The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). Compared to this abridged version of the Estimates of National Expenditure, the e-publications for each vote contain more comprehensive coverage of goods and services, transfers and subsidies, and public entities. Additional tables are included containing information on the main and adjusted appropriation, with revised spending estimates for the current financial year, on skills training, conditional grants to provinces and municipalities, public private partnerships and information on donor funding. Expenditure information at the level of service delivery is also included, where appropriate.

“We know it well that none of us acting alone can achieve success. We must therefore act together as a united people, for national reconciliation, for nation building, for the birth of a new world. Let there be justice for all. Let there be peace for all. Let there be work, bread, water and salt for all. Let each know that for each the body, the mind and the soul have been freed to fulfil themselves.”

# Foreword

The national development plan, Vision 2030 of the government of South Africa, states that ‘Alongside hard work and effort, capabilities and the opportunities that flow from development enable individuals to live the lives to which they aspire.’ The 2014 Budget has been prepared in the spirit of this statement.

While the medium term expenditure framework (MTEF) contained in the 2014 Budget ushers in the new administration after the May elections, the country faces a markedly different situation from that of 2009. In 2006/07 and 2007/08, South Africa achieved budget surpluses. In 2008, however, the worldwide economic crisis meant budget deficit forecasts were inevitable. It is now clear that the recovery in real economic growth has been less robust than initially anticipated. Despite this, the economy is growing and government revenue collection is broadly on target. The 2009 Budget announced a ‘haircut’ and reprioritisation within budget baselines. At that stage, the reassignment of R19 billion comprised 12 per cent of the total monetary value of amendments to budgets made, of R160.6 billion. By contrast, the reassignment of the R19.6 billion in the 2014 Budget comprises 51 per cent of the total of R38.8 billion in amendments to budgets. The quantum of amendments to the total budget that can be made has clearly decreased substantially over time.

Despite the fiscal environment becoming increasingly constrained, National Treasury has been able to sustain the intensity of the pursuit for budget efficiencies, with most of the fiscal space for improvements to service delivery being made through reprioritisation. This will be reinforced by procurement reform and expenditure review initiatives. While the current fiscal position no longer automatically creates room by making additional funding available, progress towards our country objectives of inclusive economic growth and employment creation must be made in the face of a tough fiscal environment. Therefore the main budget non-interest aggregate expenditure ceiling established in the 2013 Budget remains intact. New priorities and the expansion of existing programmes must be achieved through reprioritisation within the existing resource envelope.

The current fiscal context is necessitating hard trade-offs: difficult choices will need to be made in choosing between spending priorities and in deciding on the sequencing of programme implementation. Given the constraints brought to bear by the expenditure ceiling, all government institutions need to manage any cost pressures that may be related to changes in the inflation rate, exchange rate or any other factors affecting input prices with great efficiency. This means that not everything that we believe must be done, can be done at once. In the reprioritisation of existing funds, certain outputs will have to be delayed, or discontinued.

The issue is what goods and services tax-payers’ monies ‘buy’. In keeping with the ongoing endeavour to improve transparency and reinforce accountability, the focus of the sections on budget programme expenditure trends within each vote in the 2014 Estimates of National Expenditure (ENE) publications has shifted, to an explanation of the interrelationship between the significant changes in spending, performance outputs and outcomes, and in personnel.

National Treasury teams have worked closely with policy and budget teams of national and provincial departments, as well as with public entities and local government, ensuring the alignment of policy developments with the national development plan and scrutinising spending trends and cost drivers, ever mindful of service delivery. Without this cooperation and commitment across government, it would not be possible to submit the credible and comprehensive institutional budgets contained in this publication. The political guidance of the Minister of Finance, his Deputy and the members of the ministers’ committee on the budget, has been indispensable to the medium term expenditure committee of accounting officers of departments at the centre of government, in its task of providing the strategic direction in formulating the budget. I thank you all for your assistance.

# Introduction

In 1994, with the election of South Africa's first democratic government, the focus of public spending changed. There was a shift towards the development of an inclusive economy and the expansion of services to all members of society, particularly the most vulnerable and the many adversely affected by the legacy of Apartheid. The national development plan's Vision 2030 states that 'Citizens have the right to expect government to deliver certain basic services, and to hold leaders accountable for their actions'. The 2014 Budget gives credence to these imperatives.

Detailed information on budgets and their purpose presented in a transparent manner assists civil society and Parliament in enhancing their oversight roles. It is a fact that South Africa publishes budget documentation which is among the most detailed and transparent in the world. The budget publications for 2014 continue to provide comprehensive information in respect of how budget resources are generated and how institutions plan to spend these resources.

The effects of the global economic crisis that began in 2008 continue to place pressures on the South African economy, as the recovery has been less robust than initially anticipated. In order to manage these pressures and still deliver key government services, government remains committed to its counter-cyclical fiscal policy, while over time protecting its long term fiscal sustainability by consolidating spending and reducing the level of the fiscal deficit. These commitments mean that the main budget<sup>1</sup> non-interest<sup>2</sup> expenditure ceiling established in the 2013 Budget remains intact and that in the 2014 Budget it is mostly existing resources that are being re-allocated – to the areas where the largest developmental impact is to be achieved.

This allocation of resources in the 2014 Budget process continues to be determined by function of government. This approach to budgeting focuses on the outcome and purpose (function) for which funds will be utilised. It groups the vote programmes of different government institutions together in a way that facilitates planning, forecasting and budgeting in respect of each key government priority area. However, the Appropriation Bill tabled by the Minister of Finance, whereby approval is sought from Parliament for the executive's spending plans for the new financial year, is divided strictly according to each budget vote. As the Estimates of National Expenditure (ENE) publications constitute the explanatory memoranda to the Appropriation Bill, each chapter in the abridged ENE publication relates to a particular vote and a separate e-publication is made available for each vote. Generally, a vote specifies the total amount appropriated per national government department. In some cases a vote may contain more than one department.

The 2014 ENE publications largely retain the same layout of information as presented in previous years' publications. This allows information to be easily compared across publications and financial years. As in the past, information in the 2014 publications is presented for a seven-year period and contains details of all departmental programmes and subprogrammes. Information is presented in a similar way for the national public entities related to each department. For the first time in the ENE publications, in 2014, information on changes in finances, personnel and performance is brought together with the focus on the significant interrelationships between these changes. This discussion, in the expenditure trends sections of the budget programmes in each chapter, allows the reader to assess the effectiveness of past, as well as of planned, spending.

---

<sup>1</sup> Main budget level expenditure refers to expenditure financed through revenue collected by national government, which is deposited in the National Revenue Fund. This differs from the consolidated government spending level, which is the basis for discussion in the Budget Review publication. Consolidated expenditure consists of main budget expenditure, as well as expenditure financed from own revenue raised by the government entities, provinces and social security funds themselves.

<sup>2</sup> Non-interest expenditure excludes expenditure incurred to pay state debt costs.

As in past publications of the ENE, when compared to the abridged version of the ENE, the ENE e-publications provide more information. E-publications include more detailed expenditure information on goods and services as well as transfers and subsidies. While the abridged version of the ENE contains one additional table at the end of each chapter showing expenditure on infrastructure, the ENE e-publications' additional tables also contain summaries of: the budgeted expenditure and revised estimate for 2013/14, and the audited outcome for 2012/13, by programme and economic classification; expenditure on training; conditional grants to provinces and municipalities; departmental public private partnerships; and donor funding. In selected cases more detailed information at the level of the site of service delivery is included. Budget information is also provided for the public entities that are simply listed in the abridged publication.

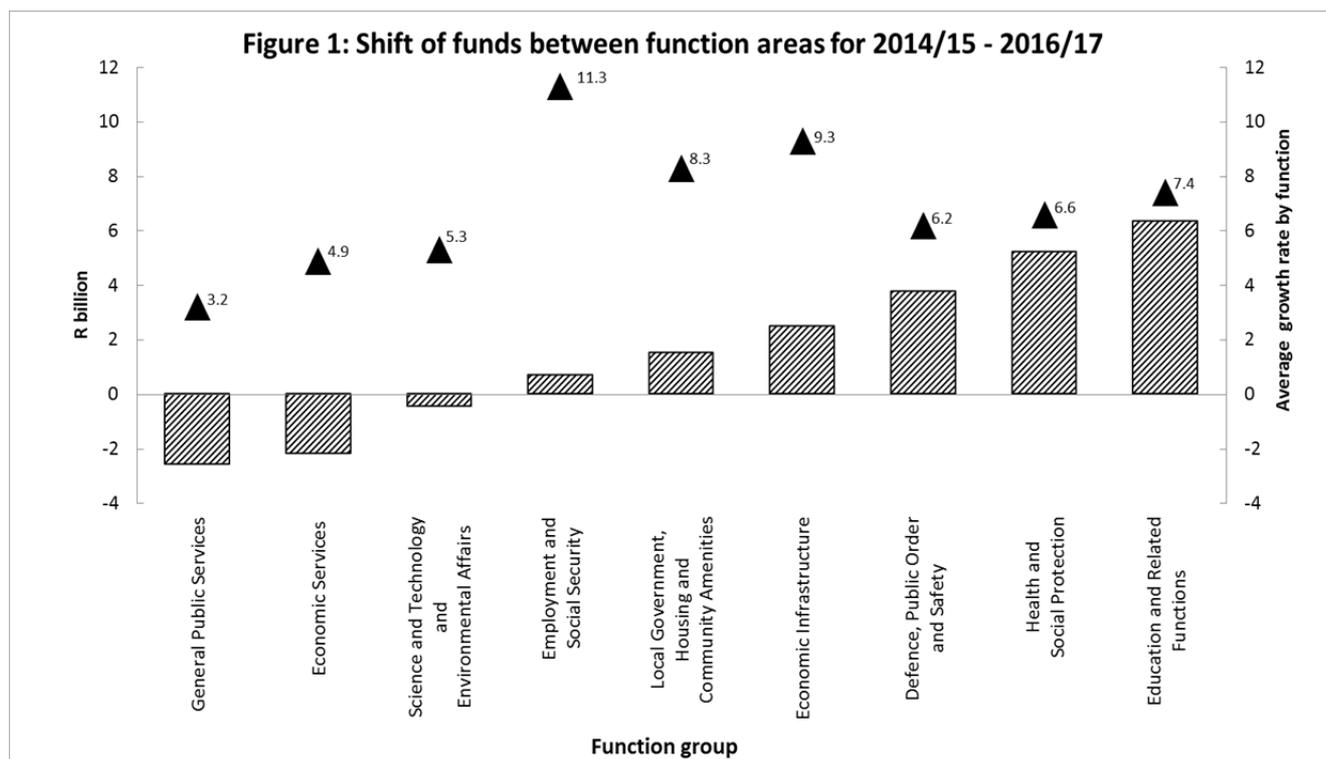

### **Allocating resources to key priorities within a constrained fiscal environment**

Government's counter-cyclical fiscal policy stance has resulted in a widened budget deficit and increased debt level, as South Africa dealt with the 2008 recessionary pressures and deals with the ensuing period of sluggish economic growth. Going forward, South Africa will be in a period of fiscal consolidation with the aim of narrowing the deficit. This is necessary to protect our ability in the long run to spend in line with planned future government service delivery. Within this context and in order to grow expenditure in key areas such as infrastructure, health, and education in the medium term, the planned growth rate of spending in other areas needs to be reduced.

Over six medium term expenditure framework (MTEF) periods, funds made available for allocation to government institutions have gradually decreased as a proportion of the total budget, from 7.4 per cent in the 2009 Budget to 1.2 per cent in the 2014 Budget. This is due to the decreased quantum of additional funding made available in terms of the fiscal framework over the different MTEF periods. The funds that in the end have been made available for allocation have thus increasingly been comprised of existing funds released for re-allocation, through the identification of expenditure reductions. In this context, providing funds for key government priority areas has meant that budget processes are increasingly being focused on freeing these existing resources from areas of lower-priority and inefficiency, for allocation to areas that have a greater developmental impact. Details of these expenditure amendments are contained in the ENE publications.

As such, institutional spending pressures including those arising from inflationary prices, or the need to accelerate existing programmes, or to launch new programmes, must in the first instance be financed from within the aggregate spending baseline of the institution by decreasing its expenditure in other areas. More service delivery needs to be achieved with the current level of resources. In line with this, National Treasury's Instruction 1 of 2013/2014 prescribes cost containment measures that accounting officers of government institutions need to follow, like the maximum rates at which consultants can be remunerated. Accounting officers have also been urged to consider a range of suggested additional cost containment measures that will enhance fiscal prudence in their respective institutions. It is anticipated that initiatives such as these, together with the changes in procurement practices and the expenditure reviews National Treasury is undertaking, will lead to significant cost reductions in forthcoming MTEF periods.

However, the use of existing resources goes beyond the reprioritisation of spending within a single institution. As the national development plan's Vision 2030 states 'The plan supports government's intention to gradually shift resources towards investments that reshape the economy, broaden opportunities and enhance capabilities. As a result, other parts of the national budget will need to grow more slowly.' The following graph depicts the main budget net aggregate shifts of funds between government function areas for the period 2014/15 to 2016/17, including direct charges such as the provincial equitable share.

After considering government priorities and their status relative to the 2013 Budget, resources have been shifted to increase the MTEF baselines of the following function areas: Education (R6.3 billion); Health and Social Protection (R5.2 billion); Defence, Public Order and Safety (R3.8 billion) Economic Infrastructure (R2.5 billion); Local Government, Housing and Community Amenities (R1.5 billion) and Employment and Social Security (R700 million). The MTEF baselines of three function areas decreased: General Public Services (R2.6 billion), Economic Services (R2.2 billion), and Science and Technology and Environmental Affairs (R463 million).

Budget reductions over the medium term are not expected to have an adverse impact on service delivery, as they largely reflect a reduction in goods and services spending plans, a correction for projected underspending, and the rescheduling of expenditure into the future to bring it in line with institutional capacity for service delivery. While future planned expenditure has been reduced for certain functions, service delivery is protected as all functions still record positive expenditure growth rates over the 2014 MTEF period; and all are contained within the aggregate expenditure ceiling.

### Resources made available for allocation

In summary, budget amendments over the 2014 MTEF period include R14.7 billion in additional financing provided by the fiscal framework. This is based on the macroeconomic forecasts for South Africa, and mainly provides for an increase in aggregate spending that accommodates allocations to institutions in the outer year of the period. Main budget level non-interest expenditure changes tabled for the 2014 MTEF, however, amount to R38.8 billion in total. This also includes a R4.5 billion drawdown on the contingency reserve, and R19.6 billion emanating from reductions in existing expenditure plans, that were identified through the budget process.

Of the R38.8 billion, R21.9 billion was allocated to accommodate spending pressures on compensation of employees budgets, R5.9 billion for goods and services that enhance service delivery, R5.5 billion for infrastructure projects, and R5.5 billion for transfers to institutions, including public entities, and households to provide beneficiaries with social grant support and HIV and AIDS antiretroviral treatment, among others. These allocation details are contained in the relevant sections of the ENE publications.

## Funding allocations to function areas by vote

The allocation of resources over the medium term is informed by government's strategic priorities, in particular by the national development plan, which sets out the approach for achieving a more inclusive and dynamic economy, in which inequality and poverty are reduced over the next two decades. In the tables that follow, main budget non-interest expenditure additions and reductions are presented by vote, as per the Appropriation Bill, together with the net effect on each government function.

While direct charges against the National Revenue Fund are not detailed in the tables, as these amounts are appropriated in terms of statutes and thus do not require parliamentary appropriation by vote, the estimated<sup>3</sup> split by function of the provincial equitable share addition is shown. It should be noted that provinces have key service delivery mandates in relation to concurrent functions.

### Economic Infrastructure

The baseline of the Economic Infrastructure function increases by R2.5 billion over the MTEF period, from R244.4 billion to R246.9 billion. Spending for this function comprises 7.5 per cent of total main budget non-interest expenditure and focuses on improving economic growth and delivery of public services through the provision of sustainable infrastructure.

1. This table shows only the allocation of revenue from the National Revenue Fund for the function group. This differs from the presentation of the consolidated function group baseline presented in the Budget Review, which includes revenue generated from other sources.

<sup>3</sup> An aggregate monetary amount is allocated from the National Revenue Fund for the provincial equitable share. These funds are then allocated to specific function areas through separate provincial budgetary processes. The details of these function allocations by each of the provinces are not known with certainty at present.

## Education and Related Functions

The baseline of Education and Related Functions increases by R6.3 billion over the MTEF period, from R789.1 billion to R795.5 billion. Spending for this function comprises 24.2 per cent of total main budget non-interest expenditure and seeks to improve the quality of education at all levels, with a specific focus on skills development in key areas of the labour market.

## Health and Social Protection

The baseline of the Health and Social Protection function increases by R5.2 billion over the MTEF period, from R910.8 billion to R916 billion. Spending for this function comprises 27.8 per cent of total main budget non-interest expenditure and seeks to improve health and life expectancy, as well as to reduce poverty by providing income support to the poor.

### Defence, Public Order and Safety

The baseline of the Defence, Public Order and Safety function increases by R3.8 billion over the MTEF period, from R512.7 billion to R516.5 billion. Spending for this function comprises 15.7 per cent of total main budget non-interest expenditure and supports enhanced domestic and international public protection.

## Science and Technology and Environmental Affairs

The baseline of the Science and Technology and Environmental Affairs function decreases by R463 million over the MTEF period, from R33.4 billion to R32.9 billion. Despite the decrease in planned future spending, the baseline does grow from the current spending level of R9.8 billion in 2013/14 to R11.4 billion in 2016/17. This function supports environmental protection and the advancement of the labour force and industry, and comprises 1 per cent of total main budget non-interest expenditure.

## Economic Services

The baseline of the Economic Services function decreases by R2.2 billion over the MTEF period, from R143.1 billion to R140.9 billion. Despite the decrease in planned future spending, the baseline does grow from the current spending level of R43.1 billion in 2013/14 to R49.8 billion in 2016/17. This function focuses on stimulating socioeconomic development by means of a range interventions in various sectors of the economy, and comprises 4.3 per cent of total main budget non-interest expenditure.

## General Public Services

The baseline of the General Public Services function decreases by R2.6 billion over the MTEF period, from R184 billion to R181.5 billion. Despite the decrease in planned future spending, the baseline does grow from the current spending level of R56.2 billion in 2013/14 to R61.8 billion in 2016/17. This function aims to deliver an efficient public service through the improvement of general government administrative services, and comprises 5.5 per cent of total main budget non-interest expenditure.

## Overview of expenditure

Overall, the main budget provides for total spending of R3.29 trillion over the 2014 MTEF period, when excluding state debt costs as well as the contingency reserve over the same period. It is distributed as follows: R1.02 trillion in 2014/15, R1.10 trillion in 2015/16 and R1.17 trillion in 2016/17. The main budget MTEF accommodates the policy priorities of the three spheres of government, with R1.56 trillion allocated to the national level, R1.43 trillion to provinces and R296 billion to local government. The total main budget grows at an average annual rate of 8.1 per cent. Non-interest expenditure, which excludes state debt costs, comprises on average 89.7 per cent of total main budget expenditure and grows at a lower average annual rate of 7.7 per cent. This rate is also lower when compared to its average annual growth of 8 per cent over the 2013 MTEF period. However the 7.7 per cent growth still constitutes budget growth in real terms over the MTEF period. Included in the main budget allocations is a contingency reserve of R3 billion in 2014/15, R6 billion in 2015/16 and R18 billion in 2016/17, to allow for unforeseeable and unavoidable expenditure in future as well as emerging government policy priorities.

The details of the main budget are discussed in the pages of this publication, with a summary provided in the tables below.

<i>Current infrastructure</i> <sup>2</sup>	642.8	591.3	669.3	848.6	958.4	826.6	939.4
<i>Capital infrastructure</i> <sup>3</sup>	70 914.4	89 215.0	92 665.5	101 427.1	115 836.7	130 070.5	138 032.4

1. Amounts include: mega infrastructure projects and programmes for which the total cost is at least R1 billion over the project life cycle; large projects and programmes for which the total cost is at least R250 million but less than R1 billion over the project life cycle; and small projects and programmes for which the total cost is less than R250 million over the project life cycle. Amounts also include: infrastructure transfers to other spheres, agencies and entities; and maintenance and repair projects.

2. Current infrastructure refers to the maintenance and repairs of existing infrastructure assets and is aimed at maintaining the capacity and effectiveness of an asset at the designed level.

3. Capital infrastructure refers to the construction, replacement, upgrade, rehabilitation, renovation and refurbishment of infrastructure resulting in a new asset or an increase in the capacity, effectiveness and value of an existing one.

1. Departmental receipts include National Revenue Fund receipts, previously classified as extraordinary receipts.

2. National Revenue Fund receipts in this instance refer to levy accounts/exchange control forfeits collected by the South African Reserve Bank.

# Information contained in Estimates of National Expenditure chapters

The Estimates of National Expenditure publications describe in detail the planned spending of all national government votes for three years going forward: that is, the years of the medium term expenditure framework (MTEF).

The abridged Estimates of National Expenditure publication is tabled in Parliament by the Minister of Finance on the day the main Budget is tabled. Through an accompanying Appropriation Bill, the executive seeks Parliament's approval and adoption of its spending plans for the new financial year. Amounts allocated for the first year of the new MTEF period are then appropriated from the National Revenue Fund in terms of the Appropriation Act, once approved by the president. The main budget also provides for a contingency reserve for expenditure related to unforeseeable circumstances.

Information in the Appropriation Bill is divided according to vote. Generally, a vote specifies the total amount appropriated per department. In some cases a vote may contain more than one department. Each chapter in the abridged Estimates of National Expenditure publication relates to a vote. A separate e-publication is also available for each vote.

The Estimates of National Expenditure e-publications for individual votes provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on training, a revised spending estimate for the current financial year, as well as expenditure information at the level of service delivery, where appropriate. These publications are available at [www.treasury.gov.za](http://www.treasury.gov.za).

**In respect of each vote, the Estimates of National Expenditure publications follow the layout shown below:**

## Budget summary

This table shows the budgeted expenditure for the vote for the three-year MTEF period.

Website address

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

The **2014/15 total** shows the expenditure allocation per programme and the aggregated amount for 2014/15, and corresponds with the information in the 2014 Appropriation Bill.

The totals to be appropriated by Parliament are categorised by economic classification into **current payments, transfers and subsidies, payments for capital assets** and **payments for financial assets**.

**Current payments** are payments made by a department for its operational requirements.

**Transfers and subsidies** are payments made by a department for which the department does not directly receive anything in return.

**Payments for capital assets** are payments made by a department for an asset that can be used for more than one year and from which future economic benefits or service potential are expected to flow.

**Payments for financial assets** are mainly payments made by departments as loans to public corporations or as equity investments in public corporations. The reason for expensing the payments, rather than treating them as financing, is that the purpose of the transaction is not profit oriented. This column is only shown in votes where such payments have been budgeted for. Payments for theft and losses are included in this category; however, these payments are not budgeted for and will thus only appear in the historical information which can be seen in the expenditure estimates table.

Estimates for the two outer years of the expenditure framework, 2015/16 and 2016/17, are also shown. These estimates are not included in the 2014 Appropriation Bill as they are still only indicative of actual expenditure levels in the outer years of the MTEF period. Parliament typically only appropriates or authorises expenditure for one financial year at a time. These forward estimates or indicative allocations do, however, form the basis of the planning of the 2015 Budget.

**Direct charges against the National Revenue Fund** are amounts spent in terms of statutes and do not require parliamentary approval and thus are not contained in the Appropriation Bill. They are not budgeted for under any programme on a particular vote and include, for example, state debt costs.

**Total expenditure estimates** are the sum of the expenditure on programmes and direct charges, classified into current payments, transfers and subsidies, payments for capital assets and payments for financial assets.

The last lines of the table provide accountability information: the vote's executive authority, accounting officer and website address.

## Aim

*The aim of the vote captures a department's mandate, strategic objectives or administrative functions, as stated in the Appropriation Bill.*

## Mandate

The department's mandate as contained in the relevant act(s) or policy document(s) that govern(s) the department's establishment and operations.

## Strategic goals

Departmental strategic goals identify areas of institutional performance that are critical to the achievement of the department's legislative mandate and responsibilities. These goals are generally aligned with departmental strategic plans.

## Programme purposes

Each vote is comprised of several programmes. The functions and activities performed by an institution are typically divided into these programmes. Programme 1 is the *Administration* programme, which houses the administrative activities and functions required to keep the department operating. Each vote programme is listed

individually with its purpose, as stated in the Appropriation Bill. In terms of the Public Finance Management Act (1999), the programme purpose outlines the activities and functions of the particular programme as per the approved budget programme structure.

## Selected performance indicators

This table highlights performance in terms of key indicators for the vote for the past three years, the current year and the three-year MTEF period.

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17

Managing, monitoring and measuring performance are integral to improving service delivery. The table presents only a selected set of a department or entity's performance information and is not intended to provide a comprehensive view of performance. It should, however, contain key performance indicators that form part of government's performance management system, departmental annual performance plans and ministerial delivery agreements.

An **indicator** is a measure that tracks a department's or entity's progress towards its goal. An indicator may measure inputs, activities, outputs and outcomes, or in certain instances explanatory information relating to the internal or external environment.

The **programme** column links the indicator to the vote programme associated with it.

The **outcome** column links the indicator to one or more of the 12 government outcomes to which it contributes.

The **past** column shows what level of performance the department actually achieved in the 2010/11, 2011/12 and 2012/13 financial years.

The **current** column shows what the department projects it will achieve for the 2013/14 financial year.

The **projections** column shows what the department expects to achieve in the 2014/15, 2015/16 and 2016/17 financial years.

## The national development plan

Information is presented on how the department's programmes and plans may link with the national development plan, including how the department expects to engage with the realisation of this plan going forward.

**In the selected performance indicators table, a dash (–) means that information is not available. However, in all expenditure and revenue tables, a dash (–) indicates that information is either unavailable or equal to zero. Due to rounding off, the line item figures in the tables may not necessarily add up to the total figures in the table.**

## Expenditure estimates

This table shows expenditure outcomes and estimates over a seven-year period, by vote programme and by economic classification item.

Programme	Audited outcome			Adjusted Appropriation 2013/14	Revised estimate	Average growth rate (%) 2010/11 - 2013/14	Expenditure/total: Average (%)	Medium-term expenditure estimate			Average growth rate (%) 2013/14 - 2016/17	Expenditure/total: Average (%)
	2010/11	2011/12	2012/13					2014/15	2015/16	2016/17		
R million												
Programme name												
Subtotal												
Direct charge against the National Revenue Fund												
Item												
Total												
Change to 2013 Budget estimate												
<b>Economic classification</b>												
Current payments												
Economic classification item												
Transfers and subsidies												
Economic classification item												
Payments for capital assets												
Economic classification item												
Payments for financial assets												
Total												

Expenditure is set out first by **programme** and then by **economic classification** over a seven-year period.

For comparability, where programme structures have been changed in recent years, expenditure has, where possible, been reallocated to the new approved programme structure for all seven years.

**Audited outcomes** are presented as they appear in the department or entity's annual financial statements, with amounts reallocated for any subsequent approved budget programme structure changes.

**Adjusted appropriation** includes any changes made to the appropriation voted in the 2013 Budget for the financial year, with amounts reallocated for any subsequent approved programme structure changes. Changes are generally made mid-year at the time of the adjustments budget. These adjustments can only be made in terms of the circumstances listed in section 30 of the Public Finance Management Act (1999). Adjustments were included in the Adjustments Appropriation Bill, which Parliament approved before expenditure could take place, and the details were published in the 2013 Adjusted Estimates of National Expenditure publication.

The **revised estimate** for 2013/14 represents expenditure outcomes in terms of National Treasury's current estimate, arrived at in consultation with the department. This does not imply a change in the amounts voted to departments in the 2013/14 adjusted appropriation; it is merely a more recent estimate of what the department is likely to spend in this financial year.

The **average growth rate** for the stated period is shown as a percentage.

The **expenditure/total: average** column shows on average what proportion an expenditure item comprises of total vote expenditure for the stated period as a percentage.

The **medium-term expenditure estimates** are shown for 2014/15, 2015/16 and 2016/17. The spending figures for 2014/15 constitute the proposed appropriation to be funded from the National Revenue Fund that is contained in the main Appropriation Bill, which has to be considered by Parliament after it has been tabled. The medium term expenditure estimates for 2015/16 and 2016/17 are indicative allocations, and will form the basis of planning for the 2015 Budget.

**Direct charges against the National Revenue Fund** are amounts spent in terms of statutes and do not require parliamentary approval and thus are not contained in the Appropriation Bill. They are not budgeted for in terms of a programme on a particular vote and include, for example, state debt costs.

The **totals**, which are the sum of the expenditure on programmes and direct charges, are also classified into current payments, transfers and subsidies, payments for capital assets and payments for financial assets. The average growth rates are also shown for the totals for the stated periods.

## Personnel information

This table provides details of the total department personnel numbers according to salary level<sup>1</sup>.

Number of posts estimated for 31 March 2014		Number and cost <sup>2</sup> of personnel posts filled / planned for on funded establishment												Number		
Number of funded posts	Number of posts additional to the establishment	Actual			Revised estimate			Medium-term expenditure estimate						Average growth rate (%)	Salary level/total: Average (%)	
		2012/13		2013/14		2014/15		2015/16		2016/17		2013/14 - 2016/17				
Vote name		Number	Cost	Unit Cost	Number	Cost	Unit Cost	Number	Cost	Unit Cost	Number	Cost	Unit Cost	Number	Cost	Unit Cost
Salary Level																
1 – 6																
7 – 10																
11 – 12																
13 – 16																
Other																

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

**Number of funded posts** refers to the number of departmental employment positions for which provision is made on the budget.

**Number of posts additional to the establishment** refers to additional employment positions that have been allocated on an ad hoc basis and that do not form part of the department's approved establishment.

Information is provided on the **number and cost of personnel posts filled/planned for on funded establishment** in the department by salary level. **Unit cost** is calculated by dividing the cost per salary level by the number of posts.

The **average growth rate** for the stated period is shown as a percentage.

The **salary level/ total: average** column shows on average what proportion the salary level cost comprises of the total vote personnel expenditure for the stated period.

Personnel information by salary level over a five-year period is provided, and discussed in relation to compensation of employees. An explanation of changes to the size of the establishment is given in relation to the department's strategic plan and service delivery goals.

## Expenditure trends

The main expenditure trends are described. Trends are generally represented over the MTEF period between 2013/14 and 2016/17, or over the entire period between 2010/11 and 2016/17.

An explanation of the spending trends over the MTEF period is given in relation to the strategic objectives and the performance targets that will be achieved over the period. Expenditure growth in the historical period is typically compared to expenditure anticipated over the MTEF period. Reasons are given for trends that are identified, and any significant increases or decreases in expenditure are explained in terms of the underlying performance information, policies, personnel profile and other factors that inform the trends. A summary of the key Cabinet approved changes to the vote baseline budget is given.

The average annual growth rates in tables are reflected in nominal, not real, terms. In particular instances where inflationary growth has been excluded in the calculation and real growth estimates are discussed, the consumer price index has been used to deflate the growth rate.

### Infrastructure spending

Expenditure on existing and new infrastructure is discussed, together with any progress made on the implementation of key existing and new infrastructure.

## Departmental receipts

This table provides details of the revenue collected on the vote.

R thousand	Audited outcome			Adjusted estimate	Revised estimate	Average growth rate (%)	Receipt/total: Average (%)	Medium-term receipts estimate			Average growth rate (%)	Receipt/total: Average (%)

## Information on each programme

### Objectives

Objectives are indicated for each programme. Objectives should include an explanation of strategic intent as well as specific interventions and progress measures. These are broadly aligned with strategic objectives captured in the strategic and annual performance plans. (Programme 1 (*Administration*) is generally exempt from providing objectives).

For example: Improve the provision of identity status services and products to eligible citizens and residents (strategic intention/objective) by reducing the time taken to issue passports and travel documents (specific intervention) from 7 days in 2013/14 to 3 days in 2016/17 (progress measure).

### Subprogrammes (per programme)

The key activities carried out by each subprogramme are described. Programme 1 is always *Administration*, which includes spending on the ministry, the director general's office and central corporate services. The *Ministry* subprogramme includes spending on the ministerial and deputy ministerial offices. Where applicable, explanatory notes on transfers to public entities or partner organisations, and on subsidies, incentives or financial assistance programmes, are also provided.

## Expenditure estimates (per programme)

Tables for each programme set out expenditure by subprogramme and economic classification over a seven-year period.

Subprogramme	Audited outcome			Adjusted Appropriation	Average growth rate (%)	Expenditure/total: Average (%)	Medium-term expenditure estimate			Average growth rate (%)	Expenditure/total: Average (%)
	2010/11	2011/12	2012/13				2013/14	2014/15	2015/16

1 – 6																			
7 – 10																			
11 – 12																			
13 – 16																			
Other																			

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends (per programme)

The spending focus of the programme is explained. The largest spending items and personnel numbers are highlighted and explained together with the underlying performance information, policies and factors that inform these quantum. Significant spending trends and year-on-year fluctuations are explained. Expenditure efficiencies and other measures to be implemented by the programme over the medium term to effect cost reductions and reprioritisations are also explained. Personnel trends, including the use of consultants in relation to programme personnel, are discussed where appropriate.

## Selected subprogrammes (per subprogramme)

Economic classification data and accompanying explanations are provided for selected subprogrammes as follows.

## Expenditure estimates (per subprogramme)

This table sets out expenditure by economic classification.

Economic classification	Audited outcome			Adjusted Appropriation 2013/14	Average growth rate (%) 2010/11 - 2013/14	Expenditure/total: Average (%)	Medium-term expenditure estimate			Average growth rate (%) 2013/14 - 2016/17	Expenditure/total: Average (%)

11 – 12																
13 – 16																

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends (per subprogramme)

The largest economic classification spending items and personnel numbers are highlighted and the underlying performance information, policies and factors are provided. Significant spending trends and year-on-year fluctuations are explained, where appropriate. Expenditure efficiencies and other measures to be implemented by the subprogramme over the medium term to effect cost reductions and reprioritisations are also explained.

## Public entities and other agencies

The scope of information contained in the write-up on public entities is similar to what is reported for the department.

However, it is important to note that the basis of accounting used by entities is different from that used by departments. As such, the statements of financial performance and financial position of entities are shown in this section of the publications.

Public entity accounts are prepared using an accrual basis of accounting, whereas departmental accounts are prepared using a modified cash basis of accounting.

In the accrual basis of accounting a transaction is recorded whenever there is an economic event regardless of when cash transactions occur. This basis of accounting also includes items that do not involve any flow of cash, such as adjustments made to account for depreciation.

In the cash basis of accounting a transaction is recorded only if cash has been exchanged and at the time that this exchange takes place.

Information on each of the public entities generally consists of the following:

- the entity's key legal mandate and goals
- selected performance indicators relating to the entity's mandate and goals
- planned deliverables for the next MTEF period
- key achievements in the previous reporting periods
- reprioritisation and baseline reduction measures implemented
- financial data tables for the entity, focusing on the sources of funding for the entity, key spending areas and expenditure trends, and, if applicable, an analysis of some of the more important items on the entity's balance sheet that relate to the key activities being carried out
- personnel information by salary level.

## **Additional tables**

### **Summary of expenditure on infrastructure**

The infrastructure table includes new and replacement assets, maintenance and repairs, upgrades and additions, and rehabilitation, renovation and refurbishment of assets.

**Departmental infrastructure** refers to direct spending by a department on infrastructure assets which the department will own.

**Infrastructure transfers to other spheres, agencies and departments** refers to transfers and grants to other government institutions for expenditure on infrastructure.

The Estimates of National Expenditure e-publications for individual votes also include the following tables:

### **Summary of expenditure trends and estimates per programme and economic classification**

This table shows the budgeted expenditure and the revised estimate for 2013/14 as well as the audited outcome for 2012/13.

### **Summary of expenditure on training**

Information is provided on the funds spent on training as a proportion of compensation of employees, and on the number of people trained by the department.

### **Summary of conditional grants to provinces and municipalities**

A conditional grant refers to an allocation made by the national government, from its nationally raised revenue, to a province, local government or municipality, on condition that certain requirements or services are met.

### **Summary of departmental public private partnerships projects**

Disclosure notes with additional details are provided for the projects signed in terms of Treasury Regulation 16.

Public private partnerships refer to contractual arrangements in which a private party performs part of a government function and assumes the associated risks. In return, the private party receives a fee according to predefined performance criteria. A public private partnership may also be a project in which a private party uses state assets for its own commercial purposes, and government benefits from the profits generated by the enterprise.

A signed project is a public private partnership project which has reached financial close and is being implemented.

Projects in preparation are in some stage of inception, feasibility or procurement, but have not yet reached financial close.

**Unitary charge or fee** refers to the total payment made to the private party for the provision of the various services.

**Advisory fees** are costs related to the hiring of transaction advisors who assist government with feasibility studies and procurement in the public private partnership project process.

**Project monitoring cost** is associated with the ongoing evaluation and monitoring of public private partnerships while in operation.

### **Summary of donor funding**

Donor funding is funding received by departments over and above the allocations provided in the South African government's appropriation legislation.

Donor funding comprises official development assistance and other local and international donations.

Official development assistance is an official resource flow from the international donor community to the South African government in the form of grants and technical cooperation.

The departmental **programme** column links the donor funding to the vote programme that is associated with it.

The **spending focus** shows what the department aims to achieve by using the donated funds.

# Vote 1

## The Presidency

Executive authority Minister in the Presidency: Performance Monitoring and Evaluation as well as Administration

Accounting officer Director General in the Presidency

Website address [www.thepresidency.gov.za](http://www.thepresidency.gov.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Facilitate a common programme towards the achievement of the electoral mandate and the enhanced integrity of the State through considered planning, coordination, oversight, mobilisation and support.*

### Mandate

The mandate of the Presidency is to support the president, the deputy president and other political principals within the Presidency to execute their responsibilities, as outlined in the Constitution and the programme of government, in order to achieve excellence in governance and to provide leadership to the state and society.

### Strategic goals

The Presidency's strategic objectives over the medium term are to:

- lead in integrated planning and in the performance monitoring and oversight of government policies and programmes
- support the president and deputy president in exercising their constitutional responsibilities and duties to promote national unity and social cohesion
- support the president and deputy president in their duties to strengthen regional integration, enhance peace and security, and promote South Africa's role in the international arena.

### Programme purposes

#### Programme 1: Administration

**Purpose:** Provide effective leadership, strategic management and administrative support services to the principals and the branches of the Presidency in fulfilment of the Presidency's mission and mandate.

## Programme 2: National Planning

**Purpose:** Develop the country's long term vision and national strategic plan and contribute towards better outcomes in government through better planning, better long term plans, greater policy coherence and clear articulation of long term goals and aspirations.

## Programme 3: National Youth Development Agency

**Purpose:** Facilitate the transfer of funds to the National Youth Development Agency to allow the agency to initiate, implement, facilitate and monitor youth development interventions aimed at reducing youth unemployment and promoting social cohesion.

## Programme 4: International Marketing and Communication

**Purpose:** Facilitate the transfer of funds to Brand South Africa to develop and implement an international marketing and communication strategy for South Africa to contribute to job creation and poverty reduction, and attract inward investment, trade and tourism.

