aircraft maintenance. This is a specialised function that is performed by contractors, which also explains the projected 27.7 per cent increase in spending on this item over the medium term.

Between 2011/12 and 2013/14, expenditure on transfers and subsidies decreased, mainly due to the expected finalisation of the strategic defence procurement programme in 2014/15. This is also the reason for the decrease in expenditure in the *Air Combat Capability* subprogramme in 2013/14. The allocation to transfers to departmental agencies and accounts over the medium term provides for the development of missiles, an aircraft rescue and fire fighting vehicle and the upgrading of helicopters.

## Programme 5: Maritime Defence

### Objectives

- Defend and protect South Africa and its maritime zones over the medium term by providing:
  - a surface combat capability of 3 frigates, 1 combat support vessel, 2 offshore patrol vessels and 3 inshore patrol vessels in each annual operational cycle
  - a subsurface combat capability of 2 submarines in each annual operational cycle
  - a mine warfare capability of 2 vessels in each annual operational cycle to ensure safe access to South African harbours and mine clearance where required
  - a maritime reaction squadron capability, comprising an operational boat division, an operational diving division and a naval reaction division, in each annual operational cycle
  - a hydrographic survey capability to ensure safe navigation by charting areas and to meet international obligations.

## Subprogrammes

- *Maritime Direction* provides strategic direction for the programme by formulating and controlling strategies, policies, plans and advice to prepare and provide maritime defence capabilities. Funding is distributed based on the cost of operating the naval headquarters. In 2012/13, 5 policies were distributed, 6 naval orders were promulgated and 8 were registered. In 2013/14, 2 policies were distributed, 7 naval orders were promulgated and 5 naval orders were registered. This subprogramme had a staff complement of 1 313 in 2013/14.
- *Maritime Combat Capability* provides mission ready and supported maritime combat capabilities in accordance with the approved force design of the department. Funding is distributed according to the number and size of units, the number of maritime combat force preparation exercises carried out and the number of force employment operations executed. In 2012/13, 15 vessels were maintained. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 1 627 in 2013/14.
- *Maritime Logistic Support Capability* sustains the availability of the force structure elements in the naval force design to ensure compliance with ordered operational commitments. Funding is distributed according to the number and size of units, the use and maintenance of support systems and equipment, and the provision of product systems. In 2012/13, the navy provided direction in the compilation of lower level logistics plans, whereby compliance to policy and strategic intent were ensured, and fully supported mission ready products and systems were available for operations. In 2013/14, the capability was maintained as required. In addition, a procurement centre in the fleet command was nearing completion. This subprogramme had a staff complement of 602 in 2013/14.
- *Maritime Human Resources and Training Capability* ensures that the maritime combat and support capability requirements are met in terms of qualified personnel. Funding is distributed according to the number and size of units, the use and maintenance of training equipment, and the number of courses presented. 2 548 members were trained in 2012/13 and 1 053 had been trained by the end of September 2013. This subprogramme had a staff complement of 1 751 in 2013/14.
- *Base Support Capability* provides a general base support capability to ships and submarines, shore units and other identified clients to ensure that the fleet complies with specified operational readiness levels. Funding is distributed according to the size of the naval base, the use and maintenance of the harbour, the maintenance of naval infrastructure, and the utilisation of naval base support systems and equipment. In 2012/13, 1 naval base and 2 naval stations were manned and maintained. In 2013/14, the capability was maintained as required. The expansion of the capability in Durban to support the maritime security strategy has begun. This subprogramme had a staff complement of 2 313 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on preparing and maintaining vessels and associated supporting systems, including human resources, at the required readiness levels to meet the country's maritime defence commitments in a sustained manner. These activities are labour intensive, therefore personnel numbers are projected to increase from 7 149 in 2014/15 to 7 414 in 2016/17 to rejuvenate the maritime forces. There were no vacancies in this programme at the end of November 2013.

Spending in the *Maritime Combat Capability* subprogramme is projected to increase significantly over the medium term due to the replacement of offshore patrol vessels and the procurement of a harbour tug for the naval base in Simon's Town. This also explains the significant increase expected in spending on transfers to departmental agencies and accounts. The projected increase in spending on other inventory supplies and

operating payments over the medium term is due to the replenishment of critical stock and to sustain naval vessels for operational deployment in the Mozambique Channel.

## Programme 6: Military Health Support

### Objectives

- Provide prepared and supported health capabilities and services by providing:
  - a health support capability of 5 medical battalion groups, including accompanying field hospitals and 1 specialist medical battalion group, for deployed and contingency forces
  - a comprehensive multidisciplinary military health service to a projected patient population of 302 000 members per year.

### Subprogrammes

- *Strategic Direction* formulates strategy, policies and plans; and provides advice from the surgeon general's office to prepare and provide the capabilities required by the chief of the South African National Defence Force. In 2012/13, continuous management intervention and rectification were undertaken to improve healthcare service delivery during force health protection and force health sustainment. In 2013/14, the advice and plans were provided as required. This subprogramme had a staff complement of 276 in 2013/14.
- *Mobile Military Health Support* provides health support elements for deployed and contingency forces, and provides health services to provincial hospitals and the Department of Health as and when ordered. Funding is distributed according to the number and size of units, systems and equipment operating requirements, maintenance requirements, and the number of force preparation activities. In 2012/13, 2 battalion groups and 3 reserve medical battalion groups were provided. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 246 in 2013/14.
- *Area Military Health Service* provides a comprehensive, self-supporting, multidisciplinary geographic military health service through a formation headquarters, commanding and controlling 9 area military health units to ensure a healthy military community. The military hospitals also attend to health care activities, medical support and health activities in the specialist aviation environment. Funding is distributed according to the number and size of units and health care facilities, systems and equipment operating requirements, maintenance requirements, the number and type of patient health services provided, and force preparation activities. In 2012/13, 1 393 612 health care activities were carried out. By the end of December 2013, 1 021 692 health care activities had been carried out. This subprogramme had a staff complement of 2 865 in 2013/14.
- *Specialist/Tertiary Health Service* provides a specialist health service to develop and maintain tertiary military health capabilities within the parameters of relevant legislation, as contained in the South African military health service strategy. Funding is distributed according to the number and size of military hospitals and specialist units, systems and equipment operating requirements, maintenance requirements, the number and type of patient health services rendered, and force preparation activities. In 2012/13, 837 465 health care activities were carried out in military hospitals. In 2013/14, an estimated 784 000 health care activities will be carried out. This subprogramme had a staff complement of 2 467 in 2013/14.
- *Military Health Product Support Capability* provides for warehousing pharmaceuticals, sundries, military health mobilisation equipment and unique stock; procuring unique military health products, materials and services; and an asset management service, military health product systems and cooperative common military health logistics. Funding is distributed according to the number and size of units; the use of military health products, equipment and consumables; and the requirements for maintaining strategic military health reserves. In 2012/13, a 64 per cent availability of stock at all times was achieved. In 2013/14, a 50 per cent availability of stock is projected. This subprogramme had a staff complement of 137 in 2013/14.
- *Military Health Maintenance Capability* provides general base support services to identified military health service units to sustain and maintain the approved force design and structure. Funding is distributed according to the number and size of units, systems and equipment operating requirements, and maintenance

requirements. In 2012/13, 65 per cent of the vehicle fleet under this subprogramme was repaired and maintained. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 749 in 2013/14.

- *Military Health Training Capability* provides a military health training service to develop and maintain military health training capabilities within the parameters of relevant legislation and policies. Funding is distributed according to the training inputs of the sub-units, equipment operating requirements, maintenance requirements, and the number of training courses presented to SADC countries. 4 763 members were trained in 2012/13 and a further 1 000 had been trained by the end of September 2013. This subprogramme had a staff complement of 1 634 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing a comprehensive military health service, maintaining and improving tertiary and specialist health support, and maintaining the military health facilities. These activities are labour intensive; therefore spending on compensation of employees is expected to account for 68.6 per cent of the programme's overall allocation over the medium term. However, in an effort to maintain spending on compensation of employees at sustainable levels without compromising performance levels, the department expects to reduce the programme's personnel numbers from 8 374 in 2013/14 to 7 545 in 2016/17. There were no vacancies in this programme at the end of November 2013.

The significant increase expected in spending on agency, support and outsourced services in 2014/15 is due to the Cabinet approved additional allocation of R100 million to improve operations of the programme and to allow patients to receive specialised treatment from private sector service providers. This is also the reason for the projected increase in spending in the *Specialist/Tertiary Health Services* subprogramme in that year.

The expenditure in the *Mobile Military Health Support* subprogramme is expected to increase over the medium term, due to the acquisition of ICT equipment to deliver health related services and information, and the development of defence against chemical and biological warfare. This is also the reason for the projected increase in spending in departmental agencies and accounts over the same period. The significant increase projected in expenditure on assets less than the capitalisation threshold over the medium term is mainly due to the planned renewal of medical equipment and to equip capabilities for medical support in both internal and external deployment areas.

## Programme 7: Defence Intelligence

### Objectives

- The detail of the output of *Defence Intelligence* programme is classified.

### Subprogrammes

- Strategic Direction* provides defence intelligence policy, doctrine and intelligence advice in support of the department's decision making and policy formulation processes. Funding is based on the cost of operating the defence intelligence headquarters. In support of government's peace initiatives, the division remains involved in peace processes in Africa by providing intelligence on the current security situation.
- Operations* provides timely defence prediction, intelligence, and counterintelligence capabilities and services. Defence related national strategic intelligence is provided to the highest level of decision makers through briefings to the president, the council on defence and the interministerial security committee. Funding is distributed based on the number and size of intelligence offices, systems and equipment operating requirements, maintenance requirements, and the requirements for producing intelligence.

- *Defence Intelligence Support Services* provides human resources, logistics, planning, security, labour relations, and training and information support services to the defence intelligence community. Funding is distributed according to the number and size of units and offices, equipment and operating requirements, maintenance requirements, and the number of force preparation exercises and training courses.

## Expenditure trends

The spending focus over the medium term will be on collecting, analysing and disseminating strategic defence intelligence in support of the department's outputs. Expenditure on inventory, stationery and printing is expected to increase over the medium term due to the provision of training and related materials to the forces of the Democratic Republic of the Congo. Expenditure on contractors increased from 2012/13 to 2013/14 due to the demands of the maintenance programme at the Defence Intelligence headquarters and the Defence Intelligence College. The projected decrease in spending on this item over the medium term is due to the finalisation of the maintenance programme.

## Programme 8: General Support

### Objectives

- Provide ongoing general support capabilities and services by providing appropriate, ready and sustained matériel, facilities, movement and logistic services focusing on supply chain and life cycle management to enable the defence mandate by:
  - providing new and replacing infrastructure assets through 16 projects
  - carrying out maintenance and repairs through 36 projects
  - operationalising and capacitating the works capability that will enable the Department of Defence to assume selected custodian responsibilities from the Department of Public Works.
- Provide the department with key information and communication systems over the medium term by:
  - ensuring that the defence information and communications infrastructure is available 98 per cent of the time
  - providing information and communication system solutions, in accordance with the portfolios of the defence enterprise information systems master plan.
- Provide a military policing capability to the department over the medium term by:
  - conducting 248 deliberate crime prevention operations per year
  - investigating 80 corruption and fraud cases per year
  - sustaining a provost company for operational deployment on an ongoing basis
  - sustaining 4 regional headquarters, 22 area offices and 22 detachments for crime prevention and investigation of criminal cases
  - sustaining 2 military correctional facilities for detention and rehabilitation.

### Subprogrammes

- *Joint Logistic Services* provides logistics services to the department in terms of warehousing for ammunition, and main equipment and stores; and for the defence works capability, the capital works programme and the defence facility refurbishment programme. Funding is distributed according to the number and size of units, use and warehousing requirements for ammunition main equipment and stores, the defence facility refurbishment programme, and the number of training courses. In 2012/13, 1 012 tons of ammunition was disposed of. In 2013/14, 250 of the planned 600 tons were disposed of. This subprogramme had a staff complement of 3 048 in 2013/14.
- *Command and Management Information Systems* provides command and management information systems and related services to the department. This entails providing information systems and communications infrastructure in relation to solutions, operating systems, continuous maintenance and upgrading requirements for the department. Funding is distributed according to the number and size of mainframe systems, the communications infrastructure operated by the department, and maintenance and upgrading requirements. In 2012/13, the availability of the defence information and communications infrastructure system was 98 per cent. In 2013/14, the capability was maintained as required. This subprogramme had a staff complement of 150 in 2013/14.
- *Military Police* provides a military policing capability for the department. Military police members support external operations, conduct crime prevention operations across the country and provide functional training at the military police school. In 2012/13, 2 288 cases were finalised and 379 crime prevention operations were conducted jointly with the South African Police Service throughout the country. In 2013/14, 456 criminal cases were finalised and 41 of the 248 planned deliberate crime prevention operations were conducted. This subprogramme had a staff complement of 1 640 in 2013/14.
- *Technology Development* provides for establishing and sustaining selected science and technology capabilities in the defence industry. In 2013/14, R348 million was used for capital acquisition.
- *Departmental Support* provides for the payment of corporate departmental obligations such as transfer payments to public entities, legal fees, external audits and bank charges. In 2012/13, R666 million was

transferred to the Armaments Corporation of South Africa to fulfil acquisition responsibilities. The transfer increased to R767 million in 2013/14.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

**Expenditure trends**

The spending focus over the medium term will be on providing continuous general support capabilities, consolidating and sustaining the defence works capability, providing key information and communication systems, providing a military policing capability, and maintaining defence facilities.

Personnel numbers are expected to increase to 5 886 in 2016/17 to provide for additional staff for the Defence Works Formation, which is also the reason for the projected increase in spending on compensation of employees over the medium term. This also explains the projected increases in spending in the *Joint Logistic Services* subprogramme between 2012/13, when the Defence Works Formation was established, and 2016/17. There were no vacancies in this programme at the end of November 2013.

Expenditure in the *Command and Management Information Systems* subprogramme is expected to decrease between 2013/14 and 2016/17 is due to savings in the payments for computer services and the delivery and completion of a static and mobile defence communication network in 2015/16.

The *Departmental Support* subprogramme provides for the payment of corporate departmental obligations such as legal fees, external audits and bank charges and transfers to the Armaments Corporation of South Africa for acquisitions. This transfer payment increases by R63.2 million between 2013/14 and 2014/15 due to the need for the accounting, storage and safeguarding of military assets transferred to the Armaments Corporation of South Africa for disposal. The additional funds will also go towards the implementation of the department’s logistics accounting systems and aligning them with those of the corporation.

The allocations for spending on consultants and professional services provide for services for the Council for Scientific and Industrial Research and the Armaments Corporation of South Africa, asset verification service, research and development, telecommunication services, codification and cataloguing, and legal fees payable to the state attorney. The decrease in spending on consultants and professional services between 2010/11 and 2013/14 was due to contracts for asset verification and Council for Scientific and Industrial Research services reaching their conclusion. Spending on consultants and professional services is projected to increase to R182.6 million over the medium term to provide for cryptology services, data communication and satellite bandwidth.

Executive authority Minister of Defence and Military Veterans

Accounting officer Director General of Military Veterans

Website address [www.militaryveterans.co.za](http://www.militaryveterans.co.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Formulate policies and standards aimed at providing a comprehensive delivery system to military veterans and their dependants in recognition of their role in the democratisation of South Africa.*

### Mandate

The Department of Military Veterans derives its mandate from the Military Veterans Act (18 of 2011), which requires it to provide national policy and standards on socioeconomic support to military veterans and to their dependants, including benefits and entitlements to help realise a dignified, unified, empowered and self sufficient military veterans' community.

### Strategic goals

The department's strategic goals over the medium term are to:

- coordinate and facilitate the provision of socioeconomic support services to military veterans
- manage and coordinate military veterans' empowerment and stakeholder relations services
- ensure that the needs of military veterans and their dependants are addressed.

### Programme purposes

#### Programme 1: Administration

**Purpose:** Provide management and strategic administrative support to the ministry, and overall management of the department.

#### Programme 2: Socio Economic Support

**Purpose:** Develop and monitor the implementation of legislation, policy frameworks and service delivery cooperation agreements on compensation for injury in military service, counselling, education, healthcare, public transport, pension and housing benefits to military veterans eligible for such support.

#### Programme 3: Empowerment and Stakeholder Relations

**Purpose:** Manage and facilitate the implementation of military veteran empowerment and stakeholder management programmes.

## Selected performance indicators

**Table 22.23 Military Veterans**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Total number of deserving military veterans with access to health care services	Socio Economic Support	Outcome 2: A long and healthy life for all South Africans	- <sup>1</sup>	- <sup>1</sup>	200	10 000	7 000	10 000	12 000
Number of deserving military veterans with decent housing per year	Socio Economic Support	Outcome 8: Sustainable human settlements and improved quality of household life	- <sup>1</sup>	- <sup>1</sup>	2	15 000	1 000	2 000	3 000
Number of military veterans' memorial sites erected per year	Empowerment and Stakeholder Management	Outcome 12: An efficient, effective and development oriented public service and an empowered, fair and inclusive citizenship	- <sup>1</sup>	- <sup>1</sup>	0 <sup>2</sup>	1	2	4	2
Number of deserving military veterans with access to training and skills development per year	Empowerment and Stakeholder Management	Outcome 5: A skilled and capable workforce to support an inclusive growth path	- <sup>1</sup>	- <sup>1</sup>	0 <sup>2</sup>	2 000	2 500	3 000	3 500
Number of private sector companies and organs of state in partnership with the department per year	Empowerment and Stakeholder Management	Outcome 4: Decent employment through inclusive economic growth	- <sup>1</sup>	- <sup>1</sup>	0 <sup>2</sup>	10	10	10	10

1. This indicator was introduced in 2012/13.

2. No memorial sites were erected in 2012/13 due to delays in the finalisation of military veterans' benefits regulations.

## The national development plan

The national development plan calls for the reduction in unemployment and expansion in enrolments in further education and training. The Department of Military Veterans will therefore provide socioeconomic services to facilitate employment opportunities for military veterans with the support of line function departments, private companies and state agencies. To date, approximately 1 176 job opportunities have been created for military veterans. It is envisaged that by the end of 2014/15, a further 1 000 job opportunities will have been created. In 2013/14, 100 dependants of military veterans were provided with bursaries and 1 800 bursaries will have been provided to dependants of military veterans through the National Student Financial Aid Scheme by 2016/17.

## Expenditure estimates

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on building sufficient capacity to support the delivery of benefits to military veterans. The bulk of the department's budget over this period will therefore go towards spending in the *Socio Economic Support* and *Empowerment and Stakeholder Management* programmes. The projected increase in expenditure in the *Socio Economic Support* programme over the medium term is expected to deliver houses, bursaries and health care services to military veterans and their dependents. The projected increase in expenditure in the *Empowerment and Stakeholder Management* programme is expected to deliver access to training and skills development and to form partnerships with private sector companies and other organs of state to ensure that jobs are provided for the military veterans.

The department had 63 filled posts and 72 vacancies at the end of November 2013. These vacancies could not be filled as the department did not have adequate office space. The department moved to a more appropriate building in 2013/14 and is in the process of recruiting additional personnel. As a result, personnel numbers are projected to grow from 135 in 2013/14 to 169 in 2016/17. The departmental allocation increased to R351.4 million in 2013/14 to provide for military veterans' benefits.

Spending on consultants is expected to increase between 2013/14 and 2014/15 to provide for the development and implementation of the department's ICT systems, and additional professional services such as internal and external audits, legal assistance, research and policy development and health assessments and care.

## Expenditure trends

The spending focus over the medium term will be on establishing the management and administrative capacity required by the department to support the delivery of benefits to military veterans. Therefore, spending in the *Corporate Services* subprogramme is expected to increase over the medium term due to the development and implementation of ICT systems; administrative policies and procedures; provision of legal, cleaning and security services; and the communication and marketing of military veterans' assistance programmes. Spending in the *Office Accommodation* subprogramme is projected to decrease over this period due to the departmental head office building being acquired in 2013/14.

Expenditure in the *Management* subprogramme increased significantly between 2010/11 and 2012/13 due to the filling of critical posts and the operational requirements of the newly established department. The projected decrease in expenditure in this subprogramme between 2012/13 and 2013/14 was due to the restructuring emanating from the implementation of the newly revised approved budget programme structure. The expenditure on consultants over the medium term is mainly on service providers for the development and implementation of ICT systems, legal services, and external and internal audits. The use of consultants is necessary due to professional services required. The programme has a funded establishment of 97 posts and 20 posts were filled additional to the establishment. At the end of November 2013, the department had 51 filled permanent posts and 21 vacancies.

## Programme 2: Socio-Economic Support

### Objectives

- Provide socioeconomic support services to military veterans over the medium term by:
  - establishing and maintaining the credibility and security of the national military veterans' database through consolidating data, updating software and updating personal files of military veterans on an ongoing basis
  - facilitating access to benefits espoused in section 5 of the Military Veterans Act (2011) for eligible military veterans by 2016/17.
- Developing strategic partnerships with other organs of the state and in broader society to advance delivery on social services to military veterans and their dependants, where this is applicable, to ensure that:
  - 6 000 military veterans have decent housing over the medium term
  - 29 000 military veterans have access to health care services by 2016/17
  - 1 800 eligible military veterans and dependents across the country are provided with ongoing education support by 2016/17
  - targets agreed with service delivery agencies are achieved and the benefits accessed by military veterans as espoused in section 5 of the Military Veterans Act (2011), are reported on comprehensively by 2016/17.
- Provide strategic leadership to the socioeconomic sector by conducting ongoing research on pertinent issues affecting military veterans and by developing requisite policies; implementation norms and standards, strategies, guidelines and frameworks by 2016/17.

### Subprogrammes

- *Database and Benefits Management* establishes systems for the seamless transition of servicemen and women from active service to civilian life. The subprogramme also consolidates and ensures the credibility and security of the national military veterans' database and exercises oversight on governance obligations and resources allocated to this unit for delivery on the relevant provisions of the Military Veterans Act (2011). In 2012/13, the focus was on verifying the status of military veterans conducting electronic clean-up activities and capturing their personal files. 342 interviews were conducted and 14 487 personal files were updated. By the end of September 2013, 56 662 names of veterans had been captured on the database. This subprogramme had a staff complement of 2 in 2013/14.
- *Healthcare and Wellbeing Support* facilitates the provision of healthcare services and wellbeing support to military veterans, including disease prevention initiatives. In 2012/13, 4 293 military veterans were registered on the South African Military Health Service database to receive health services and 954 healthcare cards were issued to qualifying veterans. In 2013/14, military veterans were given access to counselling services through the Military Veterans Healthcare Practitioner Association and the military health support service. In addition, 4 851 veterans gained access to health care services. This subprogramme had a permanent staff complement of 2, augmented by 9 contract workers, in 2013/14.
- *Socio Economic Support Management* develops norms and standards for the provision of education, public transport, pension, housing and social relief of distress for military veterans eligible for such support; establishes strategic partnerships to advance service delivery; tracks delivery by service providers on agreed targets; ensures continuous improvement; and reports on service delivery. This entails ensuring that legal instruments for the provision of socioeconomic support services to military veterans, such as housing, pensions and transport, are put in place. In 2012/13, a memorandum of understanding was signed by the department and the Department of Human Settlements for the provision of houses to military veterans. By the end of September 2013, 100 bursaries had been given to military veterans and their dependants and houses had been provided for 2 World War II veterans. This subprogramme had a staff complement of 2 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on filling the remaining critical posts and building sufficient capacity to ensure that military veterans receive socioeconomic support and benefits. Expenditure in the *Socio Economic Support Management* subprogramme is therefore expected to increase over the medium term, mainly to fund the provision of 6 000 houses to deserving military veterans and award bursaries to deserving military veterans and their dependents. The projected expenditure increase over the medium term under the *Healthcare and Wellbeing Support* subprogramme is focused on funding health care services for military veterans. The bulk of the increased spending is reflected in expenditure on consultants, where R94 million will be spent over the medium term for health care.

The projected expenditure increase in 2013/14 in the *Database and Benefits Management* subprogramme was to fund the collection, verification and refinement of collected veterans' data to ensure the accuracy and reliability of the information. The projected decrease in expenditure in this subprogramme over the medium term is due to the collected data requiring ongoing verification and refinement. The programme has a funded establishment of 28 posts and 9 posts additional to the establishment were filled. At the end of November 2013, the department had 7 filled permanent posts and 16 vacancies. The use of consultants is necessary due to professional services required.

## Programme 3: Empowerment and Stakeholder Management

### Objectives

- Ensure the empowerment of deserving military veterans by:
  - establishing a fully functional special purpose vehicle that will facilitate business opportunities for development by 2014/15
  - forming partnerships with 30 private sector companies and other organs of state and entering into service level agreements and memorandums of understanding over the medium term
  - monitoring and evaluating the implementation of the agreements and memorandums of understanding to ensure that support is provided on an annual basis
  - concluding 12 formal agreements with institutions of higher learning for the provision of skills development over the medium term
  - facilitating the association of military veterans with the international community through the establishment of relevant exchange programmes
  - ensuring that 10 strategic initiatives are established at national, continental and international levels by 2014/15
  - providing 9 000 deserving military veterans with access to relevant training and skills development over the medium term
  - facilitating the integration of military veterans into the national workforce on an ongoing basis.

### Subprogrammes

- *Provincial Offices and Stakeholder Relations* facilitates and coordinates military veteran stakeholder institutions and provides administrative support to secure stakeholders from both public and private institutions willing to contribute towards the wellbeing of military veterans. In 2012/13, 4 partnerships were formed with other government departments, including the Department of Rural Development and Land Reform. In 2013/14, the focus was on establishing and capacitating provincial offices by completing the staff employment processes and negotiating adequate office space in provinces with the relevant authorities. In addition, the South African National Military Veterans Association was supported in enhancing the strengthening of relations with key stakeholders. The association will be assisted in developing its programme of action and financial management systems and the provision of funds for effective governance will be facilitated. The department will ensure that all requisite institutions assist in putting in place structures regulating the treatment of military veterans, including the appeals board and the advisory council, as per the Military Veterans Act (2011). This subprogramme had a permanent staff complement of 1, augmented by 1 contract worker, in 2013/14.
- *Empowerment and Skills Development* provides reskilling programmes and related activities to ensure that military veterans contribute positively to mainstream economic activities. In 2012/13, memorandums of agreements were reached with the Departments of Water Affairs and Environmental Affairs for the provision of jobs for military veterans in selected work areas. In 2013/14, 1 176 military veterans were employed or provided with work opportunities through other government departments and the private sector. This subprogramme had a permanent staff complement of 1, augmented by 3 contract workers, in 2013/14.
- *Heritage, Memorials, Burials and Honours* provides services to honour the contributions made by military veterans; and ensures that their memorials are adequately secured, articulated in a dignified manner and captured in historical texts. In 2012/13, 3 events took place to acknowledge the contribution that military veterans made in the struggle for democracy. In 2013/14, the focus was on preparatory work on the establishment of a Tomb of the Unknown Soldier; memorial sites and military veterans' graves. 65 military veterans were provided with burial support. There are plans to erect 8 memorial sites to facilitate the establishment of heroes' acres and monuments in every province, and to host 1 honouring function for military veterans in 2014/15. This subprogramme had a permanent staff complement of 1, augmented by 1 intern and 1 staff member seconded from the Department of Defence, in 2013/14.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on filling the remaining critical posts and building sufficient capacity to ensure that skills development services are provided to military veterans. Thus, the bulk of expenditure over the medium term is in the *Empowerment and Skills Development* subprogramme, which is expected to provide skills and empowerment programmes to 9 000 military veterans over the period.

Expenditure in the *Provincial Offices and Stakeholder Relations* subprogramme is expected to increase over the medium term in order to fund the provision of capacity and equipment in the provincial offices to allow the department to function effectively, and to fund the establishment of the South African National Military Veterans Association and two military veterans' governance structures.

Expenditure in the *Heritage, Memorials, Burials and Honour* subprogramme is expected to decrease in 2014/15, mainly due to the fact that the department will no longer prioritise medal parades. The gradual increase in expenditure over the medium term in this subprogramme is focused on funding the memorialisation of fallen military veterans and providing burial support. The increased expenditure will also see investments in military veterans' heritage projects; such as developing biographies and facilitating the erection of 8 military veterans' memorial sites, heroes' acres and monuments in every province.

The programme has a funded establishment of 44 posts and 4 posts were filled additional to the establishment. At the end of November 2013, the department had 5 filled permanent posts and 35 vacancies.

## Public entities and other agencies

### Armaments Corporation of South Africa

#### Mandate and strategic goals

The Armaments Corporation of South Africa derives its mandate from the Armscor Act (2003). Its mission is to meet the acquisition, maintenance and disposal needs of the Department of Defence and other clients in terms of defence matériel and related products and services. The corporation maintains strategic capabilities and technologies and promotes the local defence-related industry, ensuring that the South African National Defence Force receives quality equipment to carry out its mandate.

The corporation also manages the Simon's Town Naval Dockyard. The dockyard carries out planned preventative maintenance, corrective maintenance, reconstruction and repairs, and upgrades of all the South African Navy ships and submarines. The corporation, through its research and development facilities, provides operational research and comprehensive testing and evaluation services of defence systems and capabilities in both the military and civilian environments.

The corporation's strategic goals over the medium term are:

- continued focus and commitment on delivering on its role of acquiring equipment economically and efficiently
- ensure the growth and sustainability of the corporation
- transformation of the corporation to grow human capabilities to support growth opportunities
- organisational effectiveness and efficiencies through infrastructure renewal
- review and maintain stakeholder relationships to optimise the corporation's brand positioning and marketing.

## Expenditure trends

The main source of revenue for the Armaments Corporation of South Africa is transfer payments received from the Department of Defence and sales of goods and services such as redundant equipment. These payments increase at an average annual rate of 6 per cent and do not usually cover the corporation's total operational costs. Interest earned on its revenue is also used to finance operating expenditure.

The cost of sales line item, under goods and services, as well as sales figures, decreased between 2011/12 and 2012/13 due to an international accounting standard, which states that sales and cost of sales made on behalf of a principal must not be included in the financial statements of the agent. For budget purposes however, sales and cost of sales of the principal are included, hence an increase in these figures over the medium term.

The spending focus over the medium term is to meet the defence matériel requirements of the Department of Defence effectively, efficiently and economically.

Personnel costs remain the main contributor to the organisation's expenditure between 2010/11 and 2013/14, accounting for a little over 50 per cent of the total expenditure. The number of personnel is expected to increase from 1 567 in 2013/14 to 1 739 in 2016/17. This is mainly due to the filling of critical vacancies, including the chief executive officer and general manager. This is also due to the establishment of capabilities to fully support the South African Navy at the Simon's Town Naval Dockyard.

Consultants used are predominantly for legal services and mostly in litigation matters. It is expected that around R14.6 million will be spent on legal services over the medium term, which includes costs related to the Arms Procurement Commission. The entity has a funded establishment of 1 567 posts. There were 172 vacant posts at the end of November 2013 due to retirements and resignations. Most vacancies have been advertised and are in the process of being filled. Personnel numbers are expected to stabilise at 1 739 over the medium term.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Castle Control Board** preserves and protects the military and cultural heritage of the Castle of Good Hope in Cape Town. The board's total budget for 2014/15 is R5.8 million.

Executive authority Minister of Police  
Accounting officer Executive Director of the Independent Police Investigative Directorate  
Website address [www.ipid.gov.za](http://www.ipid.gov.za)

The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.

### Aim

*Ensure independent oversight of the South African Police Service and the Municipal Police Services. Conduct independent and impartial investigations of identified criminal offences allegedly committed by members of the South African Police Service and the Municipal Police Services and make appropriate recommendations.*

### Mandate

The Independent Police Investigative Directorate exercises its functions in accordance with the Independent Police Investigative Directorate Act (2011). The act gives effect to the provisions of section 206(6) of the Constitution, which provides for the establishment of an independent police complaints body, which must investigate any alleged misconduct of, or offence committed by, a member of the police service. The thrust of the directorate's work is to investigate serious and priority crimes allegedly committed by members of the South African Police Service and Municipal Police Services.

The Independent Police Investigative Directorate Act (2011), which came into effect on 1 April 2012, grants the directorate an extended mandate and changes the focus of the work of the directorate from a complaints driven organisation to one that prioritises the investigative function. The new act places stringent obligations on the South African Police Service and Municipal Police Services to report matters that must be investigated by the directorate and ensures the implementation of disciplinary recommendations made by the directorate.

### Strategic goals

The directorate's overarching goal is to contribute towards ensuring a police service that is trusted by the community and operates in line with the principles enshrined in the Constitution. In line with government's 12 outcomes, the directorate's medium term strategic focus is to contribute towards ensuring that all people in South Africa are and feel safe (outcome 3), focusing specifically on combating corruption within the justice, crime prevention and security cluster in order to enhance the cluster's effectiveness and ability to serve as a deterrent against crime (output 3).

The directorate's strategic goals over the medium term are to:

- provide oversight over the police service by conducting investigations without fear or favour, and in order to improve police conduct, follow up on recommendations made to the police service to ensure that they are acted upon
- ensure public awareness of its mandate and functions through community awareness programmes, media campaigns and the establishment of satellite offices to increase public accessibility to the directorate's services
- ensure an effective performance management system, including internal controls and external performance reporting procedures, to promote accountability
- establish an efficient case management system that ensures the effective completion of cases and the generation of recommendation and feedback reports within appropriate timeframes.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide for the overall management of the Independent Police Investigative Directorate and support services, including strategic support to the directorate.

### Programme 2: Investigation and Information Management

**Purpose:** Coordinate and facilitate the directorate's investigation processes through the development of policy and strategic frameworks that guide and report on investigations.

### Programme 3: Legal Services

**Purpose:** Manage and facilitate the provision of investigation advisory services, and provide legal, civil and labour litigation services.

### Programme 4: Compliance Monitoring and Stakeholder Management

**Purpose:** Safeguard the principles of cooperative governance and stakeholder relations. Monitor and evaluate the relevance and appropriateness of recommendations made to the South African Police Service and the Municipal Police Services in terms of the Independent Police Investigative Directorate Act (2011).

## Selected performance indicators

**Table 23.1 Independent Police Investigative Directorate**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of community outreach events conducted per year	Compliance Monitoring and Stakeholder Management	Outcome 12: An efficient, effective and development orientated public service and an empowered, fair and inclusive citizenship	307	279 <sup>1</sup>	306	306	306	306	306
Percentage of cases registered and allocated within 72 hours of receipt <sup>2</sup>	Investigation and Information Management	Outcome 3: All people in South Africa are and feel safe	96% (5 644/5 869)	91% (4 499/4 923) <sup>1</sup>	86% (5 779/6 728)	98% (5 553/5 666)	98%	99%	100%

Table 23.1 Independent Police Investigative Directorate

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Percentage of investigations of deaths while in police custody completed within 90 days	Investigation and Information Management	Outcome 3: All people in South Africa are and feel safe	- <sup>3</sup>	- <sup>3</sup>	60% (180/300)	65% (165/254)	65%	66%	67%
Percentage of investigations of deaths as a result of police action completed within 90 days	Investigation and Information Management		- <sup>3</sup>	- <sup>3</sup>	64% (319/499)	65% (256/394)	65%	66%	67%
Percentage of investigations of rape by a police officer completed within 90 days	Investigation and Information Management		- <sup>4</sup>	- <sup>4</sup>	72% (106/147)	55% (61/110) <sup>5</sup>	60%	61%	62%
Percentage of investigations of rape while in police custody completed within 90 days	Investigation and Information Management		- <sup>4</sup>	- <sup>4</sup>	55% (12/22)	63% (5/8)	60%	61%	62%

- The performance outcome for 2011/12 has been revised from what was published in the 2013 ENE to reflect the audited outcome as published in the directorate's 2011/12 annual report.
- This indicator previously measured cases registered and allocated within 48 hours, inclusive of weekends and public holidays. In order to accommodate cases received during weekends and public holidays, the timeframe was revised to 72 hours, starting in 2013/14. The performance outcome for the period 2010/11 to 2012/13 is therefore based on the timeframe of 48 hours.
- This indicator previously measured total deaths and did not distinguish between deaths in custody and deaths as a result of police action. Accordingly, no performance information is provided for 2010/11 and 2011/12 as the appropriate reporting on this indicator started in 2012/13.
- This indicator previously measured total investigations conducted and did not distinguish between the different types of investigations. Accordingly, no performance information is provided for 2010/11 and 2011/12 as the appropriate reporting on this indicator started in 2012/13.
- The decline in projected performance for 2013/14 is due to capacity challenges within the provinces. The directorate plans to appoint more investigators over the MTEF period to meet the demand from increased investigations.

## The national development plan

The national development plan highlights the need to ensure that all people in South Africa live safely in a corruption free society, with an independent and fair criminal justice system. The plan also states that inspiring public confidence in the criminal justice system is the most effective deterrent to criminality. The directorate's work is aligned with the plan through its focus on ensuring that the police service is trusted by the community, thus contributing to a capable state. In this regard, the directorate plays an essential role in promoting a transparent and accountable police service in South Africa by investigating criminal offences allegedly committed by members of the South African Police Service and Municipal Police Services as outlined in section 28 of the Independent Police Investigative Directorate Act (2011).

Over the medium term, the directorate plans to have, as an average, 66 per cent of investigations of deaths in custody and deaths as a result of police action completed within 90 days and 61 per cent of investigations of rape in custody and rape by a police officer completed within 90 days. Moreover, over this period, the directorate will continue to improve reporting, accountability practice and standard operating procedures to regulate investigations. This is to ensure progress in achieving the national development plan's Vision 2030 as it relates to ensuring that people in South Africa feel safe and enjoy a community life that is free of fear.

## Expenditure estimates

2. Rand million.

## Expenditure trends

The spending focus over the medium term will continue to be on enhancing the directorate's investigative capacity to conduct successful and high quality investigations within 90 days of registration. This will ensure that communities feel safe and trust that the police service operates in line with the Constitution. Consistent with the spending focus and due to the labour intensive nature of investigations, the bulk of spending over the medium term will be in the *Investigation and Information Management* programme, and mainly on compensation of employees. This programme's allocation over the medium term will allow the directorate to prioritise the investigation of deaths in custody and deaths as a result of police action. This is expected to increase the proportion of cases completed for both types of investigations within 90 days, from 65 per cent in 2013/14 to 67 per cent in 2016/17.

To achieve this performance target, the directorate has realigned its budget with its plans to increase the number of investigators over the medium term. In this regard, Cabinet has approved a reprioritisation of R3.1 million in 2014/15, R4 million in 2015/16 and R4.9 million in 2016/17 from goods and services in the *Administration* programme to compensation of employees in the *Investigation and Information Management* programme. The directorate plans to appoint an additional 44 staff over the medium term, mainly investigators, thus increasing the approved establishment from 349 posts in 2013/14 to 393 in 2016/17. This explains the expected increase in expenditure on compensation of employees and training and development over the medium term. The

directorate will also fill the 37 posts that were vacant as a result of natural attrition at the end of November 2013.

As part of this realignment of the department's budget, the *Compliance Monitoring and Stakeholder Management* programme has been established as a standalone unit, whereas previously its functions had been performed by the *Investigation and Information Management* programme. Expenditure in the *Compliance Monitoring and Stakeholder Management* programme is expected to increase as the directorate plans to maintain the number of community outreach programmes conducted at 306 events annually to ensure that community members have greater access to its services.

## Expenditure trends

The spending focus over the medium term will be on capacitating the directorate's administrative support services and enhancing its internal control environment to ensure good governance and that the directorate delivers on its mandate. Accordingly, the bulk of expenditure over the medium term will go to internal control and the strengthening of security, as well as the implementation and maintenance of the directorate's ICT system in the *Corporate Services* and *Internal Audit* subprogrammes.

Spending in the programme increased significantly between 2010/11 and 2013/14, due to the allocation of additional funding to provide for the restructuring of the department in 2011/12 and 2012/13, following the introduction of the Independent Police Investigative Directorate Act (2011). This led to an increase in personnel numbers and spending on compensation of employees, mainly in the *Corporate Services* and *Financial Administration* subprogrammes. In the same year, the department moved into a new building, which increased operating lease payments significantly from 2011/12 onwards. Over the medium term, spending in the *Corporate Services* subprogramme is expected to decrease, due to a reprioritisation of R3.1 million in 2014/15, R4 million in 2015/16 and R4.9 million in 2016/17 from this programme to the *Investigation and Information Management* programme. This is in order to capacitate the directorate's investigation function to improve the turnaround time for finalising and referring investigations to the appropriate authorities and giving feedback to complainants. This also explains the overall decrease in spending on goods and services over the same period.

Spending on consultants in this programme caters for functions that cannot be performed internally, such as the regularity audit conducted by the auditor general, selected employee wellness programmes and the verification of qualifications. The number of personnel is expected to decrease from 129 in 2013/14 to 111 in 2016/17, mainly due to the reallocation of funded posts from this programme to the *Investigation and Information Management* programme to strengthen the directorate's investigative capacity. At the end of November 2013, there were 12 vacant posts, mainly due to internal promotions. The directorate expects to fill these vacancies by the end of the first quarter of 2014/15.

## Programme 2: Investigation and Information Management

### Objectives

- Strengthen the directorate's oversight role over the police service by:
  - conducting investigations, within the powers granted to the directorate by the Independent Police Investigative Directorate Act (2011), within 90 days of receipt of a complaint
  - making appropriate recommendations on investigations in the various investigation categories within 30 days and submitting feedback to complainants within 30 days of the closure of the investigation.
- Enhance efficiency in case management over the medium term by increasing the percentage of cases registered and allocated within 72 hours of receipt from 86 per cent in 2012/13 to 100 per cent in 2016/17.
- Maintain relationships with other state security agencies, such as the South African Police Service, the National Prosecuting Authority, Civilian Secretariat for Police and community stakeholders, through ongoing national and provincial engagement forums.

### Subprogrammes

- *Investigation Management* develops and maintains investigation systems, procedures, norms, standards and policies in line with the Independent Police Investigative Directorate Act (2011) and other relevant prescripts. In 2012/13, the subprogramme had a budget of R934 000, which was used to facilitate the timely submission of recommendation reports to the executive director and Minister of Police. In the first half of 2013/14, the directorate received 96 cases of rape by a police officer for investigation, of which 54 were completed within 90 days. This subprogramme had a staff complement of 2 in 2013/14.
- *Investigation Services* manages and conducts investigations in line with provisions in the Independent Police Investigative Directorate Act (2011). In 2012/13, the subprogramme had a budget of R90.8 million and key outputs included 1 088 recommendations for various offences, of which 545 were referred to the National Prosecuting Authority for decision. The remaining 543 recommendations were not referred, as allegations were unsubstantiated and did not warrant a recommendation to be forwarded to the National Prosecuting Authority. In the first half of 2013/14, 788 recommendations were made to the South African Police Service and the National Director of Public Prosecutions for disciplinary action and prosecutions. This subprogramme had a staff complement of 196 in 2013/14.
- *Information Management* manages information and knowledge management services through the development and maintenance of a case flow management system and database; and analyses and compiles statistical information. This entails registering and allocating 98 per cent of new cases within 72 hours of receipt, generating all disciplinary and criminal recommendation reports within 30 days of completing investigations, and generating all feedback reports to complainants, victims and referral authorities within 30 days of case closures. In 2012/13, the subprogramme had a budget of R2.3 million. A key output was the registration and allocation of 5 779 of 6 728 cases within 48 hours of receipt. In the first half of 2013/14, 89 per cent or 2 479 cases received were registered and allocated within 72 hours, against an annual target of 98 per cent or 2 797 cases. This subprogramme had a staff complement of 10 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on investigating matters as outlined in section 28 of the Independent Police Investigative Directorate Act (2011) in order to contribute towards making sure that people in South Africa are and feel safe (outcome 3). Accordingly, 92.5 per cent of the budget over the medium term is allocated to the *Investigation Services* subprogramme. This allocation is expected to increase the proportion of cases registered and allocated within 72 hours of receipt from 98 per cent in 2013/14 to 100 per cent in 2016/17. To achieve this, the department expects an increase in the number of personnel in the programme from 208 in 2013/14 to 265 over the medium term. This is expected to increase expenditure on compensation of employees over the same period, some of which is to be funded from funds reprioritised from the *Administration* programme.

Expenditure in the *Investigation Management* subprogramme over the medium term is expected to increase significantly, mainly with regard to spending on computer services. The increase is due to the centralisation of operating expenses for computer services from *Investigation Services* to *Investigation Management*.

Spending in the *Investigation Services* subprogramme increased significantly between 2010/11 and 2013/14, due to the increased number of mandatory investigations conducted under the Independent Police Investigative Directorate Act (2011) and the building of investigative support capacity required to manage the increase. This also accounts for the increase in expenditure on travel and subsistence and the training of investigators, which grew at average annual rates of 19.2 per cent and 48.5 per cent between 2010/11 and 2013/14. The significant increase in expenditure on compensation of employees between 2010/11 and 2013/14 is due to enhanced investigative support capacity.

The programme had a funded establishment of 208 posts, 22 of which were vacant at the end of November 2013. These vacancies were mainly in the *Investigation Management* and *Information Management* subprogrammes and were due to natural attrition. The directorate plans to fill the vacant posts and finalise the appointment of additional investigators by the end of 2014/15.

## Programme 3: Legal Services

### Objectives

- Ensure that investigations are conducted efficiently and within the ambit of the law by providing investigators with adequate legal advice and guidance on an ongoing basis, during and after completion of investigations.

### Subprogrammes

- *Legal Support and Administration* manages the directorate's legal obligations. It develops and maintains systems, procedures, norms and standards to support, guide and direct legal support within the directorate. This subprogramme had a budget of R1.3 million in 2012/13, which was mainly used to fund operating costs for managing the office of the chief director: legal services. This subprogramme had a staff complement of 2 in 2013/14.
- *Litigation Advisory Services* is responsible for the coordination of civil and labour litigation as well as the coordination of the granting of policing powers. The subprogramme's other key activities and outputs include the finalisation of received contracts and service level agreements. In 2012/13, this subprogramme had a budget of R1.6 million, which was used to facilitate the completion of 18 contracts and service level agreements. In the first half of 2013/14, the focus was on finalising contracts and service level agreements, providing legal opinion in terms of civil and labour matters, and reviewing legal compliance with the directorate's policies. This subprogramme had a staff complement of 3 in 2013/14.
- *Investigation Advisory Services* provides support during and after investigations, provides legal advice and guidance to investigators, and ensures that all cases that are forwarded for prosecution comply with the requirements of the prosecution process. In 2012/13, the subprogramme had a budget of R1.2 million and key activities and outputs included the provision of legal advice to investigators within 24 hours, followed by written advice within 48 hours of request. In the first half of 2013/14, legal advice and guidance was provided to investigators on an ongoing basis within 48 hours of request. Over the medium term, practice notes and directives will be issued to keep the department's investigators informed of the latest developments in criminal law, criminal procedure law and related case law. This subprogramme had a staff complement of 3 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on the provision of sound legal advice and guidance to ensure that cases forwarded for prosecution comply with legal requirements. The programme's budget over the medium term provides for an increase in the proportion of legal opinions provided to the directorate within 21 days of request, from 85 per cent in 2013/14 to 90 per cent in 2016/17, and contracts and service level agreements finalised by the directorate within 30 days of the request. This is to meet the expected increase in demand for investigation advisory services due to the projected increase in the number of investigations conducted by the *Investigation and Information Management* programme over the medium term.

The projected increase over the medium term in the proportion of legal opinions provided to the directorate within 21 days of request, and contracts and service level agreements finalised within 30 days of request, explains the significant anticipated growth in expenditure in *Investigation Advisory Services*, the programme's largest spending subprogramme. The directorate has realigned its budget to provide for the planned increase in the programme's staff complement, from 8 in 2013/14 to 10 over the medium term. The additional staff will increase the capacity of the newly established *Litigation Advisory Services* subprogramme. Expenditure on compensation of employees over the same period is expected to grow as a result.

The programme has a funded establishment of 8 posts, 3 of which were vacant at the end of November 2013 due to natural attrition. These vacant posts are expected to be filled by the end of 2013/14.

The increase in spending in this programme increased between 2010/11 and 2013/14, mainly due to an additional allocation in the 2012 budget to fund the increase in capacity. This additional allocation also accounts for the increase in spending on compensation of employees over this period. The increase in expenditure on goods and services, specifically on travel and subsistence, was due to consultations with various stakeholders, including the state attorney and state law advisors, on legal service matters relating to the implementation of the Independent Police Investigative Directorate Act (2011).

## Programme 4: Compliance Monitoring and Stakeholder Management

### Objectives

- Safeguard the principles of cooperative governance and stakeholder management through:
  - ongoing monitoring and evaluation of the quality of recommendations made to the South African Police Service and Municipal Police Services
  - ongoing monitoring and reporting on the police service's compliance with reporting obligations in terms of the Independent Police Investigative Directorate Act (2011).

### Subprogrammes

- *Compliance Monitoring* monitors and evaluates the quality of recommendations made and responsiveness received from the South African Police Service, Municipal Police Services and National Prosecuting Authority in compliance with the reporting obligations in terms of the Independent Police Investigative Directorate Act (2011). In 2012/13, when this subprogramme was under the *Investigation and Information Management* programme, it had a budget of R2.6 million. Key outputs included 84 disciplinary convictions on recommendations made by the directorate to the South African Police Service and 57 criminal convictions on directorate recommendations to the National Prosecuting Authority. In the first half of 2013/14, 210 disciplinary recommendations were made to the South African Police Service and 270 criminal recommendations were made to the National Prosecuting Authority. This subprogramme had a staff complement of 3 in 2013/14.
- *Stakeholder Management* manages relations and liaison with the directorate's key stakeholders, such as the South African Police Service, Municipal Police Services, Civilian Secretariat for Police, National Prosecuting Authority, Special Investigating Unit, Public Protector of South Africa, State Security Agency and civil society organisations in line with the requirements of the Independent Police Investigative Directorate Act (2011). In 2012/13, the subprogramme was part of the *Administration* programme and had a budget allocation of R398 000. The subprogramme held 5 engagements with key stakeholders in 2012/13 against a target of 4 engagements. In the first half of 2013/14, 6 out of the 12 planned engagements with key stakeholders for the year were held. This subprogramme had a staff complement of 1 in 2013/14.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on safeguarding the principles of cooperative governance, which include monitoring the directorate's compliance with reporting obligations and the quality of recommendations referred to the police service and the National Prosecuting Authority; stakeholder management; and ensuring public awareness of the directorate's mandate and functions through community awareness programmes. The programme's allocation over the medium term will provide for the establishment and maintenance of stakeholder relations in order to meet the additional reporting obligations placed on the directorate by the Independent Police Investigative Directorate Act (2011). In this regard, the directorate conducted 306 community outreach programmes in 2012/13 and 2013/14, an increase of 27 from 2011/12, and expects to maintain this number over the medium term.

The bulk of spending across the seven-year period is on compensation of employees. To enhance the programme's capacity, the directorate plans to increase the funded establishment from 4 posts in 2013/14 to 7 posts in 2016/17. This is expected to increase expenditure on compensation of employees. The significant increase in the programme's budget in 2014/15 is to provide for once-off costs related to the establishment of this programme as a standalone unit from 2014/15. In 2015/16, the programme's budget will decrease by R400 000 as some of the establishment costs provided for in 2014/15 will have no carry through effect. The significant increase in spending in the *Stakeholder Management* subprogramme over the medium term is to provide for an expected increase in the number of personnel in this subprogramme, from 1 in 2013/14 to 3 in 2014/15. The programme had no vacant posts at the end of November 2013.

The significant growth in expenditure in the *Compliance Monitoring* subprogramme between 2010/11 and 2013/14 was due to the increased number of mandatory recommendations the directorate referred to the South

African Police Service, Municipal Police Services and the National Prosecuting Authority under the new act. Between 2010/11 and 2012/13, the directorate conducted an average of 297 community outreach events per year against a target of 272, which explains the significant growth in expenditure on travel and subsistence over the period.

 Website address [www.justice.gov.za](http://www.justice.gov.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Uphold and protect the Constitution and the rule of law, and render accessible, fair, speedy and cost effective administration of justice in the interests of a safer and more secure South Africa.*

### Mandate

In addition to its constitutional mandate, the Department of Justice and Constitutional Development derives its legislative mandate from a number of different acts, which cover all the categories of the department's functions. These include: the establishment and functioning of the superior courts, magistrates' courts and specialised courts; the appointment of judges and other judicial officers, their conditions of service, discipline and training; the establishment and functioning of the National Prosecuting Authority, the Special Investigating Unit and the Asset Forfeiture Unit, the conduct of criminal proceedings, the investigation of organised crime and corruption, and the forfeiture of assets obtained through illicit means; the establishment and functioning of bodies responsible for legal aid, law reform and rule making; the appointment of masters of the high courts and the administration of the Guardian's Fund and deceased and insolvent estates; the regulation and provisioning of legal advisory services to government departments; the promotion, protection and enforcement of certain human rights; the protection of vulnerable groups; and support to Chapter 9 institutions.

### Strategic goals

The strategic goals of the department relate to ensuring safer communities, fighting corruption and enhancing accountability in order for all people in South Africa to feel and be safe (outcome 3). In this regard, the department aims to strengthen its leadership role and ensure the effective coordination of the justice, crime prevention and security cluster in the delivery of this outcome.

The department facilitates the effective and efficient resolution of disputes by providing accessible, efficient and quality administrative support, thereby improving the finalisation rates of cases; helping to clear the backlogs of criminal, civil and family matters by the courts and justice service points; providing access to quality guardian and probate services for citizens; and giving the state better access to legal advice and services.

In addition, the department will direct its attention to the provision of effective and cost efficient state legal services that anticipate, meet and exceed stakeholder needs and expectations, thereby reducing the exposure of government to legal risk. The developmental function of the department is to promote the ability of citizens to exercise their constitutional rights by assisting other departments to comply with the Promotion of Administrative Justice Act (2000). The strategic goal of the National Prosecuting Authority is to improve the delivery of justice for victims of crime.

## Programme purposes

### Programme 1: Administration

**Purpose:** Manage the department, develop policies and strategies for the efficient administration of justice, and provide centralised support services.

### Programme 2: Court Services

**Purpose:** Facilitate the resolution of criminal and civil cases and family law disputes by providing accessible, efficient and quality administrative support to the courts and managing court facilities.

### Programme 3: State Legal Services

**Purpose:** Provide legal and legislative services to government. Supervise the registration of trusts and the administration of deceased and insolvent estates and estates undergoing liquidation. Manage the Guardian's Fund, prepare and promote legislation, facilitate constitutional development and undertake research in support of this.

### Programme 4: National Prosecuting Authority

**Purpose:** Provide a coordinated prosecuting service that: ensures justice is delivered to the victims of crime through general and specialised prosecutions; removes the profit from crime; and protects certain witnesses.

### Programme 5: Auxiliary and Associated Services

**Purpose:** Provide a variety of auxiliary services associated with the department's aim. Fund transfer payments to public entities, constitutional institutions and the President's Fund.

## Selected performance indicators

- Value of freezing orders			R549.2m	R553.4m	R518m	R710m	R755m	R805m	R860m
- Success rate <sup>7</sup>	95.7% (314)	96.1% (295)	94.1% (289)	94% (312)	93% (301) <sup>8</sup>	93% (313)	93% (326)		

1. The projections in this column are based on the audited performance for 2012/13, taking into account current performance during 2013/14.

2. Decrease is due to an anticipated reduction in trial cases as a result of more cases finalised through admission of guilt fines and alternative dispute resolution mechanisms.

3. Percentage of cases finalised with a guilty verdict (including section 57A of the Criminal Procedure Act (1977) divided by the number of cases finalised with a verdict (excluding diversion).

4. This indicator was introduced in 2012/13; hence there is no historical data.

5. The focus over the medium term is on more serious cases (high value corruption cases) with huge impact rather than focusing on a large number of smaller cases.

6. Medium term projections include performance for non-dedicated courts.

7. Number of cases finally won as a percentage of all cases finally won or lost.

8. The focus over the medium term is on big cases with huge impact and there is much more risk of losing, hence a slight decline in the projected success rate.

## The national development plan

One of the goals that the national development plan embraces is that by 2030, all South Africans should feel and be safe. This vision can only be realised if there is an effective and functional criminal justice system. The medium term strategic framework, which covers the first five years of the national development plan, highlights the strengthening of the criminal justice system and this forms the basis of the department's 2014-19 strategic plan. Specifically, the department will focus on enhancing court process efficiency through improving the use of audiovisual remand systems, implementing enhanced court record systems, and better managing criminal appeals processes and transcriptions. Other goals that pertain to the work of the department include strengthening judicial governance and the rule of law, improving access to justice, and fostering a progressive judicial philosophy and an understanding of the socioeconomic context in which the law is interpreted and enforced.

The national development plan recommends that all departments in the justice, crime prevention and security cluster align their strategic plans with the seven-point plan, which provides a clear and practical roadmap for the establishment of a single, integrated, seamless and modern criminal justice system. The department aims to fast track the implementation of modernisation initiatives through using information technology to improve court efficiency. The case management integration solution has been prioritised over the medium term and it will provide for the integration of the departmental case management system.

Through the Office for Criminal Justice System Reform, the department will continue to accelerate the full

implementation of the seven-point plan, which includes fast-tracking legislation that protects vulnerable groups, such as women, children and specifically, the girl child.

The national development plan promotes access to justice and advocates that all vulnerable groups, including women, children and rural communities, should enjoy equal protection. In this regard, the department will continue to establish 75 small claims courts, align 387 magisterial districts with 234 municipal boundaries, convert 15 courts into full service courts and re-establish 57 dedicated sexual offences courts over the medium term.

The department will also contribute to the national development plan's goal of building a corruption free society by continuing to strengthen the investigative capacity of the Public Protector of South Africa and the Special Investigating Unit. The number of investigative capacity practitioners in these two institutions will increase from 467 in 2013/14 to 564 in 2016/17.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will continue to be on improving services in courts, re-engineering state legal services, implementing new pieces of legislation, opening high courts in Polokwane and Nelspruit, and accelerating access to services provided by the master's and state attorney offices. Consequently, a significant amount of the department's allocation over the medium term is directed towards the *Court Services* and the *National Prosecuting Authority* programmes for expenditure on compensation of employees, property payments and capital expenditure. This will allow the department to improve access to justice by increasing the number of high courts from 14 in 2013/14 to 16 in 2015/16, re-establishing 57 dedicated sexual offences courts, and increasing the number of criminal court cases finalised, including those involving alternative dispute resolution mechanisms, from 473 480 in 2014/15 to 486 026 in 2016/17.

To support the achievement of these targets, the number of personnel, excluding judicial officers, is expected to increase from 23 022, in 2013/14 to 24 903 in 2016/17, which will increase spending on compensation of employees over the medium term. Spending on computer hardware and systems is also expected to increase, partly due to the project to modernise justice services for which an effective information system is imperative. However, due to the delays in implementing a number of capital works and modernisation projects, Cabinet approved budget reductions of R507.7 million in 2014/15, R543 million in 2015/16 and R362 million in 2016/17. These amounts have been reprioritised for spending in the following areas:

- R286.9 million in 2014/15, R310.2 million in 2015/16 and R338.1 million in 2016/17 for the appointment of permanent personnel in the department, public entities and constitutional institutions
- R11.9 million in 2014/15, R11 million in 2015/16 and R11.6 million in 2016/17 for the implementation of legislation and criminal justice sector revamp projects in Legal Aid South Africa.

The department has a funded establishment of 23 647 (excluding judicial officers) and 533 positions are filled additional to the establishment. At the end of November 2013, 2 364 posts were vacant due to natural attrition and the length of time it takes to finalise the recruitment process.

### Infrastructure spending

Spending on infrastructure increased from R542.5 million in 2010/11 to R784.6 million in 2013/14, and is expected to increase to R1 billion over the medium term.

In 2013/14, the department completed the construction of the new Kagiso magistrate's office at a cost of R74 million. The department will complete the construction of the Polokwane high court in 2014/15 at a cost of R796.5 million, while the construction of the Mpumalanga high court is expected to be completed in 2015/16 at a cost of R706.4 million. Once completed, the department will comply with the Superior Courts Act (2013), which establishes the high court divisions of Mpumalanga and Limpopo. In 2014/15, work on the construction of six new magistrate courts will begin at a total cost of R967.6 million. The courts are to be located in Richards Bay and Port Shepstone (KwaZulu-Natal), Plettenberg Bay (Western Cape), Booysens (Gauteng), and Bityi and

Dimbaza (Eastern Cape). The refurbishment and provision of additional accommodation for the South Gauteng high court will continue, and is expected to be completed in October 2015.

Other major projects over the medium term include the relocation of the family court in Cape Town and the provision of new offices for the National Prosecuting Authority in Pietermaritzburg (KwaZulu-Natal), which will be completed at a total cost of R238.1 million.

## Expenditure trends

The *Office Accommodation* subprogramme is the largest spending item in the programme. It provides for accommodation charges, leased buildings and municipal rates. Between 2010/11 and 2013/14, the subprogramme grew significantly due to additional funding for the increased cost of municipal services and accommodation charges, which is higher than the annual budget increases. The *Corporate Services* subprogramme is the second largest item, and spending in this and the *Ministry and Management* subprogrammes grew significantly between 2010/11 and 2013/14, largely due to the filling of vacant senior

manager posts. This trend is expected to continue over the medium term, where the number of personnel in the programme is expected to increase from 1 165 in 2013/14 to 1 343 in 2016/17. This will include the filling of 79 posts, which were vacant at the end of November 2013, mostly due to natural attrition.

The additional staff will provide capacity in the regional offices to enhance management and oversight of third party funds internally, thereby avoiding reliance on consultants and contract workers for these functions. This is also expected to improve the outcomes of future external audits as third party funds and irregular expenditure were the basis for previous audit qualifications. As a result, expenditure on compensation of employees increased in 2013/14, while expenditure on consultants is expected to decrease over the medium term.

Expenditure on consultants increased significantly in 2013/14 due to the specialised skills required for work on asset management, third party funds and the commissions of inquiry (Seriti Arms Procurement Commission and Marikana Commission of Inquiry). The commissions of inquiry were allocated an additional amount of R133.7 million in 2013/14, which increased expenditure in the *Corporate Services* subprogramme in that year.

## Programme 2: Court Services

### Objectives

- Ensure timely, efficient and effective justice proceedings by:
  - reducing case backlogs from 33 504 in 2013/14 to 28 764 by 2016/17
  - converting 42 backlog courts into permanent courts by 2014/15
  - upgrading 15 regional courts into sexual offences courts, compliant with the new sexual offences court model by 2014/15
  - establishing an integrated information system to facilitate the effective monitoring and implementation of the Prevention and Combating of Trafficking in Persons Act (2013) by 2015/16
  - re-designating 15 branch courts into full services courts (detached courts) per year until 2018/19 to provide full court services, through upgrading infrastructure, conferring new and extended jurisdiction and by providing additional staff, training and accommodation
  - rationalising areas of courts' jurisdiction and harmonising the areas of jurisdiction of magistrates courts and divisions of the South African high court with the local and provincial court system, in line with the Constitution, by 2014/15.
- Provide adequate family law litigation services and family mediation services to protect the interests of children by:
  - increasing the percentage of court reports filed by the family advocate within 15 days of the finalisation of an enquiry from 50 per cent in 2012/13 to 70 per cent in 2014/15
  - increasing the percentage of finalised non-litigation matters from 15 per cent in 2013/14 to 20 per cent in 2014/15.

### Subprogrammes

- *Constitutional Court* funds the activities and operations of the Constitutional Court, which has jurisdiction over constitutional matters only. The court has 11 judges, including the chief justice. A minimum of 8 judges must hear a case, with the chief justice or deputy chief justice presiding. By the end of 2012/13, the court had finalised 198 matters with a staff complement of 81. In the first half of 2013/14, the court finalised 104 matters with a staff complement of 112.
- *Supreme Court of Appeal* funds the activities and operations of the Supreme Court of Appeal, which adjudicates appeals and questions of law from the high courts. The court has 26 judges, including a president and deputy president, and a minimum of 3 to 5 judges must hear a case. By the end of 2012/13, the court had finalised 551 criminal appeals and civil petitions with a staff complement of 43. In the first half of 2013/14, the court finalised 291 criminal appeals and civil petitions with a staff complement of 43.
- *High Courts* funds the activities and operations of the various high court divisions, which have jurisdiction over the defined geographical areas in which they are located. There are currently 14 high courts and 195 high court judges. By the end of 2012/13, high courts had finalised 1 194 criminal cases with a staff complement of 1 087. In the first half of 2013/14, these courts finalised 544 criminal cases with a staff

complement of 1 204.

- *Specialised Courts* funds the activities and operations of labour and labour appeal courts, the land claims court, the special tribunal, and family courts. By the end of 2012/13, the labour and labour appeal courts had finalised 448 taxation matters with a staff complement of 118, and the land claims court had finalised 213 land restitution and taxation matters with a staff complement of 31. In the first half of 2013/14, the labour and labour appeal courts finalised 357 taxation matters with a staff complement of 118, and the land claims court finalised 40 restitution and taxation matters with a staff complement of 31.
- *Lower Courts* is discussed in more detail below.
- *Family Advocate* funds family advocate offices. The family advocate conducts family mediations in non-litigation matters, with the goal of settling parental disputes out of court. In litigation matters, the family advocate files court reports, makes recommendations and appears in courts to promote and protect the best interests of children. The family advocate's office also deals with international cases of children who were abducted or retained in foreign countries in terms of the Hague Convention on the Civil Aspects of International Child Abduction. By the end of 2012/13, the family advocate had filed 11 632 court reports on unsuccessful mediation and finalised 1 048 cases in mediation with a staff complement of 329. In the first half of 2013/14, the family advocate filed 1 992 court reports and finalised 975 non-litigation matters with a staff complement of 325.
- *Magistrate's Commission* funds the Magistrate's Commission, which makes recommendations on the appointment and tenure of magistrates. In 2012/13, with the approval of the Minister of Justice and Constitutional Development, the commission appointed 174 magistrates at different levels. A further 308 posts were advertised in 2013/14. This subprogramme had a staff complement of 23 in 2012/13 and 20 at the end of September 2013.
- *Government Motor Transport* funds vehicles for judges and departmental officials. This subprogramme's total budget is used for purchasing vehicles. By the end of 2012/13, 14 vehicles had been purchased for judges and 131 vehicles had been purchased for departmental officials. In the first half of 2013/14, 14 vehicles had been purchased for judges and 61 had been purchased for departmental officials.
- *Facilities Management* funds the provision of accommodation for courts and justice service delivery points. The subprogramme manages funds for the construction of new and additional accommodation as well as the leasing of privately owned premises for use by the department. 4 new lower courts buildings (Tsakane, Palm Ridge, Gelvandale and Ntuzuma) were completed in 2012/13 while repairs and renovations and the construction of new accommodation were carried out in 2 courts (Caledon and Danielskuil) in the first half of 2013/14.
- *Administration of Courts* funds the management of courts' administration and performance evaluation functions, with 1 national office and 9 provincial offices. This subprogramme had a staff complement of 1 081 in 2012/13 and 1 190 in the first half of 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on enhancing the administration of courts, improving case flow management, building new courts, and refurbishing existing ones. The bulk of spending goes towards compensation of employees, property payments and capital assets in the Lower Courts and Facilities Management subprogrammes. The increase in expenditure in the Facilities Management subprogramme between 2010/11 and 2013/14 was due to the additional funding to build new courts. Spending on buildings and other fixed structures increased significantly over the same period and is expected to decrease in 2015/16 as R437.6 million was cut as a result of delays in the implementation of capital works projects. The funds were

reprioritised, mainly to expenditure on goods and services to fund leases and municipal services. Spending on buildings and other fixed structures is expected to increase from 2016/17 onwards.

The number of personnel is expected to increase from 14 823 in 2013/14 to 16 178 in 2016/17, mainly in post levels 7 to 10, as a result of an increased demand for services and staffing of the new court buildings. The increase in personnel over the medium term is expected to allow the department to reduce the case backlog from 29 952 in 2014/15 to 28 764 in 2016/17. Of the funded posts, 2 774 posts were vacant by the end of November 2013, mainly due to natural attrition.

In order to promote the independence of the judiciary, the department established the South African Judicial Education Institute and expanded capacity in the Office of the Chief Justice. This increased expenditure in the Constitutional Court subprogramme significantly between 2010/11 and 2013/14.

## Subprogramme: Lower Courts

This subprogramme funds the activities and operations of the various regional and district courts. There are more than 1 886 courtrooms dealing with district and regional court cases across the country. Small claims courts, which deal with certain civil matters involving up to R12 000, are in place countrywide. There are currently 81 backlog courts to reduce case backlogs. At the end of 2012/13, the courts had finalised 465 606 criminal cases and 249 573 quasi judiciary functions (default judgements and taxations) with a staff complement of 11 113. In the first half of 2013/14, the courts finalised 259 200 criminal cases and 171 754 quasi judiciary function matters with a staff complement of 11 777.

## Expenditure trends

The spending focus over the medium term will be on the efficient administration of the numerous regional and district courts through the use of ICT. This is reflected in the expected increase in spending on machinery and equipment due to the implementation of the second phase of the desktop renewal project dealing with ICT infrastructure.

As the effective management of the courts requires high numbers of personnel, expenditure on compensation of employees is set to take up 68.8 per cent of this subprogramme's budget over the medium term. Between 2010/11 and 2013/14, the increase in expenditure on compensation of employees was due to additional funding for improved conditions of service, as well as the upgrading of administration clerks from levels 3 and 4 to level 5. These personnel provide support to magistrates and prosecutors. Over the medium term, the department plans to appoint additional personnel within salary levels 1 to 6, and this augmented capacity is expected to enable prosecutors to increase the number of convictions from 294 221 in 2014/15 to 300 136 in 2016/17. The increase in personnel over the medium term coincides with an increase in expenditure on consultants as a result of increases in the demand for specialised services such as sheriffs, translators and transcription services. The subprogramme had a funded establishment of 12 689 posts, of which 912 posts were vacant at the end of November 2013, due to natural attrition.

## Programme 3: State Legal Services

### Objectives

- Improve the legal system by:
  - preparing approximately 7 bills and 8 subordinate legislative instruments (regulations, proclamations and notices) for submission to the minister in 2014/15
  - preparing approximately 7 rules of court or rule amendments for submission to the Rules Board for Courts of Law for consideration and approval in 2014/15.
- Facilitate law reform by developing approximately 8 research documents (issue papers, discussion papers and reports) for submission to the South African Law Reform Commission for consideration and approval in 2014/15.
- Foster the advancement of previously disadvantaged individuals by increasing the number and value of briefs to such individuals from 70 per cent in 2013/14 to 75 per cent in 2014/15.
- Finalise legal matters and save litigation costs for the state by finalising 100 per cent of all new expungement applications within 6 months upon receipt in 2014/15, compared to the finalisation timeframe of 8 months in 2013/14.
- Improve the administration of estates and the Guardian's Fund in 2014/15 by:
  - issuing 91 per cent of letters of appointment in deceased estates within 15 days of receipt of all required documents
  - examining 86 per cent of liquidation and distribution accounts in large estates (over R125 000) within 15 days of receipt of all required documents

- providing 90 per cent of beneficiaries of the Guardian’s Fund with access to funds within 40 days of application, after all necessary documentation has been received
  - issuing 81 per cent of certificates of appointment in bankruptcy matters within 10 days of receipt of all required documents
  - examining 81 per cent of liquidation and distribution accounts in bankruptcy matters within 15 days of receipt of all required documents
  - issuing 92 per cent of letters of authority in trusts within 14 days of receipt of all required documents
  - ensuring that 75 per cent of new deceased estates are registered on the paperless estate administration system.
- Promote and strengthen constitutional development through the enhancement of the implementation of the Promotion of Equality and Prevention of Unfair Discrimination Act (2000) and the rollout of the training programme for civil society organisations in all 9 provinces on an ongoing basis.

### Subprogrammes

- *State Law Advisors* provides legal advice, representation and legislative drafting services to the executive, all state departments, state owned enterprises and autonomous government bodies through the Office of the Chief State Law Advisor. By the end of 2012/13, the office had finalised 429 requests for legal opinions, 62 requests for preliminary opinions, 373 bills and other legislative instruments, and 78 requests for translation with a staff complement of 84. In the first half of 2013/14, the office finalised 217 requests for legal opinions, 30 requests for preliminary opinions, 160 bills and other legislative instruments, and 49 requests for translation with a staff complement of 89.
- *Litigation and Legal Services* provides attorney, conveyance and notary services to the executive, all state departments, state owned enterprises and other government bodies through the 12 offices of the state attorney; and provides legal support to the department and the ministry. By the end of 2012/13, the office had allocated 70 per cent or R314 million of the value of briefs to previously disadvantaged individuals, enrolled 5 556 cases, finalised 1 874 cases, settled 918 cases, won 750 or 30 per cent, and lost 386 cases. The staff complement during this period was 668. In the first half of 2013/14, the office allocated a total of R203 million in the value of briefs to previously disadvantaged individuals, 2 622 cases were enrolled, 660 cases were decided in courts and 395 cases were successfully concluded. This subprogramme had a staff complement of 674 at the end of September 2013.
- *Legislative Development and Law Reform* conducts research and prepares and promotes new and amending legislation. By the end of 2012/13, the branch had developed 11 legislative instruments (bills, research papers and rules) with a staff complement of 63. In the first half of 2013/14, 6 bills, 3 sets of regulations, 3 proclamations and 1 notice were submitted to the Minister of Justice and Constitutional Development for consideration and approval with a staff complement of 64.
- *Master of the High Court* funds the master’s office, which supervises the administration of deceased and insolvent estates, trusts, curatorship and the Guardian’s Fund. There are 15 master’s offices. By the end of 2012/13, 167 519 files on estates worth less than R125 000 and 36 585 files on estates worth more than R125 000 had been finalised with a staff complement of 1 049.
- *Constitutional Development* conducts research; coordinates the implementation of constitutionally mandated legislation such as the Promotion of Equality and Prevention of Unfair Discrimination Act (2000) and the Promotion of Administrative Justice Act (2000); promotes the Constitution and its values; assists and protects independent institutions supporting constitutional democracy to ensure their independence and effectiveness; and coordinates, promotes and develops programmes in support of social justice and participatory democracy. By the end of 2012/13, this subprogramme had carried out 6 programmes on the promotion of administrative justice across the country, provided administrative support to 2 Chapter 9 institutions (the South African Human Rights Commission and the Public Protector of South Africa) and provided advice on salary adjustments for commissioners at the South African Human Rights Commission. It also dealt with the resolution of complaints received from Chapter 9 institutions against the department and launched the programme on the promotion and protection of the rights of lesbian, gay, bisexual, transgender and intersex persons. This subprogramme had a staff complement of 49 during this period. In the first half of 2013/14, 3 programmes on the promotion of administrative justice were delivered across the country and

administrative support to the Chapter 9 institutions was provided. This subprogramme had a staff complement of 55 at the end of September 2013.

## Expenditure trends

The spending focus over the medium term will be on continuing to capacitate the Constitutional Development subprogramme, expanding services in the master's and state attorney offices in the Master of the High Court and State Law Advisor subprogrammes, and streamlining and increasing access to legal services.

Expenditure on compensation of employees takes up an average of 83.2 per cent of total spending over the seven-year period as this programme is human resource intensive. The number of personnel is expected to increase from 2 035 in 2013/14 to 2 145 in 2016/17, mostly at post levels 11 to 12, to support the achievement of these targets. The programme has a funded establishment of 2 145 posts, of which 110 were vacant at the end of November 2013, due to natural attrition. Between 2010/11 and 2013/14, expenditure on compensation of employees increased significantly due to additional allocations for the implementation of the occupation specific dispensation for legally qualified professionals and additional funding for improved conditions of service. These allocations also explain the significant increases in spending in the State Law Advisors and Legislative Development and Law Reform programmes over the same period.

The budget allocations over the medium term will enable the department to improve the legal system by preparing at least 15 bills and 20 subordinate legislative instruments for submission to the Minister of Justice and Constitutional Development, and increasing the number of state attorneys' offices from 12 in 2012/13 to 15 in 2016/17. In order to provide for legal costs to deal with cases against the state, spending on consultants and professional services (legal costs) increased at an average annual rate of 9.3 per cent between 2010/11 and 2013/14. This is projected to grow marginally over the medium term as the efficiency and effectiveness of state legal services improves.

## Programme 4: National Prosecuting Authority

### Objectives

- Improve the rate of successful prosecution by:
  - increasing the number of criminal court cases finalised with a verdict from 324 276 in 2014/15 to 330 794 by 2016/17
  - increasing the number of convictions in the regional and high courts from 28 351 in 2014/15 to 28 922 by 2016/17
  - increasing the number of criminal court cases finalised through alternative dispute resolution mechanisms from 149 204 in 2014/15 to 155 232 by 2016/17.
- Improve the conviction in cases that require specialised prosecution by:
  - ensuring that between 2014/15 and 2016/17, a total of 70 people are convicted for corruption where the amount involved is more than R5 million
  - increasing the number of convictions in complex commercial crime cases from 919 in 2014/15 to 937 by 2016/17
  - expanding the number of Thuthuzela care centres from 43 in 2013/14 to 60 by 2016/17.
- Contribute to the effectiveness of the criminal justice system by ensuring that threatened witnesses are successfully protected.
- Remove the profit from crime through increasing the impact of asset forfeiture by:
  - increasing the number of new completed forfeiture cases from 312 in 2013/14 to 350 by 2016/17
  - increasing the value of new completed forfeiture cases from R170 million in 2013/14 to R205 million by 2016/17
  - increasing the value of new freezing orders from R710 million in 2013/14 to R860 million by 2016/17.

### Subprogrammes

- *National Prosecutions Service* is discussed in more detail below.
- *National Specialised Prosecutions Services* deals with priority crimes, litigation, sexual offences and community affairs, and specialised commercial crime. By the end of 2012/13, a conviction rate on complex commercial crime cases of 92.9 per cent (639 convictions) had been achieved with a staff complement of

184. In the first half of 2013/14, the conviction rate on complex commercial crime cases was 94 per cent (529) with a staff complement of 186.

- *Asset Forfeiture Unit* seizes assets that are the proceeds of crime or have been part of an offence through a criminal or civil process. By the end of 2012/13, the success rate for this unit was 94.1 per cent (289 matters) with a staff complement of 133. In the first half of 2013/14, the success rate was 94.4 per cent (218 matters) and the staff complement was 134.
- *Office for Witness Protection* provides for protection, support and related services to vulnerable and intimidated witnesses and related persons in judicial proceedings in terms of the Witness Protection Act (1998). No witnesses or their related persons were threatened, harmed or killed in both 2012/13 and in the first half of 2013/14, and the staff complement was 155 and 154, respectively.
- *Support Services* provides corporate support services in terms of finance, human resources, ICT, strategy support, integrity, security communication and risk management to the National Prosecuting Authority. This subprogramme had a staff complement of 372 in 2012/13 and 350 and in the first half of 2013/14.

## Expenditure trends

The bulk of spending in this programme across the seven-year period is on compensation of employees. The spending focus over the medium term will be on capacitating the *National Prosecutions Service* and the *National Specialised Prosecutions Services* subprogrammes through the aspirant prosecutor programme. Expenditure on compensation of employees increased between 2010/11 and 2013/14 due to the implementation of the second phase of the occupation specific dispensation for legally qualified professionals and additional funding for improved conditions of service. R142.9 million in 2014/15, R150 million 2015/16 and R160 million in 2016/17 has been reprioritised mainly from the case backlog project, towards the appointment of permanent prosecutors. As a result, the number of personnel is expected to increase from 4 999 in 2013/14 to 5 237 in 2016/17. The programme has a funded establishment of 5 097 posts and 435 positions are filled additional to the establishment. At the end of November 2013, 147 posts were vacant, mainly due to natural attrition.

The budget allocation over the medium term will enable the National Prosecuting Authority to increase the number of criminal court cases finalised with verdicts from 324 276 in 2014/15 to 330 794 in 2016/17. In addition, it will enable it to increase the number of operational Thuthuzela care centres from 43 in 2013/14 to 60 by 2016/17, and the cumulative number of persons convicted of corruption for amounts higher than R5 million to 170 by 2016/17.

Expenditure in the *National Specialised Prosecution Services* subprogramme also increased significantly over this period, due to additional allocations for the establishment of Thuthuzela care centres. Expenditure on the *Asset Forfeiture Unit* subprogramme over the same period decreased, due to the shifting of funds from this subprogramme to the *National Prosecutions Service* subprogramme, which is discussed below.

## Subprogramme: National Prosecutions Service

This subprogramme is primarily responsible for general prosecutions and the appeals that may follow, which include resolving criminal matters outside of the formal trial process through alternative dispute resolution mechanisms, settling admissions of guilt for minor offences and considering dockets brought by the police where persons have not been charged. In 2012/13, 466 800 criminal court cases, including alternative dispute resolution mechanisms, were finalised by 3 042 legally qualified personnel. In the first half of 2013/14, the *National Prosecutions Service* finalised 259 744 criminal court cases, including alternative dispute resolution mechanisms, with 3 291 legally qualified personnel.

2. Rand million.

## Expenditure trends

Expenditure on compensation of employees over the medium term is the most significant item of expenditure, owing to the labour intensive nature of this subprogramme. Spending on this item will allow the department to increase the number of personnel in the subprogramme from 3 989 in 2013/14 to 4 124 in 2016/17 in order to increase the number of cases finalised from 473 480 in 2014/15 to 486 026 in 2016/17.

The subprogramme has a funded establishment of 4 025 posts and 354 posts are filled additional to the establishment. The number of vacant posts was 147 at the end of November 2013, due to natural attrition.

Between 2010/11 and 2013/14, the increase in expenditure on compensation of employees was due to additional allocations for the implementation of the second phase of the occupation specific dispensation for legally qualified professionals and improved conditions of service. Expenditure on machinery and equipment increases significantly over the seven-year period as a result of the reclassification of finance leases and the purchasing of vehicles for protecting witnesses.

## Programme 5: Auxiliary and Associated Services

### Subprogrammes

- *Legal Aid South Africa* funds Legal Aid South Africa, which provides legal aid to indigent people and legal representation at the state's expense, as set out in the Constitution. By the end of 2012/13, Legal Aid South Africa had finalised 432 002 legal matters with 2 029 legal practitioners. In the first half of 2013/14, Legal Aid South Africa finalised 221 619 legal matters with 2 064 legal practitioners.
- *Special Investigating Unit* funds the Special Investigating Unit, which provides professional forensic investigating and litigation services to all state institutions at national, provincial and local levels to combat

maladministration, corruption and fraud; and protects state assets and public funds. By the end of 2012/13, 997 cases had been referred to the National Prosecuting Authority for criminal prosecutions. The number of investigators during this period was 302. In the first half of 2013/14, 29 cases were referred to the National Prosecuting Authority for criminal prosecutions and the number of investigators was 299.

- *Public Protector of South Africa* funds the Public Protector of South Africa, which investigates any alleged improper conduct in state affairs, public administration, or any sphere of government; as well as any conduct that results in any impropriety or prejudice. By the end of 2012/13, 20 160 complaints had been finalised and the number of investigators during this period was 85. In the first half of 2013/14, 13 938 complaints were finalised and the number of investigators was 92.
- *South African Human Rights Commission* funds the South African Human Rights Commission, which promotes and monitors the observance of human rights in South Africa. By the end of 2012/13, the commission had finalised 7 047 cases and the staff complement was 150. In the first half of 2013/14, 4 320 cases were finalised with a staff complement of 137.
- *Justice Modernisation* designs and implements IT infrastructure and networks; and re-engineers, automates and integrates business processes for the administration of civil and criminal justice in the integrated justice system. By the end of 2012/13, this subprogramme implemented case management integration solutions to 20 courts and 99 police stations.
- *President's Fund* provides funding for reparations flowing from the findings of the Truth and Reconciliation Commission. At the end of 2012/13, 73 surviving Truth and Reconciliation Commission victims and 237 rightful next of kin had been given access to the President's Fund in terms of individual reparations. The staff complement was 4 in this period. In the first half of 2013/14, regulations on basic and higher education were submitted to Cabinet for consideration and approval by the president and the staff complement was 4.

## **Expenditure trends**

This programme's budget is comprised predominantly of transfers to public entities and constitutional institutions. The increases in transfers between 2010/11 and 2013/14 were mainly for growing the investigative capacity in the Public Protector of South Africa and the Special Investigating Unit in order to intensify the fight against corruption, maladministration, malpractices and improper conduct in state affairs.

The spending focus over the medium term will be on building capacity in these entities as well as accelerating modernisation projects administered by the department on behalf of the justice, crime prevention and security cluster. The modernisation of the criminal justice system is in line with government's priority of improving all components of the criminal justice system.

The significant growth in expenditure in the Justice Modernisation subprogramme between 2010/11 and 2013/14 is as a result of funds that were reprioritised from the Department of Police to the Department of Justice and Constitutional Development for the revamping of the criminal justice system. This is also the reason for the significant increase in expenditure on computer services, which are key to the modernisation initiative, and accounts for the projected increase in expenditure on goods and services over the medium term. The modernisation and revamp of the justice system initiative received additional allocations over this period, as did the transfers to entities and constitutional institutions, to fund an increase in personnel.