## Selected performance indicators

**Table 1.1 The Presidency**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Implementation of Vision 2030 and national development plan	National Planning	Outcome 12: An efficient, effective and development oriented public service and an empowered, fair, and inclusive citizenship	- <sup>1</sup>	Diagnostic review initiated and conducted to inform the development of Vision 2030 and national development plan	National development plan and Vision 2030 adopted by Cabinet	Broad consultations held for the propagation of the national development plan across national and provincial departments, various sectors, business and non-governmental organisations to facilitate ideas and determine the role of all stakeholders	2 national development plan pilot projects implemented	2 national development plan pilot projects implemented	2 national development plan pilot projects implemented
Number of sector research reports, and reports on major and cross-cutting macro-social implications developed per year	National Planning		- <sup>1</sup>	- <sup>1</sup>	3	2	8	8	8
Number of households surveyed on income, consumption and expenditure in the national income dynamics study	National Planning		9 600	- <sup>2</sup>	10 500	- <sup>2</sup>	12 500	- <sup>2</sup>	13 000

1. No historical data as the indicator was introduced in 2011/12.

2. The national income dynamics survey is conducted every 2 years.

## The national development plan

The National Planning Commission and the Department of Performance Monitoring and Evaluation lead government's implementation of the national development plan's Vision 2030. As such the two departments have been tasked with the formulation of the medium term strategic framework 2014-19 on behalf of the Presidency. The medium term strategic framework 2014-19, a major deliverable of the national development plan, was submitted to Cabinet for consideration in 2013/14. The framework identifies critical actions to be

undertaken during 2014-2019 to put the country on a positive trajectory towards the achievement of the plan's goals by 2030.

The Presidency's specific contributions to the medium term strategic framework relate to the following actions and outcomes: undertaking periodic regulatory impact reviews; providing advice and support to regulatory authorities and Cabinet; reviewing the national spatial and human settlements planning system; strengthening regional integration and cooperation; participating in global governance reforms; increasing advocacy for and awareness about the moral regeneration movement and the charter of good values; contributing towards the development of performance management standards and career development systems for national and provincial head of departments; and contributing towards stabilising the political-administrative interface through the hybrid approach to making top appointments, which ensures the right balance of professionalism and political accountability.

The Presidency also provides technical support to clusters in relation to the implementation of the medium term strategic framework; ensures that departments' mandates are aligned and that various implementation programmes prioritise the objectives and stated outcomes of the plan. Further; it monitors progress and contributions made by all stakeholders of the plan; and coordinates and supports the implementation of sector specific pilot projects related to the plan. The Presidency also facilitates and supports the formation of partnerships linked to the national development plan.

## Expenditure estimates

Table 1.2 The Presidency

Programme	Audited outcome			Adjusted appropriation	Revised estimate	Average growth rate (%)	Expenditure/total: Average (%)	Medium-term expenditure estimate			Average growth Rate (%)	Expenditure/total: Average (%)

## Expenditure trends

The spending focus over the medium term will be on continuing to: provide finance, human resources, IT and other corporate services to the department; provide administrative support to the president, deputy president, ministers and deputy ministers; monitor the implementation of the national development plan; conduct the fourth wave of the longitudinal study of national income dynamics; and conduct other specific research linked to the national development plan. To this end, the bulk of the allocation over the medium term, excluding the transfers to the department's public entities, is directed towards spending in the *Administration* and *National Planning* programmes, mainly for spending on compensation of employees and travel and subsistence.

In addition, the *National Planning* programme expects to make significant use of consultants over the medium term. These consultants will conduct research and produce reports and discussion papers on sectoral and cross cutting issues that affect long term development, review the national spatial and human settlements planning system, and conduct the national income dynamics survey. As a result, expenditure on consultants and professional services is expected to increase significantly over the medium term.

The department receives Cabinet approved additional allocations of R30 million in 2014/15, R20 million in 2015/16 and R30 million in 2016/17 for the national income dynamics survey. As at 30 November 2013, the department had 52 vacant posts, mainly in the *Administration* programme. The vacancies were due to normal attrition, the length of time it takes to finalise the recruitment and selection process, and the unpredictable nature of pre-employment security screening. Cabinet has also approved reductions of R13.6 million over the medium term, which are to be effected on spending on non-core goods and services items and the transfer payment to the National Youth Development Agency.

## Expenditure trends

The spending focus over the medium term will be on providing administrative support to the president, deputy president, ministers and deputy ministers, and supporting Cabinet and its structures to ensure the fulfilment of the Presidency's mandate and mission. To this end, the bulk of this programme's allocation over the medium term is spent on compensation of the employees who provide these services in the *Management and Support Services to President* subprogrammes. The programme is supported by a funded establishment of 712 posts, of which 694, including interns and contract workers, are filled and 43 were vacant at the end of November 2013. These posts are vacant due to normal attrition and the length of time it takes to finalise the recruitment process. 18 of the vacant posts are in the process of being filled, while the rest are set to be filled over the medium term. The programme's personnel numbers are expected to grow from 694 to 711 over the medium term to support the department's expanded mandate, which is the reason for the projected increase in expenditure on compensation of employees over the same period.

Spending on travel and subsistence over the medium term is a significant item and is aligned with the president's diplomatic and national programme, which includes state visits abroad, involvement in mediation processes, participation in international forums and obligations related to his leadership role in initiatives such as the presidential Siyahlola service delivery monitoring programme. Spending on communication over the medium term is set to increase as the department improves its ability to fulfil its coordination responsibilities between the executive authority and Cabinet by implementing a secure electronic document, information and communication management system for government in 2014/15.

## Programme 2: National Planning

### Objectives

- Improve long term planning and development to ensure the achievement of Vision 2030 by:
  - ensuring implementation of the national development plan, by various stakeholders through partnerships and collaboration on specific initiatives by different sectors annually
  - leading the development of the medium term strategic framework 2014-2019 and its programme of action by setting planning standards and performing quality assurance systems processes on an ongoing basis
  - advising on the sequencing of policies over the next 20 years to achieve government's goals within its means
  - coordinating pilot projects or incubation programmes, such as the health pilot laboratory, which relate to specific proposals of the national development plan
  - improving the oversight role over the planning cycle and integrated planning of government, supporting presidential councils and commissions, and reviewing the sectoral priorities and departmental plans annually.

- Advise government on the implementation of the national development plan and work together with the Department of Performance Monitoring and Evaluation to turn the plan into targets that are to be incorporated into the performance and delivery agreements annually.
- Assess the implementation of the national development plan, review and refine the plan periodically and report on it annually.
- Support the implementation of the national development plan by producing, on a continual basis, cross-cutting sectoral reports on matters that are likely to impact on the nation's long term development path.
- Monitor the level of human development and poverty transitions by conducting a longitudinal study of national income dynamics every two years.

## Subprogrammes

- *Ministry* oversees the development of South Africa's long term vision and national development plan, and contributes to improving outcomes in government through improved planning and long term plans, greater policy coherence and clearly articulated long term goals and aspirations on an ongoing basis. This subprogramme had a staff complement of 9 in 2013/14.
- *Research and Policy Services* manages and facilitates research and policy processes on long term developmental issues, and provides technical support to the National Planning Commission. This entails producing reports and discussion papers on identified cross-cutting issues that affect long term development; reviewing sector plans to ensure alignment with the national development plan; and providing advice to departments on areas where policies, operational plans and implementation strategies need to be improved. In 2013/14, 2 research reports are planned, while over the medium term, 24 reports will be published. This subprogramme had a staff complement of 15 in 2013/14.
- *Communication and Public Participation* provides ongoing support services to the National Planning Commission and its secretariat. This entails providing financial management and communication services, human resources management and development services, supply chain and logistical services, ICT services, legal advice, and contract management services. This subprogramme had a staff complement of 5 in 2013/14.

<sup>1</sup> Data has been provided by the department and may not necessarily reconcile with official government personnel data.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on advising national, provincial and local government and other stakeholders on the implementation of the national development plan. The department will do this by ensuring that sectoral priorities and departmental plans are aligned with the macro imperatives of the plan, which are further articulated in the medium term strategic framework 2014-2019. To achieve this objective, the department over the medium term plans to conduct 24 sectoral research projects on unemployment, child poverty, food security, and energy and water security, provide technical assistance to different government spheres and sectors in the production of detailed programme plans, convene inclusive stakeholder processes to facilitate implementation partnerships, and establish systems to track the implementation progress of the national development plan. In addition, the department plans to conduct the fourth wave of the national income dynamics study over the medium term.

Consequently, the *Ministry* and *Research and Policy Services* subprogrammes account for the bulk of expenditure over the medium term, most of which is allocated to compensation of employees and consultants and professional services. The *Ministry* subprogramme provides strategic support and oversight on the work undertaken in this programme, while the *Research and Policy Services* subprogramme will conduct the review of the national spatial and human settlements planning system and the national income dynamics survey. The planning and fieldwork for the survey is under way and the survey is scheduled to begin in 2014/15, during which time 12 500 households are expected to participate. R30 million in 2014/15, R20 million in 2015/16 and R30 million in 2016/17 has been allocated in the 2014 Budget for the survey, which is expected to significantly increase expenditure on consultants for business and advisory services over the medium term.

At the end of November 2013, the programme had 36 posts on its establishment, of which 9 were vacant due to natural attrition. The department has reprioritised funds from expenditure from goods and services to compensation of employees, and this will enable the department to make 4 new appointments in the *Research and Policy Services* and *Ministry* subprogrammes

## Programme 3: National Youth Development Agency

### Objectives

- Champion the development and implementation of the youth development policy in government by:
  - monitoring and evaluating government youth development programmes in South Africa continually
  - making transfers to the National Youth Development Agency annually.
- Oversee the work of the National Youth Development Agency by analysing its strategic and annual performance plans and quarterly reports on an ongoing basis.

## Subprogramme

- *National Youth Development Agency* transfers funds to the National Youth Development Agency, which initiates, implements, facilitates and monitors youth development interventions aimed at reducing youth unemployment and promoting social cohesion. This subprogramme's total budget is transferred in full to the agency.

## Expenditure estimates

## Expenditure trends

The spending focus over the medium term is on making transfers to the National Youth Development Agency to allow it to initiate, implement, facilitate and monitor youth development interventions aimed at reducing youth unemployment and promoting social cohesion. The programme's entire allocation is transferred to the agency.

Expenditure increases from R399 million in 2010/11 to R444.9 million in 2016/17 to provide funding for national youth development programmes. This is offset by a cut of the transfer to the agency of R9.6 million over the medium term, which gives effect to some of the Cabinet approved budget reductions.

## Programme 4: International Marketing and Communication

### Objectives

- Oversee the implementation of a proactive branding, marketing and communication strategy for South Africa by transferring funds to Brand South Africa for the development of a branding framework and programme over the medium term.
- Oversee the work of Brand South Africa by analysing its strategic and annual performance plans and quarterly reports on an ongoing basis.

### Subprogrammes

- *Brand South Africa* facilitates the transfer of funds to Brand South Africa (previously known as the International Marketing Council of South Africa) for the agency to develop and implement a proactive marketing and communication strategy to promote South Africa and increase the country's global presence in order to attract targeted international trade, investment and tourism markets. The subprogramme's total budget is transferred in full to Brand South Africa.

## Expenditure trends

The spending focus over the medium term will be on making transfers to Brand South Africa to develop and implement an international marketing and communication strategy for South Africa. The strategy aims to contribute to job creation and poverty reduction, and attract investment, trade and tourism. Transfer payments to the entity increase across the seven-year period as a result of inflation related adjustments to expenditure.

## Public entities and other agencies

- **Brand South Africa** develops and implements a proactive and coordinated international marketing and communication strategy for South Africa to contribute to job creation and poverty reduction, and to attract inward investment, trade and tourism. The organisation's total budget for 2014/15 is R167.7 million.
- **The National Youth Development Agency** was established in 2009 through the merger of the National Youth Commission and the Umsobomvu Youth Fund. Its main role is to initiate, implement, facilitate and monitor youth development interventions aimed at reducing youth unemployment and promoting social cohesion. The agency's total budget for 2014/15 is R408.2 million.

Executive authority National Assembly and Chairperson of the National Council of Provinces

Accounting officer Secretary to Parliament

Website address [www.parliament.gov.za](http://www.parliament.gov.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Provide the support services required by Parliament to fulfil its constitutional functions, assist political parties represented in Parliament to secure administrative support and service constituents, and provide members of Parliament with the necessary facilities.*

### Mandate

The mandate of Parliament is based on the provisions of chapter 4 in the Constitution, which establishes Parliament and sets out the functions it performs. Parliament is elected to represent the people, to ensure government by the people under the Constitution, and to represent the provinces in the national sphere of government. It does this by electing the president, providing a national forum for the public consideration of issues, passing legislation, and scrutinising and overseeing executive action.

### Strategic goals

Parliament's ongoing strategic goals are to:

- increase representation, openness and accountability in government by strengthening the oversight function and the passing of legislation
- enhance public involvement and participation in government policies and programmes by increasing the number of public education programmes and improving access to information
- enhance co-operative governance through improved oversight
- increase representation in the international sphere by improving and widening the role of Parliament enhance the effectiveness and efficiency of Parliament.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide strategic leadership, institutional policy, overall management, and administrative and corporate services for Parliament's executive, management and staff.

### Programme 2: Legislation and Oversight

**Purpose:** Provide procedural and administrative services for Parliament to carry out its core functions. Pass legislation and oversee executive action.

### Programme 3: Public and International Participation

**Purpose:** Carry out Parliament's role in public and international participation, and provide support for these activities.

### Programme 4: Members' Facilities

**Purpose:** Provide telephone, travel and other facilities for members of Parliament in the National Assembly and the National Council of Provinces.

### Programme 5: Associated Services

**Purpose:** Provide financial support to political parties represented in Parliament, and to their leaders and constituency offices.

## Expenditure trends

The spending focus over the medium term will be on: improving oversight between national, provincial and local government; increasing the number of activities aimed at improving public participation such as public hearings and the Taking Parliament to the People programme; increasing participation in international forums; improving the level of services rendered to members of Parliament; improving and upgrading the IT system; and preparing for the establishment of the fifth Parliament. To achieve these objectives, the bulk of Parliament's budget over the medium term is directed towards spending on compensation of the employees who perform these duties, in the *Administration, Legislation and Oversight*, and *Public and International Participation* programmes. This explains why expenditure on compensation of employees and travel and subsistence, mainly for members performing oversight visits and constituency work, comprises the bulk of the budget over the medium term. At the end of November 2013, Parliament had a staff complement of 1 403, and 120 posts were vacant due to normal attrition. Parliament plans to fill all vacancies over the medium term. The three programmes also use contractors and consultants who provide specialised professional services in areas such as language translation and interpretation. This explains the slight increase anticipated in spending on contractors and consultants over the medium term.

Over the medium term, Parliament plans to maintain the highest level of service on legal opinions provided by the constitutional and legal services office. In 2013, the constitutional and legal services office provided legal opinions on 199 bills, 160 contracts and 163 announcements, tablings and committees.

Expenditure is expected to increase at an average annual rate of 5.8 per cent over the medium term, primarily

due to increases in the cost of living adjustments. Parliament also makes transfer payments to political parties to allow them to carry out their legislative mandate, which explains the slight increase in spending on transfers to non-profit institutions over the medium term.

Parliament is not required to return unspent funds to the National Revenue Fund, which means that all unspent funds from previous years are held as retained earnings. Other revenue, such as interest collected and catering sales, is reflected as part of retained earnings. Over the medium term, the surplus in the retained earnings account is expected to decrease as it is earmarked for various strategic projects.

## Programme 1: Administration

## Expenditure trends

The spending focus over the medium term will be on: establishing the fifth Parliament, including launching the My Parliament application, an IT system for the public to communicate with Parliament; developing and implementing integrated planning, budgeting and performance and reporting systems; and completing the third phase of the ICT infrastructure upgrade. To achieve these objectives, the bulk of the programme's budget over the medium term is directed towards spending on compensation of employees for the personnel who provide support to the speaker of the National Assembly, the chairperson of the National Council of Provinces and the secretary to Parliament in executing their functions. Spending on compensation of employees uses 72.8 per cent of the total expenditure in 2013/14. As additional support to these offices, consultants are used for language translations and interpretations, and these costs are expected to increase to R6.6 million in 2016/17. Spending on computer services increased at an average annual rate of 18.4 per cent between 2010/11 and 2013/14 due to the completion of the second phase of the ICT infrastructure upgrade.

The increase in expenditure in the *Office of the Speaker* subprogramme between 2010/11 and 2013/14 was as a result of the additional capacity required to establish the office of institutions supporting democracy, which would allow the speaker of the National Assembly to exercise oversight over these institutions more effectively. This explains the increase in spending on compensation of employees over this period.

Expenditure in the *Office of the Secretary* subprogramme increased from R163.2 million in 2011/12 to R205.2 million in 2013/14 because of the establishment of the finance and management office. The increase over the MTEF period is to provide for additional capacity for internal audit in the subprogramme. Between 2010/11 and 2013/14, expenditure in the *Office of the Chairperson* subprogramme increased significantly, mainly as a result of the establishment of the parliamentary democracy offices in provinces. Between 2012/13 and 2013/14, the programme increased its staff establishment from 666 to 708 to provide capacity for back office functions such as secretarial and administrative support.

## Programme 2: Legislation and Oversight

### Objectives

- Strengthen Parliament's oversight function by:
  - developing a framework for assessing the performance of all state organs by 2015.
  - developing guidelines for select and portfolio committees for joint planning and coordinating; and implementing rules, systems and capacity for this planning and coordination by the end of the fourth Parliament in 2015.
- Ensure the ongoing cultivation and preservation of institutional knowledge and access by developing an institutional knowledge management strategy and policy and the requisite systems by 2015.

## Subprogrammes

- *National Assembly* provides procedural advice and guidance for the proceedings of the National Assembly. In 2013/14, support was provided to allow the National Assembly to have 53 sittings, which, in turn, allowed 28 bills to be passed by November 2013. In the same year, 8 joint sittings were supported. This subprogramme had a staff complement of 51 in 2013/14.
- *National Council of Provinces* provides procedural advice and guidance for the proceedings of the National Council of Provinces. In November 2013, the annual Taking Parliament to the People programme was rolled out in the North West province. Funds have been reprioritised from delayed projects to roll out the programme for the second time in other provinces over the medium term. This subprogramme had a staff complement of 51 in 2013/14.
- *Legislation and Oversight* provides procedural advice, language services, research and administrative services to committee proceedings to other provinces. This subprogramme had a staff complement of 536 in 2013/14. At the end of November 2013, 40 parliamentary committees conducted a total of 80 oversight meetings with various departments and entities.

## Expenditure trends

The spending focus over the medium term will be on ensuring that the parliamentary budget office continues to implement the Money Bills Amendment Procedures and Related Matters Act (2009) in its functions, and developing a coordinated oversight strategy, including the development of rules to implement the oversight model. To achieve these objectives, the bulk of the programme's budget over the medium term is directed towards spending on compensation of the employees who provide support to committee members in executing their functions, and related items of goods and services such as computer equipment, contractors and consultants. At the end of November 2013, the programme had an establishment of 597 funded posts.

Spending on travel and subsistence also remains a large portion of the programme's expenditure over the medium term due to the need for members to conduct public hearings and do constituency work. Spending on this item is expected to increase to R56.5 million by 2016/17. This is mainly as a result of the increase in the number of oversight visits by parliamentary committees from 20 in 2012/13 to 60 in 2013/14.

Spending in the *National Council of Provinces* subprogramme between 2012/13 and 2013/14 decreased due to planned Taking Parliament to the People events not taking place because of changes to parliamentary schedules or sittings. The increase in spending in the *Legislative and Oversight* subprogramme over the same period was because more content advisor and research staff were appointed to assist the committee in its increased number of oversight visits. The greater staff complement and the higher number of oversight visits led to increased spending on compensation of employees. The 10.5 per cent increase in expenditure in the *National Assembly* subprogramme between 2010/11 and 2013/14 was mainly because of costs incurred in increasing the number of committees from 40 to 55, when the fourth Parliament was established.

## Programme 3: Public and International Participation

### Objectives

- Improve public participation and involvement in parliamentary processes by developing a public participation model, including the revamping and reformatting of parliamentary radio programmes to include all official languages, and assisting the Pan African Parliament to develop a strategic plan over the medium term.
- Improve public education programmes by developing a module on Parliament for learning institutions from Grade R to tertiary level by the second quarter of 2014.
- Continue to increase public participation through the annual People's Assembly and biannual Taking Parliament to the People programmes.

### Subprogrammes

- *Public Affairs* provides education and information to the public about Parliament and its processes, public and media relations for Parliament, and parliamentary events management. By the end of November 2013, the number of visitors to Parliament had decreased to 4 566 from the 8 581 visitors recorded at the end of November 2012. This was due to the implementation of the virtual tour, which allows the public to view the parliamentary precinct and its operations on the internet. This subprogramme had a staff complement of 90 in 2013/14.
- *International Relations* provides protocol services, administration for bilateral and multilateral meetings, and services for official visits, including procedural and logistical support for incoming and outgoing delegations. The number of international agreements approved by Parliament by 30 September 2013 had increased to 6 compared to 2 for the same period in 2012. This subprogramme had a staff complement of 23 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on strengthening Parliament's cooperation and participation in international forums, updating the public participation model and strategy, and upgrading broadcasting infrastructure. Spending in these areas is linked to the number of oversight visits undertaken by committees, which are expected to increase from 20 in 2012/13 to 43 in 2016/17. The bulk of the programme's budget over the medium term is directed towards spending on compensation of employees and travel and subsistence. At the end of November 2013, the programme had 98 filled posts and personnel numbers are expected to remain at this level over the medium term. Consultants in this programme are used to provide legal opinion on international agreements and spending on this item takes up only 2.2 per cent of the programmes' total spending over the medium term.

The decrease in spending in the *International Relations* subprogramme between 2010/11 and 2013/14 was due to a reduction in spending on machinery and equipment in 2011/12 as a result of funds shifted from this item to fund a shortfall in the *Public Affairs* subprogramme, as well as decreased spending on travel and subsistence in 2012/13 because of the cancellation of some oversight meetings.

The significant increase in expenditure on compensation of employees between 2010/11 and 2013/14 was due to adjustments in members' medical aid schemes. The increase in expenditure in the *Public Affairs* subprogramme between 2010/11 and 2013/14 was mainly because of additional costs incurred to increase public participation and for participation in international forums. Between 2010/11 and 2013/14, 16 more staff members were appointed to work on the drive to increase public participation in parliamentary processes.

## Programme 4: Members' Facilities

### Objectives

- Support the operational activities of members of Parliament by continuously providing operational facilities, including housing and telephones, to the 336 members of the National Assembly and the 54 members of the National Council of Provinces, as required.

### Subprogrammes

- *National Assembly Members' Facilities* provides support and facilities to members to enable them to carry out their legislative mandate efficiently and effectively. Members are supported in terms of travel claims and training, and tools of trade are provided. Travel and facility claims are processed and paid within 3 days.
- *National Council of Provinces Members' Facilities* provides support and facilities to members to enable them to carry out their legislative mandate efficiently and effectively. Members are supported in terms of travel claims and training, and tools of trade are provided. Travel and facility claims are processed and paid within 3 days, and real time travel reservations are facilitated.

Proportion of total programme expenditure to vote expenditure	14.1%	15.0%	14.7%	14.9%			14.8%	14.7%	14.7%		

### Expenditure trends

The spending focus over the medium term will be on providing members of the fifth Parliament with travel and training services and telephones, and on improving accounting systems. The bulk of the programme's budget over the medium term is directed towards spending on travel and subsistence, which amounts to 61.3 per cent of spending on goods and services.

Spending on computer services, operating leases and communication will enable members to conduct both parliamentary duties and constituency visits. The 53.4 per cent increase in spending in the *National Council of Provinces Members' Facilities* subprogramme between 2010/11 and 2013/14 was mainly as a result of an

increase in the number of trips taken by members for oversight visits. This programme's functions are carried out by staff in the *Administration* programme.

## Programme 5: Associated Services

### Subprogrammes

- *Political Party Support* provides financial support and facilities to political parties to allow them to carry out their legislative mandate efficiently and effectively.
- *Constituency Support* provides financial support to constituency offices to allow them to carry out their legislative mandate efficiently and effectively.
- *Party Leadership Support* provides financial support to political leadership structures to allow them to carry out their legislative mandate efficiently and effectively.

Party leadership support	6.0	6.5	6.7	9.4	16.2%	2.4%	7.5	7.8	8.3	-4.1%	2.3%

### Expenditure trends

The spending focus over the medium term will be on providing financial support to the constituency offices of political parties represented in Parliament. As a result, the bulk of the programme's spending over the medium term is directed towards spending on transfer payments to the parties represented in Parliament. These transfers are calculated based on formulas contained in the approved policy on political party allowances. This programme's functions are carried out by staff in the *Administration* programme.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Improve cooperative governance across the three spheres of government in partnership with institutions of traditional leadership, thereby ensuring that provinces and municipalities carry out their service delivery and development functions effectively.*

### Mandate

The Department of Cooperative Governance is mandated to: develop, monitor and support the implementation of national policy and legislation, seeking to transform and strengthen key institutions and mechanisms of governance to fulfil their development role; develop, promote and monitor mechanisms, systems and structures to enable integrated service delivery and implementation within government; and promote sustainable development by providing support to and exercising oversight over provincial and local government. This mandate is derived from the following legislation:

- the Intergovernmental Relations Framework Act (2005)
- the Municipal Property Rates Act (2004)
- the Municipal Systems Act (2000)
- the Municipal Structures Act (1998).

### Strategic goals

The department's strategic goals over the medium term are to:

- develop policies and legislation to lead the building of capable, developmental and financially viable local governance institutions
- deepen participatory democracy through developing common standards and practices of accountability and good governance

- support planning and coordination efforts in provinces and municipalities in partnership with all sector departments, local government agencies, traditional institutions and organs of civil society
- foster sustainable infrastructure development and maintenance to ensure basic services delivery
- promote local economic development
- strengthen the department's capacity to deliver on its mandate.

## **Programme purposes**

### **Programme 1: Administration**

**Purpose:** Provide management, leadership and administrative services to the department.

### **Programme 2: Policy, Research and Knowledge Management**

**Purpose:** Provide specialised support services to the department in the areas of research and knowledge management, policy formulation, monitoring and evaluation, and information, communication and business technologies.

### **Programme 3: Governance and Intergovernmental Relations**

**Purpose:** Improve vertical and horizontal coordination and alignment between the three spheres of government. Promote public participation in governance through regulatory mechanisms. Provide oversight, intervention and support programmes to provinces, municipalities and associated institutions.

### **Programme 4: National Disaster Management Centre**

**Purpose:** Promote an integrated and coordinated system of disaster risk management that places special emphasis on prevention, mitigation and preparedness on the part of national, provincial and municipal organs of state, statutory functionaries, communities and other role players involved in disaster risk management.

### **Programme 5: Provincial and Municipal Government Systems**

**Purpose:** Provide oversight, support programmes and evidence based regulatory mechanisms for provincial and municipal government and associated institutions, and facilitate effective development and service delivery.

### **Programme 6: Infrastructure and Economic Development**

**Purpose:** Support provincial and local government programmes and systems that promote economic and infrastructure development.

### **Programme 7: Traditional Affairs**

**Purpose:** Transfer funds to the Department of Traditional Affairs which: promotes and coordinates research and information management and the development of policies and legislation on traditional affairs; and coordinates institutional development and capacity building programmes to enhance efficiency and effectiveness within the institutions of traditional affairs.

## Selected performance indicators

Total number of towns and cities implementing the Clean Cities and Towns programme	Infrastructure and Economic Development		- <sup>1</sup>	8	8	8	8	8	8

1. Department began measuring indicator in 2011/12.

2. Department began measuring indicator in 2012/13.

## The national development plan

The department's objectives are in alignment with one of the main objectives of the national development plan, which is to increase employment by 11 million jobs by 2030. The community work programme contributes towards the goal of broadening the expanded public works programme, as outlined in the national development plan, as a significant driver of job creation. The community work programme has created 172 000 job opportunities since its inception in 2010. Over the medium term, the community work programme will create additional job opportunities through new work sites in municipalities, as discussed in the subprogramme reporting below.

The national development plan also focuses on the need to produce and develop technical and specialist related skills in government to overcome the skills shortage, particularly at the local government level. In line with this, the department has established the Municipal Infrastructure Support Agency, which facilitates the deployment of engineers, scientists and technicians to municipalities that are struggling with infrastructure delivery. In 2012/13, the agency facilitated the placement of 68 technical professionals in 100 municipalities in all nine provinces. The long term strategy is to create a pool of skilled professionals who can play a critical role in

infrastructure delivery within local government. In 2012/13, technical experts supported the implementation of 220 water supply projects, 128 sanitation infrastructure projects, 40 energy projects and 18 waste management infrastructure projects. Over the medium term, technical experts will continue to support targeted municipalities to assist them with project planning and implementation, infrastructure asset management, and provide capacity building programmes for technical staff.

## Expenditure trends

The spending focus over the medium term will be on facilitating, monitoring and evaluating infrastructure delivery programmes, providing operational support, strengthening technical capacity in local government, and facilitating job creation through the *Infrastructure and Economic Development* programme. In addition, the *Governance and Intergovernmental Relations* programme will focus on strengthening the administration and financial capability of municipalities through the disbursement of the equitable share. These functions are carried out by the personnel on the department's funded establishment of 554 posts, 26 of which were vacant as at the end of November 2013. Spending on compensation of employees is set to decline over the medium term as the payment for personnel in both the Department of Traditional Affairs and Municipal Infrastructure Support Agency are now effected through transfer payments to the department and agency.

Over the medium term, spending on conditional and other fiscal transfers is expected to increase as a result of Cabinet approved budget changes within the local government, housing and community amenities and the employment programmes function. The largest increase in expenditure relates to R1.1 billion in 2016/17 for the expansion of the community work programme to increase the number of participants from 172 000 in 2013/14 to 362 000 in 2016/17. The Municipal Infrastructure Support Agency receives an additional allocation of R60 million over the medium term to expand infrastructure capacity to 80 municipalities and the municipal disaster recovery grant receives an additional R59.1 million for the disasters that occurred in 2009 and 2010 in Limpopo, KwaZulu-Natal and Western Cape.

The budget includes a Cabinet approved baseline reduction of R850 million on the municipal infrastructure grant. The allocation for the community work programme has also been reduced by R132 million in 2014/15 and R31.6 million has been reprioritised from goods and services towards the monitoring of personnel to support the implementation of the municipal infrastructure grant.

### Infrastructure spending

Infrastructure spending is allocated through the municipal infrastructure grant. Between 2010/11 and 2013/14, allocations increased at an average annual rate of 13.9 per cent, from R9.7 billion to R14.4 billion. In 2012/13, the municipal infrastructure grant provided 41 000 households with access to water services, 148 000 with basic sanitation and 10 600 with community lighting, and built 1 299 km of roads in communities. Infrastructure spending is set to gradually increase to R15.8 billion in 2016/17.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

**Expenditure trends**

The spending focus over the medium term will continue to be on improving the department's administrative capacity and governance, and providing for property management costs and operating leases associated with the department's office accommodation. This is the reason for the increase in spending on compensation of employees and goods and services over this period. The fluctuating spending in the *Corporate Services* subprogramme between 2010/11 and 2013/14 was mainly due to the personnel changes caused by the departmental restructuring in 2009 and the security personnel whose contracts end in March 2014.

Spending on property payments and travel and subsistence for the personnel monitoring the implementation of the local government turnaround strategy in the office of the chief operations officer are the reasons for the significant proportion of the department's budget spent on goods and services over the medium term. The increase in property payments between 2010/11 and 2013/14 was to cover property management and operating lease costs to accommodate the increase in personnel needed to support the implementation and monitoring of the community work programme and the Department of Traditional Affairs. At the end of November 2013, the programme had a funded establishment of 294 posts, all of which were filled.

Spending on consultants over the MTEF period provides for legal work emanating from litigation relating to traditional disputes and claims, conducting internal and external monitoring, and reviewing performance reporting and evaluation within the department and municipalities. The department does not have internal capacity to perform these functions.

## Programme 2: Policy, Research and Knowledge Management

### Objectives

- Improve service delivery by providing quarterly evidence based research and policy analyses to inform policy making.
- Improve accountability in municipalities and efficiency in the department's operations through monitoring mechanisms, systems and structures that will enable an integrated service delivery by implementing the knowledge and information management strategy, which includes managing and promoting the local government resource centre, by March 2015.

### Subprogrammes

- *Management: Research and Policy* provides strategic leadership to the programme to ensure compliance and the achievement of department targets in line with broader government priorities. This subprogramme had a staff complement of 3 at the end of November 2013.
- *Policy and Research Methods* provides technical policy and research support to the department aimed at improving the service delivery performance of municipalities, fosters compliance with legislation, and conducts research on key challenges facing local government. Weekly research alerts are also provided to the department, highlighting events in the municipal and provincial environment regarding service delivery, local economic development and public participation matters, and profiles of municipalities are developed and updated in support of political visits. In 2012/13, an in-depth research report on protests from 2004 to 2010, including case studies of the 2012 Ratanda and Sharpeville protests, was completed. In addition, analyses were completed on the implication of the audit outcomes for 2011/12; a report on infrastructure delivery progress; and 4 research papers on support towards service delivery, financial management and audit outcomes were completed in 2013/14. This subprogramme had a staff complement of 7 at the end of November 2013.
- *Knowledge and Information Management* provides knowledge and information management products and services in the department, and ensures the facilitation of knowledge and information management in local government. In 2012/13, there was an intervention on the development of a corporate portal, 2 business processes were automated and file plans and a legal library were established. The key outputs for 2013/14 included the development and launch of the Cogtanet corporate portal as a platform to improve internal knowledge and information sharing and the implementation of electronic boardroom and correspondence processes to enhance the business operation and promote efficiencies. This subprogramme had a staff complement of 16 at the end of November 2013.

## Expenditure trends

The spending focus over the medium term will be on providing technical policy and research support to the department to improve the service delivery performance of municipalities, and conducting research on key challenges facing local government in the *Knowledge and Information* subprogramme. In addition, the department will continue to focus on managing and promoting the local government resources centre as a single repository for local government information and knowledge. Consultants perform the work related to managing the centre, developing the corporate knowledge management portal and setting up a legal library. Thus spending on consultants over the MTEF period is expected to increase at an average annual rate of 24.6 per cent. The number of personnel in this programme is expected to remain at 26 over the MTEF period.

The increase in expenditure between 2010/11 to 2013/14 in the *Policy and Research Methods* subprogramme at an average annual rate of 54.5 per cent was mainly due to the ongoing research at provincial and local government.

## Programme 3: Governance and Intergovernmental Relations

### Objectives

- Strengthen intergovernmental fiscal relations by managing the municipal infrastructure, municipal systems improvement and local government equitable share grants in line with the Division of Revenue Act (2013) on an ongoing basis.
- Support municipalities' efforts to increase revenue by monitoring the implementation of the Municipal Property Rates Act (2004) and, where required, providing guidance to municipalities, by March 2015.

- Strengthen the capacity and functionality of ward committees by providing support to municipalities in the development and implementation of ward level operational plans by March 2015.
- Contribute to the reduction of incidences of corruption in municipalities by forming ethics committees in municipalities, which will ensure that allegations of corruption are investigated and concluded, by March 2015.
- Contribute to the improvement of local government audit outcomes by providing technical support to municipalities to implement post-audit action plans that will improve financial management, revenue enhancement and audit outcomes in local government by March 2015.
- Strengthen coordination and cooperation in intergovernmental relations by finalising functionality assessments of intergovernmental structures at each sphere of government and produce guidelines that will improve their coordination abilities, by March 2015.

## Subprogrammes

- *Management: Governance* provides strategic leadership by planning, monitoring and coordinating the deliverables of the programme, such as to strengthen intergovernmental fiscal relations, intergovernmental relations and support local government with the aim of improving the audit outcomes. This subprogramme had a staff complement of 12 at the end of November 2013.
- *Intergovernmental Relations Coordination* administers the Intergovernmental Relations Framework Act (2005). In 2012/13, key outputs included a bill on support, monitoring and intervention being submitted to Cabinet and the finalisation of a report on the functionality of the structure of district intergovernmental relations. In 2013/14, a key activity was the continuation of the assessment of the functionality of intergovernmental relations structures across each sphere of government. Functionality guidelines with performance indicators were also drafted for district municipalities. This subprogramme had a staff complement of 8 at the end of November 2013.
- *Intergovernmental Fiscal Relations* strengthens intergovernmental fiscal relations through local government equitable share transfers, manages the municipal infrastructure grant and municipal systems improvement grant transfers to municipalities, and manages the Municipal Property Rates Act (2004). In 2012/13, key activities included finalising draft amendments to the Municipal Property Rates Act (2004) and paying non-returning councillors. Key activities in 2013/14 included providing support to Parliament in processing the Municipal Property Rates Amendment Bill after Cabinet had approved the bill. This subprogramme had a staff complement of 18 at the end of November 2013.
- *Governance and Public Participation* promotes an environment for good governance and public participation by supporting provinces and municipalities to strengthen their governance and coordinating capabilities. In 2012/13, the key activities were the training of ward committee members and the assessment of the functionality of ward committees. A key output in 2013/14 was the submission of the Intergovernmental Monitoring, Support and Intervention Bill to Cabinet. This subprogramme had a staff complement of 5 at the end of November 2013.
- *South African Local Government Association* transfers funds to the South African Local Government Association, a recognised local government body in terms of the Organised Local Government Act (1997). Transfers are used by the association to fund operational activities, including capacity building programmes for councillors, local government research, and knowledge sharing initiatives. This subprogramme's total budget is transferred in full to the association.
- *Municipal Demarcation Board* transfers funds to the Municipal Demarcation Board, which is a constitutional body established in terms of the Municipal Demarcation Board Act (1998). The board uses the transfers to fund operational activities, including capacity assessments, ward delimitation and boundary redetermination. This subprogramme's total budget is transferred in full to the board.
- *South African Cities Network* transfers funds to the South African Cities Network, which enables cooperation between South African cities and maximises benefits through the exchange of information. This subprogramme's total budget is transferred in full to the network.
- *United Cities and Local Government of Africa* transfers funds to United Cities and Local Government of Africa, an association of municipalities and national regional local government associations in Africa. The association aims to enhance cooperation and knowledge sharing among local governments in Africa to improve the delivery of services to communities across the continent. This subprogramme's total budget is transferred in full to the association.

- *Local Government Equitable Share* is the share of nationally raised revenue, which is payable to the local government sphere in terms of section 214 of the Constitution. This transfer supplements municipal revenue for the provision of free basic services to poor households, and the funding of institutional capacity and support to weaker municipalities in poorer areas. This subprogramme's total budget is transferred in full to the municipalities.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on monitoring and supporting municipalities through municipal infrastructure grant expenditure engagements. Conducted by the *Intergovernmental Fiscal Relations* and *Governance and Public Relations* subprogramme, the engagements include project appraisals at district level and monthly coordination meetings. The department will also continue with the development of regulations and guidelines and will conduct workshops to assist municipalities to implement the Municipal Property Rates Amendment Bill to enhance municipal revenue collection. The department engages consultants to perform the municipal engagements and workshops. This involves the hiring of venues and facilities, the evaluation of valuation rolls and the provision of transaction advisory services for the rollout of smart metres by local government. This explains the significant increase in spending on consultants within goods and services over the MTEF period.

The local government equitable share, transferred to municipalities to fund the provision of free basic services to poor households, is the largest contributor to this programme, making up 99.7 per cent of the programme's budget in 2013/14. Municipalities were allocated additional funding after the introduction of a new formula in July 2013 that provides for improved funding to municipalities with higher poverty rates. The new formula will be phased in over a five-year period to mitigate the impact of the change.

The increase in spending in the *Intergovernmental Fiscal Relations* subprogramme in 2012/13 was due to a rollover allocation and a budget augmentation in the 2013 adjustment process for a once-off payment to non-returning councillors whose term ended after the May 2011 local government elections.