R90 million over the medium term has been reprioritised from the Justice Modernisation subprogramme for human resource capacity in the Financial Intelligence Centre.

## **Public entities and other agencies**

### **Legal Aid South Africa**

#### **Mandate and goals**

The Legal Aid Board, trading as Legal Aid South Africa, was established in terms of section 2 of the Legal Aid Act (1969), to provide legal aid to indigent people as well as legal representation at the state's expense to eligible people in terms of the Constitution. It is required to provide independent and impartial legal aid, with the intention of improving justice and public confidence in the law and the administration of justice. It aims to be a leader in the provision of accessible, sustainable, ethical, independent and quality legal services to the poor and vulnerable. To this end, the entity has identified the following priority groups: children; all detained people, including sentenced prisoners; all accused people who wish to appeal or review a court decision in a higher court; women, particularly in divorces, maintenance and domestic violence cases; and the landless, especially in eviction cases.

The organisation's strategic goals over the medium term are to:

- empower clients and communities to make informed choices about their legal rights and responsibilities
- ensure an accessible, effective and efficient justice system serving all in South Africa
- create effective, sustained stakeholder partnerships that are able to jointly increase access to justice as well as support other external developing legal aid organisations
- ensure financial and non-financial sustainability that impacts positively on society, the economy and the environment
- ensure good governance practices that enable high performance and accountability
- create and maintain a recognised, respected, independent and acclaimed legal aid brand
- ensure an effective and efficient, economic and environmentally responsive supply chain management system supporting client services delivery and internal business processes
- promote employee value proposition that is able to recruit and retain the best talent to deliver the organisation's mandate and strategies
- develop modern, integrated, secure and effective information technology platforms facilitating client services and linkages and enabling internal business needs.

## Expenditure trends

The spending focus of Legal Aid South Africa over the medium term will be on accelerating the provision of legal aid, particularly on civil matters, by increasing the number of legal practitioners. To give effect to this, R36 million in 2014/15, R38 million in 2015/16 and R40.5 million in 2016/17 has been reprioritised from the case backlog project towards the appointment of permanent legal practitioners. In addition, additional amounts of R11.9 million in 2014/15, R11 million in 2015/16 and R11.6 million in 2016/17 are allocated for the implementation of the Children's Act (2005) and the Child Justice Act (2008), as well as for the revamp of the criminal justice system.

These allocations will increase the number of legal practitioners from 2 116 in 2013/14 to 2 131 in 2016/17, thereby increasing the number of civil matters finalised from 45 679 to 59 604. Legal Aid South Africa has a funded establishment of 2 668 and the number of filled posts is expected to increase from 2 526 in 2013/14 to 2 668 in 2016/17. There were 142 vacant posts as at 30 November 2013, due to natural attrition and resignations. Judicare, which outsources legal representation to private practitioners, and is used in instances where Legal Aid South Africa does not have offices or capacity or where there is a potential conflict of interest, will be maintained at current levels.

Between 2010/11 and 2013/14, the increase in expenditure in the special projects programme was due to additional funding from the Department of Justice and Constitutional Development for the implementation of legislation that protects vulnerable groups, specifically the Children's Act (2005) and the Child Justice Act (2008). This increase also coincided with a significant growth in the administration programme, caused by the renewal of contractual agreements on office rentals, IT and security. The cost escalation on these contracts is usually higher than the inflationary adjustment on the budget. The significant increase in expenditure on compensation of employees in the same period was due to funds received for the implementation of phase 2 of the occupation specific dispensation for legally qualified professionals.

Over the medium term, the legal aid services programme will continue to be the largest driver of spending, and this is in line with its mandate of providing legal aid to indigents. Spending in the special projects is expected to increase significantly to accelerate the provision of legal aid services to vulnerable groups. The budget allocations over this period will enable Legal Aid South Africa to increase the number of cases finalised from 437 641 in 2013/14 to 458 663 in 2016/17.

### **Other public entities and agencies**

- The **Public Protector of South Africa** is mandated to strengthen constitutional democracy by investigating any conduct in state affairs, or in the public administration in any sphere of government that is alleged or suspected to be improper or to result in any impropriety or prejudice; to report on that conduct; and to take appropriate remedial action. Its total budget in 2014/15 is R218.2 million.
- The **South African Human Rights Commission** is an independent statutory body, established to support constitutional democracy by promoting, protecting and monitoring human rights. The Commission's total budget for 2014/15 is R128.1 million.
- The **Special investigating Unit** is established to investigate and litigate on serious malpractices, maladministration and corruption in connection with the administration of state institutions. The Special Investigating Unit is now empowered to institute and conduct civil proceedings in any court of law or special tribunal, in its own name or on behalf of state institutions. The unit's total budget for 2014/15 is R510.3 million.

Executive authority: Minister of Police  
Accounting officer: National Commissioner of the South African Police Service  
Website address: [www.saps.gov.za](http://www.saps.gov.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Prevent, combat and investigate crime, maintain public order, protect and secure the inhabitants of South Africa and their property, and uphold and enforce the law.*

### Mandate

The South African Police Service derives its powers and functions from section 205 of the Constitution and from the South African Police Service Act (1995). This legislation regulates the police service in terms of its core function, which is to prevent, investigate and combat crime.

### Strategic goals

Ensuring that all people in South Africa are and feel safe (outcome 3) is the broad outcome for the justice, crime prevention and security cluster. To deliver on this outcome and ensure safer communities, the department's ongoing strategic goals are to:

- reduce the number of serious crimes
- combat border and cyber crime
- increase the percentage of trial ready case dockets for serious crimes
- stabilise public protests
- enhance local police capability.

Another broad outcome that the department's strategic plan addresses is an efficient, effective and development orientated public service (outcome 12), specifically in relation to service delivery quality and access. The main focus is on ensuring adequate availability of and access to police service points by bringing police service points closer to communities. This goal has been prioritised in the department's medium term infrastructure and capital asset plan, with particular emphasis on constructing police stations and establishing additional service points in rural areas.

As part of the department's contribution to the creation of a better South Africa and safer Africa in a better world (outcome 11), the South African Police Service supports the advancement of South Africa's position on security and stability issues in Africa in organs such as the United Nations (UN), African Union (AU) and Southern African Development Community (SADC). Provision of specialised policing services to AU member

states includes the deployment of police officials for peace keeping missions and cross-border operations within the Southern African Development Community.

## Programme purposes

### Programme 1: Administration

**Purpose:** Develop policy and manage the department, including providing administrative support. Provide for the functions of the Civilian Secretariat for Police.

### Programme 2: Visible Policing

**Purpose:** Enable police stations to institute and preserve safety and security, and provide for specialised interventions and the policing of South Africa's borders.

### Programme 3: Detective Services

**Purpose:** Enable the investigative work of the South African Police Service, including providing support to investigators in terms of forensic evidence and the criminal record centre.

### Programme 4: Crime Intelligence

**Purpose:** Manage crime intelligence and analyse crime information, and provide technical support for investigations and crime prevention operations.

### Programme 5: Protection and Security Services

**Purpose:** Provide protection and security services to all identified dignitaries and government interests.

## Selected performance indicators

Table 25.1 Police

Indicator	Programme	Outcome	Past			Current	Projections

			2010/11	2011/12	2012/13	2013/14 <sup>2</sup>	2014/15 <sup>1</sup>	2015/16 <sup>1</sup>	2016/17 <sup>1</sup>
Percentage of crime-related hits reacted <sup>6</sup> to as a result of the movement control system screening of: - wanted persons  - circulated stolen or robbed vehicles	Visible Policing	Outcome 3: All people in South Africa are and feel safe	100% (15 972)	100% (32 805)	100% (3 435)	100%	100%	100%	100%
			100% (3 438)	100% (13 226)	100% (3 331)	100%	100%	100%	100%
Percentage of medium to high-risk incidents stabilised in relation to requests received <sup>7</sup>	Visible Policing		100% (1 960)	100% (1 909)	100% (3 160)	100%	100%	100%	100%
Detection rate for serious crimes per year <sup>8</sup>	Detective Services		51.84% (1 092 861)	53.41% (1 134 355)	54.19% (1 145 978)	56.5% (1 082 861)	59%	59%	59%
Percentage of trial ready case dockets for serious crimes per year <sup>9</sup>	Detective Services		30.84% (155 933)	48.17% (249 879)	61.31% (369 204)	51.84% (190 243)	54.84%	57.84%	60.84%
Conviction rate for serious crimes per year <sup>10</sup>	Detective Services		87.65% (309 295)	86.19% (307 580)	88.24% (352 513)	88.80% (313 144)	88.80%	88.80%	88.80%
Percentage of trial ready case dockets for serious commercial crime related charges per year <sup>11</sup>	Detective Services		25.6%	50%	56.5%	32%	44%	44%	44%
Percentage of original previous conviction reports for formally charged individuals generated per year	Detective Services		81.46% (994 020) generated within 30 day	93.88% (1 137 423) generated within 20 days	97% (164 990) generated within 20 days	90% (generated within 15 calendar days)	93%	94%	95%
Number of network operations conducted <sup>12</sup>	Crime Intelligence		24 384	49 019	37 188	29 552	32 507	34 132	35 838
Percentage of national key points evaluated in compliance with the National Key Points Act (1980)	Protection and Security Services		99.4% (164)	98% (171)	96.2% (175)	100% (197)	100% (197)	100% (197)	100% (197)

1. The number of serious crimes reported cannot be predicted, therefore medium term targets for all indicators relating to the reporting, detection and investigation of crime are only estimates based on previous past performance and new measures to combat crime to be implemented over the medium term.

2. The figures for 2013/14 are based on the published targets as described in the department's 2013/14 annual performance plan.

3. This indicator measures serious crime reported, excluding crime detected as a result of police action. Serious crimes include contact crimes, contact related crimes, property related crimes and other serious crimes.

4. This is a new indicator, which the department will be reporting on from 2014/15 onwards. The medium term targets take into account rural police stations where high levels of serious crimes have been reported.

5. *The rendering of victim friendly services is based on set criteria such as the availability of dedicated infrastructure for statement taking and specific training provided to frontline members to deal with victims. This indicator is calculated against the number of police stations in operation in the specific financial year.*
6. *Reaction to hits includes arrests and confiscations.*
7. *Stabilise means to reach a state where there are no longer any major challenges or problems to the extent that specialised policing intervention is no longer required and that it is unlikely that the situation will get worse, and can be managed through normal day-to-day policing.*
8. *The calculation for detection rate takes into account the total number of charges referred to court, plus charges withdrawn before court, plus charges closed as unfounded, divided by the total number of charges investigated.*
9. *A court ready docket is a fully investigated case docket (whether it includes one or more charges) which can be used by the National Prosecuting Authority for the prosecution of an offender. To determine the court ready rate, the total number of case dockets certified as 'investigation finalised' on the crime administration system are divided by the total number of outstanding charges.*
10. *The conviction rate relates to the provision of a fully investigated case docket that the senior public prosecutor used in a trial in court, and where the accused was found guilty and convicted. The conviction rate is determined by the number of charges resulting in a guilty verdict, divided by the sum of the guilty and not guilty verdicts.*
11. *This percentage is a composite calculation. Single absolute numbers can therefore not be provided.*
12. *Network operations refer to planned and purposeful processes of obtaining, assembling and organising information through exploitation of all types of sources on a target (organisation, group or individual) for further intelligence processing and/or use as evidence. Since specific targets are unknown, actual figures vary. Predictions are based on past average performance.*

## The national development plan

Over the medium term, the department will continue to implement strategies to ensure alignment with the national development plan's goals. These include professionalising the police service, enhancing the safety of women and children through the effective investigation and detection of serious crimes against women and children, and building community participation and partnerships around key issues such as policing, parole boards and community sentencing in terms of the visible policing strategy.

Professionalising the police service will include: enforcing the police code of conduct and code of ethics; establishing dedicated and disciplined management capacity; developing a recruitment to retirement strategy, which includes career pathing and the enhancement of police training; and developing a crime detection strategy that will incorporate skills development as a critical success factor. These elements will be complemented by the implementation of ministerial priorities which emphasise the need for transforming the police service, making police services accessible through infrastructure development, skills development, enhancing managerial and leadership abilities in the department, revamping the criminal justice system, implementing the rural safety strategy, and enhancing the effectiveness of the family, child and sexual offences unit through training.

The department will also continue to align its strategic and annual performance plans with the criminal justice system's seven-point plan, which is endorsed by the national development plan. Among the transformative changes advocated by the seven-point plan is a seamless and integrated South African criminal justice system. In this regard, the department will adopt an integrated approach, working with other departments in the justice, crime prevention and security cluster, on the implementation of the criminal justice sector revamp and modernisation programme.

Key components of the modernisation programme over the medium term include the enhancement and alignment of the department's IT infrastructure functionality to better support the criminal justice system and the implementation of provisions of the Criminal Law (Forensic Procedures) Amendment Bill. In support of the national development plan's recommendations relating to the fight against corruption, the anti-corruption task team, which is driven largely by the Directorate of Priority Crimes Investigation, employs an integrated, multi-disciplinary approach that is focused on securing convictions related to the investigation of serious corruption. The South African Police Service has adopted a zero tolerance approach to corrupt behaviour among its members and has consistently arrested, charged and secured convictions of its own members. As an integral part of the justice, crime prevention and security cluster, the South African Police Service will focus on ensuring the institutionalisation of appropriate corruption prevention and combating mechanisms, informed by the justice, crime prevention and security cluster anti-corruption framework. An anti-corruption working group has been established to coordinate the implementation of the framework.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on building and upgrading physical resources and capital infrastructure, professionalising the police service through skills development, and enhancing the department's ICT systems as part of the criminal justice sector revamp and modernisation programme. These activities

support the justice, crime prevention and security cluster's objective of enhancing the criminal justice system to create safer communities and ensure that people in South Africa are and feel safe (outcome 3).

Using funds allocated to the *Visible Policing* and *Detective Services* programmes, which also constitute the bulk of the department's operational budget over the medium term, the department plans to reduce the number of serious crimes by 103 106 in 2016/17, increase the percentage of trial ready case dockets by 9 per cent in 2016/17, and ensure that, starting in 2013/14, all police stations provide victim friendly services to victims of rape, sexual offences and abuse.

Due to the labour intensive nature of policing, spending on compensation of employees is expected to use the largest share of the budget over the medium term. The increase in spending on compensation of employees over the medium term provides for the department's existing personnel and for improved conditions of service, including the upgrading of clerical posts in line with the Department of Public Service and Administration's directive on benchmarking job descriptions and grading levels for clerks. The upgrading of the posts is provided for by additional Cabinet approved allocations of R350 million in 2014/15, R255.3 million in 2015/16 and R785.5 million in 2016/17, as well as a reprioritisation of funds of R348.1 million in 2014/15 and R470.2 million in 2015/16 from transport equipment to compensation of employees. In addition, the increase in spending on this item over the medium term includes Cabinet approved additional allocations of R242.7 million in 2014/15, R432.2 million in 2015/16 and R459.5 million in 2016/17 for improved conditions of service.

This additional funding will increase the number of filled posts from 197 842 in 2013/14 to 198 062 in 2016/17 to provide for the appointment of additional detectives in the *Detective Services* programme in order to improve detective and police capability. The department also intends to use funds from vacancies to implement grade progression for qualifying officials employed in terms of the South African Police Service Act (1995). At the end of November 2013, there were 2 837 vacant posts in the department as a result of natural attrition. Consistent with the department's human resource strategy, only critical posts earmarked for the department's core function will be filled over the medium term.

#### Infrastructure spending

Spending on infrastructure decreased between 2010/11 and 2013/14, due to delays in the implementation of a number of projects. This resulted in some projects being rescheduled over the MTEF period to allow for appropriate planning, and explains the projected increase in expenditure on infrastructure over the medium term. Allocations earmarked for infrastructure are mainly for the construction and upgrading of police stations. In 2012/13, 72.7 per cent, or 16 out of 22, of the department's facility projects planned for the year were completed. This included the completion of four new police facilities and structures such as the Port Elizabeth 10111 call centre, Amalia police station in North West, Weenen police station in KwaZulu-Natal, and the repair and upgrading of Clocolan police station in Free State. One of the main reasons for the department's failure to achieve the target for 2012/13 was the non-performance of contractors.

Over the medium term, the department will prioritise the construction of a shooting range at Faure in Western Cape at an estimated contract price of R181.1 million. The shooting range will allow for police officials to undergo firearm training and shooting practice on a regular basis to comply with legislative requirements. The tender documentation provides for the construction of an administration building, a tactical building, a guard house, a caretaker's house, an R5 rifle range, nine pistol ranges, three shot gun ranges and one tactical range with road works and storm water drainage, landscaping and irrigation and site services. The project is scheduled for completion in 2017.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on upgrading and building new police facilities to improve the accessibility of police services. Spending on buildings and other fixed structures is expected to increase over the medium term due to plans to build ramps to make police stations more accessible to people with disabilities, and projects for building new police stations that have been rescheduled for the medium term due to delays in implementation. The delay also explains the decrease in spending on buildings and other fixed structures between 2010/11 and 2013/14.

The programme will also work towards sustaining corporate support functions such as human resources, supply chain management and computer services to support the execution of line function operational activities of the department. The bulk of the programme budget over the medium term has been allocated to the *Corporate Services* subprogramme and for spending on compensation of employees. In the same period, the programme receives an additional allocation for improved conditions of service and the upgrading of clerical posts. The growth in expenditure on compensation of employees is also due to the projected increase in the programme's staff complement, from 36 629 in 2012/13 to 37 044 over the medium term. The additional capacity will mainly provide for additional cleaning staff and security officers. As at 30 November 2013, there were 1 473 vacant posts in this programme, mainly as a result of natural attrition.

Between 2010/11 and 2013/14, the increased spending in the *Corporate Services* subprogramme was due to the department's renewed focus on developing human capital and skills, replacing boarded vehicles, creating new

employee health and wellness centres, and purchasing uniforms, weapons and ammunition. This also explains the growth in spending on goods and services, specifically on training and development and inventory over this period. The increase in spending on computer services across the seven-year period is due to the ongoing implementation of two of the department's key strategic projects: the upgrading of the department's IT network and the modernisation of the criminal justice system.

The significant increase in spending in the *Civilian Secretariat* subprogramme in 2013/14 was due to the shifting of some functions that were previously executed by the South African Police Service and the Independent Police Investigative Directorate to the Civilian Secretariat for Police following the enactment of the Civilian Secretariat for Police Service Act (2011). The secretariat has been designated as a separate department with effect from 1 April 2014.

## Programme 2: Visible Policing

### Objectives

- Provide a proactive and responsive policing service to discourage and prevent priority crimes by:
  - reducing the number of serious crimes from 1 833 775 in 2012/13 to 1 650 150 in 2016/17 through the implementation of sector policing at all stations, conducting crime prevention operations in identified hotspots and enhancing training for detectives and forensic specialists
  - implementing the rural safety strategy at 50 police stations over the medium term through establishing mobile contact points and rural safety priority committees, and using reservists to enhance capacity for rural safety policing
  - increasing the percentage of police stations providing victim friendly services to victims of rape, sexual offences and abuse from 81.2 per cent in 2012/13 to 100 per cent in 2016/17
  - reacting to 100 per cent crime related hits as a result of movement control system screenings on wanted persons and circulated stolen and robbed vehicles over the medium term.

### Subprogrammes

- *Crime Prevention* provides for basic crime prevention and visible policing services provided at police stations, including community service centres. In 2012/13, 806 298 priority crime arrests were made during 34 428 crime prevention operations, an increase of 29 158 compared to 2011/12. In the first half of 2013/14, 401 244 priority crime arrests were made during 18 261 crime prevention operations, 30 132 stolen or robbed vehicles were recovered in relation to 67 020 vehicles reported as stolen or robbed, and 12 982 stolen and lost firearms were recovered in relation to 12 373 reported stolen and lost. This was against the 2013/14 annual targets of 84.3 per cent firearms recovered and 46 per cent vehicles recovered. In 2012/13, the subprogramme had a staff complement of 92 141, which is projected to decrease to 91 806 by the end of 2013/14.
- *Border Security* provides for the policing of South African borders. In 2012/13, the department made 18 882 arrests at ports of entry and exit for illegal firearms and ammunition, stolen vehicles, illicit drugs, illegal goods, maritime related offences and violations in terms of the Immigration Act (2002). The South African Police Service reacted to all crime related hits as a result of the movement control system screening of 3 435 wanted persons and 3 331 stolen or robbed vehicles in circulation. In the first half of 2013/14, 7 109 arrests were made at ports of entry and exit and the South African Police Service reacted to all crime related hits as a result of movement control system screening of 1 536 wanted persons and 1 801 stolen or robbed vehicles in circulation. In 2012/13, this subprogramme had a staff complement of 6 188, and this number is projected to decrease to 6 002 by the end of 2013/14.
- *Specialised Interventions* provides for interventions in medium to high risk operations, including the air wing, the special task force, crime combating units and the protection of valuable and/or dangerous cargo. In 2012/13, the national intervention units made 445 arrests during 3 160 interventions, the special task force made 162 arrests during 203 operations, 12 399 crowd related incidents were recorded comprising 10 517 peaceful incidents and 1 882 unrest related incidents, with 3 680 arrests made arising from these incidents. In the first half of 2013/14, 6 009 peaceful incidents and 971 unrest related incidents were policed

by the South African Police Service. In 2012/13, this subprogramme had a staff complement of 8 198, which is projected to increase to 8 289 by the end of 2013/14.

- *Facilities* provides for office accommodation budgets and related expenditure devolved to the department by the Department of Public Works. This includes payments for operating leases, municipal services and accommodation charges. In 2012/13, the subprogramme had a budget of R2.8 billion, which was used for the payment of operating leases in line with the department's lease contracts, municipal services and accommodation charges to the Department of Public Works.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing basic policing services to reduce the number of serious crimes and improving services to victims of crime, particularly with regard to rural safety and crimes affecting vulnerable groups. Due to the labour intensive nature of basic policing services, the bulk of this programme's budget over the medium term is thus allocated to spending in the *Crime Prevention* subprogramme and on compensation of employees.

The department aims to use resources to increase the percentage of police stations providing victim friendly services to victims of rape, sexual offences and abuse from 81.2 per cent in 2013/14 to 100 per cent in 2016/17 and reduce the number of serious crimes from 1 753 256 in 2013/14 to 1 650 150 in 2016/17. This will contribute to the overarching outcome of the justice, crime prevention and security cluster, which is to ensure that people in South Africa are and feel safe (outcome 3).

Expenditure on compensation of employees increases significantly over the seven-year period, due to the allocation of additional funding for improved conditions of service and the upgrading of clerical positions, particularly in 2013/14 and over the medium term. The number of filled positions in this programme decreased from 106 527 in 2012/13 to 106 097 in 2013/14 and will be maintained at this level over the medium term. This is in line with the department's strategy to use unspent funds from vacant posts to fund the implementation of grade progression for qualifying officials employed in terms of the South African Police Service Act (1995). There were 1 980 vacant positions at the end of November 2013, mainly due to natural attrition.

The increases in operating lease payments and property payments in the *Facilities* subprogramme across the seven-year period are due to annual escalations in leasehold prices and accommodation charges paid to the Department of Public Works. The increase in expenditure for contractors over the same period is due to the growing need to repair transport equipment as the department has a large fleet. Spending on contractors also provides for the use of reservists to enhance capacity for rural safety policing.

## Programme 3: Detective Services

### Objectives

- Contribute to the successful prosecution of crime by:
  - increasing the detection rate for serious crimes from 54.2 per cent in 2012/13 to 59 per cent in 2016/17 through the provision of specialised training to detectives and enhancing dedicated specialised capabilities in different detective services units
  - increasing the trial ready case dockets rate for serious crimes from 51.8 per cent in 2013/14 to 60.8 per cent in 2016/17 through ensuring that dockets are fully investigated and ready for prosecution
  - increasing the conviction rate for serious crimes from 88.2 per cent in 2012/13 to 88.8 per cent in 2016/17 through the adoption of integrated planning approaches and criminal justice system related modernisation projects

- increasing the trial ready case dockets for serious commercial crime related charges from 32 per cent in 2013/14 to 44 per cent in 2016/17 through implementation of the cyber-crime policy framework and enhancement of cyber-crime capability in the police
- generating 95 per cent of original previous conviction reports for formally charged individuals within 15 calendar days by 2016/17, from a baseline of 97 per cent reports generated within 20 days in 2012/13.

## Subprogrammes

- *Crime Investigations* is discussed in more detail below.
- *Criminal Record Centre* provides for an effective and credible criminal record centre in respect of crime scene management or processing, and provides criminal records and related information. In 2012/13, 1 201 643 fingerprint reports on previous criminal convictions were generated, of which 97 per cent were generated within 20 days. 872 505 commercial and non-criminal enquiries were received to determine whether persons applying for firearm licences, professional drivers' permits and employment had any previous convictions. In the first half of 2013/14, 92 per cent of offenders' previous conviction reports for crime related fingerprints were generated within 15 days, against a 2013/14 year-end target of 90 per cent within 15 days. In 2012/13, this subprogramme had a staff complement of 5 679, which is projected to increase to 5 784 by the end of 2013/14.
- *Forensic Science Laboratory* funds forensic science laboratories, which provide specialised evidence related technical analysis and support to investigators. In 2012/13, 381 299 entries were analysed, 57.6 per cent of which were analysed within 28 working days. The year-end target of 92 per cent was not achieved due to the partial eradication of the forensic science laboratory backlog that had a direct impact on the performance of the subprogramme. The higher the eradication in backlog cases, the less the turnaround time as measured against the 28 working days. In the first half of 2013/14, forensic analysts received 104 456 entries, of which 67 per cent were analysed within 28 working days against a 2013/14 year-end target of 93 per cent. In 2012/13, this subprogramme had a staff complement of 1 491, which is projected to increase to 1 645 by the end of 2013/14.
- *Specialised Investigations* provides for the prevention, combating and investigation of national priority offences, including the investigation of organised crime syndicates, serious and violent crime, commercial crime and corruption. In 2012/13, the serious organised crime unit arrested 1 256 persons and secured 523 convictions; and the serious commercial crime unit received 10 941 cases, made 5 358 arrests and convicted 3 965 persons on 35 833 counts in 3 763 cases. In the first half of 2013/14, a 79.3 per cent detection rate for serious commercial crime related charges was achieved, against a 2013/14 year-end target of 52 per cent. In 2012/13, this subprogramme had a staff complement of 2 830, which is projected to decrease to 2 786 by the end of 2013/14.

## Expenditure trends

The spending focus over the medium term will continue to be on contributing to the successful prosecution of criminal offences by maintaining and providing accurate criminal records and related information, and funding the forensic laboratories which provide specialised technical analysis and support during criminal investigations. The department increased the percentage of original previous conviction reports for formally charged individuals generated per year from 81.5 per cent in 2010/11 to 90 per cent in 2013/14, and expects to maintain it at above 90 per cent over the medium term, using funds allocated in the *Criminal Record Centre* and *Specialised Investigations* subprogrammes. In addition, the department expects to increase the percentage of trial ready case dockets for serious commercial crime related charges from 32 per cent in 2013/14 to 44 per cent in 2016/17.

The significant increase in spending in the *Forensic Science Laboratory* subprogramme between 2010/11 and 2013/14 was due to the allocation of additional funding for the criminal justice sector revamp programme and the acquisition of specialised technical analysis equipment and related resources, including semi-automated equipment. This was to attain better results on degraded and problematic DNA samples. This also explains the significant growth in expenditure on machinery, equipment and computer services in 2011/12 and 2012/13. The alignment of the department's IT system with the criminal justice system and the implementation of the 2013 Criminal Law (Forensic Procedures) Amendment Bill will be key features of the criminal justice sector revamp

and modernisation programme over the medium term. Consequently, expenditure on computer services will largely account for the expenditure growth in the programme over the same period.

Spending on compensation of employees increases over the seven-year period in order to enhance capacity for the detective services function and to provide for the allocation of additional funding for improved conditions of service and the upgrading of clerical posts. The number of personnel in this programme is expected to increase from 39 654 in 2013/14 to 39 874 in 2016/17 to provide for additional detective capacity. As at 30 November 2013, there were no vacancies in this programme.

## Subprogramme: Crime Investigations

This subprogramme provides for detectives at police stations who investigate general and serious crimes, including crimes against women and children. Between 2010/11 and 2012/13, the detection rate for contact crimes increased from 57 per cent in 2010/11 to 61.5 per cent in 2012/13, while the detection rate for trio crimes increased from 16 per cent in 2010/11 to 23 per cent in 2012/13. In the first half of 2013/14, detection rates of 61.1 per cent for contact crimes and 21.8 per cent for trio crimes were achieved against targets of 61.5 per cent and 29 per cent.

## Expenditure trends

The spending focus over the medium term will be on investigating reported crime, tracing wanted persons and re-establishing the family violence, child protection and sexual offences units. Specific attention will also be

given to expanding and refocusing the stock theft units, as well as investigating crime and victim support programmes. These initiatives support the department's performance targets of increasing the detection rate for serious crimes and the percentage of trial ready case dockets for serious crimes.

The significant increase in spending on compensation of employees between 2010/11 and 2013/14 is mainly due to the appointment of additional detectives to strengthen the subprogramme's detection capacity, while the anticipated increase in expenditure on travel and subsistence over the medium term provides for increased travel required by investigators and detectives for collating evidence. The detection rate for serious crimes is expected to increase from 56.5 per cent in 2013/14 to 59 per cent in 2016/17, while the percentage of trial ready case dockets for serious crimes is projected to increase from 51.8 per cent in 2013/14 to 60.8 per cent in 2016/17.

The number of filled posts is expected to increase from 29 439 in 2013/14 to 29 659 in 2016/17 to provide for the appointment of more detectives. Thus the anticipated increase in expenditure on compensation of employees over the medium term is to provide for additional detective capacity and the allocation of additional funding for improved conditions of service. The subprogramme had a funded establishment of 29 053 posts and no vacancies at the end of November 2013.

## Programme 4: Crime Intelligence

### Objectives

- Contribute to combating crime by increasing the number of crime network operations from 37 188 conducted in 2012/13 to 38 007 in 2016/17 in support of crime prevention, investigation and prosecution.

### Subprogrammes

- Crime Intelligence Operations* provides for intelligence based criminal investigations. In 2012/13, 37 188 operations were conducted compared to 49 019 in 2011/12, resulting in 10 607 arrests and the recovery of goods valued at R633.8 million. In the first half of 2013/14, 18 254 crime intelligence operations were conducted against a 2013/14 year-end target of 29 552 operations. In 2012/13, this subprogramme had a staff complement of 3 316, which is expected to increase to 3 436 by the end of 2013/14.
- Intelligence and Information Management* provides for the analysis of crime intelligence patterns that will facilitate crime detection in support of crime prevention and crime investigation. In 2012/13, 311 807 operational analyses and strategic analysis reports were produced. In the first half of 2013/14, 107 012 operational analyses and strategic analysis reports were produced against a 2013/14 year-end target of 258 606. In 2012/13, this subprogramme had a staff complement of 5 612, which is expected to decrease to 5 245 by the end of 2013/14.

## Expenditure trends

The spending focus over the medium term will be on maintaining overall personnel capacity and aligning functions within the organisational structure of the crime intelligence division, which is currently under review.

Due to the labour intensive nature of crime intelligence functions, the bulk of this programme's budget over the seven-year period is spent on compensation of employees, mainly in the *Intelligence and Information Management* subprogramme. The increase in expenditure on compensation of employees between 2010/11 and 2013/14 was thus mainly due to growing personnel numbers in the crime intelligence division. The expected increase in expenditure on this item over the medium term is to provide for improved conditions of service. The number of filled posts decreased from 8 928 in 2012/13 to 8 681 in 2013/14 and is projected to remain at this level over the medium term. This is in line with the department's strategy to use unspent funds from vacant posts to implement grade progression for qualifying officials employed in terms of the South African Police Service Act (1995). There were 161 vacant posts as at the end of November 2013. The vacancies were due to natural attrition.

Using funds allocated to the *Crime Intelligence Operations* subprogramme over the medium term, the department expects to increase the number of network operations conducted from 29 552 in 2013/14 to 35 838 in 2016/17 to support the objectives of preventing, investigating and prosecuting crime. This projected increase also explains the increase in travel and subsistence expenditure over the medium term.

## Programme 5: Protection and Security Services

## Objectives

- Minimise security violations through:
  - ongoing protection of all identified dignitaries as well as local and foreign dignitaries while in transit without any security breaches

- ongoing protection of the locations in which dignitaries, including when persons related to the president and the deputy president are present, without any security breaches
- auditing 50 per cent (124) out of a total of 248 strategic installations and evaluating 100 per cent (197) national key points by 2016/17.

## Subprogrammes

- *VIP Protection Services* provides for the protection of the president, deputy president, former presidents, their spouses, and other identified dignitaries while in transit. In 2012/13, protection was provided to 450 South African and foreign dignitaries without security breaches. In the first half of 2013/14, protection was provided to 241 South African and foreign dignitaries without security breaches, which is in line with the 2013/14 year-end target of 100 per cent protection provided without security breaches. In 2012/13, this subprogramme had a staff complement of 1 998, which is projected to increase to 2 020 by the end of 2013/14.
- *Static and Mobile Security* provides for the protection of other local and foreign dignitaries and the places in which all dignitaries, including persons related to the president and the deputy president, are present. In 2012/13, 137 residences and installations were protected, with 6 security breaches occurring. In the first half of 2013/14, 141 residences and installations were protected, with 3 security breaches occurring, against a 2013/14 year-end target of 100 per cent protection provided with no security breaches. In 2012/13, this subprogramme had a staff complement of 3 376, which is projected to increase to 3 393 by the end of 2013/14.
- *Government Security Regulator* provides for security regulations and evaluations, and the administration of national key points and strategic installations. In 2012/13, 96.2 per cent (175) of national key points were evaluated in compliance with the National Key Points Act (1980). In the first half of 2013/14, 97 national key points and 78 strategic installations were evaluated, against 2013/14 year-end targets of 197 and 124. In 2012/13, this subprogramme had a staff complement of 273, which is projected to decrease to 258 by the end of 2013/14.
- *Operational Support* provides administrative support for the programme, including personnel development. In 2012/13, this subprogramme had a staff complement of 716, which is projected to decrease to 695 by the end of 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on maintaining sufficient capacity to provide protection and security services to identified individuals and buildings.

Due to the labour intensive nature of security and protection services, the bulk of spending in this programme goes towards compensation of employees, mainly in the *Static and Mobile Security* and *VIP Protection Services* subprogrammes. The allocations over the medium term will allow the department to increase the capacity of the presidential protection services. To this end, the number of filled posts in this programme will increase to 6 366 over the medium term.

The significant increase in expenditure in the *Government Security Regulator* subprogramme between 2010/11 and 2013/14 is due to the appointment of 58 additional staff to evaluate national key points and strategic installations in compliance with the National Key Points Act (1980). This also explains the anticipated increases in spending on travel and subsistence over the medium term. Using funds allocated in this subprogramme over the medium term, the department will maintain the percentage of national key points evaluated in compliance with the National Key Points Act (1980) at 100 per cent.

Expenditure on machinery and equipment grew significantly between 2010/11 and 2013/14, mainly as a result of the upgrading of the department's vehicle fleet. This is also the reason for the expected increase in spending on machinery and equipment over the medium term.

Executive authority

Minister of Police

Accounting officer

Secretary for Police

Website address

[www.policeseecretariat.gov.za](http://www.policeseecretariat.gov.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Provide strategic advice and administrative support to the Minister of Police. Exercise civilian oversight over the South African Police Service to ensure a transformed and accountable police service that reflects the values of a developmental State.*

### Mandate

The Civilian Secretariat for Police was established in terms of the Civilian Secretariat for Police Service Act (2011) and section 208 of the Constitution, which provides for the establishment of a civilian secretariat for the police service to function under the direction of the Minister of Police. In terms of the Civilian Secretariat for Police Service Act (2011), the mandate of the secretariat is to conduct civilian oversight over the police service and provide policy, administrative and strategic support to the minister. In terms of the act, the secretariat is also responsible for monitoring the implementation of the Domestic Violence Act (1998). This was previously the responsibility of the former Independent Complaints Directorate.

### Strategic goals

The secretariat's strategic focus over the medium term relates to ensuring that all people in South Africa are and feel safe (outcome 3). This involves a specific focus on the mobilisation of all role players and stakeholders to enhance the service provided by the South African Police Service, thus ensuring the safety and security of communities.

The secretariat's strategic goals over the medium term are to:

- ensure improved accountability of the South African Police Service
- ensure the ongoing transformation of the South African Police Service
- ensure deepened public participation in the fight against crime through community engagement forums, anti-crime campaigns and the formation of strategic collaborative partnerships with intergovernmental institutions, civil society and the private sector
- provide sound, timeous and evidence based strategic research, policy advice and legislative support to the Minister of Police.

## Selected performance indicators

**Table 25.18 Civilian Secretariat for Police**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11 <sup>1</sup>	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of oversight visits to police stations conducted per year	Civilian Oversight, Monitoring and Evaluation	Outcome 3: All people in South Africa are and feel safe	–	155	429 <sup>2</sup>	200 <sup>2</sup>	450	500	500
Number of audit reports related to the Domestic Violence Act (1998) finalised per year	Civilian Oversight, Monitoring and Evaluation		–	3	3	2 <sup>3</sup>	2 <sup>3</sup>	2 <sup>3</sup>	2 <sup>3</sup>
Number of policies on policing developed per year	Legislation and Policy Development		–	5	0	5	2 <sup>4</sup>	2 <sup>4</sup>	2 <sup>4</sup>
Number of bills on policing developed per year	Legislation and Policy Development		–	1	2	1	2	2	2
Total number of provinces implementing community policing forum guidelines	Intersectoral Coordination and Strategic Partnerships		– <sup>5</sup>	– <sup>5</sup>	8	– <sup>5</sup>	9	9	9

1. Reporting on the above indicators started in 2011/12 following the enactment of the Civilian Secretariat for Police Service Act (2011). The dashes in the table indicate that no past performance data is available.

2. The significant increase in performance in 2012/13 is due to the inclusion of oversight visits by the provinces.

3. Audit reports on the Domestic Violence Act (1998) have been aligned with the number of reports that must be submitted to Parliament, which are two reports per year.

4. Between 2010/11 and 2013/14, the targets for this indicator catered for both drafting and approval of policies. Starting in 2014/15, the indicator will only cater for the drafting of policies, hence the downward revision of targets. No policies were drafted in 2012/13.

5. Before 2012/13, provinces used to determine their own community policing forum guidelines, hence there are no targets for 2010/11 and 2011/12. Due to inconsistencies observed with the indicator in 2013/14, the indicator was not included as part of the secretariat's 2013/14 annual performance plan.

## The national development plan

The national development plan recommends that the building of a safer society would be strengthened to a large degree by increasing community participation in community safety. The plan also promotes an integrated approach between state and non-state institutions with active citizen involvement. In support of these recommendations, between 2010/11 and 2013/14, the secretariat's *Intersectoral and Strategic Partnerships* programme interacted with communities through its community outreach meetings, anti-crime campaigns and the establishment of 44 community safety forums in the country intended to increase communities' awareness of crime and enhance participation in community safety. Partnerships aimed at developing shared perspectives on challenges, solutions and approaches to crime prevention were formed with the Police and Prisons Civil Rights Union and the South African Police Union.

Over the medium term, the secretariat will continue to engage in these public participatory programmes to establish and sustain working relationships formed with communities and labour unions on crime prevention, thus contributing to the building of a safer society as the national development plan espouses. The secretariat will also ensure that all provinces implement community policing forum guidelines, and through the newly established community policing forum training committee, develop training guidelines on community policing forums to ensure uniformity in the nationwide implementation of the guidelines.

## Objectives

- Manage and encourage national dialogue on community safety and crime prevention on an ongoing basis by:
  - establishing and promoting collaborative partnerships on crime prevention among civil society, intergovernmental and private institutions
  - coordinating and aligning crime prevention initiatives conducted by civil society, intergovernmental and private institutions.
- Provide policy, research and legislative support to the Minister of Police by:
  - developing 6 evidence based policies and conducting 12 research based projects on crime and policing over the medium term
  - developing an effective and constitutionally compliant legislative framework to facilitate effective policing by 2016/17.

- Provide oversight of the South African Police Service through ongoing monitoring and evaluation of the performance of the police service over the medium term by:
  - conducting an average of 483 police station visits
  - assessing the South African Police Service’s compliance with applicable legislation and monitoring police conduct to improve police accountability
  - assessing programme implementation and effectiveness based on the findings of oversight visits and in line with the Minister of Police’s priorities
  - enhancing information management in the secretariat to ensure accurate and reliable data collection and storage.

## Programmes

- *Administration* provides for administrative support, strategic leadership and management of the department. In 2012/13, the bulk of the programme’s allocation went towards compensation of employees, due to the appointment of additional personnel in the programme in support of increased oversight responsibilities of the secretariat following the enactment of the Civilian Secretariat for Police Service Act (2011). Over the medium term, the programme’s budget allocation will mainly be used to procure ICT, administration and operating systems to allow the secretariat to fully comply with the budgeting, reporting and accounting requirements of the Public Finance Management Act (1999). This programme had a staff complement of 55 in 2013/14.
- *Intersectoral Coordination and Strategic Partnerships* manages and encourages national dialogue on community safety and crime prevention. In 2012/13, 44 community safety forums were set up and crime prevention partnerships were established with key labour unions in the policing environment and the community. These partnerships were aimed at developing shared perspectives on the challenges, solutions and approaches to crime prevention. To ensure a coordinated approach to the fight against crime, over the medium term, the secretariat will continue to conduct public participatory meetings to promote its safety programmes, ensure that community forum guidelines are implemented in all provinces, and strengthen strategic and collaborative partnerships between intergovernmental institutions, civil society and the private sector. This programme had a staff complement of 23 in 2013/14.
- *Legislation and Policy Development* develops policy and legislation for the police sector and conducts research on policing and crime. In 2012/13, a DNA database was established, and this will serve as a criminal investigative tool for the South African Police Service in the fight against crime. The following bills and regulations were also developed: the draft Dangerous Weapons Bill (2012), the 2013 Criminal Law (Forensic Procedures) Amendment Bill, the 2012 South African Police Service Amendment Bill, the 2012 Private Security Industry Regulation Amendment Bill, the 2006 Firearms Control Amendment Bill and draft regulations for the Civilian Secretariat for Police. Over the medium term, the programme’s budget allocation will be used to facilitate the review of the South African Police Service Act (1995) as well as the development and finalisation of various policies on policing and crime. This programme had a staff complement of 17 in 2013/14.
- *Civilian Oversight, Monitoring and Evaluation* oversees, monitors and reports on the performance of the South African Police Service. In 2012/13, 429 police station oversight visits and 4 monitoring and evaluation forum meetings were conducted. Over the medium term, the programme will facilitate: the development of trend analysis reports on police station performance, the implementation of and compliance with legislation and policies, the implementation of the Independent Police Investigative Directorate’s recommendations, and an assessment of the South African Police Service complaints management systems. This programme had a staff complement of 24 in 2013/14.

## Expenditure trends

The enactment of the Civilian Secretariat for Police Service Act (2011) expanded the mandate of the secretariat to include various functions that were previously performed by the South African Police Service and the Independent Police Investigative Directorate. These activities included community outreach and monitoring of the South African Police Service's implementation of the Domestic Violence Act (1998). Consistent with this, the spending focus over the medium term will be on strengthening civilian oversight over the South African Police Service through strategic and collaborative partnerships with civil society, intergovernmental and private institutions.

Between 2013/14 and 2016/17, spending in the secretariat is expected to increase significantly as the secretariat establishes itself as a separate department and begins to incur operational costs. Most of the secretariat's expenditure is on compensation of employees, due to the labour intensive nature of the oversight functions it performs. These include conducting over 400 oversight visits each year and deepening public participation in crime prevention through community outreach programmes and anti-crime campaigns.

The secretariat had 19 vacant positions, which are a result of internal promotions and difficulties experienced in finding suitable candidates. There are 119 filled posts, and this number is expected to increase to 143 in 2014/15 and remain at this level over the medium term. Spending on compensation of employees and on training and development is expected to increase over the medium term as a result. With this additional capacity, the secretariat expects to strengthen civilian oversight and police accountability over the medium term by increasing the number of police station oversight visits conducted from 450 in 2013/14 to 500 in 2016/17. Expenditure on travel and subsistence over the period is also expected to increase in line with the increase in the number of oversight visits.

To facilitate its separation from the South African Police Service in 2014/15 and to ensure compliance with the accounting, budgeting and reporting requirements of the Public Finance Management Act (1999), the secretariat is in the process of acquiring its own financial, human resources and ICT systems. This explains the growth in expenditure for computer services in 2013/14 and the projected increase in expenditure on consultants over the medium term. Consultants are to provide specialised services to assist with setting up the budgeting, reporting and accounting requirements necessary for the secretariat to become fully operational as a department.

## Public entities and other agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Private Security Industry Regulatory Authority** was established in terms of section 2 of the Private Security Industry Regulation Act (2001). The entity's legislative mandate is to: promote a legitimate private security industry which acts in terms of the principles contained in the Constitution and other applicable laws. The entity's total budget for 2014/15 is R185.9 million.

Executive authority Minister of Agriculture, Forestry and Fisheries  
Accounting officer Director General of Agriculture, Forestry and Fisheries  
Website address [www.daff.gov.za](http://www.daff.gov.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Lead, support and promote agricultural, forestry and fisheries resources management through policies, strategies and programmes to enhance sustainable use, and achieve economic growth, job creation, food security, rural development and transformation.*

### Mandate

The mandate of the Department of Agriculture, Forestry and Fisheries is to address production and consumption in the agriculture, forestry and fisheries sectors. The department's mandate is derived from a range of legislation, including the Sea Fisheries Act (1988), the National Forests Act (1988), the Agricultural Product Standards Act (1990), and the Conservation of Agricultural Resources Act (1993).

### Strategic goals

The department's strategic goals over the medium term, which are organised around the key priority areas of food security, job creation, and rural and economic development, are to:

- provide effective and efficient strategic leadership, governance and administration in the department
- increase production and productivity in the agriculture, forestry and fisheries sectors, to enhance employment and economic growth
- provide an enabling environment for food security and sector transformation
- ensure the sustainable use of natural resources in the forestry and fisheries sectors through the conservation, protection, rehabilitation and recovery of natural resources within ecosystems.

### Programme purposes

#### Programme 1: Administration

**Purpose:** Provide strategic leadership, management and support services to the department.

## Programme 2: Agricultural Production, Health and Food Safety

**Purpose:** Manage the risks associated with animal diseases, plant pests and genetically modified organisms. Registration of products used in agriculture. Promote food safety and create an enabling environment for increased and sustainable agricultural production.

## Programme 3: Food Security and Agrarian Reform

**Purpose:** Facilitate and promote food security and agrarian reform programmes and initiatives.

## Programme 4: Trade Promotion and Market Access

**Purpose:** Ensure value chain integration, and facilitate market access for agriculture, forestry and fisheries products.

## Programme 5: Forestry

**Purpose:** Develop and facilitate the implementation of policies and targeted programmes to ensure proper management of forests, and the sustainable use and protection of land and water. Manage agricultural risks and disasters.

## Programme 6: Fisheries

**Purpose:** Promote the development, management, monitoring and sustainable use of marine living resources and the development of the fisheries sector.

## Selected performance indicators

**Table 26.1 Agriculture, Forestry and Fisheries**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of livestock and plant improvement schemes monitored for effectiveness per year	Agricultural Production, Health and Food Safety	Outcome 7: Vibrant equitable and sustainable rural communities with food security for all	-1	-1	-1	-1	4	4	4

## The national development plan

The national development plan identifies agriculture as one of the key job creating sectors, with the potential to create job opportunities for 300 000 households in agriculture smallholder schemes and 145 000 jobs in agro-processing by 2020. The sector also has the potential to improve the living conditions of 660 000 farm workers. The plan expects that, by 2030, a third of the country's food trade surplus should be produced by small scale farmers or households.

Many of the department's strategic goals and associated objectives are aligned with the focus of the national development plan. These include providing an enabling environment for food security and sustainable agrarian transformation; increasing production and productivity to enhance employment and economic growth; ensuring the sustainable use of natural resources through the conservation, protection, rehabilitation and recovery of natural resources within ecosystems. The department has supported approximately 609 000 subsistence and smallholder producers between 2010/11 and 2013/14, and aims to continue providing comprehensive support to all categories of producers over the medium term. The support will increase the number of people participating in activities in the agricultural, forestry and fisheries sectors, and thus facilitate their greater participation in the country's economy.

The department also aims to contribute to improving the efficiency of smallholder producers by implementing various production strategies. These include organising smallholder producers into commodity based organisations, increasing their collective bargaining power in negotiations for production inputs and markets, and providing support and training to small medium and micro enterprises (SMME). The implementation of transformation frameworks such as the AgriBEE Sector Charter and the Forestry Sector Transformation Charter, and the allocation of commercial fishing rights, will also facilitate and promote broader participation in the country's economy. Three programmes are aligned with the national development plan. These are the Fetsa Tlala integrated food production initiative, which is aimed at mass production of staple foods on fallow land with agricultural potential in communal areas; Ilima/Letsema, which is aimed at supporting sustainable agriculture and promoting rural development for smallholder producers; and the LandCare programme, which is aimed at addressing land degradation problems and encouraging the sustainable use of natural resources.

The department is also supporting targeted land reform beneficiaries in line with the plan's land reform objective by providing post-settlement support through the comprehensive agricultural support programme.

In contributing to the sustainable use of natural resources, the department will implement sustainable development programmes that ensure the protection of biomes and endangered species, rehabilitate degraded land, mitigate climate change and provide adaptation strategies. About 175 653 hectares of land have been restored through reforestation and land rehabilitation programmes between 2010/11 and 2013/14, and the department expects to restore and rehabilitate a further 91 500 hectares over the medium term.

The plan also states that the agricultural sector has the potential to create close to 1 million new jobs by 2030. To do this, South Africa needs to expand irrigated agriculture. The 1.5 million hectares currently under irrigation could be expanded by at least another 500 000 hectares to 2 million hectares. The government also

needs to support commercial agricultural industries and regions with the highest growth and employment potential; support upstream and downstream agricultural job creation; find creative opportunities for collaboration between commercial farmers, smallholder farmers and complementary industries; and develop strategies that give new entrants access to value chains and support. Between 2010/11 and 2013/14, the department created over 2 638 jobs under the LandCare programme and 4 178 jobs under the Working for Fisheries project. Over the medium term, it is expected to create 2 700 jobs and 3 550 jobs under the LandCare and the Working for Fisheries programmes.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on increasing food production by providing agricultural support to smallholder farmers through the comprehensive agricultural support programme; and implementing the Landcare, Ilima/Letsema food production and Fetsa Tlala food security programmes. The department plans to spend over R7 billion on conditional grants to provinces to support approximately 435 000 subsistence and 54 500 smallholder producers, and improve extension services. The department also plans to provide flood disaster relief in Limpopo, Mpumalanga and Western Cape, to which additional allocations of R209 million over the medium term have been made. The spending focus will also be on making additional transfers of R50 million in 2014/15 and R50 million in 2016/17 to the Land and Agricultural Development Bank of South Africa to support the implementation of the retail emerging markets model.

Over the medium term, expenditure is expected to decrease due to Cabinet approved budget reductions of R90 million, R100 million and R145 million, and the shifting of R22 million per year to the Department of Environmental Affairs in line with the shift of the Knysna indigenous forest management function. The reductions are in spending on compensation of employees and goods and services expenditure across all programmes. These reductions are not expected to have an impact on service delivery.

The department expects over the medium term to fill only 6 980 posts from its establishment of 7 068 posts and 304 additional to the establishment. At the end of November 2013, there were 6 107 filled posts, of which 873 were vacant. The vacancies were mainly due to normal attrition and the length of time it takes to finalise the recruitment process.

Expenditure in the *Agricultural Production, Health and Food Safety* programme increased between 2010/11 and 2013/14 due to the procurement of toolkits and 74 mobile clinics for animal health technicians to create an enabling environment for the appointment of 1 000 veterinarians in all nine provinces by 2015; and an increase in the allocation to the Ilima/Letsema programme. The increase in expenditure on transfers to provinces and municipalities over the same period was due to an increase in the comprehensive agricultural support programme conditional grant in order to increase the number of smallholder farmers supported from 85 505 in 2010/11 to 146 000 in 2013/14. A further reason for the increase in spending in the *Agricultural Production, Health and Food Safety* programme and on transfers over the same period was the additional allocation of R50 million in 2011/12 and R120 million in 2012/13 to the Agricultural Research Council to upgrade the foot and mouth disease facility; and R492.4 million allocated in 2013/14 and 2015/16 for Onderstepoort Biological Products to build and modernise vaccine production facilities and equipment.

### Infrastructure spending

Infrastructure projects funded by the department have an estimated cost of R708 million. This includes: R250 million for fences along South Africa's borders with Zimbabwe and Mozambique to manage the incidence of foot and mouth disease, on which approximately R102 million has been spent to date with R90 million projected to be spent over the medium term; R200 million budgeted for drilling and fitting boreholes for

agricultural purposes in rural communities across the country; R54.6 million allocated for upgrading and maintaining buildings and laboratories at the Stellenbosch plant quarantine station where the project is in its first phase, with R3.5 million spent in 2013/14; and R492.4 million to upgrade the Onderstepoort Biological Products vaccine facility, with about R63 million spent as at December 2013 and the remainder to be spent over the medium term.

## Expenditure trends

The spending focus over the medium term will be on acquiring offices for the forestry and fisheries branches through the *Office Accommodation* subprogramme; facilitating and coordinating research by engaging with the National Agricultural Research Forum through the *Policy, Planning, Monitoring and Evaluation* subprogramme; developing service level agreements with the Agricultural Research Council for research and development to be carried out; and providing effective support services to the department.

Expenditure on compensation of employees between 2010/11 and 2013/14 grew significantly after the staff complement of the legal and communication services branch was increased from 1 093 in 2010/11 to 1 124 in 2013/14. This was to provide capacity to deal with the additional responsibilities created by the transfer of the forestry and fisheries functions to the department in 2009/10. Expenditure is expected to grow slightly over the medium term due to improvements to conditions of service, and the adjustments and upgrades of the posts in the establishment in terms of a Public Service Coordinating Bargaining Council resolution. There were 150 vacancies at the end of November 2013 due to normal attrition and the length of time it takes to finalise the recruitment process.

The management of the Knysna indigenous forests function was shifted from this programme to the Department of Environmental Affairs in July 2011. Thus over the medium term, R22 million per year in the department's budget is transferred accordingly.

## Programme 2: Agricultural Production, Health and Food Safety

### Objectives

- Promote efficient production, handling and processing of food, fibre and timber by implementing 5 plant and animal production strategies to increase production by 2016/17.

- Manage the level of risks associated with food, diseases, pests and natural disasters by continuously facilitating the development and implementation of plant and animal strategies, policies, quality standards, and other sanitary and phyto-sanitary measures.
- Establish and maintain effective early warning and mitigation systems by improving the early detections of and reaction time to outbreaks of animal and plant diseases and pests over the medium term.

## Subprogrammes

- *Management* oversees and manages the programme. This subprogramme had a staff complement of 3 in 2013/14.
- *Inspection and Laboratory Services* provides leadership, guidance and support to ensure compliance with agricultural legislation and regulatory frameworks; and oversees the effective implementation of risk management strategies and plans for regulated agricultural products. In 2012/13, regulatory services in respect of sound agricultural inputs, food safety and quality assurance regulatory requirements, enforcement of bio-security management prerequisites and the sanitary and phyto-sanitary advocacy bio-security areas were provided. In 2013, disease outbreaks in production areas and interceptions at export channels were reduced significantly as a result of the enforcement of the regulatory framework. This subprogramme had a staff complement of 966 in 2013/14.
- *Plant Production and Health* is discussed in more detail below.
- *Animal Production and Health* improves livestock production through the implementation of animal production and health programmes, an informed extension service and sustainable natural resource management. It coordinates concurrent provision of primary animal health care, veterinary public health care services and animal production services. In 2012/13, surveillance for foot and mouth disease and avian influenza was conducted to regain global recognition status to enable enhanced trade in products of animal origin. In implementing the primary animal health care programme, 27 veterinary mobile clinics and associated laboratory equipment were procured in 2012/13. By the end of September 2013, about 700 new producers had participated in schemes to improve livestock production, and health and the safety of animal products. In 2014/15, existing livestock improvement schemes will be monitored and any limitations addressed. Over the medium term, key activities will include reviewing and strengthening animal disease control measures and working to regain and retain the foot and mouth disease free status. This will support the trade in livestock and related products. This subprogramme had a staff complement of 379 in 2013/14.
- *Agriculture Research* manages monthly transfers to the Agricultural Research Council.

## Expenditure trends

The spending focus over the medium term will be on: increasing agricultural production and protecting crops by reviewing and implementing disease management measures through the *Plant Production and Health* subprogramme, which is discussed in further detail in the section that follows; monitoring the access and participation of smallholder farmers in the 9 animal improvement schemes and the veld and forage programmes, and increasing to 100 the number of newly qualified veterinarians deployed to rural areas by 2015 through the *Animal Production and Health* subprogramme's animal primary healthcare programme; and providing funding to the Agricultural Research Council and Onderstepoort Biological Products.

The projected increase in the number of veterinarians deployed to rural areas explains the projected increase in expenditure in the *Animal Production and Health* subprogramme in the first two years of the MTEF period. Expenditure is set to decline significantly thereafter as the animal primary healthcare programme is scheduled to come to an end in 2016/17. Spending in this subprogramme increased in 2012/13 and 2013/14 as the subprogramme spent on expanding logistical and other facilities in remote rural areas by delivering 74 mobile clinics, acquiring veterinary toolkits and rehabilitating nine veterinary clinics.

The projected significant increase in expenditure over the medium term in the *Animal Production and Health* subprogramme is due to additional funding of R492.3 million for Onderstepoort Biological Products to build and modernise vaccine production facilities and equipment. This project is in the design phase and a project manager has been appointed.

The significant increase in expenditure in the *Agricultural Research Council* subprogramme between 2010/11 and 2013/14 was due to the increase in transfers to the Agricultural Research Council to upgrade the foot and mouth vaccine facility. The significant growth in the subprogramme was also due to additional allocations of R77 million in 2012/13 and R128 million in 2013/14 for the economic competitiveness support package to fund research into crop production, production of animal vaccine, extension services and maintenance of the national genebank collections.

To give effect to Cabinet approved budget reductions, R120 million is to be cut over the medium term from transfers to the Agricultural Research Council and R48.1 million over the same period from expenditure on non-core goods and services items. Personnel in the programme have been encouraged to use video conferencing instead of travelling to meetings and limits have been placed on the number of delegates going on overseas trips.

The programme had 1 531 funded posts. At the end of November 2013, 1 339 of these posts were filled and 196 were vacant due to normal attrition and the length of time it takes to finalise the recruitment process. As these vacancies are progressively filled over the medium term, the number of personnel is expected to increase to 1 535 by 2016/17.

### Subprogramme: Plant Production and Health

This subprogramme focuses on increasing agricultural productivity with the emphasis on a sustainable plant production system, the efficient use of genetic resources for food and agriculture, and the management of risks associated with plant pests and diseases and genetically modified organisms. In 2012/13, the key focus was the African invader fruit fly. Ongoing surveillance has shown that the pest continues to be present in the Vhembe district in Limpopo, so host materials from this area have been subjected to official control. While pest incursions have also been recorded in other areas in Limpopo, Gauteng, North West, Mpumalanga and KwaZulu-Natal, these are being eradicated. Through the Ilima/Letsema programme, which was allocated R1.4 billion over the medium term, 96 042 producers were supported with production inputs in 2012/13. This subprogramme had a staff complement of 187 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on increasing support to smallholder farmers and producers through the Ilima/Letsema programme, to which R1.4 billion is allocated over the medium term. These plant production interventions aim to support all categories of farmers over the medium term, particularly those whose crops form part of the community value chains with high growth and labour absorbing potential, in contributing towards increasing the number of hectares under production from 105 040 in 2012/13 to 113 634 in 2016/17. Over the medium term, the Ilima/Letsema projects grants will also focus on addressing the challenges of low production levels and poor production yields of community based improvement schemes. These schemes are derived from the current plant improvement schemes under the Plant Improvement Act (1976) and continue to assist smallholder farmers to access high quality seeds and fruit tree propagating material.

The significant increase in expenditure on transfers and subsidies to provincial and local municipalities in 2011/12 was due to an additional allocation of R200 million to further strengthen Ilima/Letsema projects for poverty alleviation, food safety and job creation in rural areas. Since inception, the project has spent R1.5 billion to support over 600 000 smallholder farmers and is expected spend a further R1.5 billion over the medium term to support 490 000 additional farmers.

Spending on compensation of employees is projected to increase over the medium term due to improved conditions of service and the filling of the 25 posts that were vacant at the end of November 2013, when the subprogramme had a funded establishment of 187 posts. The vacancies were due to natural attrition and the scarcity of skilled personnel.

## **Programme 3: Food Security and Agrarian Reform**

### **Objectives**

- Enhance agricultural development by coordinating the comprehensive funding and technical support to 435 000 subsistence and 54 500 smallholder producers for food production by 2016/17.
- Provide leadership and support to research, training and extension in the agricultural sector by:
  - coordinating the provision of comprehensive training and extension support to targeted subsistence and smallholder farmers by 2016/17
  - transforming 12 provincial and rural agricultural colleges into agricultural training institutions by 2016/17.

### **Subprogrammes**

- *Management* oversees and manages the programme. This subprogramme had a staff complement of 3 in 2013/14.
- *Food Security* is discussed in more detail below.
- *Sector Capacity Development* facilitates the provision of education and training skills to promote the transformation of colleges of agriculture into centres of excellence. This entails developing, managing and coordinating the sector transformation plan in line with government objectives. In 2012/13, 26 905 smallholder producers were trained through a range of short training courses and 7 agricultural colleges were accredited by the Council on Higher Education. In addition, delivery units were established in Western Cape, Northern Cape and Limpopo to implement the resolutions of the national summit for vulnerable workers in agriculture, forestry and fisheries. In 2013/14, facilities and equipment were modernised and services were improved at six colleges, with plans for further improvement over the medium term. This subprogramme had a staff complement of 217 in 2013/14.
- *National Extension Support Services* develops national extension policies, norms and standards and provides strategic leadership and guidance for planning, coordinating and implementing extension and advisory services in the sector. In 2012/13, a draft national policy on extension and advisory services and the framework document for extension as a profession and a field of practice with clear registration categories of extension officers were developed. In addition, the extension recovery plan evaluation was conducted to determine whether the programme achieved its intended objectives between 2008 and 2011. Implementation of the extension recovery programme began in 2008/09. Since then, 1 300 extension personnel have been recruited. 50 more were recruited between 2010/11 and 2013/14, and 330 extension personnel upgraded their qualifications. Since the start of the programme, working tools, such as laptops, mobile phones and 3G cards, have been provided to extension officers. These enable them to access the extension online suite and the digital pen information systems and to provide an effective and efficient extension service to subsistence and smallholder farmers. By the end of September 2013, across all provinces, 25 extension personnel had been recruited, 1 947 units of ICT equipment had been procured, 566 personnel had received short course training, 480 personnel had been trained on extension suite online and 246 personnel had been registered at institutions of higher learning to upgrade their qualifications. This subprogramme had a staff complement of 15 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on providing comprehensive agricultural support to 435 000 subsistence and 54 500 smallholder producers through the *Food Security* subprogramme, which is discussed in more detail in the section that follows. The focus will also be on enhancing yields and initiating reforms on underperforming farms by providing infrastructure development and extension services through the extension recovery plan of the comprehensive agricultural support programme grant in the *National Extension Support Services* subprogramme; and by upgrading and strengthening the 12 provincial and rural agricultural colleges through the *Sector Capacity Development* subprogramme.

Expenditure on transfers and subsidies from 2010/11 onwards increases significantly due to additional allocations for upgrading research infrastructure, facilities and equipment at the provincial and rural agricultural colleges and for increasing student intake. Expenditure in the *National Extension Support Services* subprogramme increased between 2010/11 and 2013/14 due to the introduction of the comprehensive agricultural support programme pillar to train and recruit provincial extension officers. The significant increase in expenditure on goods and services in 2013/14 was due to the once-off reclassification of funds from transfers to provincial and rural colleges to goods and services; and payments for capital assets, including computers, machinery and equipment and repairs and maintenance at colleges.

Spending is set to increase over the medium term due to improved conditions of service and in line with the expected increase in personnel from 419 to 476 as the department fills vacancies. The programme had 55 vacancies at the end of November 2013, mostly due to normal attrition and the length of time it takes to finalise the recruitment process. To give effect to Cabinet approved reductions, R187.6 million over the medium term is to be cut, mainly from the comprehensive agricultural support programme. The reductions have been made due to underspending.

### Subprogramme: Food Security

This subprogramme facilitates the provision of support to subsistence and smallholder producers, including technical infrastructure support services such as groundwater development and the establishment of foot and

mouth disease fences; and provides national frameworks to promote sustainable household and national food security. In 2013/14, Cabinet approved the food and nutrition security policy and the Fetsa Tlala integrated food production intervention. By putting at least 1 million hectares into production, the intervention seeks to unlock agricultural potential, especially in communal areas, in line with the national development plan. Over the medium term, 70 per cent, or R1.7 billion, of the comprehensive agricultural support programme allocation to the infrastructure pillar is reprioritised to support the Fetsa Tlala food production programmes. In 2012/13, 15 043 smallholder producers were established and the integrated food security and nutrition production intervention was piloted in provinces to deal with the scourge of food insecurity, especially access to food at the household level. Over 39 225 hectares of land were put into production through the initiative and 139 671 subsistence and smallholder producers were supported through various programmes and support packages in 2012/13. By the end of September 2013, approximately 59 583 subsistence and smallholder producers had benefited from these support packages. The subprogramme had 212 filled posts and 29 vacancies as at 30 November 2013.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on achieving food security by providing comprehensive production, equipment and management support to approximately 489 500 producers through various intervention programmes that provide assistance to subsistence and smallholder producers and processors. This

will include the implementation of the Fetsa Tlala integrated food production intervention, which seeks to unlock agricultural potential, especially in communal areas, in line with the goals of the national development plan. This will be realised by providing support to subsistence and smallholder producers to put at least 329 008 hectares of underused land back into production over the medium term. Due to resource limitations, 70 per cent, or R1.7 billion, of the allocation to the comprehensive agricultural support programme's infrastructure pillar has been reprioritised to support the Fetsa Tlala food production programme. As part of the agricultural modernisation policy, resources will also be expended on providing farmers with demonstrations of the use of new and complex farming machinery and equipment.

Spending on compensation of employees is projected to increase over the medium term, mainly due to improved conditions of service. The number of personnel is expected to increase as the department fills the 29 posts vacant at the end of November 2013. This is expected to increase the staff complement to 241 in 2016/17. The vacancies were due to natural attrition, the scarcity of skilled personnel and delays in obtaining security clearances and verifying qualifications.

## Programme 4: Trade Promotion and Market Access

### Objectives

- Coordinate government food security initiatives by:
  - increasing international market access and trade for agricultural, forestry and fisheries products by conducting trade negotiations on an ongoing basis
  - providing marketing and enterprise development and support measures to agricultural, forestry and fisheries producers and entrepreneurs across the value chains of the industries on an ongoing basis, in order to improve the efficiency of producers in the agricultural, forestry and fisheries sectors over the medium term
  - ensuring the establishment of 9 commodity based cooperatives to support the products of smallholder farmers in accessing markets by 2016/17
  - expanding the implementation of the agriculture and forestry transformation charters to increase the equity ownership share of historically disadvantaged groups in the value chains of agriculture, forestry and fisheries industries over the medium term.

### Subprogrammes

- *Management* oversees and manages the programme. This subprogramme had a staff complement of 3 in 2013/14.
- *International Relations and Trade* facilitates, coordinates and supports international relations, and creates an enabling environment for enhancing regional integration and access to regional and international markets for agriculture, forestry and fisheries products. In 2012/13, trade negotiations, particularly with the World Trade Organisation and South African Customs Union, were held with a view to increasing market access for agriculture, forestry and fishery products. In 2013/14, bilateral meetings with Botswana, Tanzania, Namibia and Mozambique to implement agreements were held and implementation plans were reviewed. In addition, the Food and Agricultural Organisation implemented food security projects in Limpopo and KwaZulu-Natal and 18 masters students were sent to study in universities in China. The South Africa-Japan smallholder empowerment and promotion pilot project was also launched. Six provincial consultations on the implementation of the comprehensive African agricultural development programme had been conducted and a budget tracking exercise to calculate the percentage of the budget that goes towards agriculture had been initiated by the end of September 2013. This subprogramme had a staff complement of 82 in 2013/14.
- *Cooperatives and Rural Enterprise Development* provides leadership and support in the implementation of programmes and initiatives to ensure the promotion and participation of emerging businesses in the agriculture, forestry and fisheries sectors. In 2012/13, the AgriBEE Sector Charter was gazetted as Section 9(1) in terms of the Broad-Based Black Economic Empowerment Act (2003). The AgriBEE Fund was re-launched after its funds had been frozen and re-allocated to the Land and Agricultural Development Bank of South Africa. The fund has been expanded to include the forestry and fisheries sectors to support government undertakings to the sector codes under the ownership and management control elements of the AgriBEE

scorecards. The organisation and capacitation of cooperatives will continue over the medium term. This subprogramme had a staff complement of 53 in 2013/14.

- *Agro-processing and Marketing* provides support measures aimed at increasing the access of producers to markets, and small and medium size entrepreneurs in the agriculture, forestry and fisheries sectors to agro-processing opportunities. The subprogramme also makes transfers to the National Agricultural Marketing Council. In 2012/13 and 2013/14, marketing information was provided to producers through a dedicated website and the Agriculture Produce Agents Act (1992), now ready for certification by state law advisors, was reviewed; marketing skills were provided to smallholder producers; and the value chain round table tool, as a mechanism to coordinate the value chain activities from production to trade of industries so as to improve their efficiency and competitiveness, was institutionalised and implemented. This subprogramme had a staff complement of 32 in 2013/14.

<sup>2</sup>. Rand million.

## Expenditure trends

The spending focus over the medium term will be on enhancing market access and trade for agricultural, forestry and fisheries products by extending trade, marketing and enterprise development support measures to producers and entrepreneurs across the industries' value chains; and ensuring the establishment of and providing support to commodity groups and cooperatives. This will be done through funding the activities of the Land and Agricultural Development Bank of South Africa and the National Agricultural Marketing Council. An additional R50 million in 2014/15 and R50 million in 2016/17 is allocated to the Land and Agricultural Bank of South Africa for the retail emerging markets implementation model, which seeks to assist black emerging farmers to become established retail farmers through the provision of tailored financing solutions.

The allocation to the *Agro Processing and Marketing* subprogramme over the medium term is expected to provide 300 farmers with training on the basics of marketing and marketing information through a specially designed website and mobile phones. A certification programme will also be rolled out in partnership with the Perishable Products Export Control Board to ensure that fruit and vegetables produced by smallholder farmers and agro-processors meet food safety and quality requirements. In addition, R83 million over the medium term will be spent on facilitating bilateral and multilateral forums in pursuit of the goal of negotiating market access for agricultural, forestry and fisheries products, and fostering and maintaining good international relations.

The expenditure growth in the *Cooperatives and Rural Enterprise Development* subprogramme between 2010/11 and 2013/14 was due to the reinstatement of the agricultural broad-based black economic empowerment programme in 2011/12. The purpose of the programme is to support black emerging farmers to enter the commercial agriculture sector and to ensure that smallholder farmers' products access markets by 2016/17.

Over the medium term, spending on compensation of employees is projected to increase due to improved conditions of service. At the end of November 2013, there were 170 funded posts, of which 25 were vacant due to normal attrition and the length of time it takes to finalise the recruitment process.

## Programme 5: Forestry

### Objectives

- Contribute to improvement of food security and sustainable agrarian transformation by:
  - supporting 1 400 small scale forestry growers per year with training, technical and funding support, meaning that 4 200 smallholders will have been supported by 2016/17
  - rehabilitating 750 hectares of smallholder government irrigation schemes by 2016/17.
- Provide forestry livelihoods to rural communities by contributing tree saplings for general greening and fruit trees to communities to the value of R4.5 million per year until 2016/17.
- Ensure conservation, protection, rehabilitation and recovery of natural resources and sustainable practices within the agricultural and forest ecosystem by:
  - managing and protecting 61 000 hectares per year of plantation land from fires, pests and diseases, accumulating to management and protection of 183 000 hectares by 2016/17
  - planting 2 300 hectares per year of temporarily unplanted areas of the department's plantations
  - rehabilitating 1 500 hectares of state indigenous forests over the medium term
  - rehabilitating 90 000 hectares of land through the LandCare programme over the medium term.
- Ensure adaptation of the sector to climate change by implementing effective climate change adaptation programmes, conducting awareness campaigns, and providing training to small tree growers by 2016/17.

### Subprogrammes

- *Management* oversees and manages the programme. This subprogramme had a staff complement of 3 in 2013/14.
- *Forestry Operations* ensures sustainable management of state forests and other assets such as state nurseries, in order to optimise social and economic benefits in rural areas and to promote sector growth throughout South Africa. In 2012/13, 1 361 small scale growers were trained as part of the capacity development plan;

1 985 silvicultural (weeding, pruning, coppice reduction and planting) jobs were created in category B and C plantations (typically plantations that are small, in poor condition, often government- or municipality owned, and in need of rehabilitation); and 61 000 hectares of plantations were protected by trained fire teams and forest patrols. In addition, 62 117 indigenous and fruit trees were distributed and planted in identified communities. In 2013/14, 1 096 small scale growers were assisted with technical advice and, by the end of September 2013, 293 silvicultural jobs had been created on category B and C plantations. In addition, 7 831 indigenous and fruit trees had been distributed and planted in identified communities. This subprogramme had a staff complement of 2 326 as at 30 November 2013.

- *Forestry Oversight and Regulation* provides leadership, advice and direction in the formulation of forestry development and regulation policies, strategies and frameworks and ensures the effective promotion and development of small scale and commercial forestry. A growth strategy aimed at refurbishing the 60 000 hectares of departmental plantations has been developed and 4 plantations have been targeted for Forest Stewardship Council certification, an international standard that assures that forests are managed sustainably. The outcome of an audit in KwaZulu-Natal revealed that the performance of Hlokozi plantation on the certification increased from 63 per cent in 2011/12 to 80 per cent in 2012/13. In 2013/14, 17 new fire protection associations covering 4.8 million hectares were registered, which brought the total number of fire protection associations in the country to 235, covering a space of almost 60 million hectares. This further promotes the protection of natural resources including land earmarked for food security. Furthermore, best practice guidelines focusing on the growers, sawmilling, honey production and charcoal production sub sectors have been developed to assist small, medium and micro enterprises (SMME). About 20 forestry advisors will be trained to provide extension services to SMMEs over the medium term. This subprogramme had a staff complement of 71 in 2013/14.
- *Natural Resources Management* facilitates the development of infrastructure and the sustainable use of natural resources through an enabling framework for the sustainable management of woodlands and indigenous forests, the efficient development and revitalisation of irrigation schemes and water use. The subprogramme also facilitates climate change mitigation and adaptation, risk and disaster management as well as promoting, regulating and coordinating the sustainable use of natural resources (land and water). In 2012/13, monthly advisories and daily warnings of extreme conditions for disaster risk mitigation and prevention were issued and weather and climate information reading seminars were conducted for farmers in Free State, North West and KwaZulu-Natal. In 2012/13, the department implemented measures for the prevention and mitigation of disaster risks that included research, awareness, capacity building, the construction of fire breaks and the prevention of the spread of pests and diseases in terms of the Agricultural Pests Act (1983). In addition, 500 hectares of indigenous state forests were rehabilitated. By September 2013, 396.2 hectares had been rehabilitated. In 2012/13, 155 hectares in the Makathini irrigation scheme were revitalised and by September 2013, 95 hectares had been revitalised in the Vaalharts irrigation scheme. Through the national LandCare programme, 22 459 hectares of land were rehabilitated in 2013/14 and 606 full time jobs were created through the expanded public works programme. This subprogramme had a staff complement of 732 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on enhancing South Africa's commercial and indigenous forests by managing state forests and other assets in a sustainable way through the *Forestry Operations* subprogramme, and implementing the LandCare programme in the *Natural Resource Management* subprogramme. This is expected to create 2 700 full time jobs through various LandCare projects over the medium term, rehabilitate flood damaged infrastructure, and prevent and mitigate disaster risks. A national integrated forest protection strategy has been developed to prevent and mitigate losses from fires, which have had a significant impact on fibre and food security. R4.9 million was spent in 2013/14 in the *Forestry Oversight and Regulation* subprogramme to implement the strategy. This spending is also expected to rehabilitate 2 300 hectares of state owned plantations to temporary unplanted areas each year over the medium term, which is set to result in the creation of 7 200 jobs over this period. The implementation of the flood assistance scheme has begun in the 6 provinces affected by floods, with an additional R209 million allocated in transfers to provinces and municipalities in the *Natural Resources Management* subprogramme over the medium term.

To support the protection of environmental assets, the *Forestry Operation subprogramme* invested an estimated R8 million in greening initiatives. In addition, Eastern Cape was prioritised for the expansion of community owned forests through afforestation with the department assisting communities to obtain afforestation licences, which are critical to advancing previously disadvantaged communities' participation in industrial forestry. In 2013/14, R4.2 million was spent on environmental impact assessments of 13 000 hectares of community based plantation.

The increase in expenditure on consultants, agency support and outsourced services over the medium term is for third party audits of biological assets, the disaster risk management information system and specialised skills as the programme has difficulty in recruiting skilled personnel. This is the main cause of the 411 vacant posts in the programme at the end of November 2013.

To give effect to Cabinet approved budget reductions, R13.5 million over the medium term is to be reduced in expenditure on travel and subsistence. The reduction is not expected to have an adverse effect on service delivery, as personnel in the programme have been encouraged to use video conferencing instead of travelling to meetings and limits have been placed on the number of delegates going on overseas trips.

## Programme 6: Fisheries

### Objectives

- Promote the conservation and sustainable use of marine resources and the recovery of depleted fish stocks by:
  - implementing the stock recovery strategy for hake, abalone, West Coast rock lobster and line fish by 2016/17
  - conducting annual fishery specific research to inform the setting of total allowable catches and total allowable efforts in 22 fishing sectors per year until 2016/17
  - implementing the small scale fisheries policy by 2014/15.
- Grow the fisheries sector by broadening the scope of the aquaculture sub-sector through the implementation of the national aquaculture strategic framework by 2013/14 and providing support to 40 fish farms by 2016/17.
- Improve compliance with and enforcement of the Marine Living Resources Act (1998) through implementing the integrated fisheries security strategy over the medium term.

### Subprogrammes

- Management* oversees and manages the programme. This subprogramme had a staff complement of 3 in 2013/14.
- Aquaculture* provides public support and integrated management to promote aquaculture growth and fisheries development. This subprogramme had a staff complement of 104 in 2013/14.
- Monitoring Control and Surveillance* protects and promotes the sustainable use of marine living resources. This subprogramme had a staff complement of 259 in 2013/14.
- Marine Resources Management* manages and regulates marine living resources. This subprogramme had a staff complement of 53 in 2013/14.
- Fisheries Research and Development* conducts research to promote the sustainable use and development of fisheries resources and ecosystems. This subprogramme had a staff complement of 123 in 2013/14.
- Marine Living Resources Fund* receives transfers for the management and sustainable use of marine living resources to supplement the revenue received from levies on fish and fish products, permits and application fees and the proceeds from the sale of confiscated fish and fish products. This subprogramme's budget is transferred in full to the Marine Living Resources Fund.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on enhancing the economic potential of South Africa's fishery sector through the sustainable use of marine living resources and the creation of 3 550 jobs in coastal and rural communities through the Working for Fisheries programme. The spending focus will also be on performing annual fishery specific research to inform the process of setting the total allowable catches in 22 fishing sectors per year until 2016/17. This includes continuing with the finalisation and implementation of the small scale fisheries policy in 2014/15 and improving compliance with and enforcement of the Marine Living Resources Act (1998) by finalising the development and implementation of the integrated fisheries security strategy from 2014/15 onwards. This is reflected in the significant allocations to expenditure on compensation of the employees who perform these functions and transfers payments to the Marine Living Resources Fund over the medium term.

The significant increase in expenditure in the *Marine Living Resources Fund* subprogramme between 2010/11 and 2013/14 was due to the transfer of the Working for Fisheries programme from the Department of Environmental Affairs to this programme. The increases in subsequent years represent the additional allocation to the fund for expenditure on the operation, repairs and maintenance of the vessels. Spending on compensation of employees also increased over the same period and is expected to increase over the medium term due to improvements to conditions of services. The programme had a funded establishment of 603 posts and 23 were additional to the establishment at the end of November 2013. Of these, 542 were filled and 61 were vacant, due to normal attrition and the length of time it takes to finalise the recruitment process. These posts were in the process of being filled.

To give effect to Cabinet approved budget reductions the transfer to the Marine Living Resources Fund was reduced by R45 million over the medium term. The reduction is not expected to have an adverse effect on service delivery, as personnel in the fund have been encouraged to use video conferencing instead of travelling to meetings and limits have been placed on the number of delegates going on overseas trips.

## Public entities and other agencies

### Agricultural Research Council

#### Mandate and goals

The Agricultural Research Council was established by the Agricultural Research Act (1990) and is the main agricultural research institution in South Africa. The council's primary mandate in terms of the act is to conduct research and development, and effect the transfer of technology in order to promote agriculture and industry, contribute to a better quality of life and facilitate and ensure natural resource conservation.

The council's new strategic goals over the medium term are to:

- improve the productivity, production, competitiveness and sustainability of crop based agriculture and livestock based agriculture
- develop and use new technologies and information that will enhance the development of improved productivity and sustainability in agriculture
- conduct research and translate research results to support agrarian transformation and improve the efficiency and competitiveness of the agricultural sector
- promote good governance, financial sustainability and a high performing and visible organisation.

#### Selected performance indicators

## Expenditure trends

The Agricultural Research Council's main source of revenue is government transfers, supplemented by its own revenue generated from project contracts, research and development contracts, as well as income earned from intellectual property, the sale of farm products, and the interest on cash balances and investments. The council's own revenue increased between 2010/11 and 2013/14 mainly due to research contracts signed with the Department of Rural Development and Land Reform, and is expected to grow over the medium term with the focus on driving good relationships with the current client base and generating revenue from its own intellectual property.

The council's spending focus over the medium term will be on crop production, animal production and health, the management of natural resources, and research and development.

Expenditure increased significantly between 2010/11 and 2013/14 due to the allocation of funds for the economic competitive support package projects. These projects were ring fenced for research in crop production, the production of animal vaccines, extension services for smallholder farmers, university research, and the maintenance of national collections and gene banks. The increase in expenditure over this period is also due to contractual projects entered into with the Department of Rural Development and Land Reform to provide farming training to the youth and young farming entrepreneurs. Over the medium term, expenditure on compensation of employees is the largest component of the council's spending and is expected to increase marginally over this period to provide for improved conditions of service.

Expenditure on goods and services is set to decrease over the medium term due to the discontinuation of projects funded from the economic competitive support package, as well as the implementation of the Cabinet approved reduction of R120 million on goods and services. The reduction will pose a challenge for the council in carrying out its mandate and achieving its targets, and has led to the revision of some performance targets. The entity plans to implement cost effectiveness measures to ensure activities and strategic goals are not affected.

At the end of November 2013, the entity had 3 225 employees, comprised of permanent employees, long term contractors (including executives), and other contractors. The council also has 888 vacancies, due to normal attrition and the length of time it takes to finalise the recruitment process.

## Marine Living Resources Fund

### Mandate and goals

The Marine Living Resources Fund was established in terms of the Marine Living Resources Act (1998). The fund's mandate and core business is to manage the development and sustainable use of South Africa's marine resources, as well as to protect the integrity and quality of the marine ecosystem.

The fund's main strategic goals over the medium term are to:

- conduct fishery specific research to inform the setting of total allowable catches, and total allowable effort, in 22 fishing sectors
- implement the stock recovery strategy for hake, abalone, West Coast rock lobster and line fish
- allocate rights to the small scale fisheries sector
- broaden the scope of the aquaculture sector by supporting 20 fish farms by 2016/17
- develop and implement a proactive stakeholder engagement strategy
- set transformation targets for the allocation of new fishing rights
- achieve better compliance, monitoring and enforcement efforts
- facilitate the creation of job opportunities in coastal and rural communities through the implementation of projects under the Working for Fisheries programme.

## Selected performance indicators

## Expenditure trends

The Marine Living Resources Fund's main source of revenue is transfers received from the department, which increased between 2010/11 and 2013/14, due to an additional allocation of R71.8 million for the Working for Fisheries projects, which will see 3 550 jobs created in the rural coastal communities over the medium term. Over the same period, the fund's own revenue increased mainly due to the increase in the sale of confiscated fish and fish products, recreational permits, application fees and harbour fees. Revenue from sales of goods and services other than capital assets is also expected to increase due to an increase in application fees and levies. Interest earned is expected to remain constant in comparison to 2013/14, as it is expected that monies received from transfers will be spent without unnecessary delays.

As part of the protection of South Africa's fishing stocks, the fund's spending focus over the medium term will be in the marine resources research and the monitoring compliance and surveillance programmes on: conducting scientific surveys and research in 22 fisheries; creating 3 550 jobs in coastal and rural communities through the implementation of labour intensive projects such as anti-poaching, catch data monitors, and the development of fish processing facilities; and broadening the scope of the aquaculture sector by creating 15 aquaculture pilot projects by 2016/17.

Expenditure on goods and services for vessel operations and expanded public works programme projects is set to increase over the medium term due to the return to the fund of the fisheries patrol and research function that the South African Navy had previously taken over. It will also be a result of an increase in expanded public works programme projects intended to enhance the department's capacity to protect marine species and the coastline, and to improve employment opportunities for rural coastal communities.

The expenditure increase between 2010/11 and 2013/14 was due to the implementation of Working for Fisheries projects, which created over 4 178 jobs in rural coastal communities. The expenditure decrease between 2011/12 and 2012/13 was the result of the transfer of a vessel and its associated costs to the Department of Environmental Affairs, and of Cabinet approved budget reduction of R45 million over the medium term. The reductions will be effected on non-core goods and services and will not have a negative impact on service delivery. The fund is managed by the department's staff, so compensation of employees is funded by the department through the subprogrammes.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **National Agricultural Marketing Council** was established in terms of the Marketing of Agricultural Products Act (1996) to provide strategic agricultural marketing advice to the Minister of Agriculture, Forestry and Fisheries. The council's total budget for 2014/15 is R36.9 million.
- **Ncera Farms** is a schedule 3B company in terms of the Public Finance Management Act (1999), with the Department of Agriculture, Forestry and Fisheries as a sole shareholder. The mandate of the company is to provide extension, mechanical, and training and agricultural support services to the farmers settled on Ncera Farmland, as well as the neighbouring communities. The company's total budget for 2014/15 is R3.6 million.
- **Onderstepoort Biological Products** was established by the Onderstepoort Biological Products Incorporation Act (1999). Its mandate is to prevent and control animal diseases that impact food security, human health, and livelihoods. The company's total budget for 2014/15 is R116.3 million.
- **The Perishable Products Export Control Board** is mandated by the Department of Agriculture, Forestry and Fisheries to ensure the orderly export of perishable agricultural products, to monitor the proper maintenance of a continuous cold chain for exports, and to monitor minimum quality standards of perishable products for exports. The board's total budget for 2014/15 is R257.6 million.

Additional table: Summary of expenditure on infrastructure

The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.

### Aim

*Develop information and communication technology (ICT) policies and legislation that create favourable conditions for accelerated and shared sustainable economic growth that positively impacts on the wellbeing of all South Africans.*

### Mandate

The Department of Communications is mandated to: ensure that ICT policies are developed to create conditions for the accelerated and sustained growth of the South African economy and the development of robust, reliable, secure and affordable ICT infrastructure; contribute to the development of an inclusive information society that is aimed at establishing South Africa as an advanced, information based society; contribute to building an ICT skills base in the country, ensuring equitable prosperity and global competitiveness; strengthen the capacity of the Independent Communications Authority of South Africa to regulate the sector in the public interest and ensure growth and stability; enhance the capacity of, and exercise oversight over state owned enterprises; and fulfil South Africa's continental and international responsibilities in the ICT field.

The mandate is derived from the following legislation:

- the Electronic Communications Act (2006)
- the Electronic Communications and Transactions Act (2002)
- the Broadcasting Act (1999)
- the Independent Communications Authority of South Africa Act (2000)
- the Sentech Act (1996)
- the Postal Services Act (1998)
- the South African Post Office SOC Ltd Act (2011)
- the South African Postbank Limited Act (2010).

## Strategic goals

The department's strategic goals over the medium term are to:

- enable maximum investment in the ICT sector and create new, competitive business opportunities for the growth of the ICT industry
- ensure that ICT infrastructure is accessible, robust, reliable, affordable and secure
- accelerate the socioeconomic development of South Africans
- facilitate the building of an inclusive information society through partnerships with business, civil society and the three spheres of government
- improve departmental performance and enhance the role of ICT state owned entities as the delivery arms of government
- contribute to the global ICT agenda, prioritising Africa's development.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide strategic support to the ministry and overall management of the department.

### Programme 2: International Affairs

**Purpose:** Ensure alignment between South Africa's international activities and agreements in the field of ICT and South Africa's foreign policy.

### Programme 3: Policy, Research and Capacity Development

**Purpose:** Develop ICT policies and legislation that support the development of an ICT sector that creates favourable conditions for the accelerated and shared growth of the economy. Develop strategies that increase the uptake and use of ICT by the majority of the South African population in order to bridge the digital divide.

### Programme 4: ICT Enterprise Development and SOE Oversight

**Purpose:** Oversee and manage government's shareholding interest in the ICT public entities. Facilitate growth and development of small, medium and micro enterprises (SMMEs) in the ICT sector.

### Programme 5: ICT Infrastructure Support

**Purpose:** Promote investment in robust, reliable, secure and affordable ICT infrastructure that supports the provision of a multiplicity of applications and services.

## Selected performance indicators

1. The indicator has been discontinued as the department does not have direct control over its achievement.

2. No data or the indicator is new.

3. The implementation of the programme was pushed back due to the reprioritisation of funds.

4. This was a once-off project that was implemented in 2013/14.

5. The project started in 2012/13, so no historical data is available. The target was not reached in 2012/13.

## The national development plan

In response to the national development plan's priority of ensuring that South Africa's capacity to develop as an information society and knowledge economy is enhanced, the department is formulating various enabling policy frameworks. In December 2013, the department submitted to Cabinet the broadband policy, strategy and plan; the broadcasting digital migration policy; and the draft national integrated ICT policy paper. The department has undertaken a full ICT policy review and has prioritised the development of a national integrated for the ICT legislative framework to improve e-literacy, intensify competition in the ICT sector, and provide clarity on the roles and functions of the state to prevent unintended policy outcomes.

To achieve the target of 100 per cent broadband penetration by 2020, as outlined in the plan, the department has developed the national broadband policy, strategy and implementation plan, which ensures that the roles and responsibilities of key stakeholders in the sector are clearly defined and maps the rollout of broadband infrastructure across the country.

Together with the Independent Communications Authority of South Africa, the department has prioritised several initiatives over the medium term in an effort to reduce the costs of communication. These include finalising a data portal on ICT statistics, such as pricing trends used in the department's economic analysis, and conducting a broadband value chain analysis to promote competition and address market failures.

## Expenditure trends

The spending focus over the medium term will be on preparing the broadcasting digital migration call centre, implementing the broadcasting digital migration awareness campaign on digital terrestrial television, expediting the rollout of infrastructure for digital terrestrial television by providing a subsidy scheme for set top boxes, reviewing ICT policies, and accelerating access to ICT by coordinating the participation of the government in specialised ICT agencies. Thus the bulk of the department's budget over the medium term is allocated to the *Infrastructure Support* programme, which accounts for 43.6 per cent of total expenditure over the medium term and makes transfers to the department's public entities and state owned companies over which the department exercises oversight. In this regard, the significant increase in spending on departmental agencies and accounts expected between 2014/15 and 2016/17 is due to the Cabinet approved additional allocations of R700 million to the Universal Service and Access Fund for the broadcasting digital migration project.

The broadcasting digital migration project was also the reason for the significant increase in expenditure between 2010/11 and 2013/14 in the *Administration* programme for the advertising campaign to raise public awareness about the migration process. Over the same period, spending on transfers to public corporations and private enterprises also increased, due to the rescheduling of the transfer payment to Sentech, as funding was made available to expedite the digitisation process in support of government's target to switch off the analogue signal in June 2015. Spending on public corporations and private enterprises is expected to decrease over the medium term, mainly because the final allocation to Sentech for digitisation will be transferred in 2014/15.

Through the 2013 adjustments budget, the department received additional allocations for the school connectivity project, which contributes to the increase in spending on consultants between 2010/11 and 2013/14. Transfers to departmental agencies and accounts increased significantly due to an additional allocation in 2012/13 to fund office equipment and relocation costs for the Independent Communication Authority of South Africa, and for the adjusted allocation for the 2013 Africa Cup of Nations to the South African Broadcasting Corporation.

Cabinet approved reductions of R15 million over the medium term have been effected on the 112 emergency call centre project, and this is not expected to impact adversely on performance. During 2013/14, the department finalised its organisational review process, which will result in all critical vacant posts being filled.

### Infrastructure spending

R265 million over the medium term has been allocated for the broadcasting digital migration project. Of this, R195.1 million is allocated to the South African Broadcasting Corporation for the digital library and a digital playout centre. Sentech is allocated R69.8 million in 2014/15 to finalise the rollout of digital terrestrial television infrastructure. These allocations do not include the R1.5 billion allocated to the Universal Service and Access Fund to subsidise set top boxes, antennas and installation.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing strategic support to the ministry and overall management to the department, and supporting the implementation of the broadcasting digital migration through awareness campaigns. This accounts for the significant spending projected over the medium term on advertising and in the *Corporate Services* subprogramme, which was due to funds being reprioritised in 2012/13 and 2013/14 for the digital terrestrial television awareness campaign. These funds were reprioritised mostly from allocations to the 112 emergency call centre project, which experienced implementation delays.

The department also aims to upgrade its IT systems over the medium term to improve efficiency. Service providers will be appointed over the medium term to perform this task. This explains the expected increase in spending on consultants over the medium term. The number of personnel in this programme is expected to increase from 165 in 2012/13 to 177 in 2016/17, mostly in salary levels 7 to 10 and 11 and 12, as the department finalises its organisational review.

## Programme 2: ICT International Affairs and Trade

### Objectives

- Advance the South African ICT agenda through active participation in multilateral, bilateral and other international forums by:
  - coordinating the implementation of the Southern African Development Community's (SADC) ICT infrastructure master plan with relevant stakeholders by March 2015
  - facilitating the implementation of the SADC digital broadcasting migration roadmap and reporting on the regional status of broadcasting digital migration by March 2015
  - negotiating, developing and facilitating the implementation of two bilateral programmes with countries of the South by March 2015.

- Explore trade and investment opportunities for the ICT sector in South Africa by reviewing 5 existing bilateral agreements to facilitate market access, trade and investment opportunities to the identified countries by March 2015.

## Subprogrammes

- *International Affairs* coordinates the functions and responsibilities of the department to meet South Africa's international ICT obligations. In 2012/13, South Africa was elected to the Council of Administration of the Universal Postal Union for the first time since admission in 1994, receiving the highest number of votes within the Africa region, and among the top six countries elected overall. South Africa was also selected to chair the future strategy committee, and consequently will form part of the union's management board. South Africa also chaired the Pan African Postal Union committee on strategy, which included the development of three-year and one-year work plans focused on the implementation of the Doha world postal strategy and the African regional strategy, as well as the development of the new postal strategy. The department will be hosting the extraordinary SADC meeting of ministers responsible for ICTs and postal services in March 2014. This subprogramme had a staff complement of 12 in 2013/14.
- *ICT Trade/Partnerships* develops and advances the country's interests in international trade forums through participation in World Trade Organisation ICT related initiatives and other international trade agreements such as the South Africa-European Union trade agreement and bilateral agreements with counterpart countries. The annual trade and investment conference and exhibition, which was held in North West in 2012/13, provided an opportunity for ICT SMMEs to showcase their products, services and innovations, with a view to attracting interest from the delegates and creating strategic business collaborations. The conference was hosted in partnership with the Department of Trade and Industry. This subprogramme had a staff complement of 6 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on: ensuring alignment between South Africa's international activities and agreements in the ICT sector and its foreign policy through funding the country's participation by paying membership fees to international communications organisations; participating in the global discourse within the United Nations system on telecommunications, postal services, information society and green technology; participating in engagements that result in e-skills development initiatives for young South Africans and employment creation projects; and pursuing bilateral engagement with other countries. Thus the bulk of the programme's allocation of the medium term is spent in the *ICT Trade Partnerships* subprogramme, which is responsible for membership fees. Over the medium term, payments will continue to be made to organisations such as the Universal Postal Union, the International Telecommunications Union and the African Telecommunications Union. The department also expects to submit five ICT position papers focusing on promoting South Africa's national ICT interests to relevant forums for international engagements each year.

Expenditure on goods and services decreased significantly between 2010/11 to 2013/14, as lower expenditure on travel and subsistence was incurred because the programme undertook fewer international engagements. Expenditure on consultants increased by 86 per cent between 2010/11 and 2013/14 due to the appointment of a service provider for the SADC conference that the department hosted in February 2014. This programme had a staff complement of 20 posts as at the end of November 2013, 18 of which are currently filled.

## Programme 3: Policy, Research and Capacity Development

### Objectives

- Create an enabling environment for the growth of the ICT sector through policy and legislative reform by:
  - publishing the White Paper on National Integrated ICT Policy by March 2015
  - drafting the National Integrated ICT Bill by March 2016
  - tabling the National Integrated ICT Bill in Parliament by March 2017
  - developing an approved e-strategy by March 2017
  - developing the Public Service Broadcasting Bill by March 2015.
- Provide marginalised communities with banking and financial services through the full corporatising and operationalising of the South African Postbank by March 2015.
- Improve evidence based ICT policy making by collecting and collating relevant ICT data by March 2015
- Issue 3 policy directives to reduce the costs of communication by 2016/17.

### Subprogrammes

- *ICT Policy Development* drafts legislation, regulations, policy and guidelines that govern the broadcasting, telecommunications, postal and IT sectors, thus ensuring broad based economic development within the ICT sector. In 2012/13, consultations were held with National Treasury on Postbank's borrowing, lending, and investment policies. In 2013/14, a green paper for South Africa's national integrated information and communications technology (ICT) policy was developed and the Electronic Communications Amendment Bill, the ICASA Amendment Bill, the South African Post Office SOC Limited Amendment Bill, and the South African Postbank Amendment Bill were submitted to Cabinet for approval. This subprogramme had a staff complement of 20 in 2013/14.
- *Economic and Market Analysis* conducts economic analyses of the broadcasting, telecommunications, postal and IT sectors to determine trends and make growth projections; undertakes market research to explore areas that require policy intervention; and is responsible for reducing communication costs. In 2013/14, the broadband value chain, which covers the related communications and network services, was analysed to find ways of promoting competition and addressing market failures. In addition, network operators and relevant government departments were engaged to explore ways in which communication costs could be reduced, with the operators proposing an industry forum in which the Minister of Communications could engage the ICT sector on pricing matters and other sectoral issues. It is envisaged that this forum will complement the independent role of the Independent Communications Authority of South Africa. This subprogramme had a staff complement of 2 in 2013/14.
- *Research* is responsible for understanding the ICT landscape and delivering a national ICT strategy. In 2012/13, a global benchmarking exercise was conducted with countries in Europe, Asia, North and South America and the Brazil-Russia-India-China-South Africa (BRICS) group of countries on the establishment of a global ICT research council, for which a report has been completed. In 2013/14, activities at the department sponsored African Centre of Excellence for Information Ethics at the University of Pretoria were managed. A provincial seminar on information ethics was also hosted to create a platform to discuss policy development and interpretation related to information ethics and research in Africa and the department developed a report on green ICT initiatives in South Africa. This subprogramme had a staff complement of 9 in 2013/14.
- *Information Society Development* supports the effective and efficient functioning of the information society; and the development of institutional mechanisms, such as the interministerial committee on information society and development, the information society and development intergovernmental relations forum, the forum of South African directors general for information society and development, and the intergovernmental relations forum technical committee. Subsequent to the hosting of the ICT indaba, a programme of action was developed in line with the outcomes to ensure the implementation of the declaration signed by ICT ministers. Broadband, rural connectivity, schools connectivity and e-skills development are some of the initiatives that were advanced in 2013/14. This subprogramme had a staff complement of 39 in 2013/14.

- *Capacity Development* provides direction for the advancement of e-skills graduates and society in general to function effectively in the emerging information society. In 2012/13, an e-skills virtual network for knowledge production and transfer was constructed in Cape Town and is currently being used to test targeted courses developed by the e-Skills Institute. In 2013/14, the iKamva National eSkills Institute, which integrates the e-Skills Institute, the National Electronic Media Institute of South Africa and the Institute for Satellite and Software Applications, was launched that in the future will increase e-skills capacity in South Africa for employability in the knowledge economy. This subprogramme had a staff complement of 14 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on providing support to improve the functioning of information society and promoting the development and use of ICTs through the *Information Society Development* subprogramme. Through the *ICT Policy Development* subprogramme, the programme will also review of ICT policies and legislation. Building on the department's previous work on the integrated ICT policy review, which resulted in the production of the green paper on South Africa's national integrated ICT policy, over the medium term this subprogramme will develop the white paper, which is set to be released by mid-2014.

Consultants are appointed to support the department in the policy and legislative making process. The significant increase in spending on consultants in 2012/13 was mostly due to the appointment of consultants to assist with the proposed transaction between Telkom and Korea Telecom. This also accounts for the significant increase in spending in the *ICT Policy Development* subprogramme in that year. The decrease in expenditure in the *Capacity Development* subprogramme between 2010/11 and 2013/14 was due to the high expenditure on consultants in 2010/11, mostly for the e-skills summit, which the department hosted in July 2010. Expenditure on goods and services also decreased from 2010/11 to 2013/14 as a result of cost cutting measures and reprioritisation towards other programmes in the department.

Spending on consultants is expected to account for a relatively high proportion of the programme's budget over the medium term to provide support to the department in finalising outstanding policies and legislation. This programme had a funded staff complement of 125 at the end of November 2013, of which 84 are currently filled.

## Programme 4: ICT Enterprise Development and SOE Oversight

### Objectives

- Strengthen the performance, good governance and legislative compliance, and ensure the effectiveness and efficiency of all 6 ICT sector public entities by:
  - analysing their quarterly and annual performance reports against their corporate strategic plans and providing recommendations within 30 days of receipt, and enforcing compliance with applicable legislation on a regular basis
  - analysing their expenditure patterns against financial allocations and projections on an ongoing basis
  - facilitating the alignment of all corporate strategic plans to reflect the outputs and outcomes as outlined in government priorities and mandates, annually.
- Accelerate socioeconomic development through facilitating the growth and development of ICT SMMEs and improve their sustainability by:
  - loading business profiles of 60 SMMEs onto the e-commerce platform by March 2015
  - compiling 4 quarterly reports on job creation through the implementation of relevant ICT projects in the communications portfolio by March 2015
  - compiling 4 quarterly reports on how small medium micro enterprises are benefiting from ICT state owned entities and the department by March 2015.

### Subprogrammes

- *Public Entity Oversight* provides oversight of state owned enterprises by managing government's shareholder interests in public enterprises. This includes facilitating entities' corporate plans and ensuring that planning cycles are aligned and comply with guidelines. In 2013/14, R1.1 billion was transferred to public entities, the development of budgets for entities over the medium term were facilitated along with engagements to discuss entities' additional funding requests, quarterly reports were analysed and feedback was given to the entities. This subprogramme had a staff complement of 4 in 2013/14.
- *Small Medium and Micro Enterprise Development* facilitates the growth and development of ICT SMMEs through a comprehensive capacity building programme. In 2012/13, the Minister of Communications approved the King III compliance scorecard, which will be used to measure compliance by the state owned enterprises within the department. In 2013/14, a company was appointed to host the e-commerce platform

and the process of adding content, covering agriculture, tourism and arts and craft sectors is continuing. 87 SMMEs have been capacitated on the use of the platform and their business profiles and offerings have been uploaded. Quarterly reports have also been developed on job creation through the implementation of relevant ICT projects. This subprogramme had a staff complement of 3 in 2013/14.

- *ICT Support* administers and manages the transfers to the .za domain and hosts the 112 emergency call centre programme. The implementation of the 112 emergency call centre has been put on hold, as the department has reprioritised the allocations towards the broadcasting digital migration process. This subprogramme had a staff complement of 5 in 2013/14.

## Expenditure estimates

## Expenditure trends

The spending focus over the medium term will be on continuing to strengthen the department's ability to exercise oversight over the public entities, making transfers to public entities, and facilitating the development of ICT SMMEs. Thus, over the medium term, the department expects to continue interventions such as establishing ICT hubs in underserved provinces such as Limpopo and Free State. It will also focus on e-commerce, export readiness and the broadcasting digital migration value chain. This also accounts for the increases in the *ICT Support* and *Small Medium and Micro Enterprise Development* subprogrammes over the medium term. The department appointed a service provider to assist with the establishment of the ICT hubs, which explains the increase in spending on consultants in 2011/12.

As such, 93.5 per cent of the programme's allocation over the medium is transferred to the department's public entities and enterprises, while a significant portion of the balance is spent on consultants who provide critical skills, particularly with regard to ICT research, implementing ICT hubs around the country and the broadcasting digital migration project in 2016/17.

Expenditure on transfers to public corporations and private enterprises decreased significantly between 2010/11 and 2013/14, due to the final allocation to the South African Broadcasting Corporation for the technology programme in 2010/11 and the South African Post Office in 2012/13 for universal access. Expenditure on transfers to departmental agencies and accounts increased between 2010/11 and 2013/14 due to allocations in 2012/13 to fund office equipment and relocation costs for the Independent Communications Authority of South Africa, and National Electronic Media Institute of South Africa's implementation of e-skills programmes. The transfer for the e-skills programmes included a once-off additional allocation of R15 million, which is why expenditure on transfers to departmental agencies is projected to increase at a slower rate over the medium term.

The allocations to the Universal Service and Access Agency of South Africa for the broadcasting digital migration project have been shifted to the *Infrastructure Support* programme. This has been done to create better transparency in reporting by consolidating the funding for the project in a single programme.

This programme has a funded staff complement of 16 posts, 12 of which are projected to be filled at the end of 2013/14.

## Programme 5: ICT Infrastructure Support

### Objectives

- Facilitate broadcasting digital migration from analogue to digital television by:
  - allocating 676 000 subsidised digital set top boxes to subsidy scheme recipients by March 2015
  - switching off 63 analogue transmitter sites nationally by March 2015
  - transferring required funding for the rollout of digital infrastructure to Sentech by March 2015.
- Increase broadband coverage by completing the four phases of the national broadband implementation plan, developing the digital opportunity plan and digital development plan by March 2014, and the digital readiness plan and digital future plan by 31 December 2014.
- Increase cybersecurity across South Africa through establishing a cybersecurity hub in Pretoria in order to support a secure broadband infrastructure by March 2015.

### Subprogrammes

- Broadband* is responsible for developing and facilitating the implementation of the ICT infrastructure broadband strategy and implementation plan, and ensures that broadband goals are achieved. A revised broadband policy was developed in 2012/13. In 2013/14, a broadband stakeholder consultation workshop was held to solicit the views of industry, experts, government and civil society. A revised broadband policy, strategy and implementation plan was approved by Cabinet in December 2013. This subprogramme had a staff complement of 38 in 2013/14.
- Digital Terrestrial Television* is responsible for making transfers to Sentech to roll out ICT infrastructure for the migration of signal distribution from analogue to digital. Other allocations under this programme include transfers to the South African Broadcasting Corporation for its digital terrestrial television projects, funding for the set top box subsidy including antennas and installation, and the envisaged broadband digital migration call centre to deal with queries on the migration process.

## Expenditure trends

The spending focus over the medium term will be on implementing the broadband policy, finalising the broadband implementation plan, and making transfers of the set top box subsidy for poor households through the Universal Service and Access Agency of South Africa. The transfer to the agency is the reason for the significant spending projected over the medium term in the *Digital Terrestrial Television* subprogramme. Between 2011/12 and 2013/14, R690 million was transferred to the agency to cover the subsidies for the set top boxes. These funds remain unused due to a delay in finalising the criteria to determine qualifying households and the court case around the set top box mechanism. The funds have been retained for use over the medium term. An additional R700 million has been made available under the *Digital Terrestrial Television* subprogramme to enable the agency to roll out the set top boxes, antenna and installation over the medium term.

Funds have also been reprioritised towards planning for the broadband rollout, which accounts for the strong growth in the *Broadband* subprogramme over the medium term. The department also aims to finalise government's policy on radio frequency spectrum in the next few months. The release of high demand spectrum has the potential to play an important role in improving access to wireless broadband. The large increase in external audit costs in 2012/13 is due to performance audits carried out on the national frequency spectrum in order to determine if it was used efficiently.

Spending on travel and subsistence is expected to increase to R5.7 million in 2016/17 due to increased travelling relating to the implementation of the digital terrestrial television project. This project also increased spending on transfers to Sentech between 2010/11 and 2013/14, as funding was made available for digitisation in support of government's target to switch off the analogue signal in June 2015. Over the medium term, expenditure is projected to decrease significantly due to the final allocation to Sentech for digital terrestrial television in 2014/15.

The national cybersecurity policy framework was approved by Cabinet, and mandates the establishment of a cybersecurity hub in terms of the justice, crime prevention and security cluster. The department entered into a memorandum of understanding with the Council for Scientific and Industrial Research to establish this hub, which further accounts for the large increase in consultants in 2011/12. Expenditure on consultants increased significantly between 2010/11 and 2013/14, due to an additional allocation received through the adjustments budget for school connectivity, and for service providers who assisted the department to develop the report on baseline data on broadband coverage, penetration, speed and cost, and implementing a testing centre for set top boxes. In addition, the increase in spending on goods and services over the medium term, particularly on consultants, is as a result of funds from the 112 emergency call centre project being reprioritised to the broadcast digital migration project, which will include a call centre to deal with queries related to the migration process. To give effect to Cabinet approved budget reductions, R15 million over the medium term has been reduced from spending on consultants. This programme had a staff complement of 47 funded posts at the end of November 2013, of which 38 are envisaged to be filled by 2014/15.

## **Public entities and other agencies**

### **South African Broadcasting Corporation**

#### **Mandate and goals**

The South African Broadcasting Corporation is listed as a schedule 2 public entity in terms of the Public Finance Management Act (1999). Its mandate is set out in its charter and in the Broadcasting Act (1999), which requires it to provide radio and television broadcasting services to South Africa.

The corporation's strategic goals over the medium term are to:

- ensure access of its services to all citizens throughout the country
- inform, educate and entertain and provide services in all official languages
- reflect both the unity and diverse cultural and multilingual nature of South Africa and all of its cultures and regions, to audiences
- provide programming for children, women, youth and people with disabilities, and broadcast national, developmental and minority sports
- develop talent and showcase South African content
- provide independent news of high quality standards
- ensure the financial sustainability of the corporation through the cost effective use of budgets and resources
- implement the digital content strategy
- complete the digital migration and multi-channel offering.

## Selected performance indicators

Table 27.15 South African Broadcasting Corporation

Indicator <sup>1</sup>	Programme/ Activity/Objective	Past			Current	Projections		
		2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Value of operational expenditure: Digital terrestrial television per year	Digital terrestrial migration	– <sup>2</sup>	– <sup>2</sup>	0 <sup>3</sup>	R70m	R130m	R250mn	R1.5bn
Local content as a percentage of total public broadcasting service television per year	Local content delivery	75%	75%	75%	75%	75%	75%	75%
Local content as a percentage of total public commercial broadcasting service television	Local content delivery	35%	35%	35%	35%	35%	35%	35%
Local content as a percentage of total public broadcasting service radio	Local content delivery	70%	70%	70%	70%	70%	70%	70%
Local content as a percentage of total public commercial broadcasting service radio	Local content delivery	45%	45%	45%	45%	45%	45%	45%
Number of low power television transmitters switched on per year	Universal access transmitter rollout	426	300	300	300	367	– <sup>4</sup>	– <sup>4</sup>
Number of low power radio transmitters switched on per year	Universal access transmitter rollout	105	100	100	100	100	– <sup>4</sup>	– <sup>4</sup>

1. The entity is reviewing objectives in order to align it to its corporate plan, which means that new programmes and existing programmes and special projects will be absorbed into others. Thus the current performance indicators will be different in the upcoming reporting period.

2. No data in 2010/11 and 2011/12 as the project was delayed and the amounts reflected in the previous year were incorrect.

3. The operational expenditure on digital terrestrial television per year was zero in 2012/13 due to implementation delays. Thus the target was not achieved.

4. No data is available for 2015/16 and 2016/17 as the projects will be completed in 2014/15. Furthermore, the rollout of low power transmitter has been placed on hold.

1. Rand million.

## Expenditure trends

The corporation generates revenues mainly from television licence fees, advertising and sponsorships, as well as a transfer from the department. Over the MTEF period, revenue is expected to increase from R7.3 billion in 2013/14 to R8.4 billion in 2016/17, due to the increase in advertising revenue in line with the new multichannel environment created by the expected rollout of digital terrestrial television.

The spending focus over the MTEF period will be on realigning the organisation's operational model with the digital broadcasting requirements, with an emphasis on audiences, editorial integrity, developing local content, and telling authentic South African stories. Expenditure is expected to increase from R7.3 billion in 2013/14 to

R8.6 billion in 2016/17, mainly due to activities involving improving the corporation's services offered around radio, television, news and sports content. The increase in spending between 2010/11 and 2013/14 was due to higher broadcast costs, signal distribution costs, and the remuneration of freelance artists. Moreover, higher revenue collection costs also contributed to the increasing costs over the same period as the corporation attempted to improve liquidity. At the end of December 2012, the entity had achieved a positive liquidity ratio of above R1 billion and was further able to settle its bank loan by September 2013, 14 months earlier than the expected loan term. This saved the entity R17 million in interest.

The corporation had a funded establishment of 3 720 posts, of which 3 621 were filled at the end of November 2013. The number of filled posts is expected to increase to 3 661 over the medium term, which explains the subsequent increase in spending on compensation of employees by 6.4 per cent between 2013/14 and 2016/17. The additional appointments are to meet the requirements for implementing digital terrestrial television and the organisation's strategy to expand regional content and thus contribute to job creation.

## South African Post Office

### Mandate and goals

The South African Post Office is a schedule 2 public entity in terms of the Public Finance Management Act (1999). It is a government business enterprise established to provide postal and related services to the public, and derives its mandate from the South African Post Office SOC Ltd Act (2011) and the South African Postbank Limited Act (2010). The Postal Services Act (1998) grants it an exclusive mandate to conduct postal services. This act makes provision for the regulation of postal services and operational functions of the postal company, including universal service obligations and the financial services activities of Postbank.

The entity's strategic goals over the medium term are to:

- maintain good corporate governance principles
- remain customer centric by providing quality services
- invest in employees by building capacity and implementing transformation programmes
- attain financial sustainability while delivering on government's social mandate
- provide affordable postal and related services that meet the needs of customers
- remain environmentally conscious by promoting green practices
- provide a secure, efficient and integrated infrastructure for better responses to its stakeholders
- continue the corporatisation of Postbank and the upgrading of its banking systems.

1. Rand million.

## Expenditure trends

The entity generates revenue from the provision of postal, courier, and banking services, and from interest and financial transaction fees. The post office received a government subsidy to fund the universal services obligations and investment in infrastructure, but this came to an end in 2012/13. Revenue increased marginally by 2.3 per cent between 2010/11 and 2013/14 as a result of difficult trading conditions, declining mail volumes and lower interest rates. Revenue growth over the medium term is projected to increase at 4.6 per cent, from R6.4 billion in 2013/14 to R7.4 billion in 2016/17, due to the expected growth in income from the postal service, courier and banking services and financial transaction fees.

The spending focus over the medium term will be on continuing to provide for universal access obligations by creating 50 new post office points of presence per year, increasing the number of addresses to allow wider access to postal and financial services in the underserved areas, and continuing with the corporatisation of Postbank. This provides for increasing the number of service points from 2 597 in 2014/15 to 2 697 in 2016/17, and the growth in Postbank depositor funds from R5.1 billion in 2014/15 to R5.7 billion in 2016/17. As a result, spending on the acquisition of assets remains high over the medium term.

The increase in expenditure of 4.4 per cent between 2010/11 and 2013/14 can be attributed to yearly inflation related adjustments to salaries, property costs and transport costs. Prudent cost management over this period, such as on transport, property, communication and security, has limited the expenditure increase. Expenditure over the medium term is expected to increase by 5.1 per cent, while staff costs are expected to increase by 5.7 per cent over the medium term to R4.5 billion in 2016/17. This is due to the entity's plans to increase its establishment to 23 447 by 2016/17 to meet the anticipated increase in demand for postal and financial services as the sector recovers. 23 362 posts in the entity's funded establishment of 23 560 posts in 2013 were filled.

## Sentech

### Mandate and goals

Sentech Limited is a state owned enterprise established in terms of the Sentech Act (1996) and is listed as a schedule 3B public entity in terms of the Public Finance Management Act (1999). The company is mandated to provide broadcasting signal distribution for broadcasting licensees, with a particular focus on accelerating the implementation of government ICT interventions within the framework of the national development plan and the strategic integrated project for expanding access to communication technology.

The entity's strategic goals over the medium term are to:

- align its strategic roadmap with shareholder programmes to enable the development of open access government participation in the communications industry through infrastructure based investment
- continue working to support and realise government's ICT vision and goals, including innovation in broadcasting and media services and content management and distribution
- create solutions that enhance the customer experience and are in line with government's mandate of providing all citizens with access to communication services
- repackage social responsibility interventions and create community social investment ICT programmes that improve lives, create value and are sustainable.

1. Rand million.

## Expenditure trends

Sentech derives its revenue from terrestrial television services, terrestrial FM and AM radio services, satellite linking, facility rentals sales, direct to home satellite services, and very small aperture terminal services. The entity also receives transfers from the department to cover incremental costs arising from the dual illumination period, during which the analogue and digital television signals will be run at the same time. Revenues from operations, excluding transfers from government, increased from R757.9 million in 2010/11 to R846.8 million in 2013/14 as a result of tariff increases, with little new sales activity during this period. Revenue is not expected to grow significantly over the medium term.

Over the medium term, Sentech's spending focus will be on investing in capital assets to expand the network to new sites in areas that were previously not covered, and preparing for the launch of commercial digital terrestrial television. This accounts for the large acquisition of assets in 2013/14 and 2014/15 as the entity, through the digital terrestrial television project, has to ensure that the country benefits from the evolution of broadcast television in the advance from analogue to digital television. The upward trend in goods and services expenditure over the MTEF period is also as a result of additional services emanating from the expansion of the digital terrestrial television network to provide national coverage, and the increased travel and subsistence costs incurred by the maintenance teams. Given the digital terrestrial television network project's target to cover a certain percentage of the country, maintenance teams are required to travel more regularly to conduct upgrades and maintenance on the network. The escalating fuel and electricity costs and other related costs all contribute to the higher spending on goods and services over the medium term.

At the end of November 2013, the entity had a total of 523 filled posts out of a total funded establishment of 613. The number of filled posts is expected to increase from 522 in 2012/13 to 613 over the medium term due to additional personnel requirements, which will see employee costs increasing over the same period. The additional personnel will be used to support the new business endeavours, which bring with it a variety of changes in the company's managerial, legal, and financial structure, needs, and objectives. At the end of November 2013, there were 34 appointments and 35 terminations and retirements. The vacancies were mostly at the skilled and middle management levels, but are not expected to affect service delivery.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Independent Communications Authority of South Africa** makes regulations and issues communications licences. In addition, it enforces compliance with rules and regulation, protects consumers from unfair business practices and poor quality services, hears and decides on disputes and complaints brought against licences, and controls and manages the frequency spectrum. The organisation's total budget for 2014/15 is R384.1 million.

- The **National Electronic Media Institute of South Africa** provides training at an advanced level for the broadcasting industry. It offers diploma courses, short courses and internships in television production, radio production and creative multimedia. The institute's total budget for 2014/15 is R38 million.
- The **Universal Service and Access Agency of South Africa** is a statutory body with the sole mandate of promoting the goal of universal service in and access to electronic communications services, electronic communications network services and broadcasting services. The agency's total budget for 2014/15 is R65.4 million.
- The **Universal Service and Access Fund** funds projects and programmes that aim at providing universal access to underserved areas. Its total budget for 2014/15 is R290 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Promote economic development policy formulation and planning for the benefit of all South Africans.*

### Mandate

The Economic Development Department was established in 2009 and has assumed responsibilities relating to the creation of decent work through inclusive economic growth (outcome 4), including the implementation of the new growth path, which provides a policy package to facilitate the creation of employment.

The department is also responsible for five public entities, comprising three regulatory bodies and two development finance institutions. These are: the Competition Commission, the Competition Tribunal, the International Trade Administration Commission of South Africa, the Industrial Development Corporation of South Africa and the Small Enterprise Finance Agency.

In line with these responsibilities, the department's mandate includes administration of the following legislation:

- the Industrial Development Act (1940)
- the Competition Act (1998)
- the International Trade Administration Act (2002).

### Strategic goals

To support increasingly labour absorbing and equitable growth, as foreseen in the new growth path and the national development plan, the department's strategic goals over the medium term are to:

- provide technical and administrative support to the Presidential Infrastructure Coordinating Commission in facilitating the implementation of the national infrastructure plan
- align the programmes of departmental agencies and institutions with the new growth path, while ensuring that their operations are efficient and effective
- support alignment around core economic strategies across all spheres and agencies of the state
- promote social dialogue and the implementation of the major accords reached over the past two years, particularly the accords on the basic education, national skills, the green economy, local procurement, youth employment, and the framework agreements reached in October 2012 and June 2013, which aim to enhance the national response to uncertainties in the global economy and workplace conflict in the mining belt.

## Programme purposes

### Programme 1: Administration

**Purpose:** Coordinate and render an effective, efficient, strategic support and administrative service to the minister, deputy minister, director general, the department and its agencies.

### Programme 2: Economic Policy Development

**Purpose:** Strengthen the economic development capacity of government. Review and develop the alignment of economic development policies. Develop policies aimed at broadening participation in the economy and creating decent work opportunities.

### Programme 3: Economic Planning and Coordination

**Purpose:** Promote economic planning and coordination by developing economic planning proposals. Provide oversight and policy coordination of identified development finance institutions and economic regulatory bodies. Contribute to the development of the green economy.

### Programme 4: Economic Development and Dialogue

**Purpose:** Promote social dialogue; implement strategic frameworks; build capacity among social partners; and promote productivity, entrepreneurship and innovation in the workplace.

## Selected performance indicators

**Table 28.1 Economic Development**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of reports to Cabinet on progress towards outcome 4 per year	Economic Policy Development	Outcome 4: Decent employment through inclusive economic growth	-1	-1	4	4	4	4	4
Number of reports on the impact of the new growth path on women, youth and rural people evaluated and improved per year	Economic Policy Development		-1	-1	4	3	3	3	3
Number of strategic engagements with development finance institutions per year	Economic Planning and Coordination		13	19	8	6	6	6	6
Number of economic development initiatives coordinated and facilitated per year	Economic Planning and Coordination		4	9	15	18	20	22	24
Number of project reviews for strategic integrated construction projects per year	Economic Planning and Coordination		-1	-1	30	60	60	60	60
Number of infrastructure projects unblocked per year	Economic Planning and Coordination		-1	-1	-1	8	8	12	12
Number of interventions to grow the green economy per year	Economic Planning and Coordination		-1	-1	6	6	6	6	6
Number of monitoring reports and strategies developed to improve implementation of accords per year	Economic Development and Dialogue		-1	-1	-1	4	4	4	4
Number of capacity building projects for social partners on the new growth path per year	Economic Development and Dialogue		11	-2	14	8	8	8	8

1. This is a new indicator so historical information is not available.

2. In 2011/12, the department did not measure this indicator due to a change in strategy. Thus no data is provided.

## The national development plan

The national development plan addresses the need to grow an inclusive economy as part of the country's key objectives to eliminate poverty and reduce inequality by 2030. The department endorses the plan through economic development policies to ensure that the proportion of national income earned by the lowest earning

40 per cent of the population increases from 6 per cent in 2012 to 10 per cent by 2030. The plan's economic development policies address the need to grow an inclusive economy, build capabilities, enhance the capacity of the state, and promote leadership and partnerships throughout society.

The plan envisages unemployment falling from 24.9 per cent to 14 per cent when an additional 11 million jobs are created. To achieve this, the plan proposes accelerating progress by focusing on job creation across government and other sectors, as well as improving education and service delivery.

The department's new growth path strategy is aligned with the national development plan, and remains the operational plan for implementation. The strategy aims to provide concrete programmes for growth, employment creation and equity in line with government's commitment to prioritise employment creation in its economic policies. The new growth path has set the department the principal target of supporting the creation of 5 million jobs over the next 10 years by identifying strategies that will enable South Africa to grow in a more equitable and inclusive manner while achieving the developmental agenda. Central to this is a massive investment in infrastructure as a critical driver of jobs across the economy.

The 2012 national infrastructure plan creates a platform for integrated infrastructure provision through local procurement by providing, among others, improved logistics, water and electricity. 18 strategic integrated projects that integrate more than 150 individual infrastructure project clusters into a coherent package have been developed. The projects cover social and economic infrastructure across all provinces, with an emphasis on the poorer regions. The national infrastructure plan further provided the background to Cabinet's decision to establish the Presidential Infrastructure Coordinating Commission, a body set up to integrate and coordinate the country's long term infrastructure build. The department provides technical and administrative support to the commission to facilitate the implementation of the national infrastructure plan.

The new growth path also proposes strategies to eliminate unnecessary red tape to improve competition in the economy and enhance skills development. In delivering on the economic regulation mandate through the Competition Commission, the department has improved the playing fields for businesses and consumers in respect of price, quality, choice and innovation.

The department will continue to facilitate the implementation of social accords to mobilise support for national economic strategies, and encourage coordination across the state in support of strategies to bring about a more inclusive economy. It will continue to drive projects and programmes to diversify the economy, especially in conjunction with its agencies, support small, medium and micro enterprises through the Small Enterprise Finance Agency, and coordinate the implementation of the youth employment strategy.

## Expenditure trends

The spending focus over the medium term will be on contributing to and promoting investment for economic development and trade competitiveness through providing funding to the department's public entities. This will be achieved by supporting and capitalising the Small Enterprise Finance Agency, which aims to broaden economic participation by financing the small, medium and micro enterprise (SMME) sector. Although Cabinet approved a reduction of R146 million on the allocations for this agency over the medium term, the financial support the department provides will be enhanced by R254 million over the period through the economic competitiveness support package, which is projected to increase spending on transfers and subsidies over the medium term. The department has targeted at least 6 strategic engagements annually with development finance institutions such as the Small Enterprise Finance Agency. The department will also focus on improving the implementation and adjudication of competition policy by funding the work of the Competition Commission through transfers to departmental agencies in the *Economic Planning and Coordination* programme.

The employees on the department's establishment of 166 funded posts conduct high level stakeholder interactions and specialised projects. As the department expects to continue building internal capacity in this

regard over the medium term, the number of filled posts is projected to increase from 129 in 2013/14 to 166 over the medium term. This, in turn, is expected to increase spending on compensation of employees over the period. This increase in capacity is expected to result in a decrease in spending on consultants over the medium term as the new, appropriately skilled and experienced personnel take up responsibilities that had been previously performed by consultants. In addition, the increase in capacity over the medium term is expected to fill the 37 posts that were vacant at the end of November 2013, due to the scarcity of skills in finance, development economics and infrastructure development. The department has improved its recruitment and selection processes and expects to fill the vacancies over the medium term.

The allocation to expenditure on goods and services over the medium term has been reduced by R20 million, made up of R6 million in 2014/15, R6 million in 2015/16 and R8 million in 2016/17, as a result of Cabinet approved budget reductions.

## Expenditure trends

The spending focus over the medium term will be on expanding and building capacity in support functions, such as IT, finance and human resources to support the department in achieving its objectives. Over the medium term, expenditure is allocated to spending on compensation and goods and services items such as travel and subsistence and advertising. Spending on the latter increased significantly in 2013/14 due to the communications strategy for the Presidential Infrastructure Coordinating Commission.

Spending on operating leases increased substantially in 2013/14 due to the additional office space required by the growing staff complement. Established in 2009/10, the department has been filling the 80 posts in this programme's funded establishment, which explains the significant increase in spending on compensation of employees between 2010/11 and 2013/14. This increase in operational capacity has allowed the department to reduce its use of consultants, which is the reason for the significant decrease in spending on this item over the medium term. However, the department expects to continue using consultants who provide specialist expertise, such as private legal services engaged through the Office of the State Attorney, whenever they are needed.

7 posts were vacant at the end of November 2013, due to a skills shortage in the development sector, which makes the competition for recruiting and retaining specialist expertise intense. Personnel numbers are expected to remain at 80 over the medium term, which is why spending on compensation of employees grows marginally over the medium term. The vacancies will be filled as appropriately skilled and experienced individuals are found.

## Programme 2: Economic Policy Development

### Objectives

- Address development gaps by assessing trends in employment, inequality and growth, the impact of the state on employment and equity, and the key outcomes for the new growth path by conducting biannual surveys

on an ongoing basis.

- Formulate best practice economic development policies by disseminating knowledge of policy options and challenges by convening 12 policy platforms by 2014/15.
- Enhance economic policy-making methodologies by:
  - supporting the socioeconomic impact assessment system, prioritising its employment impact
  - populating a tailored economic development index for South Africa and developing a macro-economic model that enables the assessment of the employment impact of government activities, by 2014/15, with quarterly progress reporting.
- Identify systemic obstacles to investment with proposals to address them, by reviewing quarterly reports on economic progress with reference to decent employment through inclusive economic growth (outcome 4) and the industrial policy action plan, as well as in-depth evaluations of the impact on employment of four government departments over the medium term.
- Develop support measures for emerging enterprises, the social economy and the township economy through regular reports on existing policies on smaller enterprises and development of a monitoring and evaluation framework for the Small Enterprise Development Agency in 2014/15.
- Improve employment strategies by addressing youth unemployment, gender and economic development, with a particular focus on inclusive growth, by providing a twice yearly report on the implementation of the youth employment strategy, with proposals for unblocking initiatives as required, in 2014/15.

### Subprogrammes

- *Growth Path and Creation of Decent Work* focuses on the ongoing review of policies to realise a growth path that addresses the economy's structural constraints, expands the industrial base and creates decent work opportunities. To this end, quarterly reports on economic progress were produced in conjunction with other departments in 2013/14. The development of policies for the build programme and the Infrastructure Development Bill was also supported and selected departments were engaged to understand how they can improve their impact on employment generation. This subprogramme had a staff complement of 4 in 2013/14.
- *Economic Policy* evaluates macro and microeconomic policy tools used by government to promote the developmental agenda and improve the alignment, efficiency and impact of these policy tools. Among other issues, financialisation, the impact of rising electricity prices and African regional development were researched in 2013/14, in addition to work on ensuring a coordinated government response to a construction cartel uncovered by the competition authorities. An improved regulatory framework for scrap metal was developed and issues around the beneficiation of minerals were interrogated. This subprogramme had a staff complement of 15 in 2013/14.
- *Broad Based Black Economic Empowerment* aims to enable the meaningful participation of citizens in the economy by focusing on employment equity, staff training, preferential procurement, enterprise development and cooperative advancement. A range of departments were engaged to this end in 2013/14. This subprogramme had a staff complement of 2 in 2013/14.
- *Second Economy* develops policies that will create and sustain livelihoods and transform second economy activities into dynamic, competitive activities that are part of the economic mainstream and ensure decent income for entrepreneurs and workers; and develops strategies for youth unemployment and the second economy. The youth employment strategy was adopted in 2013/14 and has begun to lead to a qualitative expansion in programmes to achieve these objectives. In addition, substantial work was carried out on township economies, smallholder farmers and the new growth path's impact on women. This subprogramme had a staff complement of 3 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on increasing the efficacy of economic development policies through reviewing policy instruments that advance the developmental agenda of government. The bulk of spending will thus be in the *Growth Path and Creation of Decent Work* and the *Economic Policy* subprogrammes, and will go mostly towards spending on compensation of employees, which made up 53 per cent of the total budget in 2013/14.

Being a knowledge intensive department, activities such as planning, strategy development and stakeholder engagement are the main drivers of spending in the subprogrammes. To facilitate the work of the new growth path, personnel in this programme's funded establishment of 24 posts will be deployed to key tasks such as compiling reports on the impact of the new growth path on women, youth and rural people; and supporting emerging enterprises and township economies through the development of a monitoring and evaluation framework for the Small Enterprise Development Agency. However, 8 posts were vacant at the end of November 2013 due to of natural attrition and difficulties in recruiting qualified candidates. The department expects to fill the vacancies over the medium term.

Between 2010/11 and 2013/14, spending increased in the *Economic Policy* subprogramme as the department developed its policy capacity, particularly for the implementation of the new growth path. In addition, consultations with departments, the private sector and the public on the key elements of the framework for

youth employment were accelerated. The consultations were aimed at garnering support for the department's actions towards reducing youth employment, which was finalised in February 2013.

## Programme 3: Economic Planning and Coordination

### Objectives

- Promote economic planning and coordination through developing economic planning proposals after engaging with stakeholders, on an annual basis.
- Provide oversight and policy coordination of identified development finance institutions and economic regulatory bodies by reviewing strategic plans and annual performance plans annually.
- Contribute to the development of the green economy by supporting projects that are managed by the Industrial Development Corporation over the medium term.

### Subprogrammes

- *Spatial, Sector and Planning* is discussed in more detail below.
- *Economic Development, Financing and Procurement* analyses procurement trends in the public and private sector; and identifies opportunities for improving local procurement and production to meet broader economic development goals. Key activities included engaging private sector to attract domestic and foreign investment and developing strategies to address localisation plans in the light of the infrastructure programmes. Over the medium term, there are plans to deepen these activities with a view to focusing on infrastructure financing strategies. In 2013/14, initiatives ensuring that a company producing steel pipes for the gas and water sectors did not relocate to a foreign country were supported. In addition, opportunities for localisation at both Transnet and Eskom were identified with the assistance of the Industrial Development Corporation of South Africa. This subprogramme had a staff complement of 5 in 2013/14.
- *Investment for Economic Development* provides policy oversight and strategic direction to the Industrial Development Corporation of South Africa and the Small Enterprise Finance Agency. The Industrial Development Corporation of South Africa, the country's largest development finance institution, provides loan funding to industrial projects which are generally aligned with the objectives of the new growth path, while the Small Enterprise Finance Agency provides direct and wholesale loan funding to SMMEs. The focus has been on improving the strategy and business plan and developing financing programmes to foster the small business sector. In 2013/14, the Industrial Development Corporation of South Africa continued to rebalance its investment portfolio to match market developments. In 2012/13 and 2013/14, Small Enterprise Finance Agency officials were trained to develop a toolkit of support programmes by all branches and agencies of the state: these toolkits are used by trainees in the agency road shows to market their products across all provinces, including training in rural areas. In 2013/14, through the ministers and members of the executive committee process, measures were put in place to co-locate the services offered by the Small Enterprise Finance Agency to that of other developing finance agencies. This subprogramme had a staff complement of 7 in 2013/14.
- *Competitiveness and Trade for Decent Work* provides policy oversight and strategic direction to the Competition Commission, Competition Tribunal and the International Trade Administration Commission. In 2012/13 and 2013/14, the key activities focused on the elimination of unnecessary regulatory burdens and actions to lower price increases for key inputs and goods to promote investment and economic growth. The aim of the Competition Commission is to reduce input costs in the economy and increase levels of competition to ensure that merger/acquisition approvals promote public interest goals. The commission also investigates price fixing. The International Trade Administration Commission promotes improved trade levels, with a focus on a developmental trade policy that promotes industrialisation and job creation. It also strives to reduce input costs for value added products through lower tariffs or by offering rebates on duty, and to provide protection for industries as part of a plan to boost competitiveness and jobs. This subprogramme had a staff complement of 6 in 2013/14.
- *Green Economy* identifies, develops and supports projects, incentives and other measures; and engages with government and non-government stakeholders to maximise the job creation potential of green economic activities. The Industrial Development Corporation of South Africa has been a successful bidder in

renewable energy projects over the years, and in 2013/14 it continued with the process of implementing concentrated energy and hydro-energy projects in Northern Cape. Key activities in 2012/13 and 2013/14 focused on strategies to rebalance the Industrial Development Corporation of South Africa's portfolio towards green investments. The corporation was awarded R6.3 billion of renewable energy projects by the Department of Energy in the round three bids in 2013/14. Further bidding processes are being contemplated. This subprogramme had a staff complement of 4 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on strengthening the institutional capacity of the competition bodies, development finance institutions and trade administration entity for which the department has an oversight responsibility. This is in accordance with the department's strategic goal of driving inclusive growth and economic diversification as these entities contribute to economic competitiveness and increased economic participation. The funding of the competition and trade administration bodies is transferred through the *Competitiveness and Trade for Decent Work* and *Investment for Economic Development* subprogrammes, to which 47.5 per cent and 47.7 per cent of the programme's funding over the medium term is allocated.

To give effect to Cabinet approved reductions over the medium term, the department is to cut spending on the transfer to the Small Enterprise Agency by R146 million. However, the 2013 Budget includes an additional R254 million, which has been allocated from the economic competitiveness package in the *Investment for Economic Development* subprogramme. There will be less capital available for lending to SMMEs over the medium term. In 2016/17, expenditure is expected to increase in the *Green Economy* subprogramme due to the implementation of renewable energy projects with the department targeting 6 interventions per year over the medium term to grow the green economy. The Industrial Development Corporation is in the process of implementing concentrated energy projects and hydro-energy projects in Northern Cape.

Between 2010/11 and 2013/14, expenditure increased by R180.6 million in the *Investment for Economic Development* subprogramme due to transfers to public corporations for establishing, and providing initial capitalisation to the Industrial Development Corporation for the Agro-Processing Competitiveness Fund. The fund supports new and non-dominant market players in line with the department's objective of inclusive economic growth, and provides funding by way of interest free loans, equity arrangements and business support grants.

Spending on compensation of employees is set to grow significantly over the medium term as the number of personnel increases to 47 by 2016/17 to increase operational capacity particularly in the *Spatial, Sector and Planning* subprogramme, which provides support for the implementation of the national infrastructure plan. There were 19 vacancies at the end of November 2013. These resulted from slow recruitment and high turnover caused by the difficulty in recruiting and retaining suitably qualified candidates who have skills that are in short supply and who are thus able to command higher salaries elsewhere. The department is working to attract appropriately skilled individuals.

## Subprogramme: Spatial, Sector and Planning

This subprogramme focuses on developing and coordinating economic plans for South Africa, ensuring coherence between the state and state entities, safeguarding the consistency of the micro and macroeconomic plans, and supporting the development of spatial economic action plans for distressed areas. In 2012/13, the department, together with the Department of Rural Development and Land Reform and the Council for Scientific and Industrial Research, developed and improved understanding of the economic potential of the rural space economy, and launched intergovernmental forums. The subprogramme is responsible for providing the secretariat function of the Presidential Infrastructure Coordinating Commission, which has been instrumental in

facilitating the implementation of the national infrastructure plan. Quarterly construction updates are provided to Cabinet with an analysis of expenditure trends, construction progress, jobs created, local procurement and key constraints and blockages. The technical team facilitated the signing of a memorandum of understanding through which Eskom, Transnet and the Industrial Development Corporation of South Africa cooperate on expediting the strategic infrastructure projects. Memorandums of understanding with social partners on infrastructure, and with the Engineering Council of South Africa on capacity support, were also concluded in 2012/13 and 2013/14. Another key aim of the programme is to provide a spatial understanding of the economy in the context of the national growth plan. In 2013/14, the department worked on a national spatial economic perspective and developed spatial maps of socioeconomic indicators for the distressed mining areas. This subprogramme supports business and government to unblock regulatory and licensing bottlenecks that prevent investment projects from being implemented. The support provided includes follow-up on water and mining licences, among others, and on water and electricity connections for newly established industries. The subprogramme had a funded establishment of 16 posts at the end of November 2013.

## Expenditure trends

The spending focus over the medium term will be on developing and coordinating economic plans for South Africa, ensuring coherence between the state and state entities, aligning micro and macroeconomic plans, and supporting the development of spatial economic action plans for distressed areas. The main cost drivers of this subprogramme are compensation of employees, which accounts for 76.9 per cent of the programme's budget over the medium term, as well as goods and services items such as consultants and travel and subsistence, which support staff operations. Spending on compensation of employees is projected to grow significantly over the

medium term as the personnel numbers increase to 31 posts by 2016/17 to support economic planning for rural development.

Between 2010/11 and 2013/14, spending on goods and services grew significantly due to the increase in programme activities to support rural and mining communities, where development had lagged behind; and an increased focus on planning, stakeholder engagements and research. In 2012/13, the subprogramme experienced a spike in expenditure mainly on advertising and contractors due to the extensive interaction required with rural communities, so media and local community organisers were used.

The subprogramme also supports the activities of the Presidential Infrastructure Coordinating Commission and the department provides the secretariat function. Between 2011/12 and 2013/14, the subprogramme used consultant services which included specialists in spatial planning to provide technical support to the commission. The subprogramme has since become fully staffed, contributing to the increase in spending on compensation of employees over the MTEF period.

## Programme 4: Economic Development and Dialogue

### Objectives

- Promote dialogue among social partners by convening and participating in national social dialogue forums relating to economic development as and when required over the medium term.
- Mobilise society and government to agree on common socioeconomic goals by promoting dialogue, facilitating, monitoring and reporting on the implementation of framework agreements, social pacts and accords on an ongoing basis, with progress reports being presented twice yearly.
- Develop partnership agreements in key sectors and workplaces through the process of social dialogue, in order to create and save jobs, and to ensure that jobs are sustainable through the utilisation of appropriate available mechanisms as and when required over the medium term.
- Enhance the understanding of government, society, the private sector and organised labour of the challenges and opportunities in socioeconomic development through effective stakeholder capacity building, on an ongoing basis.
- Promote and stimulate productivity, innovation and entrepreneurship at the workplace, cluster and sector level by facilitating social pacts and agreements and other related initiatives with key partners and stakeholders on an annual basis.

### Subprogrammes

- *National Social Dialogue and Strategic Frameworks* contributes to social dialogue on economic issues and policy development; and coordinates, monitors and ensures the development of action plans and framework agreements on various economic issues, such as the global economic crisis, as well as those that are envisaged, such as national economic development and decent work pacts. Key activities are to lead government in its dialogue with social partners on economic development; negotiate national economic development and decent work pacts and coordinate government's policy. This subprogramme had a staff complement of 5 in 2013/14.
- *Sector and Workplace Social Dialogue* promotes workplace and sector agreements and social pacts that address challenges of growth and development, job creation and job retention, and productivity and innovation. Key objectives are to: facilitate the development of partnership agreements and the establishment of consultative forums in key sectors and workplaces; establish and administer a social partner fund; provide secretarial, logistical and research support to forums that include social partners; and disseminate information for use by social partners. This subprogramme had a staff complement of 3 in 2013/14.
- *Capacity Building for Economic Development* promotes and builds the research output and knowledge base of social partners in economic development sectors and issues relating to equity and productivity. This entails implementing appropriate mechanisms for empowerment by hosting capacity building workshops at district level and value chain competitive workshops in provinces over the medium term period. This subprogramme had a staff complement of 2 in 2013/14.

- *Productivity, Entrepreneurship, Innovation* promotes productivity, entrepreneurship and innovation by developing and reviewing policy frameworks; facilitating productivity agreements in cooperation with role players; monitoring and evaluating the implementation of policy frameworks and agreements; and working with Productivity South Africa. These functions will be executed through 6 sectoral engagements on productivity and the commissioning of productivity research reports over the medium term. This subprogramme had a staff complement of 2 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on coordinating economic development policies through the activities of the National Social Dialogue and Strategic Frameworks and Capacity Building for Economic Development subprogrammes, which receive the bulk of the programme's allocation over the medium term. Improving strategies to meet the goals of creating jobs, attracting new industries and rolling out infrastructure to provide services forms a central part of these subprogrammes' activities. The main cost drivers in this programme are compensation of employees and goods and services items, specifically travel and subsistence and venues and facilities. Over the medium term, spending on compensation of employees is expected to grow at an average annual rate of 20.4 per cent. This is in line with the department's plans to increase the number of filled posts in this programme from 12 in 2013/14 to 15 in 2016/17 in order to capacitate the programme to deliver on the implementation of the accords. As at 30 November 2013, the programme had 3 vacant posts as a result of natural attrition. The department expects to fill these posts by 2014/15. Spending on goods and services is expected to increase at an average annual rate of 7.7 per cent over the medium term, due to the work around implementing the accords, including stakeholder engagement, research, formulation of plans and strategy development.

## Public entities and other agencies

### Competition Commission

#### Mandate and goals

The Competition Commission is a statutory body constituted in terms of the Competition Act (1998). It is empowered to investigate, control and evaluate restrictive business practices, including the abuse of dominant positions and mergers, and to promote the advocacy of competition issues to achieve equity and efficiency in the South African economy.

The Commission's strategic goals over the medium term are to:

- achieve demonstrable competitive outcomes in the economy
- increase stakeholder engagements to improve the competitive environment for economic activity
- build a high performance competition regulatory authority.

#### Selected performance indicators

## Expenditure trends

The Competition Commission's revenue is derived mostly from transfers from the department. Other sources of revenue include filing fees paid by external parties, mainly for merger and acquisition transactions. Revenue is expected to grow at an average rate of 5.5 per cent over the medium term and will be used to support the ongoing goal of realising competitive outcomes in the economy.

The spending focus over the medium term will be on building enforcement capacity in line with the strategic objective to increase equity and performance in the South African economy through competition and enhancing economic activity through strategic partnerships, engagement, investments, dialogue, and advocacy. To achieve these goals, the commission will continue to focus on building a high performance regulatory agency, in line with best practices. Thus, expenditure on compensation of employees is the largest item of expenditure. The increase in spending on compensation of employees is due to the increase in the cases notified, which required the acquisition of more staff between 2010/11 and 2013/14. The commission had a funded establishment of 185 posts, 20 of which were vacant at the end of November 2013. These vacancies are due to the difficulty of finding scarce skills in a highly specialised sector. The commission will improve recruitment strategies and plans to fill all key vacancies by 2014.

Expenditure over the medium term is expected to increase at an average rate of 6.2 per cent due to the criminalisation of cartels and envisaged market enquiries for which experts will need to be hired, additional computer equipment purchased and communication, travel and subsistence expenses.

Expenditure increased significantly between 2010/11 and 2013/14 as the number of investigations grew because of the commission's proactive approach to enforcement activities through improved planning and the prioritisation of its corporate leniency policy. In June 2013, the commission finalised the fast-tracking of settlements of fines and penalties in the construction sector, and will continue with the finalisation of the phase 2 cases.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Competition Tribunal** is an adjudicative agency that rules on large mergers and alleged restrictive practice cases. The department transfer payment to the tribunal for 2014/15 is R18.1 million.
- The **Industrial Development Corporation of South Africa** is a national development finance institution, and has been reporting to the Economic Development Department since April 2010. The primary objective of the corporation is to support industrial capacity development to facilitate the creation of sustainable employment opportunities. The corporation does not receive annual transfers from the department.
- The **International Trade Administration Commission of South Africa** aims to foster economic growth and development to raise incomes and promote investment and employment in South Africa. The department transfer payment to the commission for 2014/15 is R85.1 million.

- The **Small Enterprise Finance Agency** is mandated to increase access to and the provision of finance for South African SMMEs, thereby contributing to job creation. The department transfer payment to the agency for 2014/15 is R242.6 million.

*The Estimates of National Expenditure e-publications for individual votes are available on www.treasury.gov.za. These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Formulate energy policies, regulatory frameworks and legislation, and oversee their implementation to ensure energy security, promotion of environmentally friendly energy carriers and access to affordable and reliable energy for all South Africans.*

### Mandate

The Department of Energy is mandated to ensure the secure and sustainable provision of energy for socioeconomic development. This is achieved by developing an integrated energy plan, regulating the energy industries, and promoting investment in accordance with the integrated resource plan. A number of acts regulate the energy sector and reflect the legislative measures the department has instituted to govern the energy sector. Key among these are:

- the National Energy Act (2008)
- the Petroleum Products Act (1977)
- the Electricity Regulation Act (2006)
- the Central Energy Fund Act (1977).

The National Energy Act (2008) sets out the core aspects of the department's mandate. These are to:

- ensure that diverse energy resources are available in sustainable quantities and at affordable prices in the South African economy to support economic growth and poverty alleviation, while also taking into account environmental considerations
- plan for the increased generation and consumption of renewable energy, contingency energy supply, the holding of strategic energy feedstock and carriers, adequate investment in appropriate upkeep, and access to energy infrastructure
- collect data and information regarding energy demand, supply and generation
- promote electricity regulation, energy research, and the efficient generation and consumption of energy.

The department is also mandated to regulate the petroleum industry at the manufacturing, wholesale and retail levels, through the implementation of the Petroleum Products Act (1977). The Petroleum and Liquid Fuels Charter is annexed to the Petroleum Products Amendment Act (2003), and is an important part of the department's strategy to effect the transformation of the industry.

In terms of its policy mandates, the department is working with a range of documents and legislation which: support the long term vision for South Africa to use as much renewable energy as possible; create the necessary conditions for the introduction of an independent systems operator and independent power producers in the electricity market; and position South Africa to become globally competitive in the use of innovative technology for the design, manufacture and deployment of state of the art nuclear energy systems, power reactors, and nuclear fuel cycle systems.

## **Strategic goals**

The department's strategic goals over the medium term are to:

- ensure that energy supply is secure and demand is well managed
- facilitate an efficient, competitive and responsive energy infrastructure network
- ensure that there is improved energy regulation and competition
- ensure that there is an efficient and diverse energy mix for universal access within a transformed energy sector
- ensure that environmental assets and natural resources are protected and continually enhanced by cleaner energy technologies
- implement policies that adapt to and mitigate the effects of climate change
- implement good corporate governance for effective and efficient service delivery.

## **Programme purposes**

### **Programme 1: Administration**

**Purpose:** Provide strategic support and management services to the department.

### **Programme 2: Energy Policy and Planning**

**Purpose:** Ensure evidence based planning, policy setting and investment decisions in the energy sector to improve the security of energy supply, regulation and competition.

### **Programme 3: Petroleum and Petroleum Products Regulation**

**Purpose:** Manage the regulation of petroleum and petroleum products to ensure the optimum and orderly functioning of the petroleum industry to achieve government's development goals.

### **Programme 4: Electrification and Energy Programme and Project Management**

**Purpose:** Manage, coordinate and monitor programmes and projects focused on access to energy.

### **Programme 5: Nuclear Energy**

**Purpose:** Manage the South African nuclear energy industry and control nuclear materials in terms of international obligations, and nuclear energy legislation and policies to ensure the peaceful use of nuclear energy.

### **Programme 6: Clean Energy**

**Purpose:** Manage and facilitate the development and implementation of clean and renewable energy initiatives, as well as energy efficiency and demand side management initiatives.

## Selected performance indicators

**Table 29.1 Energy**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of new operational integrated energy centres established per year	Electrification and Energy Programme and Project Management	Departmental mandate	2	2	2	2	2	1	1
Number of new petroleum retail site inspections per year	Petroleum and Petroleum Products Regulation	Outcome 6: An efficient, competitive and responsive economic infrastructure network	3 360	1 500	1 500	1 500	2 000	2 500	3 000
Number of additional households electrified per year	Electrification and Energy Programme and Project Management	Outcome 9: A responsive, accountable, effective and efficient local government system	191 469	151 390	166 130	200 000	265 000	275 000	290 000
Number of new bulk substations built per year	Electrification and Energy Programme and Project Management	Outcome 6: An efficient, competitive and responsive economic infrastructure network	4	7	4	6	14	16	20
Number of additional substations upgraded per year	Electrification and Energy Programme and Project Management		3	10	5	10	10	10	10
Kilometres of new medium voltage power lines constructed per year	Electrification and Energy Programme and Project Management		350km	350km	275km	350km	350km	450km	450km
Kilometres of existing medium voltage power lines upgraded per year	Electrification and Energy Programme and Project Management		200km	200km	200km	220km	220km	220km	220km
Number of non-grid connections per year <sup>1</sup>	Electrification and Energy Programme and Project Management	Outcome 9: A responsive, accountable, effective and efficient local government system	-1	-1	9 343	15 000	20 000	25 000	30 000
Number of terawatts per hour of energy savings realised and verified from energy efficiency and demand side management projects <sup>1</sup>	Clean Energy	Outcome 10: Environmental assets and natural resources that are well protected and continually enhanced	-1	1 TWh	1.2 TWh	1.2 TWh	2.5 TWh	2.5 TWh	2.5 TWh
Number of solar water heating units installed in residential and commercial sectors per year	Clean Energy		55 000	242 000	353 188	129 679	204 000	87 500	92 137

## The national development plan

The national development plan envisages that by 2030 South Africa will have an adequate supply of electricity and liquid fuels to ensure that economic activity and welfare are not disrupted, and that at least 95 per cent of the population should have access to grid or off-grid electricity. To support this vision, the integrated resource

plan proposes that gas, imported hydro-power, and other renewable resources like wind, solar, and hydro-electricity, will be viable alternatives to coal and will supply at least 20 000 Megawatts of the additional 29 000 Megawatts of electricity needed by 2030.

In order to improve energy security across the entire electricity value chain, the plan recommends investment in human capital and the rehabilitation of electricity distribution infrastructure. A funding model for the electricity distribution infrastructure rehabilitation programme was being developed in 2013/14 and is due to be completed in 2014/15. Funds will continue to be allocated to research and development by the South African National Energy Development Institute for a carbon capture and storage project. In support of the development of an appropriate regulatory framework for hydraulic fracturing for shale gas, the gas utilisation master plan was being developed in 2013/14 as part of the integrated energy plan, and is due to be finalised by the end of March 2014. The integrated energy plan will map out the country's energy and infrastructure requirements up to 2050 for electricity, gas and petroleum in a manner that aligns with the strategic objectives outlined in the national development plan. The department aims to introduce more independent power producers into the market on a yearly basis to produce at least the capacity of 1 000 Megawatts to increase to 18 Gigawatts of capacity, to be in line with the integrated resource plan. The 2012 Independent System and Market Operator Bill, which facilitates the creation of a conducive environment for private sector investment in the electricity sector when enacted, will support this objective.

The department established a task team to develop a plan to implement the national development plan. The implementation plan was approved in December 2013, and is inclusive of different approaches and time frames to be applied and adhered to for the implementation of recommendations from the plan. Some of the major activities related to the plan will be increased demand side management measures; the revision to the national electrification plan to ensure universal access of 97 per cent by 2025; the implementation of the strategic stocks policy to ensure security of supply; and a decision on South Africa's nuclear future by the national nuclear energy executive coordination committee, especially after actual costs and financing options are revealed.

## Expenditure trends

The spending focus over the medium term will continue to be on expanding the integrated national electrification programme to increase the number of households with a connection to the electricity grid and the number of non-grid connections, provide substation infrastructure, and promote energy efficiency through the continuation of the solar water geyser programme. Thus, over the medium term, 93.2 per cent of the department's budget is expected to be transferred to the implementing municipalities and agencies, and the state owned company Eskom. Transfer payments for the integrated national electrification programme, and the energy efficiency and demand side management programme, constitute on average 67.4 per cent and 15.5 per cent of total expenditure over the medium term.

Established in 2001/02, the integrated national electrification programme aims to address electrification backlogs in line with the recommendations of the 1998 White Paper on Energy Policy. The programme over the past 10 years electrified newly built households and informal settlements, and reduced backlogs. The new household electrification strategy, which was approved by Cabinet in June 2013, has set a access target of 97 per cent of households by 2025. Furthermore, the strategy focuses on the electrification of about 90 per cent of households through grid connections, and the rest with high quality non-grid solar home systems or other possible technologies based on cost effective options. This is evident in the increase in transfers and subsidies, as well as the *Electrification and Energy Programme and Project Management* programme over the medium term. To increase the number of households connected to the electricity grid, spending in this programme increased by 12.5 per cent between 2010/11 and 2013/14. In 2012/13, 175 473 connections were made, of which

166 130 were grid connections and 9 343 were off-grid connections. Eskom made 118 926 or 71.6 per cent of the total grid connections, while municipalities made 47 204 or 28.4 per cent. Over the medium term, total expenditure is estimated to increase to R8.4 billion in 2016/17, mostly in transfers and subsidies, to provide for the expansion and acceleration of electrification programmes to meet the universal access target.

As the government and Eskom have sought to make solar water heating technology more affordable and accessible to citizens, the department rolled out the solar water geyser programme in 2012/13 through the *Clean Energy* programme. Thus expenditure in the programme increased significantly from R368 million in 2010/11 to R1.5 billion in 2013/14 to roll out 1 million solar water geyser units. Over the medium term, expenditure is expected to decrease to R1.1 billion in order to match allocations with delivery.

The South African Nuclear Energy Corporation, which provides products and services to various market sectors, including industry and medicine, receives additional funding of R190 million in 2014/15 through the *Nuclear Energy* programme. The additional funding is to make improvements to SAFARI-1 nuclear reactor, conduct research and development, and upgrade and refurbish the Pelindaba facilities in 2014/15.

Cabinet approved budget reductions of R15 million in 2014/15, R10 million in 2015/16 and R5 million in 2016/17 are made to the department's budget. These reductions will be implemented in the energy efficiency and demand side management grant paid to municipalities as a result of slow spending.

The significant increase in spending on compensation of employees between 2010/11 and 2013/14 was due to additional funds for capacitating areas in the department where critical skills are required, mainly in the *Electrification and Energy Programme and Project Management* and *Nuclear Energy* programmes. Over this period, the department's filled posts increased to 616 in 2013/14, including 54 filled in addition to the approved establishment. Following a review of its organisational structure in 2013/14, the department was allocated additional funding of R84 million to increase the approved establishment to 624 posts in 2014/15, in line with the resources required for the department to carry out its mandate. As a result, expenditure on compensation of employees is expected to increase over the medium term, largely due to increased staff costs.

## Infrastructure spending

### *Mega project: Integrated national electrification programme*

The department makes transfer payments to Eskom and municipalities for the integrated national electrification programme. These transfers fund infrastructure for the electrification of households, and the building and upgrading of substations and electrical networks. Between 2010/11 and 2013/14, R12.4 billion was spent on electricity infrastructure, of which R4.6 billion was spent by municipalities, R7.5 billion by Eskom, and R315.3 million by non-grid service providers. The spending provided electricity connections to 508 989 households over the period. The non-grid electrification programme will in future be implemented throughout the country, including those parts outside concessionary areas and particularly those with low density and low consumption households. A once-off allocation of R320 million in 2013/14 was distributed to nine municipalities facing severe electricity distribution challenges in order to improve their distribution asset condition.

Over the medium term, the spending on electrification infrastructure is expected to increase to R6.1 billion in 2016/17 to electrify 905 000 households over the medium term. 50 new substations will also be built, 32 by independent power producers, while a total of 30 substations will be upgraded.

### *Mega project: new generation capacity through independent power producers*

In line with the national development plan, the energy sector has developed sector plans: an integrated resource plan for electricity, a gas utilisation master plan for gas, and a plan for liquid fuels. The implementation of the integrated resource plan for ensuring energy security involves the development of infrastructure, including power stations and transmission lines, by Eskom and independent power producers. The department has focused on introducing independent power producers using renewable energy technologies such as wind, solar photovoltaic, concentrated solar power, biomass and hydro, through bidding rounds, in terms of which project developers compete on the most attractive projects that yield the lowest cost to the electricity consumer while maximising local economic development. By September 2013, three bidding rounds under the renewable energy independent power producers procurement programme had been concluded to contract for about 3 900 Megawatts, which represents approximately R120 billion of direct investment in the green economy.

Further bidding rounds in which bidders will be awarded contracts for generating 1 000 Megawatts will be held each year until the capacity of 18 Gigawatts has been created, in line with the integrated resource plan.

In addition to their involvement in this renewable energy programme, independent power producers are due to be introduced to the baseload programme utilising coal, co-generation, gas, and imported hydro technologies. This is in parallel to the baseload programme executed by Eskom, in terms of which Medupi and Kusile power stations are being developed.

2. Rand million.

## Expenditure trends

The department embarked on a restructuring process in 2013/14 to achieve better alignment between the structure and the electoral mandate. This included restructuring the regional offices to improve service delivery. The programme had a funded establishment of 282 posts in 2013/14 and 5 posts are filled in addition to this establishment. In 2013/14, the programme had 321 filled posts, the majority of which are in salary levels 7 to 10. Expenditure on compensation of employees increased significantly over the medium term mainly due to additional funding of R29.5 million out of a total of R66 million to improve the human resource capacity of the department's support service structure in order to implement these and other objectives. This expansion in human resources is expected to result in an increase in expenditure on communication, training and development, and audit fees over the same period. Over the medium term, it is expected that the establishment will increase to 329 posts, which also accounts for the strong growth in the compensation of employees' budget to support human resource capacity in the line functions.

The department relocated its head office during 2012/13 to Matimba House to cater for the growing establishment. Thus, expenditure in the *Office Accommodation* subprogramme increased significantly in 2013/14. The relocation also accounts for a large increase in operating leases expenditure between 2010/11 and 2012/13.

## Programme 2: Energy Policy and Planning

### Objectives

- Improve energy security by:
  - regulating demand and introducing a diversified mix of energy generation technologies on an ongoing basis
  - increasing competition in the energy sector by introducing independent power producers utilising renewable technologies through a bidding process on an annual basis
  - planning interventions to expand energy infrastructure through the development of a policy framework for the integrated energy plan, the integrated resource plan, the liquid fuels infrastructure roadmap, the transmission development plan, and the major distribution infrastructure plan, over the medium term
  - publishing an annual energy statistics report to facilitate information based decision making.
- Address current and envisaged energy supply and distribution constraints by developing the planned approach to distribution asset management for the rehabilitation of critical municipal electricity distribution infrastructure by the end of June 2014.
- Improve liquid fuels energy security by developing and implementing the liquid fuels 20-year infrastructure plan over the medium term.

### Subprogrammes

- *Policy Analysis and Research* develops key indicators and monitors the impact of energy sector policies, planning and interventions; analyses all energy policies and their impact on access to energy and on the security of energy supply; conducts research and analyses policies in relation to other countries; and carries out research and analysis on national and international trends or developments that impact on the demand and supply of energy. In 2012/13, the draft integrated energy plan report was completed and circulated to the integrated energy plan steering committee. It was also presented at an integrated energy plan colloquium before being forwarded to Cabinet for approval. The report was approved for public release by Cabinet and was subsequently published in the Government Gazette in 2013/14. By the end of September 2013, the first consultation workshop had been held in Johannesburg, with other provincial consultation workshops taking place in October and November 2013. This subprogramme had a staff complement of 3 in 2013/14.
- *Energy Planning* manages energy data and information; develops and maintains an energy modelling system to stimulate energy supply and distribution; identifies energy supply and distribution constraints and addresses them through the integrated energy plan; manages the overall collection, collation, validation, integrity and quality of energy data; and is responsible for managing the development of energy plans and strategic interventions for the generation, refining, distribution and transmission of energy sources for demand and supply optimisation. Over the medium term, the focus will be on developing standardised tools for connecting data, centralising the collection and storage of energy data collected within the unit, and automating the submission of energy data by the oil industry. In 2012/13, fuel sales volume data was collected, quality checked, and stored in the database. Disaggregated data was published on the department's website and provided to stakeholders in accordance with the recommendation made by the Competition Commission. By the end of September 2013, a preliminary oil questionnaire had been submitted to the Joint Organisations Data Initiative, and the 2013 third quarter prices and taxes questionnaire had been submitted to the International Energy Agency. This subprogramme had a staff complement of 23, including 1 contracted intern, in 2013/14.
- *Hydrocarbon Policy* ensures a secure energy supply, well managed demand, and enhanced access to hydrocarbons; a transformed energy sector; and ensures that energy regulation and competition is improved through the development, promulgation and maintenance of a statutory framework for petroleum, petroleum products, petroleum infrastructure, coal and gas. Between 2010 and 2013, Transnet's construction of the new multi-purpose pipeline from Durban to Johannesburg was monitored and reported on. In 2012/13, the final allocation of R1.5 billion was transferred to Transnet and an oversight visit to the Durban terminal was conducted. In 2013/14, stakeholder comments were considered and incorporated into a draft gas amendment

bill, which was then presented to the National Economic Development and Labour Council for analysis. This subprogramme had a staff complement of 20, including 1 contracted intern, in 2013/14.

- *Electricity, Energy Efficiency and Environmental Policy* ensures secure energy supply; well managed demand and a transformed energy sector; and energy regulation and competition that is improved through the development, promulgation and maintenance of a statutory framework for electricity over the medium term. A final independent system and market operator report was submitted to Parliament for consideration of options with, and without, transmission assets. In 2012/13, the National Assembly considered the Independent System and Market Operator Bill, which provides for an independent, integrated system of power generation without transmission assets. A draft report for the second phase of the South African coal roadmap was also developed. By the end of September 2013, the third window of the renewable energy independent power producers programme, during which bid documents were assessed, was completed, allowing for the selection of candidates prior to the start of construction work related to renewable energy technologies. This subprogramme had a staff complement of 8 in 2013/14.

## Expenditure estimates

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on implementing the regulatory framework for the introduction of biofuels in the liquid fuels sector, completing the infrastructure plans for gas and liquid fuels, and revamping the legislative and regulatory frameworks for the sector. Key projects are expected to be finalised, such as the development of the energy modelling systems; the audit of refineries as an extension of scope under the 20-year liquid fuels infrastructure road map, which will look at unlocking bottlenecks in the supply value chain under the *Energy Planning* subprogramme; and the integrated energy plan within the *Policy Analysis and Research* subprogramme. The plan, which the minister is mandated to review and publish annually in the Government Gazette, aims to prescribe an energy roadmap for the country. The plan will have integrated a number of other plans by the end of March 2014, including those relating to liquid fuels, gas, energy efficiency and distribution, in order to provide policy direction in the energy sector in line with the developmental goals in the national development plan. Expenditure on goods and services, particularly in consultants and professional services, is consequently expected to decrease over the medium term due to the completion of these plans.

In 2013/14, R6 million was earmarked for the review of the asset status of the electricity distribution industry, which is to be finalised in 2014/15. This resulted in a spike in expenditure on travel and subsistence in 2013/14, which continues in 2014/15. The pilot phase of the asset rehabilitation, linked to this review, began in 2013/14, led by the integrated national electrification programme in the *Electrification and Energy Programme and Project Management* programme.

The commissioning of the new multi-products pipeline between Durban and the inland market aims to reduce the constraints in supplying liquid fuels to the inland market of Gauteng. Between 2010/11 and 2012/13, expenditure grew significantly in transfers and subsidies as a result of allocations in the *Hydrocarbon Policy* subprogramme to Transnet of R4.5 billion for the construction of the pipeline. Expenditure in the subprogramme is consequently set to decrease significantly from 2013/14 onwards as a result of the conclusion of transfers to Transnet, in accordance with the grant funding agreement.

The programme had a funded establishment of 65 posts, and 3 posts were filled additional to the establishment. As at 30 November 2013, 61 posts were filled. Expenditure on compensation of employees increased in 2012/13 due to the high number of filled posts in 2012/13 as a result of the large number of interns and contract workers employed in that year. The number of posts is expected to decrease slightly over the medium term as fewer contract employees will be required.

## Programme 3: Petroleum and Petroleum Products Regulation

### Objectives

- Ensure development and transformation of the liquid fuels industry and security of supply of petroleum products in the South African economy through monitoring and enforcing technical and economic compliance to legislation, specifications, standards and licence conditions in each year of the medium term.
- Facilitate the improved participation of historically disadvantaged individuals in the petroleum sector by enforcing compliance by wholesalers, manufacturers and retailers with the liquid fuels charter in the adjudication of licences on an ongoing basis.
- Strengthen the regulatory framework in the liquid fuels petroleum industry by implementing the regulatory accounting system to have a transparent fuel pricing mechanism that will reward investors in the liquid fuels sector throughout the value chain, by 2013/14.