## Programme 4: National Disaster Management Centre

### Objectives

- Support the establishment and operation of effective fire services and disaster management by :
  - enhancing the fire services legislative framework by developing a draft Fire Services Bill by March 2015, to ensure that the legislation is responsive to the changing conditions in the sector
  - ensuring the promulgation of the Disaster Management Amendment Bill by March 2015.
- Enhance and strengthen capacity in the disaster risk management fraternity by developing and implementing an integrated national disaster risk management education and training framework by March 2015.
- Create public awareness of disaster reduction by rolling out the disaster risk reduction advocacy and awareness programmes, such as the International Day for Disaster Reduction in provinces by March 2015.

### Subprogrammes

- *Management: Head of Disaster* provides strategic leadership to the programme. This subprogramme had a staff complement of 5 at the end of November 2013.

- *Legislation, Policy and Compliance Management* develops and provides implementation support for disaster management and fire service policies and legislative frameworks across all spheres of government. In 2012/13, key activities were related to the development of the draft Disaster Management Amendment Bill, which was submitted to Cabinet and published in the Government Gazette and national newspapers. A discussion paper on fire brigade services was also published for public comment. In 2013/14, the focus was on continuing to provide support to establish and operationalise disaster management centres, and developing a white paper on fire brigade services. This subprogramme had a staff complement of 6 at the end of November 2013.
- *Planning Coordination and Support* develops and implements disaster management operational systems and coordinates disaster management capacity building and strategic research across all three spheres of government. In 2012/13, the focus was on the provision of disaster risk management bursaries to 15 new and 7 second-year students pursuing a master's degree in disaster management; rolling out public awareness campaigns; funding *Jambá*, a journal of disaster risk studies; enhancing the national disaster risk management education and training framework; and engaging the services of consultants for the independent assessment and verification of disaster damages and aerial support to municipalities. In 2013/14, the disaster management plan and national disaster risk management education and training framework were developed. In addition, there was another student intake for the national disaster management centre bursary and studentship scheme. This subprogramme had a staff complement of 12 at the end of November 2013.
- *Intelligence and Information Systems Management* guides the development of a comprehensive information management and communication system and establishes integrated communication links with all disaster risk management role players. In 2012/13, an early warning and capability management system to ascertain national indicative risk in terms of flooding was developed. In 2013/14, the focus was on developing the ICT strategic plan for the national disaster management centre to foster a closer relationship between the branch's business and its ICT unit, to translate the business objectives into ICT initiatives, and to detail a list of ICT initiatives in support of the business strategy. This subprogramme had a staff complement of 11 at the end of November 2013.
- *Disaster Relief Transfers* is a conditional grant that aims to provide immediate relief after disasters without any scientific assessment. Transfers are made only when a disaster has been declared. In 2012/13, transfers for disasters that occurred in Limpopo and Mpumalanga amounted to R47 million. In 2013/14, KwaZulu-Natal, Limpopo and North West received transfers for disasters of R34.1 million, R87.7 million and R43.6 million.
- *Municipal Disaster Recovery Grant* is a conditional grant, which aims to repair infrastructure damaged by disasters that occurred in 2009 and 2010 in Limpopo, KwaZulu-Natal and Western Cape.

2. Rand million.

**Expenditure trends**

The spending focus over the medium term will be on providing immediate relief for disasters through the disaster relief conditional grant, which is transferred to provinces affected by disasters. The grant is transferred through the *Disaster Relief Transfers* subprogramme, which is the biggest spending item over the medium term. The grant allows provinces and municipalities to respond timeously to the immediate needs of affected communities after disasters have occurred. The disaster relief envisaged would include the repair of infrastructure that supports basic services and the provision of environmental health and humanitarian relief within three months following the declaration. Over the medium term, expenditure in the *Disaster Relief Transfer* subprogramme is expected to increase to R611.5 million, at an average annual rate of 4.6 per cent. The

introduction of the municipal disaster recovery grant includes funding for ongoing municipal disaster recovery in Limpopo, KwaZulu-Natal and Western Cape for disasters that occurred in 2009 and 2010.

Spending on consultants over the MTEF period will be to assist with the development of the monitoring and evaluation system for post-disaster recovery and rehabilitation funding, and to provide an independent assessment and verification of damages after the declaration of a disaster.

## **Programme 5: Provincial and Municipal Government Systems**

### **Objectives**

- Support provinces in discharging their mandate towards local government by implementing the diagnostic report on provincial institutional capacity to support local government, and preparing an action plan by March 2015.
- Enhance the capacity of municipalities by developing and implementing uniform standard systems and procedures for municipal staff, as per the revised Municipal Systems Act (2013), by March 2015.
- Ensure the integrated provision of services to communities by facilitating focused capacity building support interventions in 136 municipalities to implement the revised integrated development plans, by March 2015.
- Enhance the planning, programme and project management capacity of municipalities by institutionalising the geographic information system and provide training on data packaging that will assist municipalities with the effective execution of service delivery projects, by March 2015.

### **Subprogrammes**

- *Management: Provincial and Local Government Support* provides strategic leadership to the programme. This subprogramme had a staff complement of 4 at the end of November 2013.
- *Provincial Government Support and Intervention* aims to strengthen provincial government policies and governance systems. In 2012/13, an institutional capacity assessment of the provincial departments responsible for local government was conducted, and the guidelines on provincial monitoring of municipalities and non-performance and maladministration in terms of sections 105 and 106 of the Municipal Systems Act (2000) were developed. In 2013/14, provinces were supported in implementing these guidelines. Workshops were also held to improve development planning and monitoring capacity to support a differentiated approach to municipal planning. This subprogramme had a staff complement of 12 at the end of November 2013.
- *Local Government Support and Intervention* provides uniform norms and standards for human resources in local public administration and coordinates the implementation of capacity building programmes within local government. In 2012/13, draft regulations setting uniform standards for all municipal employees were developed. Municipalities were also supported through workshops to develop and implement recruitment and retention strategies. In 2013/14, the key focus was on the implementation of the human resource related regulations emanating from the revised Municipal Systems Act (2000), and the coordination and facilitation of capacity building initiatives. This subprogramme had a staff complement of 16 at the end of November 2013.
- *Development Planning* provides support to provinces and municipalities to strengthen intergovernmental planning and attain development planning outcomes. In 2012/13, the focus was on finalising the revised integrated development plan framework and providing support to provinces in conducting integrated development plan assessments. In 2013/14, the key focus was on the development of an urban development concept paper and the establishment of a panel of experts to manage the integrated urban development framework and revised integrated development plan framework. This subprogramme had a staff complement of 19 at the end of November 2013.
- *Municipal Systems Improvement Grant* makes transfers to assist municipalities in building in-house capacity to perform functions, and to stabilise institutional and governmental systems. This subprogramme's total budget is transferred in full to the municipalities.

## Expenditure trends

The spending focus over the medium term is on: supporting municipalities to implement the Municipal Systems Act (2000) and build geographic information systems capacity; training officials in municipalities on the development of geographic information systems; reviewing a framework on intergovernmental planning; coordinating and supporting integrated urban development and management across government and various

stakeholders; and monitoring the implementation of regulations. These activities are supported by the increase in spending in the *Local Government Support* and *Intervention and Development Planning* subprogrammes over the medium term.

The programme's allocation is dominated by the *Municipal Systems Improvement Grant* subprogramme, which accounts for 85.3 per cent of the total budget in 2013/14. The grant is used to build in-house capacity in 150 municipalities to perform their legislated functions and to stabilise institutional and governmental systems as required by the Municipal Systems Act (2000).

Spending on consultants is projected to decline over the MTEF period as personnel capacity within the programme has increased and capacity is built within municipalities. The work undertaken by consultants over the MTEF period will be for work related to the implementation of the remuneration framework and the regulation of senior managers at municipalities. This programme has an establishment of 51 funded posts, all of which were filled at the end of November 2013.

## **Programme 6: Infrastructure and Economic Development**

### **Objectives**

- Promote economic development within local government by supporting 25 municipalities with:
  - reviewing municipal local economic development strategies by March 2015
  - developing collaborative partnerships with local private sectors by March 2015
  - promoting a business enabling environment in municipal areas through the red tape reduction programme by March 2015
  - implementing the local economic development strategy by March 2015.
- Contribute to the progressive realisation of access to free basic services by supporting 150 municipalities in the rollout of the national indigent policy for free basic services by March 2015.
- Create work opportunities and provide income security to the unemployed in the most marginalised communities by increasing the number of participants in the community work programme to 362 000 participants by March 2017.

### **Subprogrammes**

- *Management Infrastructure* provides strategic oversight for the programme. This subprogramme had a staff complement of 2 at the end of November 2013.
- *Local Economic Development Planning* supports the planning and implementation of local economic development programmes in provincial and local governments within the national framework. In 2012/13, 3 business development forums were developed in district municipalities and memoranda of understanding were signed with the private sector in a partnership to improve service delivery. In 2013/14, the focus was on the new framework for local economic development, the expansion of the business development forums to new municipalities, the red tape reduction programme in partnership with the Department of Trade and Industry, and the monitoring of the partnerships between private businesses and municipalities. This subprogramme had a staff complement of 13 at the end of November 2013.
- *Infrastructure Development* supports provinces and municipalities with the implementation of the free basic services programme and infrastructure planning that informs capital investment priorities within their integrated development plans. In 2012/13, the subprogramme monitored the implementation of municipal infrastructure grant projects and the rollout of free basic services. In 2013/14, key activities were to support municipalities to improve their non-financial reporting of the municipal infrastructure grant; improve monitoring, reporting and evaluation of the municipal infrastructure grant programme; and improve access to free basic services through better policies for the indigent. This subprogramme had a staff complement of 35 at the end of November 2013.
- *Municipal Infrastructure Grant* makes specific transfers to supplement municipal capital budgets to eradicate backlogs in municipal infrastructure. This subprogramme's total budget is transferred in full to the municipalities.
- *Community Work Programme* is discussed in more detail below.

- *Municipal Infrastructure Support Agency* is discussed in more detail below.

## Expenditure trends

The spending focus over the medium term will continue to be on monitoring transfers of the municipal infrastructure grant to supplement the capital budgets of municipalities to eradicate backlogs in municipal infrastructure. The grant made up 90.8 per cent of programme expenditure between 2010/11 and 2013/14. The department will also focus on supporting the Municipal Infrastructure Support Agency, which deploys specialist technical experts to targeted municipalities to assist them with project planning, implementation and infrastructure asset management, and providing capacity building programmes for technical staff in municipalities.

Expenditure in the *Community Work Programme* subprogramme is expected to increase to R3.7 billion over the medium term, which will allow the number of targeted participants to increase to 362 000 in 234 municipalities by 2016/17. The funding for the *Municipal Infrastructure Support Agency* subprogramme is projected to increase to R319.4 million in 2016/17 to assist 80 low capacity municipalities, especially in rural areas, with technical experts and artisans.

Furthermore, the department expects to implement the local economic development strategy, develop indigent registers, conduct evaluations of free basic services and review the municipal infrastructure grant policy framework in conjunction with the local government conditional grant review. This is reflected in the increase in spending from 2013/14 in the *Local Economic Development Planning and Management: Infrastructure* subprogrammes. The increased spending mostly provides for an increase in personnel numbers, from 66 in 2012/13 to 76 in 2016/17. Spending on compensation of employees is thus projected to increase from R33.4 million to R67 million over the same period. The increase is funded in part by a reprioritisation of operational funds from computer services and consultants in the *Management: Infrastructure* subprogramme to strengthen the monitoring and evaluation capacity in the *Municipal Infrastructure Grant* subprogramme.

## Subprogramme: Community Work Programme

This subprogramme contributes to the development of public assets in poor communities, provides income security and work experience for participants, and promotes social and economic inclusion. The programme is managed through the 3 lead implementing agents, each heading the programme in 3 provinces, who are responsible for the day-to-day project management function of the community work programme. Key activities in 2013/14 included the development of the information management system and the review of the delivery model of the programme, which involved the revision of the three-layer implementing model. The model will be phased out and replaced by a single layer of implementing agents from 2014/15, to improve efficiency. Between 2010/11 and 2013/14, the community work programme increased targeted work opportunities to 172 000 in 140 municipalities.

2. Rand million.

## Expenditure trends

The bulk of the spending in this subprogramme goes directly to participants as wages. Approximately 95 per cent of the allocated budget over the medium term is for site implementation, of which 65 per cent is paid as wages and 35 per cent for operational costs. The objective of the community work programme is to provide work opportunities in a targeted 234 municipalities in all nine provinces. The funds allocated are used to pay wages to participants; pay implementing agents; buy tools, materials and protective clothing; and provide training and technical support to the participants. Over the medium term, expenditure is expected to grow at an average annual rate of 28.9 per cent. This is mainly due to the additional allocation provided to increase the number of targeted participants in the community work programme and to grow the total number of the sites from 140 municipalities to 234 municipalities, particularly those in rural communities.

Between 2010/11 and 2013/14, expenditure on wages to participants increased from R318.7 million to R833.2 million, due to spending that was allocated to start 80 new sites in 2012/13, which accounts for the increase in spending on contractors over this period. The increase in expenditure ensured that the community work programme was implemented in 140 municipalities with 172 000 participants in 2013/14. The fluctuations in expenditure on consultants and contractors between 2011/12 and 2013/14 was mainly due to the shifting of funds between the two line items for implementing agents for site maintenance and participants payments. Due to the nature of their activities and contractual arrangements with the department, expenditure for implementing

agents is more appropriately reflected as contractors and not consultants. This programme has an establishment of 30 funded posts, all of which were filled at the end of November 2013.

### Subprogramme: Municipal Infrastructure Support Agency

This subprogramme makes transfers to the Municipal Infrastructure Support Agency. The agency aims to address current failures in infrastructure and service provisions. Its mandate includes the provision of technical advice and support to optimise municipal infrastructure provision and the coordination of the development and implementation of programmes designed to strengthen the capacity of municipalities in the planning, development, operation and maintenance of their infrastructure. In 2013/14, the agency provided technical support on a range of electrical issues to 32 municipalities, compared to the 5 that were supported in 2012/13. In addition, 40 young town planners and civil engineers were deployed to municipalities in 2013/14 as part of the capacity development programme. The agency's technical training programme offers short courses to municipal officials in areas such as civil engineering, water, energy, sanitation, waste management and town planning. In 2013/2014, 10 municipal officials were trained in Japan through the Japan International Cooperation Agency. Using funds allocated to the municipal and sector technical support programmes, the Municipal Infrastructure Support Agency plans to improve sustained water supply and quality by providing technical support to 4 water service authority districts in 2013/14 and aims to support 44 municipalities in becoming licensed to own landfill sites as per the Cabinet directive. The agency's in-house support capacity consists of 26 officials. The agency recruited 21 short term contractors, while the process of filling vacant critical posts is under way. The vacancies arose after the Development Bank of Southern Africa significantly scaled down the operational support it provides.

### Expenditure trends

The spending focus over the MTEF period will be on improving the state of infrastructure in municipalities. This will be done by conducting diagnostic assessments of infrastructure needs, deploying technical expertise where required and implementing capacity building programmes for infrastructure related critical skills. Cabinet approved an additional allocation of R60 million over the medium term, which will enable the Municipal Infrastructure Support Agency to support 32 additional municipalities and employ an additional 53 technical consultants to provide engineering and project management skills. The agency was proclaimed as a government component in 2013, which changed the programme's allocation to a transfer payment.

Expenditure grew from R189.6 million in 2010/11 to R262 million in 2013/14 to allow for the deployment costs of 74 individual technical experts and 28 technical professional services to municipalities, which gives rise to the increase in spending on consultants over the period. Consultants were used due to a shortage of skills and staff in municipalities.

## Programme 7: Traditional Affairs

### Objectives

- Support the Department of Traditional Affairs to fulfil its mandate by transferring funds to the department over the medium term.

## Subprogrammes

- *Traditional Affairs* makes transfers to the Department of Traditional Affairs, which is discussed in further detail below.

## Expenditure estimates

The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.

## Aim

*Facilitate integrated traditional affairs for sustainable development and social cohesion in traditional communities.*

## Mandate

The Department of Traditional Affairs is mandated to support traditional leadership through legislation and regulation by developing knowledge and support frameworks to empower traditional communities. This mandate is derived from the following legislation:

- the Traditional Leadership and Governance Framework Act (2003)
- the National House of Traditional Leadership Act (2009)
- the Commission for the Promotion and Protection of the Rights of Cultural, Religious and Linguistic Communities Act (2002).

## Strategic goals

The department's strategic goals over the medium term are to:

- empower the institutions of traditional leadership
- effectively implement policies and legislation relating to traditional affairs
- restore dignity to the institution of traditional leadership
- enhance the department's governance systems
- enhance information and knowledge management systems for the traditional affairs sector
- ensure good governance systems are in place for structures of traditional affairs
- promote the heritage of traditional, indigenous interfaith leadership and communities.

## Selected performance indicators

**Table 3.22 Traditional Affairs**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of traditional leadership disputes and claims cases finalised per year	Commission on Traditional Leadership Disputes and Claims	Outcome 9: A responsive, accountable, effective and efficient local government system	- <sup>1</sup>	32	249	300	350	400	450
Number of traditional councils engaged in service delivery and rural development initiatives per year	National House of Traditional Leaders		- <sup>2</sup>	- <sup>2</sup>	- <sup>2</sup>	78	276	275	200

1. Department began measuring this indicator in 2011/12.

2. Department began measuring this indicator in 2013/14.

## Objectives

- Promote good governance of entities and institutions of traditional leadership through the implementation of the capacity building plan and the corporate governance framework for traditional leaders by March 2015.
- Restore the dignity and integrity of the institution of traditional leadership through the resolution of historical disputes and claims of traditional leadership by March 2015.

## Programmes

- *Administration* provides strategic management, corporate services and administrative support to the Department of Traditional Affairs. This subprogramme had a staff complement of 22 at the end of November 2013.
- *Policy and Legislation for Traditional Affairs* provides for the development, review, monitoring and implementation of policies and legislation relevant to traditional leadership nationally, and enhances knowledge management within traditional affairs. In 2012/13, legislative compliance reports were conducted for 7 provinces and draft formulas to determine the number of members of royal councils were developed and circulated for comment. In addition, the concept paper on *ukuthwala*, the practice of abducting young girls and forcing them into marriage was finalised. In 2013/14, Cabinet approved the National Traditional Affairs Bill. A research report on the role of headmen and headwomen in local government was also developed and their appointments were finalised. This subprogramme had a staff complement of 17 at the end of November 2013.
- *Institutional Support and Coordination* provides systems and programmes for institutional development and capacity building, and coordinates partnerships within the institution to achieve cooperation and collaboration with all traditional affairs stakeholders. In 2012/13, a draft traditional affairs sector strategy aimed at improving and strengthening the coordination of traditional matters was completed and a report on the state of governance of traditional leadership was developed. In 2013/14, key activities included finalising

a report on the comprehensive assessment of governance in traditional affairs. This subprogramme had a staff complement of 14 at the end of November 2013.

- *National House of Traditional Leaders* represents the interests of traditional communities and traditional leaders, and provides advice to government on policies and programmes. In 2012/13, coordinated training on indigenous law was conducted to empower traditional leaders on issues of customary related legislation. The house also participated in programmes in the Department of Rural Development that deal with land ownership and use of land. In 2013/14, training was facilitated for 25 members of the executive committee on the interpretation of traditional leadership legislation. This subprogramme had a staff complement of 14 at the end of November 2013.
- *Commission for the Promotion and Protection of the Rights of Cultural, Religious and Linguistic Communities* makes transfers to the Commission for the Promotion and Protection of the Rights of Cultural, Religious and Linguistic Communities. This subprogramme's total budget is transferred in full to the commission.
- *Commission on Traditional Leadership Disputes and Claims* resolves claims and disputes at all levels of traditional leadership referred to the commission. In 2012/13, 249 traditional leadership disputes and claims were finalised. The commission plans to finalise 300 claims in 2013/14. This subprogramme had a staff complement of 11 at the end of November 2013.

<sup>1</sup>. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

<sup>2</sup>. Rand million.

## Expenditure trends

Over the medium term, the department will focus on strengthening the coordination of traditional affairs sector and forging partnerships to ensure that traditional leaders, Khoi and San leaders, and the interfaith sector play a central role in socioeconomic development, nation building, service delivery initiatives and the development of traditional communities in collaboration with government. The department will further extend its focus on other elements of its mandate, including social cohesion, heritage and the profiling of the 751 traditional councils over this period.

At 38.6 per cent of the programme budget between 2010/11 and 2013/14, spending on compensation of employees is the largest item and mainly provides for the appointment of research personnel to support the department's work on resolving traditional leadership claims and disputes, and for capacity in corporate and financial services. The number of personnel is expected to increase from 76 posts in 2012/13 to 78 posts in 2016/17. Spending on consultants, which is projected to increase over the medium term, provides for legal costs on litigation relating to traditional leadership dispute and claims. Consultants are used because the department currently lacks the internal capacity to perform this function.

## Public entities and other agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **South African Local Government Association** is mandated by the Constitution to assist in the comprehensive transformation of local government. The association participates in intergovernmental structures at the provincial and district levels, and is therefore able to influence national and provincial legislation and gauge its impact on local government. The association's total transfer for 2014/15 is R27.3 million.
- The **Municipal Demarcation Board** is an independent authority responsible for determining municipal boundaries. The board is also mandated to declare district management areas, delimit wards for local elections, and assess the capacity of municipalities to perform their functions. The board's total budget for 2014/15 is R49.9 million.
- The **Commission for the Promotion of the Rights of Cultural, Religious and Linguistic Communities** promotes and protects cultural, religious and linguistic rights. The commission focuses on conflict resolution, research, advocacy and community engagement on conflicts pertaining to cultural, religious and linguistic rights within communities. The commission's total budget for 2014/15 is R35 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Efficiently determine and safeguard the identity and status of citizens. Regulate immigration to ensure security, promote development and fulfil South Africa's international obligations.*

### Mandate

The mandate of the Department of Home Affairs is derived from the Constitution of the Republic of South Africa and various acts of Parliament and policy documents. The department's services are divided into two broad categories: civic services and immigration services. Both must ensure the efficient determination and safeguarding of the identity and status of citizens, and provide for the regulation of immigration to ensure security, promote development and fulfil South Africa's international obligations.

### Strategic goals

The department's strategic goals over the medium term are to:

- secure South African citizenship and identity through regulating and overseeing the provision of enabling documents such as identity documents and passports and maintaining the national population register
- ensure effective and secure management of immigration to facilitate the movement of people through ports of entry, issue permits and visas, enforce immigration legislation, and grant refugee status to those who meet the requirements
- ensure citizens, immigrants and internal and external clients receive efficient and secure services.

### Programme purposes

#### Programme 1: Administration

**Purpose:** Provide leadership, management and support services to the department.

#### Programme 2: Citizen Affairs

**Purpose:** Provide secure, efficient and accessible services and documents for citizens and lawful residents.

## Programme 3: Immigration Affairs

**Purpose:** Facilitate and regulate the secure movement of people through the ports of entry into and out of the Republic of South Africa. Determine the status of asylum seekers and regulate refugee affairs.

### Selected performance indicators

Table 4.1 Home Affairs

Indicator <sup>1</sup>	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Percentage of machine readable passports (manual process) issued within 24 working days <sup>2</sup>	Citizen Affairs	Outcome 12: An efficient, effective and development orientated public service and an empowered, fair and inclusive citizenship	24 days <sup>2</sup>	82% (402 474)	94.3% (413 213)	95%	95%	95%	95%
Percentage of machine readable passports (live capture process) issued within 13 working days <sup>2</sup>	Citizen Affairs		12 days <sup>2</sup>	84% (186 216)	93.3% (167 001)	97%	97%	97%	97%
Percentage of identity documents (first issue) issued in 54 working days <sup>2</sup>	Citizen Affairs		60.5 days <sup>2</sup>	63% (1 199 467)	92.16% (1 039 862)	95%	95%	95%	95%
Percentage of identity documents (second issue) issued within 47 working days <sup>2</sup>	Citizen Affairs		49.6 days <sup>2</sup>	66% (1 075 994)	98.15% (896 613)	95%	95%	95%	95%
Number of births registered within 30 calendar days of birth	Citizen Affairs	Outcome 3: All people in South Africa are and feel safe	46% <sup>2</sup> (500 524)	51% (556 762)	54.7% (602 530)	642 000	694 000	750 000	810 000
Number of smart ID cards issued to citizens 16 years of age and above <sup>3</sup>	Citizen Affairs		– <sup>3</sup>	– <sup>3</sup>	– <sup>3</sup>	100 000	3 000 000	8 000 000	10 000 000
Percentage of permanent residence permits issued within 8 months (applications collected within South Africa)	Immigration Affairs	Outcome 12: An efficient, effective and development orientated public service and an empowered, fair and inclusive citizenship	3.4% (307)	38% (1 679)	1.3% (211)	50%	50%	60%	75%
Percentage of temporary residence permits: critical skills (business, critical skills and general work) issued within 8 weeks <sup>4</sup>	Immigration Affairs	Outcome 5: A skilled and capable workforce to support an inclusive growth path  Outcome 12: An efficient, effective and development orientated public service and an empowered, fair and inclusive citizenship	11.4% (2 309)	45% (16 961)	49.5% (14 471)	85%	62%	72%	82%
Percentage of refugee identity documents issued within 90 days <sup>5</sup>	Immigration Affairs	Outcome 12: An efficient, effective and development orientated public service and an empowered, fair and inclusive citizenship	–	–	–	–	50%	50%	50%
Percentage of refugee travel documents issued within 90 days <sup>5</sup>	Immigration Affairs	public service and an empowered, fair and inclusive citizenship	–	–	–	–	80%	90%	95%
Number of illegal foreigners deported per year	Immigration Affairs	Outcome 3: All people in South Africa are and feel safe	55 825	75 336	105 392	80 000	85 000	90 000	95 000

1. From 2013/14, the projected number of applications processed are not displayed as it is not within the control of the Department of Home Affairs.

2. These indicators were measured in terms of number of days up to 2010/11.

3. New performance indicator from 2013/14.

4. Up to 2012/13, work, business and corporate temporary residence permits were given focused attention. From 2013/14 a critical skills permit will replace the quota and exceptional skills permits.

5. Measured from the date of application at refugee reception offices until travel document is ready for collection at office of application or outcome is known. The performance indicator was not accurately measured in previous financial years, hence previous years' numbers are not published.

## The national development plan

The civic and immigration services provided by the department are key enablers for the achievement of the development objectives espoused in the national development plan. The plan deals with the economy, employment and positioning South Africa in the world. In this regard, the department is taking steps to address critical skills gaps by facilitating the acquisition of skilled migrants from abroad and encouraging investment in South Africa. These steps include implementing the amendments to the Immigration Act of 2011 and the amended immigration regulations once the regulations are approved by the minister in July 2014. In addition, the department will streamline both the civic and immigration business processes, and over the medium term will enhance human capacity and the systems used to process applications for enabling documents.

The efficient management of migration within the Southern African Development Community (SADC) is an essential factor in growing the regional economy. The department, alongside other government departments, works with SADC structures to conduct government to government bilateral engagements so as to improve the regional management of migration while developing appropriate policy to deal with economic migrants who are currently abusing the asylum seekers system, and also to strengthen its business procedures and work instructions for processing applications for asylum. The establishment of a border management agency by the department in 2017 will contribute significantly to building safer communities in terms of combatting transnational crime and terrorism, and enabling the efficient facilitation of trade and tourism.

Civic services, such as the provision of identity and travel documents, are key enablers of the capable state envisaged in chapter 13 of the national development plan, and contribute to ensuring social protection and building an active and engaged citizenry as set out in chapter 15 of the NDP. The department's modernisation programme over the medium term will enable it to provide secure and efficient services and ensure that they are accessible to all citizens. The new national identity system, of which the smart card identity document is an element, will assist in the fight against corruption, and the department is already working with other government departments and the financial sector on this.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on improving the quality of services the department offers to South African citizens and foreign nationals by: enhancing the management of asylum seekers, economic migration from the SADC, international migrants with critical skills, and residency and citizenship applications; and implementing the new national identity system, which is to be the centre of a single integrated platform for managing civic and immigration services. These activities are carried out by the *Citizen Affairs* and *Immigration Affairs* programmes, which spend significantly on compensation of employees, stationery and printing, computer equipment and services, contractors, and travel and subsistence. The allocations support the department in issuing birth, death and marriage certificates, identity documents, and passports to citizens, and permanent and temporary permits to foreign nationals.

Over the medium term, the department will incur spending in the *Citizen Affairs* programme to: reduce the turnaround time for issuing the identity document from the current 54 days to 30 days when it replaces the identity book with a smart ID card; register new births within 30 days as the early registration of birth; and maintain the current turnaround of 13 days for issuing a passport. Further spending in the *Immigration Affairs* programme will be incurred to reduce the processing times of all temporary and permanent permits from over a year to 8 months. To achieve this, expenditure in computer services over the medium term is expected to increase due to additional allocations for the implementation of the system's modernisation programme, which will provide an integrated IT platform to decrease the turnaround time for issuing enabling documents. Expenditure over this period is also expected to increase due to additional funds allocated to the Electoral Commission to prepare for and preside over the 2014 national and provincial elections and the 2016 municipal elections. Cabinet approved budget reductions over the medium term of R99.5 million, R102.6 million and R102.6 million will mainly be effected in non-core areas of the department's operations, such as venues and facilities, and catering and entertainment. The department will continue to incur expenditure on these non-core items but will decrease activity levels in line with the reductions, which will have no effect on service delivery.

In automating the business processes for issuing enabling documents and allowing biometric data, photographs, fingerprints and signatures to be captured live electronically, the systems modernisation programme has allowed the department to maintain its funded establishment at 10 369 posts over the medium term, made up mainly of frontline and back office staff in service delivery offices and head office staff. Of the funded establishment, 353 posts were vacant as at 30 November 2013. The posts were vacant due to natural attrition and existing vacant posts not filled which will be filled over the medium term. The department does not employ contract workers and uses consultants on an ad hoc basis, particularly with regard to ICT, where the department experiences difficulty in attracting suitably qualified and experienced candidates.

### Infrastructure spending

R130 million in 2013/14 and R160 million in 2014/15 of the R400 million allocation for infrastructure at ports of entry has been reallocated to this department from the Department of Public Works. These amounts were meant to be used to improve and build residential and official accommodation for officials, as well as for the additional office space needed to replace tents at the Lebombo, Beitbridge, Maseru Bridge, Oshoek,

Ramatlabana, Vioolsdrift, Golela and Kopfontein ports of entry. However, minimal progress was made in 2013/14 due to the delay in the finalisation of procurement processes to obtain external expertise as well as business and project plans. The department is projecting that only R30 million of the R130 million allocated in 2013/14 will be used. The R160 million allocated in 2014/15 has been rescheduled with R90 million moved to 2016/17; this was done due to the delay in finalising the appointment of suitable service providers to develop infrastructure improvement standards and project plans. The rescheduling will provide the department with sufficient time to do the necessary due diligence.

### Information systems modernisation (formerly Who Am I Online)

The implementation of the information systems modernisation project resumed in 2012/13 following the resolution of a dispute between the department and the service provider, which had put the project on hold since May 2010. The project will provide an integrated IT platform to decrease the turnaround time for issuing identity documents; birth, death and marriage certificates; passports and visas; section 22 asylum permits; refugee identity documents; citizenship certificates; and permanent and temporary residence permits. The system is designed to automate the end to end business processes, and supports transactional processing; and it simultaneously provides information that includes photographs, fingerprints, signatures, voice recordings, demographic information and scanned supporting documents.

The department has made R1.1 billion available over the medium term to complete the development of the integrated systems by 2014/15. Rollout of the system to all the offices will continue over the MTEF period. R1.4 billion in expenditure for the project was incurred between 2008/09 and 2011/12, including R835 million for the settlement agreement reached in January 2011.

The following aspects of the project are due to be completed over the medium term: live capture functionality for identity documents and passports; the cleaning of the national population register; core systems integration of civics and immigration; and the upgrading of the visa and permitting system. The rollout of the movement control system to 38 remaining ports of entry was finalised during 2013/14, which with the 34 that were rolled out in 2010 in preparation for the 2010 FIFA World Cup, brings the total to 72 ports of entry.

The department managed to roll out the live capture functionality for identity documents and passports to three offices by the end of October 2013, and also projected that a total of 70 offices would have the system by the end of 2013/14. The department also launched the roll out of the smart identity card in October 2013, and projected that 100 000 smart identity cards would be issued by the end of 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on: improving access to the services provided by the department by increasing the number of service points and connecting health facilities to the department's network for registering births; designing and implementing a new national identity system with secure biometric features, which will include South African and foreign nationals; and improving business processes and systems to combat fraud and corruption by rolling out online verification and live capture for both passports and identity documents to district and regional offices.

The department plans to increase its footprint for the provision of its services by increasing the number of offices by 14 over the medium term. This will bring the total number of offices to 644, and is part of the reason for an increase in expenditure for operating leases. Between 2010/11 and 2013/14 expenditure on operating leases also increased as a result of office refurbishments. The increase in the compensation budget over the seven year period is explained by an increase in the number of personnel and the organisational restructuring which resulted in the department strengthening the middle management echelon which previously was not adequate. As at 30 November 2013 the programme had a funded establishment of 1 012, with no vacancies. The personnel numbers are expected to remain at 1 012 in each year of the MTEF period. During the same period expenditure on compensation of employees is expected to increase moderately to provide for inflationary adjustments.

The department managed to rollout the live capture functionality for identity documents and passports to three offices by the end of October 2013, and projected that a total of 70 offices would have the system by the end of 2013/14. Over the medium term the department plans to roll out the live capture functionality for identity documents and passports to 240 additional offices. To achieve this, the programme receives additional allocations of R325 million, R125 million and R436 million over the medium term for the implementation of the systems modernisation programme. This explains the increase in expenditure expected in the *Transversal Information Technology Management* subprogramme, as well as on computer services, contractors, training and development, and stationery, printing and office supplies.

To give effect to Cabinet approved reductions, the programme is cutting spending by R19.9 million, R20.5 million and R20.5 million over the medium term. The reductions are to be effected in non-core areas of the department's operations, such as venues and facilities, consultants, catering and entertainment. The department will continue to incur expenditure on these non-core items but will decrease activity levels in line with the reductions, which will have no effect on service delivery.

## Programme 2: Citizen Affairs

### Objectives

- Ensure that registration at birth is the only entry point to the national population register by improving the number of births registered within 30 calendar days of the birth event from 694 000 in 2014/15 to 810 000 in 2016/17.
- Maintain the standard of service delivery for the issuing of enabling documents by:
  - increasing the issuance of the smart identity document card from 3 million in 2014/15 to 10 million by 2016/17
  - issuing 95 per cent of machine readable passports for manual processes within 24 working days in 2014/15
  - issuing 97 per cent of machine readable passports for live capture processes within 13 working days in 2014/15
  - issuing 95 per cent of the projected 1 113 290 first issue identity documents within 54 working days in 2014/15
  - issuing 95 per cent of the projected 1 257 848 reissue identity documents within 47 working days in 2014/15.

### Subprogrammes

- *Citizen Affairs Management* provides for the overall management of the branch for both head office and frontline offices; and provides policy direction, sets standards and manages back office processes. This subprogramme had a staff complement of 29 in 2013/14.
- *Status Services* regulates all matters relating to the national population register. These include: maintaining an accurate register of all citizens and immigrants who have acquired the right to permanent residence; registering births, deaths and marriages; providing travel and citizenship documents; providing financial assistance to citizens abroad who wish to return to South Africa but have no means of doing so; and determining and granting citizenship. In 2012/13, the department registered 1 259 491 births (early and late registration), 144 370 marriages (including civil, customary and civil union), and 473 853 deaths. This subprogramme had a staff complement of 300 in 2013/14.
- *Identification Services* oversees issues relating to identity such as fingerprints, photographs and identity documents. This entails establishing and maintaining national identity systems such as the automated fingerprint identification system. In 2012/13, 1 039 862 identity documents were issued within 54 days. This subprogramme had a staff complement of 503 in 2013/14.
- *Access to Services* provides for the development and facilitation of a strategic channel which ensures the optimal placement and use of the department's services. This is done by: developing, managing and coordinating the department's footprint strategy in relation to opening new department offices, following recommendations from the Human Sciences Research Council; deploying registration facilities at health facilities with maternity wards; scheduling mobile office deployment in rural areas where the department does not have permanent offices; and managing customer telephonic enquiries to the department. In 2013/14, the department connected 85 health facilities, which brings the total number of connected health facilities to 400. This initiative provides facilities for registering births, and the number of connected hospitals is set to increase over the medium term. There are 117 mobile offices equipped with satellite dishes to connect to the department's systems. These mobile offices are used to provide services to remote and rural areas. The department provides its services at 413 service points, including district and regional offices. This subprogramme had a staff complement of 75 in 2013/14.
- *Service Delivery to Provinces* provides for all civic, immigration and refugee affairs functions in all provinces. This entails providing a client interface for the collection and processing of applications, issuing enabling documents that are available on demand (such as temporary identity certificates or temporary passports), and conducting quality assurance checks of permanent residence and citizenship applications. This subprogramme had a staff complement of 6 812 in 2013/14.

- *Film and Publication Board* transfers funds to the Film and Publication Board, which regulates the creation, production, possession, exhibition and distribution of films, interactive computer games and certain publications in terms of the Films and Publications Act (1996). This subprogramme's total budget is transferred in full to the board.
- *Government Printing Works* transfers funds to Government Printing Works, which provides printing services to the South African government and some states in the Southern African Development Community. This subprogramme's total budget was previously transferred in full to the entity.
- *Electoral Commission* transfers funds to the Electoral Commission, which manages the national, provincial and municipal elections, ensures that those elections are free and fair, and declares the results within a prescribed period. This subprogramme's total budget is transferred in full to the commission.

## Expenditure trends

The spending focus over the medium term will be on: rolling out the national population registration campaign, with the aim of registering births, marriages and deaths, and issuing secure identity and travel documents to eligible citizens and residents; enhancing access to services by expanding the department's footprint; and improving the functioning of customer service centres. To achieve these objectives, the bulk of the programme's budget over the medium term is directed towards spending on compensation of employees, fleet services (excluding government motor transport), stationery and printing and office supplies, contractors, travel and subsistence, and transfer payments made to the Electoral Commission and Film and Publication Board. The expenditure on these items is directed towards the improvement of the quality of services the department offers to South African citizens and foreign nationals. Compensation of employees accounts for 48.2 per cent of the programme's budget, and transfer payments account for 42.6 per cent. The reason for the bulk of the expenditure going to compensation of employees is that the department requires enough people staffing all its offices so as to offer both civic and immigration services to the public in the subprogramme *Service Delivery to Provinces*. The department plans to: reduce the turnaround time for issuing the identity document from the current 54 days, when it replaces the identity book with a smart identity card; register new births within 30 days; and maintain the current turnaround time of 13 days for issuing a passport using the live capture process.

Over the medium term, expenditure on transfers and subsidies is expected to increase due to additional allocations to the Electoral Commission for the 2014 national and provincial elections and the 2016 municipal elections. To give effect to Cabinet approved budget reductions, the programme will cut spending by R19.9 million in 2014/15, R20.5 million in 2015/16, and R20.5 million in 2016/17. The reductions were mainly effected in non-core areas of the department's operations, such as venues and facilities, and catering and entertainment. The department will continue to incur expenditure on these non-core items but will decrease activity levels in line with the reductions and as a result service delivery will not be affected. The significant decrease in goods and services from 2013/14 and over the medium term is mainly as a result of expenditure related to the issuing of enabling documents being funded from the self-financing funds.

The programme has a funded establishment of 8 333 made up mainly of frontline and back office staff in service delivery offices and head office staff, of which 133 posts were vacant as at 30 November 2013 due to natural attrition and the length of time it takes to finalise the recruitment process. Personnel numbers are expected to remain at 8 333 in each year of the MTEF period because the IT modernisation programme automated all business processes. The department uses consultants on an ad hoc basis, particularly with regard to ICT, where the department experiences difficulty in attracting suitably qualified and experienced candidates.