### Subprogrammes

- *Petroleum Compliance, Monitoring and Enforcement* monitors compliance with the Liquid Fuels Charter and technical, legal and commercial licensing conditions. This includes compliance with import and export conditions as well as enforcement of the submission of data by industry. The subprogramme also processes arbitration requests, promotion of access to information requests on behalf of the Controller of Petroleum Products, and assists in finalising appeals based on decisions of the controller. On an annual basis, the subprogramme aims to conduct 1 500 retail site inspections for petroleum manufacturers, wholesalers and retailers to ensure compliance with the Liquid Fuels Charter and technical, legal and commercial licensing conditions. In 2012/13, 1 717 site inspections were carried out. By the end of September 2013, 845 inspections had been conducted. 20 non-compliance issues were identified, 6 were resolved immediately and 14 enforcement notices were issued. This subprogramme had a staff complement of 4 in 2013/14.
- *Petroleum Licensing and Fuel Supply* manages the petroleum licensing process; regulates the permitting of the export and import of petroleum products; monitors fuel stock levels; and coordinates corrective actions to avoid distribution shortages. This entails conducting licence analyses, and ensuring permit and charter compliance and hydrocarbons supply. Wholesale and retail licence applications are managed by renewing 95 per cent of licences issued within 90 days, and issuing new licences to the retail industry within 60 days. In 2012/13, no fuel supply shortages were experienced and through regular meetings with the industry's heads of supply managers, corrective actions to avoid distribution shortages were implemented where necessary. By the end of September 2013, no fuel supply shortages had been experienced and 46 petroleum activity licence applications, excluding site and retail new to industry applications, were finalised within 90 days, against a target of 38. This subprogramme had a staff complement of 33 in 2013/14.
- *Fuel Pricing* regulates the pricing of petroleum products in accordance with the legislative framework. This entails the determination, review, update and maintenance of fuel levies and margins, and the process of paying fuel levies. Fuel price administration includes developing, evaluating and monitoring price models; updating elements of the basic fuel price; and ensuring secure audit services for the auditing of fuel prices to ensure internationally competitive pricing of petroleum products, thereby enabling investment in the sector. In 2012/13, the stakeholder consultation process on the fixed retail margin for illuminating paraffin was finalised, and a discussion document on the maximum refinery gate price was published. By the end of September 2013, the global energy information provider Platts had been consulted regarding elements to ensure internationally competitive pricing in the administration of petroleum product pricing. The department participated in the South African Petroleum Industry Association-Kellogg Brown Roodt study on the review of the basic fuel price, and 2 reports on the implementation of the regulatory accounting system applicable to the adjustment of fuel margins and petrol attendants' wages were compiled and approved in 2013/14. This subprogramme had a staff complement of 5 in 2013/14.
- *Regional Petroleum Regulation Offices* provides advice on integrated energy services, develops appropriate interventions to enhance and promote universal access to energy, and ensures economic and technical compliance with relevant legislation. In addition, all annual information submitted by licence holders is captured and analysed. In 2012/13, 13 licensing awareness campaigns relating to the Petroleum Products

Act (1977) were conducted throughout the country to explain the legislation to the public. These campaigns continued in 2013/14, with 4 having been conducted by the end of September 2013. This subprogramme had a staff complement of 61 in 2013/14.

## Expenditure estimates

**Table 29.9 Petroleum and Petroleum Products Regulation**

Subprogramme	Audited outcome			Adjusted Appropriation 2013/14	Average growth rate (%) 2010/11 - 2013/14	Expenditure/total: Average (%) 2010/11 - 2013/14	Medium-term expenditure estimate			Average growth rate (%) 2013/14 - 2016/17	Expenditure/total: Average (%) 2013/14 - 2016/17

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on monitoring and enforcing technical, economic, and legal compliance with legislation, specifications, standards and licence conditions by conducting fuel specification tests and issuing enforcement notices in cases where non-compliance is identified. The emphasis will also be on the testing of fuel samples collected from licence holders, which explains the increase in expenditure on consultants and professional services for laboratory services in 2013/14. A service provider is contracted to provide this service from 2014/15, which accounts for the increase in business and advisory services over the medium term.

Following a review of the department's organisational and budget structure, the department moved the *Regional Petroleum Regulation Offices* subprogramme from the *Electrification and Energy Programme and Project Management* programme to this programme. The move is expected to improve the alignment of the budget

structure to the department's mandate. Expenditure on travel and subsistence increased significantly between 2010/11 and 2013/14 due to licensing awareness campaigns that were conducted throughout the nine provinces.

The department is required to inspect 7 500 petroleum manufacturers, wholesalers and retailers over the medium term for compliance with the Liquid Fuels Charter and technical, legal and commercial licensing conditions. Over the medium term, the department plans to increase its monitoring activities, finalise arbitration requests and public complaints in the petroleum industry within 14 working days, and conduct 27 awareness campaigns on the Petroleum Products Act (1977) among members of the industry. These activities require that the department increases its funded establishment over the medium term, from 53 posts, with 2 additional to the establishment, at the end of November 2013, to 103 over the medium term. This projected increase in personnel numbers is the main reason for the significant increase expected in spending on compensation of employees over the medium term. The increase in spending on compensation of employees in 2012/13 was due to the high number of interns and contract workers employed during this period while the department finalised its structure.

## **Programme 4: Electrification and Energy Programme and Project Management**

### **Objectives**

- Increase access to electricity by monitoring the implementation of the integrated national electrification programme, which aims to electrify an additional 905 000 (grid and non-grid) households by 2016/17.
- Ensure the efficient management of the electricity supply by:
  - enhancing the application of project management business principles to assist programme and project managers on an ongoing basis
  - continually coordinating, monitoring and reporting on the implementation of programmes and projects focused on the development, improvement and transformation of the energy generation, refinement, transmission and distribution industry and infrastructure.
- Increase public awareness about energy issues while empowering disadvantaged and vulnerable groups by identifying, implementing, managing and coordinating upliftment programmes and projects on an ongoing basis.

### **Subprogrammes**

- *Integrated National Electrification Programme* oversees and manages the finance and implementation processes for the electrification programme, manages the annual planning processes including electrification infrastructure plans, and manages and coordinates technical audits for the programme. In 2012/13, through transfers to Eskom, municipalities, and non-grid service providers, 175 473 new household connections were achieved, of which 9 343 were under the non-grid programme. In addition, 4 new substations were completed, 5 were upgraded, and 275 kilometres of new electrical lines were installed while 85 kilometres were upgraded. By the end of September 2013, 92 085 new household connections had been achieved, including 4 415 non-grid connections. This subprogramme had a staff complement of 20, including 2 contracted interns, in 2013/14.
- *Energy Regional Offices* provides advice on integrated energy services, develops appropriate interventions to enhance and promote universal access to energy, manages and coordinates regional electrification planning and ensures economic and technical compliance with relevant legislation. In 2012/13, the establishment of 2 integrated energy centres was facilitated. These are one-stop shops that provide energy services and information to communities in Mbizana in Eastern Cape and Ulundi in KwaZulu-Natal. By the end of September 2013, 3 integrated energy centres had been completed or were being built in Free State, Eastern Cape and Limpopo. This subprogramme had a staff complement of 19 in 2013/14.
- *Programme and Projects Management Office* provides specialised assistance to programme and project managers, and management in general, to apply management principles, coordinate project information, and report on projects. The focus will be on capacitating this subprogramme over the medium term through the development of a project management platform, the appointment and training of staff, and meeting with

stakeholders to conduct planning sessions. In 2013/14, the requisite progress reports and dashboards were compiled and submitted to entities such as the renewable energy independent power producer procurement programme's project office, and the Presidential Infrastructure Coordinating Commission secretariat. This subprogramme had a staff complement of 6, including 1 contracted project integration manager, in 2013/14.

- *Electricity Infrastructure/Industry Transformation* oversees programmes and projects focused on the development, improvement and transformation of the electricity generation, transmission and distribution sector, and independent power producers. By the end of September 2013, the necessary strategic infrastructure project reports and a progress summary on all other project reports had been compiled and forwarded to the Presidential Infrastructure Coordinating Commission secretariat; a strategic infrastructure projects business plan had been compiled and was subsequently approved by the minister; and contracts were finalised and signed with 9 municipalities facing significant electricity distribution challenges as part of the approach to distribution asset management pilot project. All projects have since begun within these municipalities. The progress of these projects will be monitored by a steering committee of relevant stakeholders. This subprogramme had a staff complement of 7, including 4 contract workers, in 2013/14.
- *Community Upliftment Programmes and Projects* fulfils government's priorities for broad transformation in the work of the department and the energy sector, and supports departmental special programmes and projects. This entails drafting youth and gender policies for the department, as well as showcasing energy issues to the public. 5 awareness campaigns were hosted in 2012/13, including the learners focus week, which was attended by 250 learners from the coastal provinces, with a concentration of learners from rural areas. 14 were awarded bursaries to study in the science, technology, engineering and mathematics fields. In addition, the job summit in Ekurhuleni and various energy awareness exhibitions were held where youth and women in rural areas were informed of career opportunities available within the energy sector, and given energy saving tips. In 2013/14, 4 public awareness campaigns were conducted. In addition, a learner focus week was hosted, targeting 300 Grade 10 to 12 learners to educate them on career opportunities in the energy sector. This subprogramme had a staff complement of 6 in 2013/14.

## Expenditure trends

The new household electrification strategy, which was approved by Cabinet on 26 June 2013, aims to achieve universal access to electricity by 97 per cent of all households by 2025. Thus the spending focus over the medium term will continue to be on the continuation and expansion of the electrification programmes being implemented by Eskom and municipalities, which accounts for the increase in transfers and subsidies and in the *Integrated National Electrification Programme* subprogramme, as well as the strengthening of the programme and projects management office and the independent power producers unit. The electrification programmes implemented by Eskom will be strengthened through the development of a project management platform, as well as the appointment and training of staff. The new household electrification strategy includes a least cost approach that combines grid and high quality non-grid solutions to support areas with high backlogs and low delivering municipalities, and to ensure that electrification targets are met.

Therefore, expenditure is expected to increase significantly over the medium term due to higher allocations for the *Integrated National Electrification Programme*, for which expenditure is projected to increase to R6.2 billion in 2016/17 to expand electrification to 290 000 households in that year. The bulk of this allocation is towards transfer payments to Eskom, which is projected to increase to R3.9 billion in 2016/17. Within goods and services, expenditure on travel and subsistence is the major cost driver over the medium term and relates to the department's responsibility to monitor progress and conduct technical audits of completed electrification projects.

The increased spending in the *Integrated National Electrification Programme* between 2010/11 and 2013/14 was due to additional allocations to municipalities and Eskom for their implementation of electrification projects to achieve universal access to electricity. 708 989 connections were achieved in this period.

A number of initiatives will be undertaken to support the key strategies and objectives in this programme. These include the development of reporting systems to enhance the electrification planning and monitoring processes, which accounts for the increase in spending on computer services in 2013/14.

The programme has a funded establishment of 103 posts, and 41 posts were filled additional to the establishment. Expenditure on compensation of employees in this programme increased to R35.8 million in 2013/14 due to the high numbers of interns and contract workers that were employed. The total number of employees is expected to decrease over the medium term as fewer interns and contract workers are expected to be employed, and more permanent workers are recruited over the medium term to increase capacity. Overall, this will result in the expenditure on compensation of employees growing to R39.7 million in 2016/17. Regional petroleum regulation offices were moved to programme 3, which accounts for the staff numbers being below the establishment numbers.

## Programme 5: Nuclear Energy

### Objectives

- Regulate the security of nuclear material, related equipment, and facilities by developing and publishing appropriate regulations by 2016.
- Strengthen the control of, and accounting for, the nuclear materials and related equipment by enforcing relevant statutory frameworks on an ongoing basis.
- Ensure safe, secure and sustainable management and disposal of radioactive waste by facilitating the full operation of the National Radioactive Waste Disposal Institute, and establishing a waste disposal fund by 2015.
- Contribute towards ensuring the security of energy supply by leading, developing and overseeing the implementation of the nuclear energy expansion programme as guided by nuclear energy policy and the decision of the national nuclear energy executive coordination committee of November 2013, in accordance with timelines stipulated in the integrated resource plan 2010-2030.
- Ensure compliance with international nuclear obligations by developing, maintaining and implementing an appropriate statutory framework for nuclear energy policy by 2016.
- Ensure the readiness of all relevant stakeholders for the management of any nuclear emergency as part of the national disaster plan on an ongoing basis by:
  - conducting an emergency preparedness review of the International Atomic Energy Agency in order to identify gaps in South Africa's nuclear infrastructure
  - developing an action plan to address such gaps to be in line with the national nuclear emergency management plan.

### Subprogrammes

- *Nuclear Safety and Technology* manages and implements all matters related to nuclear safety and technology as required by legislation and international agreements; implements the nuclear energy policy, which was approved in 2008 as a national nuclear programme in line with the integrated resource plan requirements; and administers all matters related to nuclear safety, liability and emergency management with the aim to

improve the governance of the nuclear sector, specifically in relation to nuclear safety and nuclear technology. In 2012/13 and 2013/14, an integrated nuclear infrastructure review mission of the International Atomic Energy Agency was conducted, after which an action plan to address the identified gaps was developed. Studies and strategies on nuclear financing and procurement were completed and South Africa's self-assessment on nuclear emergency preparedness was also finalised. In addition, an emergency preparedness review pre-mission of the International Atomic Energy Agency was hosted and a procurement framework benchmark proposal was submitted to the national nuclear energy executive coordination committee. The board of directors for the National Radioactive Waste Disposal Institute was established. This subprogramme had a staff complement of 11 in 2013/14.

- *Nuclear Non-proliferation and Radiation Security* manages and implements all matters related to nuclear non-proliferation and radiation security as required by legislation and international agreements. This entails standardising security measures at ports of entry and installing portal radiation monitors at the main ports of entry. In 2012/13 and 2013/14, the relevant stakeholders were engaged in the installation of radiation portal monitors at strategic ports of entry to enhance security. Nuclear safeguards compliance inspections were also successfully conducted. This subprogramme had a staff complement of 9 in 2012/13.
- *Nuclear Policy* develops and reviews policies as required by international agreements and governance of the nuclear sector in South Africa; undertakes research and development; and reviews and monitors nuclear safety, nuclear technology, nuclear non-proliferation and nuclear radiation security policies, and provides advice accordingly. The National Nuclear Regulator Act (1999) is currently being amended. The review process has commenced and will be finalised in 2014/15. During 2013/14, a study was completed on the independence of the National Nuclear Regulator to ensure the effective separation of promotional and regulatory aspects of nuclear energy. This report has been submitted to the minister for approval, and the amendment to the act is anticipated to be finalised in 2014/15. This subprogramme's staff complement will increase from 1 in 2013/14 to 4 in 2014/15.

2. Rand million.

## Expenditure trends

The spending focus over the medium term continues to be on funding the department's public entities to carry out their mandates on behalf of the minister. Thus, transfers and subsidies are projected to be the most significant item of expenditure over the medium term and comprise transfers to the nuclear departmental agencies, such as the South African Nuclear Energy Corporation and the National Nuclear Regulator. The activities these transfers fund are governed by the nuclear energy policy, which was approved by Cabinet in June 2008. The policy provides a framework within which prospecting, mining, milling, the use of nuclear materials, and the development and use of nuclear energy for peaceful purposes, is to take place. The transfer to the South African Nuclear Energy Corporation is projected to increase over the medium term due to a once-off Cabinet approved additional allocation of R190 million in 2014/15. The additional allocation provides for the upgrading, replacement and refurbishment of the Pelindaba site infrastructure; the replacement and upgrading of the SAFARI-1 nuclear reactor research and development facilities as part of the ageing management programme; upgrading liquid effluent management services to comply with licensing and regulatory requirements; and sustaining critical investment in the entity's analytical and calibration capabilities.

The transfer to the National Nuclear Regulator increased between 2010/11 and 2013/14 to allow the entity to upgrade its ICT infrastructure, cater for staff retention due to a skills shortage and weaknesses in areas such as governance compliance, and upgrade the emergency preparedness centre. In the same period, transfers to the

National Radioactive Waste Disposal Institute increased between 2010/11 and 2013/14 following the establishment of the entity in 2013/14.

The national nuclear energy executive coordination committee, which comprises ministers from various departments and is chaired by the president, is responsible for taking strategic decisions on the implementation of the nuclear energy policy. Cabinet endorsed several decisions taken by this committee, such as the phased decision making approach for implementing the nuclear programme, and the reaffirmation of Eskom as the owner-operator for future nuclear power plants. In preparation for the new nuclear build programme and in order to learn from international experience on nuclear procurement, spending on consultants increased significantly due to a once-off allocation in 2012/13 for research and studies relating to the nuclear build programme. Over the medium term, expenditure on consultants will be focused on the development of an implementation plan based on the mission report of the nuclear infrastructure review, implementation of the nuclear procurement process, finalisation of plans to support the nuclear fuel cycle strategy, and the implementation of the nuclear fuel cycle strategy. Consultants are used to perform highly specialised work for which the department does not have the requisite skills.

This programme had a staff complement of 29 in 2013/14, which is expected to increase to 34 by 2014/15, due to the additional funding allocated to the department for specialised nuclear human resource capacity. The programme capacity is strengthened in line with the department's mandate on nuclear energy policy. Expenditure on compensation of employees is expected to grow significantly over the medium term to support the increase in personnel numbers. At the end of November 2013, this programme had no vacant posts.

## **Programme 6: Clean Energy**

### **Objectives**

- Manage climate change and environmental matters by:
  - monitoring the implementation of climate change regulations to mitigate the risk of environmental impact on an ongoing basis
  - publishing climate change strategies and plans by 2014/15.
- Promote and facilitate energy efficiency and demand management by:
  - monitoring and reporting on energy savings on an ongoing basis
  - coordinating, monitoring and reporting on the progress and impact of energy efficiency and demand management strategies by 2015
  - reviewing the energy efficiency tax incentive and energy conservation schemes by 2014/15.
- Improve energy demand management by facilitating the development of an energy management plan by 2014/15.
- Ensure the integration of renewable energy into the mainstream energy supply of South Africa by planning and coordinating initiatives and interventions focused on the development and improvement of the renewable energy market through:
  - facilitating the incorporation of the renewable energy policy into the integrated energy plan by 2014
  - implementing awareness campaigns from 2013/14 onwards.

### **Subprogrammes**

- *Energy Efficiency* is discussed in more detail below.
- *Renewable Energy* ensures the integration of renewable energy into South Africa's mainstream energy supply by planning and coordinating initiatives and interventions focused on the development and improvement of the renewable energy market; and ensures the integration and coordination of renewable energy initiatives and interventions with relevant associated institutions. The largest spending item, constituting 95.7 per cent of expenditure, is on transfers to the South African National Energy Development Institute for operational expenditure, and research and development into projects such as carbon capture and storage. In 2012/13, an umbrella memorandum of understanding was completed and signed with the Central

Energy Fund and the Northern Cape provincial government for the development of a solar park, which included the land access agreement for an Upington site. To raise awareness, wind energy articles were published in various media outlets nationally. By the end of 2013/14, the solar park corridor development feasibility studies report will have been submitted to Cabinet for approval. The corridor consists of 6 sites, while the geotechnical and environmental impact studies, which commenced in 2012/13, focused on Upington and Prieska. This subprogramme had a staff complement of 5 in 2013/14.

- *Climate Change and Designated National Authority* ensures that climate change and environment response measures, in terms of mitigation and adaptation, are implemented within the energy sector. It also ensures the fulfilment of international energy commitments and obligations under the United Nations Framework Convention on Climate Change pertaining to the Kyoto Protocol. This subprogramme will develop an energy and climate change strategy, and measure and report on energy related carbon emission reductions. In 2012/13, 68 clean development mechanism applications were processed. 57 clean development mechanism projects were submitted and registered with the United Nations Framework Convention on Climate Change. In 2012/13 and 2013/14, the subprogramme received awards from the United Nations in recognition of work done to raise awareness of the clean development mechanism programme activities. The award in 2012/13 was for being the best performer among developing countries with 10 or more registered clean development mechanism projects, while the award in 2013/14 was for being the best performer globally. The subprogramme also participated in the 19th conference of the parties to the United Nations Framework Convention on Climate Change (COP 19), and held workshops with stakeholders in promoting the clean development mechanism methodology. This subprogramme had a staff complement of 8 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on improving the implementation of energy efficiency and clean energy technologies through the provision of financial subsidies and tax incentives in support of the department's mandate to promote the development and use of clean and renewable energy resources. Expenditure in the *Renewable Energy* subprogramme increased between 2010/11 and 2013/14 due to an increase in transfer payments to the South African National Energy Development Institute to fund its operational activities, as well as research and development it conducted on key projects such as carbon capture and storage, with the entity on track to conduct a test injection of carbon in 2016, and continuing with the national energy efficiency and demand side management programme being implemented by Eskom and municipalities. The programme will also focus on the full establishment of the energy efficiency target monitoring system, which will be critical in the accurate reporting of achievements of the national energy efficiency strategy. The *Energy Efficiency* subprogramme is discussed in more detail below.

Expenditure on consultants was increased in 2011/12 when the department contributed towards the implementation of the renewable energy market transformation project as co-founders of the grant agreement. The project is an initiative funded from the World Bank's global environmental facility to overcome barriers to

the development and implementation of technical, regulatory and economic aspects of renewable energy in South Africa, with a special focus on solar water heating and renewable power generation.

The programme has a funded establishment of 25 posts and 1 post filled in addition to the establishment. An increase in the number of posts is expected over the medium term due to additional capacity required for the *Climate Change and Designated National Authority* subprogramme to fulfil its mandate. This accounts for the 14.2 per cent average growth in expenditure on compensation of employees over the medium term.

### Subprogramme: Energy Efficiency

This subprogramme advances energy efficiency in South Africa by planning and coordinating initiatives and interventions focused on developing and improving the energy efficiency market; and ensures integration and coordination of energy efficiency initiatives and interventions with relevant associated institutions. In 2012/13, regulations for introducing the energy efficiency incentives scheme and the public consultation process on the national energy efficiency strategy document were completed. In December 2013, the regulations on the allowance for the energy efficiency savings were promulgated and formally presented to stakeholders. These regulations will provide South African Revenue Service tax incentives for energy efficiency improvements for businesses, based on measured and verified energy savings through registration with the South African National Energy Development Institute. Businesses will have to intensify energy efficiency improvement measures in order to take full benefit of this tax incentive. Linked to these regulations for the income tax allowance for energy efficiency savings, is the private sector energy efficiency project, which was launched in December 2013 in collaboration with the lead implementer, National Business Initiative. This project will provide commercial and industrial companies with various services to assist them in identifying energy efficiency savings measures.

## Expenditure trends

This subprogramme is tasked with contributing to the country's efforts to reduce energy demand and carbon emissions, and to address the impacts of climate change. Thus the spending focus over the medium term will be on strengthening the implementation of various energy efficiency implementation tools, such as the implementation of the solar water heaters programme and the promulgation of the national energy efficiency strategy, by the start of 2014/15. Over the medium term, expenditure is expected to decrease as allocations earmarked for the national energy efficiency and demand side management programme, and transferred to Eskom for the installation of solar water heaters, are reduced because the programme was amended in 2013/14 to enforce the subsidisation of products with a high local content. The solar water heater programme will also stimulate the green economy by localising the associated value chains. The programme monitors the mandatory requirement of local content for those systems that benefit from government subsidies, requiring a minimum of 70 per cent. The programme helps to cushion the poor from high electricity prices. The department expects to install 383 637 solar units over the medium term and realise 7.5 terawatts per hour in energy savings.

One item of expenditure under goods and services that is expected to increase significantly over the medium term is advertising. This will be a result of the department facilitating a series of energy efficiency awareness campaigns in each of the country's regions.

The efficient use of energy in South Africa is a key element in mitigating the challenge of increased energy demand caused by our growing economy. Expenditure in the *Energy Efficiency* subprogramme thus increased between 2010/11 and 2013/14 as a result of the introduction of the energy efficiency and demand side management programme implemented by both Eskom and selected municipalities, and spending on the solar water heaters programme.

The subprogramme had a staff complement of 10 in 2013/14, which is expected to increase to 12 over the medium term, with the increases occurring among the higher 13 to 16 salary levels. This results in expenditure on compensation of employees growing by 37.1 per cent over the medium term.

## Public entities and other agencies

### Central Energy Fund

#### Mandate and goals

The Central Energy Fund is listed in schedule 2 of the Public Finance Management Act (1999), and is governed by the Central Energy Fund Act (1977) and the Companies Act (2008). Its mandate is to research, finance, develop and exploit appropriate energy solutions across the spectrum of energy sources to meet South Africa's future energy needs. In terms of its governing legislation, the company is also mandated to manage the Equalisation Fund, which collects levies from the retail sales of petroleum products to eliminate unnecessary fluctuations in the retail price of liquid fuel and to give tariff protection to the synthetic fuel industry.

Through its 10 operating subsidiaries, the fund is also mandated to finance and promote the acquisition of coal; exploit coal deposits; manufacture liquid fuel, oil, and other products from coal; and market these products. The subsidiaries are: the Petroleum, Oil and Gas Corporation of South Africa; the South African Gas Development Company; the Petroleum Agency of South Africa; Oil Pollution Control South Africa; the Strategic Fuel Fund Association; African Exploration; ETA Energy; the South African Supplier Development Agency; the Central Energy Fund Carbon; and CCE Solutions.

- The fund's strategic goals over the medium term are to:
  - align operations and activities with the government's key outcomes and the minister's delivery agreement obligations
  - ensure the long term profitability of the fund
  - invest in alternative and cleaner energy technologies that will improve the quality of life for low income households through more affordable and safer energy sources
  - manage investments in subsidiaries to ensure good governance and sustainability
  - contribute towards South Africa's renewable energy targets
  - improve energy security of supply through diversifying sources and by building and managing strategic energy stocks and energy infrastructure
  - continue to develop projects in the clean and renewable energy sector.

## Selected performance indicators

## Expenditure trends

The Central Energy Fund derives its revenue from the sale of energy products, services rendered, royalty receipts and tank rentals. The revenue generated from the operating activities is used to secure energy supply through diversifying sources and by building and managing strategic energy stocks and energy infrastructure. The fund continues to partake in upstream activities to enable it to acquire, hold and develop exploration and mining rights in the areas of oil, gas, coal, and also renewable energy, as this in turn assists it in meeting its objective of developing projects in the clean and renewable energy sector as well as contributing towards South Africa's renewable energy targets. Revenue is expected to increase significantly over the medium term by 85 per cent due to projected income from projects that will be implemented over the medium term. The improved turnover is mainly due to improved market conditions from 2011/12 and increases in oil prices, and the demand for storage. The Irene project will result in significant revenue growth for the entity through entering the petroleum retail sector, with a projected 25 per cent market share in South Africa.

The fund's spending focus over the medium term is on accelerating spending on infrastructure, as well as the development of renewable and alternative energy sources in order to contribute to energy security in the county and contribute to the long term profitability of the fund. Projects incorporated over the medium term include: Ikhwezi, with a total approved budget of R11.2 billion, for which first gas is expected in June 2014; Sabre Oil and Gas in the Jubilee Production Field, with a total budget of R4 billion, where the acquisition has been finalised and additional investments will have been made by the end of 2013/14 to fully optimise the resource acquired; and Irene and other downstream acquisitions with a total estimated cost of R14 billion, the finalisation of which is dependent on successful negotiations with the parties concerned. It is anticipated that the transaction will reach closure in 2014/15. Other projects to be undertaken are Project Mthombo, and projects in Venezuela and Equatorial Guinea. Project Mthombo is a PetroSA initiative to build a world class crude refinery in the Coega industrial development zone in Eastern Cape by the end of March 2015. The initiative in Equatorial Guinea is a drilling project, while the project in Venezuela relates to the acquisition of a mature field opportunity. It is anticipated to be finalised by March 2020. This accounts for the strong growth in carrying value of assets, goods and services, and the energy security programme over the medium term.

Expenditure on goods and services increased by 26.1 per cent between 2010/11 and 2013/14 due to the escalation in spending as a result of the Vlakfontein Mine resuming full operating capacity in 2011/12. Over the medium term, total expenditure is expected to increase as well, to R141 billion in 2016/17, due to the incorporation of the operating results of Irene into the budgeted financials over the planning period, and growth associated with the increasing operational capacity at the Vlakfontein Mine and other projects. These projections are subject to the successful implementation of these projects.

Expenditure on compensation of employees increased between 2010/11 and 2013/14 as a result of the annual inflationary adjustment to employee salaries, as well as the creation of additional contractual employment opportunities within the group. Over the medium term, spending on compensation of employees is expected to decrease mainly due to fewer contractual employment opportunities that will be required following the completion of projects. The fund had an establishment of 2 058 posts, all of which are funded. Over the

medium term, filled posts are expected to remain at 2 202. As projects develop further, more accurate determinations of staffing requirements will be made.

## South African Nuclear Energy Corporation

### Mandate and goals

The South African Nuclear Energy Corporation is a schedule 2 entity, and derives its mandate from the Nuclear Energy Act (1999), the Nuclear Energy Policy of 2008, and directives conferred on it by the Minister of Energy. The corporation is responsible for nuclear energy research, development and innovation in South Africa, and the execution of nuclear fuel cycle activities.

Responsibilities also include: operating the SAFARI-1 research nuclear reactor for research and development purposes, and to provide irradiation services for the production of radioisotopes; the decommissioning and decontamination of nuclear facilities; and contributing to South Africa's obligations in terms of international nuclear treaties and agreements. The latter includes: the comprehensive safeguards agreement with the International Atomic Energy Agency; the Africa Regional Cooperative Agreement for research, development and training related to nuclear science and technology; the Comprehensive Nuclear Test Ban Treaty; and the Pelindaba Treaty.

- The corporation's strategic goals over the medium term are to:
  - maintain and develop the capability to house nuclear programmes
  - develop a strategy for the industrialisation of nuclear and associated technology
  - provide research and development support to the nuclear power cluster, specifically relating to uranium process chemistry
  - develop the production and commercial utilisation of radiation products and services.

### Selected performance indicators

## Expenditure trends

The South African Nuclear Energy Corporation derives its revenue from the sale of nuclear technology products, chemical products, and nuclear engineering services, and from transfer payments received from government to fund the operation of specific activities, namely the decommissioning of strategic plants, the production and conversion of low enriched uranium fuel, and nuclear security. Between 2010/11 and 2013/14, the increase in revenue was mainly due to an increase in sales by the subsidiary NTP Radioisotopes.

The corporation's spending focus over the medium term continues to be on six areas: radioisotope production, radiation applications, research and development, specialised nuclear manufacturing, the nuclear fuel cycle, and nuclear power generation support. The first three are the current priority focus areas and are aimed at expanding research and development programmes in support of the corporation's core activities; contributing to the national system of innovation; and strengthening the global market position in medical radioisotopes for NTP Radioisotopes, which is wholly owned by the corporation. The latter three are aligned with the integrated resource plan for electricity 2010-2030, and the requirements for the building of new nuclear power reactors. These activities are expected to increase the corporation's proportion of total annual group sales to around 23.4 per cent in 2016/17. These reactor building requirements include the manufacturing of specialised components so as to increase localisation opportunities that will arise out of South Africa's nuclear power expansion programme, and the commercial exploitation of the corporation's strategic fluorine technology platform. These activities account for most of the spending on goods and services over the medium term, as well as the expenditure on the acquisition of assets, and will also assist the entity in increasing its sales as a proportion of group sales over the medium term.

The increase in expenditure between 2010/11 and 2013/14 was mostly as a result of inflation adjustments, annual salary increases, severance packages, and above inflation increases in electricity costs and licensing fees, which accounts for the large increases in spending on compensation of employees and the administration programme. In addition, in 2010/11 the corporation was required to respond to the downscaling of the Pebble Bed Modular Reactor programme by employing people with valuable and highly scarce nuclear skills who were being retrenched from this programme, in recognition of the impending nuclear power expansion programme. During this time, the corporation also entered into a medical aid buyout agreement accepting post-retirement liability with all employees under the age of 45. Expenditure on compensation of employees increased to R774 million in 2013/14 due to the inclusion of severance packages offered and accepted by the corporation's staff during the organisational downsizing process and the appointment of additional staff. The number of posts decreased from 2 397 in 2012/13 to 2 247 in 2013/14 due to the reduction of headcounts through these voluntary severance packages. Over the medium term, this expenditure is expected to increase to R885 million in 2016/17 due to annual salary increases and the appointment of staff in vacant positions; the number of positions is expected to increase to 2 432 in 2016/17.

Over the medium term, a significant portion of the corporation's goods and services funding will be utilised for critical repairs and maintenance while also providing for above inflation increases in costs and licensing fees.

The additional once-off allocation of R190 million in 2014/15 is earmarked for the upgrading and replacement of Pelindaba site infrastructure, the replacement and refurbishment of underground piping systems, strengthening Pelindaba site security infrastructure, replacing and upgrading SAFARI-1 facilities for processing enriched and depleted uranium as part of the reactor's overall ageing management programme, upgrading liquid effluent management services to comply with licensing and regulatory requirements, and sustaining critical investment in the corporation's analytical and calibration capabilities. Reserves are mainly non-cash reserves, consisting of fair value adjustments to the land and buildings of the corporation.

Spending on consultants is mainly used for functions which the entity does not have the requisite expertise and skills to perform. These functions include the review of compliance with certain environmental permit applications; conducting ISO 9000 compliance audits; determining a capital funding model for NTP Radioisotopes; upgrading and customising the enterprise resource planning system; conducting reactor analysis work; conducting specialised engineering on projects; and conducting environmental impact assessments to obtain approvals for expansions and new plants.

### **Other public entities and agencies**

Comprehensive coverage of the following public entities is provided with more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **National Energy Regulator of South Africa** is the regulatory authority for electricity, gas and petroleum. Its total budget for 2014/15 is R272.4 million.
- The **National Nuclear Regulator** is responsible for the protection of people, property, and the environment against nuclear damage. Its total budget for 2014/15 is R170.8 million.
- The **South African National Energy Development Institute** is mandated to stimulate innovation in energy research and development, transform the gender and race profile of researchers in the sector, and improve South Africa's competitiveness in energy research internationally. Its total budget for 2014/15 is R224 million.

Additional table: Summary of expenditure on infrastructure

Project name	Service delivery outputs	Current project stage	Total project cost	Audited outcome			Adjusted appropriation	Medium-term expenditure estimate		
				2010/11	2011/12	2012/13		2014/15	2015/16	2016/17

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Lead South Africa's environmental sector to achieve sustainable development towards a better quality of life for all.*

### Mandate

The Department of Environmental Affairs is mandated to give effect to the right of citizens to an environment that is not harmful to their health or wellbeing, and to have the environment protected for the benefit of present and future generations. To this end, the department provides leadership in environmental management, conservation and protection towards sustainability for the benefit of South Africans and the global community.

This mandate is derived from the following legislation:

- the National Environmental Management Act (1998), which provides for issue specific legislation on: biodiversity and heritage resources; oceans and coasts; climate change and air quality management; and waste and chemicals management
- the National Environmental Management Amendment Act (2004), which streamlines the process of regulating and administering the environmental impact assessment process
- the National Environmental Management: Protected Areas Amendment Act (2009), which provides for the assignment of national parks, special parks and heritage sites to South African National Parks and the World Heritage Act (2001)
- the National Environmental Management: Biodiversity Act (2004), which significantly reforms South Africa's laws regulating biodiversity
- the National Environmental Management: Air Quality and Atmospheric Act (2004), which reforms the law regulating air quality in order to protect the environment by providing reasonable measures for preventing pollution and ecological degradation, securing ecologically sustainable development, and provides for national norms and standards regulating air quality monitoring
- the National Environmental Management: Waste Act (2008), which reforms the law regulating waste management, in order to protect health and the environment by providing reasonable measures for the prevention of pollution

- the National Environmental Management: Integrated Coastal Management Act (2008), which promotes the conservation of the coastal environment and ensures sustainable development practices and the use of natural resources.

## Strategic goals

The department's strategic goals over the medium term are to:

- ensure that the department has optimal capacity to deliver services efficiently and effectively
- ensure that South Africa's environmental assets are conserved, valued, sustainably used, protected and continually enhanced for the benefit of both current and future generations of South Africans
- enhance socioeconomic benefits and employment creation in a safe, clean and healthy environment for both present and future generations in a safe
- provide leadership in environmental management, conservation and protection towards sustainability for the benefit of both current and future generations of South Africans
- manage the interface between the environment and development to encourage the transformation of the development trajectory to an environmentally sustainable, inclusive, low carbon and green economic growth path
- promote compliance with environmental legislation, and act decisively against transgressors
- develop and facilitate the implementation of a climate change adaptation and mitigation regulatory framework
- facilitate the transition to an environmentally sustainable, job creating and low carbon, green development pathway through the national Green Fund and environmental projects in the expanded public works programme
- improve the provision of quality waste management services across the country with clear environmental health benefits for communities, particularly those with no previous access to waste management services.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide leadership, strategic centralised administration and executive support and corporate services. Facilitate, environmental education and awareness and effective cooperative governance, and environmental relations.

### Programme 2: Legal, Authorisations and Compliance

**Purpose:** Promote the environmental legal regime and licensing system.

### Programme 3: Oceans and Coasts

**Purpose:** Promote, manage and provide strategic leadership on oceans and coastal conservation.

### Programme 4: Climate Change and Air Quality

**Purpose:** Formulate policies, and administer legislation and implement systems to improve regulation, monitoring and compliance regarding climate change and air quality.

### Programme 5: Biodiversity and Conservation

**Purpose:** Ensure the regulation and management of biodiversity, heritage and conservation matters in a manner that facilitates sustainable economic growth and development.

### Programme 6: Environmental Programmes

**Purpose:** Implement expanded public works and green economy projects in the environmental sector.

## Programme 7: Chemicals and Waste Management

**Purpose:** Formulate policies and administer legislation regarding chemicals and waste management to improve the regulation, monitoring, compliance and enforcement.

### Selected performance indicators

Table 30.1 Environmental Affairs

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of interventions for streamlining environmental authorisations for strategic infrastructure programmes and industrial policy action plan priorities developed per year	Legal Authorisations, Compliance and Enforcement	Outcome 10: Environmental assets and natural resources that are valued, protected and continually enhanced	-1	-1	-1	3	5	5	5
Percentage of national environmental impact management applications processed within stipulated time frames per year <sup>2</sup>	Legal Authorisations, Compliance and Enforcement		87% (348)	88% (352)	88% (352)	89% (356)	90% (360)	90% (360)	90% (360)
Number of environmental authorisations inspected per year	Legal Authorisations, Compliance and Enforcement		51	70	85	125	135	145	155
Number of annual research voyages per year in Antarctica, and at Marion and Gough islands	Oceans and Coasts		3	3	3	3	3	3	3
Percentage of coastline with full protection	Oceans and Coasts		9% (324 /3 600km)	9% (324 /3 600km)	9% (324 /3 600km)	9.5% (342 /3 600km)	10% (360 /3 600km)	11% (396 /3 600km)	11.5% (414 /3 600km)
Percentage of exclusive economic zone under protection	Oceans and Coasts		1% (15 000 /1 500 000km <sup>2</sup> )	1% (15 000 /1 500 000km <sup>2</sup> )	2.0% (30 000 /1 500 000km <sup>2</sup> )	2.0%	2.5%	3.0%	3.0%
National air quality index	Climate Change and Air Quality		1.150	1.145	0.972	1.35	1.30	1.25	1.2
Total number of climate change response policy interventions implemented	Climate Change and Air Quality		-3	6	4	10	16	20	25
Total percentage of land under conservation towards the Convention on Biological Diversity target of 17 per cent by 2020	Biodiversity and Conservation		6.4% (7 807 436ha)	6.9% (8 417 392ha)	7.7% (9 393 322ha)	7.9% (9 637 304ha)	8.5% (10 369 252ha)	9.2% (11 236 402ha)	9.7% (11 941 912ha)
Percentage of area of state-managed protected areas assessed with management effectiveness tracking tool score above 67 per cent	Biodiversity and Conservation		-3	-3	30% (1 957 766 /6 525 889)	85% (5 547 005 /6 525 889)	87% (2 232 323 /6 525 889)	88% (2 257 982 /6 525 889)	89% (2 283 641 /6 525 889)
Number of work opportunities created through expanded public works programme projects per year	Environmental Programmes	45 856	65 182	99 548	65 494	77 562	80 280	71 018	

**Table 30.1 Environmental Affairs**

Indicator	Programme	Outcome	Past			Current 2013/14	Projections		
			2010/11	2011/12	2012/13		2014/15	2015/16	2016/17
Number of full time equivalent jobs created through expanded public works programme projects per year	Environmental Programmes		21 899	23 074	23 136	34 019	40 324	38 061	37 215
Total number of plastic buy-back centres established	Environmental Programmes	Outcome 10: Environmental assets and natural resources that are valued, protected and continually enhanced	– <sup>3</sup>	– <sup>3</sup>	9	9	11	15	15
Total number of Green Fund projects approved and implemented	Environmental Programmes		– <sup>3</sup>	– <sup>3</sup>	9	20	45	55	65
Number of unlicensed waste disposal sites that are authorised per year	Chemicals and Waste Management		– <sup>3</sup>	116	41	202	40	0 <sup>4</sup>	0 <sup>4</sup>
Total percentage of waste tyre being reused, recycled and recovered	Chemicals and Waste Management		– <sup>3</sup>	– <sup>3</sup>	– <sup>3</sup>	1% (110 000)	4% (440 000)	10% (1 100 000)	20% (2 200 000)

1. No historical data, as this is a new indicator.

2. These percentages apply provided that no more than 400 applications are received.

3. These indicators were recently introduced, so there is no data for these years.

4. All identified unlicensed sites will be licensed by 2014/15.

## The national development plan

In order to realise the vision of the national development plan of an environmentally sustainable, climate change resilient and low carbon economy, the challenges of deteriorating environmental quality due to pollution, waste management and natural resource degradation, destruction and depletion must be effectively addressed. The national development plan highlights the need to sustain ecosystems, mitigate the effects of climate change and manage the transition towards a low carbon economy effectively. In response, the department's strategic plan has aligned with these intentions.

In relation to the preservation of ecosystems, the focus will be on an increase in the conservation estate to 8.7 per cent in 2015 towards the international target of 17 per cent by 2020; the rehabilitation and restoration of 62 640 hectares of degraded land and ecosystems by 2015; and ensuring the sustainable exploitation of natural resources by identifying and publishing at least one environmentally significant area restricted for mining activities by 2015.

To mitigate the effects of climate change, South Africa has pledged to reduce carbon emissions by 35 per cent in 2020. In 2014/15, related activities will include the implementation of interventions identified in the national climate change policy, which include the development of adaptation strategies and plans for key sectors.

To manage the transition to a low carbon economy, the focus in 2014/15 will be on reviewing economic development policies and infrastructure development initiatives to ensure that they meet the standards for environmental sustainability and low carbon requirements.

## Expenditure trends

As part of the national development plan to create green jobs, the spending focus over the medium term will continue to be on creating jobs in the environment sector through the rollout of the expanded public works programme. This focus is reflected in the significant amount of the department's budget allocated to the *Environmental Programmes* programme, which makes transfers of funds for the expanded public works programme. Over the medium term, expenditure in this programme is projected to grow at an average annual rate of 10.7 per cent due to an additional allocation of R205 million over the period. The increased expenditure will allow the expanded public works programme to create 115 600 full time equivalent jobs and 228 860 work opportunities over the medium term. Between 2010/11 and 2013/14, the programme created 102 128 full time

equivalent jobs and 276 080 work opportunities, hence the significant growth evident in expenditure on transfers and subsidies over the period.

In addition to transfers for the expanded public works programme, the *Environmental Programmes* programme also makes transfers of funds to its public entities. Projected to take up 21.9 per cent of the department's allocation over the medium term, these transfers are expected to increase due to further Cabinet approved additional allocations of: R490 million over 2014/15 and 2015/16 for infrastructure upgrades at the public entities; R50 million over 2014/15 and 2015/16 for combatting rhino poaching, mainly in the South African National Parks; R28 million over the medium term to repair infrastructure damaged by disasters at some South African National Parks operations; and R250 million in 2014/15 for the Green Fund to fund projects that support environmental protection.

The *Administration* programme expanded its mandate in 2011/12 to include managing and facilitating the department's international relations, engagements and cooperation agreements, as well as managing the infrastructure development programme. This increased expenditure in the *Administration* programme and on compensation of employees between 2010/11 and 2013/14 is to provide the capacity required to meet the expanded mandate. The department increased its funded establishment to 1 600 posts, with 188 additional and 40 vacant as at 30 November 2013. The vacancies are the result of natural attrition, a lack of adequately skilled people within the environmental sector and the time needed to finalise recruitment processes. The department underwent a restructuring process in 2011/12 to strengthen its capacity to provide effective and efficient enforcement and compliance capacity in the environmental sector, and to build capacity to combat rhino poaching. As a result, the department's establishment is expected to increase further to 1 788 funded posts over the medium term.

Expenditure on consultants decreased between 2010/11 and 2013/14 due to cost cutting measures but is expected to increase to R279.9 million over the medium term, mainly to provide for the installation of IT infrastructure for the new departmental building. Consultants mostly provide business and advisory services; infrastructure, IT and planning support, and laboratory services. Cabinet approved budget reductions of R197 million in 2014/15, R182.3 million in 2015/16 and R100 million in 2016/17 have been effected across all programmes. The details of these reductions are discussed within each programme.

### Infrastructure spending

Spending on infrastructure decreased from R601.7 million in 2010/11 to R405.7 million in 2013/14, and is expected to increase to R540 million in 2016/17. Over the medium term, these funds will be used to maintain and upgrade facilities and equipment at the department's public entities, including the South African Weather Services, South African National Parks, the South African National Biodiversity Institute and the iSimangaliso Wetland Park Authority.

The department entered into a public private partnership agreement in 2010/11 to build a new departmental building in Pretoria. An additional contribution of R220 million in 2012/13 and R146 million in 2013/14 was provided in order to decrease the annual unitary payments due in the 25 years after the completion of the project. Construction of the building began in July 2012, and the project is scheduled for completion in September 2014.

<sup>1</sup> Data has been provided by the department and may not necessarily reconcile with official government personnel data.

<sup>2</sup> Rand million.

**Expenditure trends**

The spending focus over the medium term will be on supporting the department to achieve its overall objectives by providing office accommodation, corporate and other support services, and facilitating the department's involvement in international relations, engagements and cooperation agreements. For this reason, the bulk of the programme's expenditure is on property related costs in the *Office Accommodation* subprogramme and on compensation of employees, travel related costs, consultants and computer services in the *Corporate Affairs* subprogramme.

The property related costs are for the department's new office building, which increased expenditure on payments for capital assets, computer services and operating leases between 2010/11 and 2013/14 to complete the building and prepare it for occupation in September 2014. Expenditure on operating leases increased due to the government's contribution of R220 million in 2012/13 to the public private partnership programme for the new departmental building. This accounts for the increase in spending in the *Office Accommodation* subprogramme between 2010/11 and 2013/14.

The new office building is to accommodate the department's growing number of personnel following the restructuring in 2011/12. In this programme, personnel numbers are expected to increase from 666 in 2012/13 to 765 in 2016/17, which explains the projected increase in compensation of employees over the medium term.

As part of Cabinet approved budget reductions, the department cut spending in this programme by R12.6 million over the medium term. The reductions are to be effected mostly in spending on travel and

subsistence, which explains the projected decrease over the medium term. To minimise the impact of this reduction on the *Environmental Advisory Services* subprogramme's performance, the department plans to give effect to the cut by reducing the size of delegations sent to international meetings.

## Programme 2: Legal, Authorisations and Compliance

### Objectives

- Improve the level of compliance with environmental legislation by increasing:
  - the number of inspections of authorisations in facilities located in environmentally sensitive areas from 86 in 2013/14 to 115 in 2016/17
  - the number of environmental management inspectors trained from 240 in 2014/15 to 1 060 by 2018/19.
- Ensure that the possible negative impacts of development activities and patterns are minimised, mitigated or managed by increasing the percentage of environmental impact assessment decisions processed within prescribed timeframes from 88 per cent (352) in 2013/14 to 90 per cent (360) in 2016/17.

### Subprogrammes

- *Legal, Authorisations and Compliance Management* provides for the overall administration and functioning of the programme by carrying out its planning and performance management functions. The programme achieved 83 per cent (10/12) of its targets in 2012/13 and 80 per cent (8/10) in the first half of 2013/14. This subprogramme had a staff complement of 5 in 2013/14.
- *Compliance Monitoring* ensures effective compliance with environmental legislation by undertaking compliance inspections on all authorisations issued by the department. In 2012/13, 35 proactive and 53 reactive inspections were carried out. In the first half of 2013/14, 86 authorisations were inspected. This subprogramme had a staff complement of 20 in 2013/14.
- *Integrated Environmental Authorisations* is discussed in more detail below.
- *Enforcement* undertakes criminal and administrative enforcement action in response to non-compliance with environmental impact and pollution legislation, and provides capacity development and support services to the environmental management inspectorate. In the first half of 2013/14, 22 pre-directives/notices and final directives/notices were issued, and 172 officials completed the environmental management inspectorate training course. This subprogramme had a staff complement of 29 in 2013/14.
- *Corporate Legal Support and Litigation* provides quality and timely corporate legal support; litigation management support; and education on legal compliance to ensure that the department complies with legislation relating to its core business. In the first half of 2013/14, all 8 environmental compliance matters relating to the Promotion of Access to Information Act (2000) were dealt with within their timeframes. This subprogramme had a staff complement of 12 in 2013/14.
- *Law Reform and Appeals* processes appeals received in terms of the legislation administered by the department, investigates appeals, sources responses from all parties, conducts research and advises the minister on appeals; coordinates the law reform programme in the department; drives the Commission for Environmental Cooperation's subcommittee on law reform; drafts legislation; comments on draft legislation; and advises on law reform issues. In 2012/13, 87 per cent (89/102) of appeals were processed within timeframes as prescribed in the appeals protocol. A 92 per cent (12/13) success rate was achieved in the first half of 2013/14. In addition, the Green Paper on National Environmental Management of the Oceans was developed and the operational policy for wastewater disposal into the marine environment was updated. This subprogramme had a staff complement of 18 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on enhancing compliance and enforcement efforts to increase industry's voluntary compliance with environmental legislation. This is reflected in the significant expenditure over the medium term in the *Enforcement* and *Compliance Monitoring* subprogrammes, and is supported by the preventative work of the *Integrated Environmental Authorisations* subprogramme, which is discussed in further detail below.

Over the medium term, expenditure in the *Compliance Monitoring* subprogramme is expected to increase as the department plans to conduct more compliance monitoring exercises. The additional exercises will enhance the department's capacity to develop an early warning system and protect the environment. The number of environmental authorisations inspected is expected to increase from current levels of 125 per year to 155 per year by 2016/17. The increase in the number of inspections is a continuation of the trend from previous years, where inspections had increased from 51 in 2010/11. This was supported by an increase in personnel to 158 in 2016/17, which explains the significant increase in expenditure on compensation of employees between 2010/11 and 2013/14. The growth expected in expenditure on compensation of employees over the medium term is due to improved conditions of service. The programme had no vacant posts as at the end of 2013/14.

## Subprogramme: Integrated Environmental Authorisations

This subprogramme ensures that the potentially negative impact of substantial new developments is avoided, reduced or managed; and establishes mechanisms to ensure the effective coordination and integration of environmental impact assessments and other regulatory authorisations.

## Expenditure estimate

## Expenditure trends

Expenditure on compensation of employees, travel and subsistence, and on business advisory consultants increased between 2010/11 and 2013/14. This was due to the department's efforts to fully capacitate this subprogramme's workforce to increase the number of environmental impact management applications processed. 340 applications were processed in 2010/11, whereas 352 were processed in 2013/14, and the number of inspections of environmental authorisations facilities increased from 51 to 85 over the same period. As a result of the department's efforts, only 5 posts were vacant at the end of November 2013 and these are in the process of being filled.

Expenditure on consultants, who are mainly used to conduct specialised inspections of facilities and to provide legal services, is set to increase in the first two years of the medium term as a result of the shortage of critical skills. However, as the subprogramme develops adequate capacity to deal with these specialised tasks, spending on consultants is expected to decrease in 2016/17.

Over the medium term, as reflected under spending on personnel and travel and subsistence, the spending focus will continue to be on ensuring that the negative impact of development activities are minimised, mitigated or managed, by increasing the percentage of environmental impact assessment decisions processed within the prescribed time from 60 per cent in 2013/14 to 90 per cent in 2016/17.

## Programme 3: Oceans and Coasts

### Objectives

- Ensure effective management of the ocean and coastal environment by:
  - finalising the Ocean Management White Paper by 2015/16
  - ensuring response preparedness for oil spills along the South African coast through a review of 14 of the 25 oil pollution response plans by 2015/16.
- Strengthen the national science programmes for integrated ocean and coastal management by:
  - conducting research annually to determine baseline information for biodiversity species and priority habitats within South Africa's exclusive economic zone and associated large marine ecosystems
  - supporting bio-discovery and assessing marine protected areas through cataloguing new or unknown species, with an emphasis on benthic invertebrate species, on an ongoing basis.
- Improve the conservation status of marine top predator populations, especially seals and the 12 South African seabird species, by:
  - annually monitoring and researching their behaviour for baseline information
  - providing appropriate management advice based on population numbers as required.

## Subprogrammes

- *Oceans and Coasts Management* provides for the administration and coordination of the overall programme activities. This entails strategic planning, team building, coaching and training. In the first half of 2013/14, 90 per cent (18/20) of set milestones for the programme were achieved as a result of effective planning and performance management by the subprogramme. Over the medium term, the focus will be on developing partnerships with academic institutions and research bodies as well as with international partners to facilitate skills transfers. This subprogramme had a staff complement of 5 in 2013/14.
- *Integrated Coastal Management* provides for the coordinated and integrated management of the coastal environment. This entails implementing measures to advance the protection of coastal ecosystems and species, in particular the management of marine protected areas and the development of estuary management plans, as well as those meant to control and reduce the pollution of coastal waters from land based sources and oil spills. In 2012/13, 2 additional local oil pollution emergency response plans were updated from a baseline of 6 of 25. In the first half of 2013/14, a consultation process to review an additional local oil pollution emergency response plan was convened. This subprogramme had a staff complement of 36 in 2013/14.
- *Oceans and Coastal Research* monitors and undertakes scientific investigations on marine and coastal ecosystems, ocean dynamics, ecosystem functioning and marine biodiversity, to improve the understanding and management of ocean and coastal ecosystems. In 2012/13, 8 research projects on marine top predators and 2 baseline assessments/surveys of the ocean and coastal biodiversity were completed at the Betty's Bay and Robberg marine protected areas. In the first half of 2013/14, 3 surveys of priority habitats, seabird population estimates for 12 species around South Africa and a coastal research project were completed. This subprogramme had a staff complement of 57 in 2013/14.
- *Oceans Conservation* provides for the management and conservation of oceans, and sub-Antarctic and Antarctic ocean environments; the development and implementation of ocean policy; ocean atmosphere information coordination; the management of ocean ecosystems; and the management of regional and international oceans obligations. This includes the 3 annual research voyages undertaken to Antarctica and the Prince Edward Islands. A draft white paper on ocean management was developed in the first half of 2013/14. This subprogramme had a staff complement of 68 in 2013/14.
- *Specialist Monitoring Services* provides leadership in specialist monitoring strategies for oceans and coasts, through coordination with sector departments and regional and international programmes and forums. This entails managing and coordinating national programmes and large regional and international marine ecosystem programmes. The national oceans and coasts spatial plan framework was finalised in September 2013. Over the medium term, national spatial planning strategies and tools, such as the oceans and coasts information management system, will be developed. This subprogramme had a staff complement of 4 in 2013/14.

## Expenditure trends

The spending focus over the medium term will continue to be on enhancing the economic potential of the marine system by increasing the amount of South Africa's coastline and exclusive economic zones under protection, and by improving the management of protected marine species. This is reflected in the significant proportions of the budget allocated to the *Integrated Coastal Management, Oceans and Coastal Research* and *Oceans Conservation* subprogrammes.

Over the medium term, expenditure increases projected in the *Oceans Conservations* subprogramme are a result of the increased cost of operating and manning the SA Agulhas II polar and the Algoa research vessels. Fuel and oil costs are the primary reasons for this. In addition, as the department depends on external service providers to man the vessels and accompany the SA Agulhas II by helicopter to the islands and Antarctica, spending on agency, support and outsourced services is expected to increase over the medium term. Consultants are also used to undertake specialised research on climate and weather pattern changes and biodiversity research. As part of Cabinet approved budget reductions, allocations for outsourced services are reduced by R31 million over the medium term. The adverse effects of this reduction are to be offset by renegotiating favourable terms with service providers.

The programme had a funded establishment of 145 posts and 48 posts additional to the establishment at the end of November 2013, with 12 posts vacant, mostly due to natural attrition. The number of personnel in this

programme is expected to increase by 12 to 193 by 2016/17, and is reflected in increases in compensation of employees in the *Integrated Coastal Management* programme. The increase in personnel numbers is mainly due to the filling of critical vacant researchers' posts, and the provision of additional capacity for the missions to the Gough, Marion and Antarctica islands. The annual research voyages contribute to the departmental goals of development and implementation of ocean policy, coordination of ocean atmosphere information, management of ocean ecosystems, and regional and international obligations in relation to oceans.

## Programme 4: Climate Change and Air Quality

### Objectives

- Ensure an effective response to the impacts of climate change by building adaptive capacity, socioeconomic resilience and emergency response capacity by 2015/16.
- Contribute to the global effort to stabilise greenhouse gas concentrations in the atmosphere by:
  - making recommendations on aligning 4 climate change sectoral policies and plans by 2015/16
  - finalising 3 sector mitigation plans by 2015/16.
- Enable South Africa to meet its national and international obligations by developing a national monitoring and evaluation system for climate change by 2015/16.
- Ensure the continuous improvement of ambient air quality throughout the country by implementing air quality management plans in priority area hotspots and providing legislative support and leadership to provincial and local authorities performing air quality management functions over the MTEF period.

### Subprogrammes

- *Climate Change Management* provides for the overall management and administration of the programme by ensuring the strategic management and coordination of programme activities. The programme achieved 74 per cent of its targets in 2012/13 and 59 per cent in the first half of 2013/14. This subprogramme had a staff complement of 6 in 2013/14.
- *Climate Change Mitigation* coordinates and informs the development of national climate change response plans for key sectors concerned with climate change mitigation. This entails implementing a participatory process to set desired outcomes in emission reduction for each sector and subsector of the economy; developing climate change mitigation measures, including carbon budgeting; and conducting regulatory reviews and audits. Most projects related to climate change adaptation and mitigation in this subprogramme's performance plan are funded through Gesellschaft für Internationale Zusammenarbeit, a German donor funder. In 2012/13, the mapping of existing research, planning, and modelling processes was concluded, and a carbon budgets/tax report was produced. In the first half of 2013/14, 4 sector mitigation and impact studies were conducted. This subprogramme had a staff complement of 7 in 2013/14.
- *Climate Change Adaptation* leads, supports, informs, monitors and reports on efficient and effective national, provincial and local climate change adaptation responses. Most projects related to climate change adaptation and mitigation in this subprogramme's performance plan are funded through Gesellschaft für Internationale Zusammenarbeit. In 2012/13, a review was conducted on 16 plans within the agriculture, fisheries and forestry, water, and disaster management sectors. In 2013/14, sector stakeholders (health and marine public and private sectors, government departments, non-governmental organisations, and academic institutions) were consulted about the impact scenarios and adaptation responses for the human health and marine sectors. This subprogramme had a staff complement of 3 in 2013/14.
- *Air Quality Management* ensures that the possible negative impacts of air pollution on air and atmospheric quality are avoided, mitigated or managed, with a view to ensuring ambient air quality that is not harmful to health and wellbeing. This entails providing national leadership, oversight and monitoring, and setting norms and standards, as well as building capacity in local government on air quality issues. The draft vehicle emissions strategy, which was developed in 2012/13, was processed for Cabinet approval in 2013/14, and the Vaal and Highveld air quality management plans are being implemented. This subprogramme had a staff complement of 36 in 2013/14.

- *South African Weather Service* makes transfer payments to the South African Weather Service for managing meteorological services. In 2013/14, R162.9 million was transferred to the organisation in quarterly tranches. The accuracy of severe weather warnings was 98.8 per cent in 2012/13 and 99.3 per cent in the first half of 2013/14.
- *International Climate Change Relations and Negotiations* is the focal point for South Africa's international climate change interactions, including multilateral and bilateral engagements. This entails preparing for, negotiating and informing the implementation of multilateral, mini-lateral and bilateral climate change agreements. Contractual agreements for the development of the third national communication to the 19th conference of the parties to the United Nations Framework Convention on Climate Change (COP 19) were established and the department's participation in COP 19 in Warsaw, Poland, was coordinated in 2013/14. This subprogramme had a staff complement of 6 in 2013/14.
- *Climate Change Monitoring and Evaluation* monitors and evaluates national climate change responses. This entails gathering, synthesising, analysing, storing, and distributing complete, accurate and current climate change and climate change response data and information, to ensure informed climate change response decision making. All projects in this subprogramme's performance plan are supported through donor funding from Gesellschaft für Internationale Zusammenarbeit. In 2012/13, information for the 2014 biennial update report was scoped and the terms of reference for the compilation of the report were developed. A draft climate change monitoring and evaluation system was developed in the first half of 2013/14. This subprogramme had a staff complement of 10 in 2013/14.

2. Rand million.

## Expenditure trends

Over the seven-year period, transfer payments to the South African Weather Service are the largest item of expenditure. The transfer increased significantly between 2010/11 and 2013/14 as the number of air quality monitoring stations reporting to the South African air quality information system increased from 39 to 70. This is expected to result in more accurate weather forecasting, which, along with improving air quality, is one of the department's strategic objectives. It will also enable better decision making, policy alignment and implementation of the strategy, as reflected in the gradual increase in compensation of employees between 2010/11 and 2013/14. To give effect to Cabinet approved budget reductions, the department has reduced the transfer by R40 million over the medium term. However, this will have a minimal effect on service delivery as the organisation will be able to raise revenue to compensate for the cuts.

To support the objectives of improving air quality and providing more accurate weather forecasts, the department expects to increase the programme's personnel capacity to 75 in 2016/17 to provide additional capacity for the South African air quality information system project. The project aims to ensure that air quality information management and reporting requirements directed by the National Environmental Management: Air Quality and Atmospheric Act (2004) are efficiently and effectively met, and to fund the South Africa Weather Service's procurement of a high processing computer over the medium term. This explains the significant

increase in spending on capital assets, goods and services, and the slight increase in expenditure on compensation of employees over the medium term.

## Programme 5: Biodiversity and Conservation

### Objectives

- Improve conservation and biodiversity through the safeguarding of ecosystems, species and genetic diversity, and the minimising of threats to ecological sustainability, by increasing the percentage of land under conservation from 7.7 per cent in 2012/13 to 9.5 per cent in 2016/17.
- Promote and enhance livelihoods through access to, and fair and equitable sharing of, benefits arising from the use of biological resources, by developing a system for transformation of the biodiversity sector by 2016/17.

### Subprogrammes

- *Biodiversity and Conservation Management* provides for the overall administration of the programme. This subprogramme includes the wildlife information management unit, which facilitates wildlife security and monitors and reports on wildlife crimes. In 2012/13, 22 of the planned key activities outlined in the national strategy for the safety and security of the rhinoceros population were implemented. In the first half of 2013/14, agreements on cooperation in ensuring the endangered animal's safety and security with Thailand, Cambodia and Mozambique were developed and negotiated, and are currently awaiting finalisation. This subprogramme had a staff complement of 12 in 2013/14.
- *Biodiversity Planning and Management* manages, protects and conserves the country's biological resources and ecosystems for human wellbeing and sustainable development; and develops and implements programmes and processes aimed at the protection and mitigation of threats to biodiversity at the species and ecosystem levels. This entails developing, coordinating and implementing policies and decision support tools for conservation planning and biodiversity management. In 2012/13, the mining and biodiversity guideline was finalised and published, and risk assessment guidelines for alien and invasive species were developed. In 2013/14, the minimum requirements for biodiversity in land use planning and integrated environmental management were drafted. This subprogramme had a staff complement of 24 in 2013/14.
- *Protected Areas Systems Management* oversees the establishment and maintenance of comprehensive, effectively managed and ecologically representative national and cross border systems of protected areas. This entails ensuring the effective management of transfrontier conservation areas; developing and overseeing the implementation of protected area policies and legislation; and ensuring compliance with and enforcement of protected area legislation, while promoting the participation and beneficiation of local communities in the establishment, development and management of protected areas. In 2012/13, management plans for De Mond Nature Reserve, Seekoeivlei Nature Reserve, Langebaan Lagoon, uKhahlamba Drakensberg Park and De Hoop Nature Reserve were completed. In 2013/14, 5 management plans were evaluated. This subprogramme had a staff complement of 40 in 2013/14.
- *iSimangaliso Wetland Park Authority* transfers funds to the iSimangaliso Wetland Park Authority, which protects, conserves and promotes the park. This subprogramme's total budget is transferred monthly to the authority. In 2012/13, 10 per cent of the park's former commercial forestry and other incompatible land use areas were rehabilitated. In 2013/14, 47 pre-site inspections were completed and 20 contractors were appointed regarding rehabilitation of degraded habitats and ecosystems.
- *South African National Parks* transfers funds to South African National Parks, which conserves, protects, controls and manages national parks and other defined protected areas and their biological diversity. This subprogramme's total budget is transferred monthly to the authority. The total number of visitors to the parks grew by 5 per cent from 4 705 306 in 2012/13 to 4 941 697 in 2013/14.
- *South African National Biodiversity Institute* transfers funds to the South African National Biodiversity Institute, which implements strategic activities as identified in the National Environmental Management: Biodiversity Act (2004), with a specific focus on biodiversity research and knowledge management in support of South Africa's biodiversity. This subprogramme's total budget is transferred monthly to the

authority. In 2012/13, 30 publications were reviewed at the institute and in 2013/14, 33 publications were produced. The publications focused on trends, risks and benefits associated with emerging invasive, threatened species and the sustainable use of biological resources.

- *Biodiversity Monitoring and Evaluation* is responsible for sector wide biodiversity monitoring and evaluation, and coordinating biodiversity related multilateral environmental agreements through the management of the science policy interface. In 2012/13, the fifth national report to the Convention on Biological Diversity was compiled. In 2013/14, the international expert and stakeholder workshop on the conceptual framework for the intergovernmental science policy platform on biodiversity and ecosystem services was hosted. This subprogramme had a staff complement of 3 in 2013/14.
- *Biodiversity Economy and Sustainable Use* promotes and regulates sustainable use as well as the fair and equitable sharing of benefits arising from the use of biological resources; and facilitates the growth of a nature-based bio diversified economy through appropriate policies, legislation and programmes. In 2012/13, 2 agreements on bio prospecting access and benefit sharing were issued. In 2013/14, 4 permit applications were received and assessed. This subprogramme had a staff complement of 7 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on improving conservation and biodiversity through safeguarding ecosystems, minimising threats to ecological sustainability, and expanding conservation and protected areas for future generations. To this end, the programme makes transfer payments to departmental agencies, including the South African National Parks, the South African National Biodiversity Institute and the iSimangaliso Wetlands Park Authority. These transfer payments are the largest item of expenditure over the seven-year period and account for over 80 per cent of allocations annually.

The significant growth in spending between 2010/11 and 2013/14 contributed to: an increased percentage of land under conservation, from 7 441 463ha (6.1 per cent) to 9 027 348ha (7.9 per cent); better maintained infrastructure and facilities by all entities; and increased capacity, especially that of SANParks, to combat rhino poaching and other related wildlife crimes.

The programme had a funded establishment of 103 posts and 7 posts additional to the establishment. As a result of natural attrition and difficulties experienced in sourcing personnel with the appropriate skills, there were 2 vacant posts at the end of November 2013. The number of personnel in the programme is expected to increase from 90 in 2012/13 to 110 by 2016/17, as critical vacant posts are expected to be filled. In addition to the effect of a projected increase in personnel, expenditure on compensation of employees over the same period is projected to grow due to improved conditions of service.

Spending on consultants is expected to increase over the medium term. Consultants in this subprogramme are used to assist with the development of policies on biodiversity and conservation in accordance with the National Environmental Management: Biodiversity Act (2004), as well as to conduct research in those areas in which the department is currently lacking the requisite skills.

## Programme 6: Environmental Programmes

### Objectives

- Promote the empowerment of designated communities by creating 377 361 work opportunities and 195 115 full time equivalents in environmental projects through the implementation of expanded public works programme projects over the MTEF period.
- Restore and maintain vegetation structure and function to contribute to ecosystem services by:
  - clearing or treating 877 030 hectares of invasive alien plants each year
  - restoring and rehabilitating 169 940 hectares of land over the MTEF period.
- Facilitate the transition to a growth path that is low in carbon and is natural resource efficient by facilitating the implementation of green initiative projects over the medium term.

### Subprogrammes

- *Environmental Protection and Infrastructure Programme* identifies, plans and implements projects under the expanded public works programme through the use of labour intensive methods targeting the unemployed, youth, women and people with disabilities; and empowers small, medium and micro enterprises during project implementation processes. In 2012/13, 99 548 work opportunities were created, while 13 613 were created in the first half of 2013/14. This subprogramme had a staff complement of 84 in 2013/14.
- *Working for Water* and *Working on Fire* ensures that South Africa addresses its responsibilities relating to water resource management, biological diversity and the functioning of natural systems; and ensures that meaningful livelihood opportunities are supported for those employed on these programmes. The Working for Wetlands programme, which is responsible for the rehabilitation, protection and sustainable use of wetlands, and the Working for Land programme, which addresses the rehabilitation and restoration of degraded land, are where this subprogramme's activities are focused. Working on Fire employs and trains young men and women from marginalised communities to be skilled, wild land fire fighters, in order to reduce the personal and economic harm caused by unwanted wildfire. In 2012/13, 107 wetlands were rehabilitated and 2 682 km of coastline was cleaned. In the first half of 2013/14, 76 wetlands were under rehabilitation and 2 203 km of coastline was cleaned. This subprogramme had a staff complement of 300 in 2013/14.
- *Green Fund* invests in projects to protect the environment by working with the donor community and the private sector. The Development Bank of Southern Africa has been appointed as the implementing agent of the fund. In 2013/14, 22 projects were approved for implementation.
- *Environmental Programmes Management* contributes to sustainable development and livelihoods, and green and inclusive economic growth. This includes facilitating skills development, creating employment, managing natural resources and developing infrastructure. 64 698 accredited training person days were created in 2013/14. This subprogramme had a staff complement of 6 in 2013/14.
- *Information Management and Sector Coordination* aims to provide effective and efficient support to environmental programmes to stimulate the potential for economic growth in the environment sector, and to maximise the sustainable utilisation of environmental resources. The main achievements for the subprogramme included the development of a new online performance management system in 2012/13 and the development of a framework for the knowledge management strategy in 2013/14. This subprogramme had a staff complement of 23 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on enhancing the economic potential of the environmental sector by expanding job creation through the management, monitoring and implementation of the expanded public works programme. As such, 83.8 per cent of the programme's budget over the medium term is transferred to implementing agents and public entities.

The transfer payments to implementing agents account for over 60 per cent of the programme's budget over the medium term. The funding to the expanded public works programme created 210 586 work opportunities and 68 109 full time equivalent jobs between 2010/11 and 2013/14, and is projected to create a further 115 600 full time equivalent jobs and 228 860 work opportunities over the medium term. These transfers are the main driver of the increase in spending in the programme over the seven-year period. Spending on consultants, who are mainly used for small projects in the eradication of alien vegetation, is also expected to increase over the medium term as it directly correlates with allocations to the expanded public works programme.

Infrastructure development in the public entities is enabled by transfer payments, which are expected to increase due to the additional allocation of R680 million for infrastructure and the upgrading of facilities at the iSimangaliso Wetland Park Authority, South African National Parks, South African National Biodiversity Institute and the South African Weather Service. To give effect to Cabinet approved budget reductions, the

department has reduced the allocations for transfers over the medium term to the expanded public works programme by R207 million, to Working for Water and Working on Fire by R101 million, and to the Green Fund by R100 million. This will not impact service delivery due to the Working for Water and Working on Fire programmes receiving an additional R125 million and the environmental public works programmes receiving R80 million in 2016/17, resulting in a net increase in funding of R75 million over the medium term. The Green Fund also receives R250 million in 2014/15 to enable more green projects to be approved and implemented to ensure that the transition to a low carbon economy is addressed.

At the end of November 2013 the department had 9 vacant positions as a result of natural attrition and delays in finalising appointments. The number of personnel in this programme is expected to increase to 418 by 2016/17 to facilitate better management and implementation of the expanded public works programmes.

## **Programme 7: Chemicals and Waste Management**

### **Objectives**

- Oversee, monitor and evaluate waste sector performance, ensuring that there is less waste generated and existing waste is better managed by:
  - developing and implementing national waste management policies, strategies, legislation, and norms and standards over the MTEF period
  - supporting municipalities to increase the percentage of households with basic service collection from 67 per cent in 2012/13 to 75 per cent by 2016/17
  - managing and coordinating the licensing of all surveyed unlicensed (341) landfill sites by 2015/16.
- Contribute to the management of the impact of chemicals on the environment by developing and implementing legislative instruments and providing specialist advisory services on chemicals and pollution management as and when requested.

### **Subprogrammes**

- *Chemicals and Waste Management* provides for the overall administration and functioning of the programme. In both 2012/13 and 2013/14, the subprogramme hosted the fourth Waste Management Officers Khoro with the objective of promoting strategic waste management as a collective social effort. In 2012/13, 36 857 households benefited from waste collection initiatives and 9 buyback centres were created. This subprogramme had a staff complement of 2 in 2013/14.
- *Hazardous Waste Management and Licencing* develops and implements processes and systems for the efficient and effective administration of the department's authorisation of waste management activities, and ensures that the release of hazardous waste streams into the environment is reduced and that contaminated land is remediated. In 2013/14 the health care risk waste regulations were reviewed and gazetted for comment. This subprogramme had a staff complement of 11 in 2013/14.
- *General Waste and Municipal Support* leads the development of national policies, strategies, legislation, and norms and standards; builds capacity in government, industry and civil society to respond to the challenges of pollution resulting from poor general waste management; and contributes to the provision of basic waste services to all South Africans. In 2012/13, municipal support resulted in 65 per cent of households nationally (8 487 783 out of 12 977 615) receiving basic waste collection services. A tariff model for refuse removal was also developed. In 2013/14, 103 waste facilities were registered on the South African waste information system, and 18 capacity building sessions for waste data collection and reporting were conducted in 4 provinces (North West, Northern Cape, KwaZulu-Natal, Mpumalanga). This subprogramme had a staff complement of 18 in 2013/14.
- *Chemicals and Waste Policy, Evaluation and Monitoring* leads the development of national policies, strategies, legislation, and norms and standards; and monitors and evaluates the impact of policy on chemicals and waste management. The national waste management strategy was finalised in 2013/14. This subprogramme had a staff complement of 7 in 2013/14.
- *Chemicals Management* facilitates, plans and coordinates both the department's and South Africa's engagement and cooperation agreements in multilateral chemical and waste agreements and related

international cooperation and national programmes. The national implementation plan for the Stockholm Convention on Persistent Organic Pollutants was finalised and implemented in 2013/14. This subprogramme had a staff complement of 11 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on developing an appropriate legislative framework and building capacity to improve the provision of quality chemical and waste management services across the country. To this end, the bulk of the programme's spending over the medium term is concentrated in the *Hazardous Waste Management and Licencing*, *General Waste and Municipal Support*, and *Chemicals and Waste Policy, Evaluation and Monitoring* subprogrammes, which perform these functions. Compensation of employees is expected to increase over the medium term as the programme builds internal capacity in accordance with the National Environmental Management: Waste Act (2008) to enable the department to support provinces and municipalities in this concurrent function. Since the programme was only created after the restructuring in 2011/12, there were still 9 vacancies at the end of November 2013. The number of personnel is expected to increase to 69 by 2016/17. The additional personnel will travel to sites, require computer equipment and generally use more supplies, leading to an increase in expenditure on goods and services.

Spending on consultants, who provide specialist skills in relation to developing appropriate waste management and licensing legislation, processes and policies, is expected to increase moderately over the medium term. This is mainly due to the programme not being able to attract suitable personnel to perform these functions as a result of the shortage of highly specialised skills in the chemical and waste management sector.

The programme will also focus over the medium term on supporting municipalities in ensuring that their landfill sites are properly licensed for waste disposal. For this reason, spending on travel and subsistence is expected to increase to provide for staff to travel to different provinces to train municipal officials and councillors on waste management. Between 2010/11 and 2013/14, spending in the *General Waste and Municipal Support* subprogramme increased significantly after the 2011/12 restructuring of the department. This was as a result of the creation of this programme as a new standalone programme which had to be capacitated, leading to an increase in the number of personnel.

## Public entities and other agencies

### South African National Parks

#### Mandate and goals

South African National Parks was established in terms of the National Environmental Management: Protected Areas Act (2003) with the mandate to conserve, protect, control and manage national parks and other defined protected areas and their biological diversity.

The organisation's strategic goals over the medium term are to:

- contribute to economic growth and transformation by creating decent jobs, and sustainable and quality livelihoods
- ensure that national parks remain important components of economic stimulus through the entity's infrastructure development programme and expanded public works programme
- continue with the adoption and implementation of several sector skills programmes, including learnerships and internships, to enhance cost effective human capital development while addressing the objectives of the national skills development strategy
- combat and deter rhino poaching in partnership with the national wildlife reaction unit, the South African Police Service, the National Prosecuting Authority and the South African Revenue Service.

## Selected performance indicators

1. Rand million.

**Expenditure trends**

Revenue for South African National Parks increases from R1.4 billion in 2010/11 to R1.6 billion in 2014/15, mostly from tourism activities within the parks such as self-drive safaris, game viewing, accommodation tariffs, adventure activities such as guided walks and hiking, bird-watching, 4x4 trails, sight-seeing, cultural and historical experiences, mountain biking, golf, canoeing and swimming. This revenue enables the entity to fund activities and projects, mostly infrastructure, which could not be accommodated in the budget allocations. Between 2010/11 and 2013/14, revenue decreased mainly due to a decline in tourism arrivals in a difficult economic climate. However, revenue is expected to grow over the medium term with an increase in the transfers from the Department of Environmental Affairs for infrastructure development and operational activities.

The spending focus over the medium term will be on improving the state of the conservation estate, and on contributing to conservation nationally and participating in global conservation efforts. Maintenance and upgrading of infrastructure and facilities, and fighting wildlife crime, remain priorities. An additional R15.9 million in 2014/15 and R12.1 million in 2015/16 is allocated for repairing infrastructure damaged by recent natural disasters at the Kruger National Park in both Limpopo and Mpumalanga. The function shift of the management of the Knysna indigenous forests from the Department of Agriculture, Forestry and Fisheries to the entity has been finalised, with R22 million made available annually over the MTEF period.

With an allocation of R103 million over the medium term for combatting wildlife crimes, especially rhino poaching, the entity will continue to work with other law enforcement agencies in this regard. This is also

reflected in the number of personnel, which is expected to increase to 1 034 by 2016/17 as capacity is increased to ensure vigilance and a more robust response to the poaching scourge.

The cost curtailment measures initiated to reduce expenses include a focus on financial management discipline and controls, in-sourcing some previously outsourced services, training staff to try to reduce the entity's dependence on consultants, and encouraging the use of video and teleconferencing facilities to reduce mainly travel and subsistence costs. Consultants are mainly used for specialised conservation initiatives, assessing the feasibility of land claims, and for bioregional assessments using geographic information systems. Spending on consultants is expected to increase over the medium term as result of the shortage of expertise and skills within the entity, and to enable a rapid response to poaching.

The number of visitors to the entity's parks is expected to increase from 4.7 million in 2013/14 to 4.8 million in 2016/17, largely driven by an anticipated increase in domestic visitors as a result of increasing awareness of what South African National Parks has to offer, and its Wild Card loyalty programme.

### **Other public entities and agencies**

Comprehensive coverage of the following public entities is provided with more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **iSimangaliso Wetland Park Authority** protects and conserves the park, to promote and facilitate tourism and tourism related development in the park. Its total budget for 2014/15 is R122 million.
- The **South African National Biodiversity Institute** focuses on biodiversity knowledge management and information generation and dissemination by conducting coordinated research on the composition, value, status, functioning and dynamics of South Africa's biodiversity. The institute's total budget for 2014/15 is R507 million.
- The **South African Weather Service** maintains, extends and improves the quality of meteorological services. Its total budget for 2014/15 is R335 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Facilitate the creation of sustainable human settlements and the improvement to household quality of life.*

### Mandate

The Department of Human Settlements derives its responsibilities from section 3 of the Housing Act (1997). According to the act, the department must, after consultation with provinces and municipalities, establish and facilitate a sustainable national housing development process by:

- determining national policy, including national norms and standards, in respect of housing and human settlements development
- setting broad national housing delivery goals
- monitoring performance of provinces and municipalities against housing budgetary and delivery goals
- building the capacity of provinces and municipalities
- promoting consultation with all stakeholders in the housing delivery chain, including civil society and the private sector.

### Strategic goals

The department's strategic goals over the medium term are to:

- accelerate the delivery of housing opportunities
- improve access to basic services
- provide a framework for more efficient land use
- improve access to the property market.

### Programme purposes

#### Programme 1: Administration

**Purpose:** Provide strategic leadership, and administrative and management support services to the department.

## Programme 2: Human Settlements Policy, Strategy and Planning

**Purpose:** Manage the development of and compliance with human settlements sector delivery and intergovernmental relations frameworks, and oversee integrated human settlements strategic and planning services.

## Programme 3: Programme Delivery Support

**Purpose:** Support the execution of human settlement programmes and projects, oversee the implementation of the household sanitation programme, monitor and evaluate the implementation of the human settlement programme, manage the building of capacity and skills in the sector and provide oversight of public entities reporting to the Minister of Human Settlements.

## Programme 4: Housing Development Finance

**Purpose:** Fund and monitor the delivery of all housing and human settlements programmes and manage all matters related to improving access to housing finance and developing partnerships with the financial sector.

## Selected performance indicators

1. No historical data as these are new performance indicators.

2. Figures for 2013/14 are up to December 2013.

3. Figures for 2013/14 are up to September 2013.

4. Figures for 2013/14 are up to October 2013.

## The national development plan

Central to the national development plan is the need to transform the functioning of human settlements and the workings of the spatial economy in order to create more functionally integrated, balanced and vibrant urban

settlements by 2030. This is consistent with sustainable human settlements and improved quality of household life (outcome 8), on which the department delivers.

Over the medium term, the department will therefore focus on policy and funding reforms in order to:

- achieve better spatial targeting for new urban developments
- ensure adequate housing opportunities and better living standards for poor households
- support the development of a well-functioning and equitable residential market
- improve institutional capacity and intergovernmental coordination.

Households in informal settlements and backyard shacks present a particular challenge relating to the pursuit of economic livelihood opportunities. The national development plan proposes a series of integrated interventions that include economic solutions, institutional reforms, and changes to land management systems, housing and infrastructure investment. Departmental programmes, such as the social housing programme and the informal settlement upgrading programme, provide for higher densities in locations with access to public transport and socio-economic services in support of this vision. Social housing delivers medium density rental housing in designated restructuring zones and aims to improve the quality of neighbourhoods. Through the informal settlements programme, the in-situ upgrading of informal settlements that are well located provides secure tenure and access to basic services that improve the quality of the lives of households. The department is drafting a green paper for human settlements to support the national development plan's vision.

## Expenditure trends

The spending focus over the medium term will be on accelerating the delivery of low income housing opportunities and basic services for the poor. This is reflected in transfers of the human settlements development grant and the urban settlements development grant to provinces and municipalities through the *Housing Development Finance* programme. These transfers used 93 per cent of the total departmental budget in 2013/14 and are expected to allow provinces and municipalities to deliver an additional 215 621 low income houses and upgrade a further 225 505 sites for greenfield development over the medium term. The department expects to reach these targets despite a Cabinet approved reduction over the medium term of R130 million from the urban settlements development grant and R900 million from the human settlements development grant.

To accelerate the delivery of housing opportunities, the department transfers funds to the Social Housing Regulatory Authority for the capital restructuring grant it administers. As a result, transfers to departmental agencies and accounts are the fastest growing item in the department's budget over the medium term. The capital restructuring grant will contribute to the delivery of approximately 17 977 medium density rental housing units for households earning between R1 500 and R7 500 per month to contribute towards the spatial, social and economic restructuring of South African cities and towns.

To facilitate the assignment of the administration of the housing and human settlements programmes from provinces to six metropolitan municipalities in 2014, Cabinet approved an additional allocation of R900 million over the MTEF period to create the municipal human settlements capacity grant. In addition, Cabinet approved the introduction of a programme to accelerate the eradication of bucket toilets by expediting the delivery of suitable sanitation systems for households. As a result, the department's payments for capital assets budget is set to increase by R1.9 billion in 2014/15 and 2015/16. The Budget also includes additional Cabinet approved allocations of R180 million in the *Housing Development Finance* subprogramme in 2014/15 to provide for rapidly urbanising mining towns, and R185 million in 2014/15 and R140 million in 2015/16 for disaster relief in provinces.

In relation to the department's policy making responsibilities, spending in the *Human Settlements, Policy, Strategy and Planning* programme will focus on the drafting of a new human settlements green paper, which is expected to be completed by 2015/16. This new policy framework, consistent with the national development plan, is expected to provide new legislation by 2018 to support the facilitation of sustainable human settlements.

Over the MTEF period, the department plans to strengthen its capacity support to provinces and municipalities, and focus on enhancing its monitoring and evaluation of service delivery of housing opportunities and access to housing finance. As a result, the *Programme Delivery Support* programme is expected to be one of the fastest growing programmes over the MTEF period, with spending expected to increase at an average annual rate of 6.9 per cent. Spending on consultants in the department over the medium term relates to the national upgrading support programme, which is expected to provide project level technical assistance for the upgrading of informal settlements in 53 municipalities by 2016/17. It will also provide for the expansion of Special Investigations Unit investigations into fraudulent activity in the issue of low income housing subsidies and the

construction of houses. In addition, a new capacity building programme will be developed in 2014 to support poorly capacitated rural municipalities in providing on-site sanitation services. This will be funded through the rural household infrastructure grant.

The department's organisational structure comprises 861 approved posts, of which 49 per cent were in the *Administration* programme. The department had 652 filled posts at the end of November 2013, representing an overall vacancy rate of 23.5 per cent. The vacancy rates per programme were: 14 per cent in *Administration*, 40 per cent in *Human Settlements Policy, Strategy and Planning*, 34 per cent in *Programme Delivery Support* and 14 per cent in *Housing Development Finance*. These posts were vacant due to normal attrition and the length of time it takes to finalise the recruitment process. The department expects to fill these posts over the medium term.

### Infrastructure spending

The department is not directly involved in the implementation of infrastructure projects. Spending on infrastructure is through grants transferred to the provinces, municipalities and public entities. This includes:

- R17.1 billion in 2014/15, R18.5 billion in 2015/16 and R20.4 billion in 2016/17 for the direct human settlements development grant
- R1.9 billion over the MTEF on the indirect human settlements development grant for bucket eradication
- R32.3 billion over the MTEF period for the urban settlements development grant
- R113.1 million in 2014/15, R118.3 million in 2015/16 and R124.5 million in 2016/17 for the rural household infrastructure grant
- R3.3 billion over the MTEF period for the capital transfer to the Social Housing Regulatory Authority for medium density rental housing.

### Expenditure trends

The spending focus over the medium term will be on providing operational support services to the department, including strengthening the department's financial management capability and ensuring adequate office space to accommodate employees as the department completes its organisational restructuring. The *Corporate Services* subprogramme, which provides administrative support to the department, including centralised advertising and computer services, is the largest spending item in the programme. Expenditure on advertising was reduced due to cost saving measures in 2009/10, but has increased significantly since 2012/13 as the department intensified its marketing strategy of informing households about the various housing programmes and government's

delivery performance. Spending on computer services is primarily for the upgrading and maintenance of the housing subsidy and logistical information systems to improve the department's management information services.

Expenditure on consultants between 2010/11 and 2016/17 relates to the investigations undertaken by the Special Investigations Unit into the fraudulent issuing of low income housing subsidies and the construction of houses. The decline in expenditure on consultants in 2011/12 and 2012/13 was as a result of inefficient billing systems at the Special Investigations Unit. Expenditure on consultants is expected to increase over the MTEF period as the department augments its internal audit capability.

The need to provide additional office accommodation for the expanding staff complement led to increased spending in the *Property Management* subprogramme in 2012/13 and 2013/14. However, delays in finalising the lease caused underspending in this subprogramme in 2010/11 and 2012/13.

The number of filled posts in this programme is expected to increase from 421 in 2012/13, when the department's organisational restructuring process was completed, to 457 by 2016/17. Spending on compensation of employees amounts to 42.5 per cent of the programme's expenditure in 2013/14. Growth in spending on compensation of employees over the MTEF period is largely driven by personnel growth, and cost of living adjustments. As a result, expenditure on compensation of employees is expected to grow at an average annual rate of 6.9 per cent over the medium term.

## Programme 2: Human Settlements Policy, Strategy and Planning

### Objectives

- Provide policy and implementation guidance to provinces and municipalities by developing and maintaining policy frameworks, and norms and standards for human settlements development on a continual basis.
- Facilitate sustainable human settlements development by drafting a new green paper on human settlements by 2015 and amending the related legislation by 2018.
- Improve integrated planning by developing a sustainable human settlements planning framework on an annual basis.
- Oversee the implementation of human settlements programmes and related projects by managing and monitoring programmes in terms of the human settlements planning frameworks and processes on an ongoing basis.
- Improve the development of sustainable human settlements by facilitating the accreditation of 27 municipalities to administer national housing and human settlements programmes by 2015.
- Improve cooperation and collaboration in the sector by facilitating an environment for cohesive intergovernmental and sector wide relationships with all stakeholders in the human settlements value chain on an ongoing basis.

### Subprogrammes

- *Management for Policy, Strategy and Planning* provides strategic leadership to the programme. The budget of R5.8 million was largely spent on personnel for the offices of the deputy directors-general for *Human Settlements Policy Frameworks*, and *Human Settlements Strategy and Planning*. This subprogramme had a staff complement of 3 at the end of November 2013.
- *Human Settlements Policy Frameworks* manages the development of the National Housing Code, provides advisory services to provinces and municipalities in relation to the application of the code, and facilitates the accreditation and assignment of the housing function to municipalities. In 2012/2013, R4.5 million was spent on delivering the capacity assessments of 27 municipalities for level 1 and 2 accreditations. This subprogramme had a staff complement of 31 and a vacancy rate of 26 per cent at the end of November 2013.
- *Human Settlements Strategy and Planning* manages the research, development and evaluation of the human settlements strategy at a national level; manages the human settlements planning system; and communicates the national human settlements development plan to sector stakeholders through the implementation of international and intergovernmental programmes and plans. In 2012/13, R1 million was spent on supporting

the work of the United Nations Human Settlements Programme. This subprogramme had a staff complement of 38 and a vacancy rate of 49 per cent at the end of November 2013.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing a responsive policy framework, which will enable sector stakeholders to respond proactively to the national development plan. A key activity to set the sector on the right trajectory to achieve the milestones set out in the plan's Vision 2030 is the development of a green paper for human settlements by 2015/16. Over the medium term, a monitoring framework for spatial targeting is expected to be developed, together with norms and standards for spatial development.

The increase in expenditure in the *Human Settlements Policy Frameworks* subprogramme between 2010/11 and 2012/13 was as a result of the capacity and compliance assessments undertaken to assign the administration of housing and human settlements programmes to municipalities. These assessments drive expenditure on consultants in the programme. In 2011/12, spending on consultants increased significantly, due to the accelerated focus on assessing the capacity of the six metropolitan municipalities expected to be assigned the function for the administration of housing programmes in 2014. Spending on consultants is expected to decrease over the MTEF period as programme evaluations in terms of the national evaluation plan are completed.

Compensation of employees, which made up 68.7 per cent of the programme budget in 2013/14, highlights the importance of human resources in delivering on the department's policy making responsibilities in terms of the Housing Act (1997). Expenditure on compensation of employees is expected to increase at an average annual rate of 7.9 per cent over the medium term as the department aims to improve the programme's vacancy rate, which was 40 per cent at the end of November 2013. The 48 vacant positions in 2013/14 were due to normal attrition and the length of time it takes to finalise the recruitment process. These positions are set to be filled in 2014/15.

## Programme 3: Programme Delivery Support

### Objectives

- Ensure effective delivery and performance of human settlements programmes by monitoring and evaluating expenditure and performance of public entities, provinces and municipalities by conducting reviews, workshops and site visits on a quarterly basis.
- Improve the delivery rate of housing projects, including blocked projects and informal settlement upgrading projects, by providing technical support to provinces and municipalities in the planning and implementation of strategic programmes and projects on an ongoing basis.
- Facilitate the upgrading of informal settlements by providing support to 53 municipalities through the implementation of the national upgrading support programme over the medium term.
- Ensure progress towards universal access to sanitation by providing on-site sanitation to rural households and monitoring the implementation of the rural sanitation programme on an ongoing basis.
- Ensure effective governance in public entities reporting to the Minister of Human Settlements, through the monitoring of public entities in terms of the department's governance framework on an ongoing basis.

### Subprogrammes

- *Management for Programme Delivery Support* provides strategic leadership to the programme. This subprogramme had a staff complement of 2 at the end of November 2013.
- *Programme Management Unit* provides support to provinces and municipalities for the implementation of housing and human settlement projects and programmes, including project level technical assistance for the upgrading of informal settlements, support for strategic projects and the implementation of the rural sanitation programme. The subprogramme also monitors, evaluates and assesses the performance of human settlements projects, policies and programmes. In 2012/13, R1.6 million was spent on providing informal settlement upgrading support to 20 municipalities. By September 2013/14, 33 municipalities had been provided with technical support for the upgrading of informal settlements. This subprogramme had a staff complement of 116 and a vacancy rate of 36 per cent at the end of November 2013.
- *Chief of Operations* provides regulatory, strategic and policy oversight to the public entities, manages the development of sector specific technical skills through human settlements skills development programmes, develops national technical skills development strategies and manages the scholarship programme. In

2012/13, R13.8 million was spent on bursaries for 184 students. This subprogramme had a staff complement of 47 and a vacancy rate of 25 per cent at the end of November 2013.

## Expenditure trends

The spending focus over the medium term will be on: providing project level technical assistance to 53 municipalities through the national upgrading support programme; and monitoring and managing the implementation of the rural sanitation programme, which includes capacity building for 13 municipalities that receive the indirect component of the rural household infrastructure grant. These support programmes are funded from the allocation for spending on consultants, the largest item of expenditure in goods and services in the *Programme Delivery Support* programme. Spending on consultants is expected to increase at an average annual rate of 8.7 per cent over the medium term, as upgrading plans for informal settlements are developed.

The need to monitor and report on the progress of human settlements and rural sanitation projects and monitor the performance of the department's public entities makes travel and subsistence the second largest item of expenditure in goods and services.

The decline in expenditure on buildings and other fixed structures in 2012/13 was due to the accelerated community infrastructure programme, which came to an end in that year. Combined with underspending on the national upgrading support programme, this explains the 31.5 per cent decrease in expenditure in the *Programme Management Unit* subprogramme in 2012/13. The increase in transfers to households between 2010/11 and 2012/13 is as a result of the increase in the department's scholarship programme.

Spending on compensation of employees comprises 41.2 per cent of the programme's expenditure in 2013/14. The anticipated increase in spending on this item over the MTEF period is largely driven by personnel recruitment, as the department aims to reduce the vacancy rate of 34 per cent in 2013/14. These posts were vacant due to normal attrition and the length of time it takes to finalise the recruitment process.

## Programme 4: Housing Development Finance

### Objectives

- Accelerate the delivery of housing and facilitate the development of sustainable human settlements by providing funding to provinces, municipalities and public entities from the human settlements development grant, the urban settlements development grant, the rural household infrastructure grant, as well as through transfers to public entities on a continual basis.
- Improve access to housing finance by collaborating with the private sector and related entities to develop mechanisms to increase market penetration and provide loans to low and middle income households on a continual basis.
- Ensure equity in the provision of housing finance through monitoring the lending practices of the financial sector by publishing an annual report on banks' lending practices.

### Subprogrammes

- *Management for Housing Development Finance* provides strategic leadership to the programme. This subprogramme had a staff complement of 1 at the end of November 2013.
- *Chief Investment Officer* is responsible for monitoring the spending performance of provinces and municipalities, implementing housing and human settlements programmes, mobilising and catalysing private sector financial resources for human settlements development, and monitoring and reporting on the lending patterns by financial institutions. In 2012/13, R16 million was spent on the compensation of employees. This subprogramme had a staff complement of 33 and a vacancy rate of 12 per cent at the end of November 2013.
- *Human Settlements Development Grant* reflects the conditional grant allocation that is transferred to all provinces and accredited municipalities. Funding to provinces and assigned municipalities is based on an allocation formula that takes housing needs into account. In 2012/13, R15.9 billion was spent on the delivery of 115 079 housing units and the servicing of 54 918 sites in informal settlements. By the end of December 2013, 70 362 additional housing units had been built from funding provided through the human settlements development grant.
- *Contributions* makes transfers to public entities reporting to the department, such as the Social Housing Regulatory Authority and the Housing Development Agency. Funds are transferred on the basis of ministerial approval of strategic and business plans. In 2012/13, R32 million was transferred to the Social

Housing Regulatory Authority for operational funding and R647.4 million was transferred for their restructuring capital grant. R97.5 million was transferred to the Housing Development Agency to fund operations. An additional 5 429 social housing units had been approved for investment by September 2013.

- *Rural Households Infrastructure Grant* reflects the conditional grant allocation for onsite sanitation provision in rural areas. In 2012/13, R205.6 million was spent on the delivery of 27 377 ventilated pit latrines in rural areas. By September 2013, 7 335 rural households had been provided with onsite sanitation.
- *Urban Settlements Development Grant* reflects the conditional grants transferred to municipalities for infrastructure development to support the upgrading of informal settlements and increase the provision of serviced land in metropolitan municipalities. In 2012/13, R7.4 billion was spent on providing municipal services to support the upgrading of informal settlements in metropolitan municipalities.
- *Municipal Human Settlements Capacity Grant* reflects the new conditional grant for capacity development to municipalities expected to be assigned the housing function. The aim is to facilitate a smooth transition of project administration from provinces to municipalities.

## Expenditure trends

The spending focus for this programme over the MTEF period will be on transferring grants to provinces and municipalities to fund the delivery of low income housing, the purchase of land to upgrade informal settlements and the upgrade of informal settlements. Total transfers to provinces and municipalities constitute 99.5 per cent of the programme's budget in 2013/14. The department's objective of accelerating delivery is reflected in the growth in expenditure in the *Human Settlements Development Grant* programme, which is expected to increase at an average annual rate of 6.2 per cent over the medium term, and the *Urban Settlements Development Grant* programme, which is expected to increase at an average annual rate of 7.4 per cent over the same period. These grants are expected to deliver 215 621 housing units, the upgrade of 92 000 serviced sites in informal settlements and acquire 7 197 hectares of land over the medium term. An additional R505 million over the medium term has been allocated for the human settlements development grant and R900 million over the same period has been reprioritised from this grant to create the municipal human settlements capacity grant. This new grant is intended to supplement the operations of metropolitan municipalities that are expected to be assigned the housing function in 2014. In addition, R1.9 billion has been earmarked for the new Cabinet approved bucket eradication programme, which aims to remove approximately 273 297 bucket toilets from households in formal and informal areas over the next two years. The allocation to Mangaung and Buffalo City municipalities in the *Urban Settlements Development Grant* subprogramme has been reduced by R130 million over the MTEF period due to underspending.

With expenditure increasing at an average annual rate of 27.1 per cent between 2010/11 and 2016/17, the *Contributions* subprogramme is the fastest growing subprogramme over the MTEF period. This growth in

spending is to support the objective of increasing the delivery of rental housing through the social housing programme. This is also the reason why the capital transfer to the Social Housing Regulatory Authority increased at an average annual rate of 89.8 per cent between 2010/11 and 2013/14. Spending on the capital restructuring grant, which is transferred to the Social Housing Regulatory Authority, is expected to increase at an average annual rate of 12.5 per cent and will deliver approximately 17 977 medium density rental housing units for households earning between R1 500 and R7 500 per month.

In 2013/14, a portion of the rural household infrastructure grant was converted to a direct grant to municipalities to strengthen municipal accountability to deliver services to households. Expenditure on the indirect component of the grant resulted in a decrease in payments of capital assets between 2011/12 and 2013/14 due to rescheduling. Over the medium term, expenditure on the grant is expected to increase from R106.7 million in 2013/14 to R124.6 million in 2016/17 and is expected to deliver approximately 37 575 ventilated pit latrines in rural areas.

Between 2010/11 and 2011/12, spending on the Chief Investment Officer subprogramme increased by 36 per cent due to the appointment of the members of the Office of Disclosure, which monitors the lending practices of the financial sector in terms of the Home Loan and Mortgage Disclosure Act (2000).

The number of personnel in this programme is expected to increase from 30 in 2013/14 to 35 in 2016/17, as the department completes the organisational restructuring process.

## Public entities and other agencies

### National Home Builders Registration Council

#### Mandate and goals

The mandate of the National Home Builders Registration Council is to protect the interests of housing consumers by providing warranty protection against defined defects in new homes, and to regulate the homebuilding industry in terms of the Housing Consumers Protection Measures Act (1998). The council provides training and capacity building to promote and ensure compliance with technical standards in the home building environment.

Over the medium term, the council's strategic goals will be to improve stakeholder interaction and market accessibility for housing consumers, to enhance the entities position to:

- provide quality services to both housing consumers and home builders
- make better use of technological building solutions
- provide training and building capacity in the home building sector.

#### Selected performance indicators

### Expenditure trends

The National Home Builders Registration Council's main source of revenue is derived from the insurance premiums charged for the enrolment of homes, the fees for the registration of homebuilders, renewal fees paid by home builders, the sale of manuals, and the technical services provided to provinces. The entity's revenue is expected to increase from R932.3 million in 2013/14 to R1.1 billion in 2016/17, driven primarily by enrolment fees. The 21.6 per cent decline in revenue in 2013/14 was as a result of the completion of rectification work on behalf of the KwaZulu-Natal Department of Human Settlements.

The council's spending focus over the medium term will be on increasing the number of quality assurance inspectors, which is a key component in the improvement of the regulatory function of the entity. The largest expenditure items are agency and support services for the delivery of home inspections. Spending on goods and services increased at an average annual rate of 24.1 per cent between 2010/11 and 2013/14 as housing programmes were implemented on behalf of provinces. Over the medium term, spending on goods and services is expected to decline as a result of the work for provinces being completed. Consultants are used for ad hoc work on specialised internal audit services, legislative review, actuarial valuations, and impact analysis for the training of home builders, as well as management and council advisory services.

The personnel costs related to home inspections both in the subsidy and non-subsidy residential market are expected to continue being a significant component of the compensation of employees budget. As a result, compensation of employees is expected to increase at an average annual rate of 19.4 per cent over the medium term. This is largely due to the hiring of more inspectors as the organisational structure of the council is revised. As a result, compensation of employees is expected to increase to R454.5 million in 2014/15. At the end of November 2013, the entity had a staff complement of 507, and an increase to 709 posts in 2014/15 is expected. The entity's vacancy rate was 28.5 per cent, due to normal attrition and the length of time it takes to finalise the recruitment process in a specialised field.

Investments continue to be the largest asset on the balance sheet. This is as a result of home enrolment fees invested into the warranty fund for any claims paid to housing consumers. Provisions for operational liabilities and outstanding claims against the warranty fund are expected to be R1 billion per year over the medium term.

## National Housing Finance Corporation

### Mandate and goals

The National Housing Finance Corporation is a schedule 3A development finance institution that was established in 1996. Its primary mandate is to catalyse private sector funding to broaden and deepen access to affordable housing finance for middle and low income households. To this end, it provides wholesale funding to housing development projects and partners with banks and other non-bank retail finance intermediaries to mobilise and increase lending to the target market.

The entity's strategic goals over the medium term are to;

- provide effective housing finance solutions

- mobilise lending by financial institutions to the lower end of the housing market
- conduct business and lending processes on a sustainable basis.

## Selected performance indicators

## Expenditure trends

Between 2010/11 and 2013/14, the National Housing Finance Corporation's total revenue decreased as a result of the contraction in the housing market. The corporation is expected to increase revenue at an average annual rate of 15.7 per cent over the medium term, from R207.4 million in 2013/14 to R320.9 million in 2016/17, largely due to increases in the interest margin earned on loans disbursed. In 2014/15, 81 per cent of revenue is expected to be generated from this interest.

The main spending focus for the corporation will be on facilitating the development of housing opportunities by providing commercial and project financing. The entity's largest spending items are on the provision for losses from financial assets and interest on borrowings. Spending is expected to increase from R180.7 million in 2013/14 to R290.3 million in 2016/17, at an average annual rate of 17.1 per cent, and is expected to deliver a value of R1.6 billion project loans, R197 million mortgage loans and R245 million incremental loans. Goods and services expenditure is driven by loss adjustments on the loan book and spending on consultants, who supplement employee expertise in conducting due diligences on funding proposals, and internal audit and IT support services. As a result, expenditure on goods and services is expected to increase at an average annual rate of 23.3 per cent over the MTEF period.

Spending on compensation of employees is expected to increase at an average annual rate of 4.9 per cent, and is related to annual inflationary increments between 2013/14 and 2016/17. The entity had a staff complement of 86 at the end of November 2013. It is expected to remain constant over the medium term.

## Social Housing Regulatory Authority

### Mandate and goals

The Social Housing Regulatory Authority was established in 2010 in terms of the Social Housing Act (2008). The entity is mandated to regulate the social housing sector, and to ensure a sustainable and regulated flow of investment into social housing by providing capital grants to accredited social housing institutions.

The entity's strategic goal over the medium term is to provide a transparent and credible investment and regulatory environment for the social housing sector.

### Selected performance indicators

**Table 31.21 Social Housing Regulatory Authority**

Indicator	Programme/Activity/Objective	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of social housing units approved for investment per year	Regulation of social housing sector	Outcome 8: Sustainable human settlements and improved quality of household life	1 041	4 214	10 441	5 429	5 668	5 979	6 330
Number of social housing institutions assessed for accreditation per year	Social housing investment programme		33	40	53	50	50	70	70
Number of social housing institutions inspected per year	Social housing investment programme		-1	2	19	20	20	30	30

1. As the Social Housing Regulatory Authority was established in 2010/11, it would take a year for applications to be received and processed before the inspections can be performed.

1. Rand million.

**Expenditure trends**

The spending focus of the Social Housing Regulatory Authority over the medium term will be on investment in and the regulation of the social housing sector. The largest spending item is on the transfer of capital grants to social housing institutions for the building of medium density rental houses for households earning between R1 500 and R7 000 per month. Spending by the authority is expected to increase from R936.3 million in 2013/14 to R1.3 billion in 2016/17, and will facilitate the delivery of approximately 17 977 social housing units over the medium term. The entity uses consultants to assess applications for the restructuring capital grant, assess the institutional applications for social housing accreditation, certify the achievement of project milestones, and conduct social housing related research. As a result, expenditure on goods and services is expected to increase from R13.4 million in 2013/14 to R16.2 million in 2016/17.

Spending on compensation of employees is expected to increase from R16.6 million in 2013/14 to R19.5 million in 2016/17, and is related to inflationary adjustments as well as the filling of 9 posts over the medium term. At the end of November 2013, the authority had a staff complement of 29, which is expected to increase to 38 in 2014/15 to provide for the entity's regulatory function. The authority's vacancy rate was 23.6 per cent, due to normal attrition and the length of time it takes to finalise the recruitment process.

The Social Housing Regulatory Authority is funded by a transfer from Department of Human Settlements. The largest component of revenue is the capital restructuring grant, which subsidises the construction of rental housing units. Total revenue is expected to increase at an average annual rate of 12.2 per cent over the medium term as a result of the grant increase. Between 2010/11 and 2013/14, revenue increased at an average annual rate of 71.1 per cent as a result of the targets set out to increase the delivery of rental housing to establish sustainable human settlements and improved quality of household life (outcome 8). To support this objective, the authority received funds from provincial departments in 2011/12 and 2012/13. As a result, total revenue increased by 151 per cent in 2011/12 and 138 per cent in 2012/13.

## Other public entities and agencies

- The **Community Schemes Ombud Service** is mandated to provide a dispute resolution service for community schemes; to regulate, monitor and control the quality of all sectional title schemes' governance documentation; and to take custody of, preserve and provide public access to, scheme governance documentation. The ombud's total expenditure for 2014/15 is R40.2 million.
- The **Estate Agency Affairs Board** regulates, maintains and promotes the standard of conduct of estate agents, issues Estate Agents Fidelity Fund certificates, prescribes the standard of training of estate agents, investigates complaints lodged against estate agents, and manages and controls the Estate Agents Fidelity Fund. The board's total expenditure for 2014/15 is R90.7 million.
- The **Housing Development Agency** is mandated to identify, acquire, hold, develop and release state and privately owned land for residential and community purposes and for the creation of sustainable human settlements. The agency's total expenditure for 2014/15 is R148.4 million.
- The **National Urban Reconstruction and Housing Agency** provides bridging finance to contractors building low to moderate income housing, infrastructure and community facilities, and provides account administration and support services. The agency's total expenditure for 2014/15 is R100.7 million.
- The **Rural Housing Loan Fund** is a wholesale lending institution. Its main business is to raise money and lend it on to retail credit intermediaries to provide repeat access to housing credit to low income rural households. The fund's total expenditure for 2014/15 is R31.8 million.

The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.

### Aim

*Promote and regulate the minerals and mining sector for transformation, growth and development. Ensure that all South Africans derive sustainable benefits from the country's mineral wealth.*

### Mandate

The mandate of the Department of Mineral Resources is broadly informed by the following:

- the Minerals and Petroleum Resources Development Act (2002), which provides the regulatory framework for equitable access to and the sustainable development of mineral resources and related matters
- the Mine Health and Safety Act (1996), which governs mine health and safety
- the 1998 White Paper on the Minerals and Mining Policy for South Africa, which provides the framework for the transparent and efficient regulation of the mineral resources and mineral industry.

### Strategic goals

The department's strategic goals over the medium term are to:

- promote and facilitate an increase in mining activity and in value added to mineral resources extracted in South Africa
- implement transformation policies that redress past imbalances through broader participation in the mineral sector
- provide a framework for managing health and safety risks, enforce compliance and promote best practice in the mineral sector
- promote sustainable resource management, contribute to skills development and the creation of sustainable jobs in the mining sector
- contribute to a reduction of the adverse impacts of mining on the environment
- attract, develop and retain appropriate skills and ensure the optimal utilisation of resources
- implement risk management strategies and promote corporate governance.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide strategic support and management services to the department.

### Programme 2: Promotion of Mine Safety and Health

**Purpose:** Ensure the safe mining of minerals under healthy working conditions.

### Programme 3: Mineral Regulation

**Purpose:** Regulate the minerals and mining sector to promote economic development, employment, and ensure transformation and environmental compliance.

### Programme 4: Mineral Policy and Promotion

**Purpose:** Develop relevant mineral policies that promote South Africa's mining and minerals industries to attract investment.

## Selected performance indicators

**Table 32.1 Mineral Resources**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of occupational health and safety inspections and mine audits conducted per year	Promotion of Mine Safety and Health	Outcome 4: Decent employment through inclusive economic growth	7 566	8 020	8 632	8 396	8 396	8 396	8 396
Number of rights and permits granted to historically disadvantaged South Africans per year <sup>1</sup>	Mineral Regulation		198	82	102	200	200	200	200
Number of industry workshops on compliance issues conducted per year	Mineral Regulation		32	34	25	9 <sup>2</sup>	9	9	9
Number of social and labour plans inspections per year <sup>3</sup>	Mineral Regulation		100	259	181	210	250	250	250
Number of environmental authorisation inspections per year	Mineral Regulation	Outcome 10: Environmental assets and natural resources that are well protected and continually enhanced	2 853	1 898	1 751	1 700	1 700	1 700	1 700
Number of publications per year	Mineral Policy and Promotion	Outcome 4: Decent employment through inclusive economic growth	15	12	35	11	13	13	13
Number of policies and regulations reviewed and amended per year	Mineral Policy and Promotion		1	2	2	2	3	4	4
Number of derelict and ownerless mines rehabilitated per year	Mineral Policy and Promotion	Outcome 10: Environmental assets and natural resources that are well protected and continually enhanced	5	3	13	30	50	50	50
Number of SMMEs supported (new and established) per year	Mineral Policy and Promotion	Outcome 4: Decent employment through inclusive economic growth	82	85	72	67	67	77	77

1. The department does not have control over the number of eligible applications submitted. The targets over the medium term have been adjusted to include the number of women-led companies to avoid double counting, since women are also included in the definition of historically disadvantaged South Africans.

2. The decrease is due to the department's plan going forward to conduct one workshop per region.

3. This indicator replaces the "Number of mining charter inspections per year."

## The national development plan

The national development plan suggests that there is significant unrealised opportunity in South Africa's mining sector and that the country's global market dominance in mineral deposits offers an opportunity for growth of 3 per cent to 4 per cent a year, as well as the creation of 300 000 additional jobs. However, the plan

also identifies a number of constraints that could derail growth and development in the mining sector. These include uncertainty about the regulatory framework; electricity shortages and prices; infrastructure weakness, especially in heavy haul rail services and ports; lack of sufficient water supply; and the skills gap.

The interventions recommended by the plan include: ensuring a stable regulatory framework; conducting research into improved energy and water efficient extraction methods; developing links with supplier industries and downstream producers; identifying resource based products for manufacture to improve local beneficiation; and improving the alignment of the industry with the requirements of the Broad Based Socioeconomic Charter for the South African Mining Industry. These are to create a globally competitive mining industry that reflects a non-racial South Africa and draws on the human and financial resources of, and offers real benefit to, all South Africans by stimulating local economic development.

In support of the plan's priority to achieve a stable regulatory framework within the mining sector, the department has reviewed and amended the Mineral and Petroleum Resources Development Act (2002), which was tabled in Cabinet for approval in May 2013 and the Mine Health and Safety Act (1996), which was published in the Government Gazette for public consultations in September 2013. These amendments to legislation are intended to improve the minerals and upstream petroleum resources development environment, attract increasing investment capital, create an enabling environment for mineral beneficiation; augment forward and backwards linkages by clarifying ambiguities in the act, ensure appropriate skills development, maximise the sector's contribution to community development, and improve mineworkers' working and living conditions.

The department's programme of action over the medium term includes further refinement of the strategy for sustainable growth and meaningful transformation of the country's mining industry through the amendment of legislation that forms part of the regulatory framework. This includes the Precious Metals Act (2005) and the Second Diamond Amendment Act (2005). The department will also continue to contribute to the national industrialisation programme through the beneficiation strategy and its key implementation plan, and facilitating the development of mining and beneficiation infrastructure.

## Expenditure estimates

Table 32.2 Mineral Resources

Programme	Audited outcome			Adjusted Appropriation	Revised estimate	Average growth rate (%)		Medium-term expenditure estimate			Average growth rate (%)

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on ensuring that the country's mineral wealth contributes to meeting South Africa's socioeconomic needs, including job creation, technology development, economic diversification and transformation.

The department intends to rehabilitate 150 derelict and ownerless mines at a cost of R363.9 million through the *Mineral Policy and Promotion* programme, which accounts for the significant increase in contractors over the medium term. Between 2010/11 and 2013/14, expenditure on transfers and subsidies and contractors in the *Mineral Policy and Promotion* programme increased significantly due to the technical specialisation required to rehabilitate derelict and ownerless mines.

Further, over the medium term, the department plans to provide an efficient minerals licensing system through the *Mineral Regulation* programme, improve compliance with relevant environmental legislation such as the National Environmental Management Act (1998) and mining statutes such as the Broad Based Socioeconomic Charter for the South African Mining Industry, through conducting inspections under the *Mineral Regulation* programme.

Cabinet approved reductions of R40 million over the medium term have been made in the transfers to the Council for Geoscience and the Council for Mineral Technology. These reductions are not expected to adversely affect service delivery as the two entities generate their own revenue. The department received donor funding of R30 million from the European Union's general budget support over the medium term. The funds have been allocated to the Council for Geoscience for seismic hazard microzonation in Johannesburg.

The department's personnel establishment increased from 1 035 in 2012/13 to 1 146 in 2013/14 to strengthen its capacity to ensure compliance with environmental legislation relating to mining. This led to an increase in spending on compensation of employees over the period, which is expected to have a carry through effect over the medium term. The department had a funded establishment of 1 254 posts and 107 posts additional to the establishment. There were 208 vacancies at the end of November 2013, due to resignations and the difficulties experienced in attracting the required skilled personnel. To address the shortage of skills in the sector, the department plans to fill the vacancies in 2014/15 through internal skills development as well as the provision of bursary schemes and inspector learnerships.

2. Rand million.

## Expenditure trends

Over the medium term, the spending focus will be on providing quality IT services to the department through the *Financial Administration* subprogramme and attracting and retaining skilled workers, especially in the mine inspection directorates in the *Promotion of Mine Safety and Health* programme, through the *Corporate Services* subprogramme's staff development activities. This will lead to an increase in expenditure over the medium term, specifically on training and staff development, bursaries and compensation of employees as a result of improved conditions of service. Expenditure on consultants will increase over the medium term as the department continues to use consultants mainly to provide specialised IT services and to verify new employees' qualifications. The department currently lacks the capacity to perform these functions.

Spending on goods and services and on compensation of employees in the *Internal Audit* subprogramme increased between 2010/11 and 2013/14 due to the appointment of additional administrative staff after the Department of Minerals and Energy was divided into two separate departments in 2010/11.

Expenditure in the *Office Accommodation* subprogramme on operating leases increased in 2011/12 as invoices from the previous financial year were paid in that year. Expenditure then stabilised, after a reconciliation

process with the Department of Public Works as the custodian and portfolio manager of national government's immovable assets, was finalised.

At the end of November 2013, the programme had 387 filled posts and expects the number to increase to 410 over the medium term. The additional capacity will improve the management oversight of programmes and ensure their strategic alignment with the department's overall goals. The 62 vacancies arising in the same period were the result of resignations and promotions and are in the process of being filled.

## Programme 2: Promotion of Mine Safety and Health

### Objectives

- Promote mine health and safety by:
  - reducing occupational injuries by 20 per cent, and fatalities by 20 per cent per year over the medium term
  - reducing the number of mine workers exposed to occupational diseases, including tuberculosis by 10 per cent over the medium term
  - conducting ongoing investigations, inspections and audits
  - implementing the occupational health and safety strategy and enforcing guidelines over the medium term.
- Contribute to skills development in the mining sector by conducting an ongoing review and implementation of the certificate of competency model developed with the Mining Qualifications Authority and universities.
- Improve the turnaround time of medical appeals by ensuring a minimum of 100 per cent adherence to the prescribed timeframes for resolving medical appeals and applications in terms of the Mineral and Petroleum Resources Development Act (2002), and a minimum of 100 per cent adherence to the prescribed timeframes for appeals made to the Chief Inspector of Mines.

### Subprogrammes

- *Governance Policy and Oversight* provides inputs for developing policy and legislation to guide enforcement; provides technical support to regional offices; chairs tripartite structures; facilitates HIV and AIDS workshops in the mining sector; and, in collaboration with the Mining Qualifications Authority, develops strategies to address the skills shortage in the mining industry. The safety performance of mines is evaluated monthly, problem areas are identified and corrective measures are developed. In 2012/13, the programme published the Mine Health and Safety Council's annual report. It received 29 medical appeals, all of which were resolved. Of the 40 medical appeals received in 2013/14, 37 were resolved by 30 September 2013. In 2013/14, R5 million was transferred to the Mine Health and Safety Council and R5.2 million will be transferred in 2014/15. This subprogramme had a staff complement of 65 at the end of November 2013.
- *Mine Health and Safety Regions* is responsible for audits, inspections and inquiries related to enforcing the Mine Health and Safety Act (1996) and its provisions; and examination services for the certificate of competency to contribute to skills development in the mining sector. 421 audits and 8 632 inspections were carried out in 2012/13. By the end of September 2013, 5 052 inspections and 257 audits had been conducted with almost 3 000 more inspections and 140 more audits planned to be completed before the end of 2013/14. These processes play a critical part in ensuring that mine employees work in conditions that comply with health and safety regulation. This subprogramme had a staff complement of 195 at the end of November 2013.

## Expenditure estimates

**Table 32.7 Promotion of Mine Safety and Health**

Subprogramme	Audited outcome			Adjusted Appropriation	Average growth rate (%)	Expenditure/total: Average (%)	Medium-term expenditure estimate			Average growth rate (%)	Expenditure/total: Average (%)

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on ensuring that mine companies and employees comply with the Mine Health and Safety Act (1996) by conducting inspections, audits, inquiries and investigations in order to provide a framework to manage health and safety risks in the mining sector. Through the *Mine Health and Safety Regions* subprogramme, the department expects to conduct 25 188 audits and inspections over the medium term. Between 2010/11 and 2013/14, expenditure on travel and subsistence increased in the *Mine*

*Health and Safety Regions* subprogramme due to the travelling costs incurred by inspectors. 32 614 audits and health and safety inspections were conducted in the same period.

Inspections are labour intensive and require extensive travel, which explains the expected continued high spending on compensation of employees and travel and subsistence over the medium term. The programme had 67 vacancies on its funded establishment of 314 posts, with 15 posts additional to the establishment at the end of November 2013. To further enhance the capacity to conduct inspections and despite the difficulty experienced in attracting suitably qualified personnel, the department expects to fill the vacancies over the medium term.

## Programme 3: Mineral Regulation

### Objectives

- Improve the participation of historically disadvantaged South Africans in the mining sector by granting a total of 600 rights and permits to historically disadvantaged South Africans over the medium term.
- Contribute to the transformation of the mining sector by monitoring and enforcing compliance with procurement requirements that relate to historically disadvantaged South Africans, as prescribed by the Broad Based Socioeconomic Charter for the South African Mining Industry, on an ongoing basis.
- Promote job creation through the implementation and support of social labour plan development projects by implementing and supporting 345 local development projects over the medium term.
- Promote sustainable resource use and mine environmental management by supporting approved and evaluated work programmes, social and labour plans, and environmental management plans by conducting 27 industry workshops over the medium term.
- Monitor and enforce compliance with the statutory obligations of the Mineral and Petroleum Resources Development Act (2002) and the Broad Based Socioeconomic Charter for the South African Mining Industry by conducting 750 social and labour plan inspections and 5 100 environmental management inspections over the medium term.

### Subprogrammes

- *Mineral Regulation and Administration* administers prospecting and mining rights, and licensing and compliance with the Mineral and Petroleum Resources Development Act (2002), including the compliance of mines with environmental protection requirements. The issued prospecting and mining rights and permits contain terms and conditions, including the social labour plan and environmental protection, which mining rights holders must comply with. In 2013/14, 1 700 environmental inspections and 250 social labour plan inspections were carried out. This subprogramme had a staff complement of 360 at the end of November 2013.
- *Management Mineral Regulation* provides overall management of the programme. Over the medium term, the focus will be on finalising the South African mineral resources administration system and implementing the National Environmental Management Act (1998). This subprogramme had a staff complement of 20 at the end of November 2013.
- *South African Diamond and Precious Metals Regulator* transfers funds to the South African Diamond and Precious Metals Regulator, which issues licences and permits related to the trade in diamonds, gold and platinum; and monitors activities in the diamond, platinum and gold sectors. This subprogramme's total budget is transferred to the regulator on an annual basis. Over the medium term, the focus will be on contractual obligations, the expansion of the Diamond Exchange and Export Centre and overseeing inspections of diamond and precious metals licences. 3 900 diamond and precious metals inspections are planned over this period.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on improving the process of issuing mining rights and permits, and implementing mining environmental management practices in accordance with the National Environmental Management Act (1998).

R736.5 million is allocated over the medium term to process and issue mining rights and permits, with 600 rights and permits to be issued to entities controlled by historically disadvantaged South Africans. The programme issued 382 mining rights to historically disadvantaged South Africans, conducted 91 industry workshops on compliance, 540 social and labour plans inspections and 6 502 environment inspections between 2010/11 and 2012/13. Spending on compensation of employees increased over this period as the number of filled posts increased from 338 in 2012/13 to 380 in 2013/14.

Over the medium term, expenditure on compensation of employees and computer services under goods and services in the *Management Mineral Regulation* subprogramme is expected to increase due to the work involved in the implementation of the National Environmental Management Act (1998). This new responsibility, which was transferred from the Department of Environmental Affairs in 2013/14, requires additional environmental inspectors and enhancements to the South African mineral resource administration system to process the licensing of mining rights.

The programme had 405 funded posts and 43 posts additional to the establishment. As a result of resignations, there were 66 vacancies at the end of November 2013. These posts are in the process of being filled.

## Programme 4: Mineral Policy and Promotion

### Objectives

- Promote investment in the mining and petroleum sectors to increase investment into these sectors by:
  - producing 13 publications which will inform investors on how to invest in the country’s mining and petroleum sectors, in consultation with various state owned entities, in 2014/15
  - supporting 67 small scale mining operations and projects and holding 8 workshops to educate and inform the public about opportunities in mining, in 2014/15
  - drafting a report on progress in implementing the beneficiation framework, which is intended to ensure that mineral beneficiation becomes a significant part of the economy, in 2014/15.
- Promote sustainable resource use and management by:
  - annually reviewing the database of derelict and ownerless mines, state liability for these mines, and referring to the guideline document for financial provision for the rehabilitation of mines
  - rehabilitating a total of 150 derelict and ownerless mine sites by 2017
  - implementing 3 technical partnerships with state owned entities by 2015.
- Facilitate transformation in the mining and minerals sector by:
  - developing 2 policy impact reports on investment in the sector in 2014/15
  - amending the Mine Health and Safety Act (1996) regulations and the Mineral and Petroleum Resources Development Act (2002) regulations after approval by Cabinet in 2014/15
  - assessing and reviewing the Broad Based Socioeconomic Charter for the South African Mining Industry to ensure that previously disadvantaged South Africans participate in the economy through mining while ensuring mine workers’ health and safety in 2014/15
  - reviewing the Precious Metals Act (2005) and the Second Diamond Amendment Act (2005) by 2015.

### Subprogrammes

- *Management* provides overall management for the programme. This subprogramme had a staff complement of 21 at the end of November 2013.
- *Mineral Policy* develops new policies, reviews existing policies and amends legislation designed to promote investment and achieve transformation in the sector. In 2013/14, the focus was on finalising amendments to the Mineral and Petroleum Resources Development Act (2002) and the Mine Health and Safety Act (1996), a process which began in 2012/13. Following substantial consultation with stakeholders in the mining industry, the Mineral and Petroleum Resources Development Act (2002) is currently being reviewed in Parliament. The subprogramme played a leading role in the shale gas development project and in drawing up regulations on hydraulic fracturing, which were approved by Cabinet in 2013/14. In addition, South Africa’s role as

chair of the Kimberley Process certification scheme in 2013 was also successfully supported. This subprogramme had a staff complement of 16 at the end of November 2013.

- *Mineral Promotion* is discussed in more detail below.
- *Assistance to Mines* transfers funds to prevent the uncontrolled movement of water into and out of underground mine openings and holdings. This entails providing subsidies to marginal mines for pumping extraneous water from underground mine openings; and researching, developing and implementing strategic solutions for mine water management, including managing the decanting of contaminated water. Transfers to the Council for Geoscience assist with researching, developing and implementing strategic solutions for mine water management; R18.4 million was transferred to the council in 2012/13 and R26.5 million was transferred in 2013/14. Portions of this subprogramme's total budget are transferred to marginal mining companies on a needs basis, according to conditions set out by the department.
- *Council for Geoscience* transfers funds to the Council for Geoscience, a national agency responsible for developing and maintaining a geoscience knowledge infrastructure for land and ocean environments. The subprogramme's total budget is transferred in full to the council.
- *Council for Mineral Technology* transfers funds to the Council for Mineral Technology and Research, which provides research, development and technology that fosters business development in the mineral and mineral products industries. The subprogramme's total budget is transferred in full to the council.
- *Economic Advisory Services* undertakes macroeconomic and related research and develops assessment tools, which enable it to advise the branch on key strategic economic issues relating to the mining and minerals industry. 35 publications were released in 2012/13 and 6 more publications were released by the end of September 2013. This subprogramme had a staff complement of 7 at the end of November 2013.
- *Mine Environmental Management* provides strategic guidance on mine environmental management, mine closures and managing the rehabilitation of derelict and ownerless mines. In 2012/13, 13 mine rehabilitation projects were completed. 17 mine holdings had been closed off by the end of September 2013 and a number of asbestos mine sites are currently in the process of being rehabilitated. The Florida Lake canal project, which was started a number of years ago to reduce acid mine drainage formation at the lake, was completed and handed over to the City of Johannesburg metropolitan municipality in 2013/14. As part of the interventions on ingress control, strategic mine water research is carried out regularly and is funded by the *Assistance to Mines* subprogramme. This subprogramme had a staff complement of 13 at the end of November 2013.

## Expenditure estimates

Table 32.11 Mineral Policy and Promotion

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on rehabilitating derelict and ownerless mines, organising consultations with mining stakeholders and attending parliamentary hearings.

As part of the safety, health and environmental policy goal, the rehabilitation of derelict and ownerless mines in the *Mine Environmental Management* subprogramme is a key activity of the programme, with 150 sites scheduled to be rehabilitated over the medium term at an estimated cost of R363.9 million.

An additional R40 million was allocated in the 2013 Budget to the derelict and ownerless mines project, which increased expenditure on transfers and subsidies over the medium term. This allowed the department to focus on the long outstanding Osizweni mine rehabilitation project in Newcastle, KwaZulu-Natal, that is posing extreme health, safety and environmental risks to nearby communities. The department will continue to use external service providers to carry out its rehabilitation work as the department lacks the necessary skills.

Transfers and subsidies make up 82.4 per cent of the programme's total allocation over the medium term and support research, development and services by scientific organisations. Included in the transfers to the Council for Geoscience and the Council for Mineral Technology are allocations of R494 million over the medium term for the economic competitiveness and support package to support research and stimulate investment into the mining industry. In 2013/14, R6 million was reprioritised from the *Assistance to Mines* subprogramme to the transfer to the Council for Geoscience to assist with researching, developing and implementing strategic solutions for mine water management.

To give effect to Cabinet approved baseline reductions, transfers to the Council for Geoscience and the Council for Mineral Technology have each been reduced by R20 million over the medium term. These baseline reductions will not negatively affect service delivery as the entities also generate their own revenue.

The rehabilitation of derelict and ownerless mines project is expected to significantly increase spending on goods and services, mainly on contractors, over the medium term. In 2013/14, there was a significant increase in expenditure on goods and services in travel and subsistence as well as venues and facilities as a result of the intercessional and plenary meetings of the Kimberley Process certification scheme, which was chaired and hosted by South Africa. Hosting the meetings was important for the country's prestige and standing in the global minerals environment with regard to efforts to eliminate trade in conflict diamonds.

The programme had 125 funded posts and 7 posts additional to the establishment at the end of November 2013. There were 13 vacant posts, mainly due to resignations and the movement of staff to higher positions in the same period. These posts are in the process of being filled.

### Subprogramme: Mineral Promotion

This subprogramme is responsible for promoting mineral development, advising on trends in the mining industry to attract investment, promoting small scale mining through subsidies managed by the Industrial Development Corporation of South Africa, and advising the Minister of Mineral Resources on growth and competitiveness in the sector and on the contribution of mining to the economy. It plays a crucial role as the country's mining data repository, specifically data on mining production and employment. The subprogramme is responsible for the beneficiation strategy, which was adopted in 2011/12. This is designed to provide impetus to the value addition process of the country's minerals and to give effect to the government's developmental goals of transforming the economy. The draft mineral beneficiation implementation plan framework that has been developed is currently the subject of consultation in government and is expected to be finalised by the end of 2013/14.

Over the medium term, the department intends to conduct a vigorous local and international advocacy programme to local communities and targeted countries, to communicate mineral beneficiation as an opportunity for the country to create labour generating economic growth. *Mineral Promotion* also houses the international coordination hub, which coordinates the department's international engagements and activities to attract investment. The subprogramme had a staff complement of 62 at the end of November 2013.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on finalising the beneficiation implementation framework and promoting the Mineral and Petroleum Resources Development Act (2002) and the Mine Health and Safety Act (1996).

Expenditure on transfers and subsidies decreased significantly between 2010/11 and 2012/13 due to the finalisation of the small scale mining strategy. The decrease did not have any impact on performance as the subprogramme still managed to support 239 small scale mining projects over the same period.

Over the medium term, expenditure on transfers and subsidies is expected to increase significantly as the beneficiation implementation framework gets finalised due to the provision of financial assistance in the form of subsidies to 221 small scale mining projects, to promote mineral development.

The subprogramme had a funded establishment of 66 with 8 vacant posts due to resignations and promotions. These posts are in the process of being filled.

## Public entities and other agencies

### Council for Geoscience

#### Mandate and goals

The Council for Geoscience was established in terms of the Geoscience Act (1993). Its principal mandate is to develop and publish world class geoscience knowledge products and to provide geoscience related services to the South African public and to industry. The Geoscience Amendment Act (2010) extends the entity's functions to include the provision of advisory services relating to geohazards and geo-environmental pollution, and to be the custodian of all geoscience information related to the South African mining industry.

Specifically, the act requires the council to:

- conduct systematic reconnaissance and documentation of the geology of the earth's surface and continental crust
- compile all geoscience data and information in the public domain
- conduct basic geoscience research into the nature and origin of rocks, the evolution of life, and the formation of the earth
- collect and curate all geoscience data and knowledge on South Africa in the national geoscience repository
- provide relevant geoscience knowledge services and advice to the state
- manage a number of national geoscience facilities
- provide commercial geoscience services and products to national and international clients.

The council is structured and geared to support national priorities, such as economic growth and empowerment, sustainable development, rural development, and development on the continent.

The council's strategic goals over the medium term are to:

- broaden the scientific expertise of the council
- provide more direct top level management expertise and scientific leadership in the organisation
- prioritise engineering, geology and physical geohazards, environmental and chemical geohazards and water resource assessment protection
- facilitate investment into the mining industry
- focus on initiatives that contribute to rural development and poverty eradication
- develop innovative products, system and services
- build scientific, managerial and administrative skills and capacity
- contribute to socioeconomic transformation.

1. Rand million.

## Expenditure trends

Revenue for the Council for Geoscience is generated mainly from fees earned in terms of geological service contracts. In addition, a grant is received from the department, but this covers only personnel costs. All other operating and overhead expenses are funded through revenue.

Revenue increased between 2010/11 and 2013/14, and this is expected to continue over the medium term due to the increase in geological contracts. The increase in revenue will provide for improved conditions of service, the economic competitiveness support package, and various other projects such as the amendment of the Geoscience Act (1993) and the hosting of the 35<sup>th</sup> International Geological Congress in South Africa in 2016. The acquisition of technical and scientific equipment needed to make the council a leading earth science provider and establishing a national skills centre for carbon dioxide geological storage are other initiatives that will be prioritised with increased revenue.

The spending focus over the medium term will be on increasing investment, growing the sector and achieving meaningful transformation in the mining industry. Over this period, to achieve improvements in safety and health and to protect the environment, the council will spend R86 million on the water ingress project to provide solutions for decanting and ingressing acid mine drainage water. This will result in an increase in spending on goods and services, travel and subsistence, contractors and agency support.

In 2010/11, the council significantly cut spending on overheads by putting on hold or freezing the funding of certain items such as training and bursaries, travel and entertainment costs, and conferences, which led to a reduction in spending on those items and increased the number of outputs achieved as a result of savings reprioritised towards the completion of projects. In addition to the R20 million Cabinet approved budget cut over the medium term, efficiency savings of R2.9 million in 2013/14, R3.6 million in 2014/15 and R3 million in 2015/16 have been effected on travel and subsistence and training and bursaries. These savings and cost effectiveness measures will be maintained over the medium term with a limited number of expenditures being re-instated where necessary. Service delivery will not be negatively affected.

The increase in expenditure on goods and services between 2010/11 and 2013/14 was due to an additional allocation of R40 million to the rehabilitation of derelict and ownerless mines project to assist in the closing of old mines and the rehabilitation of old abandoned mines; and R80 million for producing maps targeting mineral potential in South Africa to stimulate investment in the minerals sector.

The council had a funded establishment of 338 posts, with no vacancies at the end of November 2013. Personnel numbers are expected to increase over the medium term, with personnel expenditure also expected to increase over the period due to inflation and improvements in conditions of service. According to its implementation plan, the council will need to recruit at least 56 researchers, professionals, technicians and administrative personnel in order to assist in the amendments of the Geoscience Act (1993) and to provide more stimulus to investment in the mineral sector.

## Council for Mineral Technology

### Mandate and goals

#### Mandate

The mandate of the Council for Mineral Technology as set out in the Mineral Technology Act (1989) is to maximise the value derived from South Africa's mineral resources. To this end, the council develops appropriate, innovative technology for transfer to industry, and provides industry with test work, and consultancy, analytical and mineralogical services.

#### Strategic goals

The council's strategic goals over the medium term are to:

- maximise the utilisation of finite ore resources
- alleviate poverty and create employment
- add value to mineral and metal products
- promote the transition from a resource dominated to a knowledge based economy.
- focus on strategic areas of research and development to keep the council and South Africa at the forefront of technological innovation
- operate effectively in the global environment
- satisfy the demands of a knowledgeable customer base.
- generate high economic returns for the national and regional economies through its technical programmes
- focus on skills development and educational initiatives through its social programmes
- nurture self-sustaining local economies in areas of South Africa where smaller minerals extraction and beneficiation enterprises have the capability to generate broad-based employment and wealth
- attract and retain crucial skills.

### Selected performance indicators

**Table 32.19 Council for Mineral Technology**

Indicator	Programme/Activity/Objective/Project	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of new or improved technologies developed per year	Research and develop efficient mineral processing technologies and value added products and services	Outcome 4: Decent employment through inclusive economic growth	5	4	3	3	4	4	4
Number of reports on new or improved mining and minerals processing products and services developed per year	Research and develop efficient mineral processing technologies and value added products and services		14	13	17	17	17	17	17
Number of analytical and mineralogical methods and services developed per year, evidenced by reports	Research and develop efficient mineral processing technologies and value added products and services		3	13	11	9	10	9	9
Number of external reports on water and energy efficient flow sheets developed per year	Research and develop efficient mineral processing technologies and value added products and services	Outcome 10: Environmental assets and natural resources that are well protected and continually enhanced.	1	3	3	3	3	3	3
Number of technologies adapted or developed relevant to SMMEs per year	Promote the mineral-based economies of rural and marginalised communities through technical assistance and skills development	Outcome 7: Vibrant, equitable and sustainable rural communities with food security for all	3	2	2	2	2	2	2
Number of undergraduate bursars granted bursaries per year	Build world class research and development excellence through development of human organisational skills	Outcome 5: A skilled and capable workforce to support an inclusive growth path	85	72	45 <sup>1</sup>	45	45	45	45
Number of candidates employed per year	Build world class research and development excellence through development of human organisational skills		58	48	45	45	50	50	50

1. The decrease is due to the increased focus on postgraduate bursars, more than undergraduate.

## Expenditure trends

Revenue for the Council for Mineral Technology is mainly generated from commercial companies that purchase products, services and contracted research from the council. The council also receives transfer payments from the department.

The department's transfer payment to the council increased between 2010/11 and 2013/14, and is expected to increase to R245 million in 2016/17. This is due to additional funding received between 2011/12 and 2012/13 for research in water treatment, the rehabilitation of derelict and ownerless mines, the establishment of a precious gemstone facility in Northern Cape, waste and scrap reprocessing, and the building of a pilot plant for rare earth elements.

Revenue is expected to increase further over the medium term as a result of technical projects undertaken in the past years. These include the successful commissioning and implementation of the demonstration plant for water atomisation of alloys, a project with a cost of R44 million which was finalised in 2012/13. This project is expected to provide revenue streams over the medium term.

The spending focus over the medium term will include research and development activities in the commodity sector, advanced and specialty metals, water treatment research to protect water resources, the rehabilitation of derelict and ownerless mines, the development of technology for the treatment of acid mine drainage, and the promotion of value added downstream beneficiation. Further research on enhancing extraction techniques involving hydrometallurgy, pyro metallurgy and biotechnology; and accessing and processing low grade and complex ore bodies, residues and exposed rocks facility, will also be prioritised.

Compensation of employees takes up 55.4 per cent of the Council's total expenditure in 2013/14 due to the labour intensive nature of research and project work, with consultants mainly used for outsourcing arrangements such as the maintenance of the campus, security, garden services, canteen costs and IT support. Over the medium term, expenditure on compensation of employees and goods and services is expected to increase due to the strategic drive to attract, develop, nurture and retain a skilled workforce for research and other project work. The number of positions will increase from 815 in 2013/14 to 838 over the medium term to enable the council to carry out more research work, and to increase profits from commercial revenue. There were 55 vacancies at the end of November 2013 due to the significant increase in resignations, mainly in the professional field. However, over the medium term, the council will strive to fill all vacancies through its strategic recruitment plan.

Over the medium term, the council will continue to be vigilant with regard to unnecessary spending by enforcing strict controls over spending through procurement processes. The Cabinet approved budget reduction of R20 million over the medium term is to be effected on travel and subsistence under research projects. However, this reduction will not negatively impact on service delivery as commercial revenue is expected to increase over the medium term.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Mine Health and Safety Council** is mandated to advise the Minister of Mineral Resources on all occupational health and safety issues in the mining industry, and to develop legislation, conduct research, promote mine health and safety issues, and liaise with other bodies. The council's total budget for 2014/15 is R75.1 million.
- The **South African Diamond and Precious Metals Regulator** is mandated to regulate the diamond, platinum and gold industries, and accelerate beneficiation in the jewellery industry. The regulator's total budget for 2014/15 is R80.3 million.
- The **State Diamond Trader** is mandated to promote equitable access to diamonds and local beneficiation. Revenue is generated by selling rough diamonds to clients, who consist mainly of diamond polishers and cutters. The entity's budget for 2014/15 is R569.8 million.

Executive authority: Minister of Rural Development and Land Reform  
 Accounting officer: Director General of Rural Development and Land Reform  
 Website address: [www.ruraldevelopment.gov.za](http://www.ruraldevelopment.gov.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Create and maintain an equitable and sustainable land dispensation and act as a catalyst in rural development to ensure sustainable rural livelihoods, decent work and continued social and economic advancement for all South Africans.*

### Mandate

The Department of Rural Development and Land Reform executes its legislative mandate around the following acts:

- The Restitution of Land Rights Act (1994) provides for the restitution of rights in land to persons or communities dispossessed of such rights after 19 June 1913. The act makes provision for the establishment of the Commission on Restitution of Land Rights and the Land Claims Court. The minister is authorised to purchase, acquire and expropriate land or rights in land for the purpose of restitution awards.
- The Provision of Land and Assistance Act (1993) provides for the designation of certain land, the regulation of the subdivision of such land and the settlement of persons thereon. It also provides for the acquisition, maintenance, planning, development, improvement and disposal of property and the provision of financial assistance for land reform purposes.
- The Communal Property Associations Act (1996) enables communities to form juristic persons, to be known as communal property associations, in order to acquire, hold and manage property on a basis agreed to by members of a community in terms of a written constitution.
- The Transformation of Certain Rural Areas Act (1998) provides for the transfer of certain land to municipalities and certain other legal entities, as well as for the removal of restrictions on the alienation of land.
- The Physical Planning Act (1991) promotes the orderly physical development of South Africa, and for that purpose, makes provisions for the division of the country into regions, and for the preparation of national development plans, regional development plans, regional structure plans and urban structure plans.
- The Deeds Registries Act (1937) provides for the administration of the land registration system and the registration of land rights.

In addition to overseeing land restitution, the department is also mandated to initiate, facilitate, coordinate, catalyse and implement an integrated rural development programme, which is linked to the need to create vibrant, equitable and sustainable rural communities (outcome 7).

## **Strategic goals**

The department's strategic goals over the medium term are to:

- foster effective land reform and land restitution programmes
- implement sustainable agrarian reform through increased access to and productive use of land
- ensure spatial equity through effective land planning and administration
- reform the policy, legislative and institutional environment
- improve food production and access to affordable and diverse food
- improve rural services to support sustainable rural livelihoods
- improve access to sustainable employment and skills development
- improve institutional arrangements for effective cooperative governance, stakeholder participation and service excellence.

## **Programme purposes**

### **Programme 1: Administration**

**Purpose:** Provide corporate management services. Oversee departmental capital works. Provide bursaries to non-employees.

### **Programme 2: National Geomatics Management Services**

**Purpose:** Provide geospatial information, cadastral surveys, deeds registration, spatial planning, and other technical services in support of sustainable land development.

### **Programme 3: Rural Development**

**Purpose:** Catalyse, initiate, facilitate, and coordinate the implementation of a comprehensive rural development programme leading to sustainable and vibrant rural communities.

### **Programme 4: Restitution**

**Purpose:** Settle land restitution claims under the Restitution of Land Rights Act (1994) and provide settlement support to beneficiaries.

### **Programme 5: Land Reform**

**Purpose:** Provide sustainable land reform programmes in South Africa.

## Selected performance indicators

**Table 33.1 Rural Development and Land Reform**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of hectares acquired per year <sup>1</sup>	Land Reform	Outcome 7: Vibrant, equitable and sustainable rural communities with food security for all	322 844 ha	392 850 ha	157 556 ha	311 917 ha	390 000 ha	370 000 ha	380 000 ha
Number of new farms recapitalised per year <sup>2</sup>	Land Reform		411	257	200	344	719	831	867
Number of state domestic facilities surveyed per year <sup>3, 4</sup>	National Geomatics Management Services		-	-	-	-	1 500	1 500	1 500
Number of land claims finalised per year <sup>4</sup>	Restitution		-	-	-	-	239	373	371
Number of enterprise opportunities facilitated and coordinated in rural development initiatives (agriculture and other sectors) by government stakeholders per year <sup>4</sup>	Rural Development		-	-	-	90	210	222	235
Number of new participants in the national rural youth services corps per year			7 401	5 300	5 881	4 600	5 000	5 000	5 000
Number of socioeconomic infrastructure projects coordinated and facilitated per year <sup>4</sup>			-	-	-	-	31	29	30

1. The decline in the number of hectares acquired per year in 2012/13 is due to reprioritisation of funds from the land reform programme.

2. More funds have been allocated for the recapitalisation and development programme to speed up the land reform process, hence the projections are higher.

3. State domestic facilities refer to hospitals, clinics and schools.

4. This indicator will be measured from 2013/14 or 2014/15.

## The national development plan

The national development plan proposes that an additional 1 million jobs be created in agriculture and related industries by 2030. The department contributes to the proposed rural development strategy in the national development plan by facilitating the provision of basic services infrastructure and delivery to rural households and assisting them with livelihood projects to promote community economic development.

Agriculture is the primary economic activity in rural areas. The department's land reform and rural development programmes are committed to acquiring and allocating land for agricultural projects. To ensure that these projects are productive, agricultural support is being provided through recapitalisation, mentoring and development programmes as well as the animal and veld management programme. The department is committed to supporting rural enterprises and employment in various ways including the training of rural entrepreneurs. It also ensures that, where infrastructural projects take place, labour from local communities is contracted. The department, over the medium term, plans to work with the private sector as an enabling partner in support of the government build programme.

The national development plan identifies spatial disparities and slow economic growth as the main causes of underdevelopment in rural areas. To give effect to the plan, the department will continue to reprioritise funds over the medium term towards rural development, and to geospatial and cadastral service land survey programmes used to identify and survey agriculturally-viable land which can be allocated to smallholder farmers to contribute towards rural development.

In contributing to the implementation of the national development plan over the past five years, the department has assisted over 2 296 households in producing their own food, provided basic infrastructure to more than 2 502 households, trained 13 000 rural youth in a range of skills and settled 77 334 restitution claims. Over the medium term, the department will survey 4 800 state domestic facilities, employ an additional 15 000 rural youth and recapitalise 2 417 farms.

## Expenditure estimates

Table 33.2 Rural Development and Land Reform

Programme	Audited outcome			Adjusted Appropriation	Revised estimate	Average growth rate (%)		Medium-term expenditure estimate			Average growth rate (%)	Expenditure/total: Average (%)

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on developing rural areas focusing on rural infrastructure and service delivery to ensure equitable and sustainable rural communities creating decent work and continued socioeconomic advancement for all South Africans in line with outcome 7 (vibrant, equitable and sustainable rural communities with food security for all). The comprehensive rural development programme; integrated spatial planning and land use management; land reform; and the finalisation of land restitution claims, are the department's core policy priorities in pursuit of these objectives and are implemented by the *Rural Development, Restitution and Land Reform* programmes, to which 79.1 per cent of the department's budget is allocated over the medium term.

The comprehensive rural development programme, approved by Cabinet in 2009, was set up to empower rural communities to be active participants in their own development and to provide strategic investments in rural socioeconomic infrastructure. The rural development programme accounts for the increased spending on consultants and travel and subsistence which grew significantly between 2010/11 and 2013/14 in the *Rural Development* programme. The increases in expenditure in the same period were as a result of a high number of participants in the national rural youth service corps who were trained and supported to provide services in their communities.

Over the medium term, R2.6 billion is shifted to the *Rural Development* programme, in part to provide funds for basic services infrastructure to households. In addition, R2.4 billion and R2.1 billion in the same period are reprioritised from the *Restitution* and *Land Reform* programmes to be used as transfers to households in the *Rural Development* programme. This shift decreases spending on consultants and travel and subsistence, and increases spending on transfers to households over the period.

Furthermore, of the funds shifted from the *Restitution* and *Land Reform* programmes, R870 million is allocated to drive electronic mapping, cadastre and spatial planning and land use management in the *Geospatial and Cadastral Services* programme and R1 billion is allocated to the *Administration* programme to allow the department to employ more staff in regional offices to improve service delivery.

As part of Cabinet approved reductions, expenditure in the *Rural Development* programme over the medium term will be reduced by R400 million from the economic competitiveness support package for the implementation of the national youth services corps while the land claims grant in the *Restitution* programme is reduced by R710 million. The department will reprioritise funds from non-core services to compensate for any shortfalls.

The department had a funded establishment of 4 950 posts and 384 posts are filled in addition to this establishment. 992 posts were vacant at the end of November 2013 due to natural attrition. Expenditure on compensation of employees increases significantly over the medium term due to the implementation of the occupation specific dispensation for technicians and professional surveyors, professional town and regional planners, and the increase in the number of personnel from 3 958 in 2013/14 to 5 395 in 2016/17 as the department reduces its use of consultants in favour of its own personnel.

Although a Cabinet approved budget reduction of R210 million over the medium term was implemented on spending on compensation of employees, the additional personnel will be provided for from funds reallocated from spending on consultants under goods and services, which explains the significant decrease projected in this item over the medium term.

### Infrastructure spending

Expenditure on payments for capital assets increased in 2010/11 due to the office accommodation project, which the department, together with other renovations, upgrades and installations, is undertaking. Expenditure on payments for capital assets is expected to increase over the medium term, from R24 million in 2014/15 to R24.9 million in 2016/17, as more projects are implemented over this period.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing corporate services, financial services and provincial coordination within the department to ensure line functions are aligned with strategic and operational goals and adhere to good corporate governance practices. For this reason, the bulk of the programme's budget over the medium term is allocated to spending on personnel, IT services and consultants, who will provide audit services. Spending on these items is projected to grow over the medium term as the programme increases the number of posts from 1 365 in 2013/14 to 2 258 in 2016/17 to develop internal capacity in IT, governance and the enterprise programme management office, given an impending IT review and the implementation of an improved IT security system, to comply with recommendations from a previous audit.

Out of the department's total establishment of 1 863 funded posts and 27 posts additional to the establishment, there were 498 vacant posts at the end of November 2013. Most of these vacancies were in the *Provincial Coordination* subprogramme, which used provincial shared services centres that were established in 2009/10 to speed up service delivery.

Expenditure on compensation of employees increased significantly between 2010/11 and 2013/14, as the centres were brought up to full capacity. However, as part of the Cabinet approved budget reductions, the department is to reduce spending on compensation of employees in the *Provincial Coordination* subprogramme by R120 million over the medium term. The funds were reduced from the allocation for funded posts that are currently vacant in this subprogramme.

## Programme 2: National Geomatics Management Services

### Objectives

- Facilitate integrated spatial planning and land use management in all provinces by:
  - developing targeted policies and legislation to support efficient national spatial planning and land use management on an ongoing basis
  - developing and implementing the national spatial development framework to direct where government investment should go to yield results with maximum impact by 2016
  - supporting all municipalities to implement spatial planning and land use management by 2016
  - stimulating development in areas of poverty, and reducing spatial inequalities by 2016
  - supporting comprehensive rural development programme wards with spatial planning on an ongoing basis.
- Implement the South African spatial data infrastructure by:
  - developing and maintaining the technical infrastructure, standards and institutional frameworks by 2017
  - developing and monitoring the policy framework by 2017.
- Improve the efficiency of cadastral surveys management by:
  - reducing the turnaround time for the approval of cadastral documents from 20 days in 2012/13 to 14 days by 2016
  - reducing the time taken to process cadastral documents from 20 days in 2012 to 14 days in 2016 by implementing an electronic e-cadastre system by 2015
  - increasing the number of officials trained in geomatics from 57 in 2012 to 120 by 2016
  - automating the surveyor general and deeds registration processes by 2016.
- Ensure an integrated and comprehensive land administration system by:
  - increasing the surveying of state domestic facilities from 1 700 in 2013 to 4 500 by 2016
  - updating the land register annually
  - increasing the production and reviewing of maps for South Africa in the national map series from 1 637 in 2013 to 2 161 by 2016.

### Subprogrammes

- *National Geomatics Management Services* is responsible for: examining and approving all surveys of land and real rights that are intended to be registered in the deeds office; maintaining records; compiling,

maintaining and revising maps of property boundaries; providing cadastral advisory services to other government institutions; promoting and controlling all matters related to geodetic and topographical surveying; and providing geospatial information services, including South African spatial data infrastructure. In 2012/13, 57 people graduated from geomatics training and by the end of September 2013, a further 65 had been targeted for training. This subprogramme had a staff complement of 812 at the end of November 2013.

- *Spatial Planning and Land Use Management* provides for national land use management and spatial planning systems. In 2012/13, 14 spatial plans were formulated and by the end of September 2013, a further 39 plans had been formulated. Of those, 11 were draft spatial development frameworks, 25 draft precinct plans and 3 draft land use management schemes. This subprogramme had a staff complement of 205 at the end of November 2013.
- *Registration of Deeds Trading Account* provides a high quality deeds registration system whereby secure titles are registered and speedy and accurate information is provided. In 2013/14, R241 million was transferred to the account. In 2012, it took 21 days to register and process registrable diagrams and sectional plans. By the end of September 2013, it took 19 days to register and process diagrams and sectional plans. The trading account had a staff complement of 1 504 at the end of November 2013.
- *South African Council for Planners* transfers funds on an annual basis to the South African Council for Planners, a non-profit organisation dealing with the registration and other activities of the planning profession. In 2012/13, 2.4 million hectares of homeland was surveyed. The council had a staff complement of 34 at the end of November 2013.

## Expenditure trends

The spending focus over the medium term will be on ensuring that 80 per cent of municipalities are implementing the Spatial Planning and Land Use Management Act (2013) within the *National Geomatics Management Services* and *Spatial Planning and Land Use Management* subprogrammes. The programme will also focus its spending on enhancing effective land planning and administration by providing funding to the *Registration of Deeds Trading Account* subprogramme to finalise the land register.

Between 2010/11 and 2013/14, expenditure in the *National Geomatics Management Services* subprogramme increased significantly due to the implementation of the occupation specific dispensation, particularly for technicians and professional surveyors, the survey of unsurveyed state land, and the state land audit projects.

Over the medium term, expenditure in the *Spatial Planning and Land Use Management* subprogramme is set to increase due to the implementation of the Spatial Planning and Land Use Act (2013), which was enacted into law in August 2013; and the development of spatial plans and geographic information systems. The increase in expenditure in these subprogrammes is mostly notable on goods and service items such as consultants and computer services, which grew significantly over this period. At the end of 2012, 99.5 per cent of the state land registered had been verified, against a target of 100 per cent. The department aims to achieve 100 per cent functional land use by 2016 and have 60 per cent of land use schemes implemented in municipalities by 2016.

Expenditure on goods and services is expected to increase from 2015/16 due to the implementation of state domestic surveys, and the development of guidelines, tools and systems to facilitate and coordinate the implementation of the Spatial Planning and Land Use Management Act (2013) by municipalities. In addition, the transfer to the *Registration of Deeds Trading Account* subprogramme is also expected to increase over the medium term due to the implementation of the electronic register, which will speed up title deed registrations, turnaround times on verification and the capturing of registered deeds.

As part of Cabinet approved budget reductions, a reduction of R90 million on compensation of employees will be effected by the department in the *Spatial Planning and Land use Management* subprogramme over the medium term. This is not expected to have an impact on service delivery as the department will reprioritise R870 million from the *Land Reform and Restitution* programmes to this programme. This will drive an increase in the number of posts from 1 079 in 2012/13 to 1 219 in 2016/17. The additional personnel are needed to visit and orientate municipalities about the provisions of the Spatial Planning and Land Use Management Act (2013). As a result, spending on compensation of employees is projected to increase over the period.

The programme had a funded establishment of 1 051 posts, with 259 posts additional to the establishment and no vacancies at the end of November 2013. Expenditure on consultants is projected to increase from R82 million in 2013 to R94 million in 2016 and will be used to carry out cadastral research, which is aimed at supporting and promoting coordination, integrated spatial development and improved land use management. This will enable the programme to survey 1 500 state domestic facilities by 2016 and ensure that all nine provinces have integrated spatial plans.

## Programme 3: Rural Development

### Objectives

- Provide support to rural communities by improving the standard of living in all rural districts over the medium term by implementing the rural livelihoods strategy by 2016/17.
- Improve access to basic services such as water and sanitation by coordinating, facilitating and monitoring the provision of rural basic services infrastructure by 2017.
- Facilitate the development of 235 sustainable rural enterprises and industries in areas with economic development potential and opportunities by 2016 through the coordination of 90 socioeconomic infrastructure projects.
- Increase job opportunities created from 3 545 in 2013 to 4 800 in 2016 through rural development and land reform initiatives by 2017.
- Contribute to skills development in the farming sector by increasing the number of new participants in the national rural youth services corps training programme, which aims to equip young people to enter the workforce, from 4 600 in 2013/14 and 5 000 in each year of the MTEF period.

### Subprogrammes

- *Rural Infrastructure Development* facilitates improved access to basic services, and provides economic and income generating opportunities through improved physical infrastructure in rural areas. In 2012/13, 63 rural communities were assisted with agricultural infrastructure and services. By the end of September 2013, an additional 58 rural communities had been assisted. This subprogramme had a staff complement of 163 at the end of November 2013.
- *Rural Enterprise and Industrial Development* facilitates poverty reduction, social organisation, youth development, the development of cooperatives, rural enterprise and industry, the creation of an enabling institutional environment for sustainable rural development, and the provision of social and economic development and sustainable livelihoods in rural communities. Its functions are based on the social mobilisation of communities to ensure that these communities take ownership of rural development projects and programmes to establish rural development forums and partnerships, increase food security, increase youth development and social organisation, and create jobs through the creation of cooperatives and the development of rural enterprises and industries. In 2012/13, 2 131 households accessed food security programmes and interventions, such as food gardens. By the end of September 2013, an additional 985 households had accessed food security programmes. This subprogramme had a staff complement of 354 at the end of November 2013.
- *National Rural Youth Services Corps* is responsible for training rural youth in a variety of skills such as building and farming, or in skills to match the needs of the 23 district wards or communities from which they are recruited. Funding for this training is derived from the National Skills Fund. In 2012/13, 5 881 youth

participants received training. In 2013, it was estimated that 4 600 youth would be trained. The subprogramme had a staff complement of 138 at the end of November 2013.

## Expenditure trends

The spending focus over the medium term will be on rural enterprise development, animal and veld management, and the coordination and facilitation of basic services infrastructure in rural areas. The programme will also focus its spending on additional agricultural support to farms, which will be carried out in the *Rural Infrastructure Development* and the *Rural Enterprise and Industrial Development* subprogrammes, and training more youth under the *National Rural Youth Services Corps* subprogramme.

The department aims to equip 4 719 rural individuals with skills through rural development initiatives, create 4 800 jobs through infrastructure projects, and improve the skills of 5 000 youth per year through infrastructure programmes by 2016/17.

Between 2010/11 and 2013/14, expenditure in the *Rural Infrastructure Development* subprogramme increased significantly due to the increase in projects providing access to basic services, particularly sanitation, irrigation and roads. In the same period, as part of the rural socioeconomic development policy goal, expenditure in the *Rural Enterprise and Industrial Development* subprogramme also increased significantly, particularly in goods and service items such as administration fees, advertising and consultants, as part of the implementation of the comprehensive rural development programme. The rural development programme consists of rural households profiling, food security interventions, enterprise development, support for cooperatives and value chain projects. Consultants in this programme are used for business advisory services for the implementation of the comprehensive rural development programme.

Expenditure on goods and services increased significantly between 2010/11 and 2013/14, due to the employment of additional participants in the *National Rural Youth Services Corps* subprogramme. As a result, at the end of 2012/13, seven irrigation schemes out of a target of eight had been revitalised and 4 564 people out of a target of 3 200 had been assisted to access skills to improve their livelihoods. Over the medium term, spending on goods and services is set to decrease due to the reprioritisation of funds away from goods and services towards transfers to households, to drive the comprehensive rural development programme.

Spending in the *Rural Enterprise and Industrial Development* subprogramme is expected to increase over the medium term, mainly due to the implementation of the comprehensive rural development programme. The projected increase provides for the coordination and facilitation of rural enterprise development, industrial development and support to rural communities to produce their own food, as part of the policy goal to improve the rural economy. As a result, transfers to the *Rural Enterprise and Industrial Development* increase from R389.1 million in 2014/15 to R540.7 million in 2016/17, in order to increase the number of enterprise opportunities facilitated and coordinated from 90 in 2013 to 235 by 2016.

The bulk of expenditure over the medium term will be on facilitating and coordinating the provision of basic services infrastructure to households, rural community programmes and enterprise and industrial development. Accordingly, spending in the *Rural Infrastructure Development* subprogramme receives the largest allocation in this period. Expenditure in this subprogramme is also expected to increase over the medium term as a result of the implementation of animal and veld management programmes, the coordination and facilitation of

infrastructure for the provision of basic services to rural communities, the registration of cooperatives and the provision of access to IT. The increased expenditure is expected to result in a 16 per cent increase in rural infrastructure development for households over the medium term.

As part of Cabinet approved budget reductions, a reduction of R400 million over the medium term will be effected on compensation of employees in the economic competitive support package for implementing the national rural youth service corps. These reductions will not impact negatively on service delivery. In the same period, the *Rural Development* programme receives R2.6 billion in reprioritised funds from the *Restitution* and *Land Reform* programmes to implement the comprehensive rural development programme; facilitate and coordinate enterprise development and socioeconomic infrastructure projects; and create job opportunities through infrastructure programmes to improve access to sustainable employment and skills development opportunities.

The *Rural Development* programme had a funded establishment of 655 posts, with 2 posts additional to the establishment and 260 vacancies as at 30 November 2013.

## Programme 4: Restitution

### Objectives

- Facilitate the restoration of land rights and alternative forms of equitable redress by:
  - increasing the number of land claims finalised from 602 in 2012 to 983 over the medium term
  - increasing the number of land claims settled from 602 in 2012 to 1 457 over the medium term
  - increasing the number of new recapitalised (phased) projects from 53 in 2014 to 76 in 2016.
- Facilitate the reopening and finalisation of the lodgement of restitution land claims for people who did not meet the 31 December 1998 deadline by implementing 23 functional lodgement offices and 9 mobile lodgement units over the medium term.

### Subprogrammes

- *Restitution National Office* provides administrative and professional support to the Commission on the Restitution of Land Rights for processing and investigating restitution claims, develops and coordinates restitution policy, and oversees court cases. In 2012/13, 376 land rights and awards of alternative equitable redress were restored or finalised. By the end of September 2013, 28 additional land rights had been restored. This subprogramme had a staff complement of 95 by the end of November 2013.
- *Restitution Regional Offices* is responsible for researching, validating, verifying and negotiating settlements, and provides administrative support services for settling land claims. In 2012/13, 602 land claims were settled and by the end of September 2013, 28 additional land claims had been settled. This subprogramme had a staff complement of 627 at the end of November 2013.
- *Restitution Grants* is discussed in more detail below.

## Expenditure trends

The spending focus over the medium term will be on settling and finalising restitution claims to increase access to and promote the productive use of land; providing administrative support for settling restitution claims, including resolving restitution claims in court; and verifying and negotiating claims for settlement.

Over the medium term, expenditure in the *Restitution Provincial Office* subprogramme is expected to increase due to the proposed reopening of land claims as contained in the Restitution of Land Rights Amendment Bill. As a result, the department aims to finalise 371 land claims, 76 phased projects and settle 615 land claims by 2016/17.

Spending on compensation of employees is expected to increase over the medium term as internal capacity is built to deal with the proposed reopening of land claims. As a result, personnel numbers are set to increase from 589 in 2012/13 to 650 in 2014/15 and will remain at this level over the medium term. The programme has a funded establishment of 722 posts. At the end of November 2013, the programme had 10 posts additional to the

establishment and 176 vacant posts due to natural attrition. These posts are expected to be filled by the end of March 2014.

As part of the Cabinet approved budget reductions, the department reduced spending on land restitution grants by R710 million over the medium term due to slow spending. This reduction in expenditure is not expected to have an adverse effect on service delivery. Following a review of the implementation of the comprehensive rural development programme, R2.4 billion has been reprioritised over the medium term from the *Restitution* programme to the *Rural Development* and *National Geomatics Management Services* programmes.

Between 2010/11 and 2013/14, expenditure in the *Restitution National Office* and *Restitution Regional Offices* subprogrammes increased in order to speed up the restitution process. As a result, 602 land claims were settled in 2012 and 230 were expected to be settled by the end of 2013/14. Over the same period, expenditure on goods and services increased specifically on consultants, as a result of research that needed to be conducted to aid the speeding up of the restitution process. Consultants are used to perform this function because of the specialised and technical nature of the research.

### Subprogramme: Restitution Grants

This subprogramme pays grants to redress restitution claims by restoring land or providing alternative land; provides financial compensation and alternative relief; offers settlement planning and facilitation assistance; and contributes funds for the resettlement of communities.

### Expenditure trends

The spending focus over the medium term will be on research to improve the credibility of the claims system and on finalising claims submitted before the 31 December 1998, to address any backlogs in the claims register. The aim is to settle 1 457 new land claims and 238 phased projects, and to clear the commitments of or finalise 983 settled claims by 2016 to increase access to and promote the productive use of land.

In 2013/14, 38 land claims were settled, against the target for the year of 230, with a further 59 finalised as at 30 September 2013 against that year's target of 208. The rate of settlement was low because of the lengthy period involved in finalising claims. Spending increased significantly during this period due to the high cost of the partial settlement of the Mhlanganisweni community's claim in 2013. To date, 77 334 claims have been settled. Of these, 71 292 have been settled through financial compensation totalling R7 billion.

The subprogramme's total expenditure over the medium term will go towards transfers to households for finalising claims, which is the core business of the land restitution process. 353 restitution land claims are presently under litigation and the department has made a provision over the medium term for the possibility of the land claims court ruling in favour of the claimants. The department projects that 379 claims will be settled, 53 phased projects finalised and 239 claims finalised by 2014/15.

## Programme 5: Land Reform

### Objectives

- Promote equitable land redistribution and agricultural development by acquiring 1 140 000 hectares of strategically located land by 2016.
- Provide comprehensive farm development support by:
  - financially assisting 2 280 smallholder farmers on agrarian transformation to be fully productive by 2016
  - increasing the number of farms developed through the recapitalisation and development programme from 344 in 2013 to 2 415 by 2016
  - increasing the number of farmers trained through the recapitalisation and development programme from 628 in 2013 to 1 823 by 2016.

### Subprogrammes

- *Land Reform National Office* develops and coordinates land reform products; facilitates the implementation of land reform programmes and projects; provides support services to provincial offices; provides state land administration services; provides information, risk and compliance management in the land reform branch; provides strategic land reform intervention support through recapitalisation and development services to align land reform strategic institutional partnerships; provides land acquisition and land warehouse services; and is responsible for the land reform empowerment facility, which provides for transfers to Khula Enterprise Finance, the revolving credit loan facility established to finance land acquisition and equity in commercial farming ventures. In 2012/13, 421 farmers were trained under the skills development programme. A further 361 had been trained by the end of September 2013. This subprogramme had a staff complement of 128 at the end of November 2013.
- *Land Reform Provincial Offices* implements land reform programmes and projects and administers state land in each province. Land needs will be categorised in 2014/15 to ensure the successful implementation of land reform, which is measured in terms of job creation, increased incomes and a critical mass of successful farmers contributing to the gross domestic product. In 2014/15, provincial offices will be recapitalised to develop distressed land reform projects and strengthen the security of tenure of farm dwellers and labour tenants by providing legal support. In 2012/13, 1 059 jobs were created in the land reform project. By the end of September 2013, 450 additional jobs had been created. This subprogramme had a staff complement of 531 at the end of November 2013.
- *Land Reform Grants* provides funding for project and programme planning, land acquisition and settlement, and allows the department to maintain, plan, develop or improve property. In 2013/14, this subprogramme had a budget of R546.6 million for the recapitalisation and development of distressed farms, and for animal and veld management. In 2012/13, 200 new farms were under recapitalisation. By the end of September 2013, 24 new farms had been recapitalised.
- *KwaZulu-Natal Ingonyama Trust Board* provides quarterly transfers for administering Ingonyama Trust land. By the end of September 2013, 12 labour tenant applications had been settled. This subprogramme had a staff complement of 57 at the end of November 2013.
- *Agricultural Land Holding Account* is responsible for buying and holding land until suitable beneficiaries are identified in terms of the Provisions of Land and Assistance Act (1993). This subprogramme's total budget is used for recapitalisation, development and land acquisition. By the end of September 2013, 54 land parcels had been confirmed as vested.

## Expenditure trends

The spending focus over the medium term will be on providing, through the *Agricultural Land Holding Account* subprogramme, comprehensive farm development support entailing technical, financial and management assistance to smallholder farmers and land reform beneficiaries, and acquiring strategically located land for productive use.