## Programme 3: Immigration Affairs

### Objectives

- Maintain the standard of service delivery for enabling documents while improving on the percentage of applications processed within a specified period by:

- issuing permanent residence permits (applications collected within South Africa) within 8 months, increasing from 50 per cent in 2014/15 to 75 per cent in 2016/17
- issuing temporary residence permits (business, critical skills and general work) within 8 weeks, increasing from 62 per cent in 2014/15 to 82 per cent in 2016/17
- issuing refugee travel documents within 90 working days, increasing from 80 per cent in 2014/15 to 95 per cent in 2016/17
- issuing 50 per cent of refugee identity documents within 90 working days for the period 2014/15 to 2016/17.

## Subprogrammes

- *Immigration Affairs Management* provides for the overall management of the branch and provides policy direction, sets standards and manages back office processes. This subprogramme had a staff complement of 16 in 2013/14.
- *Admission Services* is discussed in more detail below.
- *Immigration Services* is discussed in more detail below.
- *Asylum Seekers* considers and processes applications for asylum, issues enabling documents to refugees and facilitates processes to find durable solutions to refugee problems in line with the Refugees Act (1998). The head office is responsible for providing strategic leadership while refugee reception offices are responsible for operations. This subprogramme had a staff complement of 33 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on facilitating the import of critical skills into South Africa; implementing effective and efficient asylum and refugee management strategies and systems, such as the development of a framework to guide the establishment of strategically located refugee reception centres; and improving access to, and the smooth facilitation of traveller movements at, land ports of entry through the implementation of systems such as advance passenger processing, enhanced movement control, and national immigration information systems. To achieve these objectives, the bulk of the department's budget over the medium term is directed towards spending on compensation of employees, training and development for immigration officers, contractors who provide specialised professional services, travel and subsistence, and transport provided for departmental activity. Spending on compensation of employees accounts for 39.5 per cent of the total spending in this programme over the medium term, mainly as a result of the administrative support and inspectorate functions which require human capacity. In the same period, agency and support or outsourced services account for 14.8 per cent of the goods and services expenditure, which is related to the management of the Lindela Repatriation Centre, a holding facility for illegal foreigners waiting for deportation, by an external service provider. The department plans to reduce the turnaround time for issuing permanent permits from over a year to within 8 months, maintaining the turnaround times for issuing temporary residence permits for business, critical skills and general work to within 8 weeks, and refugee travel and identity documents to within 90 working days.

Cabinet approved budget reductions of R19.9 million in 2014/15, R20.5 million in 2015/16 and R20.5 million in 2016/17 are to be mainly effected in the subprogrammes *Admission Services* and *Immigration Services* in non-core areas of operations such as venues and facilities, catering, and entertainment. The reductions will not negatively impact on the delivery of services as the department intends scaling down expenditure on these non-core activities.

The programme has a funded establishment of 1 024 posts made up mainly of frontline and back office staff in service delivery offices and head office staff, of which none were vacant as at 30 November 2013. Personnel numbers are expected to remain at 1 024 in each year of the MTEF period, with spending on compensation of employees increasing moderately due to improved conditions of service. The main reason for the personnel numbers remaining constant over the medium term is the implementation of the systems modernisation programme, which automates all business processes. Certain functions that were previously performed manually and required human capacity will no longer exist, and affected personnel will be trained and redeployed to other functional areas.

### Subprogramme: Admission Services

This subprogramme is responsible for issuing visas, securely facilitating the entry and departure of persons to and from South Africa in line with the Immigration Act (2002); recording their movements on the movement control system; and controlling the processing of applications for permanent and temporary residence permits,

including work, study and business permits. As at 31 December 2013, a total of 41 848 permits were issued, of which 742 were permanent residence permits and 41 106 were temporary residence permits.

## Expenditure trends

The spending focus over the medium term will be on: developing policy options to manage the migration of skilled and unskilled migrants; rationalising the viability of ports of entry for more secure, efficient and cost effective facilitation of people and goods; rolling out the trusted traveller programme to designated ports of entry; and issuing scarce skills permits to allow skilled migrants to contribute to the country's economic growth. To achieve these objectives, the bulk of the department's budget over the medium term is directed towards spending on compensation of employees, computer equipment and services, and travel and subsistence. Over the medium term, expenditure on computer services increases slightly mainly as result of increases in maintenance costs for the refugee information management system. During the same period, expenditure on compensation of employees increases moderately to provide for inflationary adjustments. The subprogramme has a funded establishment of 802 posts. Personnel numbers are expected to remain at 802 over the MTEF period as the IT modernisation programme has automated all business processes.

Over the medium term the department plans to attract 50 000 foreigners with critical skills each year in order to contribute to economic growth and job creation; it also plans to reduce congestion and long queues at ports of entry, especially during the festive season, to facilitate the movement of people and goods in and out of the country.

## Subprogramme: Immigration Services

This subprogramme deals with immigration matters in foreign countries; detects, detains and departs illegal immigrants in terms of the Immigration Act (2002); and provides policy directives on immigration matters. At the end of December 2013, 67 575 illegal immigrants had been deported.

### Expenditure trends

The spending focus over the medium term will be on ensuring that the management of the Lindela Repatriation Centre complies with the highest applicable human rights standards in line with the Constitution and the Immigration Act (2002), and that the transportation of people found to be in South Africa illegally is carried out speedily. Additional spending in this programme will be on: training, to prepare staff for a four year deployment to foreign missions, both to replace staff whose terms are coming to an end and to fill some new postings; and the actual deployment of such staff for the rendering of consular services abroad. To achieve these objectives, the bulk of the programme's budget over the medium term is directed towards spending on compensation of employees, agency and support or outsourced services, and transport provided for departmental activity, which relates to transport costs for the deportation of illegal foreigners. The department plans to increase the number of illegal foreigners deported per year from 80 000 to 95 000 by improving the early detection and identification of over stayers by the inspectorate division. This will reduce the number of detainees at the Lindela Repatriation Centre, and the cost associated with transport and food. Over the medium term, expenditure is expected to increase slightly due to the annual adjustment to cater for inflation. The subprogramme has a funded establishment of 137, and personnel numbers are expected to remain at 137 in each year of the MTEF period.

## Public entities and other agencies

### Electoral Commission

#### Mandate and goals

The Electoral Commission is a chapter 9 constitutional institution reporting directly to Parliament. It was established in terms of the Electoral Commission Act (1996), which sets out the composition, powers, functions and duties of the Electoral Commission. The commission is mandated to manage national, provincial and municipal elections; ensure that those elections are free and fair; and declare results within a prescribed period.

The commission's strategic goals over the medium term are to:

- strengthen governance, institutional excellence, professionalism and enabling business processes, at all levels of the organisation
- achieve pre-eminence in the area of managing elections and referenda, including the strengthening of a cooperative relationship with political parties
- strengthen electoral democracy.

#### Selected performance indicators

Table 4.15 Electoral Commission

Indicator	Programme/Activity/Objective	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17

Number of liaison sessions with members of party liaison committees at national (6), provincial (72) and municipal (1 322) levels per year	Electoral Operations		2 002	1 695	1 234	2 517	1 400	2 600	1 400
Number of electoral staff recruited and trained per year	Electoral Operations		57 405	198 226	1 071 <sup>2</sup>	50 092	213 092	50 092	213 092
Voter turnout in the national and provincial elections of 2014; and in the local government elections of 2011 and 2016, as a percentage of registered voters	Outreach		–	57.64%	–	–	80%	–	60%
Number of civic and democracy education events per year	Outreach		3 124	89 321 <sup>3</sup>	4 215	8 063	6 000	8 500	7 000
Number of interactions/liaisons with international stakeholders per year	Outreach		19	14	12	30	30	30	30

1. Non-election years, though these years are used to campaign for registration.

2. This was a non-election year in which there were no election activities; as a result no expansion staff were recruited.

3. In the 2011/12 local government elections, KwaZulu-Natal recorded all meetings as an event, including very small meetings, hence the large number. The standard definition of events has been provided to all offices and will be used going forward.

## Expenditure trends

The spending focus of the Electoral Commission over the medium term in preparation for the 2014 national and provincial elections will be on: strengthening temporary human and infrastructural capacity during elections; paying tariffs commensurate with the realities of attracting a mature and experienced election day staff complement; improving and increasing the amount of training provided to electoral staff; increasing the number of prefabricated park homes as office accommodation; replacing the zip-zips machines; and implementing information and technology hardware rehabilitation. To achieve these objectives, the bulk of the commission's

budget over the medium term is directed, in registration and election years, towards spending which is linked to the commission's main performance indicators. These spending areas are: compensation for the approximately 560 563 staff appointed to work at the 22 500 voting stations in registration and election periods over the medium term; the intensive training programmes that electoral staff undergo to protect the credibility and integrity of electoral processes; continuous registration and event specific registration activities; voter and civic democracy education programmes; the procurement of the electoral bill of materials, which includes ballot papers, ballot boxes and stationery used at voting stations; extensive communication programmes via various media platforms; the updating of the electoral systems databases in line with election specific requirements; and the updating and rolling out of the commission's IT infrastructure.

Expenditure decreased from R1.3 billion in 2011/12, an election year, to R765.6 million in 2012/13, a non-election year. During a non-election year, civic and democracy education, permanent staff costs and administrative overheads play a major role in expenditure. Regarding the MTEF period, expenditure is expected to increase to R1.7 billion by 2016/17 due to the preparations for the 2014 national and provincial elections and the 2016 local government elections respectively.

The commission has introduced a number of cost saving measures to reduce expenditure and ensure proper budget management practices without compromising the integrity of the electoral processes. These measures have been necessary due to cuts made in baseline amounts over the medium term. A rigorous exercise to reprioritise expenditure was undertaken to fund underfunded projects as a result of the commission's revised strategic priorities in preparation for the 2014 national and provincial elections and the 2016 local government elections. Expenditure relating to travel, workshops, catering, promotional items, and the hiring of temporary staff and professional services are the main areas where strict controls are applied. The commission will continue with the cost saving measures introduced over the medium term in an attempt to fund a portion of the budget shortfalls envisaged over this period.

The commission had a total establishment of 8 328 posts as at 30 November 2013, of which 8 174 were filled. There were 154 vacancies due to natural attrition and newly created positions within the commission. The number of filled posts is expected to decrease in 2014/15 to improve overall efficiency leading up to the national and provincial elections in 2014 and 2016. Due to the cyclical nature of ICT projects, which normally coincide with electoral cycles that demand more ICT resources, the use of short term ICT contractors increases, as this kind capacity can be expanded and contracted at short notice in accordance with the differing skills requirements for various projects.

Subsequent to a review of the service delivery model for outreach in 2012 and in line with the initiative of the then newly appointed commissioners, the commission approved 52 permanent senior administration officer posts across the country. The aim of these posts is to provide permanent capacity to revitalise the outreach programme and to enhance electoral training. This programme will entrench an understanding of democracy in education processes at schools, higher education institutions and with other stakeholders across South Africa. These posts will also provide permanent training capacity to enhance the professionalism of election day staff. The benefit of these additional posts became evident in 2013/14 when training and civic education programmes for the 2014 elections began.

## **Government Printing Works**

### **Mandate and goals**

The mandate of the Government Printing Works is to provide security printing and ancillary services to all organs of state in all spheres of government. The entity performs its mandate subject to policies that the Minister of Home Affairs prescribes.

The entity's strategic goals over the medium term are to:

- develop the printing works as a government component organisation that performs flexibly, and within regulated parameters, as a sustainable ring-fenced business entity
- optimise processes and facilities to increase operational effectiveness and improve customer service
- develop an efficient, effective, well trained and appropriately remunerated workforce.

## Selected performance indicators

Table 4.19 Government Printing Works

Indicator	Programme/Activity/Objective	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of editions of government and provincial gazettes published per year	Production and operations	Entity mandate	2 290	2 300	2 300	2 300	2 400	2 400	2 400
Number of new passports printed per year	Production and operations		866 500	898 000	650 000	600 000	600 000	600 000	600 000
Number of new identity documents printed per year <sup>1</sup>	Production and operations		2 544 000	2 671 000	2 671 000	3 000 000	1 000 000	1 000 000	–
Number of smart identity cards issued per year <sup>2</sup>	Production and operations		–	–	–	100 000	3 000 000	7 500 000	7 500 000

1. Identity documents will not be printed beyond 2015/16 as a new system of smart identity cards has been introduced.

2. A pilot process to issue smart identity cards started in 2013/14 and the process will be fully rolled out from 2014/15.

## Expenditure trends

The Government Printing Works generates revenue mainly from manufacturing security printed material such as examination papers, identity documents, and passports; as well as from manufacturing non-security documents such as statistical reports, annual reports, brochures, and standard office stationery. The revenue collected is mainly used to fund both the operational expenditure and capital expenditure as the entity will not receive funding from government over the medium term. Revenue decreased between 2010/11 and 2011/12 and between 2012/13 and 2013/14 due to the commissioning of the new production facility and the equipment replacement programme, but is expected to increase over the medium term as a result of the new facility and equipment increasing the entity's production capacity.

The spending focus over the medium term will be on accelerating the asset replacement programme and developing the entity's production facility to enable it to implement its key strategic objectives, which include; providing functional and secure operating facilities, coordinating and distributing government publications, and developing and implementing an effective and efficient human resources plan. Over the medium term, R929 million has been allocated for spending on the refurbishment of the new facility to provide office accommodation, and also for the acquisition of additional production equipment. This will see the remaining phases of the entity's new security printing division at its Pretoria premises completed by 2014/15. To date, pavilions one and two of the facility have been completed, and a R48 million web fed printing press and a R45 million multi-unit sheet fed printing press have been commissioned. The multi-unit sheet fed printing press has the capacity to produce modern security features such as rainbow images and transparent patterns, which are required for high security printing applications. In addition to this, the entity has acquired other items of machinery and equipment for both the Bosman Street and Visagie Street premises in Pretoria.

The entity has a total of 299 funded posts, of which 223 were filled as at 30 November 2013/14; 76 posts were vacant due to natural attrition. The increase in goods and services expenditure over the medium term is mainly the result of acquiring the new machines and equipment with the latest technology, and reorganising the organisation. This means that a completely new set of highly skilled personnel are required, so existing personnel will be re-trained in order to operate the new machines in the new environment. These highly skilled personnel are remunerated at higher salary levels than is the case with low skilled personnel.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Film and Publication Board** regulates and controls the creation, production, possession, exhibition and distribution of certain films, interactive computer games and publications in terms of the Film and Publications Act (1996). The board is also responsible for monitoring age restricted business premises for compliance with their licence and registration terms. The board's total budget for 2014/15 is R90.8 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Formulate, coordinate, implement and manage South Africa's foreign policy and international relations programmes.*

### Mandate

According to the Constitution, the president is ultimately responsible for the foreign policy and international relations of South Africa. It is the prerogative of the president to appoint heads of mission, to receive foreign heads of mission, to conduct state to state relations, and to negotiate and sign all international agreements. International agreements that are not of a technical, administrative or executive nature will only bind the country after being approved by Parliament. Parliament also approves the country's ratification of or accession to multilateral agreements. All international agreements must be tabled in Parliament for information purposes.

The Minister of International Relations and Cooperation is entrusted with the formulation, promotion, execution and daily conduct of South Africa's foreign policy.

The department's overall mandate is to work for the realisation of South Africa's foreign policy objectives. This is done by:

- coordinating and aligning South Africa's international relations abroad
- monitoring developments in the international environment
- communicating government's policy positions
- developing and advising government on policy options, creating mechanisms and avenues for achieving objectives
- protecting South Africa's sovereignty and territorial integrity
- contributing to the creation of an enabling international environment for South African business
- sourcing developmental assistance
- assisting South African citizens abroad.

## Strategic goals

The department's strategic goals over the medium term are to:

- promote policies, strategies and programmes to advance South Africa's national priorities through strengthened political, economic and social relations with targeted countries
- participate in the global system of governance to enhance international responsiveness to the needs of developing countries and Africa in particular through a reformed, strengthened and equitable rules based multilateral system
- enhance the African Agenda and sustainable development to promote global security, sustainable development and human rights
- strengthen political and economic integration of Southern African Development Community (SADC)
- strengthen relations with strategic formations of the North, as well as South-South relations
- provide effective state protocol services in response to the requirements of the Vienna Convention.

## Programme purposes

### Programme 1: Administration

**Purpose:** Develop overall policy and manage the department.

### Programme 2: International Relations

**Purpose:** Promote relations with foreign countries.

### Programme 3: International Cooperation

**Purpose:** Participate in international organisations and institutions in line with South Africa's national values and foreign policy objectives.

### Programme 4: Public Diplomacy and Protocol Services

**Purpose:** Communicate South Africa's role and position in international relations in domestic and international arenas, and provide protocol services.

### Programme 5: International Transfers

**Purpose:** Fund membership fees and transfers to international organisations.

## Selected performance indicators

**Table 5.1 International Relations and Cooperation**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13		2013/14	2014/15	2015/16
Number of structured bilateral mechanisms to promote national priorities (African Agenda and the agenda of the South) per year	International Relations	Outcome 11: Create a better South Africa and contribute to a better and safer Africa and world	- <sup>1</sup>	- <sup>1</sup>	- <sup>1</sup>	17	34	34	34

1. New indicator introduced in 2013/14. No prior year data available.

2. Old indicator discontinued in 2014/15.

3. Indicator was revised and expressed as a percentage from 2013/14.

## The national development plan

With regard to international relations and cooperation, the national development plan's stated objectives are to enhance South Africa's position in the region and the world, and to increase trade and investment. The plan further states that the country's foreign policy should be shaped by the interplay between diplomatic, political, security, environmental, economic and regional dynamics that define international relations. In addition, the plan envisions the country positioning itself as one of Africa's powerhouses, leading development and growth on the continent; and deepening integration with the Brazil-Russia-India-China-South Africa (BRICS) group of countries.

The Department of International Relations and Cooperation contributes to the realisation of the plan's development goals by: continuing to support regional and continental processes, responding to and resolving crises, strengthening regional integration, contributing to an enabling trade environment, increasing intra-African trade, and championing sustainable development and opportunities in Africa.

The department recognises that to achieve the plan's proposed expansion of South Africa's trade and global market share, a greater productive and export capacity and global competitiveness across the region needs to be built. The department's strategic focus is thus to advance a developmental integration agenda in southern Africa, combining trade integration, infrastructure development and sector policy coordination with increased advocacy for a more inclusive global governance system. As such, the integration of the SADC and regional neighbours is critical for the economic development of the region and for South Africa's global competitiveness.

The department also leads efforts to revitalise the New Partnership for Africa's Development (NEPAD) as a strategy for economic development on the African continent, together with ongoing support for the African Peer Review Mechanism. South Africa will continue to use structured bilateral mechanisms and high level

engagements to reinforce and expand cooperation in the political, economic, and social and security spheres for the purpose of contributing to the achievement of national priorities.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on sustaining economic and political relations, participating in the global governance forums, and strengthening policy and coordination in relation to outgoing South African development cooperation. To achieve these objectives, the bulk of the department's allocation over the medium term will be directed towards spending on compensation of employees, travel and subsistence, operating leases, transfer payments to international organisations and departmental agencies, and payments for capital assets in the *Administration*, *International Relations* and *International Transfers* programmes.

These programmes support the 124 South African diplomatic missions abroad, the management of the department's diverse assets and property portfolio, and facilitate transfers to international organisations as membership fee contributions. These activities are to be carried out by the personnel on the department's funded establishment of 5 040 posts, of which 2 375 are additional to the approved establishment. The department's establishment includes 2 270 posts for personnel employed in the South African diplomatic missions abroad who are paid in the local currency of that country. This makes expenditure on compensation of employees, specifically in the *International Relations* and *International Cooperation* programmes, vulnerable to fluctuations in the exchange rate. At the end of November 2013, the department had 319 vacant posts due to natural attrition and delays in finalising recruitment processes. The department plans to fill some of the critical vacancies over the medium term to address capacity requirements in key competency areas such as economics, development, international relations and diplomatic affairs. This is expected to increase spending on compensation of employees from R2.4 billion in 2013/14 to R2.7 billion in 2016/17. Expenditure on consultants over the medium term is expected to increase once the department begins the ICT modernisation project and infrastructure development.

Expenditure in the *Administration* programme over the medium term is expected to increase to support other departmental objectives, such as the operationalisation of the South African Council of International Relations, and the finalisation of the Foreign Services Bill and the Partnership Fund for Development Bill. Once enacted, the latter bill will repeal the current African Renaissance International Cooperation Fund Act (2000) and facilitate the operationalisation of the South African Development Partnership Agency, which supports the development of the African continent and the regional integration of the SADC. This is expected to increase spending on legal consultants, communication and compensation of employees over the medium term.

The department receives Cabinet approved additional allocations of R25.2 million over the medium term for capacity building for the South African Development Partnership Agency, R80 million to cater for all the logistical arrangements and the diplomatic and protocol services to be rendered by the department with other departments during the inauguration of the president in 2014, and R115.1 million as a voluntary contribution to the African Union (AU) Commission.

The Budget also includes a Cabinet approved reduction of R576.8 million over the MTEF period, which the department is to effect on the transfer to the African Renaissance International Cooperation Fund and expenditure on non-core items of goods and services. The fund will use its accumulated reserves to sustain itself, if needed, so the reduction is not expected to have an adverse effect on service delivery.

### Infrastructure spending

Spending on infrastructure increased from R134.5 million in 2010/11 to R203 million in 2013/14 and is expected to increase to R236 million over the medium term. The allocation earmarked for infrastructure will go towards the construction of new state owned chanceries, official residences and staff accommodation abroad, and the completion of existing renovation and refurbishment infrastructure projects abroad. In particular, the department expects to complete the construction of chanceries and official residences in Dar es Salaam (Tanzania) and Lilongwe (Malawi), and progress substantially with the construction of chanceries in Kigali (Rwanda) and Mbabane (Swaziland), over the medium term. The department intends to engage the private sector for the development of chanceries and official residences on vacant state owned land in New Delhi (India), Riyadh (Saudi Arabia), Dakar (Senegal), Bamako (Mali), Gaborone (Botswana) and Montevideo (Uruguay) through development agreements or public private partnerships.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing property and office management services to the department, as well as modernising its ICT infrastructure. Thus the bulk of the department's budget over the medium term is allocated to the *Corporate Services*, *Office Accommodation* and the *Foreign Fixed Assets Management* subprogrammes for spending on compensation of employees, travel and subsistence, operating payments, leases, computer services, and capital expenditure. The allocations to the *Office Accommodation* subprogramme over the medium term provide for the locally based property portfolio, which consists of the head office building, VIP and protocol services lounges in three international airports, two diplomatic guesthouses as well as accommodation for the United Nations (UN) agencies in South Africa, the Pan African Parliament and the secretariat for NEPAD.

Expenditure over the seven-year period increases largely due to the challenge of managing a geographically decentralised department that incurs expenditure in multiple currencies. This is particularly the case for spending on remuneration and incentive packages for personnel deployed in foreign missions, official and residential accommodation, and goods and services. This is the reason for the significant increase in spending in the *Foreign Fixed Assets Management* subprogramme between 2010/11 and 2013/14, as the department acquired property for the mission in Geneva, Switzerland in 2011/12, built chanceries and official residences in Tokyo and Washington in 2012/13, and provided for increases in lease payments and municipal rates paid for state owned properties and embassies in foreign missions. Other related expenditure increases are in terms of legal and contract management fees for the public private partnership contracts.

Expenditure on compensation of employees is projected to increase from R329.7 million in 2013/14 to R369.4 million in 2016/17 to provide for an increase in the number of personnel, from 989 in 2013/14 to 1 074 in 2016/17. This increase in personnel is to fill the 85 posts that were vacant at the end of November 2013 due to natural attrition. In addition, spending on consultants is expected to increase over this period, mainly to

allow the department to conduct a feasibility study for the ICT infrastructure project and develop a fully integrated financial system.

## **Programme 2: International Relations**

### **Objectives**

- Strengthen political, economic and social relations through bilateral agreements with targeted countries to advance South Africa's national priorities by promoting South African national and international relations policies, strategies and programmes on an ongoing basis.

### **Subprogrammes**

- *Africa* embraces relevant national priorities by strengthening bilateral cooperation with individual countries in Africa, particularly through focusing on increasing exports of South African goods and services, foreign direct investment with technology transfers into value added industries and mineral beneficiation, and inbound tourism and skills enhancement. In 2013/14, foreign representation continued through 47 diplomatic missions in Africa, which facilitated 8 structured bilateral mechanisms and 37 level engagements during state visits to promote national priorities. By the end of September 2013, 3 structured bilateral mechanisms and 4 trade and investment seminars had been held to promote South Africa's national priorities, investment and tourism. This subprogramme had a staff complement of 330 in 2013/14.
- *Asia and Middle East* embraces relevant national priorities by strengthening bilateral cooperation with individual countries in Asia and the Middle East, particularly through focusing on increasing exports of South African goods and services, foreign direct investment with technology transfers into value added industries and mineral beneficiation, and inbound tourism and skills enhancement. In 2013/14, foreign representation continued through 32 diplomatic missions, which facilitated 7 structured bilateral mechanisms and 15 high level engagements during state visits to promote national priorities. By the end of September 2013, 7 structured bilateral mechanisms and 27 trade and investment seminars had been held to promote South Africa's national priorities, investment and tourism. This subprogramme had a staff complement of 236 in 2013/14.
- *Americas and Caribbean* embraces relevant national priorities by strengthening bilateral cooperation with individual countries in the Americas and the Caribbean, particularly through focusing on increasing exports of South African goods and services, foreign direct investment with technology transfers into value added industries and mineral beneficiation, and inbound tourism and skills enhancement. In 2012/13, foreign representation continued through 18 diplomatic missions, which facilitated 5 structured bilateral mechanisms and 7 high level engagements during state visits to promote national priorities. By the end of September 2013, 2 structured bilateral mechanisms and 19 trade and investment seminars had been held to promote South Africa's national priorities, investment and tourism. This subprogramme had a staff complement of 143 in 2013/14.
- *Europe* embraces relevant national priorities by strengthening bilateral cooperation with individual countries in Europe, particularly through focusing on increasing exports of South African goods and services, foreign direct investment with technology transfers into value added industries and mineral beneficiation, and inbound tourism and skills enhancement. In 2013/14, foreign representation continued through 28 diplomatic missions, which facilitated 6 structured bilateral mechanisms and 18 high level engagements during state visits to promote national priorities. By the end of September 2013, 6 structured bilateral mechanisms and 38 trade and investment seminars had been held to promote South Africa's national priorities, investment and tourism. This subprogramme had a staff complement of 223 in 2013/14.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

3. This number refers to locally recruited personnel, that is personnel who are recruited in the country in which the mission is located and whose salaries are paid in the local currency.

## Expenditure trends

The spending focus over the medium term will continue to be on facilitating socioeconomic development by strengthening bilateral cooperation with individual countries, particularly throughout the rest of Africa, Europe, Asia and the Middle East. These bilateral agreements aim to increase exports of South African goods and

services, foreign direct investment in technology transfers to value added industries and mineral beneficiation, and inbound tourism and skills enhancement.

The increase in expenditure in all the subprogrammes between 2012/13 and 2013/14 relate to improvements in conditions of service, the continued provision of support to the 124 diplomatic missions, the hosting of trade and investment seminars, and engagements with chambers of commerce to promote South Africa as an investment destination. The deterioration of the Rand against most major currencies also contributed to the increase in expenditure over this period, as a significant proportion of the programme's expenditure is denominated in foreign currencies. As the Rand has continued to deteriorate, expenditure on compensation of employees, property payments and operating payments, venues and facilities is set to continue rising over the medium term. This will allow the department to undertake over 819 economic diplomacy activities to attract investment and tourism, as well as 34 structured bilateral and 65 high level engagements to strengthen political relations.

This programme is supported by a funded establishment of 3 117 posts, of which 168 were vacant at the end of November 2013. The vacancies were due to natural attrition and the length of time it takes to finalise the recruitment processes. The department plans to fill these positions over the medium term, including the 38 posts additional to the establishment. This is expected to increase spending on compensation from R1.6 billion in 2013/14 to R1.9 billion in 2016/17.

## **Programme 3: International Cooperation**

### **Objectives**

- Contribute towards a reformed, strengthened and equal rules based multilateral system that will be responsive to the needs of developing countries and Africa, in particular, by participating in the global system of governance on an ongoing basis.
- Strengthen the AU and its structures by:
  - providing ongoing financial support for the operations of the Pan African Parliament in terms of the country host agreement
  - providing financial support to the AU Commission chairperson until 2015.
- Improve governance and capacity in the SADC secretariat on an ongoing basis by implementing the secretariat's job evaluation plan and assisting with the recruitment process on an ongoing basis.
- Contribute towards the NEPAD process for socioeconomic development in Africa by participating in the African Peer Review Mechanism and submitting the African Peer Review Mechanism country report when required.
- Strengthen bilateral, trilateral and multilateral interest and relations within the BRICS group of countries dialogue forum through continuous active participation in forum structures.
- Strengthen political solidarity, economic cooperation and sociocultural relations with Asian countries by participating in the New Asian-African Strategic Partnership structures over the medium term.
- Strengthen North-South economic and political relations and cooperation to advance the African Agenda through the ongoing financing of developmental initiatives and support to institutional and governance reforms.

### **Subprogrammes**

- *Global System of Governance* provides for multilateralism and a rules based international order. This entails participating and playing an active role in all forums of the UN system and its specialised agencies, and funding programmes that promote the principles of multilateral activity. In 2013/14, South Africa participated in the 67<sup>th</sup> UN General Assembly and contributions were made to agenda items dealing with the peaceful resolution of conflict in Africa and Syria. During the 23<sup>rd</sup> session of the UN Human Rights Council, South Africa's position in the negotiation of resolutions in the area of political and socioeconomic reforms was advanced. This subprogramme had a staff complement of 161 in 2013/14.
- *Continental Cooperation* provides for the enhancement of the African Agenda and sustainable development. In 2013/14, South Africa participated in the election observer missions to Zimbabwe, Swaziland, Mali and Guinea; and served on the NEPAD steering committee, where the country's position on domestic resource

mobilisation was presented. This subprogramme had a staff complement of 69 in 2013/14.

- *South-South Cooperation* provides for partnerships with countries of the South in advancing South Africa's own development needs and the needs of the African Agenda; and creates political, economic and social convergence for the fight against poverty, underdevelopment and the marginalisation of the South. In 2013/14, South Africa participated in various meetings, including the 12<sup>th</sup> meeting of Commonwealth foreign affairs ministers held in New York in September 2013, the 13<sup>th</sup> ministerial meeting of the Group of 77 (G77) and China, and the BRICS meeting to monitor and assess the level of implementation of resolutions from the fifth BRICS summit and prepare for the next summit. The fourth Forum on China-Africa Cooperation served to achieve political consensus on the implementation modalities for the forum's development cooperation under the Beijing Declaration and Platform for Action. This subprogramme had a staff complement of 8 in 2013/14.
- *South-North Dialogue* provides for South Africa's bilateral and multilateral engagements to consolidate and strengthen relations with organisations of the North to advance and support national priorities, the African Agenda and the developmental agenda of the South. In 2013/14, the department hosted the sixth South Africa-European Union (EU) summit. Key outcomes of the summit included: the establishment of the Structured Dialogue Forum on Human Rights, the creation of a maritime security cooperation subcommittee, the creation of an infrastructure fund of R1.4 billion (€100 million), a partnership in rural electrification, and an agreement to establish a South African-EU business council. This subprogramme had a staff complement of 28 in 2013/14.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

3. This number refers to locally recruited personnel, that is personnel who are recruited in the country in which the mission is located and whose salaries are paid in the local currency.

## Expenditure trends

The spending focus over the medium term will be on: participating in the UN system of governance through South Africa's elective membership of the UN Economic and Social Council (UNESCO); and contributing to the integration of the SADC through supporting regional infrastructure programmes. The bulk of the spending over the medium term towards achieving these objectives occurs in the *Global System of Governance* and *Continental Cooperation* subprogrammes, mainly on compensation of employees, operating leases payments, and travel and subsistence.

The department expects to continue playing a supportive role over the MTEF period to the AU and its structures through the hosting and funding arrangement for the Pan African Parliament, and providing capacity and technical assistance to the president in his role as the chair of various infrastructure initiatives. The latter include projects such as the AU-NEPAD presidential infrastructure championing initiative, and the North-South road and rail corridor project for the effective implementation of the Africa action plan 2010-2015. This ongoing role is set to further increase spending in the *Continental Cooperation* and *South-South Cooperation* subprogrammes over the medium term.

This programme is supported by 480 funded posts, of which 46 were vacant as at 30 November 2013. The vacancies were due to the termination of employment and expiry of working contracts. The department will prioritise the filling of posts related to economic development and diplomacy, as they are core to the functioning of the programme.

## Programme 4: Public Diplomacy and Protocol Services

### Objective

- Ensure a better understanding of South Africa's foreign policy by providing ongoing strategic public diplomacy direction and state protocol services nationally and internationally.

### Subprogrammes

- *Public Diplomacy* promotes a positive projection of South Africa's image; communicates foreign policy positions to both domestic and foreign audiences; and markets and brands South Africa by using public diplomacy platforms, strategies, products and services. In 2013/14, the department provided coverage on ministerial and deputy ministerial activities by holding 24 media briefings and issuing 373 press releases, including facilitating 8 public participation programmes and awareness campaigns. This subprogramme had a staff complement of 81 in 2013/14.
- *Protocol Services* facilitates incoming and outgoing high level visits and ceremonial events, coordinates and regulates engagement with the local diplomatic community, provides protocol advice and support to the various spheres of government, facilitates the hosting of international conferences in South Africa, and

manages state protocol lounges and guesthouses. In 2013/14, the department provided protocol services for 66 incoming and 61 outgoing state and official visits, including the South Africa-EU and SADC organ troika summits and the congress of the Pan African Women's Organisation. This subprogramme had a staff complement of 221 in 2013/14.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on: enhancing programmes that create public awareness of South African international policy and disseminate national priorities, policies and programmes locally and

abroad; and facilitating incoming and outgoing diplomatic visits to South Africa. Pursuing this objective requires significant spending on compensation of employees, property payments for diplomatic guesthouses, venues and facilities, and advertising. The projected increase in spending on goods and services and compensation of employees over the medium term is due to a once-off allocation of R80 million in 2014/15 for the 2014 presidential inauguration, and to bring the Sefako Mapogo Makgatho presidential guesthouse and the South African Council on International Relations into operation. The additional spending on compensation of employees will allow the department to increase the number of personnel in the programme from 349 in 2013/14 to 354 in 2016/17.

Expenditure increased between 2010/11 and 2013/14 due to the operationalisation of the Soutpansberg diplomatic guesthouse in Pretoria and renovations to other diplomatic guesthouses and protocol lounges. In addition, expenditure relating to the marketing and protocol support services for the hosting of the 17<sup>th</sup> conference of the parties to the UN Framework Convention on Climate Change and the BRICS summit increased spending on travel and subsistence, venues and facilities, and communication services over this period.

## Programme 5: International Transfers

### Objectives

- Promote multilateralism activities, enhancing South Africa's economic and diplomatic relations within the continent and with the world by:
  - providing for South Africa's annual contribution to membership fees of international organisations such as the UN, AU and SADC
  - providing yearly for transfers to recapitalise the African Renaissance and International Cooperation Fund as a contribution to its operations.

### Subprogrammes

- *Departmental Agencies* facilitates the transfer to the African Renaissance and International Cooperation Fund, a public entity of the department. In 2013/14, this subprogramme's total budget was transferred in full to the entity.
- *Membership Contribution* facilitates transfers to international organisations. In 2013/14, this subprogramme's total budget was transferred accordingly for payments of all membership fees to international organisations.

## Expenditure trends

The spending focus over the medium term will be on making transfers to the public entity and timeous payment of South Africa's membership fees to international organisations. To give effect to a Cabinet approved reduction of R540.3 million over the medium term, the department cut the transfer to the African Renaissance and International Cooperation Fund. R220.3 million of this was reprioritised to bring the South African Development Partnership Agency into operation, provide for the 2014 presidential inauguration and increase voluntary contributions to the AU Commission.

## Public entities and other agencies

### African Renaissance and International Cooperation Fund

#### Mandate and strategic goals

The **African Renaissance and International Cooperation Fund** was established under the African Renaissance and International Cooperation Fund Act (2000).

The fund's mandate is to:

- enhance co-operation between South Africa and other countries, in particular African countries
- promote democracy and good governance
- work for the prevention and resolution of conflicts
- promote socioeconomic development and integration
- provide humanitarian assistance and human resource development.

The fund's strategic goals over the medium term are to:

- continue to develop operational policy and guidelines
- continue to build capacity to deal with urgent cases requiring humanitarian/emergency assistance
- address concerns relating to the question of supply chain management and procurement, including finalising a database of approved service providers
- address concerns relating to the monitoring and review of the implementation of projects, including increasing visits to projects in the countries concerned, and making greater use of the department's bilateral desks for implementing projects and the missions in the monitoring and follow-up process
- support projects that contribute to South Africa's foreign policy priorities, particularly in relation to the consolidation of the African Agenda.

## Expenditure trends

The spending focus of the African Renaissance and International Cooperation Fund over the medium term is on: providing cooperation funding for initiatives between South Africa and other countries that relate to the promotion of democracy and good governance, the prevention and resolution of conflicts, socioeconomic development and integration, humanitarian assistance and relief, human resource development, and infrastructural development. Cabinet has approved a reduction of R540.3 million over the medium term to the transfer to the African Renaissance and International Cooperation Fund. The Fund will use its accumulated reserves to sustain itself such that there is not an adverse effect on service delivery.

Expenditure on projects declines significantly over the seven-year period due to strategic and operational inefficiencies within the fund. A process of restructuring is currently under way and will result in the establishment of a new agency, the South African Development Partnership Agency, which is meant to improve the coordination of South Africa's diverse development partnerships. The legislative process for establishing the agency is under way, with the Partnership Fund for Development Bill currently before Parliament. Once enacted, the bill will repeal the African Renaissance and International Cooperation Fund Act (2000), resulting in the integration of functions and the transfer of reserves and assets from the fund to the agency.

Executive authority Minister in the Presidency: Performance Monitoring and Evaluation as well as Administration

Accounting officer Director General of Performance Monitoring and Evaluation

Website address [www.thepresidency-dpme.gov.za](http://www.thepresidency-dpme.gov.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Improve government service delivery through performance monitoring and evaluation.*

### Mandate

Established in January 2010, the Department of Performance Monitoring and Evaluation is specifically mandated to:

- facilitate the development plan or delivery agreements for the cross cutting priorities or outcomes of government, and monitor and evaluate the implementation of these delivery agreements
- monitor the performance of individual national and provincial government departments and municipalities, and monitor frontline service delivery
- manage the presidential hotline
- carry out evaluations
- promote good monitoring and evaluation practices in government
- provide support to delivery institutions to address blockages in delivery.

### Strategic goals

The department's work is organised around three core goals: to advance the strategic agenda of government through the development and implementation of the delivery agreements for the outcomes, monitoring and reporting on progress and evaluating impact; to promote monitoring and evaluation practice through a coordinated policy platform, quality capacity building and credible data systems; and to monitor the quality of management practices in departments and the quality of frontline service delivery.

The department's strategic goals over the medium term are to:

- monitor and evaluate the implementation of the delivery agreements and refining them where necessary
- develop and implement performance assessments of individual departments and municipalities
- develop and implement a range of mechanisms for monitoring the quality of frontline service delivery including site visits, citizen based monitoring and managing the presidential hotline
- assist departments to analyse and use data to improve service delivery and to inform policy management decisions.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide strategic management and administrative support to the department.