To date, under the department's recapitalisation and development programme, 1 350 farms have been recapitalised and developed to the value of R2.6 billion, with the programme acquiring 4 246 895 hectares of land.

Over the medium term, expenditure in the *Land Reform Grants* subprogramme is expected to increase due to the recapitalisation and development programme. R2.1 billion is reprioritised from the *Land Reform* programme to support the department's drive of implementing the comprehensive rural development programme. In order to speed up land reform, 1 140 000 hectares of strategically located land will be acquired through the *Agricultural Land Holding Account* subprogramme and over 2 706 farmers will be trained through the recapitalisation and development programme. The agricultural land holding account receives R5.7 billion in transfers over the medium term for recapitalisation, development and land acquisition.

In order to develop internal capacity in line with the restructuring of the *Land Reform* programme, the number of personnel in this programme increased from 675 in 2012/13 to 707 in 2014/15. This explains the increase in compensation of employees in the same period. Spending on compensation of employees is expected to decrease over the medium term due to the reprioritisation of funds away from the *Land Reform National Offices* and *Land Reform Provincial Offices* subprogrammes. At the end of November 2013, the programme had a funded establishment of 659 posts, with 86 posts additional to this establishment. There are 75 vacant posts due to natural attrition and the length of time it takes to fill vacancies.

The land reform process resulted in a significant increase in expenditure in the *Land Reform National Office* and *Land Reform Regional Offices* subprogrammes between 2010/11 and 2013/14. Expenditure in the *Land Reform Grants* subprogramme decreased in 2011/12 as funds were reprioritised to speed up the restitution process, and to the *Agricultural Land Holding Account* subprogramme for the acquisition of strategically located land, as land was no longer being acquired through the *Land Reform Grants* subprogramme.

Expenditure on the *Agricultural Land Holding Account* subprogramme increased to recapitalise distressed farms. Over the same period, spending on consultants increased due to the specialist technical skills required, such as entrepreneurial and agricultural mentoring from established farmers. Over the period, 1 326 farmers were trained through the recapitalisation and development programme.

Over the same period, operational expenditure on the *KwaZulu-Natal Ingonyama Trust Board* subprogramme increased to institute its new structure and to enable more people to be employed so that the board could carry out its mandate effectively.

## Public entities and other agencies

### Registration of deeds trading account

#### Mandate and goals

The Deeds Registries Act (1937) makes provision for the administration of the land registration system and the registration of rights in land. It requires that deeds and documents are prepared and lodged in a deeds registry by a conveyancer or public notary, and are scrutinised for accuracy and compliance with common law, case law and statutory law. The main goal of the trading account is to contribute to effective land planning, administration and property registration.

## Expenditure trends

The registration of deeds trading account generates revenue mainly by selling deeds information and registering property.

Revenue increased due to the rise in the number of properties registered, which increased from 50 390 in 2010/11 to 569 120 in 2013/14. Over the medium term, revenue is expected to continue to increase in line with the projected increase in the number of properties registered over this period. There will also be an increase in expenditure on goods and services to speed up the registration and documentation of property so as to achieve 2 175 352 registered properties by 2016. It is because of this objective that between 2010/11 and 2013/14, expenditure on goods and services and on the registration of title deeds programme increased in line with the increase in the number of properties registered. This resulted in higher equipment costs related to the extra workload.

In 2013/14, the trading account received a transfer of R241.7 million from the department: R64 million was used for IT software, R164 million for the electronic cadastre project, and R13.7 million for cost of living adjustments.

The spending focus over the medium term will be on implementing an electronic register system, which will ensure effective land planning and administration, as well as the registration of property. The projected transfers of R113.2 million in 2014/15 and R127.1 million in 2015/16 are mainly for implementing the electronic register. The electronic system is expected to improve the quality of the property registration process and result in increased stakeholder confidence in the service.

Spending on compensation of employees is set to increase over the same period to assist with the implementation of the electronic register. Personnel numbers are expected to increase over the medium term from 1 168 in 2013/14 to 1 410 in 2016/17. The entity has a funded staff complement of 1 410, with 242 vacancies at the end of November 2013 due to natural attrition. These will be filled over the medium term as staff are recruited to implement the electronic register.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **agricultural land holding account** was established in terms of section 10(1)(a) of the Provision of Land and Assistance Act (1993) to give legal effect to the proactive land acquisition strategy, which involves acquiring land and other property (movable and immovable) held by the state that can be used by beneficiaries. The account's total budget for 2014/15 is R2.4 billion.
- The **KwaZulu-Natal Ingonyama Trust Board** is a land management agency that provides support to communities on communal land and estate management services to the Minister of Rural Development and Land Reform. The board ensures that any commercial activity on communal land is developmental and benefits local communities. The board's total budget for 2014/15 is R41 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Realise the full potential of science and technology in social and economic development by developing human resources, research and innovation.*

### Mandate

The Department of Science and Technology executes its mandate through the implementation of the 1996 White Paper on Science and Technology, the national research and development strategy and the 10-year innovation plan. The plan aims to make science and technology a driving force in enhancing productivity, economic growth and socioeconomic development.

### Strategic goals

The department's strategic goals over the medium term are to:

- develop the innovation capacity of the national system of innovation in order to contribute to socioeconomic development
- enhance South Africa's capacity for generating knowledge to produce world class research outputs and turn some advanced findings into innovation products and processes
- develop appropriate human capital in the science, technology and innovation sector to meet the needs of society
- build world class infrastructure in the science, technology and innovation sector to extend the frontiers of knowledge, train the next generation of researchers, and enable technology development and transfer as well as knowledge exchange
- position South Africa as a strategic international research and development and innovation partner and destination through the exchange of knowledge, capacity and resources between South Africa and its regional and other international partners, thus strengthening the national system of innovation.

## Programme purposes

### Programme 1: Administration

**Purpose:** Overall management of the department. Ensure that organisations funded by the department comply with good corporate governance and that their activities are aligned with the strategic focus of the national system of innovation. Monitor and evaluate the performance of the science councils.

### Programme 2: Technology Innovation

**Purpose:** Promote the realisation of commercial products, processes and services from research and development outputs, through the implementation of enabling policy instruments.

### Programme 3: International Cooperation and Resources

**Purpose:** Develop, promote and manage international relationships, opportunities and science and technology agreements that both strengthen the national system of innovation and enable an exchange of knowledge, capacity and resources between South Africa and its regional and international partners.

### Programme 4: Research Development and Support

**Purpose:** Provide an enabling environment for research and knowledge production that promotes strategic development of basic sciences and priority science areas, through science promotion, human capital development, the provision of research infrastructure and relevant research support, in pursuit of South Africa's transition to a knowledge economy.

### Programme 5: Socio-Economic Innovation Partnerships

**Purpose:** Enhance the growth and development priorities of government through targeted science, technology and innovation interventions and the development of strategic partnerships with all levels of government, industry, research institutions, and communities.

## The national development plan

The national development plan considers science, technology and innovation to be key aspects of the South African developmental agenda. Science and technology are crucial to equitable economic growth because advances in these fields underpin economic advances, education and improvements in health systems and all infrastructure. In order to realise the potential of technology as an engine of growth, investment needs to be made in scientific and technological education; and the population empowered to use technology efficiently, through access to knowledge and skills.

The department will continue to align its strategies and plans with the priorities and key drivers of the national development plan through ongoing investment in human capital development in various programmes, including the provision of financial support for research and development initiatives to improve education, training and innovation. The plan proposes that the country should double its number of first rate scientists by 2030 and the department addresses this through a number of its programmes. The department is also, in conjunction with the Department of Higher Education and Training, a key source of research funding for universities. The

department's funding of research and innovation infrastructure is a vital source of financial support for public research institutions and universities for research equipment and facilities.

The strategic goals of the department directly address this research imperative through the provision of support for human capital development, the provision of research and innovation infrastructure and the promotion of knowledge generation. With respect to human capital development, for example, the national development plan recommends that South Africa should produce more than 100 doctoral graduates per million population per year by 2030 (the number is currently 33), produce double the number of postgraduate and first rate scientists, increase the number of African and women postgraduates and especially PhDs, and improve the qualifications of academic staff by increasing the percentage of PhD qualified staff in the higher education sector from the current 43 per cent to over 75 per cent by 2030. The department is currently implementing several interventions that seek to address the persisting systemic challenges of access, participation, and success rate across all levels of education (especially postgraduate); the ageing and unrepresentative nature of the scientific workforce and relatively low publication and patenting rates. These interventions include human capital capacity development; the senior researcher programme, the South African Research Chairs Initiative; and the bursary programme for postgraduate studies in innovation.

The department also provides research infrastructure to enable technological innovation through platforms such as the Centre for High Performance Computing and the South African National Research Network. The department stimulates technological innovation within industry and small business through its business support programmes. These include the research and development tax incentive programme, and technology assistance packages to small, medium and micro enterprises (SMMEs), thus contributing to employment creation and economic growth. Research within the department contributes to industrial development opportunities in a variety of niche areas, such as global change and earth systems sciences, advanced manufacturing, advanced metals and ICT.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on developing human capital, generating and exploring knowledge, investing in research and development infrastructure, and encouraging South African innovation by funding marketable products emerging from research and incubation. This will be done primarily through the funds allocated to the *Research, Development and Support* programme.

In addition, to support the goal of improving competitiveness through investing in science and technology, the department will make significant transfer payments over the medium term to the Council for Industrial and Scientific Research and the National Research Foundation. These transfers are expected to fund 11 440 bursaries in 2014/15 and 14 880 in 2015/16 and 2016/17 for postgraduate research students at honours, masters and doctoral levels, and increase the number of MeerKAT antennae installed at the Square Kilometre Array from 4 in 2014/15 to 27 in 2015/16 and to 31 in 2016/17.

Expenditure on transfers and subsidies increased between 2010/11 and 2013/14 due to the additional funding needed for the Square Kilometre Array's 64-dish antennae radio telescope, MeerKAT. R1.4 billion has been allocated over the medium term from the economic competitiveness and support package for industrial partnerships, research into satellite development, titanium and nanotechnology, and for the internship programme.

As part of Cabinet approved reductions, the department's budget will be reduced by R130 million in 2014/15, R90 million in 2015/16 and R50 million in 2016/17. Due to slower than expected spending, the department will reduce expenditure on transfers and subsidies to the Technology Innovation Agency, the Council for Science and Industrial Research and industrial partnerships. These include partnerships with domestic and foreign

companies in the fields of ICT, nanotechnology and green industries. The budget reductions are not expected to impact on service delivery.

The department had a funded establishment of 480 posts, 65 of which were vacant at the end of November 2013. The vacancies were as a result of natural attrition and are set to be filled over the medium term. The planned increase in the staff complement is aimed at addressing the expected growth in the industrial partnerships research and development programmes, with a focus on stimulating innovative businesses.

A change to the programme budget structure in 2013/14 affects the *Technology Innovation, Research Development and Support* and *Socio-Economic Innovation Partnerships* programmes. More details are provided in the expenditure trends sections of these programmes.

### Infrastructure spending

#### *Mega project: Square Kilometre Array*

The Square Kilometre Array Organisation awarded a large portion of the final Square Kilometre Array project to South Africa and its eight African partner countries. While the construction of the Square Kilometre Array telescope is only expected to begin in 2017/18, work has begun on the 64-dish antennae radio telescope, MeerKAT. The first two MeerKAT antennae are scheduled to be completed by the end of 2013/14 and will be qualified and tested in 2014/15, with the entire system expected to be operational in 2016/17. R2.1 billion has been allocated over the medium term toward the Square Kilometre Array project, including MeerKAT.

#### *Large project: Research and development infrastructure*

R683 million has been allocated for research infrastructure over the medium term to provide the scientific community with equipment and facilities to ensure the country's global competitiveness in research, development and innovation. The department will continue to strategically use the research and development infrastructure budget to support five infrastructure categories: cyber infrastructure, scientific equipment, specialised facilities, high end infrastructure, and global infrastructure.

The primary allocations of the research and development infrastructure budget over the medium term are: R159 million for the scientific equipment category implemented by the National Research Foundation through the national equipment and nanotechnology equipment programmes, R105 million towards specialised facilities and R91 million to the national facilities of the National Research Foundation. A further R24 million has been made available in the high end infrastructure category for lithium battery development and titanium additive manufacturing laboratories and a primary titanium pilot plant.

The department will support cyber infrastructure by continuing to develop the High Performance Computing Centre, where the user community has grown from less than 20 in 2007 to more than 500 in 2013, and the continued rollout of broadband connectivity to all research and academic institutions, through the South African National Research Network programme. 40 research and academic sites were connected to the network in 2013/14 and all major campuses of the 23 higher education institutions, science councils, national facilities and publicly supported research institutions are now connected to the high speed national backbone. R632.4 million is allocated to cyber infrastructure over the medium term with the focus being on increasing the average bandwidth per South African National Research Network site to 3 500Mbps and increasing the user base, uptake and knowledge outputs of high performance computing by 2016/17.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will continue to be on the overall management of the department and the provision of centralised support services to ensure good corporate governance practices. Expenditure in the *Corporate Services* and *Management* subprogrammes is projected to increase over the medium term, following the centralisation of certain activities within these subprogrammes in 2012/13 to realise the benefits of strategic sourcing. These include communications, asset management, information services, knowledge management, and inventory and facilities management. The department's office accommodation requirements are also expected to increase over the medium term.

The introduction of the ministerial public participation programme's hosting of international conferences such as the German–South Africa test of science both in South Africa and in Germany, and the marketing of the Square Kilometre Array project in 2012/13 resulted in increased spending on venues, facilities and catering between 2010/11 and 2013/14. In addition, spending on consultants increased over the same period due to the increased use of management advisory services, the testing of the implementation of the business continuity plan, and increased maintenance performed on the department's facilities. Spending on consultants is expected to increase over the medium term due to the lack of management advisory services skills in the department.

The programme had a funded establishment of 263 posts, of which 38 were vacant at the end of November 2013 as a result of attrition. These are expected to be filled over the medium term. The expected growth in the number of filled posts between 2013/14 and 2014/15 is aimed at enhancing management capacity to improve oversight on programmes and to ensure their strategic alignment with the department's overall goals.

## Programme 2: Technology Innovation

### Objectives

- Lead, inform and influence policy development in strategic science and technology innovation areas of focus through:
  - developing and implementing 29 policy instruments
  - providing oversight of projects carried out by recipients of funding
  - monitoring and regulating 15 institutional arrangements
  - supporting 574 innovation interventions in these key strategic areas by the end of March 2017.
- Coordinate and support research and high end skills development in the strategic and emerging fields of the science and technology of space science energy, and the bioeconomy by:
  - bioeconomy, intellectual property management transfer and technology commercialisation
  - supporting 1 146 masters and doctoral students and 42 postgraduates financially
  - enabling training for 1 290 trainees

- supporting 98 research output publications financially in these key strategic areas by the end of March 2017.
- Support, promote and advocate for the development and transition of scientific research and development outputs, processes and services by:
  - supporting 14 new technology innovation products
  - pursuing the registration of 9 new patents and 3 trademarks
  - ensuring 850 disclosures reported by publicly-funded institutions
  - commercialising 3 new technologies in the key strategic areas by the end of March 2017.
- Oversee, monitor and regulate key policy instruments and support interventions in the strategic and emerging science and technology of space science, energy, biotechnology, nanotechnology, robotics, photonics, indigenous knowledge systems, intellectual property management, technology transfer and transfer end technology commercialisation.

## Subprogrammes

- *Space Science* is a cross-cutting and user driven subprogramme that supports the creation of an environment conducive to the implementation of the national space and South African earth observation strategies. In 2012/13, 164 841 earth observation data scenes were distributed through targeted programmes aimed at various stakeholders. In 2013/14, 11 technology solutions were supported, including the time series applications for the forest and carbon tracking portal, the geohazard atlas and funding for the calibration and validation site used to conduct pre-campaign activities. In addition, 40 postgraduate students were supported, with 20 graduating, and 240 trainees received instruction. This subprogramme had a staff complement of 9 in 2013/14.
- *Hydrogen and Energy* plays a key role in developing a sustainable and globally competitive South African energy knowledge base and industry, especially as it relates to the nascent global hydrogen economy. In 2012/13, 3 research chairs in the energy sector were supported. In 2013/14, 10 research and development initiatives were supported, including the Hydrogen South Africa Centre of Competence, the Renewable Energy Hub and 3 research chairs in clean coal technology and biofuels. This subprogramme had a staff complement of 9 in 2013/14.
- *Bioeconomy* leads the department's implementation of the National Bioeconomy Strategy that was approved by Cabinet in 2013. It strengthens research and innovation competencies to enable projects and product development to be commercialised. In 2012/13, 4 research chairs in biotechnology and health innovation were supported. In 2013/14, financial support was provided for strategic health innovation partnership initiatives that concern malaria, tuberculosis, HIV and AIDS, and non-communicable diseases, and for the bioscience research chairs. In addition, 50 PhD students were supported and 310 bio-entrepreneurs were trained. This subprogramme had a staff complement of 12 in 2013/14.
- *Innovation Priorities and Instruments* supports and strengthens the innovation policy package and related programmatic interventions aimed at creating and sustaining an enabling environment for innovation, technology development and commercialisation of publicly funded research and development initiatives. In 2012/13, 3 technology based enterprises were established with the support of the Technology Innovation Agency. 58 products, processes and services were developed for commercialisation with 3 being commercialised by the agency. In 2013/14, 1 investment was commercialised through agency funding and 1 technology product/process was developed. This subprogramme had a staff complement of 6 in 2013/14.
- *National Intellectual Property Management Office* ensures compliance by recipients of publicly financed research and development opportunities with the Intellectual Property from Publicly Financed Research and Development Act (2008) and regulations; provides funding through the intellectual property fund for the protection and commercialisation of intellectual property emanating from publicly financed research and development in higher education institutions and science councils; and provides incentives to intellectual property creators to disclose, protect and commercialise their inventions. In 2012/13, 378 South African candidates were trained in intellectual property and technology transfer through workshops and the World Intellectual Property Organisation South African summer school on intellectual property and technology

transfer. In 2013/14, 11 proposals were received and were in the process of being finalised in terms of supporting organisation and technology transfers at institutions. This subprogramme had a staff complement of 11 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on the *Innovation Priorities and Instruments* subprogramme to support the policy of creating an enabling environment for innovation, technology development and commercialising publicly funded research and development initiatives. The significant spending on the *Innovation Priorities and Instruments* subprogramme between 2010/11 and 2013/14 has contributed to the establishment of 4 technology based enterprises through the Technology Innovation Agency, and the development of 99 technology innovation products, processes and services, such as geospatial information, for commercialisation. Transfers to the Technology Innovation Agency are projected to decrease by R30 million in 2014/15, R50 million in 2015/16 and R50 million in 2016/17 due to Cabinet approved reductions that are to be effected on account of slower than expected spending. These reductions are not expected to impact on service delivery.

Expenditure on payments for capital assets for machinery and equipment increased between 2010/11 and 2013/14 due to the acquisition of Sunspace intellectual property in 2013/14 and the creation of the South African National Space Agency in 2011/12 to enable the country to launch its own communication satellites. Expenditure on transfers and subsidies is expected to decrease over the medium term as a result of the budget structure realignment that will take effect from 2014/15. The decrease is mainly due to the movement of the radio astronomy advances function from this programme to the *Research, Development*

and Support programme. The programme has 24 vacancies in its funded establishment of 56 posts at the end of November 2013 as a result of natural attrition. These posts are expected to be filled over the medium term.

## Programme 3: International Cooperation and Resources

### Objectives

- Stimulate knowledge production, international technology transfer and enhanced innovation by securing R1.2 million in foreign science technology and human capital development funds for science, technology and innovation based socioeconomic development in South Africa by the end of March 2017.
- Increase international exposure for South African researchers and students to global knowledge and science, technology, and innovation networks through facilitating their participation in 116 specialist or joint technical workshops, policy dialogues, symposia or conferences by the end of March 2017.
- Contribute towards the shaping of global science, technology and innovation discourse, decision making and policy formulation, through leading 54 regional, continental and global initiatives by the end of March 2017.
- Support science technology and innovation capacity on the African continent to create conditions for the development of a knowledge based economy in Africa, through supporting 16 regional, continental and multilateral governance systems by the end of March 2017.
- Increase participation by South Africans in international human capital development opportunities to strengthen the South African national system of innovation, by:
  - enabling participation in 152 international research and innovation opportunities
  - supporting the participation of 4 989 South African researchers and students in international human capital development opportunities by the end of March 2017.

### Subprogrammes

- *Multilateral Cooperation and Africa* seeks to advance and facilitate South Africa's participation in strategic international partnerships in science, technology and innovation to achieve shared economic and social development in the region and the continent. In 2012/13, South Africa's science, technology and innovation cooperation on multilateral platforms, especially those in the region and the continent, was enhanced. This work continued in 2013/14 through various projects and working groups. This subprogramme had a staff complement of 22 in 2013/14.
- *International Resources* works to increase the flow of international resources into the country by creating conditions for access to international science, technology and innovation skills and global projects. The focus will continue to be on managing the engagement with the European Union (EU) in pursuit of significant new financial support through the EU sector budget support and EU research and innovation programmes. In 2012/13, the department played an active role at the South Africa-EU Summit in Brussels. In 2013/14, R300 million in science, technology and innovation funds was secured from international partners for knowledge production, technology transfer, enhanced innovation and human capital development through agreed instruments. This subprogramme had a staff complement of 22 in 2013/14.
- *Overseas Bilateral Cooperation* promotes collaborative activities and secures resources in support of the national system of innovation from countries outside Africa, with a specific focus on accelerating the development of a knowledge driven economy. The key output for 2012/13, which continued into 2013/14, was the German-South Africa Year of Science programme, in which cooperation between the two countries was celebrated. Contact for cooperation with China and India was also initiated in 2013/14. This subprogramme had a staff complement of 20 in 2013/14.

## Expenditure trends

The spending focus over the medium term continues to be on engagement with the EU in pursuit of its sector budget support and research and innovation programmes; and managing bilateral relations and Africa-to-Africa engagements as well as multilateral engagements. The bulk of spending over the medium term will go towards

transfers and subsidies to agencies and non-profit institutions. The aim is to increase South African participation in international human capital development opportunities, strengthen the national system of innovation by accessing 152 international research and innovation opportunities, and support the participation of 4 989 South African researchers and students in these opportunities. Funding for these activities is provided throughout all of the subprogrammes. To access the benefits of strategic sourcing, the following amounts were reprioritised from this programme to the *Administration* programme in 2012/13: R1.2 million from the *Multilateral Cooperation and Africa* subprogramme, R1.2 million from the *International Resources* subprogramme and R1.2 million from the *Overseas Bilateral Cooperation* subprogramme.

Overall expenditure increased between 2010/11 and 2013/14 to enhance projects aimed at strengthening bilateral and multilateral cooperation and leverage international resources for transfers for global science in the *International Resources* subprogramme. The programme had a funded and filled establishment of 56 posts at the end of November 2013.

## Programme 4: Research Development and Support

### Objectives

- Contribute to the development of demographically representative, high-level human capital capable of pursuing locally relevant, globally competitive research and innovation activities by:
  - increasing the total number of postgraduate research students awarded bursaries, as reflected in National Research Foundation reports, from 11 440 in 2014/15 to 14 880 in 2015/16 and to 14 880 in 2016/17
  - increase the total number of graduates and students placed in department funded work preparation programmes in scientific engineering and technological institutions from 100 in 2014/15, to 800 in 2015/16 and 2016/17
- Ensure access to internationally comparable research and innovation infrastructure to generate new knowledge and train new researchers by:
  - increasing the number of research infrastructure grants from 60 in 2014/15 and 2015/16, to 70 in 2016/17
  - increasing the availability of bandwidth per South African National Research Network site from 2 800Mbps in 2014/15 to 3 500Mbps in 2015/16 and 2016/17.
- Support and promote research productivity through new knowledge and relevant training opportunities by:
  - increasing the total number of researchers awarded research grants through National Research Foundation managed programmes from 3 876 in 2014/15 to 4 539 in 2015/16 and 2016/17
  - increasing the number of Institute for Science accredited research articles published by National Research Foundation funded researchers from 5 700 in 2014/15 to 7 000 in 2015/16 and 2016/17.
- Strategically develop priority science areas in which South Africa enjoys a competitive advantage by increasing the number of MeerKAT antennae, as per Square Kilometre Array specification, by 4 in 2014/15, 27 in 2015/16 and 31 in 2016/17.
- Promote public engagement in science, technology and innovation by increasing the number of participants in science awareness and engagement programmes from 942 160 in 2014/15 to 979 000 in 2015/16 and to 1 200 000 in 2016/17.

### Subprogrammes

- *Human Capital and Science Promotions* is discussed in more detail below.
- *Science Missions* promotes the development of research, production of scientific knowledge and human capital development in science areas in which South Africa enjoys a geographic advantage. In 2013/14, the Minister of Science and Technology launched the Bioprospecting and Product Development Consortium, comprising 16 institutions ranging from science councils to universities and civil society organisations. In 2014/15, the earth systems science unit within the subprogramme and the National Research Foundation will jointly host the second national conference on global change. This subprogramme had a staff complement of 13 in 2013/14.

- *Basic Science and Infrastructure* facilitates the strategic implementation of research and innovation equipment and infrastructure to promote knowledge production in areas of national priority to sustain research and development led innovation and promote the development of basic or foundational sciences such as physics, chemistry, biological and life sciences, geographic and geological sciences and human and social sciences. In 2012/13, more than 50 research infrastructure grants were awarded across a range of infrastructure categories, giving approximately 250 researchers and 2 500 students access to advanced scientific equipment and infrastructure. In 2013/14, approximately 60 research grants were awarded across the infrastructure categories. This subprogramme had a staff complement of 10 in 2013/14.
- *Astronomy* supports the development of astronomical sciences around a multi-wavelength research strategy and provides strategic guidance and support to relevant astronomy institutions in the implementation of the department's astronomy programmes. Of particular relevance are the Southern African Large Telescope, the MeerKAT, the High Energy Stereoscopic System, the African Very Long Baseline Interferometry Network, and the Square Kilometre Array projects. Funding for astronomy initiatives is channelled through the National Research Foundation. In 2013/14, 2 MeerKAT antennae were installed as per Square Kilometre Array specification. This subprogramme had a staff complement of 3 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on increasing the bursary amounts awarded to postgraduate students and on attracting more students, especially in the fields of astronomy, archaeology and palaeontology, as part of the policy to stimulate scientific research. The spending focus will also be on upgrading the national system of innovation infrastructure and equipment to increase the level of interest in research and development.

Over the same period, expenditure on transfers and subsidies is expected to increase significantly due to the modernisation of the science councils' infrastructure, and for the National Research Foundation's astronomy initiatives. There are also increases in the programme spending as a result of the budget programme structure realignment, which transferred the radio astronomy advances function from the *Technology Innovation* programme and the social development analysis function from the *Socio-Economic Innovation Partnerships* programme to this programme.

The programme had 3 vacancies in its funded establishment of 47 posts at the end of November 2013 as a result of natural attrition. The posts are expected to be filled over the medium term.

## Subprogramme: Human Capital and Science Promotion

This subprogramme formulates and implements policies and strategies that address the availability of human capital for science, technology and innovation, and fundamental support for research activities. The subprogramme provides strategic direction and support to institutions mandated with human capital development and increased knowledge production, as well as interfacing with relevant stakeholders in this

regard. The department has increased the number of postgraduate students funded through bursaries and the per capita level of support. Departmental bursary values increased by more than 30 per cent between 2008/09 and 2012/13, and this was accompanied by a 20 per cent rise in student numbers. In 2012/13, 3 076 researchers were funded as research grant-holders against a target of 2 600. By the end of September 2013, 2 896 had been funded against a target of 3 822. In addition, support for 33 science centres, the key infrastructure for driving science awareness and engagement, will increase over the medium term. This subprogramme had a staff complement of 17 and a budget of R1.7 billion in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on increasing the value of bursaries awarded and increasing the number of students supported, as part of the policy goal to invest in human resources and train researchers. Expenditure on transfers and subsidies to the National Research Foundation in the medium term is expected to increase at an average annual rate of 12.4 per cent, with the increase in spending expected to see the numbers of students supported increase from 11 440 in 2014/15 to 14 880 in 2016/17, as part of an active strategy to fund deserving students. Effective spending on the human capital programme is expected to yield benefits to the scientific community in respect of national competitiveness, entrepreneurship and scientific innovation.

Between 2010/11 and 2013/14, spending in the *Human Capital and Science Promotions* subprogramme was mainly on transfers for human resources development to support researchers and students pursuing postgraduate studies at honours, masters, doctoral and postdoctoral levels. Doctoral graduations rose by 59 per cent, from 1 181 in 2010 to 1 878 in 2012, through funding from the National Research Foundation. Spending on the Centre for High Performance Computing, the South African National Research Network, research and development infrastructure, and cyber infrastructure also increased due to an additional allocation provided in the 2013 Budget.

The subprogramme had a filled and funded establishment of 17 posts at the end of November 2013. The department is reviewing its human resource plan to align it with the service delivery model. Expenditure on compensation of employees is expected to increase at an average annual rate of 2.3 per cent over the medium term.

## **Programme 5: Socio Economic Innovation Partnerships**

- Inform and influence how science and technology can be used to transform and enhance rural and socioeconomic development, government planning and service delivery and the building of sustainable human settlements by creating, sustaining or improving 420 livelihood opportunities by the end of March 2016.
- Sustain niche high-potential research and development capabilities that improve the competitiveness of existing and emerging economic sectors and facilitate the development of new targeted industries with growth potential in aerospace, advanced manufacturing, chemicals, mining, advanced metals and ICT through:
  - funding or co-funding 255 masters and doctoral students in designated niche areas by the end of March 2015
  - funding or co-funding 150 interns in designated niche areas by the end of March 2015
  - funding or co-funding the development of 20 knowledge and innovation products (patents, prototypes, technology demonstrators and technology transfer packages) by the end of March 2015
  - funding 5 instruments in support of increased localisation, competitiveness and research and development led industry development by the end of March 2015.
- Identify, grow and sustain niche high potential science and technology investment capabilities for sustainable development and the greening of society and the economy.
- Enhance understanding and analysis that supports improvement in the functioning and performance of the national system of innovation through publishing reports and policy briefings by 31 March 2015.

### **Subprogrammes**

- *Sector Innovation and Green Economy* provides support for research and development-led growth in strategic sectors of the economy to support a transition to a green economy by facilitating the implementation of high impact science and technology interventions; identifying and initiating science and technology programmes that support the growth of the environmental technologies and services sector in South Africa; and facilitating policy and strategy development on research and development interventions that support the growth of the ICT sector. In 2012/13, 294 masters and PhD students were funded or co-funded; there were 2 additions to the intellectual property portfolio; and 132 scientific and technical papers were accepted for publication. This subprogramme had a staff complement of 19 in 2013/14.
- *Innovation for Inclusive Development* supports the experimentation of technology and science based innovations for tackling poverty. It focuses on mature technologies that do not yet have widespread applications but are seen as having the potential to achieve government's broad development objectives. In 2012/13, 23 learning interventions were generated, including seminars, briefs and papers. By the end of November 2013, the knowledge product for government planning and service delivery improvement through innovation in water had been identified. This subprogramme had a staff complement of 15 in 2013/14.
- *Science and Technology Investment* leads and supports the development of science and technology indicators; monitors the performance of national science and technology expenditure and planning; and leads

the implementation of section 11D of the Income Tax Act (1962). This entails conducting an annual research and development survey, measuring innovation; developing science and technology indicators; developing databases and information systems, such as the research information management system and national science and technology expenditure tables; and implementing section 11D of the Income Tax Act (1962) to promote private sector research and development investment. 5 policy briefings or reports had been finalised by the end of March 2013/14. One such report was the 2011/12 report on performance of research and development tax incentives. This subprogramme had a staff complement of 17 in 2013/14.

- *Technology Localisation, Beneficiation and Advanced Manufacturing* advances strategic medium and long term sustainable economic growth and sector development priorities and government service delivery through investing in the long term knowledge generation capabilities of the national system of innovation in targeted innovation areas and undertaking focused efforts that exploit knowledge capabilities for economic benefit. In 2012/13, the technology localisation programme provided 50 technology assistance packages; 227 masters and doctoral students were supported in the niche areas of advanced manufacturing, chemicals, advanced metals, mining and ICT; 16 patents, prototypes, technology demonstrators and technology transfer packages were added to the intellectual property portfolio; and 1 769 small and medium enterprises (SME) and potential entrepreneurs received technology support through the technology stations programme and institutes for advanced tooling. By the end of November 2013, 132 interns and 226 masters and PhD students were being funded or co-funded. This subprogramme had a staff complement of 14 in 2013/14.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing support for research and development led growth of strategic sectors of the economy to support a transition to a green economy. This is done mainly through the *Sector Innovation and Green Economy* subprogramme. Spending is expected to facilitate the implementation of high impact science and technology interventions; identify and initiate science and technology programmes that support the growth of the environmental technologies and services sector in South Africa; and facilitate policy and strategy development on research and development interventions that support the growth of the ICT sector. Investment in the environmental sector is crucial to attaining a competitive

advantage in nascent industries. The potential to develop domestic industry and grow export earnings is significant.

Over the medium term, expenditure is expected to increase due to the expansion of the activities in the *Technology Localisation Beneficiation and Advanced Manufacturing* subprogramme, which is funded through the economic competitiveness support package.

As part of an active strategy to maximise the involvement of the private sector, expenditure increased significantly between 2010/11 and 2013/14, with additional allocations of R59 million in 2012/13, and R260 million in 2013/14 from the economic competitiveness support package for industrial partnerships to plan for ICT industry innovation partnerships to strengthen support for SMMEs. Transfers to industrial partnerships are set to decrease by R100 million in 2014/15 and transfers to the Council for Scientific and Industrial Research are also set to decrease by R40 million in 2015/16 due to Cabinet approved reductions as a result of slow spending. These budget reductions are not expected to impact negatively on service delivery because of departmental realignment. The programme had a funded and filled establishment of 58 posts at the end of November 2013.

## Public entities and other agencies

### Council for Scientific and Industrial Research

#### Mandate and goals

The Council for Scientific and Industrial Research was established in terms of the Scientific Research Council Act (1988) and is mandated to foster industrial and scientific development in the national interest through multidisciplinary research and technological innovation.

The council's strategic goals over the medium term are to:

- build a track record of the demonstrable impact in research and development through an established programme of relevant research and development in impact areas and flagship programmes
- build and transform human capital to ensure adequate capacity, and contribute to the national skills base
- strengthen the science, engineering and technology base and perform relevant research and development
- transfer technology to entrepreneurs, the private sector and public sector stakeholders, and build skilled human capital
- enhance financial sustainability and ensure good corporate governance and corporate citizenship.

#### Selected performance indicators

## Expenditure trends

The Council for Scientific and Industrial Research derives its revenue from budget and ring fenced grants from the Department of Science and Technology, contract research and development income from local and international public and private sectors, and income from intellectual property and technology transfer efforts. Contract income is projected to increase over the medium term through additional research and development work. Due to Cabinet approved reductions brought about by slow spending, transfers to the council will decrease by R40 million in 2015/16. However, these reductions are not expected to impact on service delivery.

The spending focus over the medium term will be on strengthening the council's science, engineering, and technology base, building and transforming human capital, performing relevant research and development, and transferring skills and technology. R800.4 million has been invested in scientific equipment and infrastructure since 2008/09, and this is set to continue, albeit at marginally decreased levels because of the Cabinet approved reductions.

With its mandate to strengthen the science, engineering and technology base and perform relevant research and development, the council's work is labour intensive. Expenditure on compensation of employees therefore constitutes 52.5 per cent of the total budget allocation over the medium term, with expenditure on goods and services making up 45.4 per cent of the total. The council had a funded and filled establishment of 2 491 posts at the end of November 2013 and this is expected to grow to 2 553 over the medium term as candidates with specialised science, engineering and technology skills are recruited. Expenditure on consultants is dependent on the nature of research contracts secured and whether or not particular scientific or engineering skills are present within the organisation.

In 2013/14, the council introduced flagships as a vehicle for implementing its growth and impact strategy. Flagships are large scale, impact driven, complementary projects in the development and implementation stages, and are directed at the needs of a particular stakeholder who has invested R75 million in the projects.

## National Research Foundation

### Mandate and goals

The National Research Foundation was established in terms of the National Research Foundation Act (1998), which mandates the foundation to promote and support research in all fields of humanities, the social and natural sciences, engineering and technology, and indigenous knowledge. The foundation provides research funding and platforms through national facilities and science engagement activities. It also performs an agency function on behalf of the Department of Science and Technology, and is a service provider to several other government departments in matters related to research.

The foundation's strategic goals over the medium term are to:

- promote internationally competitive research as the basis for a knowledge economy

- grow a representative science and technology workforce in South Africa
- provide cutting edge research, technology and innovation platforms
- operate world class evaluation and funding systems
- contribute to a vibrant national innovation system.

1. Rand million.

## Expenditure trends

The National Research Foundation receives approximately 45 per cent of its revenue from contract income and sales and interest, while 55 per cent is received in the form of government transfers over the medium term. The foundation's own revenue increased between 2010/11 and 2013/14, due to an increase in contract income. If one excludes the Square Kilometre Array funding, contract income will remain stable in 2014/15 as the figures are based on confirmed agreements only.

The spending focus over the medium term will be on increasing the number of postgraduate students and researchers in science, technology and innovation through the human capacity development excellence pipeline; and continuing modernisation of infrastructure, particularly high quality national facilities to attract international researchers. Additional funding of R300 million in 2014/15 and R540 million in 2015/16 is allocated for the Square Kilometre Array project as this was not included in the MTEF allocation before 2013/14 as designated income. Approximately 78 per cent of the foundation's total capital expenditure over the medium term will go towards the completion of the construction of the MeerKAT antennae, a major part of the current phase of the Square Kilometre Array project. Work on the MeerKAT entails designing, testing, constructing and commissioning 64 Gregorian dishes with the costs including appropriate systems, land and infrastructure, site operations and the telescope array. The installation of the dishes is expected to be completed by 2016/17.

Expenditure on compensation of employees increased at an average annual rate of 11.1 per cent between 2010/11 and 2013/14, primarily due to the expansion of directed initiatives and programmes, including the South African Research Chairs Initiative, which receives approximately R400 million per year through the *Research and Innovation Support and Advancement* programme; the advancement of the Square Kilometre Array project; and additional contract funding allocated by the Department of Science and Technology through a single agreement over three years for human capacity building. Other factors influencing increased expenditure included spending on urgent infrastructure needs such as MeerKAT dish installation and human capital development, national research equipment, and human capacity bursaries and assistance for needy students. Where appropriate, the Square Kilometre Array project makes use of the foundation's own specialist expertise. Appropriate additional services have been procured for the remainder of the project to ensure timeous delivery.

The foundation has a funded establishment of 1 461 posts, of which 191 were vacant at the end of November 2013 due to a scarcity of the requisite skills. Of these, 60 vacancies exist in the Square Kilometre Array due to newly created, mainly technical posts introduced for the ramp up of MeerKAT. The number of posts filled is expected to remain at 1 270 over the medium term. R359 million has been allocated over the medium term for spending on consultants who provide specialist services, mainly relating to the Square Kilometre Array project.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Academy of Science of South Africa** links South Africa with scientific communities at the highest levels in the Southern African Development Community region, the rest of Africa and internationally; promotes common ground in scientific thinking across all disciplines; encourages and promotes innovative and independent scientific thinking; promotes the development of intellectual capacity in all people; provides effective scientific evidence based advice; and facilitates appropriate action in the public interest. The academy's total budget for 2014/15 is R22.5 million.
- The **Human Sciences Research Council** undertakes, promotes and coordinates research in the human and social sciences. The council's total budget for 2014/15 is R464.7 million.
- The **South African National Space Agency** was established under the South African National Space Agency Act (2008) and came into existence in December 2010. The agency aims to be a key contributor to the South African earth observation strategy by providing space based data platforms in collaboration with other entities that focus on in situ observation measurements, like the South African earth observation network. The agency's total budget for 2014/15 is R345.4 million.
- The **Technology Innovation Agency** is a national public entity that draws its mandate from the Technology Innovation Agency Act (2008) and came into operation at the beginning of April 2010. The agency is an intervention to improve research and development from higher education institutions, science councils, public entities, private companies and commercialisation, thereby increasing technological innovation in the economy. The agency's total budget for 2014/15 is R440.7 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Promote and support the growth and development of an equitable, competitive and sustainable tourism sector, enhancing its contribution to national priorities.*

### Mandate

The mandate of the Department of Tourism, as outlined in the Tourism Act (1993), is to promote sustainable growth and development in the tourism sector. The 1996 White Paper on the Development and Promotion of Tourism in South Africa provides for the promotion of domestic and international tourism. Tourism is a national priority and has the potential to contribute significantly to economic development. The national tourism sector strategy provides a blueprint for the sector to meet the growth targets contained in the new growth path.

### Strategic goals

The department's strategic goals over the medium term are to:

- maximise domestic tourism and foreign tourist arrivals in South Africa
- expand domestic and foreign investment in the South African tourism industry
- expand tourist infrastructure
- improve the range and quality of tourist services
- improve the tourist experience and value for money
- improve research and knowledge management
- contribute to growth and development and expand the tourism share of GDP
- improve competitiveness and sustainability in the tourism sector
- strengthen collaboration with tourist organisations.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide strategic support and management services to the department.

### Programme 2: Policy and Knowledge Services

**Purpose:** Ensure strategic policy development, monitoring and evaluation, research and knowledge management services.

### Programme 3: International Tourism

**Purpose:** Develop and support South Africa's tourism potential worldwide.

### Programme 4: Domestic Tourism

**Purpose:** Promote the development and growth of sustainable domestic tourism.

## Selected performance indicators

**Table 35.1 Tourism**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of initiatives aimed at implementing local government support programmes per year	Policy and Knowledge Services	Outcome 11: Create a better South Africa and contribute to a better and safer Africa and world	-1	1	1	1	1	1	1
Number of information and knowledge systems, services and frameworks developed, implemented and maintained per year			4	1	2	3	5	7	9
Number of initiatives facilitated to institutionalise tourism in South African missions abroad per year			-1	-1	1 <sup>2</sup>	2 <sup>2</sup>	2 <sup>2</sup>	3 <sup>2</sup>	4 <sup>2</sup>
Number of projects implemented, from the approved tourism development strategies action plan, for the development of integrated support packages for domestic tourism (such as access, amenities, attractions and accommodation) per year	International Tourism		-1	-1	4	1 <sup>3</sup>	3	3	3
Number of rural enterprises supported per year	Domestic Tourism	Outcome 4: Decent employment through inclusive economic growth	-1	-1	9	2	2	2	2
Number of historically disadvantaged enterprises supported per year			-1	500	1 664	969 <sup>4</sup>	489	- <sup>5</sup>	- <sup>5</sup>
Number of full time equivalent jobs supported through tourism enterprise partnerships per year			-1	3 150	4 145	2 494	1 263	- <sup>5</sup>	- <sup>5</sup>
Number of full time equivalent jobs created through the social responsibility implementation programme of the expanded public works programme per year			6 226	5 000	5 003	4 000	2 475	- <sup>5</sup>	- <sup>5</sup>
			5 716	4 531	5 645	5 173	5 625	5 575	5 757

1. The department did not identify targets, so there is no historical data.

2. Number of national tourism information gateways.

3. The department has supported 126 foreign missions during the mid-term review conducted by the Department of International Relations and Cooperation which was conducted in various regions of the world.

4. The decrease is due to departmental budget reductions.

5. The department has no planned targets for these indicators.

## The national development plan

The national development plan recognises tourism as one of the main drivers of the country's economy and employment. The plan envisages the promotion of South Africa as a major tourist destination, with unique features, to boost tourist numbers and enable tourism to contribute to sustainable economic growth and poverty

reduction. The department supports these objectives and will implement ongoing strategies to set and maintain high standards and encourage growth in the sector.

In line with the national development plan's vision of creating an additional 11 million jobs and increasing GDP by an annual 5.4 per cent by 2030, the department's national tourism sector strategy commits the tourism sector to creating a total of 225 000 additional jobs by 2020, and also to increasing tourism's total direct and indirect contribution to the economy to R499 billion by 2020. In relation to the national development plan's focus on small, medium and micro enterprises (SMME) development, over the medium term the department will support the growth of 3 211 enterprises. These will include rural enterprises, historically disadvantaged enterprises; enterprises that require market access and enterprises that need mentorship and training to grow. The department will further create 19 250 full time equivalent jobs over the MTEF period. 2 475 of these employed individuals will be supported through tourism enterprise partnerships and 16 775 jobs will be created through the labour intensive social responsibility implementation programme, which is implemented through the expanded public works programme.

Funds from the tourism incentive programme, transferred from the Department of Trade and Industry to the Department of Tourism, will be used to ensure that the national development plan targets are achieved.

## Expenditure estimates

Table 35.2 Tourism

## Expenditure trends

The spending focus over the medium term will be on increasing incoming tourism through transfers to South African Tourism in the *Policy and Knowledge Services* programme, and on funding the research and policy formulation strategy of the *Domestic Tourism* programme, which aims to encourage South Africans to travel within the borders of the country.

An increase in both domestic and international tourism numbers is expected to contribute to government's broader objective of growing GDP and creating jobs. To further this objective, at the beginning of April 2014 the department will introduce a new tourism incentive programme that aims to help SMMEs and established businesses to grow by improving their access to international buyers and markets. The incentive programme is allocated R99.6 million in 2014/15, R199.6 million in 2015/16 and R210.4 million in 2016/17. The need for increased capacity for this programme requires that the department expand its establishment from 467 in 2012/13 to 544 in 2016/17. 36 posts were vacant at the end of November 2013, mainly as a result of departmental restructuring. The department expects to fill these posts in 2014/15. Consultants are used mainly to support the department's IT unit.

The increase in allocation over the medium term will provide for the expected increase in the number of international tourist arrivals by air from 3.8 million to 4.1 million and create 16 775 full time equivalent jobs through the expanded public works programme. South African Tourism will receive additional Cabinet approved allocations of R100 million in 2015/16 and R105 million in 2016/17 for domestic marketing programmes through the economic competitiveness support package. This funding will end in 2016/17.

However, Cabinet approved reductions of R32 million in 2014/15, R48 million in 2015/16 and R9 million in 2016/17 have been made, of which R29 million in 2014/15 and R40 million in 2015/16 will be rescheduled to 2016/17 for use in the expanded public works programme. The rest of the total reduction amount is to be effected on the transfers to South African Tourism, the expanded public works programme, transfers and subsidies for SMMEs, and spending on non-essential goods and services items, such as catering, travel and subsistence, and consultants.

## Expenditure trends

Expenditure in the *Administration* programme grew significantly between 2010/11 and 2013/14 and was the main contributor to the increase in total departmental expenditure over this period. This was due to the establishment of the Department of Tourism as a standalone department in 2010/11, and the subsequent need for new personnel, premises and fittings. This also accounted for the increase in expenditure on compensation of employees and goods and services over the period.

The spending focus over the medium term will be on enhancing management oversight to create and support an enabling policy and legislative environment. This is the main responsibility of the *Corporate Affairs* subprogramme, which accounts for 62.7 per cent of the total programme budget and is expected to grow at an average annual rate of 8.3 per cent over the medium term. Over the MTEF period, the key items of expenditure are advertising, audits, communications, computer services for data lines and servers, consultants for internal auditing, contractors for maintenance, office accommodation and domestic travel for support and reporting to Parliament and the tourism portfolio committee. Spending on these items is expected to increase to support service delivery.

Over the medium term, expenditure is expected to grow because of inflation related increases in the cost of office accommodation, computer services, domestic travel by tourism officials and external auditing. The inflation related upward trend in the cost of office accommodation is expected to be offset by the savings from the completion of refurbishments. The programme had achieved 90 per cent of its targets for 2013/14 as at the end of September 2013. For example, all tourist complaints were referred to appropriate authorities and the performance management and development system was implemented across the board. The increase in spending over the medium term will enable the programme to improve on achieving its outputs. The programme had a funded and filled establishment of 291 at the end of November 2013.

## Programme 2: Policy and Knowledge Services

### Objectives

- Develop, implement and update tourism policies, strategies, programmes and plans by:
  - conducting 3 tourist guiding awareness programmes annually
  - producing quarterly reports on the implementation of the agreements signed with tourism stakeholders annually.
- Assist in bringing together stakeholders to promote collaboration, alignment and integration in tourism initiatives and to give effect to the national tourism sector strategy by hosting 2 national tourism sector delivery forums in 2014/15.
- Promote responsible tourism best practice by:
  - implementing the national responsible tourism strategy in 2014/15

- reporting on the implementation of the national minimum standard for responsible tourism and on the plan for universal access to provincial parks in 2014/15.
- Monitor and evaluate tourism sector performance, strategies, policies and initiatives by publishing 3 annual state of tourism reports, 3 annual tourism airlift reports and 3 annual national tourism sector strategy implementation reports over the MTEF period.
- Provide research and knowledge management services to inform policy and decision making by:
  - developing and maintaining 9 information and knowledge systems and services, including visitor information knowledge centre database tools and tourist guide central databases, in 2014/15 and 2016/17
  - developing and maintaining 2 national tourism information gateway sites in 2014/15.

## Subprogrammes

- *Policy and Knowledge Services Management* provides strategic direction and comprehensive administrative and operational support services and research, information and knowledge management; manages policy development and evaluation; and promotes sector transformation and responsible tourism. This subprogramme had a staff complement of 6 at the end of November 2013.
- *Policy Development and Evaluation* manages the development of integrated policies, sector planning, intergovernmental coordination, and stakeholder relations; and promotes responsible tourism practices in the industry as well as its transformation. Key activities in 2012/13 included building local government capacity, facilitating intergovernmental cooperation and implementing the national tourism sector strategy. Outputs in 2013/14 included 2 broad based black economic empowerment (B-BBEE) charter council plan of action reports for tourism. This subprogramme had a staff complement of 23 at the end of November 2013.
- *Research and Knowledge Management* monitors and evaluates tourism policies and strategies and the projects carried out by the department; and facilitates research, information and knowledge management in the tourism sector. Key activities in 2012/13 included collaborative research with universities, piloting and branding visitor information gateways, developing forecasting models and conducting impact evaluation surveys. Key outputs and activities in 2013/14 included 3 research studies carried out in collaboration with universities; the development of 3 knowledge systems; and the maintenance of the 2 national tourism information gateways. This subprogramme had a staff complement of 33 at the end of November 2013.
- *South African Tourism* is discussed in more detail below.

**Expenditure trends**

The spending focus over the medium term will be on funding the activities of South African Tourism to allow the entity to continue marketing South Africa as a tourist destination of choice, increasing the number of international and domestic tourists, and promoting job creation and sustainable economic development. South African Tourism is funded through a transfer payment in the *South African Tourism* subprogramme, which is discussed in more detail below.

Excluding this transfer, the bulk of the programme's allocation over the medium term goes towards spending on compensation of employees. These employees develop and update tourism policies and strategies, and monitor and report on the implementation of the national tourism sector strategy. At the end of November 2013, the programme had a funded establishment of 72 posts, of which 10 were vacant. The vacancies were the result of restructuring to increase capacity for research and knowledge management. At the end of November 2013, the staff complement had increased from 57 in 2012/13 to 62. However, the increase in expenditure on compensation of employees mostly relates to inflation related adjustments to salaries. Expenditure on consultants over the medium term is projected to grow significantly as external service providers are contracted to provide IT support for the development of the visitor information knowledge centres and the tourism information gateways. The information gateways have been created to maximise domestic tourism, increase the number foreign tourist arrivals in South Africa and improve the range and quality of tourist services.

As part of Cabinet-approved budget reductions, transfers to South African Tourism have been reduced by R2.5 million in 2014/15, R6.8 million in 2015/16 and R7.6 million in 2016/17. The anticipated effect of the reductions is that operational expenditure will be reduced and specific projects, such as the upgrade to the

Oracle system, will have to be postponed. The turnaround time for the placement of orders and financial reporting will also be affected.

Among the smaller subprogrammes, the fastest growing expenditure is in the *Research and Knowledge Management* subprogramme, which is expected to increase at an average annual rate of 11.5 per cent between 2013/14 and 2016/17. This is due to an increase in the number of extended research and knowledge management activities and the corresponding increase in compensation of employees. Over the medium term, the growth in expenditure will provide for the development and maintenance of nine information and knowledge systems and services, including the visitor information knowledge centre database tools, tourist guide central databases and the two national tourism information gateways.

### Subprogramme: South African Tourism

This subprogramme transfers funds to South African Tourism, which is responsible for stimulating sustainable international and domestic demand for South African tourist experiences and for putting in place measures that maintain and enhance the standards of tourist facilities and services. Through implementing the tourism growth strategy, the organisation aims to make tourism a leading economic sector in the country and to promote sustainable economic and social empowerment for all South Africans. The number of international tourist arrivals increased from 11.4 million in 2010/11 to 13.5 million in 2012/13, contributing R105 billion to the South African economy. The number of international arrivals increased to 14.2 million in 2014/15. 14.4 million domestic tourists were reported in 2012/13. In addition, the Tourism Grading Council of South Africa, a business unit within South African Tourism, graded 6 022 properties and the National Conventions Bureau, another business unit, secured the rights to host 87 international association meetings between 2013 and 2017.

Proportion of total subprogramme expenditure to programme expenditure	98.1%	96.3%	95.1%	95.0%			94.7%	94.9%	94.9%		

### Expenditure trends

Transfers to South African Tourism account for 95.3 per cent of the subprogramme's budget between 2013/14 and 2016/17, which grew from R631.7 million in 2010/11 to R856.3 million in 2013/14 and is expected to rise to R1 billion in 2016/17. South African Tourism is responsible for marketing South Africa as a desirable tourist destination and through implementing the tourism growth strategy, it aims to make tourism a leading economic sector with a higher share of the country's GDP. It also aims to promote the development of South Africa's tourist infrastructure and services. In the 2013 adjustments budget, South African Tourism received R6.4 million from the department and R20 million from National Treasury to compensate for foreign currency losses. The total budget received for 2013/14 was thus R856.3 million.

To give effect to Cabinet approved budget reductions, the transfer to South African Tourism has been reduced by R2.5 million in 2014/15, R6.8 million in 2015/16 and R7.6 million in 2016/17. These reductions are not expected to have an impact on the entity's operations.

## Programme 3: International Tourism

### Objectives

- Provide international tourism market analysis to inform strategic interventions by:
  - producing plans in response to the needs of the market

- conducting ministerial road shows
- packaging and promoting niche products particularly geared towards the international market
- providing overseas missions with key information to counter negative perceptions of South Africa on an ongoing basis.
- Reduce barriers to tourism growth by:
  - engaging with the Department of Home Affairs to produce a report on visa facilitation in 2014/15
  - building capacity for tourism promotion, translating and distributing marketing material in South African missions abroad and improving information relating to South Africa as a destination on mission websites, in 2014/15
  - undertaking an investigation into South Africa’s potential as a southern corridor aviation hub for Latin America, Sub-Saharan Africa and the Asia-Pacific area in 2014/15.
- Advance national, regional, African and global tourism by participating in strategic engagements in bilateral and multilateral forums on an ongoing basis.

### **Subprogrammes**

- *International Tourism Management* provides a comprehensive administrative and operational support service to the programme for carrying out its activities, which include the collation and consolidation of inputs to the branch business plans, and annual and performance reports; and develops and supports the growth of South Africa’s tourist attractions. This subprogramme had a staff complement of 5 at the end of November 2013.
- *Americas and Caribbean* manages the development of South Africa’s tourism potential on a political and policy level in this region, and manages the relationships with the United Nations World Tourism Organisation and the World Travel Tourism Council. Part of this subprogramme’s budget is transferred annually to the United Nations World Tourism Organisation. Key activities in 2012/13 included developing, updating and analysing country profiles in the region. In 2013/14, key activities included producing briefing reports on major American and Caribbean tourism markets and supporting business planning models. This subprogramme had a staff complement of 13 at the end of November 2013.
- *Europe* manages the development of South Africa’s tourism potential on a political and policy level throughout Western and Eastern Europe and the Mediterranean and with the G20 group of tourism ministers and the World Travel Tourism Council. In 2012/13, key activities included developing, updating and analysing the country profiles in this region. Key activities in 2013/14 included producing briefing reports on major European tourism markets and supporting business planning models. This subprogramme had a staff complement of 12 at the end of November 2013.
- *Africa and Middle East* manages the development of South Africa’s tourism potential on a political and policy level in this region. A portion of this subprogramme’s budget is transferred annually to the Regional Tourism Organisation of Southern Africa. Key activities in 2012/13 included developing, updating and analysing the country profiles in the region. Key activities in 2013/14 included producing briefing reports on markets and supporting business planning models. This subprogramme had a staff complement of 13 at the end of November 2013.
- *Asia and Australasia* manages the development of South Africa’s tourism potential on a political and policy level throughout Asia, Australasia and the Pacific Islands. Key activities in 2012/13 included developing, updating and analysing the country profiles in this region. Key activities in 2013/14 include producing briefing reports on markets and supporting business planning models. This subprogramme had a staff complement of 12 at the end of November 2013.

## Expenditure trends

The significant increases in expenditure in the *Americas and Caribbean*, *Europe* and *Africa and Middle East* subprogrammes between 2010/11 and 2013/14 were mainly aimed at expanding South Africa's tourism potential in these areas as part of the department's diversification policy. The spending focus for this programme over the medium term will be on training tourism officials, and translating and marketing material to distribute in 126 South African missions. The programme will also negotiate, facilitate and implement international tourism agreements and produce annual reports on the implementation plan for bilateral agreements. In doing so, the

department expects to expand foreign investment in the South African tourism industry and strengthen relationships with tourism organisations.

Expenditure on compensation of employees and travel and subsistence are the programme's largest spending items and are projected to increase over the medium term as capacity is built and domestic and international trips are taken to analyse the international tourism market and attend multilateral forums. Expenditure in the programme is expected to increase over the MTEF period on items relating to the generation of market intelligence, the conducting of market analysis to inform strategic interventions, the lowering of barriers to tourism growth, and the optimal use of bilateral and multilateral connections. These activities are aimed at maximising domestic tourism and increasing the number of foreign tourist arrivals in South Africa.

The programme has a funded establishment of 71 posts, of which 11 were vacant at the end of November 2013, and the establishment is expected to remain constant over the medium term. The vacancies were due to the restructuring relating to an increased number of responsibilities within the programme, and are expected to be filled in 2014/15.

## **Programme 4: Domestic Tourism**

### **Objectives**

- Increase tourism's contribution to inclusive economic growth by:
  - developing the 2030 tourism master strategy to provide a uniform approach to promote the development of tourism infrastructure in 2014/15
  - funding the construction of interpretive signage at South Africa's 8 world heritage sites and developing proposals for infrastructure development at 4 of the sites in 2014/15 to attract investment and create employment opportunities
  - hosting the annual national tourism career expo and annual tourism month celebrations.
- Improve tourist destination competitiveness by coordinating and facilitating the development and implementation of 2 projects from the integrated regional support packages in rural areas and the Maloti Drakensberg route in 2014/15.
- Provide support to tourism businesses by:
  - implementing the incentive programme by carrying out road shows and receiving and adjudicating the applications for the programme in 2014/15
  - mentoring 34 SMMEs
  - assisting 450 businesses with market access
  - providing training interventions on skills development, customer service, toolkits and business skills to 489 rural enterprises, 1 263 historically disadvantaged enterprises, and 975 SMMEs
  - providing 2 475 full time equivalent jobs through the Tourism Enterprise Partnership in 2014/15.
- Create employment opportunities by implementing tourism projects through the expanded public works programme aimed at the unemployed, resulting in 16 775 full time equivalent jobs being created by 2016/17.

### **Subprogrammes**

- *Domestic Tourism Management* provides a comprehensive administrative and operational support service to the programme's activities. It also houses the tourism support programme, which will become a separate subprogramme over the medium term. The tourism support subprogramme stimulates new investment in domestic tourism across all subsectors; enables the payment of licensing and professional association member registration fees to remove barriers to entry into the business tourism market; supports SMME tourism infrastructure to stimulate innovation, authenticity and conversion to green systems; and enables access to international trade exhibitions. In 2013/14, a fully functional tourism incentive unit was established. This subprogramme had a staff complement of 6 at the end of November 2013.
- *Domestic Tourism Management: Southern Region* promotes and supports the growth of domestic tourism in Free State and in Western, Eastern and Northern Cape; develops and updates tourism profiles through

research; supports product development; implements the rural tourism strategy; and supports national tourism programmes in the region. In 2012/13, 2 regional support packages were developed. In 2013/14, 2 regional scoping reports on the integration of national interventions relating to the rural comprehensive strategy were compiled. The National Tourism Career Expo was hosted in 2012/13 and 2013/14. This subprogramme had a staff complement of 18 at the end of November 2013.

- *Domestic Tourism Management: Northern Region* promotes and supports the growth of domestic tourism in Gauteng, North West, Limpopo, KwaZulu-Natal and Mpumalanga. This entails conducting research to develop and update tourism profiles, providing support for product development, and implementing the rural tourism strategy. In 2012/13, 2 regional support packages were developed. In 2013/14, 2 regional scoping reports on the integration of national interventions relating to the rural-comprehensive strategy were compiled. This subprogramme had a staff complement of 21 at the end of November 2013.
- *Social Responsibility Implementation* facilitates the development of tourism infrastructure projects under the expanded public works programme through labour intensive methods targeting the unemployed, youth, women, the disabled, and SMMEs. The subprogramme also produces skills development initiatives, such as the young chefs' training programme. In 2012/13, 5 645 full time equivalent jobs were created. In 2013/14, 1 517 full time equivalent jobs had been created by the end of September 2013. This subprogramme had a staff complement of 50 at the end of November 2013.
- *Strategic Partners in Tourism* makes transfers and subsidies for small businesses. This subprogramme's total budget is currently transferred to the Tourism Enterprise Partnership, but this arrangement will end in 2014/15 and be replaced by a SMME development programme. In 2012/13, 104 enterprises were mentored, support was provided to 1 664 rural enterprises, 852 businesses were assisted with accessing markets, 4 145 historically disadvantaged enterprises were assisted, and training was provided to 3 267 enterprises. 5 005 full time equivalent jobs were created through the Tourism Enterprise Partnership in 2012/13.

## Expenditure trends

As part of the tourism development policy, the spending focus over the medium term will be on tourism infrastructure projects under the expanded public works programme. Expenditure on this programme is expected to increase mainly due to Cabinet approved additional funding of R70 million provided for the social responsibility implementation programme, which is implemented through the expanded public works programme, in 2016/17. Expenditure in the programme will support the creation of 5 625 full time equivalent

tourism jobs in 2014/15 and 5 575 in 2016/17. Due to the additional allocation in 2016/17, the rescheduling of expanded public works funds will have no impact on service delivery over the medium term.

Expenditure over the medium term is also expected to increase due to the increase in funding for the tourism incentive programme. The programme is currently a directorate in the *Social Responsibility Implementation* subprogramme and will be introduced at the beginning of April 2014. The tourism incentive programme is expected to support the growth of SMMEs and established businesses through improved access to international buyers and markets, and promote economic development. The introduction of the incentive programme is expected to result in a projected number of domestic tourists that grows from 12.9 million in 2014/15 to 14.3 million in 2016/17.

The programme had a funded establishment of 110 posts, of which 15 were vacant at the end of November 2013. These vacancies were mainly as a result of restructuring and will be filled in 2014/15. The staff complement increased from 97 in 2012/13 to 112 in 2014/15 due to the establishment of the tourism incentive programme in 2013/14. The programme is expected to be fully functional in 2014/15.

## Public entities and other agencies

### South African Tourism

#### Mandate and goals

In terms of the Tourism Act (1993), South African Tourism is mandated to market South Africa internationally and domestically as a preferred tourism destination, to ensure that tourist facilities and services are of the highest standard, and to monitor and evaluate the performance of the tourism sector.

The organisation's main strategic goal over the medium term is to ensure that the tourism sector makes an increasing contribution to economic growth. Other goals include increasing the annual volume of international tourists visiting the country, growing tourists' contribution to the economy through their spending, increasing international brand awareness of South Africa as a travel and business destination, and increasing the number of graded accommodation establishments.

## **Expenditure trends**

Almost all of South African Tourism's income is from departmental transfers. The spending focus over the medium term will be to aggressively promote tourism growth from the continent through increased awareness of South Africa as a top tourism destination. This will result in more arrivals from Africa, and the corresponding spending will contribute to GDP and job creation.

The entity will set up five marketing offices in key African markets by 2020. Two offices will be opened by the end of March 2014: one in Kenya for East Africa, the other in Nigeria for West Africa. Three hub offices will be opened by the end of December 2015: the West Africa hub office in Nigeria; the East Africa hub office in Kenya; and the Central Africa office in Angola. In 2012/13, the entity had a staff complement of 161, but this is expected to increase to 171 in 2013/14 with the opening of the new offices. The number of South African Tourism country offices is set to increase from 11 in 2014/15 to 14 in 2016/17, and an additional trade relations manager will be appointed in New Delhi to cater for the fast growing Indian market.

Over the medium term, expenditure is expected to increase from R1 billion in 2014/15 to R1.2 billion in 2016/17, with expenditure mainly occurring in international marketing. This is expected to lead to a related rise in foreign tourist arrivals from 14.2 million in 2014/15 to 15.1 million by 2016/17. Key expenditure areas will be electronic marketing, global marketing campaigns, and the hosting of the Tourism Indaba, which attracts more than 1 400 exhibitors annually. This will ensure that the sector increases its contribution to economic growth and achieves the national development plan objective for the sector to create 225 000 jobs by 2020.

The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.

### Aim

*Lead and facilitate access to sustainable economic activity and employment for all South Africans through an understanding of the economy, knowledge of economic opportunities and potential, and anticipation of future economic trends. Catalyse economic transformation and development and provide a predictable, competitive, equitable and socially responsible environment for investment, enterprise and trade for economic citizens. Contribute to achieving government's vision of an adaptive and restructured economy, characterised by accelerated economic growth, employment creation and greater equity.*

### Mandate

The department's mandate is derived from a wide legislative framework that includes:

- the Companies Act (2008)
- the Manufacturing Development Act (1993)
- the Broad Based Black Economic Empowerment Act (2003)
- the Consumer Protection Act (2008)
- the National Small Enterprise Act (1996)
- the Small Business Development Act (1981)
- the Customs and Excise Act (1964).

### Strategic goals

The department's strategic goals over the medium term are to:

- facilitate the transformation of the economy to promote industrial development, investment, competitiveness and employment creation
- build mutually beneficial regional and global relations to advance South Africa's trade, industrial policy and economic development objectives

- facilitate broad based economic participation through targeted interventions to achieve more inclusive growth
- create a fair regulatory environment that enables investment, trade and enterprise development in an equitable and socially responsible manner
- promote a professional, ethical, dynamic, and competitive and customer focused working environment that ensures effective and efficient service delivery.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide strategic leadership to the department and its entities to ensure the use of sustainable and integrated resource solutions and services that are customer driven, including conducting research on industrial development, growth and equity.

### Programme 2: International Trade and Economic Development

**Purpose:** Build an equitable global trading system that facilitates development by strengthening trade and investment links with key economies and fostering African development, including regional and continental integration and development cooperation in line with the New Partnership for Africa's Development.

### Programme 3: Broadening Participation

**Purpose:** Develop policies and strategies that create an enabling environment for small, medium and micro enterprises, and enhance the competitiveness of local and provincial economies to achieve equity, growth and job creation.

### Programme 4: Industrial Development

**Purpose:** Design and implement policies, strategies and programmes to develop the manufacturing and related sectors of the economy. Contribute to the direct and indirect creation of decent jobs. Add value and enhance competitiveness in both domestic and export markets.

### Programme 5: Consumer and Corporate Regulation

**Purpose:** Develop and implement coherent, predictable and transparent regulatory solutions, that facilitate easy access to redress and efficient regulation for economic citizens.

### Programme 6: Incentive Development and Administration

**Purpose:** Stimulate and facilitate the development of sustainable, competitive enterprises through the efficient provision of effective and accessible incentive measures that support national priorities.

### Programme 7: Trade and Investment South Africa

**Purpose:** Increase export capacity and support direct investment flows through an effectively managed network of foreign trade offices and strategies for targeted markets.

## The national development plan

The national development plan sets out the long term vision for the South African economy by affirming the need for a more dynamic and more inclusive economy. It identifies poverty, unemployment and inequality as the triple challenges facing the economy, which require both government and private sector intervention. The national development plan notes that higher rates of employment and inclusive growth will only arise if

government focuses its efforts on promoting exports, competitiveness and employment in labour absorbing industries, and providing an appropriate business environment.

The department's strategic goals are aligned with these key priorities of the national development plan and the new growth path's emphasis on decent employment through inclusive economic growth. These goals include working to achieve economic growth, generate employment and create equity by expanding the employment base, addressing regional inequality, diversifying the economy, promoting investment and reducing dependence on resources. The plan recognises the importance of broadening participation by historically disadvantaged sectors of the population, supporting small, expanding businesses and cooperatives, and working on the regulatory environment to improve growth.

The department gives effect to the national development plan through the industrial policy action plan and programmes that are aimed at industrialising the economy and broadening participation, which are actualised through policy and the incentive schemes administered by the department. These include incentives and disbursement schemes on vehicle manufacturing, entrepreneurship, women's development, clothing and textile production incentives, manufacturing development incentives, service sector incentives, broadening participation incentives, critical infrastructure, and employment creation. This will be evident by:

- the number of direct jobs facilitated per year through the enterprise investment programme, which are expected to rise from an estimated total of 5 415 in 2013/14 to 7 302 by 2016/17
- the number of companies financially assisted per year through the black business supplier development programme, which are expected to grow from 1 212 in 2012/13 to 2 245 in 2016/17
- the financial assistance of a projected 72 companies over the medium term through the automotive incentive scheme
- the partial financing of critical infrastructure projects such as access roads and water to enable investments by the private sector.

The department also endorses the plan through the industrial policy development to stimulate exports. In line with best practice, the department focuses on diversifying exports and developing a new pool of exporters through integrated trade policy and export facilitation initiatives. Between 2010/11 and 2013/14, through the export market and investment assistance programme, the number of companies that received financial assistance decreased from 1 753 to 959 due to the economic downturn. This is projected to grow to 1 150 in 2016/17 as the department plans to accelerate the programme.

## Expenditure trends

The spending focus over the medium term will be on implementing incentives, policies, strategies and programmes to promote industrial development, create job opportunities and broaden participation in the economy while transforming it. The incentives make up approximately 70 per cent of the transfers over the medium term and are mainly transferred through the *Incentive Development and Administration* and *Industrial Development* programmes. The bulk of expenditure is within the *Incentive Development and Administration* programme, which makes up just over 57.4 per cent of the department's total budget over the medium term. This is allocated to incentives such as the manufacturing development incentives, which contribute to the development of manufacturing industries, and the special economic zones investment incentives, which attract investment, to further the objectives of the industrial development action plan. In addition, expenditure within

the *Industrial Development* programme, which makes up just over 18.2 per cent of the department's total budget over the medium term, is largely allocated to the clothing and textile production incentive, which provides support to rejuvenate the sector in accordance with the industrial policy action plan.

Expenditure in the *Incentive Development and Administration* programme grew at an average annual rate of 24.5 per cent between 2010/11 and 2013/14. This was mainly due to the implementation of the special economic zones investment incentives scheme programme and the manufacturing competitiveness enhancement programme as part of the economic competitiveness and support package, which was implemented in 2011/12 as a special government intervention to support the economy during the global financial crisis. The special economic zones investment incentives scheme encourages increased investment in South Africa through the provision of infrastructure. The purpose of the manufacturing competitiveness enhancement programme is to improve manufacturing enterprises' competitiveness and support job retention and creation. The department implements this package through transfers to the programmes.

As part of Cabinet approved reductions, the department's allocation is reduced by R638 million over the medium term. The reductions are to be effected mainly in goods and services, on non-core items such as communication, venues and facilities, and travel and subsistence; and the economic competitiveness and support package for the special economic zones investment incentives. The reduction to the special economic zones investment incentives is not expected to negatively affect service delivery as the Special Economic Zones Bill (2013) was not passed in 2013. The deferment will enable the planning process to take shape. The mandate of the department expanded due to revisions in the legislation for broad based black economic empowerment, cooperatives, and the new Special Economic Zones Bill (2013), among others, as well as the implementation of new incentive schemes, which include the manufacturing competitiveness enhancement programme and the special economic zone incentives. As a result, spending on compensation of employees is projected to increase over the medium term, with the establishment growing to 1 731 posts in 2016/17 from a funded establishment of 1 715 posts in 2013/14, of which 290 were additional to the establishment. The additional positions were created to support the department's expanded mandate and deal with capacity requirements. There were 142 vacancies at the end of November 2013, due to resignations and the difficulties experienced in recruiting personnel with the necessary skills. The department has recruitment strategies in place to fast track appointments by 2014/15.

### Infrastructure spending

The department's expenditure on infrastructure relates mainly to the industrial development zones and the critical infrastructure programme.

#### *Mega project: Industrial development zones*

The industrial development zones programme was introduced in 1999 as an incentive scheme to encourage the establishment of industrial development zones to promote foreign direct investment in export oriented industries. The programme had some initial success in meeting its goals, but a review in 2008 showed a number of weaknesses. As a result, the special economic zones strategic framework was developed and encapsulated in the Special Economic Zones Bill (2013). The special economic zones programme will now consist of special economic zones, as well as industrial development zones.

Between 2001/02 and 2012/13, the department transferred R6.1 billion to the Coega, East London and Richards Bay industrial development zones. These funds were used to develop the infrastructure to attract private sector investment in export orientated industries, promote the growth of domestic industries, and create jobs. In the period between 2010/11 and 2012/13, the department held several engagements regarding the Saldanha industrial development zone application, which was designated in August 2013.

The industrial development zones have to date attracted 72 investors and about R17 billion worth of investments. 42 of these projects are already operational. 20 are located in the Coega industrial development zone, 21 in the East London industrial development zone, and 1 in the Richards Bay industrial development zone. Collectively, these industrial development zones created approximately 49 000 direct and indirect jobs.

Over the medium term, the special economic zone investment incentive has a revised allocation of R3.6 billion, reduced by R553 million due to the need to conduct the preparatory work before the project becomes operational. This will be used mainly for conducting pre-feasibility and feasibility studies for the proposed special economic zones in all nine provinces, infrastructure projects in the existing industrial development zones, and newly designated special economic zones through the incentive scheme.

The **Coega industrial development zone** was designated in 2001. Between its inception and March 2013, the department transferred R4.3 billion to the zone for infrastructure projects, and R308 million in 2013/14. The zone currently has 20 operational investors with a value of R1.13 billion; and has created about 40 900 (construction, direct and indirect) jobs. Another 17 investors, with an investment value of R9 billion, have been signed up but are not yet operational on site. In 2012/13, the zone signed up 8 new investors worth R1.7 billion. Sectors active in this zone include agro-processing, general manufacturing, business process services, energy, automotive and petrochemicals. The infrastructure programmes include road construction, earthworks, electricity, water, sewerage, factories and office buildings.

The **East London industrial development zone** was designated in 2001. From inception to March 2013, the department transferred R1.3 billion for infrastructure development to the zone, of which R100 million was allocated for 2013/14. The zone has to date secured 31 investors to the value of R4 billion; 21 of these, worth R1.08 billion, are operational on site. The zone has so far created over 7 500 direct and indirect construction jobs. Its key focus sectors are automotive, marine aquaculture, agro-processing (bio-fuels, food and timber), pharmaceuticals, ICT and electronics, business process services, and the automotive supplier park. In 2012/13, the East London industrial development zone attracted 5 new investments to the value of R284 million.

The **Richards Bay industrial development zone** was designated in 2002 but due to delays related to land, environmental and other issues, only started infrastructure development in 2010/11. The department has to date transferred R331 million for infrastructure expenditure to this zone, with R30 million allocated for 2013/14. The zone's key strategic industrial sectors include aluminium clustering, wood, chemicals and mineral beneficiation. Thus far the industrial development zone has 1 investor worth R800 million (later expanded to R980 million) operational on site and this has created approximately 180 jobs.

The **OR Tambo International Airport industrial development zone** was designated in 2002 and received a provisional operator permit in 2010. The first phase of construction, on 6.1 hectares of land leased from the Airports Company of South Africa, was scheduled to begin in 2013/14, but this has not yet taken place. The department is assisting the Gauteng provincial government in addressing the bottlenecks delaying the progress of the zone. The department's funding for the planned zone will include provision for improved infrastructure.

The **Saldanha Bay industrial development zone** was designated in August 2013. The department will finance initial infrastructure developments in this zone through the special economic zones investment incentive. Infrastructure for which capital is required includes the water demand management programme, bulk sewerage, upgrading of the Saldanha waste water treatment system, public transport facilities, bulk water supply services, solid waste transfer systems, and internal engineering services inside the industrial development zone area.

*Large project: Critical infrastructure development programme*

The critical infrastructure development programme is a cost sharing grant for projects designed to improve critical infrastructure in South Africa. The programme supports infrastructure projects in mining, tourism, manufacturing and services on a reimbursement basis. R330.7 million was spent on this programme between 2010/11 and 2012/13, and R140 million in 2013/14. R570 million is allocated over the medium term for grants subsidising development costs, from a minimum of 10 per cent to a maximum of 30 per cent of qualifying infrastructure projects. The programme expects to provide financial support to 39 enterprises over the medium term, with an estimated project investment value of R19 billion.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will continue to be on providing high quality corporate management services support to the department through sustainable and integrated resource solutions and services. Thus, expenditure on goods and services and compensation of employees will continue to drive spending, led by the *Corporate Services* and the *Office of the Director General* subprogrammes to ensure operational efficacy. The bulk of the allocation for goods and services across the seven-year period is for operating leases, consultants, and travel and subsidies. Spending in the *Communication* subprogramme is expected to decrease over the medium term due to the shifting of the media relations and public relations functions from this subprogramme to become a new separate subprogramme.

Between 2010/11 and 2013/14, the *Corporate Services* subprogramme accounted for 59.6 per cent of the programme spend mainly to provide for the payment of the operating lease for the department's accommodation. Expenditure in this subprogramme and on the operating leases is expected to continue to take up the bulk of the programme's allocation over the medium term. However, expenditure on goods and services is expected to decline over this period as the department implements the approved Cabinet approved reductions of R30 million on goods and services such as contractors and venues and facilities. The department will manage the reduction by implementing cost-cutting measures to ensure that they do not adversely affect service delivery.

Spending on compensation of employees is projected to grow moderately over the medium term due to improved conditions of service. The programme has a total of 595 funded posts, with 36 vacancies at the end

of November 2013. The vacancies are due to high turnover and the difficulties experienced in recruiting qualified staff in light of the skills shortage.

Expenditure on consultants is expected to grow over the medium term as their services are required particularly within the *Corporate Services* subprogramme to serve the department's ICT needs; and within the *Office of the Director General* subprogramme for economic research and policy coordination, and to provide high quality corporate management services support to the department.

## Programme 2: International Trade and Economic Development

### Objectives

- Promote African economic integration and development at bilateral, regional and continental levels by:
  - advancing development integration in the Southern African Customs Union and the Southern African Development Community (SADC) free trade area with the Africa regional development programme to be implemented in 2014/15
  - launching the SADC-East African community common market free trade area in 2014/15.
- Advance South Africa's trade, industrial policy and economic development objectives through cooperation with key economies to address tariff and non-tariff barriers that inhibit South African value added exports in 2014/15.
- Build national consensus around trade and investment policy, strategy and negotiation by strengthening research and national consultation for agreed national trade and investment policy positions in 2014/15.

### Subprogrammes

- *International Trade Development* facilitates bilateral and multilateral trade relations and agreements. In 2012/13, South Africa was represented at the economic partnership agreement negotiations to establish a common trade in goods arrangement between the Southern African Customs Union and the European Union (EU). In 2013/14, trade negotiations should be finalised with the EU under the economic partnership agreement with the South African Customs Union, and also between India and the SADC. Transfer payments are made annually to the Organisation for the Prohibition of Chemical Weapons, and to Protechnik Laboratories, an Armaments Corporation of South Africa institute, as part of South Africa's contribution to international non-proliferation treaties and regimes; and to the World Trade Organisation for membership fees. This subprogramme had a staff complement of 100 in 2013/14.
- *African Economic Development* facilitates bilateral and multilateral African trade relations aimed at deepening regional integration. In 2012/13, work was undertaken within the Southern African Customs Union to design and implement a five-point plan for regional industrial development. In 2013/14, work continued on the implementation of the union's five-point work programme. Transfer payments are made quarterly to the Development Bank of Southern Africa for regional spatial development initiatives. This subprogramme had a staff complement of 51 at the end of November 2013.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

**Expenditure trends**

The spending focus over the medium term will be on developing international trade relations and facilitating African economic development initiatives to build mutually beneficial regional and global relations to advance South Africa's trade, industrial policy and economic development objectives. This accounts for the significant

spending over the medium term on compensation of employees, transfers to international bodies, and travel and subsistence. In addition, spending on compensation of employees on the programme's funded establishment of 151 posts at the end of November 2013 is projected to increase slightly over the medium term to ensure that the salaries of the personnel who perform these knowledge intensive activities remain competitive. Spending over this period is to ensure that the department reaches its target of 19 technical business missions and government-to-government platforms planned in 2016/17. These activities are carried out by the *International Trade and Development* subprogramme, where spending is projected to increase moderately as expenditure on travel and subsistence to represent the country in international trade negotiations is set to increase to R21.1 million by 2016/17. Expenditure in this subprogramme increased at an average annual rate of 12.5 per cent between 2010/11 and 2013/14, as the department was involved in trade negotiations with the European Union to establish a common trade in goods arrangement between the Southern African Customs Union and the EU.

At the end of November 2013, the programme had 10 vacancies, mainly due to the turnover of staff whose skills are in demand in the market. To give effect to Cabinet approved budget reductions, the department is to reduce spending on goods and services by R2.5 million over the medium term. The reductions are to be effected in spending on items such as communication, consultants, contractors, and venues and facilities. This will not impact negatively on the programme's service delivery as the reduction is insignificant compared to the total programme budget.

## **Programme 3: Broadening Participation**

### **Objectives**

- Enhance economic growth and employment through fostering the growth of small, medium and micro enterprises and cooperatives by:
  - strengthening the establishment of 24 new incubators and support for 42 existing incubators by 2016/17
  - facilitating an increase in the number of small medium and micro enterprises (SMMEs) receiving business development support from the Small Enterprise Development Agency through its technology programme to 3 052 over the medium term, and the creation of 970 new enterprises over the medium term
  - coordinating the establishment of small scale cooperatives through the implementation of the Cooperatives Amendment Act (2013) to contribute to poverty reduction over the medium term
  - promoting entrepreneurship through the creation and support of centres of entrepreneurship over the medium term
  - supporting 80 industrial innovation projects and enabling 5 058 students to participate in the development of new technologies over the medium term.
- Phase in the implementation of the national informal business upliftment strategy to create an enabling environment for the mainstreaming and competitiveness of the informal business sector, by convening stakeholder workshops on the policy documents and the strategy, with 2 reviews in 2014.
- Facilitate financial and non-financial support for youth enterprises through the implementation of the youth enterprise development strategy by developing action plans on a quarterly basis over the medium term.
- Strengthen the department's capacity to implement the Broad Based Black Economic Empowerment Act (2003) by developing an action plan and convening stakeholder workshops in 2014, and establishing a broad based black economic empowerment commission by 2015/16.

### **Subprogrammes**

- *Enterprise Development* is discussed in more detail below.
- *Equity and Empowerment* promotes broad based black economic empowerment (BEE) and women empowerment. Transfer payments are made to organisations that support entrepreneurial empowerment and transformation, such as the Isivande Women's Fund, which provides affordable finance to all sectors of the economy with particular emphasis on rural enterprises, and the South African Women Entrepreneurs' Network, which supports women entrepreneurship by developing networking facilities. In 2012/13, the black economic empowerment (BEE) legislation and codes of good practice were reviewed to support an

environment for restructuring the South African economy to enable the meaningful participation of black people, women, youth, and people living with disabilities. The 2012 Broad-Based Black Economic Empowerment Amendment Bill was endorsed by the portfolio committee on trade and industry in 2013/14. This subprogramme had a staff complement of 33 at the end of November 2013.

- *Regional Economic Development* promotes spatially balanced economic development and productivity improvements by developing policies, strategies and programmes that focus on underdeveloped regions. In 2012/13, the regional industrial development strategy was developed. The strategy aims to unlock the economic potential of lagging regions and facilitate their industrialisation. In 2013/14, the strategy was implemented in phases with the focus being on completing 50 per cent of the special economic zones pre-feasibility studies. In addition, transfer payments were made to the University of Johannesburg's capacity building programme for economic development. The programme is contributing towards broadening and deepening the pool of skills required to support economic development, primarily at a local government level. This subprogramme had a staff complement of 39 at the end of November 2013.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on: broadening economic participation and employment by financing the development of small enterprises, promoting entrepreneurship and small enterprise development, and giving effect to the provisions of the amended Co-operatives Act (2005); and implementing policies, legislation and strategies, such as the amended broad based black economic empowerment legislation, the national strategic framework on gender and women economic empowerment and the regional industrial development strategy, in the *Regional Economic Development* and *Equity and Empowerment* subprogrammes.

At 79.9 per cent of the total budget, transfers to departmental agencies and accounts are the largest spending item over the medium term. These are largely undertaken in the *Enterprise Development* subprogramme and take the form of transfers to aid small enterprises, incubation, and technological skills, among others. More information about this is provided below under the selected subprogramme discussion. Compensation of employees is the second largest item of expenditure in this programme over the seven-year period due to the

labour intensive work of the programme, with significant growth in expenditure notable between 2010/11 and 2013/14 for capacitating the programme. Spending on compensation of employees is projected to increase over the medium term to provide for improved conditions of service. At the end of November 2013, the programme had an approved establishment of 134 posts and 18 additional posts, with 9 vacancies. Vacant posts were mainly due to staff turnover and natural attrition.

While expenditure on goods and services is set to decline over the medium term to give effect to Cabinet approved budget reductions, the department has implemented cost-cutting measures with reductions in spending on contractors, venues and facilities. However, expenditure on consultants is set to grow significantly over the medium term for legislative drafting and review; research, monitoring and evaluation; feasibility studies; and trend analysis. These are all functions for which the skills are not available internally.

## Subprogramme: Enterprise Development

This subprogramme creates an enabling environment conducive to the development and growth of informal businesses, SMMEs and cooperative enterprises. It also provides a broad range of business development support. In 2012/13, the incubation support programme was introduced with a view to establishing 250 incubators by 2015/2016. In 2012/13, 13 applications were approved with a total project value of R373 million in sectors ranging from renewable energy, ICT, agro-processing, chemicals, mining, and clothing and textiles. At the end of September 2013, applications to the value of approximately R410 million had been approved, with a total value of investment to be made of R817 million, and over 19 500 jobs to be created.

In 2012/13, the Co-operatives Act (2005) was reviewed with the aim of enhancing institutional mechanisms by establishing the cooperatives development departmental component, which will provide business development support to cooperatives; and establishing a cooperatives tribunal, which will adjudicate disputes. In August 2013, the president approved the Co-operatives Amendment Act (2013). In addition, the guidelines and programme for red tape reduction were launched in the second quarter of 2013/14, to provide a supportive regulatory environment for SMME entrepreneurship.

50 per cent of total transfers go to the Small Enterprise Development Agency, which provides non-financial business development and support services to small enterprises, and 16 per cent to the agency's technology programme. Other large transfers are made to the National Research Foundation technology for human resources and industry programme, and the Industrial Development Corporation of South Africa support programme for industrial innovation. The subprogramme had a funded establishment of 62 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on expanding the contribution of SMMEs and cooperative enterprises to job creation and economic growth by funding technology and skills development programmes, promoting centres of entrepreneurship, and implementing the informal business upliftment and youth enterprise development strategies. The funding is provided by way of transfers to the Small Enterprise Development Agency and the National Research Foundation. The agency provides non-financial business development and support services to SMMEs, and supports early technology ventures aimed at increasing competitiveness through the small enterprise development technology programme, which is projected to increase the number of technology incubators supported from 42 in 2013/14 to 60 in 2016/17, and to create 970 new enterprises over the medium term. The transfer to the foundation supports research and technology development through the technology for human resources programme, with a target of skills being transferred to 2 000 students and 800 researchers by 2016/17.

Due to the new cooperative development departmental component, and the need to increase capacity, spending on compensation of employees grew by 54 per cent between 2010/11 and 2013/14, and is expected to grow modestly over the medium term. To give effect to Cabinet approved budget reductions, the department is to spending on goods and services over the medium term. This subprogramme had a total of 62 funded posts to the establishment at the end of November 2013, and 6 vacancies, which will be filled by 2014/15.

## Programme 4: Industrial Development

### Objectives

- To achieve its objectives, the Industrial Development programme requires advocacy work, and the development and deployment of industrial policy instruments to prevent industrial decline. The programme will support the growth and diversification of South Africa's manufacturing sector by:
  - facilitating diversification beyond the current reliance on traditional commodities and non-tradable services in priority sectors over the medium term
  - promoting the long term intensification of South Africa's industrialisation process and movement towards a knowledge economy on an ongoing basis
  - promoting a more labour absorbing industrialisation path with a particular emphasis on tradable labour absorbing goods and services, and economic linkages that catalyse employment creation over the medium term
  - promoting a broader based industrialisation path characterised by increased participation in the mainstream of the industrial economy over the medium term of historically disadvantaged people and marginalised regions

- contributing to industrial development on the African continent, with a strong emphasis on building its productive capacity over the medium term.
- Specific interventions contained in the three-year industrial policy action plan, which is produced and reviewed annually, include the development of sector specific action plans to expand value added activities in existing and new sectors of the economy; the deployment of skills initiatives to support industrial development; and the creation of economic benefits for South African industries by leveraging off government procurement.

## Subprogrammes

- *Industrial Competitiveness* develops policies, strategies and programmes to strengthen the ability of manufacturing, and other value adding sectors, to create decent jobs, and increase value addition and competitiveness in domestic and export markets, as set out in the annual three-year rolling industrial policy action plan. The fourth industrial policy action plan was launched in April 2013, setting out transversal and sector specific programmes and key action plans with time bound milestones. Transfer payments are made to various public entities, including the South African Bureau of Standards, the National Metrology Institute of South Africa, the National Regulator for Compulsory Specifications, the South African National Accreditation System, the Council for Scientific and Industrial Research for the national cleaner production centre of South Africa, and Proudly South African. This subprogramme had a staff complement of 55 at the end of November 2013.
- *Customised Sector Programmes* develops and implements high impact sector strategies focused on manufacturing and other value adding sectors to create decent jobs and increase value addition and competitiveness in domestic and export markets, as set out in the annual three-year rolling industrial policy action plan. In 2010/11, the clothing and textiles competitiveness programme was developed to introduce an important production and competitiveness enhancement incentive, which encourages production and job creation activities more directly. By the end of September 2013, 728 enterprises had been supported and approximately 62 350 jobs had been saved. Transfer payments are made to various public entities, including the Industrial Development Corporation of South Africa for the clothing and textiles production incentive; customised sector programmes at the Council for Scientific and Industrial Research for the aerospace industry programme; the National Foundry Technology Network; the Intsimbi national tooling initiative; and the Centurion Aerospace Village. This subprogramme had a staff complement of 116 at the end of November 2013.

## Expenditure trends

The spending focus over the medium term will continue to be on strengthening the manufacturing and other value added sectors, such as clothing and textiles, metals, and pharmaceuticals, which generate employment and increased value in domestic and international markets. This will be done by implementing the key action programmes of the annual three-year rolling industrial policy action plan, the fourth iteration of which was released in 2013. The plan is implemented through the *Customised Sector Programmes* subprogramme, which uses the bulk of the programme's allocation over the seven-year period. Through funding the key clothing incentive mechanism, the programme created approximately 12 200 new, decent permanent jobs in the sector between 2010/11 and 2013/14.

Other transfers and subsidises, which make up 19 per cent of the total budget and increase over the medium term, are for assisting technical regulatory institutions to improve the industrial, safety, health technical standards and specifications, accreditation mechanisms and enforcement procedures, which they implement and which form a central pillar of South African industry. The focus enables the provision of additional resources to the National Regulator for Compulsory Specifications to build a culture of compliance, and allows for the upgrading of ageing equipment and facilities at the National Metrology Institute of South Africa. Other transfers to public corporations include programmes that address the manufacturing skills gap through the national tooling initiative and the national foundry technology network. At the end of November 2013, the programme had a total of 171 funded posts, which is expected to remain constant throughout the MTEF period. There were 17 vacancies, mainly due to natural attrition.

To give effect to Cabinet approved budget reductions, the department is to reduce spending in this programme by R8 million over the medium term. The reductions are to be effected in spending on consultants, and travel and subsistence. The reductions are not expected to adversely affect service delivery.

## Programme 5: Consumer and Corporate Regulation

### Objectives

- Increase access to economic opportunities for small businesses and historically disadvantaged citizens by attracting domestic and foreign investment by 2016.
- Increase investor confidence and certainty in the economy by:
  - developing world class regulatory frameworks for the monitoring, compliance and enforcement of consumer and corporate regulations by 2017
  - conducting regulatory impact assessments that address financial, economic and social assessments, annually
  - reviewing and finalising amendments to legislation, including the Business Act (1991), the National Credit Act (2005), and the 2013 Licensing of Business Bill; and developing a regulatory framework for the lotteries in 2014/15
  - reviewing the Liquor Act (2003) and the National Gambling Act (2004); and developing policy on intellectual property and 2 regulatory frameworks emanating from the amended versions of the National Credit Act (2005) and the Business Act (1991) in 2015/16
  - reviewing the Consumer Protection Act (2008) and the Companies Act (2008), developing a regulatory framework for intellectual property by 2016/17, and protecting intellectual property rights by formulating policies and drafting legislation by 2018.
- Create competitive, fair and efficient markets by:
  - having effective financial, economic, governance and related regulatory institutions in place by 2015
  - conducting biannual regulatory impact assessments on consumer and corporate regulations.
- Enhance and protect consumer rights through improved consumer awareness of the dispute resolution institutions by monitoring the performance of the institutions on an ongoing basis.
- Create a business regulatory environment that promotes competitive, fair and efficient markets by:
  - continuously monitoring and evaluating institutional management through the implementation of the agency rationalisation project recommendations on performance and management
  - continuously monitoring, evaluating, and assessing the impact of the work of the department, including its focus on anti-piracy; formalising projects; and conducting market research, surveys and trend analyses.
- Provide access to redress for consumers and businesses to increase confidence in markets by monitoring compliance through inspections of facilities; and providing education and awareness of safety, health and environment standards on an ongoing basis.
- Review, amend and implement the framework to increase industry transformation, enhance consumer protection, and carry out socio-economic impact assessments annually.
- Coordinate the implementation of concurrent jurisdiction mandates by reviewing the Consumer Protection Act (2005) and the Gambling Act (2008) in 2016/17; and implementing the Lotteries Amendment Act (2013) over the medium term.
- Promote awareness of rights, duties and responsibilities to increase activism and public participation in consumer and corporate regulations by:
  - engaging with and providing support to institutions of higher learning and research institutions
  - advocating and capacitating fieldworkers so they can educate and raise awareness about available services and products in areas such as intellectual property for the protection of indigenous knowledge, and the amended Lotteries Act (1997), between 2014/15 and 2016/17.
- Share and exchange regulatory experience with partners nationally and internationally to promote simple, appropriate and more effective regulatory solutions by participating in international forums such as the World Intellectual Property Organisation and relevant trade and investment forums, and developing position papers for publication and ratification over the medium term.

## Subprogrammes

- Policy and Legislative Development* develops policies, laws and regulatory frameworks. Key activities in 2012/13 included the development of a policy framework and the 2013 Licensing of Businesses Bill; the finalisation of the policy framework for intellectual property, which incorporates the Copyright Review Commission report and which was adopted by Cabinet for public consultation; the 2013 National Credit Amendment Bill; the policy framework and 2013 Lotteries Amendment Bill, which was developed and presented to Cabinet; and the development of the impact assessment study on the Liquor Act (2003) and draft policy by September 2013. This subprogramme had a staff complement of 33 at the end of November 2013.
- Enforcement and Compliance* conducts trend analyses, impact assessments and market surveys, and monitors the effectiveness of regulation. Key activities in 2012/13 included implementing the governance in liquor regulation, the cooperative governance in liquor regulation, and compliance inspections with regard to the Africa Cup of Nations, carried out by 14 officials across 5 provinces for all 32 matches. By the end of September 2013, the process of updating and scanning liquor registration files had been completed, cancelled registrations had been closed, and the files had been archived. In 2013/14, alcohol abuse prevention strategies and campaigns were implemented through television, radio and print advertisements, reaching a viewership and listenership of approximately 31 million people. This subprogramme had a staff complement of 43 at the end of November 2013.
- Regulatory Services* transfers funds to and oversees the following regulatory agencies: the National Consumer Tribunal; the National Credit Regulator; the National Gambling Board; the National Consumer Commission; the Companies and Intellectual Property Commission; the Companies Tribunal; the National Lotteries Board, which does not receive funding from the department but regulates the lotteries sector and facilitates the distribution of lottery funds to worthy organisations that serve public interest; the Takeover Regulation Panel; and the Financial Reporting Standards Council, which does not receive funding from the department but is responsible for regulating applicable transactions and the issuance of standards. A memorandum of agreement with the Congress of Traditional Leaders of South Africa was finalised in November 2011 to build and formalise relations and help the department to reach rural communities. 50 fieldworkers were deployed in 9 provinces, with another 50 to be deployed before the end of 2013/14. The multimedia anti-piracy campaign, which aims to curb illegal copying and to promote South African products, was relaunched in September 2013. In addition, formalisation workshops were held to encourage the creative industry to know the copyright law, formalise and register their businesses, register for tax, and gain access to government incentives and training programmes. The agency rationalisation project and its implementation plan, which recommends appropriate governance structures for regulatory agencies and aims to improve their efficiency and monitor them over the medium term, will be completed over the medium term. This subprogramme had a staff complement of 74 at the end of November 2013.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

**Expenditure trends**

The spending focus over the medium term will be on upholding the quality of standards for businesses and consumers by making significant transfers to the departmental agencies through the *Regulatory Services* subprogramme. Thus, over the medium term, transfers to the agencies are expected to make up over 72.1 per cent of the budget. Also in this period, spending on compensation of employees is expected to

take up 18.5 per cent of the programme's total budget, and to increase moderately to provide for improved conditions of service.

Within the *Policy and Legislative Development* subprogramme, the focus over the medium term will be on providing a policy and regulatory framework and solutions to achieve efficient, competitive and socially responsible legislation. This will involve developing policies; reviewing regulations; conducting legislative audits and advocating on these; developing regulations; drafting legislation on wide ranging matters including intellectual property, with the aim of extending access to medicine and education; and reviewing the companies and consumer protection acts to assess their implementation and impact.

Between 2010/11 and 2013/14 the programme's expenditure on transfers to departmental agencies increased significantly, due to the establishment of the National Consumer Commission, the Companies Tribunal, and the Companies and Intellectual Property Commission, which ensure that well functioning markets are fair, competitive, and responsible to consumers; adjudicate disputes in accordance with the Companies Act (2008); and manage, regulate and enforce compliance by businesses. Expenditure on transfers and subsidies over the medium term is expected to increase by R94 million, due to increased allocations through reprioritisation to the entities to enhance regulation capacity. To give effect to Cabinet approved budget reductions, the department is to reduce spending in this programme by R8 million over the medium term. Reductions are to be effected in spending on goods and services, travel and subsistence, contractors, and venues and facilities.

This programme has a funded establishment of 150 posts, and at the end of November 2013 there were 20 vacancies, mainly due to staff turnover. The department plans to fill these vacancies by 2014/15.

## **Programme 6: Incentive Development and Administration**

### **Objectives**

- Stimulate and facilitate the development of sustainable, competitive enterprises, through the efficient provision of effective and accessible incentive measures that support national priorities in accordance with the medium term strategic framework over the medium term.
- Improve the impact of incentive programmes through the implementation of an online and automated integrated electronic management system in 2014/15.
- Design, administer, monitor and evaluate a range of incentive programmes on an ongoing basis, based on the industrial policies and sector strategies developed by the department.
- Administer the manufacturing competitiveness enhancement programme which provides a credible support package to stabilise and grow output, employment and confidence in the manufacturing sector in order to encourage firms to innovate and invest in activities that will enhance their productivity and bolster competitiveness by 2017/18.
- Develop the special economic zones to contribute to the accelerated growth of manufacturing and internationally traded services by attracting foreign direct investment and developing growth orientated domestic businesses, leading to increased employment, exports and regional development over the long term.

### **Subprogrammes**

- *Broadening Participation Incentives* provides incentive programmes that promote broader participation in the mainstream economy by businesses owned by individuals from historically disadvantaged communities and marginalised regions. Transfers are made to the black business supplier development programme, through which qualifying black business suppliers are supported; and the cooperatives incentive scheme, through which qualifying cooperatives in the emerging economy acquire business development skills and services. In 2012/13, 1 527 enterprises were supported. By the end of September 2013, the broadening participation incentives had supported 800 black business suppliers and cooperatives. This subprogramme had a staff complement of 54 as at 30 November 2013.
- *Manufacturing Incentives* provides incentives to promote additional investment in the manufacturing sector. The manufacturing investment cluster comprises the following programmes and schemes: the manufacturing competitive enhancement programme, the enterprise investment programme, the small and medium

enterprise development programme, the automotive investment scheme, the export marketing and investment assistance scheme, the sector-specific assistance scheme, the capital projects feasibility programme, and the section 12I tax incentive scheme. In 2012/13, 589 projects were approved with a total grant of R5.1 billion. Of these, 548 were in the manufacturing investment programme, 29 were in the automotive incentive scheme, and 12 were in the 12I tax incentive scheme. The manufacturing investment cluster incentives are projected to support the creation of approximately 87 000 jobs. To create and sustain jobs, 1 132 claims worth R700 million were paid for manufacturing investment programme projects, and 135 claims worth R824 million were paid for automotive incentive scheme projects. In the first six months of 2013/14, 392 incentive scheme projects were approved with a total investment of R14.4 billion; of these, 167 were in the manufacturing investment programme, 12 were in the automotive incentive scheme, 3 were in the section 12I tax incentive scheme, and 210 were in the manufacturing competitiveness enhancement programme. This subprogramme had a staff complement of 185 at the end of November 2013.

- *Services Investment Incentives* provides incentive programmes that promote increased investment and job creation in the services sector. The programmes include the business process services programme, and the film and television production incentive support programme for South African and foreign productions. In 2012/13, 205 projects were approved with a total grant value of R657 million. Of these, 71 were for film and television productions, with a total value of R331 million; and 12 were business process services with a total value of R41 million. In the first 6 months of 2013/14, 55 projects were approved with a total investment value of R1 633 million. Of these, 49 were for film and television productions, with a total investment value of R1 2693 million; and 5 were business process services with a total value of R370 million. This subprogramme had a staff complement of 15 at the end of November 2013.
- *Infrastructure Development Support* leverages off investments in the South African economy by providing infrastructure critical to industrial development, thereby increasing the export of value added commodities and creating employment opportunities. In 2012/13, 6 projects were supported and the special economic zones programme was established. Parliament is expected to consider the 2013 Special Economic Zones Bill in 2014. In the first 6 months 2013/14, 2 projects were approved for the critical infrastructure programme. This subprogramme had a staff complement of 21 at the end of November 2013.
- *Product and Systems Development* reviews, monitors and develops incentive programmes to support the industrial policy action plan, and develops sector strategies to address market failures. Key activities include the development and enhancement of incentive project products. The revised manufacturing competitiveness enhancement, incubator support, and aquaculture development enhancement programmes were launched in 2013/14. This subprogramme had a staff complement of 24 at the end of November 2013.
- *Business Development and After Care* facilitates access to targeted enterprises by reviewing the success of incentive schemes and improving such schemes. In 2012/13, an incentive capacity building workshop was held for officials from the Western Cape investment and trade promotion agency and the East London industrial development zone. In addition, incentive road shows took place in February 2013 in partnership with the Western Cape Department of Economic Development and Tourism. In the first 6 months of 2013/14, 55 targeted workshops were conducted on broadening participation and competitiveness in the manufacturing and services clusters. This subprogramme had a staff complement of 34 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on promoting activities through the provision of manufacturing development incentives to stimulate additional investment in the manufacturing sector, resulting in increased output and employment. Preparatory work including research, stakeholder relations and infrastructure planning has been done to stimulate industrial development. This includes consultations and negotiating mandates for the special economic zones in all nine provinces. The largest expenditure item in the programme in this period is transfers to public corporations and private enterprises, which make up 96.5 per cent of the total budget. Over the medium term, the *Manufacturing Incentives* subprogramme receives just over 61.1 per cent of the total budget and the *Infrastructure Development Support* subprogramme 21.6 per cent.

Expenditure increased between 2010/11 and 2013/14 on transfers to the manufacturing development incentives following the implementation of new incentives under transfers to private enterprises. These include the automotive incentives scheme and the enterprise investment programme, which are significant job creating initiatives within the manufacturing development incentives. These initiatives are expected to continue over the medium term, which accounts for the significant allocation to manufacturing development incentives transfers and subsidies in this period, which include the manufacturing competitiveness enhancement programme. As a result of these initiatives, the number of companies supported through the manufacturing competitiveness enhancement programme is anticipated to increase to 500 in 2016/17 from 189 in 2012/13. By 2016/17, over 7 302 jobs are expected to be supported through the enterprise investment programme and manufacturing development incentives, compared with 5 415 in 2013/14.

To give effect to Cabinet approved budget reductions, a decrease in spending of R9.1 million is to be effected over the medium term on goods and services, particularly on consultants, contractors, and travel and subsistence; and R533 million on special economic zones investment incentives. The spending plans will be informed by the 2013 Special Economic Zones Bill, once it is enacted.

The programme has a funded establishment of 333 posts. At the end of November 2013, there were 31 vacancies, mainly due to staff promotions and the difficulties experienced in recruiting staff because of the scarcity of skills in this specialised area. The subprogramme has a recruitment strategy to fill the vacancies in 2014/15.

## Programme 7: Trade and Investment South Africa

### Objectives

- Promote and attract direct investment from targeted countries into targeted sectors of the South African economy, as per the industrial policy action plan, with a target of R135 billion by 2016/17.
- Promote South African value added goods and services abroad by broadening the export base; increasing market share in targeted high growth markets, especially in countries such as the Brazil-Russia-India-China-

South Africa (BRICS) group of countries, African countries, and other developing countries; and sustaining market share in traditional markets, with a target of R3 billion for 2014/15 and R10.5 billion by 2016/17.

- Review the export strategy over the medium period in order to enhance South African export capabilities by 2014/15.
- Manage the implementation of the revised national exporter development programme that covers a number of critical components and a menu of innovative structures, new tools, and value-added services, to increase the exporter base in the country as well as to assist exporters and better position them to enter new markets by 2014/15. It also provides for a more coherent stakeholder engagement and co-ordination programme between government and the private sector based on the review of the export council model.
- Further enhance the promotion of exports and investment by placing foreign economic representatives, responsible for promoting foreign direct investment and the export of South African goods and services internationally, in 27 foreign economic missions over the medium term.

## Subprogrammes

- *Investment Promotion and Facilitation* facilitates the increase in the quality and quantity of foreign and domestic direct investment by providing investment, recruitment, problem solving and information services. The subprogramme promotes South Africa as an investment destination, with a target of R50 billion in investments for 2013/14. In 2012/13, a pipeline of projects worth R53.5 billion was achieved and a further R23.2 billion had been achieved by the end of September 2013. Key activities include stakeholder engagement, strategy formulation, study tours and country visits. The subprogramme is also responsible for organising annual international investment conferences, such as the Africa Dialogue. This subprogramme had a staff complement of 51 at the end of November 2013.
- *Export Promotion and Marketing* promotes exports of South African value added goods and services to increase market share in targeted high growth markets and to sustain market share in traditional markets. Over the medium term, the trade and investment funding and participation will be extended to 70 national pavilions, 6 group trade missions, 15 investment and trade initiatives and 3 China expos. In 2012/13 22 national pavilions were managed at international trade fairs, 43 group trade missions were organised and 5 international trade initiatives were conducted. By the end of September 2013, 11 national pavilions, 23 group trade missions, 1 international trade institute and 2 special projects, the World Cup legacy in Qatar and a China expo, had been supported. This subprogramme had a staff complement of 55 at the end of November 2013.
- *International Operations* promotes trade and investment, and administers and provides corporate services to the department's foreign office network of 27 foreign economic representatives in 43 countries to enable South African businesses to access global markets. The department also employs 42 locally recruited marketing officers. This subprogramme had a staff complement of 33 at the end of November 2013.
- *Export Development and Support* manages the national exporter development programme, which is designed to contribute to positioning South Africa as a reliable trade partner and improve and expand the country's exporter base. The subprogramme focuses on creating an export culture which encourages global participation; providing assistance, extensive capacity building, and the creation of trade opportunities for exporters; and serving as an industry interface for the department. The national exporter development programme was launched and implemented in April 2013, and will include the global exporter passport training programme, which is set to begin in 2014/15. To support the global exporter programme, a help desk was established at the Department of Trade and Industry campus in 2013/14. In addition, the interest make-up incentive scheme, which supports South African exporters and fosters the utilisation of local technology and goods and services to generate export earnings, receives annual transfers, and is administered by the Export Credit Insurance Corporation of South Africa. This subprogramme had a staff complement of 26 at the end of November 2013.

## Expenditure trends

The spending focus over the medium term will be on increasing the quality and quantity of domestic and foreign direct investment, promoting South African products in targeted markets, and promoting exports and investment in targeted countries. The *Export Promotion and Marketing* subprogramme, which maintains a network of foreign based economic offices, an export helpdesk, and a website, is the largest item of expenditure. The programme aims to achieve an investment pipeline totalling R135 billion over the medium term that will consist of investments from particular countries that are targeted at specific sectors. Spending on compensation of employees is expected to grow significantly over the medium term in line with the programme's plans to increase its funded establishment from 181 posts in 2013/14 to 197 posts by 2016/17 in order to implement the new export strategy. At the end of November 2013, the programme had 19 vacancies, which were mainly due to staff turnover, but which will be filled in 2014/15.

At 35.7 per cent of the total budget over the medium term, the *International Operations* subprogramme is the second largest in the programme, mainly because of spending on compensation of employees and goods and services due to the high costs of operating foreign missions. The subprogramme provides corporate services to the economic offices abroad, which promote South African businesses' access to global markets as part of the trade relations strategy. However, to give effect to Cabinet approved budget reductions, spending on goods and services over the medium term is projected to decline at an average rate of 10 per cent. Other reductions include expenditure on consultants and travel and subsistence. These cuts are not expected to adversely affect service delivery.

Between 2010/11 and 2013/14, expenditure on transfers and subsidies decreased significantly due to a decrease in transfers for the interest make-up incentive scheme administered by the Export Credit and Insurance Corporation. Unspent funds from the scheme were used to cover spikes in disbursements over this period. Allocations to this incentive scheme are projected to grow significantly over the medium term to enhance the competitiveness of South African exports.

## Public entities and other agencies

### Companies and Intellectual Property Commission

#### Mandate and goals

The Companies and Intellectual Property Commission was established in terms of Section 185 of the Companies Act (2008) to function as an organ of state within the public administration but outside the public service. It is mandated to undertake and enhance the functions of the Office of Companies and Intellectual Property Enforcement as well as those previously falling under the Companies and Intellectual Property Registration Office's mandate. The commission regulates companies, close corporations, cooperatives, trademarks, patents, designs, copyright, and enforces rules and regulations.

The commission's strategic goals over the medium term are to:

- improve the competitiveness of the South African economy by enhancing the reputation of South African businesses and the South African business environment
- contribute to a knowledge based economy and competitive local industries by promoting innovation, creativity and indigenous cultural expression and knowledge
- promote broader formal economic participation by enhancing service delivery and extending the reach of the commission.

**Expenditure trends**

The Companies and Intellectual Property Commission generates revenue from the registration of companies, trademarks, patents, and copyright. The increase in revenue over the medium term is mainly due to the increase in applications for intellectual property rights, patents, trademarks, and the incorporation of companies. Revenue over the medium term is expected to grow as the commission improves its operations and the compliance rate improves. However, interest revenue, which relates to the investment of the approved retained earnings at the South African Reserve Bank, is set to decline over the medium term as the funds are used in implementing special projects.

The commission's spending focus over the medium term will be on regulating the behaviour of companies and the intellectual property system in terms of the Companies Act (2008), and promoting broader, formal economic participation through enhanced service delivery. This will improve the reputation of the South African business environment by providing accessible and value-adding registration for business entities and ensuring intellectual property rights. Over the medium term, the largest item of expenditure is in the administration programme, followed by the business regulations and reputation programme. Using funds allocated to these programmes the commission will increase the percentage of companies and cooperatives registered manually within 25 and 21 days, to 95 per cent by 2016/17. These programmes contribute to the work of the commission by developing a successful registration, regulation, and monitoring and enforcement system. As part of the

commission's efforts to improve the quality of its service and its ability to comply with regulatory requirements, expenditure on goods and services increased significantly in 2013/14 due to the implementation of special projects that will continue over the medium term. These include the implementation of the new service delivery model with its IT based platform that will enable the percentage of companies registered electronically within one day to reach 95 per cent by 2016/17, and a move to new office accommodation to provide for the expected increase in the entity's establishment.

Spending on compensation of employees is set to increase significantly over the medium term to support the increase in personnel numbers from 532 in 2013/14 to 660 in 2016/17. There were 189 vacant posts at the end of November 2013, mostly as a result of the change in the organisational structure. Spending on consultants, currently used to fill gaps resulting from the revised organisational structure, is expected to decrease over the medium term as posts are filled by suitably skilled personnel as capacity grows within the commission.

## Export Credit Insurance Corporation of South Africa

### Mandate and goals

The Export Credit Insurance Corporation of South Africa was established in terms of the Export Credit and Foreign Investments Insurance Act (1957) to facilitate and encourage South Africa's export trade by underwriting export credit loans and investments outside South Africa. The corporation is mandated to evaluate export credit and foreign investment risks; provide export credit and foreign investment insurance cover on behalf of the South African government; and manage the interest makeup subsidised interest rate arrangement for participating financial institutions, thereby enabling them to provide loans to South African firms that invest in capital projects abroad.

The corporation's strategic goals over the medium term are to:

- facilitate export trade and investments outside South Africa
- build mutually beneficial local, regional and global relations to advance South Africa's trade and economic development objectives
- promote a professional, competitive and customer focused workforce that ensures an effective and efficient service to customers
- create enterprise wide risk awareness and effective corporate governance and risk management practices
- use sound business environment and social principles by applying international best practice.

## Expenditure trends

The Export Credit Insurance Corporation of South Africa generates revenue mainly from insurance premiums and investment income. Revenue is expected to increase over the medium term as a result of the anticipated growth in policies underwritten, with the corporation aiming for a target of R7 billion of export credit and investment policies that it will sign in 2016/17.

The main spending focus over the medium term will be on continued support for exports to expand the exporter base and the diversification of South Africa's exports, as reflected in the projected increase in projects underwritten. This is also reflected in the increase in the interest make up disbursement, which is an incentive in the form of an interest subsidy that is administered by the corporation on behalf of the department. This is done in support of export transactions, as the scheme enhances the competitiveness of South African exports by enabling South African banks to offer competitive financing for international capital projects. The risk orientation objective is due to an increase in technical insurance provisions as the corporation increases its pipeline. The main cost driver over the medium term is thus expenditure on goods and services, mainly as a result of the increasing tax bill associated with an increasing surplus.

Other items of expenditure under goods and services will also increase over the medium term due to the continued implementation of IT infrastructure, as well as the increased focus on staff training. The value of loans disbursed and investment insurance exposures declared per year is expected to reach R2 billion in 2016/17.

Between 2010/11 and 2013/14, spending on compensation of employees grew significantly, mainly due to the increase in filled positions, in accordance with the approved structure, and over the medium term the number of staff is expected to increase from 57 in 2013/14 to 61 in 2014/15 to support the business growth. At the end of November 2013, the corporation had 6 vacancies which are in the process of being filled. However, the skills required are specialised and scarce, and spending on consultants is therefore expected to increase over the medium term, specifically to compensate for the lack of in-house actuarial skills. Ongoing attention is being given to building these skills within the corporation.

## National Empowerment Fund

### Mandate and goals

The National Empowerment Fund was established by the National Empowerment Fund Act (1998) to promote and facilitate black economic equality and transformation. In providing financial and non-financial support to black businesses and structuring accessible retail savings products for black people, the fund is mandated to implement the empowerment codes of good practice for BEE. The fund has 3 core divisions: small and medium enterprises and rural development, venture capital and corporate finance, and asset management.

The fund's strategic goals over the medium term are to:

- provide finance to business ventures established and managed by black people

- invest in black empowered businesses that have high employment creating opportunities
- support the participation of black women in the economy
- facilitate investment across all provinces in South Africa
- encourage and promote saving, investment and meaningful economic participation by black people
- advance black economic empowerment through commercially sustainable enterprises
- establish the fund as a sustainable development finance institution.

**Expenditure trends**

The National Empowerment Fund generates its revenue mainly from interest on call accounts, interest on investments or loans, and dividend income from MTN shares. Revenue is therefore expected to grow over the medium term in line with prevailing interest rates, the performance of the invested portfolio of companies funded by the fund, and the performance of the MTN shares.

Over the medium term, the fund's spending focus continues to be on promoting and facilitating black economic equality and transformation by providing funding for black owned business ventures. Spending on compensation of employees grew significantly between 2010/11 and 2013/14 due to the growth in personnel numbers. This is directly linked to the number of financing approvals targeted for qualifying black empowered businesses. To date, the four funds have supported 400 black empowered businesses, with 40 000 jobs created, of which 12 000 were new jobs. The organisation's four funds are the Umnotho fund, which provides acquisition, new venture and expansion finance; the Imbewu fund, which supports black empowered small and medium enterprises; the rural and community development fund; and the strategic projects fund, which assists in the acquisition of equity in companies. The expenditure excludes provision for impairments.

42.2 per cent of the fund's expenditure over the medium term is on compensation of employees, with the number of personnel set to increase from 168 in 2013/14 to 195 by 2016/17 as a result of the increased demand for investment professionals in the four funds as they continue to grow. This accounts for the increase in spending on compensation of employees over this period. The value of approvals from the Imbewu fund is set to grow to R430 million by 2016/17 from R180 million in 2013/14. Related expenditure on goods and services is

due to the impairment provision, the main cost driver, which is in line with approval and disbursement targets which will also grow to just over 57 per cent over the medium term.

At the end of November 2013, there were 43 vacant posts, mostly as a result of resignations. Consultants are used mainly for marketing, IT and human resource services in non-core activities.

## National Lotteries Board

### Mandate and goals

The National Lotteries Board was established in terms of the Lotteries Act (1997) and is mandated to regulate the National Lottery as well as other lotteries, including fundraising society lotteries and promotional competitions. The board also advises the Minister of Trade and Industry on policy matters relating to the National Lottery and other lotteries. The board ensures the protection of all participants, maximises revenue for good causes in a responsible manner, administers the National Lottery Distribution Trust Fund, and distributes funds for good causes to the distributing agencies in an equitable and expeditious manner.

The board's strategic goals over the medium term are to:

- improve the impact of the National Lottery Distribution Trust Fund
- review regulatory practice
- sustain organisational capability
- ensure stability and enhance business continuity.

## Expenditure trends

The National Lotteries Board withdraws the funds it requires to pay for running costs from the National Lottery Distribution Trust Fund, basing these withdrawals on an overall annual budget approved by the Minister of Trade and Industry. A small amount of revenue is also generated from interest earned on funds received from licence holders.

Over the medium term, the spending focus will continue to be on regulating all lotteries as required by the board's mandate in order to improve the impact of the National Lottery Distribution Trust Fund and grow sales, which are expected to reach R5.6 billion in 2016/17 from R4.9 billion in 2013/14. Studies are planned to understand the National Lottery Distribution Trust Funds' funding impact on communities. The administration programme accounted for the largest share of expenditure between 2010/11 and 2013/14, and will do so over

the medium term due to the administrative costs associated with effectively managing the work of the board so that it achieves the following objectives: socially uplifting the beneficiaries of the National Lottery Distribution Trust Fund; delivering on its mandate to advise the Minister of Trade and Industry on policy matters; increasing the benefits the public receives from lotteries; reviewing its regulatory practices; and developing the organisation.

Expenditure on compensation of employees will increase over the medium term, with the number of personnel employed standing at 253 in 2016/17. Compensation of employees constitutes 56.4 per cent of total expenditure over the MTEF period. Expenditure on personnel grew significantly between 2012/13 and 2013/14 due to revisions being implemented in accordance with the Lotteries Amendment Act (2013), which provides for full time distributing agency members and associated staff. There were 99 vacancies at the end of November 2013 due to the expanded structure and these will be filled over the medium term. Related to this, expenditure on goods and services over the medium term remains significant, at 42.2 per cent of total expenditure. This includes the costs of key activities such as awareness programmes and road shows which are undertaken in all provinces and targeted to reach 186 events by 2016/17. The board uses consultants mainly for fraud investigations and the grant funding impact study. It has undertaken an exercise to ensure that only work which cannot be undertaken internally is outsourced, with an emphasis on the transfer of skills.

## Small Enterprise Development Agency

### Mandate and goals

The Small Enterprise Development Agency was established in December 2004 in terms of the National Small Business Amendment Act (2004), and is mandated to implement government's small business strategy, design and implement a standard and common national delivery network for small enterprise development, and integrate government funded small enterprise support agencies across all tiers of government.

The agency's strategic goals over the medium term are to ensure that the small enterprise sector grows and increases its contribution to sustainable and equitable social and economic development, employment and wealth creation.

### Selected performance indicators

**Table 36.37 Small Enterprise Development Agency**

Indicator	Programme/Activity/Objective	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Percentage of clients satisfied with quality of Small Enterprise Development Agency services	Enhance competitiveness and capabilities of small enterprises through coordinated services, programmes and products	Outcome 4: Decent employment through inclusive economic growth	80%	80%	98%	88%	90%	90%	90%
Percentage of existing SMME clients whose turnover increased	Enhance competitiveness and capabilities of small enterprises through coordinated services, programmes and products		35%	35%	63%	35%	45%	45%	45%
Percentage of existing SMME clients whose number of employees increased	Enhance competitiveness and capabilities of small enterprises through coordinated services, programmes and products		25%	25%	35%	25%	30%	30%	30%
Number of clients working with the agency per year	Ensure equitable access to business support services		12 000	25 000	10 208	10 400	10 400	10 400	10 400
Number of adopted enterprises under the community public private partnership programme per year	Ensure equitable access to business support services		18	20	28	22	24	24	24
Value of service provision costs covered by partners	Ensure equitable access to business support services		R6.8m	R7.6m	R9.6m	R6m	R6m	R6m	R6m
Number of partnerships operational per year	Ensure equitable access to business support services		40	30	44	40	40	40	40
Percentage of direct service costs versus total costs	Strengthen the organisation to deliver on its mandate		-1	-1	73%	62%	62%	62%	62%
Percentage of deviations of actual expenditure from the approved budget	Strengthen the organisation to deliver on its mandate		-1	-1	2%	5%	5%	5%	5%
Percentage reduction in staff vacancies	Strengthen the organisation to deliver on its mandate		-1	-1	68%	50%	50%	50%	50%
Number of jobs created per year	Assist SMMEs with technology through the organisation's technology programme	-1	-1	2 301	989	1 500	1 500	1 500	

**Table 36.37 Small Enterprise Development Agency**

Indicator	Programme/Activity/Objective	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of clients supported per year	Assist SMMEs with technology through the organisation's technology programme	Outcome 4: Decent employment through inclusive economic growth	-1	-1	2 282	935	1 600	1 600	1 600
Number of clients assisted with technology transfer incentives per year	Assist SMMEs with technology through the organisation's technology programme		-1	-1	99	38	60	60	60
Number of clients supported with conformity assessment and product testing per year	Assist SMMEs with technology through the organisation's technology programme		-1	-1	159	127	130	130	130
Number of clients trained on national and international standards per year	Assist SMMEs with technology through the organisation's technology programme		-1	-1	571	425	450	450	450
Number of clients supported with systems implementation per year	Assist SMMEs with technology through the organisation's technology programme		-1	-1	35	34	30	30	30

## Expenditure trends

The spending focus of the Small Enterprise Development Agency over the medium term will be on developing, supporting and promoting small enterprises to ensure their growth and sustainability by providing them with non-financial services. This is to ensure that the small enterprise sector grows and increases its contribution to sustainable and equitable social and economic development, employment and wealth creation. The agency supports this through business advice, consultancy, training and mentoring, and by assisting SMMEs with technology through the technology programme. It also provides for the incubation of businesses in the SMME sectors through technology demonstration centres, technology incubators, and hybrid centres as part of the technology programme, and for the development of rural enterprises and cooperatives through the cooperatives and community private partnerships programme.

The activities of the agency will result in improved performance and increase employment within SMMEs, and an increased number of clients assisted with technology transfers over the medium term. Goods and services is thus the largest item of expenditure over the seven-year period. Expenditure on goods and services grew significantly between 2010/11 and 2013/14 due to the implementation of special projects, which included expanding the incubation programme to support small businesses and incubators.

Compensation of employees is the second largest item and thus is set to increase due to the delivery network encompassing South Africa, with agency offices and personnel in all nine provinces. This item is set to grow moderately over the medium term due to inflation related adjustment to salaries, with the number of personnel expected to remain constant. Consultants are used largely to perform market research, to conceptualise programmes, and to perform programme evaluations in line with good practices to ensure independence and objectivity. There were 57 vacant posts as at 30 November 2013 due to resignations, promotions, retirements and dismissals.

## South African Bureau of Standards

### Mandate and goals

The South African Bureau of Standards was established as a statutory body in terms of the Standards Act (2008), and is part of South Africa's standardisation, quality assurance, accreditation and metrology technical infrastructure. The bureau is mandated to provide standardisation and conformity assessment services to protect the integrity of the South African market, protect consumers, create a competitive advantage for South African industry, and facilitate access by South Africans to local and international markets. The bureau is the sole publisher of South African national standards, and is responsible for the technical work of the industrial policy action plan.

The bureau's strategic goals over the medium term are to:

- increase the use of standardisation services by broadening the geographic footprint and the scope of services offered, and being client focused
- provide standardisation and conformity assessment services that facilitate development and regulation of

national and regional economic activity, and support the industrial policy framework and the industrial policy action plan

- develop standards and provide conformity assessment services that protect the integrity of the South African market
- provide the conformity assessment services on a commercial basis.

## Expenditure trends

The South African Bureau of Standards derives revenue mainly from fees for certification and testing services. Revenue is expected to grow significantly over the medium term, mainly due to commercial operations which are projected to grow rapidly over this period due to the additional services being extended to local government to improve management systems and processes, and to boost service delivery capacity. Growth is also expected in new business, which will contribute to spending on compensation of employees and will require the expansion and maintenance of infrastructure.

The spending focus over the medium term will be on providing standardisation and conformity assessment services to protect the integrity of the South African market and consumers, creating a competitive advantage for South African industry, and facilitating access by South Africans to local and international markets. Expenditure on compensation of employees remains the largest item of expenditure over the seven-year period, with personnel numbers set to increase to 1 310 in 2016/17. There will be sustained efforts to attract talent and retain skilled employees to increase efficacy, as there is a need for a pool of test officers and certification auditors to meet the needs of industry. This is in line with the rapid growth in performance targets for test and services, and product and system certification revenue, which are expected to reach R333 million and

R416 million by 2016/17. Spending on consultants is expected to decrease over the medium term. Consultants are used mainly for specialised ICT tasks and other specialist skills not required on a permanent basis.

In line with this, spending on goods and services is expected to increase from R284.8 million in 2013/14 to R373.1 million by 2016/17 due to the cost of upgrading IT infrastructure and maintaining the ageing laboratory equipment, and also to cover travelling costs for certification auditors as well as technical experts representing the country in international meetings on the development of standards. The bureau has implemented several cost containment measures, which include requiring certification auditors and other employees to travel on low cost airlines and booking trips at least two weeks in advance to save on airfares. In addition, the number of delegates attending international standards development meetings will be kept to a minimum.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Companies Tribunal** mandate is to adjudicate any application made to it in terms of the Companies Act (2008); to assist in the resolution of disputes and to perform any other function assigned to it by or in terms of the act, or any law mentioned in the act. The organisation's total budget for 2014/15 is R13.3 million which is mainly received from the department for establishment costs.
- The **National Consumer Commission** ensures the enforcement of consumer legislation by establishing a regulatory framework to achieve and maintain a consumer market that is fair, accessible, efficient, sustainable, and promotes and protects consumer interests. The budget for 2014/15 is R53.4 million, which is received from the department.
- The **National Consumer Tribunal** ensures equity in the credit market and balances the rights and responsibilities of credit providers and consumers. The budget for 2014/15 is R45.9 million, of which 88 per cent is received from the department.
- The **National Credit Regulator** regulates the consumer credit industry in order to improve consumer protection and the efficiency and fairness of the end user credit market. The budget for 2014/15 is R110.9 million, of which R63.8 million is received from the department.
- The **National Gambling Board of South Africa** oversees regulation in the gambling industry throughout South Africa and preserves the integrity of South Africa as a responsible global citizen. The budget for 2014/15 is R32.6 million, of which R29.8 million is received from the department.
- The **National Metrology Institute of South Africa** maintains the international system of units and ensures that South African measurements, standards and units are internationally comparable and scientifically valid. The budget for 2014/15 is R214.4 million, of which 94.5 per cent is received from the department.
- The **National Regulator for Compulsory Specifications** regulates adherence to compulsory specifications and technical regulations. The budget for 2014/15 is R313.8 million, of which R109.7 million is from the department.
- The **South African National Accreditation System** is mandated to accredit or monitor for compliance purposes, promote accreditation as a means of facilitating international trade and enhancing South Africa's economic performance and transformation, promote the competence and equivalence of accredited bodies, and promote the competence and equivalence of facilities compliance. The budget for 2014/15 is R82.4 million, of which R35.7 million is received from the department.

**Additional table: Summary of expenditure on infrastructure**

Project name	Service delivery outputs	Current project stage	Total project cost	Audited outcome			Adjusted appropriation	Medium-term expenditure estimate		
				2010/11	2011/12	2012/13		2014/15	2015/16	2016/17

Executive authority Minister of Transport  
Accounting officer Director General of Transport  
Website address [www.transport.gov.za](http://www.transport.gov.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Lead the provision of an integrated, sustainable, reliable and safe transport system through planning, developing, coordinating, promoting and implementing transport policies, regulations and strategies.*

### Mandate

The Constitution identifies the legislative responsibilities of different levels of government with regard to airports, roads, traffic management and public transport. Transport is a function that is legislated and executed at all levels of government. In addition, for transport functions at the national level, most of the implementation takes place in public entities that are overseen by the department, each with a specific delivery mandate, as specified in the respective sections below.

The 1996 White Paper on Transport defines the different subsectors in the transport sector. Broadly, these are the infrastructure and operations of rail, pipelines, roads, airports, harbours as well as the cross-modal operations of public transport and freight. The Department of Transport is responsible for the legislation and policies for all these subsectors.

For the cross modal functions of public transport and freight, the guiding documents are the National Land Transport Act (2009), the public transport strategy and the national freight logistics strategy.

The Department of Transport is therefore responsible for conducting sector research, formulating legislation and policy to set the strategic direction of subsectors, assigning responsibilities to public entities and other levels of government, regulating through setting norms and standards, and monitoring implementation.

### Strategic goals

The department's strategic goals over the medium term are to:

- ensure an efficient and integrated infrastructure network that serves as a catalyst for social and economic development
- ensure a transport sector that is safe and secure

- improve rural access, infrastructure and mobility
- improve public transport systems
- increase the contribution of the transport sector to job creation
- increase the contribution of the transport sector to environmental protection.

## **Programme purposes**

### **Programme 1: Administration**

**Purpose:** Provide leadership, strategic management and administrative support to the department through continued refinement of organisational strategy and structure, in line with appropriate legislation and best practice.

### **Programme 2: Integrated Transport Planning**

**Purpose:** Manage and facilitate national sector strategic planning. Formulate policies and strategies. Coordinate regional and inter-sphere relations, including providing economic modelling and analysis of the sector.

### **Programme 3: Rail Transport**

**Purpose:** Facilitate and coordinate the development of sustainable rail transport policies, infrastructure development strategies, and economic and safety regulations. Support and monitor the oversight of rail public entities and the implementation of integrated rail services.

### **Programme 4: Road Transport**

**Purpose:** Develop and manage an integrated road infrastructure network. Regulate road transport and ensure safer roads. Oversee the road entities.

### **Programme 5: Civil Aviation**

**Purpose:** Facilitate through regulation and investigation, the development of an economically viable air transport industry that is safe, secure, environmentally friendly and compliant with international standards. Oversee the aviation public entities.

### **Programme 6: Maritime Transport**

**Purpose:** Coordinate the development of a safe, reliable and economically viable maritime transport sector through the development of policies and strategies, and monitoring of the implementation plan. Oversee the maritime public entities.

### **Programme 7: Public Transport**

**Purpose:** Transform land transport systems by developing norms and standards, regulations, and legislation. Develop empowerment systems within the public transport sector. Facilitate institutional planning and capacitation to guide the provision of sustainable integrated public transport networks in both urban and rural areas. Regulate national transport services. Improve the management of scholar transport.

## Selected performance and operations indicators

**Table 37.1 Transport**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of Metrorail passenger trips per year	Rail Transport	Outcome 6: An efficient, competitive and responsive economic infrastructure network	472 million	516 million	528 million	574 million	608 million	645 million	683 million
Lane kilometres of surfaced roads rehabilitated	Road Transport		- <sup>1</sup>	- <sup>1</sup>	365	1 970	1 100	1 155	1 213

Square metres of surfaced roads resealed	Road Transport		5 547 940	2 870 957	6 718 931	6 925 543	- <sup>3</sup>	- <sup>3</sup>	- <sup>3</sup>
Kilometres of roads regavelled	Road Transport		3 413	2 814	2 823	3 692	- <sup>3</sup>	- <sup>3</sup>	- <sup>3</sup>
Square kilometres of blacktop patching on roads (including pothole repairs)	Road Transport		719 357	497 731	1 367 293	1 050 988	810 000	850 025	893 025
Kilometres of gravel roads bladed	Road Transport		526 661	221 111	434 955	512 040	350 000	367 500	385 875
Length of network (kilometres) with active routine road maintenance contracts	Road Transport		16 170	16 170	19 704	19 704	19 704	19 704	19 704
Number of appeals processed in terms of the Transport Appeal Tribunal Act (1998)	Public Transport		- <sup>2</sup>	- <sup>2</sup>	- <sup>2</sup>	- <sup>2</sup>	30	35	40
Number of average weekday bus rapid transit passengers: Rea Vaya in Johannesburg	Public Transport		30 000	36 000	43 000	50 000	85 000	100 000	100 000
Number of integrated public transport networks facilitated at construction phase	Public Transport	- <sup>2</sup>	- <sup>2</sup>	- <sup>2</sup>	- <sup>2</sup>	6	7	7	
Number of average weekday bus rapid transit passengers: MyCiti in Cape Town	Public Transport	- <sup>1</sup>	22 000	30 000	60 000	80 000	80 000	80 000	

1. Service began in 2012/13.

2. This new indicator will only be measured from 2014/15.

3. This indicator will not be measured from 2014/15.

## The national development plan

The national development plan emphasises the necessity of sound economic infrastructure as a precondition for economic growth. The country's transport infrastructure is thus a key priority. The major recommendations of the national development plan are to improve public transport planning and integrate it with spatial planning, emphasise asset management, and design institutional arrangements to ensure safe, reliable and affordable public transport and renew the commuter rail fleet. In this regard, the plan highlights the need to focus on the Gauteng-Durban corridor for freight, to incentivise public transport and to focus on transport systems rather than modes. The need to invest heavily in transport is recognised, as is the need to carefully prioritise these investments.

Many of these priorities are being addressed by the department and will continue to be part of its objectives, particularly the focus on public transport, road maintenance and rail investments. For instance, a report on the implementation of the four transport hubs in 2050 vision was delivered in 2012/13 and submitted as part of the Presidential Infrastructure Coordinating Commission's second strategic infrastructure project's integrated business plan that seeks to support initiatives aimed at unlocking bottlenecks in the Gauteng-Durban freight corridor. In addition, the national transport master plan 2050, once approved by Cabinet, has the potential to ensure that transport planning and investment into socioeconomic transport network infrastructure facilities supports a dynamic, long term, sustainable, multimodal transport systems framework.

The public transport infrastructure and public transport network operations grants ensure that emphasis is placed on networks, rather than modes, and that planning is improved in cities. The devolution of the public transport contracting and regulating functions to metropolitan cities will also see the provincial public transport operations grant and the national Metrorail subsidies devolved to cities. This will ensure that transport planning is seen in the context of spatial planning, and therefore the more effective use of existing subsidies. The asset management approach is strongly supported through the provincial roads maintenance grant and the rural roads asset management systems grant to district municipalities. The capital transfers to the Passenger Rail Agency of South Africa will ensure that the commuter fleet is renewed over a 10-year period from 2015/16 and that the necessary complementary investments are made. Over the medium term, investment into maintenance and upgrade of the provincial and national road and rail infrastructure and integrated public transport networks within 13 cities remain the departmental focus, in line with the objectives of the national development plan.

## Expenditure estimates

<sup>2</sup>. Rand million.

## Expenditure trends

The spending focus over the medium term will be on supporting the need for an efficient, competitive and responsive infrastructure network (outcome 6); and the national development plan's priorities of maintaining road infrastructure, upgrading rail infrastructure and services, and building and operating public transportation infrastructure. The department will facilitate the achievement of these objectives by providing transfers, such as the provincial roads maintenance grant to provinces and the public transport infrastructure grant to municipalities, as well as transfers to public entities such as the Passenger Rail Agency of South Africa and the South African Roads Agency. These transfers constituted 97.7 per cent of the department's total budget in 2013/14.

Spending on rail infrastructure in the *Rail Transport* programme over the medium term is expected to be the fastest growing item of expenditure, increasing at an average annual rate of 20 per cent as the Passenger Rail Agency of South Africa procures new trains, continues to upgrade its signalling infrastructure and build depots over the medium term. In addition, expenditure in the programme is expected to grow further due to Cabinet approved additional allocations of R348 million in 2014/15, R338 million in 2015/16 and R410 million in 2016/17, which are to be used to offset the effect of foreign exchange rate fluctuations on the agency's new rolling stock programme.

In 2011/12, the department's expenditure increased by 41.3 per cent to provide for significant investment in road infrastructure through the provincial roads maintenance grant and the R5.8 billion additional allocation for the South African National Roads Agency due to the delays in the implementation of e-tolling on Gauteng freeways. Expenditure on road infrastructure is expected to increase to R23.9 billion over the MTEF period, largely due to Cabinet approved additional allocations of R235.3 million in 2014/15 and R178.4 million in 2015/16 to rebuild roads destroyed by natural disasters.

Spending in the *Public Transport* programme increased at an average annual rate of 9.6 per cent between 2010/11 and 2013/14 due to the increase in spending on the provincial public transport operations grant and the public transport infrastructure and systems grant to municipalities. The infrastructure and systems grant is used to fund public transport networks in cities, including bus rapid transit systems. Since its launch in 2005/06, Johannesburg and Cape Town municipalities have begun operating services on routes in the initial phases of their integrated public transport network plans, and several cities have advanced significantly in planning their public transport networks, while others have begun building infrastructure. This programme also receives further Cabinet approved additional allocations of R50 million each year over the medium term for the provincial transport operations grant to fund the continued provision of subsidised public transport services in provinces, and R170 million in 2016/17 for the implementation of the reviewed taxi recapitalisation programme.

Expenditure on consultants increased significantly in 2012/13 because of spending on the maintenance and upgrade of the electronic national traffic information system and Mthatha Airport. The airport upgrade project also explains the significant spike in expenditure in the *Civil Aviation* programme in that year. The decrease in

expenditure on consultants in 2013/14 is attributed to transaction fees for the national traffic information system not being paid over to the department by the Road Traffic Management Corporation.

The department had a funded establishment of 816 posts at the end of November 2013, with 44 additional to the approved establishment. The 19.6 per cent increase in spending on compensation of employees in 2013/14 was due to the department enhancing capacity for overseeing transfers to public entities and other levels of government. Spending on compensation of employees is expected to increase moderately over the medium term as the department attempts to reduce its vacancy rate of 28.1 per cent by the end of 2013/14.

### Infrastructure spending

The department's infrastructure expenditure consists of transfers to public entities and other levels of government. The major components are capital transfers to the Passenger Rail Agency of South Africa and the South African National Roads Agency, and conditional grants for roads to provinces and municipalities for public transport infrastructure.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on the *Corporate Services* and *Management* subprogrammes, which provide operational and administrative support to the department. These activities are carried out by the employees on the programme's establishment, which constitutes 47.9 per cent of the department's overall establishment. A significant proportion of this programme's budget over the medium term is therefore allocated to spending on compensation of employees, mostly in the *Corporate Services*, *Management* and *Communication* subprogrammes. The programme had an approved establishment of 391 posts at the end of November 2013, with a vacancy rate of 26.1 per cent. The department appoints contract employees against vacant posts on a month-to-month basis until posts are finally filled to ensure that service delivery is not affected. The recruitment of additional personnel is expected over the medium term due to the *Administration* programme expanding its portfolio of responsibilities and the need to establish a project management office.

Consultants, travel and subsistence, venues and facilities, and operating leases, primarily for office accommodation, are the other large spending items in the programme over the medium term and support the objective of providing operational and administrative support to the department.

Spending on travel and subsistence is expected to increase to R31.8 million in 2016/17, largely as a result of the minister and deputy minister needing to travel more often. This increase is largely funded through a reprioritisation of R6 million in 2014/15, R6.5 million in 2015/16 and R7 million in 2016/17 from various programmes in the department.

Expenditure on venues and facilities is expected to decrease over the medium term at an average annual rate of 11 per cent as the department looks to limit use of external venues for stakeholder consultations. Spending on office accommodation meanwhile increased significantly in 2011/12 due to the renovation of the head office building to create additional space and comply with occupational health and safety requirements. Spending on this item is set to increase over the MTEF period due to the department taking over additional office blocks in the current building from the South African Police Service.

Consultants are used largely in the *Communication* subprogramme to assist the department with the October Transport Month and Arrive Alive awareness campaigns. Expenditure on advertising is also expected to increase over the medium term in support of these campaigns.

## Programme 2: Integrated Transport Planning

### Objectives

- Facilitate integrated multimodal transportation systems planning by:
  - reviewing the White Paper on National Transport Policy by 2014/15
  - facilitating the implementation of the national transport master plan 2050 by 2015/16
  - developing multimodal transport planning and coordination legislation by 2015/16
  - developing and consolidating the national transport planning data bank by 2016/17.
- Ensure integrated and seamless movement of freight in South Africa and regionally for all modes of transport by:
  - developing a border post transport decongestion strategy for Beit Bridge in 2014/15
  - coordinating and prioritising the implementation of projects detailed in the Durban-Free State-Gauteng logistics and industrial corridor business plan by 2016/17
  - developing a South African Development Community (SADC) transport corridor strategy in 2014/15.
- Increase economic transformation and performance of the transport sector through the:
  - establishment of a single transport economic regulator by 2015/16
  - establishment of a transport broad based black economic empowerment (BEE) charter council in 2014/15
  - development of a transport infrastructure funding strategy in 2014/15.
- Contribute to the reduction of greenhouse gas emissions in the transport sector by developing a transport energy consumption and reduction strategy by 2015/16.

## Subprogrammes

- *Macro Sector Planning* examines land use and transport planning in all spheres of government from a multimodal perspective, and manages and facilitates the implementation of the planning provisions contained in the National Land Transport Act (2009). In 2012/13, the draft national transport master plan 2050 was presented to the infrastructure development cluster and terms of reference to appoint a service provider to develop a draft national transport infrastructure planning bill were developed. In 2013/14, the national transport master plan 2050 and transport master planning framework were reviewed to ensure alignment with the rail policy as directed by Cabinet. In addition, a consolidated status quo and recommendations report on provinces' and municipalities' integrated transport plans is set to be completed by March 2014. This subprogramme had a staff complement of 8 in 2013/14.
- *Logistics* develops and coordinates the implementation of freight logistics strategies aimed at unblocking bottlenecks in the freight logistics system and related supply chains, with particular emphasis on integrating elements of the system across all modes. In 2012/13, a report on the Durban-Free State-Gauteng logistics and industrial corridor institutional framework was completed as part of the Presidential Infrastructure Coordinating Commission's second strategic infrastructure project's integrated business plan. Other key activities relate to the development and implementation of the logistics hubs framework and the annual updating of the national freight databank. In addition, integrated rural transport plans were rolled out in 3 provinces in 2013/14. This subprogramme had a staff complement of 13 in 2013/14.
- *Modelling and Economic Analysis* undertakes economic studies, provides innovative and enabling transport infrastructure funding options that respond to the socioeconomic needs of the national agenda, and applies economic analysis tools to transport sector policy development. In 2013/14, an analytical report on the 2012 national household travel survey was completed, as were the situational, international benchmarking and options analyses for the establishment of the single transport economic regulator. In addition, the Cabinet process to promulgate regulator legislation and the development of an implementation plan were underway. This subprogramme had a staff complement of 11 in 2013/14.
- *Regional Integration* manages, coordinates and facilitates the development of strategies for engagements in the SADC region and the rest of Africa. In 2012/13, service providers were appointed to develop traffic optimisation plans for key border posts and traffic flows at airports and seaports were assessed. In 2013/14, a decongestion strategy for the Mozambique-South Africa border posts was developed. In addition, studies were being conducted on the harmonisation of transport standards within the SADC region and the status of regional infrastructure. This subprogramme had a staff complement of 6 in 2013/14.
- *Research and Innovation* ensures research, innovation and monitoring of the transport sector for sustainability. In 2012/13, a literature review to develop a rural accessibility/multideprivation index was completed and a monitoring and evaluation framework for the transport sector was developed that mapped out the extent of transport deprivation across 12 of the neediest rural districts in South Africa. A transport energy consumption framework for climate change mitigation is expected to be finalised and approved by the end of 2013/14. In addition, a public transport vehicle conversion from petroleum to compressed natural gas programme is being developed. This subprogramme had a staff complement of 10 in 2013/14.
- *Integrated Transport Planning Administration Support* provides administrative support services to the entire programme. It is responsible for budget control, performance reporting and project administration. This subprogramme had a staff complement of 5 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on developing and implementing macro strategies, and undertaking studies and analyses around developing an integrated, multimodal system of transport. The bulk of the spending is concentrated in the *Modelling and Economic Analysis* and the *Logistics* subprogrammes. Spending is expected to deliver an updated national transport planning databank, national household travel survey project support and secretariat services over the medium term. Increased spending over the MTEF period in the *Logistics* subprogramme on goods and services is expected to facilitate the development and implementation of macro strategies, aimed at reducing greenhouse gas emissions in the transport sector and integrating local, regional and continental transport infrastructure and operations.

Expenditure in the *Modelling and Economic Analysis* subprogramme between 2012/13 and 2013/14 increased significantly due to the national household travel survey, which cost R40.9 million to conduct in 2012/13. This explains the significant spending on consultants, who provide specialised modelling skills and research with regard to transport planning. Spending on consultants amounted to R38.2 million in 2013/14, which equated to 48.3 per cent of the programme's total budget and is expected to remain stable over the medium term as the statistical analysis required for the national household survey is completed. In 2013/14, spending on consultants is expected to support projects such as the establishment of the single transport economic regulator, the annual integrated transport sector BEE survey and the macro planning framework. The increases in expenditure on travel and subsistence, and venues and facilities in 2012/13 and 2013/14 were due to workshops held in provinces on the Integrated Transport Sector Broad Based Black Economic Empowerment Charter.

Expenditure on compensation of employees took up 41.6 per cent of the programme budget in 2013/14, following a decrease in 2012/13 due to the realignment of the organisational structure, which necessitated a modal reporting arrangement to improve coordination between programmes. Personnel numbers are expected to increase from 52 in 2013/14 to 71 in 2016/17, as all vacancies are filled after the completion of department restructuring in 2012/13. The vacancy rate for the programme was 26.8 per cent at the end of November 2013. To counter the negative effects of this high rate, the department appoints contract employees against vacant posts on a month-to-month basis.

Programme expenditure is expected to increase over the medium term due to an average annual increase of 10.6 per cent in compensation of employees as efforts are made to increase the staff complement over this period.

## Programme 3: Rail Transport

### Objectives

- Ensure a sustainable rail infrastructure network by developing a national rail policy by 2014/15 and facilitating the implementation of the Moloto rail development corridor project in 2016/17.
- Enhance performance and efficiency in the rail sector by:
  - identifying 7 priority commuter rail corridors to be expanded and modernised by 2014/15
  - reviewing Transnet's branch lines strategy in 2014/15.
- Regulate and enhance rail transport safety by developing a national rail safety strategy and reviewing the National Railway Safety Regulator Act (2002) by 2015/16.
- Improve commuter rail services by facilitating, coordinating and monitoring the Passenger Rail Agency of South Africa's capital programme on a continuous basis.

### Subprogrammes

- *Rail Regulation* is responsible for the development of rail policy, and safety and economic regulations to improve safety and efficiency in rail transport. In 2012/13, the Interim Rail Economic Regulator was established, the Green Paper on Rail Policy that seeks to enhance efficiencies and reliability in rail transport sector was published and the cost benefit analysis began after consultation with stakeholders. In 2013/14, the strengthening of the regulator was supported, and the draft Economic Regulation of Transport Bill was published for comment. This subprogramme had a staff complement of 8 in 2013/14.
- *Rail Infrastructure and Industry Development* coordinates the development, maintenance of and investment in rail infrastructure. In 2012/13, R2.6 million was spent on a feasibility study that analysed the engineering, economic, legal and financial aspects of the rolling stock procurement process. The study's findings were approved by Cabinet in December 2011 and the Passenger Rail Agency of South Africa started the procurement process in April 2012. In 2013/14, a draft option analysis to the Moloto rail development corridor was produced and circulated to stakeholders for comment, and continued oversight of the Passenger Rail Agency of South Africa's capital programme was provided. This subprogramme had a staff complement of 7 in 2013/14.
- *Rail Operations* coordinates the implementation of integrated rail services, and monitors and analyses service delivery challenges facing the rail industry. In 2012/13, a service level agreement between the

Passenger Rail Agency of South Africa and the department was concluded and piloted. In 2013/14, due diligence studies continued in Cape Town, eThekweni and Gauteng. The studies are carried out by the Passenger Rail Agency of South Africa to quantify the financial and operational implications of devolving the rail operational subsidies to the municipality. This subprogramme had a staff complement of 4 in 2013/14.

- *Rail Oversight* makes transfers to the Passenger Rail Agency of South Africa and the Railway Safety Regulator. This subprogramme had a staff complement of 1 in 2013/14.
- *Rail Administration Support* provides support services to the entire programme. This entails preparing submissions, facilitating departmental meetings, implementing projects, and business planning. This subprogramme had a staff complement of 6 in 2013/14.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on making transfers to the Passenger Rail Agency of South Africa to replace the signalling systems and ageing rolling stock and upgrade rail infrastructure. R3.2 billion in additional funds was allocated in the 2013 Budget to support the replacement of the signalling systems, which will be done in 2014/15. Spending in the *Rail Oversight* subprogramme is expected to increase to R19.3 billion by 2016/17 as a result. Additional transfers will be made to the agency to offset the effect of foreign exchange fluctuations on the fleet renewal programme. The operational subsidy constituted 33 per cent of total transfers to the agency in 2013/14, or R3.7 billion in that year. R650 million has been reprioritised from the capital transfer in 2013/14 to the agency's budget to address the operational shortfall for the Shosholoza Meyl mainline passenger long distance service.

Spending on the *Rail Regulation* subprogrammes is expected to increase at an average annual rate of 4.5 per cent over the medium term, with a rate of 8.5 per cent expected in the *Rail Infrastructure and Industry Development* subprogramme due to the projected increase in spending on compensation of employees and the use of consultants to assist the department in the development of policy and related legislation. While spending on compensation of employees equates to only 0.2 per cent of the programme's total expenditure in 2013/14, it accounts for 55.1 per cent of the programme's operational spending. Spending on this item is expected to increase to R23.5 million in 2016/17 as the programme increases its number of filled personnel posts from 25 in 2013/14 to 41 over the medium term. At the end of November 2013, the vacancy rate was 39 per cent. To counter the negative effects of this high rate, the department appoints contract employees against vacant posts

on a month-to-month basis. Consultants are used primarily to review the branch line strategy and rail policy with spending on these services expected to remain constant over the medium term.

## Programme 4: Road Transport

### Objectives

- Ensure a sustainable road infrastructure network by implementing the road infrastructure asset management programme on an ongoing basis.
- Regulate and enhance road transport safety by:
  - developing and implementing a road safety policy by 2016/17
  - reviewing the National Road Traffic Act (1996) and associated regulations by 2016/17
  - developing the 365 days road safety programme by 2014/15 and implementing the programme on an ongoing basis.
- Contribute to improved rural access and mobility by developing a non-motorised transport policy by 2016/17.

### Subprogrammes

- *Road Regulation* regulates road safety and traffic management, manages relevant information systems and programmes, and exercises oversight over the inspectorate for driving licences and vehicle testing stations. In 2012/13, the Administrative Adjudication of Road Traffic Offence Amendment Bill and the legislation on the implementation of periodic motor vehicle testing was drafted and published for public comment. In 2013/14 the National Road Traffic Act (1996) was amended to incorporate the safety requirements in all motor vehicles, and forensic investigators were appointed to look into fraud concerning roadworthy vehicle certificates. This subprogramme had a staff complement of 35 in 2013/14.
- *Road Infrastructure and Industry Development* facilitates and coordinates the planning, development and implementation of a sustainable reliable integrated road infrastructure network and capacity enhancement in the industry. In 2012/13, the draft non-motorised transport plans for Polokwane and Moses Kotane local municipalities were completed. In 2013/14, critical roads were maintained through provincial road maintenance grant funding and fiscal transfers to the South African National Roads Agency, and 21 district municipalities were assisted in developing non-motorised transport infrastructure and facilities. This subprogramme had a staff complement of 9 in 2013/14.
- *Road Oversight* reviews and analyses the performance of road transport public entities and monitors their compliance with regulations and legislation. The subprogramme also transfers funds to the South African Roads Agency, the Road Traffic Management Corporation and the Road Traffic Infringement Agency. In 2013/14, all strategic plans and annual performance plans for public entities were approved, and quarterly performance reports were submitted. This subprogramme had a staff complement of 5 in 2013/14.
- *Road Administration Support* provides administrative support services to the programme. This entails preparing submissions, facilitating departmental meetings, implementing projects and business planning. This subprogramme had a staff complement of 9 in 2013/14.
- *Road Engineering Standards* develops and implements road engineering standards, and coordinates the development of asset management system for safe and resilient road infrastructure. In 2012/13, the road infrastructure asset management policy and the road infrastructure asset management policy were completed. In 2013/14, provinces submitted data to inform the prioritisation of projects in roads asset management systems. In addition, a new standards document aligning the country's highway standards was developed and presented to the committee of transport officials. This subprogramme had a staff complement of 10 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on facilitating capital investment and the development of roads and road infrastructure in South Africa through the transfer of funds to provinces, rural municipalities and the South African National Roads Agency. As a result, expenditure under transfers and subsidies in the *Road Oversight* subprogramme amounts to 99.5 per cent of the programme, or R19.5 billion, in 2013/14. These transfers are mainly to the South African National Roads Agency for non-toll and coal haulage networks, and for transfers to provinces through the provincial roads maintenance grant for road maintenance and coal haulage network upgrade and maintenance. In 2011/12, expenditure on transfers to the South African National Roads Agency increased due to a once-off allocation of R5.8 billion for the Gauteng freeway improvement project, which caused a spike in spending in the *Road Oversight* subprogramme in the same year.

While spending on compensation of employees was equivalent to 0.3 per cent of the programme's total expenditure in 2013/14, it did amount to 53 per cent of the operational budget, which excludes transfers. Spending on compensation of employees increased by 58.5 per cent in 2013/14, as efforts were made to fill vacant posts. At the end of November 2013, the programme had 76 filled posts and a vacancy rate of 36.1 per cent. The vacancy rate negatively impacts the programme's ability to deliver on its strategic goals and objectives, however, as a backup mechanism; the department appoints contract employees against vacant posts on a month to month basis until posts are finally filled to ensure that service delivery is not negatively affected.

Spending on consultants in the programme decreased significantly between 2010/11 and 2013/14, at an average annual rate of 36 per cent, due to the department not having received transaction fees for the maintenance and upgrade of the electronic national traffic information system, which falls under the *Road Regulation* subprogramme. Funding for this system is allocated once National Treasury receives proof that funds have been deposited into the National Revenue Fund. Expenditure over the medium term on this item is expected to be higher than reflected because the electronic national information systems transaction fee revenue has not yet been finalised. However, the department expects to receive the revenue from these fees over the medium term, as reflected in the departmental receipts table.

As part of the Cabinet approved budget changes, a reprioritisation of R63 million in 2014/15 within the provincial road maintenance grant from the Mpumalanga coal haulage allocation to KwaZulu-Natal is to fund the development of access roads to the Avon peaking power station to ensure security of supply in the electricity sector. A peaking power station is only brought on line when demand is high.

## Programme 5: Civil Aviation

### Objectives

- Ensure effective air transport economic regulation through the implementation of the national civil aviation policy, the national airports development plan, and enhancing regional and international cooperation on an ongoing basis.

- Improve civil aviation safety by:
  - reviewing the national security programme through consultations in 2014/15 and amending the programme in 2015/16
  - promulgating civil aviation regulations in 2014/15
  - amending the Civil Aviation Act (2009) in 2014/15 to establish a regional independent aviation accident investigation body.
- Minimise the adverse effects of aviation on the environment by developing a draft aviation fuel strategy in line with the International Civil Aviation Organisation resolution by 2014/15 and implementing the strategy in 2015/16.

## Subprogramme

- *Aviation Policy and Regulations* develops and maintains the civil aviation regulatory regime to respond to national imperatives and international standards, norms and protocols. In 2012/13, ministerial submissions on various civil aviation conventions and protocols were prepared. In 2013/14, the draft airlift strategy, the national airports development plan and the White Paper on Civil Aviation Policy were completed and will be submitted to Cabinet. This subprogramme had a staff complement of 29 in 2013/14.
- *Aviation Economic Analysis and Industry Development* provides aviation economic analysis and develops strategies for industry development and airfreight logistics activities. In 2012/13, the funding models for the Airports Company of South Africa and the Air Traffic and Navigation Services Company were completed and adopted in principle by the industry. In 2013/14, the draft amendment bills for the Airports Company of South Africa and Air Traffic and Navigation Services Company were developed. Consultation is ongoing. This subprogramme had a staff complement of 13 in 2013/14.
- *Aviation Safety, Security, Environment and Search and Rescue* develops and monitors South Africa's aviation safety, security, environment, and search and rescue regime; and manages investigations of aviation accidents and serious incidents for the purposes of identifying deficiencies to make recommendations on mechanisms to address these deficiencies. An appeals committee was established in 2013/14 to adjudicate appeals from aviation industry stakeholders who are aggrieved by South African Civil Aviation Authority decisions. This subprogramme had a staff complement of 15 in 2013/14.
- *Aviation Oversight* monitors the performance of the Airports Company South Africa, the Air Traffic and Navigation Services Company and the South African Civil Aviation Authority in line with the legislative framework. This subprogramme had a staff complement of 2 in 2013/14.
- *Aviation Administration Support* provides project and financial administration support to the entire programme. This entails preparing submissions, facilitating departmental meetings, implementing projects, and business planning. This subprogramme had a staff complement of 9 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on improving civil aviation safety and ensuring effective air transport economic regulation and minimising the adverse effects of aviation on the environment as well as making transfers to departmental agencies and international aviation organisations. Therefore, spending in the *Aviation Safety, Security, Environment, and Search and Rescue* and *Aviation Oversight* subprogrammes accounts for the majority of the programme budget over the medium term. Spending in the *Aviation Safety, Security Environment, and Search and Rescue* programme is expected to increase significantly in 2013/14 due

to the shift in search and rescue function from the *Maritime Transport* programme to the *Civil Aviation* programme. As a result of this shift, communications in the programme's goods and services budget is expected to increase at an average annual rate of 466.5 per cent over the MTEF period.

Expenditure in the *Aviation Oversight* subprogramme increased between 2010/11 and 2013/14 as a result of larger transfers to the South African Civil Aviation Authority to improve the authority's accident and incident investigation function. The Civil Aviation Act (2009) will be amended over the medium term to establish an independent accident and incident investigation body.

Spending on compensation of employees in the programme is projected to increase to R36.1 million in 2014/15 and is expected to continue to grow at an average annual rate of 10 per cent over the medium term as the programme increases its number of filled posts from 58 in 2013/14 to 75. At the end of November 2013, the programme had a vacancy rate of 22.7 per cent. To counter the negative effects of this high rate, the department appoints contract employees against vacant posts on a month-to-month basis.

Programme expenditure increased significantly in 2012/13 and 2013/14 as a result of the upgrade of the Mthatha Airport, which also resulted in increased spending on consultants for the development of the taxiway and runway. This increased the proportion of goods and services to 86.8 per cent of total programme expenditure in 2012/13. Consultants were hired between 2010/11 and 2013/14 to assist the department with the establishment of the aviation appeals committee, and R2.4 million is reprioritised over the medium term to finance the search and rescue function within the department. Spending on goods and services is projected to decline at an average annual rate of 22.9 per cent over the MTEF period as the Mthatha Airport upgrade was finalised in 2013/14.

## Programme 6: Maritime Transport

### Objectives

- Ensure a sustainable transport infrastructure network by developing a green paper on maritime transport policy by 2015/16.
- Ensure the implementation of the National Ports Act (2005) by facilitating consultative committees to optimise port tariffs, monitor infrastructure development of ports and monitor the issuing of licences for port terminal operations on an annual basis.
- Contribute to the reduction of the number of accidents and incidents in the sea environment by reviewing maritime security regulations in 2014/15 and drafting amendments to legislation in 2015/16.
- Contribute to the reduction of the levels of pollution at sea through the development of a salvage strategy by 2016/17.

### Subprogrammes

- *Maritime Policy Development* develops and maintains a maritime regulatory regime that is responsive to national imperatives and international standards, norms and protocols. The subprogramme is also responsible for the development and maintenance of maritime policies and strategies. In 2012/13, R3 million was allocated to conduct an extensive consultation with government departments, public entities and the marine industry on the effectiveness of the administration of services of the current shipping registry, the development of the Green Paper on Maritime Shipping Policy and consultation on the review of the South African Maritime Authority Act (1998). In October 2012, the International Maritime Organisation's diplomatic conference on the adoption of the Torremolinos Convention on the Safety of Fishing Vessels was held in Cape Town. In 2013/14, the Green Paper on Maritime Shipping Policy was developed and published for consultation. This subprogramme had a staff complement of 6 in 2013/14.
- *Maritime Infrastructure and Industry Development* facilitates the development of an integrated maritime infrastructure and maritime industry. In 2013/14, R1.6 million was spent on hosting World Maritime Day in Kimberley. This subprogramme had a staff complement of 5 in 2013/14.
- *Implementation, Monitoring and Evaluations* ensures that legislation, policies and strategies pertaining to maritime safety, security and environment protection are implemented. In 2012/13, a monitoring and evaluation framework for the safety and security of navigation in the South African territorial waters and

inland waterways, piracy and marine environment protection was developed. In addition, compliance with the national and international legal instruments by implementing agents, such as the South African Maritime Safety Authority, Transnet National Ports Authority and the Department of Environment Affairs, was monitored. In 2013/14, draft ballast water legislation was developed and readied for public comment. It is expected to be gazetted by March 2014. This subprogramme had a staff complement of 10 in 2013/14.

- *Maritime Oversight* transfers allocations to public entities in the maritime field, the South African Maritime Safety Authority and the Ports Regulator and oversees these entities' compliance with relevant regulations and legislation. This subprogramme's total budget is transferred in full to the South African Maritime Safety Authority, the Ports Regulator and to international maritime organisations and non-profit search and rescue organisations for membership. This subprogramme had a staff complement of 5 in 2013/14.
- *Maritime Administration Support* provides project and financial administration support to the entire programme. This entails preparing submissions, facilitating departmental meetings, implementing projects, and business planning. This subprogramme had a staff complement of 2 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on implementing the National Ports Act (2005) and reducing the levels of pollution and the number of accidents and incidents at sea. As a result, the majority of the spending will be in the *Implementation, Monitoring and Evaluations* subprogramme and the *Maritime Oversight* subprogramme. The *Maritime Oversight* subprogramme is responsible for transferring funds to departmental agencies such as the South African Maritime Authority and the Ports Regulator. The allocations to the Ports Regulator increased by R7.1 million in 2013/14 from a reprioritisation of funds, to enhance its human resource capacity to fulfil its economic regulation mandate. Transfers to the regulator are expected to increase to R18.6 million by 2016/17. The transfers to the South African Maritime Safety Authority decreased from R14.9 million in 2010/11 to R6.4 million in 2013/14 as a result of reprioritisation and a reallocation in the department for the investigation of the feasibility study for undertaking tug boat services and developing maritime revenue sources. These transfers will cease to exist in this programme over the MTEF period and the marine rescue coordination centre will continue to be paid for in the *Civil Aviation* programme.

Personnel numbers are expected to increase from 27 in 2013/14 to 42 in 2014/15, resulting in an expected increase in compensation of employees to R25 million in 2016/17 as the department implements its recruitment drive following the successful organisational structure change. There were no vacancies at the end of November 2013.

Consultants in this programme are mainly used in the *Implementation, Monitoring and Evaluation* and *Maritime Infrastructure and Industry Development* subprogrammes for oil pollution services, salvage operations and policy development. The department does not have the resources to do this internally.

## Programme 7: Public Transport

### Objectives

- Enhance the performance and efficiency of public transport by:
  - amending the National Land Transport Act (2009) in 2014/15 and issuing associated regulations by 2016/17
  - developing a comprehensive integrated public transport plan by 2016/17
  - establishing and operationalising a national public transport regulator by 2016/17.
- Provide quality rural public and scholar transport by:
  - developing and implementing the learner transport policy by 2015/16
  - distributing 20 000 bicycles through the Shova Kalula programme over the medium term
  - developing and implementing the rural transport strategy action plan in 2 district municipalities over the medium term.
- Promote sustainable public transport by:

- developing and implementing a public transport stakeholder engagement framework by 2016/17
- scrapping 18 000 taxis in the taxi recapitalisation programme over the medium term
- developing a public transport subsidy management system over the MTEF period.
- Improve public transport access and reliability by facilitating the construction of 7 integrated public transport networks by 2016/17.

## Subprogrammes

- *Public Transport Regulation* manages the development and maintenance of policy, legislation and regulation; and coordinates and facilitates implementation. Responsibilities include managing public transport information, such as public transport systems developed in terms of the National Land Transport Act (2009). In 2012/13, stakeholders were consulted about the draft National Land Transport Amendment Bill. In 2013/14, the draft amendment bill was developed further, transport planning requirements were reviewed and updated, and interns were trained and placed in district municipalities. This subprogramme had a staff complement of 13 in 2013/14.
- *Rural and Scholar Transport* develops and reviews rural, scholar and non-motorised transport strategies, and coordinates and evaluates their implementation. In 2012/13, the scholar transport policy was approved by the director general and the draft guidelines for the policy were completed. In 2013/14, 5 provinces successfully moved the scholar transport function from the provincial departments of education to the provincial departments of transport. In addition, the funding model for the integration and implementation of non-motorised transport and learner transport schemes was developed and finalised. This subprogramme had a staff complement of 12 in 2013/14.
- *Public Transport Industry Development* oversees and facilitates the implementation of public transport policy, legislation and strategy; develops public transport empowerment schemes; manages the taxi recapitalisation programme; and oversees the bus subsidy system. In 2012/13, 6 457 old minibus taxis were scrapped and the public transport conflict resolution strategy was developed. In 2013/14, the national public transport transformation plan was revised to align with the rollout of the integrated public transport networks and 7 500 taxis were scrapped. This subprogramme had a staff complement of 19 in 2013/14.
- *Public Transport Oversight* oversees the use of public transport subsidies and grants, and monitors compliance with the Division of Revenue Act (2013) in terms of the transferring of money, reporting and reallocation. In 2013/14, R5.5 billion was transferred to local government for public transport infrastructure, operations and systems, R4.6 billion was transferred to provinces for bus subsidies and R474 million towards the taxi recapitalisation.
- *Public Transport Administration Support* renders an administrative and financial support service to the programme. This entails preparing submissions, facilitating departmental meetings, implementing projects, and business planning. This subprogramme had a staff complement of 9 in 2013/14.
- *Public Transport Network Development* develops norms and standards for integrated public transport systems to assist in providing accessible, reliable and affordable integrated public transport network services in municipalities. In 2012/13, the Msunduzi, Ekurhuleni and Mangaung municipalities were assisted with developing operational plans for public transport and a bus pilot project was launched in Nelson Mandela Bay. In 2013/14, integrated public transport networks plans were reviewed and approved in line with the division of revenue conditional grant framework, and technical oversight and support was provided to municipalities. This subprogramme had a staff complement of 4 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on promoting sustainable public transport, and improving public transport access and reliability. This will be done by facilitating the construction of 7 integrated public transport networks by 2016/17 and through providing transfers to provinces and municipalities to increase the number of average weekday bus rapid transit passengers to 100 000 in Johannesburg and 80 000 in Cape Town by 2016/17. As a result, expenditure in the *Public Transport Oversight* subprogramme is expected to increase to R12.6 billion in 2016/17, as the department transfers the public transport operations grant to provinces, and the public transport infrastructure grant and the public transport network operations grant to municipalities.