### Programme 2: Outcomes Monitoring and Evaluation

**Purpose:** Advance the strategic agenda of government by developing and implementing the outcomes approach, monitoring and reporting on its progress, and evaluating its impact.

### Programme 3: Institutional Performance Monitoring and Evaluation

**Purpose:** Promote good monitoring and evaluation practices and processes in government through: management performance assessment and support; frontline service delivery monitoring and support; and monitoring and evaluation capacity development.

## Selected performance indicators

**Table 6.1 Performance Monitoring and Evaluation**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17

Number of quarterly progress reports on monitoring and evaluation of strategic priorities per year			-1	24	48	48	56	56	56
Number of evaluation reports per year			-1	-1	1	15	13	10	10
Number of operational data forums per year for each of the outcomes to support data driven and evidence based monitoring and reporting			-1	12	12	12	10	10	10
Number of institutional performance assessments carried out and reports issued per year	Administration		3 national departments (pilot)	5 national and 20 provincial departments	43 national and 124 provincial departments	43 national and 124 provincial departments	43 national and 124 provincial departments	43 national and 124 provincial departments	43 national and 124 provincial departments
Number of service delivery monitoring visits conducted at national, provincial and local government level and reports issued per year	Institutional Performance Monitoring and Evaluation	Outcome 12: An efficient, effective and development oriented public service and an empowered, fair and inclusive citizenship	-1	60	215	120 new sites monitored	90 new sites monitored and 120 sites revisited	90 new sites monitored and 120 sites revisited	90 new sites monitored and 120 sites revisited

1. Indicators were introduced in phases between 2010/11 and 2011/12 following the establishment of the department from 1 January 2010.

## The national development plan

The work of the Department of Performance Monitoring and Evaluation supports the national development plan's objective of a government that is accountable and transparent. The department's focus is on strengthening accountability and improving coordination, and it works with the National Planning Commission to facilitate and monitor the implementation of the national development plan. The department is responsible for mainstreaming the national development plan into the work of government by drafting the medium term strategic framework to guide government's programme. This is based on the 2009-2014 electoral cycle and will be reviewed annually. The strategic framework includes 14 outcomes, which form the basis of the new performance agreements between the president and individual members of Cabinet.

Over the medium term, the main focus will be on strengthening oversight over the achievements of the outcomes, which will contribute to the realisation of Vision 2030 as outlined in the national development plan. This function is performed in the Outcomes Monitoring and Evaluation programme.

## Expenditure estimates

## Expenditure trends

The spending focus over the medium term will be on drafting and implementing the medium term strategic framework (2014-19); developing, implementing and monitoring delivery agreements; improving the quality and analysis of data related to delivery agreements to allow the department to coordinate and support an integrated government wide performance monitoring and evaluation system; and conducting evaluations in line

with the approved national evaluation plan, institutional performance and frontline service delivery monitoring. To achieve these objectives, the bulk of the department's budget over the medium term is directed towards spending on compensation of employees, computer equipment and consultants. Consultants are typically researchers and industry experts who provide services in different aspects of evaluations.

The department is focusing on realigning its functions to reflect the shift towards an integrated performance monitoring and evaluation approach, which goes beyond the scope of previous monitoring and evaluation systems and support programmes. The integrated approach looks at government performance from a more holistic perspective by aligning the planning and budgeting cycles with performance evaluation. This expands on the functions formerly performed under the *Monitoring and Evaluation Systems Coordination and Support* programme, such as setting monitoring and evaluation standards and developing guidelines and practice notes. The expanded function places additional responsibilities on the department to provide technical guidance on the process of formulating, reviewing and appraising strategic and annual performance plans set by national departments and other spheres of government. This is being undertaken to ensure that departmental programmes of action and sectoral priorities align with broader national priorities. The department has thus amended its budget programme structure to accommodate the new strategic planning and annual performance planning functions, which were previously done in National Treasury. The 2014 Budget allocates R.3.5 million in 2014/15, R6.1 million in 2015/16 and R6.2 million in 2016/17 for this.

In terms of the new function, the department will facilitate strategic and annual performance planning, review the alignment of strategic plans and annual performance plans with the medium term strategic framework for government, support National Treasury in prioritising funding, and facilitate the alignment between quarterly and annual performance reports and outcomes reporting.

Over the medium term, the department will also establish a secretariat for the interdepartmental committee that will look into the revitalisation of distressed mining communities. Due to the expanded functions and the establishment of the secretariat, expenditure over the medium term is expected to increase in compensation of employees, consultants, computer services and travel and subsistence in the *Outcomes Monitoring and Evaluation* programme. Cabinet approved additional allocations of R3 million in 2014/15, R3.2 million in 2015/16 and R3.4 million in 2016/17 provide for this. By the end of November 2013, the department had filled 23 vacant posts and the additional allocations will allow the total number of filled posts to increase to 256 by 2016/17.

Cabinet also approved reductions of R1.1 million over the medium term, which are to be effected through cost curtailing measures such as spending on catering, entertainment, travel and subsistence, and other non-core items in goods and services. These will have no negative impact on service delivery.

## Departmental receipts

### Expenditure trends

The spending focus over the medium term will be on strengthening capacity in administrative and corporate support services, and the acquisition of additional office accommodation to house the expanded functions of the department. This will result in an increase in spending on compensation of employees, property leases and payments in the *Corporate and Financial Services* subprogramme. Spending on training and development will also increase, due to the centralisation of bursaries, training and development spending in 2012/13.

Following its establishment in 2011/12, the department has incurred significant increases in expenditure relating to the development of ICT infrastructure, the setting up of the management performance assessment tool system and outsourced departmental services. The increase in spending on computer services and machinery and

equipment is also evident in 2013/14, although spending on these items is expected to stabilise over the medium term. The number of personnel in this programme is expected to increase from 66 in 2012/13 to 92 by 2016/17 as the department continues to build capacity in internal auditing, financial and information management. In line with the projected growth in personnel numbers, spending on compensation of employees is also expected to increase from R29.6 million in 2013/14 to R38.1 million in 2016/17, due to new positions created and improvements in conditions of service. There were no vacant posts at the end of November 2013.

To give effect to Cabinet approved budget reductions, the department has cut spending on catering, entertainment, and travel and subsistence by R300 000 over the medium term. The department will reprioritise funds from non-core services to ensure that these reductions do not impact negatively on service delivery.

## Programme 2: Outcomes Monitoring and Evaluation

### Objectives

- Advance government strategic priorities by:
  - embedding the outcomes approach by developing, coordinating and monitoring the implementation of delivery agreements and conducting implementation forums and related initiatives, on an ongoing basis
  - monitoring and evaluating the implementation of strategic priorities and providing 1 quarterly report per outcome to Cabinet on the progress of agreed outputs and targets for each outcome, and continuously evaluating the developmental impact
  - increasing accountability and transparency of government's commitment to the 14 priority outcomes by updating the current programme of action web portal hosted by the department, on an ongoing basis.

### Subprogrammes

- *Programme Management for Outcomes Monitoring and Evaluation* provides programme management and administrative support. This subprogramme had a staff complement of 1 in 2013/14.
- *Outcomes Support* facilitates and monitors the implementation of the outcomes approach. To monitor progress against targets, outputs and outcomes contained in the 12 delivery agreements, 4 quarterly reports per outcome are prepared for presentation to Cabinet every year. In 2012/13, the subprogramme provided 233 briefing notes on Cabinet memoranda to political principals and developed guidelines on municipal assessment. This subprogramme had a staff complement of 33 in 2013/14.
- *Evaluation and Research* conducts evaluations of government policies and programmes in terms of the national evaluation plan. In 2012/13, the department completed three evaluations under the currently approved national evaluation plan (2013-2016), with one evaluation still under way. To date, the department has developed 12 guidelines and provided training and capacity building to 237 national, provincial and local government officials in 12 courses relating to the evaluation process. This subprogramme had a staff complement of 8 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on completing the process of ministers signing the new performance and delivery agreements, which are informed by the medium term strategic framework and the 14 outcomes. These agreements, which should all be signed by 2014/15, will serve as the basis for reviewing and monitoring national departments against agreed upon outcomes and outputs.

The priority given to increasing capacity in evaluations and to extend management performance and service delivery assessments to local government is the result of a high level strategic decision. The development and piloting of the local government performance assessment programme and the establishment of the secretariat responsible for the revitalisation of distressed mining communities will increase spending in the *Outcomes Support* and *Evaluations and Research* subprogrammes over the medium term. The secretariat was established as a response to developments in the mining sector that have highlighted underlying socioeconomic dynamics in mining communities that require government intervention. Related spending increases will be on compensation of employees, as the department plans to appoint 3 additional personnel each year to perform these functions. The number of personnel in this programme is therefore expected to increase to 82 by 2016/17. At the end of November 2013, this programme had 5 vacancies. The posts are vacant due to normal attrition and the length of time it takes to finalise the recruitment process.

Expenditure over the medium term is expected to increase further as the department has terminated the *Monitoring and Evaluation Systems Coordination and Support* programme which entailed activities such as developing norms and standards and integrated its functions and some of its support staff into the *Outcomes*

*Monitoring and Evaluation* programme. This change to the programme structure was part of a departmental restructuring and realignment to improve accountability and support the attainment of the outcomes by government.

The department will give effect to Cabinet approved budget reductions of R400 000 over the medium term, through curtailing spending mainly on catering, entertainment, communication and travel. Funds from non-core services will be reprioritised to ensure that the reductions do not impact negatively on service delivery.

Spending on consultants, who provide professional and specialised services for research and evaluations, is set to increase to R16.3 million by 2016/17, in line with the department's expanded mandate.

## **Programme 3: Institutional Performance Monitoring and Evaluation**

### **Objectives**

- Ensure the alignment of departmental activities with government priorities by:
  - evaluating departmental strategic plans and annual performance plans on an ongoing basis
  - conducting annual management performance assessments on all national and provincial government departments over the medium term.
- Improve frontline service delivery by:
  - monitoring 180 new sites and revisiting 360 sites in collaboration with the offices of premiers in all provinces over the medium term
  - continually using the presidential hotline as a monitoring and evaluation tool.

### **Subprogrammes**

- *Programme Management for Institutional Performance Monitoring and Evaluation* provides programme management and administrative support. This subprogramme had a staff complement of 1 in 2013/14.
- *Management Performance Monitoring and Support* coordinates and facilitates institutional performance monitoring and evaluation in government. In 2013/14, the management performance assessment tool was reviewed and updated, 9 workshops were held to launch the tool at national and provincial levels and 6 learning workshops were held at provincial level. This subprogramme had a staff complement of 13 in 2013/14.
- *Presidential Frontline Service Delivery Performance Monitoring and Support* monitors, evaluates and facilitates the improvement of frontline service delivery throughout the public sector system, including the presidential hotline. In 2012/13, 215 frontline service delivery site visits took place, and in 2013/14, 120 new sites will be monitored. The site visits will be extended to 90 new sites and 120 revisits per year over the medium term. This subprogramme had a staff complement of 18 in 2013/14.
- *Macro Monitoring and Evaluation Policy and Capacity Building* coordinates the implementation of monitoring and evaluation policies, as well as systems and capacity building programmes. In 2013/14, the government wide monitoring and evaluation policy framework was reviewed and a draft green paper was developed. This subprogramme had a staff complement of 8 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on stimulating improvements in the performance of government service sites such as schools, clinics and police stations, through service delivery monitoring visits and piloting projects in 50 service delivery facilities. This forms part of government's citizen based monitoring initiative, which falls under the *Presidential Frontline Service Delivery Performance Monitoring and Support* subprogramme. This is reflected in the increased spending in the subprogramme over the medium term. Expenditure on travel and subsistence and computer services is expected to increase by an estimated R11.5 million over the medium term, due to the visits and the cost of maintaining the presidential hotline.

Expenditure increases between 2012/13 and 2013/14 were driven mostly by the *Management Performance Monitoring and Support* subprogramme, due mainly to the department's expanded mandate to support the strategic and annual performance planning and reporting process across national and provincial departments.

Increased spending on compensation of employees in the subprogramme is due to improvements in conditions of service, and R15.7 million in additional allocations for the expanded mandate will facilitate the appointment of 8 personnel and related increases in goods and services.

The *Macro Monitoring and Evaluation Policy and Capacity Building* subprogramme and its related expenditure has been moved from the now defunct *Monitoring and Evaluation Systems Coordination and Support* programme to this programme as it mostly supports the programme's objectives. This will result in an increase in personnel numbers from 67 in 2013/14 to 82 by 2016/17 as the department continues to build capacity to ensure that 90 new sites are monitored and 120 sites are revisited over the medium term. At the end of November 2013, this programme had 5 vacancies. These posts are vacant due to normal attrition and the length of time it takes to finalise the recruitment process.

Executive authority Minister of Public Works  
Accounting officer Director General of Public Works  
Website address [www.publicworks.gov.za](http://www.publicworks.gov.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Provide for and manage the accommodation, housing, land and infrastructure needs of national departments. Lead and direct the implementation of the national expanded public works programme. Promote growth, job creation and transformation in the construction and property industries.*

### Mandate

As set out in the Government Immovable Asset Management Act (2007), the Department of Public Works is mandated to be the custodian and portfolio manager of national government's immovable assets. This includes the provision of office accommodation and expert built environment services to client departments at the national government level; as well as the planning, acquiring, managing and disposing of immovable assets under the custody of the department. The department is further mandated to coordinate and provide strategic leadership in job creation initiatives through the implementation of the expanded public works programme, and to regulate the construction and property industries. Public works is constitutionally designated as a concurrent function exercised by both the national and provincial spheres of government.

### Strategic goals

The department aims to promote government's policy objectives by providing and managing the accommodation, housing, land and infrastructure related needs of national government; coordinating the national expanded public works programme; and driving the transformation of the construction and property industries.

The department's strategic goals over the medium term are to:

- manage the life cycle of immovable assets in the custody of the department effectively and efficiently, within a reasonable timeframe, and in a cost effective manner, without compromising quality
- lead and coordinate the creation of additional employment opportunities by introducing labour intensive delivery methods and additional employment, as well as skills programmes, for the participation of the unemployed in delivering the needed services
- contribute towards a comprehensive rural development programme through the disposal of state owned immovable assets

- provide competent leadership to the South African construction and property industries while ensuring the transformation and regulation of these industries
- provide strategic leadership in ensuring effective governance and the integrity of the operations of the department.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide strategic leadership and support services, including the accommodation and overall management of the department.

### Programme 2: Immovable Asset Management

**Purpose:** Provide and manage government's immovable property portfolio in support of government's social, economic, functional and political objectives.

### Programme 3: Expanded Public Works Programme

**Purpose:** Ensure the creation of work opportunities and the provision of training for unskilled, marginalised and unemployed people in South Africa by coordinating the implementation of the expanded public works programme.

### Programme 4: Property and Construction Industry Policy Regulations

**Purpose:** Promote the growth and transformation of the construction and property industries. Promote a standardised approach and best practice in construction and immovable asset management in the public sector.

### Programme 5: Auxiliary and Associated Services

**Purpose:** Provide for various services, including compensation for losses on the government assisted housing scheme and assistance to organisations for the preservation of national memorials. Meet the protocol responsibilities for state functions.

## Selected performance indicators

Table 7.1 Public Works

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of properties released for redistribution under the land reform programme per year	Immovable Asset Management	Outcome 7: Vibrant, equitable, sustainable rural communities with food security for all	34	0 <sup>1</sup>	0 <sup>1</sup>	9	40	38	9
Total number of properties for which information fields in the immovable asset register are compliant with generally recognised accounting practices	Immovable Asset Management	Outcome 6: An efficient, competitive and responsive economic infrastructure network	-2	-2	-2	-2	56 871	113 742	-3

Table 7.1 Public Works

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of expanded public works programme work opportunities created per year	Expanded Public Works Programme	Outcome 4: Decent employment through inclusive economic growth	607 612	843 459	941 593	1 210 000	1 075 189	1 147 026	1 198 087
Number of expanded public works programme work opportunities created by rural municipalities per year	Expanded Public Works Programme		449 313	626 161	707 973	700 000	700 000	730 000	750 000
Number of planned projects completed	Immovable Asset Management	Outcome 12: An efficient, effective and development oriented public service	326	237	214	300	542	349	200
Number of signed outcomes based facilities management contracts for state owned buildings per year	Immovable Asset Management		-2	-2	-2	-2	12	20	20
Number of buildings retrofitted in line with green building principles per year	Immovable Asset Management	Outcome 12: An efficient, effective and development oriented public service	1 342	1 342	1 079	0 <sup>1</sup>	300	347	400

1. There were no properties released for redistribution in 2011/12 and 2011/13 as there was no approval and there were no buildings retrofitted as there was no plan to retrofit buildings in 2013/14.

2. No historical data as these are new indicators that the department will be implementing over the MTEF period.

3. The target will be achieved in 2015/16.

## The national development plan

The department will contribute to the priorities of the national development plan through the implementation of initiatives that relate to job creation, the transition to a low cost carbon economy, the development of an inclusive and integrated rural economy, and the fight against corruption.

The national development plan acknowledges that unemployment is likely to remain high in the medium to long term, even in more favourable macroeconomic conditions. Through its coordination of the expanded public works programme, the department aims to create 6 million work opportunities by the end of 2018/19. The department's other job creation programmes include the young professionals programme, the internship programme and learnership programme for graduates from sectors that are relevant to the department's core business, and the resuscitation of regional workshops through the artisan training programme. In line with the national development plan's endorsement of a low cost carbon economy, the department will continue to implement energy and water efficiency programmes, as well as the green buildings framework, over the medium term. These are all linked to government's broader strategies to manage the effects of global warming. To contribute to the development of an inclusive and integrated rural economy as envisaged by the national development plan, the department's rural development programme will continue to focus on the disposal of state owned immovable assets in rural areas for developmental purposes, and facilitate the creation of remote area development precincts.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing and managing the accommodation, housing, land and infrastructure needs of national departments; rehabilitating 34 state owned buildings; and ensuring that at least 100 buildings are made accessible to people with disabilities in each year of the MTEF period.

The focus will also be on leading and improving the coordination of the expanded public works programme to achieve the department's target of creating 3.4 million work opportunities by the end of 2016/17. To achieve the target for work opportunities, Cabinet has approved an additional allocation of R159 million in 2016/17 for the expanded public works programme.

Cabinet approved baseline reductions of R1.3 billion over the MTEF period will be effected in the following areas: R650 million on infrastructure projects in the *Immovable Assets Management* programme, R150 million on non-core goods and services items in all programmes, R26.2 million on compensation of employees, R150 million on transfers to the property management trading entity, and R308.3 million on the expanded public works programme. These reductions are largely a result of continual underspending in the department's capital budget.

Spending on consultants increased between 2010/11 and 2013/14 as the department lacked the technical skills in finance and supply chain management, security, information service, property and project management, and for implementing the turnaround programme. The department has, in the past, received adverse audit reports which identified maladministration and a shortage of technical skills as weaknesses. As a result, over the medium term the department will be implementing the turnaround project, which will source staff with the required skills and technical expertise, and strengthen the skills and experience of existing staff. This is expected to decrease spending on consultants gradually over the medium term, while personnel numbers and the related expenditure on compensation of employees are set to increase. At the end of November 2013, the department had a funded establishment of 6 252, of which 5 560 were filled and 692 were vacant. These vacancies are the result of natural attrition and the length of time it takes to finalise recruitment processes. The department's filled establishment is expected to increase to 6 008 posts in 2016/17 and as a result, spending on compensation of employees is projected to increase by 8.3 per cent over the medium term.

### Infrastructure spending

Spending on infrastructure decreased from R1.3 billion in 2010/11 to R676 million in 2013/14. The decrease was due to the reprioritisation of infrastructure funds to provide funding for the turnaround programme. The department's overall infrastructure budget has been reduced by R220 million in 2014/15, R180 million in 2015/16 and R250 million in 2016/17, mainly to provide for Cabinet approved reductions. Consequently, infrastructure spending is expected to increase slightly to R885 million over the medium term, mostly due to inflation related adjustments to existing infrastructure projects.

#### *Small infrastructure projects*

The department's capital works implementation programme, which is allocated R2.2 billion over the medium term, is organised into six project categories, which are at various stages of completion. The allocations are as follows:

- R448 million for departmental projects, which deal with the construction and major refurbishment of the department's own accommodation
- R306 million for dolomite projects, which deal with the management of risk in dolomitic areas
- R30 million for accessibility projects, which make public buildings more accessible to disabled people
- R795 million for land ports of entry, which provide for the construction, maintenance and upgrading of border control infrastructure projects
- R346 million for prestige management projects, which are for the management of government's prestige portfolio
- R314 million for inner-city regeneration projects, which facilitate inner city regeneration around the Tshwane area in addressing the accommodation needs of national government departments.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on ensuring adequate office accommodation for departmental employees and on maintaining and improving corporate services functions such as legal, financial and supply chain management, as part of the turnaround strategy. Thus, the bulk of the programme's allocation over the medium term goes to the *Office Accommodation and Corporate Services* subprogrammes, in which spending on compensation of employees, operating leases, property payments and specific areas in the turnaround programme, are the largest spending items.

With the turnaround strategy requiring an overhaul of the department's structure, as well as personnel establishment and systems to be in line with the new business model, spending on agency support and outsourced services increased in 2013/14. However, this is expected to decrease over the medium term as the department appoints its own personnel to implement the turnaround project to completion. The increase in 2013/14 provided for the appointment of the core turnaround support team. The turnaround project is allocated R366 million over the medium term to fund the activities of the Special Investigating Unit, a technical support unit, a clean audit project, irregular expenditure management, internal audit support, and the appointment of additional personnel within the finance and supply chain management units. This programme had a funded establishment of 777, of which 578 were filled and 199 posts were vacant at the end of November 2013. These vacancies are the result of natural attrition and the length of time it takes to finalise recruitment processes. The number of filled posts is expected to increase to 772 in 2016/17 and this will lead to increased expenditure on compensation of employees, growing at an average annual rate of 12.8 per cent over the MTEF period.

To give effect to Cabinet approved budget reductions, R128 million over the medium term has been cut from the programme's budget. The reductions are to be implemented mainly in spending on non-core goods and services items such as communication, computer services, agency and support services, stationery, operating leases, property payments, travel and subsistence, and venues and facilities.

## **Programme 2: Immovable Asset Management**

### **Objectives**

- Enhance the value of the state's immovable asset portfolio and improve the condition of state buildings by rehabilitating 34 buildings to ensure that service delivery to client departments is improved, over the medium term.
- Ensure that all state owned buildings are accessible to all people, including people with disabilities, by building basic requirements such as ramps, appropriate parking and ablution facilities, doorways, lifts and signage for 300 buildings over the medium term.
- Ensure complete, accurate and generally recognised accounting practices, compliant with the immovable asset register, through the enhancement of information fields in the asset register database and through desktop and physical verification of 113 742 properties (of which 39 812 are land parcels) by March 2016.

### **Subprogrammes**

- *Infrastructure (Public Works)* is discussed in more detail below.
- *Strategic Asset Investment Analysis* provides for the strategic management of immovable assets owned or used for delivering various government services that are expected to yield functional, economic and social benefits to the state. A key activity is ensuring the efficient and effective management of immovable assets throughout their lifecycle. In 2013/14, 4 buildings were rehabilitated and 28 buildings were refurbished to ensure that they are accessible to people with disabilities. This subprogramme had a staff complement of 218 in 2013/14.
- *Operation Management* funds the human resources and related goods and services required for the acquisition and construction of infrastructure for the department and client departments. A key activity is ensuring that all projects and services, such as municipal services and leasing of properties are implemented to improve service delivery by client departments. This subprogramme had a staff complement of 4 864 in 2013/14.
- *Prestige Management* funds the allocations for activities relating to the residences of parliamentarians, ministers, deputy ministers, the deputy president and the president. A key activity is ensuring that all prestige projects and programmes are completed to the satisfaction of their clients. This subprogramme had a staff complement of 12 in 2013/14.
- *Special Projects* funds the implementation of non-recurring and technical projects in the department. This entails ensuring that the department delivers timeously and efficiently on all planned infrastructure projects. Specific services provided include project management in the design and construction of office accommodation. This subprogramme had a staff complement of 134 in 2013/14.
- *Construction Industry Development Board* transfers funds to the Construction Industry Development Board, which is an entity of the department.
- *Council for the Built Environment* transfers funds to the Council for the Built Environment, which is an entity of the department.
- *Parliamentary Village Management Board* provides for the transportation and related costs of parliamentarians and related officials. The purpose of this subprogramme is to ensure efficient and effective provision of transport to officials residing at the parliamentary village.
- *Augmentation of the Property Management Trading Entity* transfers funds to the Property Management Trading Entity.
- *Independent Development Trust* transfers funds to the Independent Development Trust, an entity of the department established in 1990 as a schedule 2 public entity with a once-off R2 billion government

endowment. However, financial constraints necessitated additional funding of R150 million in 2011/12, R50.8 million in 2012/13, and R150 million in 2013/14 to ensure that it remains a going concern and that it is able to develop a business case that articulates its transformation.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on funding the acquisition and construction of infrastructure for the department, the dolomite and prestige portfolios, and border control operations. This spending is reflected in the *Operation Management and Infrastructure (Public Works)* subprogrammes. The latter subprogramme is discussed in further detail in the section that follows.

The decrease in transfers and subsidies over the medium term is due to the discontinuation of the devolution of the property rates fund grant to provinces as the allocated funding for property rates was phased into the equitable share in 2013/14. Before this arrangement came into effect, spending on transfers and subsidies increased due to additional allocations to fund increased spending on property rates, particularly those paid by provinces. Spending in the *Operation Management* subprogramme over the medium will be mainly on compensation of employees for building and maintaining the capacity required to acquire and build infrastructure for the department and client departments. At the end of November 2013, the programme had a funded establishment of 5 169, of which 4 721 were filled and 448 posts were vacant. These vacancies are the result of natural attrition and the length of time it takes to finalise recruitment processes. The programme's establishment is expected to increase to 4 930 posts in 2016/17, as part of the drive to improve service delivery.

### Subprogramme: Infrastructure (Public Works)

This subprogramme funds the acquisition of infrastructure for the department, the prestige portfolio and the infrastructure component of the mandate of the border control operational coordinating committee. In 2013/14, R476 million was spent on constructing, upgrading and refurbishing residential accommodation.

## Expenditure trends

The spending focus over the medium term is on the acquisition of infrastructure for the department, the prestige portfolio and the infrastructure component of the mandate of the border control operational coordinating committee. Over the medium term, the department will spend R306 million on dolomite projects; R30 million on accessibility projects; R795 million on land ports of entry for border control operational coordinating committee projects; R346 million on prestige management; R448 million on departmental projects and R314 million on projects facilitating inner city regeneration around the Tshwane area, as accommodation needs of national government departments are addressed. Over the medium term, these projects take up all the subprogramme's allocation, which is expected to increase at an average annual rate of 9.4 per cent over the MTEF period to provide for inflation related adjustments and project cost escalations.

The decrease in expenditure between 2011/12 and 2012/13 was due to the non-completion of various projects that were scheduled for completion in those years, due to delays in the appointment of contractors. Cabinet approved reductions are therefore to be effected as a result of the continual underspending and the rescheduling of projects in the past. To give effect to the reductions, the spending in the subprogramme has been reduced by R220 million in 2014/15, R180 million in 2015/16 and R250 million in 2016/17. However, concrete outputs in 2012/13 include the refurbishing of 11 buildings to make them more accessible to disabled people, and the rehabilitation of 6 buildings.

## Programme 3: Expanded Public Works Programme

### Objectives

- Create 1 075 189 work opportunities (434 649 full time equivalents) through the expanded public works programme by upscaling the programme and improving coordination and performance in all 4 participating sectors in 2014/15.
- Ensure that employees from designated groups are participating in the expanded public works programme by confirming that 55 per cent of the participants are women, of which 55 per cent are youth and 2 per cent are people with disabilities, in 2014/15.
- Advance the monitoring of the expanded public works programme in municipalities by increasing the number of public bodies reporting on the implementation of the expanded public works programme from 255 in 2013/14 to 260 in 2014/15.
- Increase participation in the expanded public works programme by ensuring that at least 3 500 youth are involved in the national youth service programme in 2014/15.

### Subprogrammes

- *Expanded Public Works Programme* is discussed in more detail below.
- *Performance Based Incentive Allocations* disburses funds to provinces, municipalities and non-governmental organisations based on set job creation targets to ensure the creation of work opportunities in the infrastructure, environment and culture, social and non-state sectors. Projects include municipal and provincial expanded public works programme projects for collecting refuse, beach cleaning, clearing alien vegetation, pothole or road mending, and painting government buildings. Overall, the expanded public works

programme created 3 054 027 work opportunities in phase 2 between 2009/10 and 2012/13. This is 68 per cent of the 5-year target of 4 500 000 work opportunities. 1 230 000 work opportunities were created in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on creating work opportunities and providing training for unskilled, marginalised and unemployed people in South Africa. This entails improving the coordination and performance of the expanded public works programme, which is discussed in further detail in the section that follows.

The rest of the programme's budget over the seven-year period goes towards the payment of performance based incentives to eligible provinces, municipalities and non-profit organisations, in order to increase job creation efforts in expanded public works programme projects. The increase in spending between 2010/11 and 2013/14 was due to the allocation of additional funding for performance incentives in support of the introduction of phase 2 of the expanded public works programme. Approximately 4.5 million work opportunities were created over this period, in line with the business plan for phase 2 of the programme. Anticipated spending increases in this programme over the MTEF period are due to the provision of funding to the non-state sector as a subsidy for the creation of additional work opportunities. Phase 3 of the programme will continue to see increased spending on transfers and subsidies over the medium term and aims to create 3.4 million work opportunities, which are equal to 1.5 million full time equivalents.

To give effect to Cabinet approved budget reductions, spending on the integrated grants for provinces and municipalities will be reduced as follows: R37.8 million in 2014/15 and R42 million in 2015/16 on the expanded public works programme incentive grant for municipalities; and R22 million in 2014/15 and R25 million in 2015/16 on the expanded public works programme incentive grant for provinces. In 2016/17, expenditure on performance based incentive allocations is expected to increase, due to an additional allocation of R159 million for incentives. Of this, R10 million is for the expanded public works programme integrated grant for municipalities, R10 million for the expanded public works programme integrated grant for provinces, R74 million for the social sector expanded public works programme incentive grant for provinces and R65 million for the non-state sector.

## Subprogramme: Expanded Public Works Programme

This subprogramme finances the national expanded public works programme, which promotes the use of government expenditure to create additional employment opportunities through labour intensive delivery methods and additional employment and skills programmes for the unemployed. Between 2009/10 and 2013/14, the programme aimed to coordinate the creation of 4.5 million work opportunities for unemployed people through labour intensive methods. In 2013/14, 1 230 000 work opportunities were created. Over the medium term, the expanded public works programme projects are expected to create 10 800 work opportunities through the national youth service programme, 900 non-profit organisations are to be contracted to participate, 9 000 beneficiaries will be trained through the National Skills Fund, and 663 000 municipal work opportunities will be created.

## Expenditure trends

The spending focus over the medium term will be on coordinating, monitoring and evaluating the creation of work opportunities and income support through the expanded public works programme. Expenditure will be specifically on administrative costs related to the expanded public works programme, such as compensation of employees and related goods and services, particularly consultants and agency and outsourced services.

The subprogramme has a funded establishment of 282, of which 242 were filled and 40 posts were vacant at the end of November 2013. These vacancies are the result of natural attrition and the length of time it takes to finalise recruitment processes. The programme's establishment is expected to increase to 282 posts in 2016/17 as the department progressively uses more of its own personnel than consultants. Expenditure on compensation of employees is therefore projected to increase by 10.8 per cent over the medium term.

Spending on consultants, agency and outsourced services increased between 2010/11 and 2013/14 due to the appointment of service providers to provide technical support to provinces and municipalities for the design of infrastructure projects and reporting on them. This was done to allow the implementation of the expanded public works programme projects by participating provinces and municipalities. Over the MTEF period, expenditure on consultancy, agency and outsourced services is expected to decrease as capacity is built in provinces and municipalities to enable them to improve on their job creation initiatives.

## Programme 4: Property and Construction Industry Policy Regulations

### Objectives

- Regulate the construction and property industries by developing, reviewing and tabling the Agrément South Africa Bill, amendments to the Built Environment Professions Bill and the draft bill on the future of the Independent Development Trust in Parliament for approval by February 2015.
- Promote uniformity and best practice in construction and immovable asset management in the public sector through the development of policies, legislation and best practice standards, such as the guidelines for immovable asset performance assessments, the guidelines for immovable asset condition assessment guideline for specialised buildings, and the Expropriation Act, by March 2015.

### Subprogrammes

- *Construction Industry Development Programme* creates an enabling environment for transforming the construction and development industry by developing appropriate legislation and implementing monitoring mechanisms for the sector. The subprogramme aims to ensure the transformation and regulation of the construction and property industries to ensure economic growth and development. In 2013/14, the Agrément South Africa Bill was gazetted for public comment. Over the medium term, the Agrément South Africa Bill and amendments to the Built Environment Professions Bill will be tabled in Parliament. This subprogramme had a staff complement of 13 in 2013/14.
- *Property Industry Development Programme* provides leadership and guidance on the transformation of the property industry, and promotes uniformity and best practice on immovable asset management in the public sector through policy development; sets best practice standards for compiling and maintaining immovable asset registers; and administers rights over state and private land through its guidelines. This subprogramme aims to ensure effective and efficient strategic leadership in immovable asset management and in the delivery of infrastructure programmes through the development of guidelines on immovable asset performance assessments and immovable asset condition assessments. This subprogramme had a staff complement of 10 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on tabling the Expropriation Bill, which provides for the expropriation of property for a public purpose or in the public interest, subject to just and equitable compensation; and the Agrément South Africa Bill, which confers the appropriate legal status on Agrément South Africa. The focus will also be on promoting growth and transformation in the construction and property industries through the implementation of the construction and property charters.

Between 2010/11 and 2013/14, additional staff were appointed to oversee the development of lifecycle asset management policies and legal expertise was engaged to assist with the development of the Expropriation Bill and the Agrément South Africa Bill. This explains the significant growth over this period in expenditure on compensation of employees and goods and services, specifically travel and subsistence, agency support and outsourced services, professional services, and advertising. Over the medium term, the department will continue to use the services of consultants, specifically those with legal expertise, to finalise the two bills. This is expected to increase spending on consultants, agency support and outsourced services over the period. Personnel numbers over the medium term are projected to increase from 19 in 2013/14 to 24 in 2016/17 as more staff are employed to oversee these processes.

## Programme 5: Auxiliary and Associated Services

### Subprogrammes

- *Compensation for Losses* provides compensation for losses in the state housing guarantee scheme when public servants fail to fulfil their obligations.
- *Assistance to Organisations for Preservation of National Memorials* provides funding to the Commonwealth War Graves Commission and to the United Nations for maintaining national memorials.

- *State Functions* provides for the acquisition of logistical facilities for state functions, with the aim of ensuring effective and efficient delivery of infrastructure for all state function activities.
- *Sector Education and Training Authority* aims to influence training and skills development throughout the construction industry. In 2013/14, this subprogramme's total budget was transferred to the Construction Education and Training Authority.

## Expenditure trends

The spending focus over the medium term will be on providing assistance to the Commonwealth War Graves Commission and the United Nations for the preservation of national memorials, and on the preparation of facilities for state functions. The bulk of spending in this programme goes towards goods and services for state functions, and transfers and subsidies for the *Assistance to Organisations for Preservation of National Memorials* subprogramme. Between 2010/11 and 2013/14, expenditure on contractors increased significantly due to additional allocations for state functions, including state funerals. In 2014/15, expenditure for state functions is expected to increase by 149.8 per cent, mainly to provide for the presidential inauguration ceremony in 2014. This will also lead to increased spending on contractors, who will be responsible for erecting marquees; organising the stage, podium and seating arrangements; and providing cleaning services. Spending on contractors will thus account for 60.7 per cent of the programme's expenditure over the medium term.

## Public entities and other agencies

### Property management trading entity

#### Mandate and goals

The property management trading entity was established following the decision in 2006 that accommodation related costs be devolved from the Department of Public Works to client departments. The budget devolution was aimed at ensuring the long term sustainability of the department and its immovable assets, and ensuring compliance with the Public Finance Management Act (1999), specifically the requirement that the full cost of a service be reflected on each of the departments' budgets. On a cost recovery basis, the entity finances the purchase, construction, refurbishment and maintenance of nationally owned government properties. The entity also pays for municipal services on behalf of national departments on a commission basis.

The entity's strategic goals over the medium term are to improve internal financial management practices by re-evaluating its current policies and procedures, and to implement an adequate IT system to support operations.

## Expenditure trends

The property management trading entity's revenue is generated mainly from management fees earned through administrative services provided on behalf of client departments. These include the payment of municipal charges on behalf of client departments at a management fee of 5 per cent, and the collection of rental income on both government owned buildings rented to client departments, and privately owned buildings rented on behalf of government departments from private landlords. Between 2010/11 and 2013/14, revenue increased significantly due to increases in accommodation charges and cost escalations from leases. Over the MTEF period, revenue is expected to increase to R14.1 billion in 2016/17 due to annual escalations in lease contracts, which range between 8 per cent and 10 per cent, and an inflationary increase in estimates for day-to-day maintenance. The entity's revenue between 2010/11 and 2013/14 and over the MTEF period grows at a rate higher than that of expenditure, which results in a surplus. The surplus will be used for the acquisition and maintenance of assets.

The spending focus over the medium term will be on the acquisition and maintenance of assets as well as the implementation of an improved invoicing system. This should lead to better revenue collection and therefore more funds being available for the implementation of capital projects. Other projects that are under way to improve revenue collection include a review of the entire lease portfolio and the physical verification of the immovable asset register to support the invoicing system. In support of these imperatives, spending grows by an average annual rate of 9 per cent in the maintenance and repair of buildings programme, mainly on goods and services, which grows by 8.2 per cent over the MTEF period.

As part of its acquisition and maintenance of assets function, the entity has, over the years, financed the refurbishment of the Civitas building, which is currently occupied by the Department of Health; acquired the Salvokop precinct in Tshwane for the construction of a number of buildings to be used as headquarters for a number of departments; and managed the repair and maintenance of infrastructure at various ports of entry across the country. The entity has managed the completion of several repair and renovation projects across the country, including major renovations at the Graaff Reinnet police college. Over the medium term, the entity will upgrade and complete the rehabilitation of the Agrivaal and 38 Church Square buildings in Pretoria. With the improved invoicing system and the upgrades, the accommodation charges on these buildings will generate more revenue for the entity.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more the detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- **The Construction Industry Development Board** provides leadership to stakeholders, stimulates the growth, reform and improvement of the construction sector, and enhances the industry's role in the South African economy. The board's total budget for 2014/15 is R128.5 million.
- **The Council for the Built Environment** oversees and regulates the 6 professional councils responsible for regulating built environment professionals such as architects, engineers, quantity surveyors, landscape architects, property valuers, and project and construction managers. The council's total budget for 2014/15 is R43.2 million.
- **The Independent Development Trust** has evolved from being a grant making organisation to being a responsive development agency with a well established footprint across South Africa. The trust's total budget for 2014/15 is R495.9 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Drive, accelerate and oversee government's equity, equality and empowerment agenda on women, children and people with disabilities, especially in poor and rural communities.*

### Mandate

The mandate of the Department of Women, Children and People with Disabilities is to promote, facilitate, coordinate and monitor the realisation of the rights of women, children and people with disabilities. The mandate is derived from elements of a range of legislation, including but not limited to the Promotion of Equality and Prevention of Unfair Discrimination Act (1996), the Children's Act (2005), and the Commission on Gender Equality Act (1996).

### Strategic goals

The department's strategic goals over the medium term are to:

- contribute to the socioeconomic and political empowerment of women, children and people with disabilities
- improve universal access to development opportunities for women, children and people with disabilities
- promote a society free of violence and abuse against women, children and people with disabilities
- provide effective and efficient good governance for the realisation of the department's mandate.

### Programme purposes

#### Programme 1: Administration

**Purpose:** Provide effective leadership, management and administrative support services to the department.

## Programme 2: Women Empowerment and Gender Equality

**Purpose:** Facilitate the translation of national and international instruments into empowerment and socioeconomic development programmes. Oversee and comprehensively report on the national realisation of women's rights and the progressive realisation of equality.

## Programme 3: Children's Rights and Responsibilities

**Purpose:** Ensure the alignment of the conceptual frameworks and strategies across the three spheres of government to advance delivery in line with constitutional and international instruments.

## Programme 4: Rights of People with Disabilities

**Purpose:** Facilitate the translation of national and international instruments into empowerment and socioeconomic development programmes. Oversee and comprehensively report on the national realisation of the rights of people with disabilities and the progressive realisation of equality.

## Selected performance indicators

**Table 8.1 Women, Children and People with Disabilities**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of reports submitted to Cabinet on mainstreaming, advocacy and monitoring of rights of women, children and people with disabilities per year	Women Empowerment and Gender Equality, Children's Rights and Responsibilities, and Rights of People with Disabilities		-1	3	7	4	5	6	6
Number of advocacy and mainstreaming programmes on the realisation of the rights of women, children and people with disabilities per year	Women Empowerment and Gender Equality, Children's Rights and Responsibilities, and Rights of People with Disabilities		-1	5	17	6	7	8	8
Number of awareness campaigns promoting the realisation and protection of the rights of women, children and people with disabilities per year	Women Empowerment and Gender Equality, Children's Rights and Responsibilities, and Rights of People with Disabilities	Outcome 2: A long and healthy life for all South Africans	-1	16	28	10	11	12	12
Number of programmes on access to development opportunities for vulnerable groups per year	Women Empowerment and Gender Equality, Children's Rights and Responsibilities, and Rights of People with Disabilities	Outcome 5: A skilled and capable workforce to support an inclusive growth path	-1	3	3	3	4	5	5
Number of reports submitted to international and regional bodies (i.e. United Nations, African Union and Southern African Development Community) per year	Women Empowerment and Gender Equality, Children's Rights and Responsibilities, and Rights of People with Disabilities	Outcome 12: An efficient, effective and development orientated public service and an empowered, fair and inclusive citizenship	-1	6	8	4	4	4	4
Number of programmes on institutional support and capacity <sup>3</sup> building provided to government institutions per year	Women Empowerment and Gender Equality, Children's Rights and Responsibilities, and Rights of People with Disabilities		-2	-2	-2	-2	6	6	6

1. The department started measuring these indicators in 2011/12.

2. The department will start measuring this indicator in 2014/15.

3. The department supports and provides capacity building programmes such as training, workshops, and campaigns. It also develops frameworks and policies for institutions to understand their role in gender mainstreaming to ensure transformation towards full realisation of equality, particularly in the workplace, as well as the promotion and the realisation of the rights of children and people with disabilities.

## The national development plan

The national development plan proposes a range of measures to advance women's equality in employment, transformation of the economy, and in leadership in all sectors. The plan also considers the integration of disability into all facets of planning and for people with disability to have access to opportunities including employment and social amenities. Regarding children, the plan emphasises access to education, healthcare, and social protection.

In contributing to the plan over the medium term, the department aims to monitor, evaluate and report on progress regarding women's empowerment and gender equality, equal opportunities, children's rights and the rights of people with disabilities; and provide institutional support and capacity building on women's empowerment, gender equality and the rights of people with disabilities. The department will embark on key projects, such as the advocacy programme for the implementation of the 50/50 policy in key sectors. The policy requires that women are represented by at least 50 per cent of the total in leadership and decision-making structures. Other projects include the economic empowerment programme for women's access to financing for entrepreneurship, the mainstreaming of gender sensitivity, and the integration of women (including young women, disabled women and women in rural areas) in the socioeconomic development agenda of different sector policies such as mining, energy, infrastructure and trade.

Furthermore, the department will continue with and advance the implementation of the 365 Days national plan of action to fight gender based violence through an advocacy project that focuses on the prevention of gender based violence in its three tiers of focus (women, children and people with disabilities). In addition, throughout the year the department will continue with promoting Orange Day (part of the United Nations UNiTE campaign) and 16 Days of Activism for No Violence Against Women and Children campaigns to contribute to outcome 3 (all people in South Africa are and feel safe).

## Expenditure trends

The department has two major spending priorities over the medium term: developing key sectoral policies on women's empowerment and gender equality; and improving and maintaining the department's administrative capacity.

In relation to gender equality in key sectors, the department submitted the Women Empowerment and Gender Equality Bill to Parliament in November 2013 and anticipates this to be passed and implemented over the medium term. The department allocates 42.1 per cent of its total budget over the medium term to the *Women Empowerment and Gender Equality* programme, which performs the functions related to women's empowerment and gender equality.

In relation to enhancing overall administrative capacity following instances of overspending in 2010/11 and 2011/12, the department resolved to develop its financial management capacity. This was also a significant component of the turnaround strategy, which the department has been implementing since 2012/13. The increase in spending on compensation of employees from 2012/13 onwards is primarily to provide for and maintain the additional financial management capacity, which explains the increase in spending in the *Administration* programme over the medium term, as well as the number of filled posts increasing to 159 over the period.

## Departmental receipts

### Expenditure trends

The spending focus over the medium term will be on maintaining and improving the department's administrative capacity, particularly the financial and supply chain management capacity. In response to the department's financial mismanagement and reported overspending in 2010/11 and 2011/12, this capacity building initiative became necessary as a part of the turnaround project requested by Parliament.

The efforts to strengthen the department's administrative capacity resulted in an increase in the number of filled posts from 27 in 2010/11 to 117 in 2013/14. This is particularly evident in the *Corporate Services*, *Ministry* and *Management* subprogrammes, which spend most of their budgets on compensation of employees.

The unqualified audit finding in 2012/13 reflects the success of the capacity building initiative, and the department has been able to keep its spending within its allocated budget since 2011/12. With these

improvements in place, the department expects that the increases in expenditure over the medium term will mostly provide for inflationary adjustments.

## **Programme 2: Women Empowerment and Gender Equality**

### **Objectives**

- Promote gender equality and the empowerment of women by:
  - facilitating empowerment in economic and political spheres, advocating the elimination of gender based violence and advancing the representation and meaningful participation of women in government programmes, on an ongoing basis
  - providing government institutions and the private sector with integrated training programmes, which support gender mainstreaming and transformation, on an ongoing basis.
- Monitor, evaluate and report on progress in women's empowerment and rights, and gender equality by conducting impact assessments quarterly.

### **Subprogrammes**

- *Advocacy and Mainstreaming for Gender Equality* promotes the mainstreaming of women's empowerment and gender equality considerations into government policies and processes of governance. In 2013/14, advocacy programmes were conducted to accelerate socioeconomic development for women; the Women Empowerment and Gender Equality Bill was finalised; and commemorations were convened for International Day of Rural Women, Women's Month, International Widows' Day and International Women's Day. In addition, the Orange Day and 16 Days of Activism for Non-Violence Against Women and Children campaigns were promoted to fight gender-based violence. This subprogramme had a staff complement of 5 in 2013/14.
- *Institutional Support and Capacity Building for Gender Equality* coordinates institutional support and capacity development by integrating activities and synergy among government departments, civil society and the private sector. In 2013/14, consultations on national gender machinery were hosted at national, provincial and local government levels and capacity development sessions on gender mainstreaming and the gender scorecard were provided to all spheres of government. In addition, the analysis of and consultation on the report on gender responsive budgeting of government departments was coordinated. This subprogramme had a staff complement of 4 in 2013/14.
- *Monitoring and Evaluation for Gender Equality* monitors, evaluates and reports on the promotion and realisation of the rights and empowerment of women and gender equality, to ensure compliance and conduct impact assessments. A monitoring and evaluation strategy with gender responsive indicators and monitoring tools was developed and piloted in the economic cluster departments in 2013/14. In the same year, national reports on the representation of women in political and decision-making structures and a 50 per cent parity programme in the public sector were compiled. The department also participated in a number of regional, continental and international processes on the Women Empowerment and Gender Equality Bill, including the United Nations Commission on Status of Women, African Union (AU) and Southern African Development Community (SADC) meetings. This subprogramme had a staff complement of 8 in 2013/14.
- *Commission for Gender Equality* makes the transfer to the Commission for Gender Equality, which promotes gender equality and respect for women's rights. The commission engages in advocacy and education initiatives to raise awareness and challenge patriarchal stereotypes. It seeks to protect and enforce gender rights by investigating complaints by members of the public and by sanctioning appropriate remedies in line with legislation. The total budget for the subprogramme is transferred in full to the commission on a monthly basis.

## Expenditure trends

Over the medium term, the programme will focus on advocating and mainstreaming women's empowerment and gender equality by continuing to participate in awareness campaigns and holding consultative meetings to engage government, business and other stakeholders on issues affecting women's empowerment and gender equality. The campaigns and meetings will focus specifically on issues such as economic empowerment, gender based violence, and the representation and the meaningful participation of women in key sectoral areas. For this

reason, the bulk of the programme's allocation over the medium term goes towards the *Advocacy and Mainstreaming for Gender Equality* subprogramme and the transfer to the Commission for Gender Equality.

The department plans to increase the number of advocacy programmes on women's empowerment, which will enhance women's participation in decision-making in key sectors, such as the political arena and economic sectors, over the medium term. The department submitted the Women Empowerment and Gender Equality Bill to Parliament and anticipates that the bill will be passed and implemented over the medium term. As a result of these activities, the budget allocation in the *Advocacy and Mainstreaming for Gender Equality* subprogramme is expected to increase significantly over the medium term, mainly on goods and services.

Between 2010/11 and 2013/14, the department provided institutional and capacity building support to institutions regarding gender mainstreaming measures, such as crafting gender considerate strategic plans and gender responsive budgets, and acts as a convenor of state and civil society institutions that are working towards gender equality. These activities resulted in the appointment of more personnel and thus increased spending on compensation of employees in the *Institutional Support and Capacity Building for Gender Equality* subprogramme between 2010/11 and 2013/14. This trend is expected to continue over the medium term.

## **Programme 3: Children's Rights and Responsibilities**

### **Objectives**

- Promote children's rights and responsibilities by:
  - contributing to coordinated campaigns with specific focus on promoting quality basic education, safety and protection, standard of living and early childhood development, on an ongoing basis
  - providing institutional support and coordinating capacity development in children's rights and responsibilities through integrated programmes across government, on an ongoing basis.
- Monitor, evaluate and report on the realisation of children's rights and responsibilities by conducting impact assessments of national and international policies affecting children, measuring progress made in complying with these policies, and determining policy and other interventions where necessary, on an ongoing basis.

### **Subprogrammes**

- *Advocacy and Mainstreaming for the Promotion and Protection of Children's Rights* advocates for the realisation of children's rights and responsibilities across the three spheres of government. A child protection campaign was conducted successfully and a child friendly community model was developed in consultation with stakeholders in 2013/14. In addition, the mainstreaming strategy was workshopped across national, provincial and local government levels, the Nelson Mandela Children's Parliament was hosted and meetings on children's rights machinery were convened. This subprogramme had a staff complement of 3 in 2013/14.
- *Institutional Support and Capacity Building for the Promotion and Protection of Children's Rights* provides government and private institutions with support and coordinates capacity development for the realisation of children's rights and responsibilities through integrated programmes across government. Capacity development sessions focusing on the national plan of action and the monitoring and evaluation strategy for children were undertaken in 5 provinces and several municipalities in 2012/13. The Children's Rights and Responsibilities programme is implementing the child friendly communities initiative with municipalities, the Department of Cooperative Governance and Traditional Affairs and the South African Local Government Association. This subprogramme had a staff complement of 1 in 2013/14.
- *Monitoring and Evaluation for the Promotion and Protection of Children's Rights* monitors, evaluates and reports on the realisation of children's rights and responsibilities to ensure compliance with relevant legislations and policies, and monitors the progress made in meeting national, continental and international commitments on children's rights and responsibilities. A monitoring and evaluation strategy with child friendly indicators has been developed and stakeholders were consulted in 2013/14. This subprogramme had a staff complement of 3 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on fulfilling the department's objective of ensuring the realisation of children's rights through the development and implementation of a plan of action for children's rights. In fulfilling this objective, the department expects to take part in engagements organised by international and regional bodies, such as the United Nations (UN), African Union (AU) and the SADC. These activities are supported by the budget allocations to the *Advocacy and Mainstreaming for the Promotion and Protection of Children's Rights* and *Monitoring and Evaluation for the Promotion and Protection of Children's Rights* subprogrammes over the medium term. These activities are expected to increase expenditure on goods and services items such as travel and subsistence, catering, and venues and facilities over the same period.

## Programme 4: Rights of People with Disabilities

### Objectives

- Advocate for the rights of people with disabilities including their empowerment and access to equal opportunities by:
  - contributing to and promoting self-representation in key sectors such as the political and economic sectors and self-reliance by raising awareness campaigns such as National Disability Month and the International Day of Persons with Disabilities, annually
  - providing institutional support and coordinating capacity development programmes for the rights of people with disabilities across government on an ongoing basis.
- Monitor, evaluate and report on the realisation of the rights and empowerment of people with disabilities by conducting impact assessments of national and adopted international policies on the rights of people with disabilities, by measuring progress made in complying with these policies and determining policy and other interventions where necessary, on an ongoing basis.

### Subprogrammes

- *Advocacy and Mainstreaming for the Equalisation of Opportunities for Persons with Disabilities* advocates for the empowerment, equalisation of opportunities and rights of people with disabilities through facilitating and coordinating campaigns and mainstreaming these into government's policies, programmes and governance processes. In 2012/13, a branded national integrated disability information and awareness campaign was coordinated; the National Disability Summit was hosted, the National Disability Rights Awareness Month, including the International Day of Persons with Disabilities, was celebrated; the national disability rights advocacy strategy was drafted; and the national universal access and design campaign was conceptualised. In 2013/14, electronic and print media interviews for disability campaigns were conducted, disability rights organisations' conferences were supported, and disability considerations were mainstreamed into national day celebrations, including the 16 Days of Activism for Non-Violence Against Women and Children. In September 2013, a discussion document developing a national policy to uphold the rights of persons with disabilities was released. This subprogramme had a staff complement of 2 in 2013/14.
- *Institutional Support and Capacity Building for the Equalisation of Opportunities for Persons with Disabilities* provides institutional support and coordinates capacity development for the rights of people with disabilities through integrated programmes across government. A draft institutional support and capacity development strategy for the mainstreaming of disability considerations was developed, following an extensive consultative process with the national disability rights machinery in 2012/13. In addition, good practices were documented and shared in the areas of access to justice for children, adults with intellectual disabilities, inclusive skills development for young persons with disabilities and community based disability centres as empowerment vehicles for children with disabilities. By September 2013, the national higher education and training road show campaign had been concluded, and the provincial executive disability rights road show had been convened to accelerate the implementation of the national disability rights agenda. This subprogramme had a staff complement of 4 in 2013/14.
- *Monitoring and Evaluation for the Equalisation of Opportunities for Persons with Disabilities* monitors, evaluates and reports on the realisation of the rights and empowerment of people with disabilities to ensure compliance and conduct impact assessments. In 2012/13, the department participated in regional, continental and international processes on disability, including UN and AU obligations. The United Nations Convention on the Rights of Persons with Disabilities report was finalised and approved by Cabinet. The convention's baseline country report was also finalised after an extensive public participation process and the disability rights monitoring and evaluation strategy framework was drafted. The development of disaggregated disability rights indicators, which was initiated in 2012/13, continued in the first half of 2013/14. This subprogramme had a staff complement of 5 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on ensuring the progressive realisation of rights for people with disabilities. To achieve this objective, this programme will finalise the cross-cutting disability rights policy and legislation, and strengthen the national disability services information portal. The programme will also strengthen evidence based reporting by implementing the three pillars of the monitoring and evaluation strategy: tracking statistical trends via the Ulwazi disability rights development information database, which will be housed in Statistics South Africa; monitoring government performance through the analysis of outcome performance reports and quarterly reports to Parliament; and providing rights holders with platforms to participate in monitoring processes by, for example, commissioning participatory qualitative research.

These activities are supported by the budget allocated to the *Advocacy and Mainstreaming for the Equalisation of Opportunities for Persons with Disabilities* and the *Monitoring and Evaluation for the Equalisation of Opportunities for Persons with Disabilities* subprogrammes.

The significant increases in expenditure on goods and services, particularly on travel and subsistence, is due to the funding provided for programmes related to advocacy and the mainstreaming of the rights of people with disabilities through consultative and focal point meetings across the provinces and internationally. Four reports on issues relating to the mainstreaming, advocating and monitoring of the rights of people with disabilities will be produced annually. The African disability protocol will also be finalised.

## **Public entities and other agencies**

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Commission for Gender Equality** promotes respect for gender equality. The commission engages in advocacy and education initiatives to raise awareness and challenge patriarchal stereotypes. It seeks to protect and enforce gender rights by investigating complaints by members of the public and by sanctioning appropriate remedies in line with legislation. The commission's total budget for 2014/15 is R67.2 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Provide a comprehensive communication service on behalf of government to facilitate the involvement of the majority of South Africans in governance, reconstruction and development, nation building, and reconciliation.*

### Mandate

The Government Communication and Information System's mandate is derived from section 195 (g) of the Constitution of South Africa (1996), which stipulates that the public should be provided with information that is timely, accurate and accessible, in support of the constitutional principles of freedom of expression and transparency and openness of government. The Government Communication and Information System was established in terms of section 7 of the Public Service Act (1994) as a strategic unit located in the Presidency to meet the demands of the broader democratic human rights environment, and to find ways of alleviating the isolation of citizens who, through apartheid, poverty and current circumstance are being deprived of the information that can help them take control of their lives and engage in dialogue with government.

Government's mandate requires that its communication be expanded to: enhance access to information that enables the public to participate in the country's transformation and in bettering their own lives; bring the realities of an emergent and thriving democracy to the attention of the international community; and promote the African Renaissance, including regional integration and the implementation of people centred development programmes. Functioning as a separate department, the mandate of the Government Communication and Information System is to coordinate, guide and advise on government communication, including media liaison, development communication, and marketing. Its core vision is to achieve integrated, coordinated and clear communication between government and South African citizens to enable them to be involved, in line with the departmental aim, in the country's transformation.

### Strategic goals

The Government Communication and Information System's strategic goals over the medium term are to:

- ensure coherent, responsive and cost effective communication services for all government programmes
- ensure that it is a responsive, cost effective, compliant and business focused organisation
- professionalise the government communication system, build a reliable knowledge base and enhance related

- communication products
- maintain and strengthen a well functioning communication system that proactively informs and engages the public
- provide efficient and effective communication services for government
- enhance the image of government and that of the state.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide overall support services to the department.

### Programme 2: Content Processing and Dissemination

**Purpose:** Provide strategic leadership in government communication to ensure coherence, coordination, consistency, quality, impact and responsiveness of government communication.

### Programme 3: Intergovernmental Coordination and Stakeholder Management

**Purpose:** Implement development communication through mediated and unmediated communication channels, and sound stakeholder relations and partnerships. Transfer funds to the Media Development and Diversity Agency.

### Programme 4: Communication Service Agency

**Purpose:** Provide media bulk buying services and media production services to national government.

1. Indicators with limited or no historical information were introduced in 2011/12 and 2012/13.

## The national development plan

The national development plan highlights the need to unite South Africans around a common programme, have citizens be active in their own development, and build a capable and developmental state. In ensuring effective government communication and facilitating the involvement of citizens in governance, reconstruction and development, nation building and reconciliation, the Government Communication and Information System contributes to the fulfilment of an efficient, effective and development oriented public service and empowered, fair, and inclusive citizenship (outcome 12).

The more citizens are informed about government programmes, plans and activities, the more they are empowered to hold government accountable to improve on service delivery. The department therefore contributes to citizen participation by facilitating two-way interaction between government and the public by organising imbizo public engagement programmes and publicising government's development-related initiatives through the media. The department will continue to use community and stakeholder liaison visits for the effective communication of Cabinet decisions.

The department has, over the past five years, working with other government departments, continued to communicate and facilitate communication campaigns informed by the following priorities: job creation, education, health, rural development, and the fight against crime and corruption. Through coordinating the activities of the social cluster, the department will assist with the strategic communication related to the popularisation of the Department of Basic Education's Bill of Responsibilities, which the plan identifies as an action towards nation building and social cohesion. The department will also continue to provide strategic communication support to government departments through transversal communication campaigns that place special emphasis on national priorities.

The department will further support government in building a capable state by maintaining good relations at provincial and local government levels, and establishing and strengthening provincial and district communication forums. The department also aims to professionalise the government communication and information system through the development of training course content and identifying, coordinating and implementing effective training programmes for government communicators. This will ensure more coordinated efforts in communicating government plans, programmes and achievements.

In addition, the department aims to take a direct role in communicating the national development plan by conducting research to measure the willingness and participation of citizens in their own development.

## Expenditure trends

The spending focus over the medium term will be on implementing the national communication strategy, which was approved by Cabinet in June 2011. The strategy tasks the department with working with other departments to align their communication campaigns and programmes with the strategic priorities of government. The department is also responsible for taking the lead in communication projects and programmes of strategic significance to government, which include providing advertising and media buying expertise to other government departments over the medium term. The department will continue to conduct information campaigns, such as the state of the nation address; develop communication activations aligned with the government communication programme; coordinate the imbizo government programmes; and produce

government publications, such as the South Africa Yearbook, over this period.

Almost 63.7 per cent of the department's allocation over the medium term is spent in the *Administration and Intergovernmental Coordination and Stakeholder Management programmes*, most of which is on compensation of employees and goods and services. The anticipated increase in spending on compensation of employees over the medium term is to provide for annual salary adjustments as the department's funded establishment is expected to remain at 514 posts, including 24 contract workers. Over the same period, expenditure in the *Administration programme* is expected to decrease due to the completion of the new head office building, for which funds were provided between 2010/11 and 2013/14.

The department had 30 vacant posts at the end of November 2013, mainly as a result of retirements, resignations and transfers to other government departments. There are plans to employ 25 interns in each year over the medium term to support skills development. 23 interns participated in the internship programme in 2013/14.

Spending on goods and services over the medium term is expected to be primarily on operating leases, travel and subsistence and operating expenses related to the publication of the monthly Vuk'uzenzele newspaper and the South Africa Yearbook. 20.4 million Vuk'uzenzele copies are set to be produced in 11 official languages and distributed monthly over the MTEF period. In addition, the department plans to issue 42 cluster reports on perceptions of government delivery and performance, conduct 8 250 community and stakeholder liaison visits and align 6 552 development communication projects with the government communication programme over the medium term. It is also projected that 3 846 media, photographic, video and graphic design products will be produced over this period.

The transfer to the Media Development and Diversity Agency accounts for 5.1 per cent of the department's total expenditure over the medium term. R68.2 million is allocated to the agency over this period to enable historically disadvantaged communities and individuals to gain access to the media.

### Infrastructure spending

The department contracted a landlord and a developer to assist in designing and building the department's new head office in 2011/12. The construction process was completed at the end of November 2013, instead of the end of July 2013, as was anticipated. The delays were mainly caused by the need to install additional ICT infrastructure, such as cabling for voice over internet protocol and fire suppression devices.

Although the building project began in 2011/12, legal and logistical delays resulted in funds of R20 million being rolled over to 2012/13. Additional allocations of R50 million towards the project were made in 2012/13, with R18.3 million being shifted in 2012/13 from the Office Accommodation subprogramme in the Administration programme to the project to fund the purchase of additional ICT infrastructure. Total project expenditure at the end of November 2013 was approximately R101 million, used mainly for ICT. Project shortfalls were funded through the reprioritisation of funds across the four departmental programmes.

### Expenditure trends

The spending focus over the medium term will be on providing IT infrastructure and systems in the new head office, and addressing the office accommodation and corporate service needs of the department. The *Corporate Services*, *Financial Administration* and *Office Accommodation* subprogrammes therefore constitute the bulk of this programme's allocation over the medium term. These funds are mainly allocated towards compensation of employees, operating leases and computer services.

Programme expenditure increased between 2010/11 and 2013/14, mainly due to a once-off allocation of R50 million in 2012/13, rollover funds of R20 million from 2011/12 to 2012/13 and R39.8 million between 2012/13 and 2013/14 in respect of the new head office. This resulted in a significant increase in spending on

buildings and other infrastructure, which comprised of building, ICT and data line costs; as well as increased spending on assets valued at less than the capitalisation threshold for the purchase of office furniture. With the new head office now complete, it is projected that programme expenditure will decrease at an average annual rate of 5 per cent over the medium term. The increase in expenditure on operating leases over the same period is due to the increased lease cost of the new building.

The reprioritisation of funds augmented this programme's budget by R5.5 million over the medium term, mainly for social contributions in compensation of employees, and the installation of ICT infrastructure to enable the department to function efficiently in view of the significant increase in the supply chain management component of the *Financial Administration* subprogramme. This reprioritisation was mainly funded from the Content Processing and Dissemination programme.

The other significant increase of R5.5 million in medium term spending is on compensation of employees, mainly for annual salary adjustments in the *Corporate Services* and the *Financial Administration* subprogrammes. The number of personnel in this programme is expected to increase from 156 in 2012/13 to 183 by 2016/17, due in large part to the filling of intern positions and the recruitment of supply chain management clerks and support staff in critical areas. The personnel in this programme are mainly remunerated for financial management, human resource and administrative support skills. There were 12 vacant posts at the end of November 2013 as a result of retirements, resignations or transfers to other government departments. The recruitment process to fill these posts has begun. Consultants in this programme are mainly used for legal advice relating to labour relations, translations and transcriptions of programme products, qualification verifications and audit committees.

## **Programme 2: Content Processing and Dissemination**

### **Objectives**

- Inform government's communication strategy and decisions by:
  - analysing the communication environment on a weekly, monthly and quarterly basis, and conducting communication research on an ongoing basis
  - providing strategic leadership and support in government communication through national and international media monitoring and impact assessments conducted on an ongoing basis.
- Intensify the provision of communication of government information to the general public, specifically through promoting greater application of public socioeconomic programmes by:
  - increasing the annual production and distribution of the Vuk'uzenzele newspaper from 10 million copies in 2009/10 to 20.4 million copies over the MTEF period
  - increasing the annual production of the South Africa Yearbook from 40 000 copies in 2009/10 to 45 000 copies over the MTEF period
  - updating the electronic version of Vuk'uzenzele newspaper every second month
  - disseminating the Braille version of Vuk'uzenzele newspaper to visually impaired individuals and organisations every second month.
- Provide professional language services to departments in support of government's efforts to communicate in all South African languages by increasing the number of language services requests handled from 1 226 in 2013/14 to 1 500 in 2016/17.
- Expand the knowledge base of Cabinet ministers by producing analytical reports that highlight issues and trends in national and international media on a fortnightly basis.
- Facilitate knowledge sharing on public sector management innovations and communication best practices for government communicators and public sector managers by producing the quarterly GovComms newsletter and the bimonthly Public Sector Manager magazine.

## Subprogrammes

- *Programme Management for Content Processing and Dissemination* coordinates communication strategic planning in the department and other government departments, and ensures adherence to government communication standards. This subprogramme had a staff complement of 3 at the end of November 2013.
- *Policy and Research* conducts research to assess how government should better address the public's communication needs and monitors national and international media coverage relating to government programmes and campaigns. Outputs in 2013/14 included the annual Insight newsletter for internal staff members and government communicators, 2 annual cluster reports on perceptions of government priorities for political principals, an annual assessment of the media landscape for journalists and government communicators, 5 Pulse of the Nation reports, and weekly opinion pieces on communication and media issues. This subprogramme had a staff complement of 51 with 3 vacancies at the end of November 2013.
- *Products and Platforms* develops information products and communication platforms that enable government to communicate directly to citizens and public servants. In 2012/13, this subprogramme produced 45 000 copies of the South Africa Yearbook, 20 000 copies of the annual Pocket Guide to South Africa, 20.4 million issues of the monthly Vuk'uzenzele government newspaper, 170 091 copies of the Public Sector Manager magazine, 60 000 copies of the GovComms newsletter and 6 monthly Government Dialogue electronic newsletters. Funds for this subprogramme are also used for translation, editing and proofreading services. This subprogramme had a staff complement of 47 with 4 vacancies at the end of November 2013.
- *2010 Government Communication Project Management* produced marketing and communication material for the 2010 FIFA World Cup project. The activities of this subprogramme were concluded in 2010/11 after the successful hosting of the World Cup.

## Expenditure trends

The spending focus over the medium term will be on providing strategic leadership and support in government communication through media monitoring, research, surveys and analysis in order to better understand the communication environment. These activities will be conducted in the *Policy and Research* subprogramme, while the *Products and Platforms* subprogramme will be responsible for enhancing government communication products to strengthen the voice of government.

Expenditure decreased between 2010/11 and 2013/14, mainly due to the completion of activities and projects related to the 2010 FIFA World Cup in 2010/11, which accounts for the discontinuation of the allocations to the *2010 Government Communication Project Management* subprogramme in 2011/12.

The decrease in expenditure in the *Products and Platforms* subprogramme from 2010/11 to 2011/12 was mainly in operating payments of goods and services due to the shifting of distribution costs of the Vuk'uzenzele newspaper to the Communication Service Agency programme. Another contributing factor was the decrease in spending in electronic information resources between 2011/12 and 2012/13, due to the shifting of IT related functions, such as webserver administration of department-managed websites, to the *Corporate Services* subprogramme in the *Administration* programme.

The main achievements for this programme between 2010/11 and 2013/14 included the production of media content and the provision of support for the 2010 FIFA World Cup event, reports on government delivery and performance and media coverage, and reviews of the assessment of the media landscape reports.

The bimonthly Vuk'uzenzele magazine was also converted to a monthly newspaper, which resulted in efficiency gains on operating payments for the printing and distribution costs. These savings allowed the department to publish the Vuk'uzenzele newspaper more regularly. The Vuk'uzenzele newspaper comprises 54 per cent of the average annual expenditure of the *Products and Platforms* subprogramme.

Expenditure in the *Policy and Research* subprogramme over the medium term is set to increase in line with projected inflation escalation. This subprogramme provides government communication support through media monitoring, research, surveys and analysis. The main cost drivers of these activities are agency and outsourced services and operating payments.

The number of personnel in this programme is expected to increase from 93 in 2012/13 to 101 by 2016/17 mainly due to the timeous filling of vacant posts, as per departmental policy. The projected growth in expenditure on compensation of employees over the same period will be driven largely by improvements in conditions of service. There were 7 vacant posts at the end of November 2013 as a result of resignations and transfers to other government departments. Consultants in this programme are mainly used for translating the Vuk'uzenzele newspaper into the 11 official languages and Braille, and assisting in the production of the South African Yearbook and other departmental publications and media products. Spending on consultants is expected to increase over the medium term to provide additional capacity for translation services.

The department reprioritised funds of R5.6 million over the medium term, mainly from expenditure on compensation of employees in the *Policy and Research* and *Products and Platforms* subprogrammes, to the Administration programme. Efficiency measures that will be implemented to ensure minimal negative impact on service delivery include limiting hotel accommodation, air travel and car-hire expenses and using the head office instead of private venues for meetings.

## **Programme 3: Intergovernmental Coordination and Stakeholder Management**

### **Objectives**

- Implement a proactive media engagement system by building, maintaining and improving relations with the media and driving the communication agenda of government in the communication of policies, programmes, plans, as well as achievements and challenges, on an ongoing basis.
- Maintain and strengthen a well functioning communication system that proactively informs and engages the public by:
  - aligning messages across the three spheres of government to ensure coherence through the coordination of national, provincial and district communication forums as and when required
  - undertaking community and stakeholder liaison visits on an ongoing basis and developing communication campaigns as and when required
  - improving interdepartmental coordination and planning across the three spheres of government to ensure coherence through the coordination of national, provincial and district communication forums as and when required
  - coordinating a proactive imbizo public participation programme of political principals, including the president and deputy president, throughout the year and during imbizo focus weeks.
- Ensure the centrality of government's voice in the media by driving and participating in a daily rapid response system that analyses and recommends proactive and reactive communication on issues in the national and international environment.
- Provide communication support in the parliamentary precinct by distributing parliamentary questions and programmes, and providing support for media briefings weekly.
- Address the communication and information needs of communities through monthly community and stakeholder liaison visits, information sessions and communication interventions.
- Improve access to government services and information by implementing marketing and promotion drives of the Thusong service centre programme at the local government level on an ongoing basis.

### **Subprogrammes**

- *Programme Management for Intergovernmental Coordination and Stakeholder Management* ensures a well functioning communication system that proactively informs and engages the public. This entails managing and overseeing roles regarding the implementation of development communication by building sound stakeholder relations and partnerships, and ensuring that the public is informed about government policies and programmes. Key outputs in 2012/13 and 2013/14 included communication campaigns and programmes, community and stakeholder liaison visits and the provision of leadership in key cluster programmes. This subprogramme had a staff complement of 3 at the end of November 2013.
- *Provincial and Local Liaison* ensures that the national communication strategy is presented to all provinces and aligned with provincial and local communication strategies. Key functions include the cascading of the national communication strategic framework down to provincial and local stakeholders and partners, and implementing development communication campaigns and programmes aligned with the government communication programme. In the first half of 2013/14, 209 communication system forums were supported; 81 communicators and local government principals were trained in communication skills, and 10 local municipalities were supported in developing communication strategies. At the end of November 2013, there were 178 Thusong service centres in operation. Over the medium term, communication on how these centres can meet the public's information needs will be intensified. This subprogramme had a staff complement of

135 with 1 vacancy at the end of November 2013.

- *Media Engagement* promotes and facilitates effective communication between government and the media. This includes the strategic influencing of the media agenda through a robust, proactive and efficient rapid response system to ensure that government messages are communicated to the public. The subprogramme leads and drives the communication of government's programme of action and policies by building, maintaining and strengthening relations with the media. Key outputs and activities include cluster media briefings; coordinating government engagement with the South African National Editors' Forum, the Foreign Correspondents' Association and the Press Gallery Association; and managing the communication implications arising from parliamentary questions. By the end of November 2013, 526 media engagements had been facilitated and 228 rapid response reports had been produced. This subprogramme had a staff complement of 22 with 2 vacancies at the end of November 2013.
- *Media Development and Diversity Agency* funds the Media Development and Diversity Agency in the form of a transfer payment to enable the entity to fulfil its purpose of promoting local media development and diversity.
- *Cluster Supervision (Human Development, Social Protection and Governance and Administration)* provides strategic cluster communication advice and support to national departments and leadership on key cluster communication issues and campaigns, coordinates Cabinet cluster communications and the development of the government communications programme, and develops communication strategies and key messages for the campaigns of the human development, social protection, and governance and administration clusters. This subprogramme had a staff complement of 8 with 2 vacancies at the end of November 2013.
- *Cluster Supervision (Economic and Infrastructure, Justice and International)* provides strategic communication advice to the economic and infrastructure, justice and international clusters; supports national departments and provides leadership on key cluster communication issues and campaigns; coordinates Cabinet cluster communications; and develops communication strategies and key messages for the campaigns of the clusters. This subprogramme had a staff complement of 7 with 1 vacancy at the end of November 2013.
- In 2012/13, both *Cluster Supervision* subprogrammes presented, within their respective clusters, the national communication strategy to 14 departments and all heads of government communications; attended 113 communication meetings across the country; and assisted 28 public entities in implementing strategic principles. Over the medium term, the internal communication plan in departments in these clusters will be reviewed and the functioning of the internal communicators forum will be reported on. Communication strategies aligned with the government communication strategy and the government communicators programme will also be developed and 4 high level strategic meetings will be convened.

**Expenditure trends**

The spending focus over the medium term will be on ensuring that provincial and local government departments and entities are aligned with the government communication strategy in order to maintain and strengthen a well-functioning communication system that proactively informs and engages the public. This is primarily the task of the *Provincial and Local Liaison* subprogramme, which uses 60 per cent of the programme's allocation over the medium term. With these funds, the programme expects to conduct 2 750 community and stakeholder liaison visits and 1 860 community media and outreach platforms each year over the medium term, and make more effective use of community media platforms linked especially to the public participation programmes of the president, deputy president and members of the executive. The aim is to increase the reach of citizens from all areas and living standards measure groups.

Expenditure increased between 2010/11 and 2013/14 mainly due to a once-off allocation of R10 million for advertising and communication in 2012/13 related to the preparations for the 2013 Africa Cup of Nations as

well as advertising activities related to the country's hosting of the African Nations Championships, which took place in the first quarter of 2014.

To address the information and communication needs of communities, the programme received annual allocations of R5 million until 2012/13 towards the first generation Thusong service centres to improve access to government services and information. The first generation Thusong service centres project was discontinued in 2013/14 as the funding for the clean-up of these centres was allocated until 2012/13.

In 2012/13, the department conducted 3 588 community and stakeholder liaison visits and 3 010 development communication projects, distributed 1.6 million communication packages, compiled 519 reports on marketing and promotion events for Thusong service centres, facilitated rapid response reports and promoted and facilitated the media's understanding of government's agenda. Allocations towards these activities were mainly spent on compensation of employees and travel and subsistence. Travelling expenditure comprises approximately 30 per cent of the operational budget allocation for the *Provincial and Local Liaison* subprogramme. The number of personnel in this programme is expected to increase from 172 in 2012/13 to 175 by 2016/17, mainly due to the filling of vacant posts. There were 6 vacant posts at the end of November 2013 as a result of resignations and transfers to other government departments. The vacancies are in the process of being filled.

The department reprioritised funds of R1 million over the medium term, mainly from expenditure on compensation of employees from the Media Engagement and the *Cluster Supervision (Economic and Infrastructure, Justice and International)* subprogrammes to the *Cluster Supervision (Human Development, Social Protection and Governance and Administration)* subprogramme. Efficiency measures that will be implemented to ensure minimal negative impact on service delivery include limiting hotel accommodation, air travel and car-hire expenses, and using the head office instead of private venues for meetings.

The department has also reprioritised funds of R5.2 million over the medium term from spending on travel and subsistence to spending on fleet services, including government vehicle transport. The reprioritisation provides for the travel needs of communication officers conducting outreach communication programmes.

Expenditure in the *Media Development and Diversity Agency* subprogramme is expected to increase over the medium term to cover the agency's operations going forward.

## **Programme 4: Communication Service Agency**

### **Objectives**

- Provide effective and efficient communication services through:
  - cost effective media bulk-buying services for government by implementing all approved media-buying campaigns
  - the production of high quality television commercials, video footage, photographs, radio commercials and programmes, print advertisements and graphic designs for client departments as and when required
  - the provision of effective and efficient marketing and distribution services for government, which includes conducting nine public sector manager forums annually over the MTEF period.
- Maintain a positive image of government and that of the state through managing government's corporate identity by conducting 10 corporate identity workshops annually over the MTEF period.
- Inform the public of government's programmes and developments by conducting phone-in radio programmes on government's programmes, and documenting the public programmes of the Presidency, both domestically and internationally, on video and in photographs to profile the work of government as and when required.
- Ensure that government's communication products reach the intended audience in a timely manner by providing distribution services as and when needed.