Spending in the *Public Transport Industry Development* subprogramme is expected to increase to R133 million by 2016/17 to administer the taxi recapitalisation programme and for the alignment of the taxi recapitalisation programme with the public transport strategy. Consultants are used for the administration of taxi recapitalisation, policy development and the verification of subsidies and payments made to bus operators funded through the public transport operations grant. Consultants are also used in the national department's intervention in the administration of the Limpopo provincial transport department in terms of section 100 of the Constitution, which allows for this intervention. Expenditure on consultants was R151.7 million or 76.5 per cent of the programme's operational expenditure in 2013/14 and is expected to decline by an average annual rate of 2.3 per cent over the medium term as more use is made of internal capacity.

Spending on compensation of employees is small in relation to the overall programme expenditure, but is expected to grow at an average annual rate of 7.1 per cent over the medium term as 17 vacant posts are filled. The vacancies are as a result of organisational structure changes.

## Public entities and other agencies

### Air Traffic and Navigation Services

#### Mandate and goals

The Air Traffic and Navigation Services Company was established in terms of the Air Traffic and Navigation Services Act (1993). Its mandate is to provide safe, orderly and efficient air traffic navigational and associated services to the air traffic management community. It does this on behalf of the state and in accordance with the International Civil Authority Organisation standards and recommended practices, and the South African civil aviation regulations and technical standards.

The company's overall strategy to grow and expand its footprint involves marketing, distributing and offering a high quality air traffic management solution.

In line with this, the company's strategic goals over the medium term are to:

- provide safe, efficient and cost effective air traffic management solutions and associated services

- expand the company footprint to cover Africa and the Indian Ocean region.

## Selected performance indicators

## Expenditure trends

The Air Traffic and Navigation Services Company's revenue is generated from the provision of aeronautical services to the aviation industry. The main sources of this revenue are en route and approach fees. Total revenue increased at an average annual rate of 5.8 per cent between 2010/11 and 2013/14, and is expected to increase at an average annual rate of 4.5 per cent between 2013/14 and 2016/17 in line with an expected increase in air traffic.

The company's spending focus over the medium term will be on communication and simulator systems. Simulator systems are a total training solution for controllers and operators, providing realistic training in a simulated environment before being deployed, while communication systems provide both a medium and infrastructure for the effective ground-ground and ground-air communication of voice, aeronautical and meteorological information between controllers and airspace users. These systems have constituted the largest expenditure areas in the entity in the past, and are expected to grow at an average annual rate of 10.8 per cent over the medium term as they remain essential to ensuring safety and improving capacity at airports.

Expenditure increased from R892.2 million in 2010/11 to R1.2 billion in 2013/14 at an average annual rate of 9.2 per cent, due to the entity increasing capacity in line with the airports expansion programme. In the same period, spending on compensation of employees grew from R487.2 million to R730.3 million at an average annual rate of 14.4 per cent, due to an increase in human resource requirements in existing departments, and in departments that were restructured to add marketing, project management, economic regulation and environmental planning skills. The increase in spending on compensation of employees between 2013/14 and

2016/17 is as a result of an expected increase in the headcount, air traffic controller validation or career progression, and normal annual increases for improved conditions of service. The increase in compensation of employees in 2013/14 was driven by the strategic objective to improve safety performance by increasing the expertise levels in the company, and the need to phase out contracted air traffic control staff.

The vacancy rate in the entity at the end of November 2013 was 22.2 per cent. Because of the technical nature of the Air Traffic and Navigation Service Company's business, the process of sourcing, appointing and training the entity's human capital is lengthy and this had led to prolonged high vacancy rates. In line with the current development and training plans, it is anticipated that vacancies will decrease over the medium term.

Consultants are used in some areas due to staff shortages as the entity's business is highly specialised and some positions take longer to be filled. The consultants are used for research and development for the company to acquire strategic vision, detailed insight and an understanding of global market dynamics and readily available information on technological and business trends, suppliers, products, clients and competitors.

Expenditure on goods and services is expected to increase at an average annual rate of 11.8 per cent over the medium term, driven in part by the effects of foreign exchange fluctuation on repairs, maintenance, and telecommunication network costs. Electronic maintenance support contracts are another big driver of spending.

Interest payable is projected to increase at an average annual rate of 20.3 per cent over the medium term as borrowings increase because of capital expenditure reprioritisation. Depreciation costs are also expected to increase at an average annual rate of 20.2 per cent as a result of an expected asset procurement drive.

## Airports Company South Africa

### Mandate and goals

The Airports Company of South Africa is regulated in terms of the Airports Company Act (1993) and the Companies Act (1973), and is listed as a schedule 2 public entity in terms of the Public Finance Management Act (1999). The company was formed to own and operate the nine principal South African airports, including the three main international gateways of O.R. Tambo International, Cape Town International and King Shaka International airports. As well as providing safe and secure services and infrastructure for passengers and airlines to transport people and goods, the company extends its responsibilities to include promoting tourism, facilitating economic growth and job creation, and protecting the environment.

Over the medium term, the company's main strategic goals are for it to position itself strategically for long term sustainability and to improve its operations. This involves analysing the market, refining its business and revenue models, developing a comprehensive stakeholder management strategy, and improving short term human resource performance.

## Expenditure trends

The Airports Company of South Africa derives its revenue from aeronautical and non-aeronautical sources. Aeronautical revenue consists of landing fees, passenger service charges and aircraft parking fees. Non-aeronautical revenue is derived from retail rental, car rental, advertising, parking receipts, office rental and property development.

While revenue increased at an average annual rate of 12.2 per cent from 2010/11 to 2013/14 over the medium term, revenue growth is expected to continue at more moderate levels as the regulated tariff for aeronautical revenue is adjusted downward. Particularly high average annual growth of 20.4 per cent from 2010/11 to 2012/13 was experienced because of increases in the regulated tariff for aeronautical revenue. This increase was based on capital expenditure of R17 billion brought into operation in this period.

The revenue increase over the medium term is in line with the company's funding model, which aims to ensure that the company is able to operate and fund the business in a sustainable manner. The increase will be used to repay the interest and debt accumulated during the expansion programme phase, which was necessary to accommodate the anticipated increase in the number of planes and passengers. The expansion programme resulted in additional capacity to subsidise airport operational expenses. This additional capacity created the need for further spending on security, compensation of employees, cleaning and repairs and maintenance. The increases in other non-tax revenue and interest over the MTEF period are mainly due to greater cash balances.

The spending focus over the medium term is in the administration, airport maintenance and engineering programmes, which together make up 87.1 per cent of the budget in 2013/14. This will enable the entity to continue to achieve high levels of passenger service quality, a key barometer of the company's performance. Airport maintenance and engineering consists of all activities required to keep the airport infrastructure in working order, and includes costs for specialist engineers in the electrical, mechanical, civil and industrial fields. Repairs and maintenance also require specialist skills, and the spending on this item is predominantly for contracts for the maintenance of certain infrastructure components. Spending on compensation of employees increased to 11.3 per cent of the budget in 2013/14.

Spending on goods and services increased at an average annual rate of 5.6 per cent over the medium term to meet the increase in demand for the maintenance of airport infrastructure. Administration is a major expenditure item because it includes the bulk of depreciation, as well as interest incurred on loans totalling R16.7 billion, which funded infrastructure investments between 2007/08 and 2010/11. These investments account for a robust growth in the acquisition of assets between 2010/11 and 2013/14 at an average annual rate of 47.6 per cent, mainly for new infrastructure developments in the OR Tambo, King Shaka and Cape Town International airports. The acquisition of assets between 2013/14 and 2016/17 is expected to be mainly for airport refurbishments, which is why growth on this spending item slows to an average annual rate of 25 per cent.

Expenditure growth between 2010/11 and 2013/14 was mainly driven by the airport security and safety programme, which increased by an average annual rate of 15.5 per cent. This expenditure was for additional capacity that was required at the new King Shaka International Airport, which was commissioned in 2011 and

increased the land area and safety and security costs. In 2013/14, a new security contract was awarded to accommodate additional capacity at some of the airports. Other expenditure drivers over this period were for IT, marketing, cleaning and consumables, and travel and communication.

Expenditure is expected to increase at an average annual rate of 3.4 per cent over the medium term. This is as a result of reduced interest payments. Infrastructure investment over the medium term is expected to be mostly for upgrades and additions to existing airports. Expenditure on consultants showed a significant increase between 2012/13 and 2013/14, due to key operational positions being vacant. The mitigating action was to contract a consultant with the required technical skill to assist.

The number of employees increased from 2 974 in 2012/13 to 3 020 in 2013/14. The positions that were not budgeted for, due to uncertain economic conditions, are expected to be filled in 2013/14 and 2014/15 to ensure the sustainability of the organisation. However, the increase in the number of employees is mainly due to learnerships in the different functional areas to enable succession planning and increase productivity. Expenditure on compensation of employees is expected to grow at an average annual of 8.2 per cent, from R984.6 million in 2013/14 to R1.3 billion in 2016/17, due to inflationary adjustments and provisions for competitive salaries.

## Passenger Rail Agency of South Africa

### Mandate and goals

The Passenger Rail Agency of South Africa's mandate is contained in the Legal Succession to the South African Transport Services Amendment Act (2008). The act requires the agency to, at the request of the Department of Transport, provide rail commuter services within, to and from South Africa in the public interest. In consultation with the Department of Transport, it also provides for long haul passenger rail and bus services within, to and from South Africa. The agency leverages off its assets to generate income, and to have due regard for key government social, economic and transport policy objectives.

The agency's strategic goals over the medium term are to:

- invest in new capacity such as modern trains, signalling and telecommunications systems, infrastructure, transit orientated developments, new generation stations, access control and other operating systems
- unlock the value of assets, such as the telecommunications network and the property portfolio
- effect key operational efficiencies for improved service delivery
- modernise operations in critical areas such as ticketing, cabling, booking systems and energy regeneration.
- achieve financial sustainability through improved revenue generation.

## Expenditure trends

The primary source of revenue of the Passenger Rail Agency of South Africa is transfers from the Department of Transport to finance both the entity's operational and capital expenditure requirements. Revenue from passenger services is generated from ticket sales to train and bus commuters and passengers on long distance journeys. Revenue is expected to increase moderately over the MTEF period from R8.7 billion in 2013/14 to R10.2 billion in 2016/17, at an average annual rate of 4.8 per cent. The increase is expected to be derived from improved revenue collection, increases in the prices of tickets and the expected number of passenger trips. More importantly, however, is that this moderate increase to revenue projections is largely attributed to the agency deferring a substantial proportion of its capital subsidy and thus only recognising that portion of it that matches the depreciation of assets that were bought using the subsidy.

The focus over the medium term will be on improving the agency's infrastructure to increase service reliability and efficiency, mainly in the Metrorail programme. This includes the maintenance of existing infrastructure and rolling stock; upgrading signalling, rail tracks and per way infrastructure, such as platforms and bridges; and the procurement of new rolling stock.

The acquisition of assets is expected to increase at an average annual rate of 19.5 per cent over the medium term as train coaches are refurbished and new rolling stock is purchased. However, the increase to the capital reserve is due to the additional capital subsidy the agency receives every month. When this subsidy is received, the entire amount is deferred in line with the agency's accounting policy and standards. The entity then recognises the subsidy on a systematic basis to match the depreciation from the asset that was bought using the subsidy.

Total expenditure increased between 2010/11 and 2013/14 at an average annual rate of 6.3 per cent. The growth in expenditure over this period relates to expenditure growth in goods and services as a result of an increased focus on maintenance and repairs of rolling stock and signalling systems, and increases in energy and fuel costs. In addition, the administration programme, which accounted for 13.7 per cent of total expenditure in 2013/14, grew significantly from 2010/11 to 2013/14 at an average annual rate of 20.4 per cent. The increase is largely due to the depreciation of rolling stock. The reduction in cash is due to the fact that the first few trains arrive in 2015 and the upgrades, modernisation and other major projects are expected to be nearing completion by then.

Total expenditure is expected to increase over the medium term to R10.9 billion in 2016/17 as the entity expects to increase its staff complement to increase to 23 901 in anticipation of a major capital expenditure programme that will involve the improvement and upgrades of signalling infrastructure and stations, and the recruitment of additional security personnel to improve fare collection rates. As a result, spending on compensation of employees is expected to increase to R4.2 billion in 2016/17 at an average annual rate of 5.7 per cent over the medium term.

## Road Accident Fund

### Mandate and goals

The mandate of the Road Accident Fund, a schedule 3A public entity, is derived from section 3 of the Road Accident Fund Act (1996) as the payment of compensation for loss or damage wrongfully caused by the driving of motor vehicles in South Africa. The socioeconomic mandate of the fund is to reintegrate victims of road accidents into society from a health and economic perspective, and to protect wrongdoers and their families from financial ruin. The fund delivers on this mandate by:

- paying the medical and related costs required to restore road accident victims to health
- compensating the victim/s or their dependants for income or support lost as a result of the accident
- indemnifying the wrongdoer from liability
- paying general damages in instances where a person suffers a serious injury in a road traffic accident
- paying funeral expenses to families when a person dies as a result of a road traffic accident.

The fund's strategic goals over the medium term are to:

- develop a legislative dispensation that is aligned with the principles of social security
- ensure that the organisation is solvent, liquid and sustainable by 2020
- ensure that the organisation is customer centric, operationally effective and efficient by 2017.

## Expenditure trends

Almost all of the Road Accident Fund's revenue is derived from the fuel levy, which was 96 cents a litre in 2013/14. Total revenue is expected to increase at an average annual rate of 9.1 per cent over the medium term from R20.7 billion in 2013/14 to R26.9 billion in 2016/17 due to increases in the levy. The average annual growth between 2010/11 and 2013/14 was 12.6 per cent.

The fund intends to use cash received from the fuel levy after paying administration, human resources and capital expenditure costs to pay claims and related expenditure. On average, 93 per cent of the fuel levy is expected to be used for claims and related expenses.

Total expenditure is driven by the payment of claims to accident victims, which continues to be the spending focus over the medium term. Claims expenditure is expected to increase at an average annual rate of 20.9 per cent over the medium term to R25.9 billion in 2016/17 as more claims are finalised through agents who process claims.

Expenditure on the payment of claims to accident victims decreased at an average annual rate of 1.6 per cent between 2010/11 and 2013/14. This decline is as a result of the work undertaken by actuaries on claim reporting and settlement delays, which influenced the valuation assumptions of liabilities on payment of claims in March 2013. After 2013/14, the reported claims are expected to stabilise above the R20 billion level.

The increase in goods and services in 2012/13 is mainly as result of the impairment of the software assets. Spending on goods and services is expected to increase at an average annual rate of 7.8 per cent over the medium term to support the expansion of the organisational structure to process claims. This can be seen in the

decreased number of open claims received but not finalised over the MTEF period. The decrease in depreciation for 2012/13 and 2013/14 was mainly the result of the impairment of the software assets, while the increase in depreciation for 2014/15 and 2016/17 is as result of the expected acquisition of assets following the implementation of the new organisational structure.

Expenditure on compensation of employees grew at a rate of 17.1 per cent to R996 million in 2013/14 as the staff complement increased to 2 513 due to new staff for the expansion drive who are expected to be employed by the end of 2013/14. As a result of the implementation of the new organisational structure that seeks to rationalise the historic structure and to control for weaknesses and operational impediments, compensation of employees is projected to increase to R1.4 billion. It is expected that the staff complement will increase from 1 877 at the end of March 2013 to 2 837 in 2016/17.

The increase in administrative expenditure in 2013/14 and 2014/15 is as a result of initiatives to improve productivity in the claims environment and related projects. The entity has a funded establishment of 2 513 posts.

## South African National Roads Agency

### Mandate and goals

The South African National Roads Agency is a schedule 3A public entity established by the South African National Roads Agency and National Roads Act (1998). In terms of the act, the agency is responsible for the planning, design, construction, operation, management, control, maintenance and rehabilitation of the South African national road network, including the financing of the these functions. This includes both toll and non-toll roads.

The agency's main strategic goal over the medium term is to provide effective strategic road infrastructure to facilitate development, commerce, mobility and access. In addition, the agency will continue with its preventative maintenance approach as it expands its network to the extended mandate of 35 000 kilometres.

### Selected performance indicators

Table 37.35 The South African National Roads Agency

Indicator	Programme/Activity/Objective	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Smooth travel exposure index: Percentage of travel undertaken each year on national roads with roughness less than 4.2(m/km)	Routine maintenance	Outcome 6: An efficient, competitive and responsive economic infrastructure network	95%	96%	95%	95%	95%	95%	95%
Low rut exposure: Percentage of travel undertaken each year on national roads with rut depth less than 20mm	Routine maintenance		99%	99%	95%	95%	95%	95%	95%
High texture exposure: Percentage of travel undertaken each year on national roads with macro texture higher than 0.4mm	Routine maintenance		99%	97%	97%	95%	95%	95%	95%
Bridge condition exposure index: Percentage of travel over or under bridges on national roads with overall condition index higher than 80	Routine maintenance		95%	96%	94%	90%	90%	90%	90%
Length of network: Kilometres of roads with active routine maintenance contracts	Routine maintenance		16 170	16 170	19 704	19 704	19 704	19 704	19 704
Resurface length: Kilometres of roads resealed or overlaid	Routine maintenance		1 250	750	1 370	850	850	850	850
Strengthening length: Kilometres of roads strengthened	Improvements		275	300	502	400	400	400	400

## Expenditure trends

The South African National Roads Agency's income mainly comprises of revenue generated from toll fees for the toll road network, and government allocations for the upkeep of the non-toll network. 39.7 per cent of total revenue came from national government transfers between 2010/11 and 2013/14. While the transfers increased significantly between 2010/11 and 2012/13 as road maintenance was identified as an economic infrastructure priority, the growth in transfers will reduce over the MTEF. Toll income increased considerably between 2010/11 and 2013/14, at an average annual growth of 10 per cent, due to traffic increases on existing toll roads and the opening of new toll plazas on the R30 and N17 national roads, as well as the start of the e-tolling project in December 2013. Transfers were particularly high in 2011/12 due to the once-off transfer of R5.8 billion in 2011/12 for the Gauteng freeway improvement project.

Revenue from sales by market establishment is projected to grow significantly over the MTEF period at an average annual rate of 27.8 per cent to R5.8 billion, due to the anticipated full implementation of the Gauteng freeway improvement project e-tolling, which has the potential to result in improved revenue inflows. The decline in non-tax revenue at an average annual rate of 81.9 per cent is due to the agency not undertaking work on behalf of other spheres of government in the absence of contracts. This is the reason for the other non-tax revenue levelling off over the medium term.

The spending focus over the medium term will be on road improvements, due to that fact that 75 per cent of the network is beyond its original design life, and some road sections cannot be economically maintained through preventative maintenance any longer. This approach ensures consistently high road quality while gradually increasing the kilometres of roads that have been resurfaced and strengthened. The agency's main expenditure item is on payments to contractors for road works. As a result, total expenditure is expected to increase at an average annual rate of 11.8 per cent over the medium term. Over the same period, interest payments will decline at an average annual rate of 1.7 per cent. The decline in finance charges over the projected period is as a result of improved cash holdings, which will result from e-toll inflows. In addition, the agency paid off one of its long term bonds in October 2013 and another long term bond is expected to be paid off in 2015.

Expenditure between 2010/11 and 2013/14 increased for different activities, but in particular for maintenance as this is the most efficient way of upholding the value of road assets. The increase in the total road network from 16 000km to 20 000km is the large driver of expenditure, and this includes provincial roads incorporated into the agency's strategic road network. In addition, total expenditure grew at an average annual rate of 30.7 per cent between 2010/11 and 2013/14, largely driven by interest costs incurred to service the existing bonds, as well as the costs of repairing and maintaining the existing infrastructure. The increments in interest cost contribute to the overall increase in trade payables from 2010/11 onwards due to higher outstanding payments to service the repayment of the Gauteng freeway improvement project loan.

Expenditure on goods and services is made up mainly of project, technical and computer services costs. The 42.7 per cent average annual increase in spending on goods and services between 2010/11 and 2013/14 was largely driven by active projects, including the initial phase for the Gauteng freeway improvement project.

Expenditure on consultants increased from R9.3 million in 2011/12 to R26.4 million in 2012/13 due to the building of new offices for the western and southern region branches. It is expected to decrease drastically to R5.2 million over the medium term. Design consultants are used for once-off tasks. Spending on compensation of employees increased significantly, at an average annual rate of 20.6 per cent 2010/11 and 2013/14, from 224 staff in 2010/11 to 260 in 2013/14. This increase in the staff complement enabled the agency to achieve high levels of performance as shown by the routine maintenance targets achieved in the same period.

Financial asset investments declined from R3.2 billion in 2010/11 to R573.6 million in 2012/13, and stabilised in 2013/14 at R2.9 billion. This trend is due to the volatility in market related financial instruments as a result of the repo borrowing programme. Additionally, the increase in receivables and prepayments to R1.7 billion in 2013/14 at an average annual rate of 72.9 per cent is due to increases in the number of defaulting debtors as a result of the implementation of the Gauteng freeway improvement project. Over the same period, receivables are expected to increase at an average annual rate of 14.6 per cent due to an increase in the number of e-toll debtors, since it is expected that in the early stages, large numbers of users will default on payments.

The capital reserve fund is largely made up of a revaluation of land, the road network and road structures, and a deferred grant for non-toll roads. The fund's 19.6 per cent average annual growth between 2010/11 and 2013/14 was largely influenced by deferred capital allocations.

### Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Cross Border Road Transport Agency** is tasked with facilitating the unimpeded flow of cross border freight and passengers by road in order to promote trade and economic development within the SADC region. Estimated expenditure for 2014/15 is R214 million.
- **Driving Licence Card Account** manufactures credit card format driving licences, based on orders received from driving licence testing centres, and generates its own revenue through the sale of the licences. Estimated expenditure for 2014/15 is R160.6 million.
- The **Ports Regulator** exercises economic regulation over the ports industry. Estimated expenditure for 2014/15 is R17.2 million.
- The **Railway Safety Regulator's** mission is to oversee and promote safe railway operations through appropriate support, monitoring and enforcement guided by an enabling regulatory framework. Estimated expenditure for 2014/15 is R134.8 million.
- The **Road Traffic Infringement Agency** administers the procedures that discourage the contravention of road traffic laws and adjudicates infringements, enforces penalties, provides specialised prosecution support services, and undertakes community education and awareness programmes. Estimated expenditure for 2014/15 is R157.4 million.
- The **Road Traffic Management Corporation** coordinates strategic planning, regulation, facilitation and law enforcement in respect of road traffic matters by national, provincial and local spheres of government. Estimated expenditure for 2014/15 is R624.9 million.
- The **South African Civil Aviation Authority's** main strategic objective is to enforce safety and security regulations in the aviation industry. Estimated expenditure for 2014/15 is R468.7 million.
- The **South African Maritime Safety Authority** promotes South Africa's maritime interests and ensures the safety of life and property at sea. Estimated expenditure for 2014/15 is R356.8 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Ensure the availability and supply of water at national level, facilitate equitable and sustainable social and economic development, and ensure the universal and efficient supply of water services at local level.*

### Mandate

The Department of Water Affairs' legislative mandate seeks to ensure that the country's water resources are protected, managed, used, developed, conserved and controlled by regulating and supporting the delivery of effective water supply and sanitation. This entails adhering to the requirements of water related policies and legislation, including constitutional requirements, that are critical in delivering on the right of access to sufficient food and water, transforming the economy and eradicating poverty. The mandate is derived from the National Water Act (1998), the Water Services Act (1997) and the Water Research Act (1971).

### Strategic goals

The department's strategic goals over the medium term are to:

- be an efficient, effective and development oriented sector leader by increasing the skills pool by implementing commitments contained in the sector skills plan of capacity building
- improve water resources management by finalising the institutional framework and formalising regional entities to provide regional bulk water infrastructure and support municipalities
- improve the internal control environment, thus improving water resources and services information and implementing programmes that support job creation
- provide equitable and sustainable raw water by finalising and implementing strategies that guide future priorities for water management in the country
- implement programmes to improve the efficiency of water use and oversee water infrastructure programmes that would be of benefit to various other sectors
- ensure the provision of equitable and sustainable water services of acceptable quantity and quality by regulating the quality and quantity of water services, and ensuring interim water supply in the 24 priority district municipalities

- protect freshwater ecosystems by improving the protection of water resources through the implementation of various programmes in support of water resources quality management, and ensuring that various sectors across the water value chain comply with water legislation.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide policy leadership, advice and core management and administrative support services.

### Programme 2: Water Sector Management

**Purpose:** Ensure that the country's water resources are protected, used, developed, conserved, managed and controlled in a sustainable manner for the benefit of all people and the environment, by developing and implementing effective policies and integrated planning strategies, and developing a knowledge base and procedures.

### Programme 3: Water Infrastructure Management

**Purpose:** Ensure a reliable supply of water from bulk raw water resources infrastructure to meet sustainable demand objectives for South Africa within acceptable risk parameters. Solicit and source funding to implement, operate and maintain bulk raw water resources infrastructure in an efficient and effective manner by strategically managing risks and assets.

### Programme 4: Regional Implementation and Support

**Purpose:** Coordinate the effective implementation of the department's strategic goals and objectives at the regional level, including the establishment of water resource management institutions. Facilitate water conservation and demand management. Accelerate communities' access to water infrastructure.

### Programme 5: Water Sector Regulation

**Purpose:** Ensure the development, implementation, monitoring and review of regulations across the water value chain in accordance with the provisions of the National Water Act (1998) and the Water Services Act (1997).

### Programme 6: International Water Cooperation

**Purpose:** Strategically develop, promote and manage international relations on water resources between countries through bilateral and multilateral cooperation instruments and organisations, in line with provisions of the National Water Act (1998). Pursue national interests at both African multilateral and global multilateral organisations and forums.

## Selected performance indicators

**Table 38.1 Water Affairs**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of new reconciliation strategies developed to ensure water security per year	Water Sector Management	Outcome 6: An efficient, competitive and responsive economic infrastructure network	2	2	4	1	3	3	3
Total number of gauging sites monitored	Water Sector Management	Outcome 10: Environmental assets and natural resources that are valued, protected and continually enhanced	1 500	1 549 <sup>8</sup>	1 515	1 509	500	700	700
Number of additional people provided with access to water per year	Regional Implementation and Support	Outcome 9: A responsive, accountable, effective and efficient local government system	351 106	598 766	695 600	1 million	1 million	1 million	1 million
Number of new bulk infrastructure schemes completed per year <sup>1</sup>	Regional Implementation and Support	Outcome 6: An efficient, competitive and responsive economic infrastructure network	55	62	3	12	8	18	19
Number of rainwater harvesting tanks installed for access to water and food production per year <sup>2</sup>	Regional Implementation and Support	Outcome 9: A responsive, accountable, effective and efficient local government system	5 740	8 068 <sup>8</sup>	4 068	2 400	1 790	1 500	1 500

Table 38.1 Water Affairs

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of additional resource poor farmers supported with access to water per year	Regional Implementation and Support	Outcome 7: Vibrant, equitable and sustainable rural communities with food security for all	666	4 174 <sup>8</sup>	1 787	880	744	620	620
Number of municipalities supported to implement water conservation and water demand management per year	Regional Implementation and Support	Outcome 9: A responsive, accountable, effective and efficient local government system	4	68 <sup>8</sup>	34	70	35	69	51
Percentage completed on construction of Inyaka water treatment works as stated in the original and approved project implementation plan <sup>3</sup>	Regional Implementation and Support	Outcome 6: An efficient, competitive and responsive economic infrastructure network	73%	98%	99%	100%	- <sup>3</sup>	- <sup>3</sup>	- <sup>3</sup>

Total number of water treatment supply systems assessed for compliance with drinking water quality standards	Water Sector Regulation	787		914	931	950	1 084	1 084	1 090
Number of new catchment areas in which compulsory licensing processes have been completed per year	Water Sector Regulation	- <sup>5</sup>		- <sup>5</sup>	2	2	0	1	1
Number of strategic new partnerships established with countries in Africa per year	International Water Cooperation	Outcome 11: Create a better South Africa and contribute to a better and safer Africa and world	- <sup>5</sup>	4	2	2	2	4	3

1. From 2012/13, the indicator only includes completed schemes. The indicator previously measured all the schemes implemented per year, hence the decrease in 2012/13.

2. The significant decline over the medium term is as a result of a budget reduction.

3. These indicators will only be measured up to 2013/14.

4. The construction of Nandoni distribution replacement of glass reinforced plastic pipeline only started in 2011/12.

5. This indicator had not been introduced yet, thus no historical data available.

6. This project will be completed in 2015/16.

7. This indicator will only be measured up to 2012/13.

8. The number published in the 2013 ENE was incorrect.

## The national development plan

The national development plan envisages that by 2030 the country will have transitioned to an environmentally sustainable economy, and that all South Africans will have access to affordable, sufficient and safe water and decent sanitation. Urban and industrial centres will have a reliable supply of water to meet their needs, agricultural water use will support productive and inclusive rural communities, and the natural environment will be protected to prevent excessive abstraction and pollution. To this end, the plan advocates carefully regulated infrastructure, and research and development to ensure the most efficient use of this resource. The second iteration of the department's national water resource strategy was completed, approved by Cabinet and published in the Government Gazette in August 2013. The strategy sets out how the department will achieve its own core objectives and those of the water sector. The following objectives are aligned with the national development plan: water that supports development and the elimination of poverty and inequality; water that contributes to the economy and job creation; and water that is protected, used, developed, conserved, managed and controlled sustainably and equitably.

The plan also proposes the target of a 15 per cent reduction in the average water demand by 2030. In response to this, the department will continue to run various programmes supporting local government to refurbish existing infrastructure of prioritised schemes, and implement water conservation and water demand management programmes. These programmes include: the war on leaks project, the accelerated community infrastructure programme, water conservation and demand management target setting for metropolitan municipalities, the no drop assessment and certification programme, and various education and awareness programmes.

## Expenditure estimates

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing regional bulk infrastructure for water and wastewater treatment works which link water sources to local government infrastructure. This is done through contributions to the infrastructure build programme in the *Regional Implementation and Support* and the *Water Infrastructure Management* subprogramme. Over the MTEF period, expenditure in the *Regional Implementation and Support* programme, specifically on payments for capital assets, is expected to increase significantly as a result of an additional allocation of R934 million to implement regional bulk water and wastewater projects. These projects include the construction of the De Hoop Dam's regional bulk distribution, Sedibeng bulk water supply, and the OR Tambo district municipality regional bulk water and wastewater infrastructure. In addition, spending on the municipal water infrastructure grant, which was introduced in 2013/14, is expected to increase from R603 million in 2013/14 to R2.8 billion in 2016/17. The grant is earmarked for specific projects to eradicate backlogs in water and sanitation infrastructure, particularly within the 24 priority district municipalities identified through Census 2011's enumeration of backlogs per poor household per municipality.

The department will also transfer R2.6 billion in 2014/15, R3.7 billion in 2015/16 and R4 billion in 2016/17 to the water trading entity through the *Water Infrastructure Management* programme. The bulk of this funding will be used on the bulk distribution system of the De Hoop Dam and the dam safety rehabilitation programme. The transfers include additional allocations of R264 million in 2015/16 and R430 million in 2016/17 for the presidential infrastructure coordinating commission project for the construction of a new dam on the Umzimvubu River in Eastern Cape.

The 2014 Budget includes Cabinet approved budget reductions of R55 million in 2014/15, R20 million in 2015/16 and R50 million in 2016/17 to the department's allocation. The department is to effect the reductions mainly in spending on compensation of employees and various items of expenditure on goods and services, such as communication, travel and subsistence, and consultants. These reductions are not expected to have a negative impact on service delivery.

At the end of November 2013, the department had a funded establishment of 4 261 posts, with 219 additional to the establishment and 491 vacant. The vacancies were due to the difficulty experienced in attracting people with the critical and scarce skills necessary to perform vital tasks, which is why the department uses consultants when required. Thus spending on consultants, which fluctuated between 2010/11 and 2013/14, is expected to increase from R362.3 million in 2014/15 to R477.9 million in 2016/17. The department expects to reduce vacancies to 115 posts in 2016/17 as it implements the organisational restructuring over the MTEF period, which explains the anticipated increase in spending on compensation of employees over the period.

### Infrastructure spending

#### *Mega infrastructure projects*

The **Olifants River water resources development project** comprises the construction of the De Hoop Dam

and the bulk raw water distribution systems. The project will deliver water for domestic and industrial use in the Greater Sekhukhune, Waterberg and Capricorn district municipalities in Limpopo. The project will benefit more than 800 000 people in the domestic sector. The construction of the dam began in 2007 and R3.2 billion has been spent up to 2013/14. The dam was commissioned at the beginning of 2013/14, with site clearance expected to take place by the beginning of 2014/15.

The department has begun to implement phase 2C, which entails the construction of a pipeline from De Hoop Dam to Steelpoort, including the Steelpoort pumping station, which will pump water through existing infrastructure to the Mooihoek water treatment works. The construction of the distribution system began in 2011/12. R1.9 billion has been spent up to 2013/14 and R1.2 billion is allocated over the MTEF period. Phases 2B and 2D will be advanced over the MTEF period and are scheduled to be completed by 2020.

**Phase 1 and Phase 2A of the Mokolo and Crocodile River west water augmentation project** aims to deliver water to meet South Africa's future energy needs in the Waterberg coal fields and the Mpumalanga highveld. Water requirements in the Waterberg coal fields in Limpopo are expected to increase over the next 20 years. The project is expected to be commercially viable as all costs get recovered from water users, except for a municipal portion of about 10 per cent. The Minister of Water Affairs has directed the Trans-Caledon Tunnel Authority to secure funding and implement the project. Funding will be repaid through revenues from the sale of water delivered to the users.

Phase 2 of the project includes a diversion weir and associated low lift pump station on the Crocodile River at Vlieëpoort, near Thabazimbi. This phase of the project also includes removing silt and balancing storage facilities from where a high lift pump station will eventually feed 100 million cubic metres of water per year to the demand centres in the Lephhalale and Steenbokpan areas. This infrastructure will connect to the infrastructure built in phase 1. The total estimated cost of the phase 2A and 3 of the project is R13.9 billion, of which R772.9 million is to be spent over the MTEF period. Off budget sources are used to fund about 11 per cent of the system and phase 2A is scheduled for commissioning in 2019/20.

The **dam safety rehabilitation project** ensures the continued structural and operational safety of the 316 dams owned by the department in order to comply with dam safety regulations. The project has an estimated cost of R2.8 billion, of which R1.8 billion has been spent up to 2013/14. An additional R1 billion has been allocated over the MTEF period.

The **raising of Clanwilliam Dam project** will make the dam safer during floods, stabilise dam distortion caused by alkali aggregate reaction, provide an additional yield of 70 million cubic metres of water per year, and help under resourced, poor farmers promote food security and employment. The dam is located in the middle reaches of the Olifants River near Clanwilliam in Western Cape. The project is expected to create 2 500 permanent jobs in the agricultural sector. During the construction phase, the project will create 650 temporary jobs. The total estimated budget for the project is R2.2 billion, with R1.8 billion to be spent over the MTEF period. The project budget has increased since 2012/13 due to cost adjustments made due to the delays in finalising the design and changes in the scope of work. The project is at the start of the planning and design stage, with construction of the N7 re-alignment having started in October 2013. The project is scheduled for completion by 2018.

The **Pilanesberg north and south water supply project** is estimated to cost R771.3 million and was introduced as a direct result of the bulk water demands of mines developing around the Pilanesberg area, as well as identified domestic water needs within the Moses Kotane, Rustenburg and Thabazimbi local municipalities. A joint venture between the Magalies Water Board, mines in the area and the local municipalities, the project makes each party responsible for its pro-rata share of project costs based on the water allocation to each participating party. The project consists of upgrading the water treatment works at Vaalkop Dam, various bulk water pipelines, pump stations and storage facilities for both the north and south schemes. The portion of the project funded from the department's budget is scheduled for completion in 2015/16.

With a total project cost of R734 million, the **Taung Dam water supply scheme** in North West will augment bulk water supply to settlements in the Naledi local municipality and the Greater Taung local municipality within the Dr Ruth Segomotsi Mompati district municipality, which is the relevant water services authority. The project is comprised of various phases, with completion of the first phase in 2011. The final intended completion date of the project is 2016. Water from the dam will reduce reliance on the Vaalharts irrigation scheme and lower the cost to users. In 2010, the Taung Dam water supply scheme served a total combined

population of 186 139 and projections estimate that it will serve a population of 217 429 by the year 2030. The total water demand for the Greater Taung area to be supplied from the Taung Dam is 16 megalitres per day, while that for the Naledi local municipality is 17.3 megalitres per day.

With a total cost of R674 million, the **Pongolapoort bulk water scheme** is located within the Jozini local municipality in northern KwaZulu-Natal's Umkhanyakude district municipality. The project's proposed water supply area extends from Jozini in the south to the boundaries of the Shemula water supply scheme to the north, supplying the town of Ingwavuma and communities along the Lebombo mountain range on the border between KwaZulu-Natal and Swaziland. The residents of this area currently do not have a reliable, sustainable, potable water supply. The first phase of the project has been completed and serves a population of 50 706. Once completed by 2016, the population served by the project is estimated to increase to 94 328 by 2029.

With a total project cost of R530 million, the primary purpose of the **Namakwa replacement project** in Northern Cape is the provision of sustainable bulk potable water services to the towns of Steinkopf, Bulletrap, Nababeep, O'Kiep, Carolusberg, Concordia, Springbok, the De Beers mining operation and the settlement of Kleinsee in the Namaqualand region of the Northern Cape. The area is large, sparsely populated and characterised by water scarcity, requiring that water services provided to small towns spread over a vast area with a total population of approximately 62 000 people. The infrastructure in the area is in a poor condition and much of it has reached the end of its useful economic life. There is thus an urgent need to refurbish and replace key components of the water supply infrastructure to ensure that the infrastructure continues to provide reliable bulk services to the communities that it serves.

The **Ndlambe regional bulk water supply** in Eastern Cape has a total project cost of R879 million and is to serve the Ndlambe local municipality, where development cannot take place due to a lack of bulk water services infrastructure. Characterised by rivers with high salinity and brackish water, the municipality has areas that are currently supplied from boreholes, which are also often saline and brackish, and cannot supply peak demand. The objective of the regional bulk pipeline is to augment water supply to these communities.

The **Mbizana regional bulk water supply project** in Eastern Cape has a total project cost of R780 million, of which R242.9 million has been spent to date. The project aims to improve the bulk water supply of the 41 321 households and other users in the Greater Mbizana area, which is part of the Mbizana local municipality, located in the OR Tambo district municipality in the Eastern Cape. Currently, the sources of bulk water supply for the local municipality are not able to meet the immediate and long term bulk water needs of the Greater Mbizana area as groundwater yields are low and the current capacity at the Mbizana Dam is limited. The local municipality also has significant backlogs in the provision of water and sanitation. The regional bulk water supply scheme project will provide a new water resource, added treatment capacity and a bulk water distribution system within the area. This will ultimately eradicate the water backlogs in the area and aid in the eradication of sanitation backlogs. The scheme consists of three key components: the Nomlacu water treatment works, a raw water supply system, and bulk potable water distribution. The scheme will be completed by 2018.

The **raising of Tzaneen Dam and the construction of the new Nwamitwa Dam for the Groot Letaba River development project** aim to augment the supply of water to meet the growing demand from the domestic sector in Limpopo by 2025, improve water availability in the riverine ecosystem and stabilise water availability to the irrigation sector. The project is estimated to cost R1.5 billion, R858 million of which is allocated over the MTEF period. The commissioning of the Tzaneen Dam is scheduled for August 2017, while the Nwamitwa Dam is set to be commissioned in November 2019. Both projects have been delayed by approximately 12 months due to the delays in issuing environmental authorisations and gazetting.

#### Large infrastructure projects

The **Nandoni water treatment works and distribution networks** project will augment the water supply to the Vhembe district municipality in Limpopo. The total value of the project is estimated at R1.8 billion, R1.3 billion of which has been spent up to 2013/14 and R23.4 million of which will be spent in 2014/15. The construction began in 2006/07 and commissioning is scheduled for 2014/15.

The **Nandoni Pipeline project** aims to convey water for domestic use to the Vhembe district municipality in Limpopo. The construction of the project began in 2006/07 and the project was completed in 2013/14 and will be commissioned early in 2014/15. The total value of the project is estimated at R750 million, of which R735 million has been spent up to 2012/13. R15 million is allocated in 2013/14 for retention fees.

The **Mzimvubu water project** aims to augment the supply of water to meet the growing demand from the domestic sector in Eastern Cape by 2021. The project will be built as a conjunctive scheme involving a water supply dam at Ntabelanga and a hydropower scheme at Lalen. Subsequent works and funding arrangements for the Lalen hydropower scheme will be implemented following detailed planning work to be carried out with the Department of Energy and Eskom. The project size and features are to be confirmed in a feasibility study, however, the water project component is estimated at R8 billion, with R694 million allocated over the MTEF period.

#### Small infrastructure projects

Over the medium term, 145 small infrastructure projects will be implemented, of which 73 are in the construction phase, 20 are in the design and tender phases, and 52 projects are in the feasibility study phase. These projects aim to develop bulk water and wastewater infrastructure that will enable the connection of municipal reticulation infrastructure. The total value of these projects over the MTEF period is estimated at R5.2 billion.

## Programme 1: Administration

### Subprogrammes

- *Ministry* provides support to the minister and deputy minister, and provides for their salaries. The support function entails advising the minister and deputy minister on policy matters, organising public participation programmes, dealing with appeals in terms of grievance procedures, attending to administrative and logistical needs, processing the department's submissions, and supporting the minister and deputy minister

on Cabinet and parliamentary matters. Key activities in 2013/14 included liaising with constituencies and participating in international programmes and parliamentary programmes. This subprogramme had a full time staff complement of 35 in 2013/14.

- *Departmental Management* provides administrative support to the director general and secretariat services to the department, and makes provisions for salaries and other costs associated with the office of the director general. This entails tracking submissions, facilitating governance structure meetings chaired by the minister, director general and chief operating officer, coordinating parliamentary responses, preparing for cluster meetings, business planning, reporting on performance, and implementing transformation projects. In 2013/14, the following reports were finalised: annual report, quarterly reports, the strategic plan and draft annual performance plan. The programme management unit is in the process of being established and is set to be operational by 1 April 2014. This subprogramme had a full time staff complement of 30 in 2013/14.
- *Internal Audit* provides independent, objective assurance and advisory services designed to add value and improve the department's operations. This entails involvement in 84 various projects, such as conducting audits to evaluate the integrity of financial and operational information, verifying asset management procedures, special investigations, and assessing compliance with laws and regulations. In 2013/14, a three-year implementation plan was approved by the audit committee. This subprogramme had a full time staff complement of 32 in 2013/14.
- *Corporate Services* provides administrative support to the department and is made up of the human resources, communication services, legal services, administration and information services units. In 2013/14, R12.7 million was transferred to the learning academy for student bursaries in science and engineering and R2.5 million was transferred to the Energy Sector Education and Training Authority. In that year, 55 students qualified and 60 new bursaries were awarded. Over the medium term, the focus is on developing and recruiting specialised skills, especially engineers and scientists. In 2013/14, 214 candidates were registered and 185 candidates were placed into permanent posts. This subprogramme had a full time staff complement of 635 in 2013/14.
- *Financial Management* ensures the efficient management of daily financial operations, processes and systems. In 2012/13, a procurement supplier database was implemented to meet the procurement needs of the department and to address the qualified external audit and to enable the department to rotate suppliers as required. An agreement has been signed with the Department of Trade and Industry regarding verification of suppliers. In 2013/14, the process of establishing and improving systems of internal control within the department and regional offices was under way. A service level agreement has been signed for contract management with a service provider and will be implemented on 1 April 2014 in an effort to improve contract administration in the department. This subprogramme had a full time staff complement of 263.
- *Office Accommodation* makes payments for rental charges on all leased office space occupied by the department, as well as for municipal services such as electricity, water, and sewage and waste removal. This subprogramme has no staff.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on maximising organisational efficiencies and strengthening internal and financial controls by providing administrative and financial management support to the department and seeing to its office accommodation needs. Thus the bulk of the programme's budget over the MTEF period is allocated to the *Corporate Services*, *Financial Management* and *Office Accommodation* subprogrammes for spending on compensation of employees, operating leases and property payments, computer services, consultants and contractors.

Spending in the *Corporate Services* subprogramme is expected to increase from R382.5 million in 2013/14 to R474.5 million in 2016/17 due to the transfer of the transformation management function from the

*Departmental Management* subprogramme. The significant increase in spending on contractors projected over the medium term is due to the department's plans to host the National Youth Water Summit and the Women in Water Awards, while the increase in spending on consultants projected over the same period provides for specialised knowledge and skills in legal, financial and information technology processes required to improve departmental performance and service delivery objectives.

The department expects to hire additional office space for the support staff of the deputy minister in 2015/16. This, together with an anticipated increase in rental costs, is expected to increase spending in the *Office Accommodation* subprogramme from that year. In 2013/14, property payments were shifted to operating lease payments, resulting in a shift of spending between these two items over the medium term.

Between 2010/11 and 2012/13, the department created an internal control directorate and restructured the internal audit unit to include three additional directorates to ensure that efficient systems of control were in place and to strengthen the system of financial management. As a result, spending in the *Financial Management* and *Internal Audit* subprogrammes over the seven-year period grows significantly. Additional staff will be appointed over the medium term, which accounts for the projected increase in spending on compensation of employees and goods and services, particularly rental costs and computer services. At the end of November 2013, the programme had an establishment of 1 122 funded posts and 54 posts additional to the establishment, of which 995 posts were filled and 127 were vacant due to promotions within the department and the high turnover rate.

## Programme 2: Water Sector Management

### Objectives

- Ensure that water resources are managed sustainably and that funding is raised for refurbishing existing water infrastructure, by gazetting the final water pricing strategy in 2014/15.
- Monitor the national water resource strategy implementation and improve the monitoring of water resources in order to respond and adapt to the impact of climate change, by optimising the water monitoring network by 2016/17.
- Ensure the equitable allocation of water resources for social and economic development by implementing water allocation reform and completing compulsory licensing in 2 catchment areas: Mhlathuze in 2014/15 and Limpopo in 2016/17.
- Ensure that available water is used efficiently by implementing water conservation and demand management programmes, including sector awareness and mobilisation on an ongoing basis over the MTEF period.
- Maintain a reliable and equitable supply of water over the medium term by:
  - developing reconciliation strategies for the Richards Bay, Luvuvhu-Letaba, Orange and Limpopo North water management areas
  - completing 2 feasibility plans for water resource development projects for the Umzimvubu and Western Cape water supply systems
  - developing groundwater resources and optimisation usage.
- Strengthen the regulatory function through improved regulations for water services provision and water resource development by revising and submitting the Water Services Amendment Bill and National Water Bill to Parliament by 2013/14 and finalising the legislative review by 2015/16, leading to a single water act.
- Improve the efficiency and effectiveness of the delivery of water by strengthening the capacity of water institutions to discharge their obligations through the finalisation of an institutional realignment framework over the MTEF period.
- Ensure the efficient use and protection of water resources by:
  - setting the final resource quality objectives for the Upper Vaal and Lower Vaal by 2014/15 and two other significant river systems for the year 2015/16
  - completing a national integrated water information system by 2016/17
  - developing the integrated water quality management strategy.

## Subprogrammes

- *Policy and Planning Management and Support* oversees the overall management and oversight of the programme by ensuring effective and efficient operation of the office of the deputy director general. This entails business planning and overall monitoring of the programme. The deputy director general was appointed in September 2013. This subprogramme had a staff complement of 6 in 2013/14.
- *Integrated Planning* develops comprehensive plans that guide infrastructure development, systems and services management in the water sector. This entails preparing reconciliation strategies, drafting feasibility plans, compiling the integrated hydrological plan, undertaking options analyses and macro planning. In 2012/13, 4 reconciliation strategies were completed. Over the medium term, the focus will be on developing reconciliation strategies for the Richards Bay, Luvuvhu-Letaba, Orange and Limpopo-North water management areas, as well as completing 2 feasibility plans of the uMzimvubu and Western Cape water supply systems. This subprogramme had a staff complement of 99 in 2013/14.
- *Policy and Strategy* develops, maintains, monitors and reviews the implementation of water sector policy to ensure reliable and equitable water supply and services. In 2012/13, the draft of the second iteration of the national water resources strategy was gazetted for public consultation. The strategy was approved by Cabinet in 2013/14 for implementation and the review of national water policy positions were gazetted for consultation. This subprogramme had a staff complement of 11 in 2013/14.
- *Water Services and Local Water Management* entails the formulation and development of strategies, guidelines and plans for water services and management of water at local level. The function ensures that all people in South Africa have access to effective sustainable and affordable water services through policy and legislative framework, information and planning, support as well as monitoring, evaluation and reporting. In 2012/13, the first order national water services master plans were developed. In 2013/14, 1 national and 9 provincial water services perspectives, incorporating the 24 priority district municipality perspectives, were developed. This subprogramme had a staff complement of 51 in 2013/14.
- *Water Ecosystem* develops and implements measures to protect water resources. This entails determining resource direct measures by classifying water resource systems, determining reserves, conducting resource quality assessments and determining resource directed measures by developing pollution control guidelines, rehabilitation measures and protocols. In 2012/13, a draft Olifants-Doorn resource quality objectives report was prepared for public consultation and a gap analysis report for Olifants-Doorn was produced. In 2013/14, the Olifants-Doorn resource quality objectives will be gazetted. Over the medium term, the focus will be on classifying the water resources and setting resource quality objectives for four significant river systems. This subprogramme had a staff complement of 34 in 2013/14.
- *Water Information Management* ensures the development and maintenance of systems and programmes for data and information acquisition and management; builds the knowledge base on all aspects of water; and coordinates and audits policy implementation by the department, catchment management agencies and other water management institutions or agencies operating under the auspices of national water policy and legislation. In 2012/13, the annual report on the state of water 2011/12 and the business case for the national integrated information system were finalised. In 2013/14, the national integrated information system prototype was developed. This subprogramme had a staff complement of 183 in 2013/14.
- *Institutional Oversight* involves institutional governance and oversight of all water institutions, and facilitates their establishment and development. This entails providing institutional support, establishing catchment management agencies and rendering advisory services oversight. In 2012/13, the review of the raw water pricing strategy was initiated. In 2013/14, the review was gazetted for public consultation and the main focus was on establishing business cases for the five catchment management agencies, which were submitted to the National Treasury for listing as entities under the Public Finance Management Act (1999). Five catchment management agencies were gazetted for consultation in 2013/14 (Limpopo, Pongola-Mzimkhulu, Breede-Gouritz, Inkomati-Usuthu and Olifants) and R51.8 million was transferred to the agencies. This subprogramme had a staff complement of 37 in 2013/14.
- *Water Use Authorisation Enabling* is aimed at enabling all authorisation and allocation of water through coordination and development systems and processes to support cross-cutting licensing activities. This newly created subprogramme will begin operating in 2014/15.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on ensuring the availability of and access to water for environmental and socioeconomic use through planning, developing policies and maintaining data management systems. Thus the bulk of expenditure in this programme will go towards activities in the Water Information Management and Integrated Planning subprogrammes, which perform these activities. Over the medium term, spending on consultants in the Water Information Management subprogramme is set to grow, mainly to provide for the highly specialised engineering and scientific activities and projects, and for software licence and system developments required to maintain monitoring and information systems. Expenditure in the Integrated Planning subprogramme is expected to grow at an average annual rate of 6.4 per cent over the same period in order to develop comprehensive plans to guide the development of the water sector. These plans include reconciliation strategies, which contain comprehensive assessments of the supply and demand of water within catchment areas; recommend appropriate measures to manage any shortfalls; and develop two feasibility plans.

By the end of November 2013, the programme had 502 funded posts, of which 421 were filled and 81 were vacant. The vacancies were due mainly to a reorganisation within the department, which created new posts that were in the process of being filled. As these posts are filled over the medium term, the number of personnel in this programme is expected to increase to 487 by 2016/17. Spending on compensation of employees is expected to increase over the medium term as a result of this increase in personnel numbers, higher salaries for officials on occupation specific dispensation, improved conditions of service and the recruitment of graduate trainees to build capacity within the programme. Spending on travel and subsistence is also expected to increase over this period in line with the filling of vacant posts and due to the travel required for staff to fulfil their work responsibilities.

Previously effected through the Institutional Oversight subprogramme, spending on transfers and subsidies over the medium term is projected to decline, as the department begins to effect transfers for the catchment management agencies through the water trading entity, which is funded through the Water Infrastructure Management programme.

## Programme 3: Water Infrastructure Management

### Objectives

- Ensure the effective and sustainable management of water resources over the medium term by:
  - transferring sufficient funds on a regular basis to the water trading entity for the design, construction, commissioning and rehabilitation of bulk raw water resources infrastructure
  - managing and operating existing bulk raw water infrastructure on a continuous basis.

## Subprogrammes

- *Infrastructure Development and Rehabilitation* provides for the design, construction and commissioning of new water resource infrastructure; and the rehabilitation of existing infrastructure to ensure the safety and functionality of departmental dams and related infrastructure. In 2012/13, R1.9 billion was transferred to the water trading entity to construct, operate and maintain existing and new bulk raw water infrastructure, such as dams, canals and reservoirs. In 2013/14, R2.2 billion was transferred to the water trading entity.
- *Operation of Water Resources* funds expenditure on water resource management activities conducted by the department or catchment management agencies within water management areas. Activities for water management areas include: planning and implementing catchments management strategies; monitoring and assessing water resource availability and use; water use allocations; water quantity management, including flood and drought management, water distribution, control over abstraction, storage and stream flow reduction activities; water resource protection, resource quality management and water pollution control; water conservation and demand management; institutional development; and the facilitation of public participation in making decision about water resources management. In 2012/13, R159 million was transferred to the water trading entity to augment these activities. In 2013/14, the amount increased to R167 million.

## Expenditure trends

The spending focus over the medium term will be on funding the water trading entity's implementation of existing and new water infrastructure projects, the bulk distribution system of the De Hoop Dam, and the dam safety rehabilitation programme. Over the medium term, the programme expects to transfer R1.4 billion to the water trading entity to upgrade the pipeline from Steelpoort to Mooihoek and build the new pipeline from the Flag Boshielo Dam to Mokopane in phase 2B of the De Hoop Dam's bulk distribution system project. The programme receives Cabinet approved additional allocations of R264 million in 2015/16 and R430 million in 2016/17 for the development of the Umzimvubu Dam and bulk water scheme. Between 2010/11 and 2013/14, the capital transfers grew as a result of additional allocations for the completion of the construction of the De

Hoop dam, its bulk distribution systems, and the Nandoni distribution network and pipeline. The details of the water infrastructure projects are discussed in the infrastructure section.

## Programme 4: Regional Implementation and Support

### Objectives

- Ensure the availability of water supply for domestic and agricultural use by:
  - completing 45 bulk infrastructure schemes (bulk water scheme and wastewater treatment works) over the MTEF period
  - distributing 4 790 rainwater harvesting tanks to rural communities over the MTEF period
  - supporting 1 984 farmers in the resource poor farmers schemes to access water over the MTEF period.
- Ensure the provision of local government institutional support through the refurbishment of prioritised schemes for municipalities from 59 in 2012/13 to 100 by 2016/17.
- Support the local government water sector over the medium term by:
  - prioritising improvements in 42 water services authorities with blue drop risk ratings which are above 50 per cent and 55 water services authorities with cumulative risk ratings above 70 per cent, for 2014/15
  - selecting 35 municipalities to implement water conservation and demand management in 2014/15
  - prioritising 10 municipalities to implement community infrastructure water projects in 2014/15
  - completing 93 interventions to address lack of water supply, poor water quality and pollution incidents in the municipalities for 2014/15.
- Improve the protection of water resources and safeguard their sustainability by:
  - implementing the river health programme from 110 rivers in 2012/13 to 125 rivers by 2016/17
  - ensuring appropriate alignment of the management of mine water through making sure that the Central Basin plant is 100 per cent operational at an average of 57 mega litres per day by 2014/15, and the Eastern Basin plant is 100 per cent operational at an average of 80 mega litres per day by 2015/16.
- Improve water use efficiency to previously disadvantaged communities by processing 100 per cent of water use licence applications received and increasing the volume of water allocated to historically disadvantaged individuals from 28 million cubic metres in 2012/13 to 42 million cubic metres of water by 2016/17.

### Subprogrammes

- *Regional Management and Support* provides strategic support for and oversees management of the programme. This entails managing documents, coordinating information on outcomes from the programme and providing responses to parliamentary questions and referrals. This subprogramme had a staff complement of 11 in 2013/14.
- *Water Sector Support* is discussed in more detail below.
- *Water Use Regulation* provides integrated interventions for ensuring that water resources are protected, used, conserved and managed in an equitable and sustainable manner. In 2012/13, the river health programme was implemented in 110 rivers and in 2013/14 in 107 rivers. This subprogramme had a staff complement of 840 in 2013/14.
- *Institutional Establishment* contributes to the establishment of effective water management institutions by developing water user association business plans, transforming irrigation boards into water user associations and building capacity within water user associations. In 2012/13, 1 787 resource poor farmers were supported and 4 068 rainwater harvesting tanks were distributed. In addition, 41 management institutions were supported in the development of business plans. In 2013/14, 146 resource poor farmers were supported and 1 080 rainwater harvesting tanks were installed thus far. This subprogramme had a staff complement of 38 in 2013/14.
- *Regional Bulk* is discussed in more detail below.
- *Transfer of Water Schemes* guides the transfer of the operation and maintenance functions of water services schemes to water services institutions to ensure effective, efficient and sustainable service delivery by all

water services authorities. This entails administering and managing water and wastewater owned by the department and those that have been transferred to municipalities and other water management institutions. In 2012/13, a total of 59 schemes were transferred. In 2013/14, R573 million was used for funding the refurbishment, operation and maintenance of 54 transferred water and wastewater schemes, in accordance with signed transfer agreements between the department and municipalities. This subprogramme had a staff complement of 316 in 2013/14.

- *Support Services* provides human resources, financial management and general administration to the programme. This subprogramme had a staff complement of 848 in 2013/14.
- *Water Services Projects* provides for the construction of new water services infrastructure projects such as water treatment works and pipelines. The key projects funded in 2012/13 and 2013/14 were the Nandoni water treatment works and distribution network pipelines, phase 2 of the Inyaka water treatment works and distribution lines, phases 1, 2 and 3 of the Hluhluwe regional water scheme, and the Groot Letaba water treatment plant.
- *Integrated Catchment Management* provides for the protection, development, use and management of resources at the water management area level. In 2012/13, monitoring was conducted at 794 water sampling points and 749 waste discharge points, and 179 mine pollution inspections were carried out. In 2013/14, monitoring was conducted at 1 194 water sampling points and 645 waste discharge points, and 91 mine pollution inspections were carried out. This subprogramme had a staff complement of 33 in 2013/14.
- *Mine Water Management* coordinates and oversees the management of mine water in South Africa with specific emphasis on acid mine drainage. Over the medium term, the focus will be on reviewing the implementation model and revenue plan to ensure long term infrastructure sustainability. Funds to this end are transferred to the Trans-Caledon Tunnel Authority as the implementing agent. In 2012/13, the treatment plant in the Witwatersrand western basin was upgraded and is currently partially treating and discharging 21 mega litres of water per day to the Tweelopiespruit, resulting in no decant of untreated acid mine water since August 2012. A further upgrade of the plant is being investigated to increase the treatment capacity to 36 mega litres per day. The construction of a new neutralisation plant and pumping station in the Witwatersrand central basin began in January 2013 and was commissioned in January 2014.
- *Water Use Authorisation and Administration* authorises all water use activities in South Africa through the use of regulatory instruments, such as licensing and water allocation reform, to ensure sustainable, equitable integrated water resources management for current and future generations. In 2012/13, 288 water use authorisation licences were finalised and 17 million cubic metres of water were allocated to historically disadvantaged individuals. In 2013/14, 5 million cubic meters of water were allocated.

## Expenditure estimates

2. Rand million.

## Expenditure trends

The *Regional Bulk* and *Water Sector Support* subprogrammes, the largest spending items in this programme, are discussed in further detail in the sections below. Excluding these two subprogrammes, the bulk of the programme's spending goes towards administering and managing the water and wastewater resources owned by the department, municipalities and other water management institutions, intervening to protect and conserve water resources, and providing strategic and administrative support to these and the programme's other activities. Most of these activities are carried out by the personnel on department's funded establishment of 2 414 posts, with 165 posts additional to the establishment. Over the medium term, personnel numbers are expected to increase to 2 533 in 2015/16, as vacant positions are filled. This is expected to increase spending on compensation of employees. These posts were vacant due to the length of time it takes to finalise the recruitment processes, resignations, promotions, transfers and the difficulty in recruiting posts selected for occupation specific dispensation.

As a result of the vacancies, the programme relies on consultants to provide, as required, the technical, engineering and project management services that staff might otherwise provide. Thus spending on consultants decreased from R184.3 million in 2010/11 to R150.6 million in 2013/14 and is projected to decrease further to R141.1 million in 2016/17 as the vacancies are filled.

## Subprogramme: Water Sector Support

This subprogramme coordinates sector collaboration and intergovernmental relations at the national, provincial and local levels; and provides hands on support to local government through the rapid response unit, accelerated community infrastructure programme, and the municipal water infrastructure grant (introduced in 2013/14) to ensure effective, efficient, economic and sustainable provision of water. In 2012/13, 34 municipalities were supported in implementing water conservation and demand management measures and 14 municipalities were supported in implementing community water infrastructure. In 2013/14, 15 municipalities were supported. In 2012/13, there were 52 water service authorities with a risk rating above the threshold for blue drop, and 59 for green drop. In 2013/14, there were 40 blue drop and 62 green drop water service authorities. In 2012/13, 86 interventions were completed to address the lack of water supply, poor water quality and pollution. Interventions are incident driven, and by September 2013, 60 interventions had been completed. 93 interventions are targeted for 2014/15. This subprogramme had a staff complement of 304 in 2013/14.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on coordinating sector collaboration and intergovernmental relations through managing and making transfers of the municipal water infrastructure grant, which was introduced in 2013/14 to address the backlog in providing access to water to rural households in 24 district municipalities. This R6.5 billion grant is expected to increase expenditure significantly over the medium term. In addition, expenditure is projected to grow over the medium term, due to the R20 million that was reprioritised from payments for capital assets to the accelerated community infrastructure programme, to fund water conservation and demand management.

The subprogramme's personnel numbers are expected to increase over the medium term, due to the filling of the 66 posts that were vacant at the end of November 2013. These vacancies were mostly at the department's regional offices. Spending on compensation of employees is also expected to grow, at an average rate of 8.8 per cent over the same period as the vacancies are filled. Consultants generally provide additional capacity, as required, where there are vacancies for project management, programme coordination, technical support and implementation oversight. However, between 2010/11 and 2013/14, expenditure on consultants decreased from R118.4 million to R48.2 million as some activities were moved to other subprogrammes and the vacancies were filled over this period.

## Subprogramme: Regional Bulk

The Regional Bulk programme develops regional bulk infrastructure for water supply and water treatment works, and supplements regional bulk sanitation collector systems, as well as regional wastewater treatment works. This entails connecting water from sources to municipal reticulation systems. In 2012/13, 3 bulk infrastructure systems were completed and 63 projects were under construction at a cost of R2.2 billion. In 2013/14, R3.3 billion was used to develop bulk infrastructure for water and wastewater treatment works. In the first half of 2013/14, 3 626 job opportunities were created through the subprogramme. Of the subprogramme's funded establishment of 29 posts, 24 were filled at the end of November 2013. The vacancies are due to newly created posts, which are still in the process of being filled.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing regional bulk infrastructure for water and wastewater treatment works that links water sources to local government infrastructure. Over the MTEF period, expenditure on payments for capital assets is expected to increase significantly as a result of a Cabinet approved additional allocation of R934 million for critical bulk water projects. The rollout of regional bulk water infrastructure also explains the increase in spending between 2010/11 and 2013/14. The increase in transfers and

subsidies over the medium term provides funding to water boards, such as the Umgeni, Magalies and Amatola water boards, which operate as implementing agents for the department.

The growth expected in spending on compensation of employees over the medium term is due to the filling of vacant posts. However, as the capacity constraints are expected to remain despite the increase in personnel, consultants with specific technical and scientific skills will be used, which explains the increase in spending on consultants over this period.

## **Programme 5: Water Sector Regulation**

### **Objectives**

- Strengthen the regulatory function of the department by developing and completing a regulatory framework by 2015/16.
- Ensure the improved monitoring of drinking water quality, using the blue drop status as an annual performance indicator, by assessing 1 084 water supply systems for compliance with drinking water quality standards in 2014/15 and publish the blue drop progress report in 2015/16.
- Reduce pollution in water resources throughout South Africa by ensuring that 1 028 wastewater treatment collector systems are assessed for green drop status in 2014/15 and publish the full green drop report in 2016/17.
- Improve efficiency in water pricing and regulation by developing an economic regulation implementation strategy for the entire value chain by 2015/16, to be effected through the approved institutional model for implementation in 2016/17.
- Ensure compliance with dam safety regulations for the protection of the population, economy and water resources by monitoring 140 dams per year over the MTEF period.
- Ensure the effective enforcement of compliance with water legislation by finalising the implementation protocol for enforcement, including a compliance and monitoring strategy to curb unlawful water use by mining, agriculture and other industries, by 2014/15,

### **Subprogrammes**

- *Regulation Management and Support* provides for the overall management and oversight of the programme. This entails business planning, performance reporting, management support and project management. This subprogramme provides support to the office of the deputy director general and it oversees management of key activities within the programme. The deputy director general was appointed in September 2013. This subprogramme had a staff complement of 2 in 2013/14.
- *Economic and Social Regulation* ensures that pricing is efficient and cost reflective, achieves value for money for consumers and, where appropriate, that trade-offs are made between the cost, quality and sustainability of services, focusing on developing finance and pricing strategies. In 2012/13, the institutional options for economic regulation were developed. In 2013/14, the institutional options for economic regulation were revised to incorporate comments received.
- *Water Use Authorisation* authorises all water use activities in South Africa by using regulatory instruments, such as licensing and water allocation reform. This entails issuing water licences and giving effect to water allocation reform by reallocating water to historically disadvantaged individuals. In 2012/13, compulsory licensing processes were completed for Tosca Molopo river catchment within the Dr Ruth S. Mompati district. In 2013/14, the Jan Dissels river catchment compulsory licensing processes were completed. This subprogramme had a staff complement of 23 in 2013/14.
- *Water Supply Services and Sanitation Regulation* regulates the quality of drinking water and wastewater by using incentive and risk based regulation, such as the blue drop and green drop certification programmes, and enforcement tools, such as monitoring drinking water quality, setting drinking water standards, prescribing wastewater treatment and processes, and processing water information. In 2012/13, 963 wastewater treatment collector systems and 931 water treatment supply systems were assessed. The green drop and blue drop progress reports were published. In 2013/14, R14.6 million was spent on consultants who assisted in conducting assessments of drinking water quality and wastewater treatment

works within municipalities, as part of the department's blue drop and green drop certification activities. This subprogramme had a staff complement of 13 in 2013/14.

- *Water Resource Regulation* ensures water use regulation through the development of policies, strategies, regulations, general authorisations, norms, standards and guidelines, evaluates compliance, and provides implementation training and support. In 2012/13, 148 dams were evaluated for compliance with dam safety regulations. This subprogramme had a staff complement of 59 in 2013/14.
- *Compliance Monitoring* coordinates and monitors compliance to standards, licence conditions and regulations across the full water value chain, including water resources, dam safety, water hazards and water services. Activities carried out in 2012/13 included the auditing of mines and industry against authorisations as part of providing environmental assets and natural resources that are valued, protected and continually enhanced. In 2012/13, 92 mines were audited for compliance and in 2013/14, 31 cases were investigated for compliance, of which 4 cases were resolved. 3 criminal cases were opened and 24 notices of intention were issued.
- *Enforcement* ensures that appropriate legal action is taken against all unlawful water users. This entails monitoring, conducting investigations, and providing legal and enforcement support. In 2013/14, 19 pre-directives and 7 directives were issued, of which 8 are ongoing criminal cases. This subprogramme had a staff complement of 23 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on strengthening the regulatory function of the department by revising the pricing strategy to attain full cost recovery on water schemes and initiating a process for establishing an economic regulator to contribute to ensuring compliance with water legislation. This is to be carried out through the *Economic and Social Regulation* subprogramme.

Over the medium term, the significant increases expected in spending in the *Regulation Management and Support* and *Compliance Monitoring and Enforcement* subprogrammes are due to increased spending on compliance and enforcement related activities as part of the department's policy position on protecting South Africa's natural water resources. The review of the compulsory water licence process for the water management area in Mhlathuze in KwaZulu-Natal, Tosca in North West and Jan Dissel in Western Cape was completed in 2012/13. Over the medium term, the department will implement measures to ensure that 29 per cent of the water abstraction allocation is authorised to historically disadvantaged individuals.

Between 2014/15 and 2016/17, spending on goods and services is projected to increase as a result of an increase in spending on consultants for the assessment of drinking water quality and wastewater treatment works under the *Water Supply Services and Sanitation Regulation* subprogramme and related compliance monitoring programmes under the *Compliance Monitoring* subprogramme. At the end of 2013, the programme had a funded establishment of 179 posts, 120 of which were filled. Vacancies were due to the difficulties in filling posts that require scientific, technical and engineering skills to meet the occupation specific dispensation requirements. Consultants are used as required to provide specialised engineering and scientific skills, which they will transfer to the department's personnel. Between 2010/11 and 2013/14, the department reduced spending on consultants, travel and subsistence, and advertising, to give effect to Cabinet approved budget reductions in previous budget cycles.

## Programme 6: International Water Cooperation

### Objectives

- Facilitate technical support and capacity development in water sector partnership arrangements at international, African, national, provincial and local levels by:
  - establishing 8 new strategic partnerships and implementing 16 existing strategic partnerships with countries outside Africa over the medium term
  - holding 12 strategic engagements with international and multilateral organisations outside Africa over the medium term.
- Strengthen, implement and facilitate water governance, infrastructure and information management by:
  - establishing 9 new strategic partnerships and implementing 15 existing strategic partnerships with other countries in Africa over the medium term

- implementing 4 trans-boundary water management projects and having 6 strategic engagements with international and multilateral organisations in Africa over the medium term.

## Subprogrammes

- *International Relations Management and Support* ensures overall management and oversight of the programme. This entails business planning, performance reporting, management support and project management. This subprogramme had a staff complement of 12 in 2013/14.
- *Africa Cooperation* fulfils the department's responsibility of advancing the African agenda through promoting and facilitating collaborative activities in support of the water sector. This takes the form of bilateral relations and participation in multilateral institutions such as the African Union (AU), the African Ministers' Council on Water, the Southern African Development Community (SADC), as well as programmes related to the New Partnership for Africa's Development. Trans-boundary water management, a sub-function of this subprogramme, is responsible for advancing the national interest among the shared river basin organisations, where South Africa shares water with neighbouring countries and implements projects within the shared river basin. This includes the Orange-Senqu River Commission, the Limpopo Water Course Commission, the tripartite permanent technical committee of the Lesotho Highlands Water Project and joint water commissions. In 2012/13, 7 existing strategic partnerships were implemented in Africa and 2 new partnerships were established on the continent in 2013/14. This subprogramme had a staff complement of 14 in 2013/14.
- *Global Cooperation* promotes and advances national interests at global governance institutions, strategically engages in bilateral arrangements with countries outside Africa and explores opportunities to leverage off resources from donor countries. This entails hosting bilateral engagements and participating in conferences. Currently, diplomatic relations are being strengthened with the new emerging partnerships of United Kingdom, Korea, Iran, USA, India, Singapore, Belgium and Australia. In 2012/13, 3 new strategic partnerships were established with countries outside Africa and in 2013/14, 4 such new strategic partnerships were established. This subprogramme had a staff complement of 18 in 2013/14.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on forming and maintaining strategic relations with neighbouring countries and international organisations in line with South African foreign policy and the National Water Act (1998). This is expected to increase spending on travel and subsistence between 2013/14 and 2016/17, particularly due to the rollout of strategic initiatives in the rest of Africa. R23.6 million was reprioritised from the *Administration* programme to this programme to ensure that the department honours its international commitments, including participating in the activities of international organisations. Participation in these activities will ensure the facilitation of projects, such as the Lesotho Highlands Water Project and various other water infrastructure development programmes. The programme had a funded establishment of 44 posts, all of which were filled at the end of November 2013.

## Public entities and other agencies

### Consolidated water boards

#### Mandate and strategic goals

Water boards derive their mandate from the Water Services Act (1997) and are categorised as national government business enterprises in terms of schedule 3B of the Public Finance Management Act (1999). Water boards are mandated to provide water services to other water service institutions within its service area. Other activities include to: provide management services, training and other support services to water services institutions to promote cooperation in the provision of water services; supply untreated or non-potable water to end users who do not use the water for household purposes; provide catchment management services to or on behalf of the responsible authorities. With the approval of the water services authorities in their areas, the boards, accept industrial effluent, act as water service providers to consumers, provide water services in a joint venture with water services authorities, and perform water conservation functions.

The boards' strategic goals over the medium term are to:

- ensure that they continue to be viable and sustainable bulk water service providers
- ensure that all customers and stakeholders are satisfied
- improve business efficiencies and quality
- achieve transformation in the water sector.

## Expenditure trends

Revenue collected by the water boards is derived mainly from the sale of bulk water to water service authorities in their areas. Between 2010/11 and 2013/14, total revenue from the sale of bulk water increased, due to increases in the volume of water sold and annual increases in the water tariff. The average annual increases in the bulk water tariff ranged from 10 per cent to 12 per cent over this period. Over the medium term, revenue is expected to increase, due to tariff increases required to cover the cost of operations and capital infrastructure upgrades, and the projected increases in the volumes of water which are sold because of increased demand for water and because the water boards will be expanding their scope of operations into new areas.

The spending focus over the medium term will be on covering the operational costs of the water boards for the provision of bulk treated water, as well as capital spending on the infrastructure capacity required to meet the projected increases in water demand. In providing bulk treated water, the water boards' largest spending items are energy costs for pumping water, raw water costs, staff costs and chemical costs. Expenditure increased between 2010/11 and 2012/13 as a result of high energy costs related to electricity price increases and pumping requirements related to the volume of water and the distance over which water is pumped.

## Rand Water

### Mandate and goals

Rand Water was established in terms of the Water Services Act (1997) and is listed as a schedule 3B public entity of the Public Finance Management Act (1999). Its mandate is to provide water services, management services, training and other support services to water services institutions, to promote cooperation in the provision of water services; supply untreated or non-potable water to end users who do not use the water for household purposes; provide catchment management services to or on behalf of the responsible authorities; provide water services in a joint venture with water services authorities; and perform water conservation functions.

Rand Water's strategic goals over the medium term are to:

- ensure that it continues to be a viable, sustainable bulk water services provider that operates with integrity, uses best fit technology and achieves a high performance culture
- position itself as a partner of choice in water services by positively engaging with its stakeholders
- achieve transformation, growth in services and maintain financial health and sustainability.

## Expenditure trends

Rand Water derives its income primarily from the sale of bulk water in Gauteng and parts of Mpumalanga, Free State and North West. Between 2010/11 and 2013/14, revenue grew at an average rate of 13.4 per cent mainly due to tariff increases over the medium term, projected tariff increases average 5 per cent and thus revenue is expected to grow at a slower pace over this period. Rand Water continues to benefit from the work that is under way to further develop new revenue streams, such as waste water treatment, which contributed to the growth in other non-tax revenue between 2010/11 and 2013/14.

The spending focus over the medium term will be on implementing initiatives that improve internal efficiencies to reduce operational costs. This includes reducing chemical, power and pumping costs. These initiatives are expected to decrease the rate of growth in spending on goods and services, from 13.4 per cent between 2010/11 and 2013/14 to 9.8 per cent over the medium term. Between 2010/11 and 2012/13, expenditure increased, due to the increase in the cost of electricity required to pump water. Energy efficiency measures, such as the optimisation of the hydraulic system and the maximisation of off-peak pumping have limited the total cost increases. In 2012/13, capital spending on infrastructure was R1.6 billion and is projected to average R2.5 billion per year over the medium term, which is the reason for the growth in depreciation over the medium term. Capital expenditure will be partially funded through internal resources, in the form of accumulated profits and cash reserves, after providing for liquidity requirements. Additional funding requirements are met by raising funds in the debt capital market and other sources. The board had a funded establishment of 3 311 posts, with no vacancies, at the end of November 2013.

## Trans-Caledon Tunnel Authority

### Mandate and goals

The Trans-Caledon Tunnel Authority was established in 1986 in terms of the Water Act (1956) read together with section 108 of the National Water Act (1998). As a specialised liability management entity, it finances and implements bulk raw water infrastructure within an acceptable risk framework and in the most cost-effective way to benefit water consumers. The authority also plays an important role as an advisor in the water sector in

the areas of project initiation, the restructuring of treasury activities and the review of water tariffing methodologies.

The authority's strategic goals over the medium term are to:

- participate in key water sector initiatives, which are focused on the sustainability of the water sector
- contribute to the development of knowledge in the sector
- implement projects in support of the government's transformation agenda.
- raise finance for the construction of infrastructure and manage debt in the most effective way
- construct infrastructure on time, within budget and in line with appropriate standards and in a sustainable manner
- build and maintain human capital that is fully empowered to deliver on the vision and mission of the organisation.

## Selected performance indicators

### Expenditure trends

The Trans-Caledon Tunnel Authority's revenue increased from R4.1 billion in 2010/11 to R7.3 billion in 2013/14, as a result of increased construction activities on projects, which led to tariff revenue being received from the department for those projects that had been completed. The increase in construction activities over the same period, particularly for the Olifants River water resource development project, the acid mine drainage project, the Mokolo-Crocodile water augmentation project and the Mooi-Mgeni transfer scheme, also increased expenditure, from R4.4 billion in 2010/11 to R7.4 billion in 2013/14. Over the medium term, revenue is expected to increase and will be used to invest in capital infrastructure to increase and expand the provision of bulk water and sanitation services

The spending focus over the medium term will be on implementing capital projects, servicing current debts, and appointing consultants services to various projects. Expenditure is expected to grow at a slower rate over the medium term as projects near completion.

The authority had an establishment of 192 approved funded posts, all of which were filled at the end of November 2013. Personnel numbers are expected to remain at this level over the medium term. Increases in spending on compensation of employees over this period provide for inflation related adjustments to personnel costs.

### Umgeni Water

#### Mandate and goals

Umgeni Water was established in 1974 to provide water services to six municipalities in its operational area in KwaZulu-Natal. The organisation operates in accordance with the Water Services Act (1997).

The entity's strategic goals over the medium term are to:

- develop strategic partnerships, increase support to customers, improve visibility and be a regional leader in the provision of bulk water and sanitation services
- expand and improve funding collaborations while managing key cost drivers
- remove system constraints and blockages through innovative thinking and improve efficiency of all inputs
- strengthen and develop quality human resources, infrastructure capacity and water resources sustainability to support growth.

## Expenditure trends

Umgeni Water's main source of revenue is from the sale of potable bulk water. The significant growth in revenue in 2012/2013 was due to the inclusion of the capital unit charge for Spring Grove Dam, which was charged on behalf of the department and is offset by the related raw water cost. Over the medium term, the growth in the volume of bulk water sales is expected to be low due to initiatives to reduce and manage demand, thus the projected increases in revenue over the period will be derived mainly from tariff increases.

The spending focus over the medium term will continue to be on maintaining and increasing bulk water services by rolling out the capital infrastructure programme and carrying out maintenance projects on existing infrastructure. The infrastructure projects are partially funded from interest bearing loans, which are expected to increase over the medium term to allow the entity to meet its capital and operating expenditure requirements. This is expected to increase expenditure on interest over the period.

Between 2010/11 and 2013/14, spending on goods and services increased due to: rising raw water costs, which increased in 2012/13 by 221 per cent due to the introduction of the capital unit charge for the Spring Grove Dam; an increase in expenditure on chemicals caused by an increase in the amounts needed to treat poor quality water, and an increase in energy costs, due to a combination of an energy tariff increase and the additional pumping that will be required as new schemes become operational.

The entity had a funded establishment of 1 075 posts, of which 78 were vacant at the end of November 2013. Vacancies are as a result of additional posts created for operational requirements for bulk infrastructure and to operate new schemes, and the board is still in the process of recruiting staff.

## Water trading entity

### Mandate and goals

A water trading account was established in 1983 to separate departmental revenue collected through the sale of bulk water and related services from appropriated funds. The trading account was amended by the Public Finance Management Act (1999), under which it became the water trading entity in 2008. The rationale was to

create an entity that would manage the recovery of usage costs to ensure the long term sustainability of South Africa's water resources.

The entity has two components: water resources management and infrastructure management. The water resources management component oversees the management of water quality, conservation and the allocation of water through catchment management agencies. The infrastructure component oversees the operations and maintenance of existing water infrastructure as well as the development of new infrastructure.

The entity's strategic goals over the medium term are to:

- establish appropriate governance structures
- strengthen financial management
- build organisational capacity to ensure that the entity operates economically and efficiently and provides water in an equitable and sustainable manner.

## Expenditure trends

The water trading entity generates revenue from raw water charges and transfers received from the department. Between 2010/11 and 2013/14, revenue increases relate to the annual tariff adjustment, the increase in the sale of raw water and related services, and the significant increase in transfers the entity has received from the

department. Over the medium term, total revenue is expected to increase due to the completion of dams and bulk distribution systems, increasing the availability of water and, as a result, the amount of water sold.

The spending focus over the medium term is on the development of new water infrastructure and the operation, maintenance and refurbishment of existing water resources infrastructure. To this end, the entity expects to implement phases 2B, 2C and 2D of the Olifants River water resources development project in the implementation of new water infrastructure and the operations and maintenance programmes. Expenditure on new water infrastructure is expected to be fast track the raising of the Tzaneen, Clanwilliam and Hazelmere dam walls, and phase 1 and 2 of the Mokolo augmentation project, which is set to increase the value of assets on the entity's balance sheet to R118.8 billion in 2016/17.

The entity also plans to implement a recovery plan to reduce the backlog in the operation and maintenance of the national water infrastructure. This will be done through comprehensive programmes for dam safety, and the rehabilitation and refurbishment of all water related infrastructure, including reservoirs, canals, weirs, pipelines and wastewater treatment works.

Between 2010/11 and 2013/14, spending on goods and services increased mainly due to expenditure on contractors, and repairs and maintenance relating to the provision and the operation of water infrastructure. The decrease in expenditure on goods and services in 2013/14 is as a result of the impairment on financial assets. Over the medium term, expenditure on interest, dividends and rent on land is expected to increase due to higher royalty fees to be paid to the government of Lesotho for water delivered to South Africa, and the payment of interest on debt not capitalised during construction projects.

The slight decline in spending on compensation of employees between 2011/12 and 2012/13 was due to a delay in the filling of vacant posts as a business engineering review processes was under way. Once the process was completed, expenditure on compensation of employees increased by 47.5 per cent between 2012/13 and 2013/14 as the entity filled vacant technical positions. At the end of November 2013, there were 511 vacancies on the entity's approved establishment of 4 205 posts. These vacancies are set to be filled over the medium term through in-house training and recruitment. Consultants are mainly used as required for project and contract management, engineering design and services, and construction monitoring.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Breede-Overberg Catchment Management Agency** was established in terms of the National Water Act (1998) and is a schedule 3A public entity. It manages water resources through continuous engagement with all stakeholders and devolves decision making to the lowest level for the benefit of all water users in the Breede-Overberg water management area, and ensures that water is used to support equitable and sustainable socioeconomic transformation and development. The agency's total budget for 2014/15 is estimated to be R24.9 million. The agency received transfers of R19 million in 2012/13 and R24 million for 2013/14 from the department. From 2014/15, the entity will be funded through the water trading entity.
- The **Inkomati Catchment Management Agency** was established in terms of the National Water Act (1998) and is a schedule 3A public entity. It manages water resources through continuous engagement with all stakeholders and devolves decision making to the lowest level for the benefit of all water users in the Inkomati water management area, and ensures that water is used to support equitable and sustainable socioeconomic transformation and development. The agency's total budget for 2014/15 is estimated to be R54.8 million. The budget is monitored on a quarterly basis through the submission and review of quarterly reports that include financial information. The agency received transfers of R22.3 million in 2012/13 and R23.6 million in 2013/14. From 2014/15, the entity will be funded through the water trading entity.

The **Water Research Commission** was established in terms of the Water Research Act (1971) and plays an important role in water research by establishing needs and priorities for research, stimulating and funding water research according to each priority, promoting effective transfer of information and technology, and enhancing the knowledge and capacity building in the water sector. Its total budget for 2014/15 is R207.2 million.