## Subprogrammes

- *Programme Management for Communication Service Agency* provides strategic leadership in advertising communication development and production. This entails the management and strategic direction of media buying, media production, and marketing and distribution services provided to government. Key activities in 2013/14 included expanding media bulk buying services to include recruitment advertising, accelerating the conversion of analogue video archives to digital format, and the implementation of corporate identity management compliance systems.
- *Marketing, Advertising and Media Buying* provides media buying expertise and develops effective marketing, distribution and public relations and event management strategies for the department's products; manages and drives the distribution strategy of all the products produced for dissemination to the public; oversees the outsourcing of distribution services to service providers; and manages the corporate identity of government. In 2012/13, R11.3 million was used for operating expenses, such as the distribution costs of the Vuk'uzenzele newspaper and the South Africa Yearbook. In 2013/14, operating expenses covered the publication portfolio distribution costs. In 2014/15, marketing and distribution campaigns will be conducted and government print information products will be distributed on a monthly basis. This subprogramme had a staff complement of 23 with 5 vacant posts at the end of November 2013.
- *Media Production* provides for the production of videos, photographs and radio programmes in support of government communication programmes; and provides product development services to government. In 2012/13, 327 events were documented photographically, 258 events were documented on video, 205 radio programmes and live satellite broadcast link-ups were produced and 254 design products were completed. In 2013/14, concerted efforts were under way to digitise historical video footage and expand the network of syndicated community radio stations. In 2014/15, key activities and outputs are expected to be corporate identity management, graphic design, video production, photographs and the production of radio content for government communication programmes, the distribution of parliamentary media briefings, the facilitation of ministerial talk shows on community radio stations, and the production of audio material for use on websites. This subprogramme had a staff complement of 32 at the end of November 2013.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on consolidating the media production, media bulk buying and advertising agency functions for government departments. This includes: buying media for campaigns; producing radio advertisements and dramas, video programmes and live broadcasts on community radio stations; and providing photographic coverage and cost effective and efficient electronic media products and services. To support these objectives, funds are mainly allocated to compensation of employees, advertising, travel and subsistence and operating payments. The expected increase in spending on operating payments in 2016/17 is mainly due to an increase in costs related to the distribution of the Vuk'uzenzele newspaper and the South African Yearbook. Expenditure in this programme is expected to increase marginally over the medium term mainly to cater for allocations for improved conditions of service and other inflation related adjustments.

Expenditure for advertising in the *Marketing, Advertising and Media Buying* subprogramme decreased between 2010/11 and 2013/14 mainly due to the cancellation of the energy efficiency campaign in 2010/11 and the conclusion of the CNBC Africa communication programmes. Expenditure on compensation of employees increased over the same period, as a result of an increased staff complement. The increase in programme capacity was aimed at implementing the media bulk buying strategy adopted by Cabinet and distributing more copies of the Vuk'uzenzele newspaper. The allocation for the *Marketing, Advertising and Media Buying* subprogramme will allow the department to spend a projected R4.7 million on designing print advertisements for various communication campaigns in 2013/14. Approximately 20.5 million copies of departmental publications were distributed in 2012/13 at a total cost of R11.1 million and R11.2 million communication packages had been produced by the end of September 2013. It is expected that the distribution costs for departmental publications and products will amount to R13 million by the end of 2013/14. The Media Production subprogramme documented the local and international public programmes of the president and deputy president and sent photographs of all presidential events to a range of print media publications in 2013/14. Travel and subsistence is the main cost driver in rendering this service and is expected to amount to R4.1 million at the end of 2013/14.

In addition, as more services were provided to other government departments, increases are also expected in video, photography, radio products and services, as well as in graphic designs of print products.

The number of personnel in this programme is expected to increase from 50 in 2012/13 to 55 by 2016/17, mainly due to the filling of vacant posts. There were 5 vacant posts at the end of November 2013 as a result of resignations and transfers to other government departments. These posts are in the process of being filled. The allocation will increase by R1.2 million over the medium term. The projected growth in expenditure on compensation of employees over the same period will be driven largely by improvements in conditions of service. The personnel in this programme are mainly being remunerated for marketing, advertising, photography, video, and graphic design skills.

The department reprioritised funds of R1.2 million over the medium term, mainly to the *Media Production* subprogramme. The reprioritisation increased compensation of employees and contractors. Spending on travel

and subsistence was reduced by R5.2 million to increase the allocation for community radio stations to broadcast government messages such as Talk to your Minister radio shows and the state of the nation address. Efficiency measures that will be implemented to ensure that there is minimal negative impact on service delivery include limiting hotel accommodation, air travel and car-hire expenses and using the head office instead of private venues for meetings.

## **Public entities and other agencies**

- The **Media Development and Diversity Agency** promotes media development and diversity to ensure that all citizens can access information in a language of their choice and to transform media access, ownership and control patterns in South Africa. The entity's total budget for 2014/15 is R57.696 million.

Executive authority Minister of Finance  
 Accounting officer Director General of the National Treasury  
 Website address [www.treasury.gov.za](http://www.treasury.gov.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Support economic growth and development, good governance, social progress and rising living standards through the accountable, economical, efficient, equitable and sustainable management of public finances, maintenance of macroeconomic and financial sector stability, and effective financial regulation of the economy.*

### Mandate

The National Treasury's legislative mandate is based on chapter 13, section 216 (1) of the Constitution, which calls for the establishment of a national treasury to ensure transparency, accountability and sound financial controls in the management of the country's public finances. This role is further elaborated in the Public Finance Management Act (1999). The department is mandated to:

- promote the national government's fiscal policy and the coordination of its macroeconomic policy
- ensure the stability and soundness of the financial system and financial services
- coordinate intergovernmental financial and fiscal relations
- manage the budget preparation process
- enforce transparency and effective management in respect of revenue and expenditure, assets and liabilities, public entities, and constitutional institutions.

## Strategic goals

The department's strategic goals over the medium term are to:

- prepare, finance, publish and monitor the execution of the annual national budget to provide accurate and clear financial information and associated indicators of service delivery and performance
- improve techniques employed to monitor and analyse public expenditure by further refining applicable financial management frameworks and policies to ensure the appropriate use of available public financial resources for social and economic development, and infrastructure investment
- contribute to improved financial management, infrastructure development, and public sector planning and organisation through various technical assistance and skills development programmes
- contribute to the development of a stable and robust financial sector that leads to continued economic stability and growth by continuing to monitor financial sector performance and developing financial sector policies and regulatory frameworks
- support infrastructure and urban development through various programmes, including the infrastructure development improvement programme, the neighbourhood development partnership programme and the cities support programme
- promote public private partnerships as a financing alternative for development, where feasible
- enhance supply chain management in government through the chief procurement office, which will provide a blueprint for addressing supply chain principles in order to reduce waste and maximise value in the public sector.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide strategic management, leadership and administrative support to the department, and capacity building.

### Programme 2: Economic Policy, Tax, Financial Regulation and Research

**Purpose:** Provide specialist policy research, analysis and advisory services in the areas of macroeconomics, microeconomics, taxation, the financial sector and regulatory reform.

### Programme 3: Public Finance and Budget Management

**Purpose:** Provide analysis and advice on fiscal policy and public finances, intergovernmental financial relations, expenditure planning and priorities. Manage government's annual budget process and provide public finance management support.

### Programme 4: Asset and Liability Management

**Purpose:** Manage government's annual funding programme in a manner that ensures prudent cash management, an optimal portfolio of debt and other fiscal obligations. Promote and enforce prudent financial management of state owned entities through financial analysis and oversight.

### Programme 5: Financial Accounting and Supply Chain Management Systems

**Purpose:** Facilitate governance and accountability by promoting and enforcing transparent, economic and effective management of revenue, expenditure, assets, liabilities and supply chain processes in the public sector.

### Programme 6: International Financial Relations

**Purpose:** Manage South Africa's interests in shaping regional and global policies that advance the economic, financial and development objectives of the country and Africa.

## Programme 7: Civil and Military Pensions, Contributions to Funds and Other Benefits

**Purpose:** Provide for government's pension and post-retirement medical benefit obligations to former employees of state departments and bodies. Provide for similar benefits to retired members of the military.

## Programme 8: Technical Support and Development Finance

**Purpose:** Provide specialised infrastructure development planning, and implementation support and technical assistance, to aid capacity building in the public sector.

## Programme 9: Revenue Administration

**Purpose:** Administer an efficient tax system, provide tax education to the public, ensure maximum compliance with tax and customs legislation, and provide a customs service to maximise revenue collection and facilitate trade.

## Programme 10: Financial Intelligence and State Security

**Purpose:** Combat financial crime, including money laundering and terror financing activities. Gather intelligence for the purpose of national security, defence and combating crime.

## Selected performance indicators

Table 10.1 National Treasury

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Net loan debt as a percentage of gross domestic product	Asset and Liability Management	Outcome 4: Decent employment through inclusive economic growth	29.8% (R820.4bn)	33.2% (R989.7bn)	36.9% (R1 181.5bn)	39.5% (R1 376.7bn)	41.9% (R1 589.2bn)	43.5% (R1 804.8bn)	44.4% (R2 019.4bn)
Value of government gross annual borrowing	Asset and Liability Management		R149.5bn	R163.7bn	R209.8bn	R211bn	R230bn	R207.8bn	R222.8bn
Cost to service debt as a percentage of GDP	Asset and Liability Management		2.4% (R66.2bn)	2.6% (R76.5bn)	2.8% (R88.1bn)	2.9% (R100.5bn)	3.0% (R114.9bn)	3.1% (R126.6bn)	3.1% (R139.2bn)
Number of training courses and workshops presented on the implementation of financial management reforms per year	Financial Systems and Accounting	Outcome 12: An efficient, effective and development oriented public service and an empowered and fair, inclusive citizenship	100	46	72	40	40	43	45
Number of individuals trained per year to assist with the implementation of financial management reforms	Financial Systems and Accounting		2 000	3 142	3 547	700 <sup>2</sup>	700	760	750
Percentage of identified transversal contracts with strategic sourcing principles introduced per year	Financial Systems and Accounting		100% (20)	59% (19)	70% (14)	100% (19)	100% (15)	100% (20)	100% (15)
Total number of neighbourhood development partnership grant projects under construction	Technical Support and Development Finance	Outcome 9: A responsive, accountable, effective and efficient local government system	67	70	86	90	40	40	50
Total third party investment leveraged	Technical Support and Development Finance	Outcome 8: Sustainable human settlements and improved quality of household life	- <sup>1</sup>	- <sup>1</sup>	R1.5bn	R2bn	R2.5bn	R3bn	R3.5bn
Total number of projects approved	Technical Support and Development Finance	Outcome 4: Decent employment through inclusive economic growth	- <sup>1</sup>	- <sup>1</sup>	54	90	120	150	150
Number of training placements contracted with private companies per year	Technical Support and Development Finance		- <sup>1</sup>	- <sup>1</sup>	105 499	120 000	150 000	180 000	180 000
New jobs contracted for with projects per year	Technical Support and Development Finance		- <sup>1</sup>	- <sup>1</sup>	65 121	24 879	30 000	30 000	- <sup>3</sup>

1. No past data as investments and projects began in 2012/13.

2. The target decreases from 2013/14 as fewer finance officials will require training over the medium term.

3. The future support for these projects will only be agreed upon as the department nears the completion of the current engagements.

## The national development plan

The national development plan aims to reduce poverty and inequality, and to build a capable state that is able to play a developmental and transformative role. The plan aims to achieve these goals through investment in infrastructure development, job creation, transforming urban and rural spaces, education and training, fighting corruption, providing quality health care, transforming the country to a low-carbon economy and through effecting transformation and unity. National Treasury plays a critical role in actively managing the financial resources of South Africa to ensure that funds are directed towards the achievement of the goals of the national development plan.

The plan requires a stable and enabling macroeconomic platform in order to realise its objectives of sustainable growth and employment creation. In support, National Treasury conducts and administers research work to assess the country's economic environment and evaluate strategic options that can be implemented to manage the economic risks to the country and take advantage of the economic growth opportunities. Such work includes researching the effects of the employment tax incentive and publishing discussion papers on economic growth, job creation and various other micro and macroeconomic studies. The department's financial sector policy unit will finalise policy proposals on deposit insurance and dedicated banks, and enact legislation through a parliamentary process to increase access to financial services to promote inclusive growth. Substantial resources are being earmarked for the implementation of the twin peaks model of regulatory reform for regulatory oversight of the financial sector.

The proposals for carbon tax policies and the expected implementation of tax reforms towards environmental sustainability over the medium term will chart the country's transition to a low carbon economy. This is aligned with goals of the environment component of the national development plan.

The Jobs Fund gives effect to the national development plan by facilitating and supporting innovative approaches and initiatives that contribute to the development of the South African economy, and enable job creation. Working on a partnership funding model, by contributing funds at a ratio of funds invested by the private sector on each project, the fund provides support for projects that create sustainable employment. It is estimated that about 150 000 new sustainable jobs will be contracted for by 2015/16 through this intervention. In 2013/14, cumulative grants had been allocated to 90 projects.

- The national development plan emphasises the need to address the country's distorted spatial legacy. To this end, the neighbourhood development partnership programme through its grant funding has provided support to projects that have delivered transport infrastructure that connects rural and urban spaces to facilitate an environment for improved economic activity.
- Newly established as a unit within National Treasury, the government technical assistance centre will play a critical role in providing technical skills to deliver the infrastructure projects in provinces mainly for the departments of health, education and public works. In support of the *Technical Support and Development Finance* programme's objectives, medium term outputs will include the provision of technical implementation support to cities and relevant national departments as part of rolling out of the cities support programme. The programme aims to enable cities to manage their built environment and ensure that all member departments of the infrastructure development improvement programme implement the principles of sound infrastructure lifestyle of planning and maintenance. These activities contribute to the national development plan's aim of infrastructure development.
- The newly established office of the chief procurement officer, a division within National Treasury, aims to improve and modernise the procurement system across government and related organs to make the system fair, equitable, transparent, competitive and cost effective. The office also participates in the interdepartmental anti-corruption task team and plays an instrumental role in enforcing compliance with government's supply chain management strategies. These activities bolster the national development plan's intention of combating corruption in the public sector.

## Expenditure estimates

2. Rand million.

## Expenditure trends

The department is responsible for the main statutory transfers to provincial governments, the details of which can be found in chapter 7 and annexure E of the 2014 Budget Review and the 2014 Division of Revenue Bill. The department provides for the servicing of government debt and is responsible for the distribution of the general fuel levy to metropolitan municipalities. Recorded as a direct charge against the National Revenue Fund, the transfer of the provincial equitable share, provision for servicing government debt and the general fuel levy to metropolitan municipalities together account for 94.4 per cent of the department's allocation across the seven-year period. The department receives Cabinet approved additional allocations of R1.7 billion in 2014/15, R4 billion in 2015/16 and R8 billion in 2016/17 for higher state debt costs.

Excluding the direct charges, most of the department's budget over the medium term is allocated to transfers and subsidies, including those to: fund the operations of the South African Revenue Service in the *Revenue Administration* programme, and the Financial Intelligence Centre and the South African Secret Services in the *Financial Intelligence and State Security* programme; pay pensions and medical benefits to retired, injured or disabled civil servants and their beneficiaries in the *Civil and Military Pensions* contributions to funds and other benefits programmes; provide funds for the Jobs Fund and the neighbourhood development partnership grant in the *Technical Support and Development Finance* programme; and recapitalise state owned companies through the *Asset and Liability Management* programme. The department receives additional Cabinet approved allocations over the medium term for transfers and subsidies as follows:

- R20 million in 2014/15, R30 million in 2015/16 and R40 million in 2016/17 to augment the Financial Intelligence Centre's budget for a move to new premises and the filling of positions to enhance capacity to combat money laundering and financial criminal activity
- R105 million in 2014/15, R116 million in 2015/16 and R135 million in 2016/17 for the integrated cities development grant for the initiation of the grant to assist metropolitan municipalities to develop more inclusive and productive built environments.

Cabinet also approved the following budget reductions to transfers and subsidies, which are not expected to adversely affect service delivery:

- R5 million per year over the medium term from transfers in the *Civil and Military Pensions, Contributions to Funds and Other Benefits* programme
- R601.8 million in 2014/15, R495.4 million in 2015/16 and R408.2 million in 2016/17 from the South African Revenue Service, as the entity was assessed to have sufficient cash surpluses as at March 2013 to enable it to continue its modernisation agenda
- R19 million in 2014/15, R18.7 million in 2015/16 and R18.4 million in 2016/17 from the common monetary area compensation due to anticipated lower Rand circulation in the participating countries

- R6 million in 2014/15, R6.3 million in 2015/16 and R6.6 million in 2016/17 from the former *Financial and Technical Support* subprogramme in order to bring its operations to a close
- R28.3 million in 2014/15, R28.4 million in 2015/16 and R3.7 million in 2016/17 from the department's operational expenditure for goods and services.

Over the medium term, the department will continue to manage national debt and liquidity by ensuring that government's borrowing needs of R660 billion are met annually by sourcing funds from the domestic and international markets through the activities of the *Assets and Liability Management* programme. The reductions of R20 billion in expenditure between 2010/11 and 2011/12 and R539.1 million between 2011/12 and 2012/13 in this programme were mainly due to the R20 billion final tranche payment in 2010/11 for the provision of a R60 billion subordinated loan to Eskom to support its expansion plans, as well as a reduction in payments to the Land and Agricultural Development Bank of South Africa as the capital injection of R3.5 billion between 2009/10 to 2014/15 to support the emerging farmer support facility ends.

Excluding direct charges and transfers and subsidies, expenditure is mainly on compensation of employees, particularly in the *Administration, Public Finance and Budget Management* and *Financial Accounting and Supply Chain Management Systems* programmes. The department's funded establishment is anticipated to increase to 1 371 posts in 2016/17, which is expected to increase spending on compensation of employees to R863.2 million in that year. These posts were mainly created for the *Employment Creation Facilitation* subprogramme, the chief procurement office and the infrastructure development improvement programme. At the end of November 2013, there were 153 vacancies in the department due to natural attrition.

The department utilises consultants where it lacks capacity. Between 2010/11 and 2013/14, spending on consultants grew at an average annual rate of 20 per cent due to the specialised audit services required to combat fraud and corruption, and the interventions to assist with the administration of the provincial departments in Limpopo. However, as a result of the department's effort to control expenditure on consultants and build internal capacity, and the conclusion of the intervention in Limpopo, spending on consultants is set to increase at a lesser rate over the medium term.

### Infrastructure spending

#### *Mega project: Neighbourhood development partnership grant projects*

The neighbourhood development partnership grant is directed at eradicating spatial inequality and creating liveable, sustainable, resilient, efficient and integrated towns and cities. It is driven by the principle that public investment and funding can be used to attract third party public and private sector investment to unlock the social and economic potential in targeted underserved neighbourhoods, which are generally townships. In 2011/12, the neighbourhood development partnership unit formulated a new approach, known as the urban networks strategy. This strategy shifts infrastructure investments towards the creation of efficient and effective urban centres to increase economic growth, create employment and increase access to urban amenities, especially for the poor located in marginalised settlement areas. The new approach locates township development as part of wider integrated city planning, which includes the spatial prioritisation and targeting of public sector capital investments. The grant supports the city wide and precinct level planning, as well as provides the capital for catalytic infrastructure projects. These catalytic projects, such as public transport facilities, social facilities, public spaces and landscaping, aim to transform the identified and prioritised nodes in townships into vibrant, sustainable urban hubs that are connected to other strategic locations within the townships and the wider urban network.

The grant's capital investment reached R3.5 billion by 31 March 2014. This is allocated to projects as follows: 20.1 per cent to community facilities, 1.6 per cent to utility infrastructure, 1.6 per cent for green efficiencies, 37.5 per cent for nodal and corridor upgrading, 13.5 per cent for small and medium enterprise facilities, and 25.7 per cent for transport infrastructure. R2 billion has been allocated over the medium term for spending on neighbourhood development partnership infrastructure grants. In 2013/14, the neighbourhood development partnership had more than 280 approved project plans valued at R3.2 billion. By 2012/13, the partnership had completed 129 catalytic projects valued at R988 million.

The urban networks strategy model requires a transit orientated approach that integrates the townships with the wider urban fabric. In the Bridge City project in the Phoenix, Inanda, Ntuzuma and KwaMashu townships, the department worked closely with the Ethekewini metropolitan municipality. Between 2010 and 2013, the grant

contributed R80.3 million for the implementation of the Bridge City inter-modal facility. The value of Bridge City project is estimated at R5 billion.

The department also has a portfolio of existing non-urban projects that it continues to support, including: the KwaDukuza local municipality intermodal transport facility, in which the grant's R36 million contribution has resulted in a planned R500 million shopping mall development; and the Nongoma local municipality taxi and bus ranks, which are under construction for completion by May 2014 and to which the grant contributed R38.2 million.

### Large projects

The department continues to develop the integrated financial management system, which will replace its existing legacy systems. Since inception, R768.8 million has been expended on developing the financial management, supply chain management, human resource management, payroll and related business intelligence modules, which have been piloted at lead sites, including National Treasury, the Free State Department of Education and Limpopo Department of Health. A revised approach on the solution architecture of the system was endorsed by Cabinet in 2013/14. This is aimed at fast tracking completion of the project and may call for an increase in expenditure in the future. However, spending on the project is expected to remain within the R3.2 billion allocated to it.

2. Rand million.

## Expenditure trends

Most of the programme's allocation over the medium term is spent on compensation of employees in the *Corporate Services*, *Financial Administration* and *Departmental Management* subprogrammes, and on operating leases in the *Office Accommodation* subprogrammes. This supports the department's objective of providing strategic, financial and human resource management to improve governance and attain unqualified audit reports.

With regard to personnel, over the medium term the department will continue to focus on building capacity in the internal audit, ICT and human resource functions. Consequently, the 59 posts that were vacant at the end of November 2013 due to natural attrition are to be filled over the medium term, and this is expected to bring the programme up to its full capacity of 405 posts and increase spending on compensation of employees. The additional capacity will allow the department to complete the vetting of employees, perform 75 compliance, performance and IT audits each year, and ensure 95 per cent compliance with service level agreements.

However, the increase in capacity in the internal audit and risk management functions is expected to decrease spending in the *Internal Audit* and *Enterprise Risk Management* subprogrammes over the medium term as a result of the savings of approximately R10 million to be realised from using internal personnel, who are to take over the functions previously performed by consultants. This is also the reason for the decrease in expenditure on consultants and professional services expected over the medium term. These consultants have been contracted on a short term basis to provide auditing, ICT support and legal services as the department builds its capacity.

With regard to office accommodation and related costs, over the medium term the department will focus on upgrading its ICT and security infrastructure, particularly for the 38 Church Square building, which is currently being refurbished. The project to refurbish the building, which began in 2010/11, is running behind schedule and is expected to be completed in 2014/15. Once the project is complete, expenditure in the *Office Accommodation* subprogramme is expected to decrease in 2014/15, as is expenditure for capital assets over the medium term. This project was also the reason for the significant increase in spending in the *Office Accommodation* subprogramme and on payments for capital assets between 2010/11 and 2013/14.

## Programme 2: Economic Policy, Tax, Financial Regulation and Research

### Objectives

- Improve South Africa's macroeconomic and microeconomic framework by conducting ongoing analytical work and research, and developing policy advisory services.
- Support the promotion of economic growth, employment and macroeconomic stability and retirement reform by:
  - developing tax policy proposals and supporting tax legislation for the annual budget

- monitoring the collection of revenue through ongoing consultation with relevant stakeholders and the consideration of contributing factors that determine tax collection.

## Subprogrammes

- *Programme Management for Economic Policy, Tax, Financial Regulation and Research* provides overall programme management and policy advice to government relating to the promotion of economic growth, employment, and microeconomic and macroeconomic stability. In 2012/13 and 2013/14, transfers and subsidies in this subprogramme accounted for R10 million (51.7 per cent) and R9.9 million (39.4 per cent) of the total budget, with the bulk of the transfer payments allocated to Economic Research Southern Africa to conduct economic research. In 2013/14, legislation was published in the Government Gazette, the Taxation Laws Amendment Bill was published and electronic subscriptions to the Financial Times publication were managed. This subprogramme had a staff complement of 9 at the end of November 2013.
- *Research* promotes economic research institutions through the funding of economic research in the public interest, as well as more dedicated research on behalf of the department. This includes promoting the research capacity of local academic researchers in areas such as economic growth, job creation, macroeconomic stability, poverty alleviation, retirement reform and financial sector development. Most funding is for longer term agreements with institutions such as the Centre for Research into Economics and Finance in Southern Africa, and for ad-hoc economic research related projects. In 2012/13, R7.5 million was spent towards 61 Economic Research Southern Africa papers, which included research on the trade and industry policy, economic impacts of carbon taxation, the integrated resource plan and electricity pricing policy, and economic drivers of tax revenue. By the end of December 2013, 58 Economic Research Southern Africa papers had been published on topics such as the changes in South African retirement funds, with spending to support these activities amounting to R7.9 million. The subprogramme aims to publish a minimum of 44 papers on economic growth, job creation and various micro and macroeconomic subjects each year over the medium term.
- *Financial Sector Policy* is responsible for developing policy on the regulation of the financial sector in South Africa, developing policies to broaden access to financial services by all South Africans, and developing policies to improve the national savings rate through reforms to the legislative framework governing the savings industry, including work being undertaken towards the implementation of retirement reform proposals. In 2012/13, in its focus on increasing access to financial services, the unit spent R21.4 million and successfully hosted the 2012 Alliance for Financial Inclusion's global policy forum. Enabling legislation for the twin peaks model for regulation and oversight in the financial sector was introduced in 2013/14. Under the twin-peaks model, the financial services industry and related structures will have two regulators: a prudential regulator, which will operate within the Reserve Bank; and a new market conduct regulator, which will be established from within a restructured Financial Services Board. The draft financial sector regulation bill was released for comment in December 2013, which, once promulgated as expected in 2014/15, will establish a prudential authority and a market conduct authority over the medium term. Policy papers on savings and retirement policies that will lead to increased levels of national savings were also published, with public consultations held in September 2013. The aim is to implement the legislation in 2014/15. The budget allocation for 2013/14 was R24.9 million. This subprogramme had a staff complement of 36 at the end of November 2013.
- *Tax Policy* is responsible for drafting annual tax legislation as part of the national budget to promote an effective, equitable and efficient tax policy framework and tax administrative system that ensures sustainable growth and delivery on government's mandate to address the needs of all South Africans. This includes providing tax proposals towards improved environmental sustainability. In 2012/13, R24.2 million was spent on publishing tax proposals in the annual Budget Review and finalising the revised carbon tax policy. The unit will have spent R23.7 million by the end of 2013/14 and has prepared draft legislation on the carbon tax policy, which is expected to be implemented by January 2015. In addition, the Tax Laws Amendment Act (2013) and the Employment Tax Incentive Act (2013) were promulgated in December 2013 and took effect in January 2014. This subprogramme had a staff complement of 28 at the end of November 2013.
- *Economic Policy* provides macroeconomic and microeconomic forecasts, policy analysis on microeconomic and regulatory issues, economic impact assessments and scenario modelling to provide sound policy advice

on the economic environment for the annual budget and other government processes. Policy advice is mainly focused on creating decent employment through inclusive economic growth. The subprogramme also provides analytical work and policy advice on a wide range of issues including: inflation management; electricity pricing; economic growth; structural budget balances; industrial policy; small, medium and micro enterprise (SMME) policy; and the exchange rate. In 2012/13, R22.8 million was spent and the development of the 2005 South African general equilibrium model was supported to allow for the mining sector impact assessment. The estimated expenditure of R25.3 million in 2013/14 has facilitated the development of the GDP model and the updating of the consumer price index model, among other regular deliverables, including providing economic forecasts for the 2014 medium term expenditure framework. Activities over the medium term include reviewing the electricity pricing methodology and providing advice on the economic impacts of alternative models for restructuring the energy sector and freight logistics systems to improve economic efficiency. This subprogramme had a staff complement of 29 at the end of November 2013.

- *Cooperative Banks Development Agency* facilitates the transfer payment to the Cooperative Banks Development Agency, which provides for the registration, supervision and regulation of cooperative banks and the development of cooperative financial institutions such as savings and credit cooperatives, community banks, village banks and financial services cooperatives into cooperative banks. The unit transferred R16 million in 2012/13 and R16.2 million in 2013/14 to the agency for operational expenditure. Over the medium term, transfers to the agency are expected to increase to provide for inflationary increases to operational costs.

## Expenditure trends

The bulk of the programme's expenditure over the seven-year period is on compensation of employees, consultants, and travel and subsistence in the *Financial Sector Policy*, *Tax Policy* and *Economic Policy* subprogrammes. These subprogrammes support the programme's objective of enabling economic growth and financial stability by funding the analysis of the country's economic and financial environment through the research and the development of economic policies and financial frameworks. In this regard, the department has worked on: finalising carbon tax proposals, which are expected to be implemented by January 2015; the Financial Services Laws General Amendment Bill, which was tabled in Parliament in September 2012; the Financial Markets Bill, which was adopted by the National Assembly in November 2012; and the Credit Ratings Agencies Bill, which was adopted by the National Assembly in November 2012. This will enable it to meet its target of implementing the twin peaks model of regulating the financial sector by the end of the medium term.

Spending on compensation of employees is projected to increase further over the medium term as the number of filled posts is projected to increase to 129 in this period. Most of these posts are in the legal tax design unit in the *Tax Policy* subprogramme. The growth in capacity is expected to fill the 29 posts that were vacant at the end of November 2013 and, along with the adjustments for improved conditions of service, is an expected increase in spending on compensation of employees over the medium term. The vacant posts were the result of natural attrition. The increase in capacity over the medium term is expected to reduce the department's reliance on consultants, which is the main reason for the projected decrease in spending on goods and services over the medium term. This reduction is also indicative of the department's commitment to controlling costs and implementing the Cabinet approved baseline reductions.

Between 2010/11 and 2013/14, to support the attainment of these targets, the department implemented the amendment to the Public Service Coordinating Bargaining Council resolution 3 of 2009, which moved certain jobs graded at salary level 9 to level 10 and those graded at level 11 to level 12. This increased spending on

compensation of employees over the period. In addition, spending on consultants increased to support the additional specialised research required to produce these policies and frameworks.

## **Programme 3: Public Finance and Budget Management**

### **Objectives**

- Give effect to government's economic, fiscal, social and development goals by engaging in an ongoing rigorous analytical and consultative process to produce the national budget to be tabled annually in Parliament in February.
- Promote accountability and transparency by:
  - publishing the Budget Review, Estimates of National Expenditure and Medium Term Budget Policy Statement and appropriation legislation containing relevant, accurate and clear financial information and associated indicators of service delivery and performance on an annual basis
  - monitoring and analysing progress on the implementation of the appropriated budget on a quarterly and annual basis.
- Contribute to public policy and programme development by promoting sound planning, budgeting and project management, and providing increased support to public finance reform in provinces and municipalities on an ongoing basis.
- Promote and support public private partnerships, and provide a mechanism for accessing private sector finance and expertise to support the development and implementation of services infrastructure in all spheres of government by appropriately assessing all major infrastructure initiatives and employing the appropriate financing mechanism on an annual basis.
- Ensure the appropriate use of public and private financial resources for social and economic development and infrastructure investment by continuously improving the monitoring and analysis of public expenditure monthly, quarterly and annually.

### **Subprogrammes**

- *Programme Management for Public Finance and Budget Management* provides support to the programme's planning, monitoring and delivery functions. Key activities include oversight and managing the processes related to the annual publication of the medium term budget policy statement, the coordination of the budget, and the production of the Division of Revenue Bill for the three spheres of government, with spending of R33.8 million in 2012/13 and an allocated budget of R18.6 million in 2013/14. This subprogramme had a staff complement of 10 at the end of November 2013.
- *Public Finance* provides financial and budgetary analysis of government programmes, advises on policy and service delivery trends, and manages National Treasury's relations with other national departments. The division will continue to provide recommendations annually to the medium term expenditure committee based on engagements with departments. Other outputs and activities include the phased implementation of contributory social security reforms over the medium term, the evaluation and monitoring of major infrastructure projects, and funding recommendations on the projects. R46.6 million was spent in 2012/13. In 2013/14, the subprogramme was allocated R51 million and its outputs and activities included presentations made on research on nuclear and liquid fuels electricity supply options, and the establishment of a functional group approach to prepare a national budget that is aligned with national priorities. This subprogramme had a staff complement of 72 at the end of November 2013.
- *Budget Office and Coordination* is responsible for the provision of fiscal policy advice and the alignment of government's medium term spending and revenue plans with its longer term fiscal policy and strategic priorities. The unit leads the budget reform programme, coordinates international technical assistance and donor finance, provides advice on public service remuneration and pension arrangements, and compiles public finance statistics. A governance monitoring system will be designed and implemented over the medium term. R47.6 million was spent in 2012/13. In 2013/14, the budget allocation was R57.5 million and a debt sustainability analysis was completed together with the International Monetary Fund to ensure that

current fiscal plans are sustainable as part of the division's contribution to the national budgeting process. This subprogramme had a staff complement of 80 at the end of November 2013.

- *Intergovernmental Relations* coordinates fiscal relations between national, provincial and local government; promotes sound provincial and municipal budgetary planning, reporting and financial management; and provides infrastructure support for government with the aim of promoting improved planning and management of the service delivery targets for the spheres. Key outputs and activities in 2012/13 included publishing the Division of Revenue Act (2013); publishing quality non-financial performance information for the 278 municipalities; performing benchmark assessments for all municipalities; running 7 division of revenue workshops; and providing business planning training courses, and other training for officials. R67.5 million was spent in 2012/13. In 2013/14, the budget allocation was R79.4 million. A new local government equitable share formula was introduced and phased in and an infrastructure conditional grant system based on new data sets from Census 2011 was reviewed. In addition, the final built environment performance plans for all 8 metropolitan municipalities were assessed to ensure the delivery of the infrastructure targets. This subprogramme had a staff complement of 91 at the end of November 2013.
- *Financial and Fiscal Commission* facilitates the annual transfer payment to the Financial and Fiscal Commission, which provides independent, objective, impartial and unbiased advice to all three spheres of government regarding the division of revenue; as well as advice on the enactment of legislation pertaining to provincial taxes, municipal fiscal powers and functions, and provincial and municipal loans. In 2012/13, R37.3 million was transferred to the commission, while in 2013/14, R39.6 million was budgeted to support the commission's activities.

## Expenditure trends

The spending focus over the medium term will be on improving the provision of financial management, budgeting and expenditure management support, including the oversight of civil pension reforms, to the national, provincial and local spheres of government by building capacity within the programme, mainly at the senior management level. As a result, the number of posts filled is expected to grow from 250 in 2012/13 to 304 over the medium term. This programme had 47 vacant positions at the end of November 2013 as the department was gradually building capacity in the public service pensions and benefits unit, which was established late in 2011/12. Over the medium term, expenditure on compensation of employees is expected to increase as the department accelerates its recruitment to build the programme to full capacity. This will allow the programme to continue enhancing the reporting of non-financial performance information, and develop and implement a standard chart of accounts for all municipalities by 2015/16. To this end, the programme circulated the first quarter reporting requirements for non-financial performance information in June 2013, which municipalities submitted in December 2013. The programme also selected municipalities to pilot the newly developed standard chart of accounts and assessed final built environment performance plans for all 8 metros.

Over the medium term, the department expects to use consultants to support various projects, including for editing publications, actuarial valuations, conducting the local government survey, carrying out research, completing the multi-agent transport simulation toolkit project, and supporting the drafting of the Public Administration Management Bill, which will standardise the remuneration for departments and local government. The department has no internal staff to perform these as the assignments are specialised and short term.

However, spending on consultants is projected to decrease over the medium term as the programme gives effect to Cabinet approved reductions. The phasing out of the multi-agent transport simulation toolkit in the *Public Finance* subprogramme and the conclusion of the national government intervention in Limpopo in the *Programme Management for Public Finance and Budget Management* subprogramme are also expected to contribute to the decrease in spending on consultants over the medium term. The intervention in Limpopo, which has since been paid for by the province, had previously increased expenditure on consultants in 2012/13.

## Programme 4: Asset and Liability Management

### Objectives

- Exercise oversight of state owned enterprises to enable them to achieve government's policy objectives in a financially sustainable manner by:
  - reviewing the corporate plans and annual financial statements of state owned enterprises regularly
  - coordinating state owned entities' borrowing programmes on an ongoing basis
  - tracking progress on capital expenditure programmes on an ongoing basis
  - reviewing applications for funding, guarantees and borrowing limits in terms of the Public Finance Management Act (1999), and monitoring progress on an ongoing basis.
- Finance government's gross borrowing requirement of R230 billion by March 2015 by sourcing such funds from the domestic and international markets over the same period.
- Ensure that government's liquidity requirements are consistently met through effective cash management by making sound cash flow forecasts on an ongoing basis.
- Enable government to manage financial risk and attract investment by reviewing credit, debt, country ratings and contingent liability risk benchmarks, and ensure adherence to set standards on an ongoing basis.

### Subprogrammes

- *Programme Management for Asset and Liability Management* provides support for planning, monitoring and delivering the programme's activities. Key activities that are supported and monitored include the management of the government debt, financial assets and investments. R14.9 million was spent in 2012/13 and an estimated R16.3 million will be spent by the end of 2013/14. In 2013/14, the core development of the retail debt module of the new treasury management system was delivered for quality assurance testing and the migration of retail debt from the mainframe to the new back office system had been completed. This subprogramme had a staff complement of 4 at the end of November 2013.
- *State Owned Entity Financial Management and Governance* is responsible for overseeing and enabling state owned enterprises to meet government's policy objectives in a financially and fiscally sustainable manner. The subprogramme is also responsible for promoting sound corporate governance. In 2012/13, the remuneration trends of nine public entities were analysed against the state owned entities remuneration guide and the findings were shared with shareholder departments to ensure continued governance of the entities. These activities resulted in spending of R23.7 million in 2012/13. In 2013/14, the budget allocation was R27.4 million. By September 2013, 33 state owned companies' annual reports were analysed, and borrowing, infrastructure spending and funding progress data for state owned companies responsible for 97 per cent of the infrastructure expenditure were collated and consolidated. Over the medium term, the unit will continue to compile submissions and review applications for borrowing limits in state owned companies. In order to strengthen regulatory compliance, the unit will report on the compliance of major state owned companies with the Public Finance Management Act (1999), the Companies Act (2008), National Treasury regulations and the King III code of corporate governance. This subprogramme had a staff complement of 42 at the end of November 2013.
- *Government Debt Management* is responsible for government's long term funding needs and manages domestic and foreign debt, contributes to the development of financial markets and maintains sound investor relations. In 2012/13, government financed its gross borrowing requirement of R209 billion: R61.1 million was from international export credit agencies, R180.2 billion was from the domestic market, R3.7 billion was from retail bond investors and R29 billion was on cash balances. R15.7 million was spent in the subprogramme in 2012/13. In 2013/14, the budget allocation was R17.7 million. An investment road show was conducted in Pretoria, Johannesburg and Cape Town as a strategy to retain and attract investors in that year. By the end of December 2013, R179.4 billion had been raised to meet government's borrowing requirements. To maintain a diversified funding portfolio, 76 per cent was borrowed at a fixed rate and 24 per cent was linked to inflation. This subprogramme had a staff complement of 31 at the end of November 2013.

- *Financial Operations* provides for government's short term funding needs, manages cash in all spheres of government, invests government surplus cash, supplies reliable systems and provides information relating to the division's operations. By the end of the third quarter of 2012/13, Treasury bills of R293.6 billion had been issued and R278.3 billion repaid, resulting in net issuance of R15.3 billion. Over the same period, government borrowed R22.5 billion of the R40.9 billion public sector cash, which was available at the Corporation for Public Deposits for bridging finance for government. R15.9 million was spent in 2012/13. In 2013/14, the budget allocation was R18.2 million. The retail bond module on the new treasury management system was developed, the business requirement for the money market module was finalised, and payments of domestic and foreign debt were switched to the Society for Worldwide Interbank Financial Telecommunication system. This subprogramme had a staff complement of 18 at the end of November 2013.
- *Strategy and Risk Management* develops and maintains a risk management framework for the debt and contingent liabilities of government and state owned entities, and implements debt management strategies that minimise government's exposure to adverse risks. At the end of December 2013, the domestic debt portfolio was at a 64 per cent fixed rate and a 36 per cent non-fixed rate, and the government had a 9.2 per cent foreign debt exposure, which is well below the internationally acceptable maximum of 20 to 25 per cent. Net debt, provisions plus contingent liabilities, as a percentage of GDP, is estimated to increase from 52.1 per cent in 2012/13 to 54 per cent at the end of 2013/14. South Africa's sovereign credit rating remained at Baa1 in the second quarter of 2013/14, since being downgraded in 2012/13 by Moody's Investor Services. In the third quarter, ratings review visits by Standard & Poor's and Fitch were conducted and coordinated and a forward looking sovereign risk analysis and credit rating report, based on the Moody's report, was compiled. According to the analysis, South Africa's overall credit risk profile has deteriorated for both 2013 and 2014. The activities conducted resulted in spending of R8 million in 2012/13 and a budget allocation of R9.3 million in 2013/14. This subprogramme had a staff complement of 13 at the end of November 2013.
- *Financial Investments* provides for funding needs of state owned entities, such as the recapitalisation of the Land and Agricultural Development Bank of South Africa, Postbank, as well as the Development Bank of Southern Africa. The Land and Agricultural Development Bank of South Africa was recapitalised with R300 million in April 2013, while R205.5 million was allocated for the Postbank recapitalisation and R2.4 billion went towards the Development Bank of South Africa's recapitalisation. To enhance the Development Bank of Southern Africa's capital structure and to deliver on its new mandate to focus on lending for infrastructure projects with maximum socioeconomic impact within the Southern African region, government has committed R7.9 billion in support over the medium term.

2. Rand million.

## Expenditure trends

Most of the programme's allocation across the seven-year period is spent on providing capital to the state owned companies over which the department exercises oversight. This is done through the *Financial Investments* subprogramme, which is set to provide R800 million over the medium term for the further recapitalisation of the Land and Agricultural Development Bank of South Africa, R481 million for the recapitalisation of Postbank and R7.9 billion for the recapitalisation of the Development Bank of Southern Africa. The recapitalisation of these corporations is expected to end in 2015/16, which is the reason for the significant decrease projected in programme expenditure.

Excluding the capitalisation of state owned companies, spending on compensation of employees is the largest spending item. Along with spending on computer services and consultants, spending on this item over the medium term will focus on: supporting the financing of government's gross borrowing requirement; supporting the sound management of cash resources; managing government's financial risks and oversight responsibilities with regard to state owned companies; and continuing to manage the assets and liabilities of the country to ensure optimal debt portfolio and a manageable credit risk profile. The programme's staff complement is expected to remain at 117 posts over the medium term. The main reason for the increase in spending on compensation of employees over this period relates to the adjustments to be made for improvements in conditions of service. Over the same period, spending on consultants is set to decrease once the project to develop and implement the treasury management system concludes.

## **Programme 5: Financial Accounting and Supply Chain Management Systems**

### **Objectives**

- Ensure compliance with and the implementation of the Public Finance Management Act (1999) and the Municipal Finance Management Act (2003) across the three spheres of government on an ongoing basis, by:
  - working with relevant officials in national and provincial departments and entities, as well as municipalities and municipal entities, to address implementation challenges
  - establishing a structured process of issuing frameworks, guidelines and treasury instructions to enable proper implementation of the Public Finance Management Act (1999) and the Municipal Finance Management Act (2003)
  - developing and maintaining financial management assessment tools for national and provincial departments and entities, as well as municipalities and municipal entities
  - facilitating and undertaking special investigations and performance audits to improve financial management practices and support enforcement of the acts.
- Ensure sound financial management systems in the implementation of the Public Finance Management Act (1999) and the Municipal Finance Management Act (2003) by:
  - providing capacity and support to municipalities on policies relating to accounting and reporting, internal auditing and risk management on an ongoing basis
  - developing and implementing government transversal accounting and reporting systems over the medium term
  - maintaining government's current financial systems at a level of 98 per cent availability including providing reliable, efficient and effective support and user training over the medium term
  - completing the development of the remaining integrated financial management system's payroll modules, core financial management and inventory management, and begin the rollout over the medium term.
- Support government's financial management capacity building efforts across the three spheres of government by introducing minimum competency profiles and offering graduate internships in financial management annually.
- Improve financial management in provincial and local government by:
  - implementing the revised Treasury Regulations by 2014/15
  - developing and implementing financial recovery plans and providing technical assistance in 2014/15.

### **Subprogrammes**

- *Programme Management for Financial Accounting and Supply Chain Management Systems* supports the planning, monitoring and coordinating deliverables of the programme plan, such as the development and implementation of the integrated financial management system; and facilitates accountability and governance in the public sector, especially in terms of financial management. In 2012/13, R7.3 million was spent and the 2013/14 budget allocation was R15.1 million, due to the establishment of the office of the chief procurement officer. This subprogramme had a staff complement of 9 at the end of November 2013.
- *Office of the Chief Procurement Officer* aims to: modernise the state procurement system to be fair, equitable, transparent, competitive and cost-effective; enable the efficient, economic, effective and transparent utilisation of financial and other resources, including state assets, for improved service delivery; and promote, support and enforce the transparent and effective management of state procurement and the sound stewardship of government assets and resources. This subprogramme absorbed the *Supply Chain Policy* subprogramme in 2013/14. Staff members were then appointed to carry out the refined mandates of the office of the chief procurement officer. In the first half of 2014/15, the office plans to develop a national supplier database, identify and list the top 40 commodities that government spends money on, review and amend the Preferential Procurement Policy Framework Act (2000), and provide operational support to government entities. The subprogramme spent R34.1 million in 2012/13 and was allocated R43.1 million in 2013/14. This subprogramme had a staff complement of 54 at the end of November 2013.

- *Financial Systems* is discussed in more detail below.
- *Financial Reporting for National Accounts* is responsible for accounting for the National Revenue Fund and the Reconstruction and Development Programme Fund, providing banking services to national government, providing support to all spheres of government in implementing financial reporting frameworks and preparing consolidated financial statements. In 2012/13, the consolidated annual financial statements for the national departments and public entities and the annual financial statements of the Reconstruction and Development Programme Fund were prepared and tabled. In 2013/14, the budget allocation was R88.5 million. All the monthly monitoring of state budgets and expenditure reports according to section 32 of the Public Finance Management Act (1999) and bank reconciliation of the National Revenue Fund were published timeously. In addition, the 2012/13 consolidated annual financial statements for both the national departments and public entities were audited and presented to Parliament. This subprogramme had a staff complement of 48 at the end of November 2013.
- *Financial Management Policy and Compliance Improvement* is discussed in more detail below.
- *Audit Statutory Bodies* is a transfer payment that provides for compensation for certain shortfalls of statutory bodies and municipalities in terms of the Auditor-General Act (1995). This subprogramme's total budget is transferred to fund municipalities that are unable to pay for audit services. In 2013/14, R40.8 million was allocated and transferred to municipalities, an increase of R10.5 million from 2012/13.
- *Service Charges: Commercial Banks* is a transfer payment that provides for bank service charges for all departments' deposit accounts. In 2012/13, R155 000 was paid for the charges and in 2013/14, R280 000 was budgeted for this purpose.

## Expenditure trends

Most of the programme's allocation over the medium term is to be spent in the *Financial Systems* and *Financial Management Policy and Compliance Improvement* subprogrammes, which are discussed in further detail below. Excluding these subprogrammes, the rest of the allocation over the medium term is mainly spent on compensation of employees and consultants in the *Financial Reporting for National Accounts* and *Office of the Chief Procurement Officer* subprogrammes, and transfers to statutory bodies and municipalities in the *Audit Statutory Bodies* subprogramme. Spending on these items and in these subprogrammes over the medium term is focused on the tabling of consolidated annual financial statements, the timely and accurate publication of monthly statements of actual revenue and actual expenditure for the National Revenue Fund, the undertaking of special investigations to improve financial management practices and support enforcement, and the capacitation of the office of the chief procurement officer.

The *Office of the Chief Procurement Officer* subprogramme was established in 2013/14 to improve procurement systems in government and combat fraud, corruption, wasteful expenditure and to bring about efficiency and cost effectiveness of procurement across government. This subprogramme will be capacitated gradually over the medium term due to budgetary constraints, which the department plans to manage by reprioritising funds where possible. Expenditure on compensation of employees is thus expected to increase to provide for the growth in establishment, from 300 positions at the end of November 2013 to 313 over the medium term.

## Subprogramme: Financial Systems

This subprogramme maintains and improves existing financial management systems and develops and implements the new integrated financial management system, which aims to replace ageing and fragmented financial, supply chain and human resource management systems across national and provincial departments. In September 2013, the integrated financial management system steering committee decided on a different direction in strategy to deliver the system as a single, commercial, over the shelf package. This decision was endorsed by Cabinet and is expected to fast track the delivery of the complete system. The lead sites that were used for the piloting of the developed modules continued to use the systems in 2012/13 and 2013/14. The unit will enter into new contracts in early 2014/15 that will support the new direction taken and is anticipating that

the project will not be extended beyond what was originally planned. The unit effectively maintained the transversal systems and achieved 99 per cent availability for 2012/13 at a cost of R217 million. The cost for achieving the same results in 2013/14 was R262.3 million. This subprogramme had a staff complement of 39 at the end of November 2013.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on achieving at least 98 per cent systems availability by maintaining the current financial systems; and developing and implementing the revised approach for the integrated financial management system. Thus, computer services and software are the largest spending items in this subprogramme. To date, the department has developed and piloted the system's human resource management, procurement management and asset management modules at lead departments. However, in 2013/14 Cabinet approved that the development and rollout of the system be fast tracked to the rest of government. The department expects to enter into new contracts that support this decision to fast track the delivery of the system, which is expected to increase spending on software significantly over the medium term.

With the funds allocated to spending on computer services and employees between 2010/11 and 2013/14, the subprogramme achieved a systems availability rate of 99 per cent in 2012/13 and 2013/14 by using the expenditure to maintain the current financial system. As the integrated financial management system is rolled out over the medium term, the rate of growth in spending on computer services is projected to decrease as fewer maintenance costs will be incurred in maintaining legacy systems. Over the same period, expenditure on compensation of employees is expected to increase, driven by adjustments for improved conditions of service.

The subprogramme's funded establishment is expected to remain at 42 over the medium term. At the end of November 2013, 3 posts on the funded establishment were vacant due to natural attrition.

## Subprogramme: Financial Management Policy and Compliance Improvement

This subprogramme is responsible for improving financial management, developing financial management regulatory frameworks for each sphere of government, aligning reporting frameworks with local and international best practice; developing and implementing accounting policies, and improving the financial management, risk management and internal audit capacity in government. Activities include providing assistance in investigations of malpractice in all spheres of government. 12 fraud and corruption cases were investigated across departments and municipalities in 2013/14, with some leading to arrests, among other compliance measures the department is undertaking to enforce compliance with public sector financial management legislation. R118.6 million was spent in 2012/13 and the subprogramme had a budget allocation of R118.1 million in 2013/14. This subprogramme had a staff complement of 118 at the end of November 2013.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on continuing to assist public sector institutions to adopt the public sector risk management framework by training relevant structures to perform their monitoring and oversight functions in the risk management process. These activities are carried out by the department's funded establishment, which stood at 118 posts at the end of November 2013, and is supported by spending on consultants. The number of personnel in the subprogramme is expected to increase to 128 over the medium term, and this will drive the increase in spending on compensation of employees.

Consultants are used to provide high end audit skills, build financial reporting templates and conduct forensic investigations. In 2012/13, expenditure on consultants increased significantly to provide for the forensic audits required in response to the need to combat corruption. In 2012/13, there were 23 forensic investigations based

on reported allegations of fraud and corruption and performance audits were conducted in 5 government departments by the second quarter of 2013/14, some of which have led to investigations that are yet to be concluded.

To enhance the financial management and compliance skills and competency levels in government over the medium term, the capacity building unit will develop and implement the public finance management talent pipeline policy, framework and practice notes, and the knowledge management framework. By the end of December 2013, 3 230 learners were registered for attaining minimum competency levels for municipalities and 2 500 learners received training opportunities through the local government sector training authority in 2013/14. Over the medium term, the governance monitoring and compliance unit expects to support the anti-corruption task team targets to refer 20 cases for criminal proceedings, where appropriate, and review 4 to 8 cases per year of identified breakdowns in internal controls in procurement processes and transversal systems. The unit that supports the implementation of the Municipal Finance Management Act (2003) expects to continue to support local government by convening meetings and workshops to address implementation challenges, issuing circulars and rendering technical assistance to municipalities requiring assistance. This includes the development and implementation of the financial management capability maturity model for the assessment of municipalities' capacity in 2014/15.

## Programme 6: International Financial Relations

### Objectives

- Advance South Africa's national economic interests and those of Africa more generally by undertaking regular strategic analyses, engagements and negotiations at regional and global financial and economic forums, on an ongoing basis.
- Increase sub-Saharan Africa's voice and South Africa's influence in multilateral international institutions such as the International Monetary Fund, the World Bank Group, the G20 forum, and other influential global financial and economic forums by:
  - advancing the reform of these institutions on an ongoing basis through the lobbying of regional groupings
  - securing the third board chair for the International Monetary Fund for the benefit of sub-Saharan Africa by the end of 2014.
- Enhance South Africa's participation in strategic regional, continental and global governance institutions by seconding South Africans into strategic positions of these institutions, informed by government's secondment policy, on an ongoing basis.
- Promote regional economic integration in the Southern African Development Community (SADC) and strengthen economic links within Africa by:
  - developing and implementing a policy of one-stop border posts by 2014 in collaboration with the South African Revenue Service, and the departments of International Relations and Cooperation, Police, and Home Affairs
  - providing ongoing support to the SADC committees dealing with economic and financial protocols
  - supporting the Southern African Customs Union to meet regional challenges on an ongoing basis.

### Subprogrammes

- *Programme Management for International Financial Relations* supports the planning, monitoring and delivering of the programme's activities. The unit oversees South Africa's representation in international and regional financial institutions; manages bilateral and multilateral relationships on behalf of National Treasury; and plans, implements and monitors programmes and activities that advance South Africa's national interests. Activities include supporting the planning, monitoring and delivery of the programme's activities. R9 million was spent on these activities in 2012/13. In 2013/14, R16.4 million was the budget allocated. This subprogramme had a staff complement of 6 at the end of November 2013.
- *International Economic Cooperation* focuses on improving South Africa's participation in international and regional economic institutions. This entails working through key economic institutions and forums such as the African Development Bank, the United Nations Economic Commission for Africa, the New Partnership

for Africa's Development (NEPAD), the G20, and the Brazil-India-China-South Africa (BRICS) group of countries. Key outputs include: the Collaborative Africa Budget Reform Initiative that was successfully established as an independent regional organisation in 2012/13, and the World Economic Forum Africa 2013 conference, which was held in May 2013. R21 million was spent in 2012/13. In 2013/14, this subprogramme had a budget allocation of R25.7 million. This subprogramme had a staff complement of 31 at the end of November 2013.

- *African Integration and Support* is mainly for transfers towards National Treasury's participation in African interventions and arrangements that are mainly to bring about support and integration between African states and institutions. The subprogramme facilitates the transfer of funds to Lesotho, Namibia and Swaziland for the common monetary area compensation. Under this agreement, South Africa compensates the member countries for the use of the Rand currency within their respective borders. In 2013/14, R613.9 million was paid to the member countries compared to R490.7 million in 2012/13. The subprogramme also makes contributions to the African Institute for Economic Development and Planning, a subsidiary body of the Economic Commission for Africa, with the objective of providing formal training to policy-makers and advisory services to African governments and regional organisations. South Africa will start paying its assessed contribution of \$80 000 per year to the African Institute for Economic Development and Planning in 2013/14. R492.3 million was incurred in 2012/13, while in 2013/14, this subprogramme had a budget allocation of R619 million.
- *International Development Funding Institutions* provides for subscriptions and contributions to international development funding institutions and banks. The subprogramme transfers funds to the African Development Bank and the African Development Fund to buy shares and subscriptions, and for accelerated encashment schedules to support African development; and the World Bank Group for providing concessional loans and grants to low income countries and contributes to the general and selective capital increases of the bank. The subprogramme transferred R121.1 million to the organisations in 2012/13 and transferred R346.4 million for the subscription of shares in the African Development Bank and World Bank. The World Bank country partnership strategy for South Africa was presented and approved by Cabinet in September 2013. South Africa has been allocated 3 560 shares in the African Development Bank that were offered from the bank's fourth, fifth and sixth general capital increases. These will contribute to the strategic objective of increasing influence within the bank in order to facilitate the developmental agenda of Africa. R467.5 million was spent in 2012/13, while in 2013/14 this subprogramme had a budget allocation of R415.9 million.
- *International Projects* transfers funds to international projects and interventions for various causes such as building capacity, and providing medical support to disaster and impoverished areas. To this end, National Treasury contributes to the Commonwealth Fund for Technical Cooperation and the International Funding Facility for Immunisation. The facility transfers funds to the GAVI Alliance, a public-private global health partnership, to support health care, particularly the provision of vaccines to reduce the number of vaccine preventable deaths among children in low income countries. The United Kingdom, France, Italy, Norway, Australia, Spain, the Netherlands, Sweden and South Africa have committed \$6.3 billion to the facility over 23 years. Every year, 22 million children miss out on vaccines against common diseases and 1.5 million children die from easily preventable diseases. In 12 years, the GAVI Alliance has prevented over 5.5 million future deaths. R13.227 million was spent in 2012/13, while in 2013/14, this subprogramme had a budget allocation of R14.991 million. R10 million was contributed towards the International Funding Facility for Immunisation in 2013/14.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on directing funds to international obligations to manage South Africa's interests in shaping regional and global policies to advance the economic, financial and developmental objectives of the country and the rest of Africa. Thus, transfer payments and payments for financial assets for the equity purchase of shares constitute more than 95 per cent of this programme's expenditure. Most of the allocation for transfer payments is to the common monetary area compensation to pay for Rand circulation in neighbouring countries, the African Development Bank and African Development Fund to recapitalise the entities and buy shares, and the replenishment of the African Development Fund.

Spending is expected to increase over the medium term, as a result of the allocation for the African risk capacity in the *African Integration and Support* subprogramme. The increase is due to the department's commitments to the African Union to assist member states develop and improve their planning for and responses to extreme weather events and natural disasters. Expenditure on compensation of employees is set to increase over the medium term due to cost of living adjustments to salaries and the programme increasing its establishment, especially for research capacity, from 37 filled positions at the end of November 2013 to 41 positions over the medium term. Spending on goods and services is expected to decrease significantly, specifically on travel and subsistence, as the department supports the call for reduction in costs. As part of Cabinet approved reductions, the department cut R25 million, mainly from the common monetary area compensation allocation due to lower than expected Rand circulation in neighbouring countries, as well as to close the financial and technical support function in the *African Integration and Support* subprogramme, which had not incurred spending since 2006/07. The department does not expect that this will affect its ability to carry out its mandate.

## Programme 7: Civil and Military Pensions, Contributions to Funds and Other Benefits

### Objectives

- Ensure the effective administration of pension and retirement policies by completing annual reviews and implementing recommendations in accordance with stakeholder agreements reached on pension reforms, post-retirement medical benefits, political-office bearers and pension legislation.
- Provide good services to clients by:
  - processing member applications and making payments as required by applicable legislation punctually
  - processing post-retirement medical benefit applications within 60 days of receipt and paying all medical subsidies within 7 days of receiving a valid and correct claim
  - activating and tracing all redundant claimants of about 1 200 members for the Special Pensions Amendment Act (2008) by the end of March 2015, and ensuring that the administration deals with applications within 3 months of receipt
  - accurately processing and paying injury on duty benefits to civil servants within 45 days of receiving complete documentation

- ensuring punctual and accurate payments of military pensions within 45 days of receipt and medical accounts within 30 days of receipt of the claim, while maintaining a zero backlog.

## Subprogrammes

- *Government Pensions Administration Agency* provides administrative services in accordance with the Temporary Pension Fund Act (1979), the Associated Institution Pension Fund Act (1963); and post-retirement medical subsidies, as provided for and regulated by Public Service Coordinating Bargaining Council resolutions, the Military Pensions Act (1976), injury on duty payments in terms of the Compensation for Occupational Injuries and Diseases Act (1993) and special pensions in terms of the Special Pensions Act (1996) on behalf of National Treasury. By the third quarter of 2013/14, 100 per cent of the benefits were paid accurately by the agency and 88.3 per cent of these were paid within 60 days. The department will transfer R51.8 million to the agency to administer the pensions and benefits by the end of 2013/14.
- *Civil Pensions and Contributions to Funds* provides for the processing and payment of pensions and medical subsidies to retired civil servants; and pension payments to the injured, disabled and the dependants of deceased civil servants and to former struggle veterans in terms of various statutes, collective bargaining agreements and other commitments. The *Government Pensions Administration Agency* subprogramme administers all payments related to this subprogramme. The bulk of this subprogramme's budget is transferred for payments to households in terms of member pensions, and post-retirement medical subsidies, which makes bulk payments and other benefit payments. R2.6 billion was transferred in 2012/13. By the third quarter of 2013/14, R2.2 billion had been transferred to beneficiaries.
- *Military Pensions and Other Benefits* provides for the processing and payment of military pension benefits and medical claims arising from injuries sustained during various wars, including South Africa's liberation wars. These include payments to former members of the legislative assembly of the former Venda, Transkei, Ciskei and Bophuthatswana governments; judges or their widows in terms of the Judges' Remuneration and Conditions of Employment Act (1989); and former state presidents, among other benefits. In 2012/13, 67.7 per cent (R370 million) of the subprogramme's spending was towards the payment for the debt obligation of the non-statutory forces transfer payment, and 23.2 per cent of the allocation was for the South African Citizen Force. By December 2013, R154.7 million had been transferred, mainly for the South African Citizen Force.

## Expenditure trends

Spending in the *Military Pensions and Other Benefits* subprogramme increased between 2010/11 and 2013/14 mainly due to the extension of payment for the revised non-statutory forces dispensation to include all former members who entered into employment contracts with other government departments and institutions that contribute to the Government Employees Pension Fund. The bulk of the programme's expenditure over this period was in the form of transfer payments to households, which goes mainly towards post-retirement medical scheme contributions, the political office-bearers' pension fund, injury on duty payments and special pensions.

The spending between 2010/11 and 2013/14 reduced the backlog of applications for benefits, such as the injury on duty benefits, by 78.3 per cent. It also increased compliance with stakeholder service level agreements by 95.5 per cent. As the Government Pensions Administrations Agency administers the pensions and contributions payments on behalf of the department, spending on goods and services and on the *Government Pensions Administrations Agency* subprogramme grew at an average rate of 10.9 per cent between 2010/11 and 2013/14, in line with the improved performance.

Over the medium term, the spending focus will continue to be on: providing administrative support to the department in terms of managing the post-retirement pension payout, medical subsidies and other benefits including special pensions; the automation of core processes to enhance service delivery; and the reduction of backlogs on the different benefits such as the injury on duty and special pensions. Thus far, the modernisation project has automated 30 per cent of the core processes and has a total project cost of R614 million, including the contribution from the Government Employees Pension Fund.

R15 million has been reduced from the programme's post-retirement medical benefits over the medium term to give effect to Cabinet's call for cost containment. The department does not expect that this reduction will have an adverse effect on the programme's service delivery.

## Programme 8: Technical Support and Development Finance

### Objectives

- Build public sector capacity by offering a combination of diagnostic services, organisational development and programme and project implementation support over the medium term period.
- Improve capacity in public private partnership and capital projects planning and oversight by:
  - providing advisory support to all public private partnership and large capital projects in development and implementation over the medium term

- facilitating adherence of state organs to National Treasury’s financial management frameworks and infrastructure planning and implementation frameworks as and when requested
- building sustainable capacity in selected municipalities and provincial departments of health, education and public works to improve infrastructure delivery through the implementation of the infrastructure delivery improvement programme over the medium term
- strengthening the capacity of provincial treasuries and municipalities to fully implement the Municipal Finance Management Act (2003) and associated financial reforms by appointing more than 1 500 financial management graduate interns over the medium term to support them
- promoting and mobilising public and private sector investment in community and economic infrastructure by supporting 62 municipalities in planning and implementing integrated neighbourhood development programmes in 150 townships over the medium term
- improving the long term employment prospects for unemployed people, particularly youth and women, by promoting innovative and partnership based approaches to job creation and business opportunities, and supporting project development in the implementation of the Jobs Fund over the medium term with an expected 150 000 sustainable job opportunities created.

## Subprogrammes

- *Programme Management for Technical Support and Development Finance* provides project management support on major national infrastructure projects and administrative support to the inter-departmental task team on social security and retirement reform. In 2012/13, a project appraisal methodology for capital projects was finalised and was supported by training in cost-benefit analysis, studies in various aspects of project costing and the development of a framework for financing public infrastructure. In 2013/14, the unit continued to monitor major infrastructure projects such as the renewable energy independent power producer procurement programme and the Eskom build programme to ensure delivery of the required power infrastructure. This subprogramme had a staff complement of 9 at the end of November 2013.
- *Local Government Financial Management Support* provides for transfers to municipalities and assists them with building financial management capacity regulated in terms of the Municipal Finance Management Act (2003). This includes providing technical assistance and support to provincial treasuries and municipalities through the placement of financial experts in these areas to facilitate skills and capacity transfers. Outputs include: the improved capacity of provincial treasuries to undertake their responsibilities in terms of sections 5 and 6 of the act, the improved capacity of municipalities to implement the act, the improved overall compliance with the act, and improved financial management performance. There were 78 municipalities and 8 provinces receiving support in 2013/14. The phasing in of the reporting template for the financial management grant, first introduced in 2012/13, is progressing well. The subprogramme activities are performed by the Office of the Accountant-General, using staff from the Municipal Finance Management Act (2003) implementation unit.
- *Urban Development and Support* incorporates the neighbourhood development partnership grant and the integrated cities development grant. Through the neighbourhood development partnership grant, the subprogramme aims to improve the quality of life of people living and working in townships to eradicate spatial inequality and to facilitate the creation of liveable, sustainable, resilient, efficient and integrated towns and cities. By the second quarter of 2013/14, the programme had cumulatively approved 260 catalytic projects against a target of 300, and 8 projects were under construction. The integrated cities development grant has been introduced to respond to the implementation support needs of cities in four critical areas of the built environment: governance and planning, human settlements, public transport, and environmental sustainability and climate resilience. The grant is being implemented through the provision of technical assistance, peer learning and collaborative performance reviews linked to incentives. In addition, the grant is being introduced to provide incentives for cities to strengthen planning and delivery capacity, and target infrastructure spending to transform the inefficient spatial form of South African cities so that they are more inclusive, productive and sustainable. This subprogramme had a total budget of R693 million in 2013/14.
- *Employment Creation Facilitation* is discussed in more detail below.
- *Government Technical Advisory Centre* provides technical assistance to the different spheres of government through advisory and capacity building initiatives focused on public private partnerships, project

management, infrastructure service delivery and public finance information systems. In 2012/13, the consolidation of technical assistance into a government component began; and a review of the public private partnership advisory and regulatory functions was completed. This is being fed into the process of establishing a government component for the provision of advisory services. The establishment of the Government Technical Advisory Centre component was finalised in 2013/14 and appointments are in progress to facilitate the administration process. The government component will be effective in early 2014/15. This subprogramme had a staff complement of 38 at the end of November 2013.

- *Infrastructure Development Support* provides technical support on infrastructure development planning and implementation to local and provincial government by providing technical expertise, advisory services and skills training, including placement of graduate interns in local government. In 2012/13, 120 officials from provincial and national departments were enrolled in the foundation course for infrastructure planning and maintenance lifecycle. In 2013/14, officials from infrastructure departments were trained in the intricacies of the course and 70 per cent of those trained have implemented the initiative. In addition, 37 technical assistants were deployed to the provincial departments of basic education and health to assist with the delivery of infrastructure projects.

## Expenditure trends

The spending focus over the medium term will be on supporting infrastructure development through the neighbourhood development partnership grant and integrated cities development grant. Through funding to the neighbourhood development partnership and the local government financial management and skills development grants, the department expects that capacity will be built to: support the financial reforms in local and provincial government; enable infrastructure development; and promote public private partnership objectives.

Over the medium term, transfer payments are allocated to municipalities to fund the development of financial management and infrastructure capacity. This will be done mainly through the implementation of the local government financial management and infrastructure skills development grants. Through the integrated city development grant, the city support programme has been allocated an additional Cabinet approved R150 million over the medium term. The infrastructure skills development grant, which received its first allocation in 2012/13, is expected to provide for approximately 675 graduates and interns training in infrastructure with the intention to be registered as professional artisans, technicians, engineers and other specialists in line with the national development plan of professionalising local government and creating capable staff and the national development plan's outcome of a capable state. Most of the spending on goods and services over this period is on consultants who provide specialist infrastructure and technical support that the department does not have the internal capacity to provide.

The programme had a staff complement of 58 in 2013/14. The programme is expected to grow by 7 posts to a funded establishment of 62 over the medium term. The 7 vacancies will be filled mainly in efforts to enhance the division's ability to support assessment of major capital projects and support for infrastructure development.

### Subprogramme: Employment Creation Facilitation

This subprogramme, which includes the Jobs Fund, aims to give effect to the new growth path and national development plan by facilitating and supporting innovative approaches and initiatives that contribute to the development of the economy; and aims to provide sustainable new job opportunities. With a total allocation of R9 billion, the subprogramme is expected to create 150 000 jobs over its lifespan. The Development Bank of Southern Africa is the implementing agency for the fund, and it will co-finance successful proposals from government departments, municipalities, the private sector and non-governmental organisations. In 2012/13, 20 funded projects were visited, site reports were prepared and lessons were shared with grantees and Development Bank of Southern Africa officials to ensure ongoing governance and the monitoring and evaluation of the projects. Furthermore, the electronic reporting modules of the grant management system were completed and grantees reported online in the fourth quarter of 2012/13. By the third quarter of 2013/14, R4.5 billion in funding had been approved for 89 projects since the inception of the subprogramme. This subprogramme had a staff complement of 3 at the end of November 2013.

## Expenditure trends

The spending focus over the medium term will be on continuing to support initiatives that support sustainable job creation. The subprogramme will strive to enhance administrative processes by the implementing agent, the Development Bank of Southern Africa, and ensure that approved projects are supported to derive the social and economic value and jobs anticipated to be created. The subprogramme aims to leverage R10 billion from third party participation through the investment of R9 billion over the life of the Jobs Fund. By 2012/13, R3.4 billion had been allocated to 66 projects and this had potentially raised R3.5 billion in matched contributions towards job creation initiatives. By the third quarter of 2013/14, 93 941 new jobs were contracted by the fund to 89 approved projects, with approved grant funding of R4.5 billion.

Over the medium term, expenditure is expected to increase to R1.9 billion in 2014/15 and decrease in the following years to cater for funded projects requirements in 2014/15, winding down in following years as the fund and its projects reach their maturity and completion. Expenditure is expected to increase to cater for increased monitoring of the projects' performance and provision of support, reflected by the increase in spending on compensation of employees and goods and services. To this end, the unit aims to recruit for 5 positions to assist in the administering and evaluation of the fund. The current programme has been managed by the project management unit of the department and the implementation agency, the Development Bank of Southern Africa. It has been deemed prudent to recruit for dedicated staff to support the increasing administration and monitoring requirements in relation to the fund.

## Programme 9: Revenue Administration

### Objectives

- Centralise registration, accreditation and licensing capabilities over the medium term by improving the South African Revenue Service's registration database, and moving the customs service into the unified trader and traveller master using web based registration and entity level risk assessment.
- Contribute to revenue generation and improved compliance over the medium term by:
  - ensuring that 90 per cent of all annual import declarations are submitted by 10 per cent of traders and South African Revenue Service targets
  - increasing annual trader declaration by 50 per cent
  - achieving an uptake in electronic declaration (Southern African Customs Union) of 95 per cent.
- Manage migration, customs and land borderline control services and efficiently coordinate other departments in the ports of entry by:
  - establishing a border management agency over the medium term
  - achieving a 100 per cent success rate in investigative audits, seizures of counterfeit cigarettes, counterfeit CDs and DVDs, clothing, drug cases, and medicament continually.
- Manage the South African Revenue Service's R60 billion plus debtors book efficiently by:

- establishing and employing an integrated debt management solution
- recovering cash from the debtors book of R11 billion per year over the medium term.
- Improve the processing of payments and the accuracy of payments referencing of incoming payments by achieving a percentage reduction in outstanding returns of 5 per cent over the medium term.
- Improve payment reconciliation and the allocation of PAYE tax by achieving an average processing turnaround time for personal income tax returns of 2 working days over the medium term.

## Subprogrammes

- *South African Revenue Service* receives transfers to provide core tax administration services and maintain the IT services that support its operations. The entity's operational activities include branch operations, taxpayer audits, call centre operations, processing operations, debt management and IT support. In 2012/13, R9.1 billion was transferred to the entity. R9.5 billion was allocated to support these activities in 2013/14.

## Expenditure trends

This programme makes transfer payments to the South African Revenue Service to fund the entity's mandate as encompassed in the South African Revenue Service Act (1997). Spending by the entity is mainly on compensation of employees, goods and services, and capital assets in its endeavour to continue implementing heightened border control activities and other customs projects, and the modernisation of ICT systems. The South African Revenue Service's ongoing modernisation of ICT systems was the reason for the 71.5 per cent increase in the capital transfer to the entity between 2010/11 and 2013/14. This enabled the entity to enhance its revenue collection efforts through: the improvement of on-time filing in personal income tax through e-filing; the rollout of the re-engineered customs front end solution, which has improved turnaround time at the border posts; the implementation of the new debt management case solution; and changes to the value added tax refund process.

Over the medium term, expenditure on the transfer payment to the South African Revenue Service is expected to increase to R10.5 billion, mainly to fund its operational activities. This growth is marginal due to a Cabinet approved baseline reduction of R1.4 billion on the transfer over the medium term. The reduction is to be effected against the operational transfer to the entity and is not expected to have a negative impact on performance as the entity has an adequate accumulated surplus to cover its operations.

## Programme 10: Financial Intelligence and State Security

### Objectives

- Combat money laundering and terror financing activities by continuously monitoring and ensuring compliance with the Financial Intelligence Centre Act (2001) and imposing certain duties on institutions and other persons who might be used for money laundering and terror financing.
- Combat crime and financial terrorism by:
  - providing services and intelligence reports on suspected money laundering to law enforcement authorities such as the South African Revenue Service and the State Security Agency to ensure compliance with the law and contribute to state crime prevention strategic objectives on an ongoing basis
  - collaborating closely with counterparts in African countries and in international organisations as part of a web of nodal points for information exchange on an ongoing basis
  - collaborating with the financial action task force, which reports to the G20 summit processes and several standards setting bodies on an ongoing basis
  - processing 3 568 intelligence information requests from national and international law enforcement authority counterparts over the medium term.

### Subprogrammes

- *Financial Intelligence Centre* facilitates the transfer payment to the Financial Intelligence Centre, which enhances the integrity of the South African financial system while creating new means for investigating authorities to combat financial criminal activity. This subprogramme's total budget is transferred in full to the centre. In 2012/13, R197.3 million was transferred to the centre. R241 million was allocated for transfer in 2013/14.
- *Secret Services* facilitates the transfer payment to the South African Secret Services account, in order to provide government with accurate, topical, policy relevant and timeous foreign intelligence to promote, enhance and protect national security and the interests of South Africa and its citizens. This subprogramme's total budget is transferred in full to the account. In 2012/13, R3.784 billion was transferred to the Secret Services' account. R3.934 billion was allocated for transfer in 2013/14.

## **Expenditure trends**

This programme's entire allocation is transferred to the Financial Intelligence Centre to combat financial crime and corruption, and the South African Secret Services' account in terms of the Secret Services Act (1978). The increases in transfers to the Financial Intelligence Centre between 2010/11 and 2013/14 were mainly for the enhancement of ICT systems to improve the centre's capacity to monitor and detect money laundering and other activities. The growth in the transfer to the South African Secret Services' account mainly funded growth in operational expenditure.

Over the medium term, expenditure on capital transfers to the Financial Intelligence Centre is expected to decrease marginally. This is mainly because of the completion of the ICT enhancements. An additional R90 million has been allocated to the centre over the medium term to provide for the entity's move to its new premises and the expansion of personnel resources. The increase in the transfer to the South African Secret Services' account provides for the modernisation of its systems over the medium term.

## **Public entities and other agencies**

### **Development Bank of Southern Africa**

#### **Mandate and goals**

The Development Bank of Southern Africa was reconstituted in terms of the Development Bank of Southern Africa Act (1997) as a development finance institution with the primary purpose of promoting economic development and growth. The bank also promotes human resource development and institutional capacity building by mobilising financial and other resources from the national and international private and public sectors for sustainable development projects and programmes in South Africa and regions in the rest of southern Africa.

The bank aims to provide financial and non-financial support to the social and economic infrastructure sectors in South Africa and the Southern African Development Community region. In 2012/13, the bank embarked on an extensive organisational review process, which focused on improving the impact and effectiveness of the bank, with the express intent of accelerating and deepening delivery in the key priority sectors of energy, transport and logistics, water, ICT, health, and education. As a result, the bank was restructured and the new strategy was adopted. The bank aims to accelerate infrastructure financing in South Africa that is targeted at municipalities, state owned companies, independent power producers, public private partnerships, and the rest of Africa. Furthermore, the bank aims to become a preferred source of innovative, integrated and workable infrastructure solutions, offering a one-stop solution through its multiple roles as financier, adviser, partner, integrator and implementer. This strategy therefore spans both financing and non-financing developmental activities.

The bank's strategic goals over the medium term are to:

- present the Development Bank of Southern Africa Amendment Bill to Parliament to enable the provision of infrastructure support to the rest of Africa
- appraise, plan and monitor the implementation of development projects and programmes
- facilitate the participation of the private sector and community organisations in development projects and programmes
- provide technical assistance, particularly in respect of human resources development and training with regard to the identification, preparation, evaluation, financing, implementation and management of development projects and programmes
- fund or mobilise wholesale funding, as determined in regulations, for initiatives to minimise or mitigate any adverse effect of development projects or programmes on the environment
- assist international, national, regional and provincial initiatives to achieve an integrated finance system for development
- provide project preparation funds to support infrastructure deal pipeline flow in favour of, among others, public-private and public-public partnerships and regional projects, such as the North-South corridor fund

operations with the focus on supporting economic infrastructure development and maintaining financial sustainability with the objective of generating and sustaining inflation linked growth.

## Selected performance indicators

## Expenditure trends

The Development Bank of Southern Africa generated 97.6 per cent of its total revenue between 2010/11 and 2013/14, mainly from interest income from loans and borrowing. Interest income is largely derived from the development loan book, with loans mainly made to municipalities, state owned companies, independent power producers, public private partnerships and the rest of Africa for infrastructure development. Over the medium term, revenue is expected to increase by a large margin mainly because of increased interest payments on the development loan book, as well as increased payments on disbursement goals.

Before the implementation of the organisational and strategic review conducted by the bank from 2012/13 to 2013/14, interest payments related to funding debt securities, lines of credit, and funding under repurchase agreements accounted for over half of the bank's spending. Losses due to impairments of loan and equity investments, which resulted in revaluations being effected on these items in spending on goods and services, also contributed to the significant spending.

Expenditure increases between 2010/11 and 2013/14 were due to the revaluation of impairment on loans and equity investments, and revaluation losses on financial instruments. These factors contributed to the net loss of R826 million in 2012/13. National Treasury has recapitalised the bank with R7.9 billion over the medium term, of which R2.4 billion was transferred in 2013/14 to facilitate the bank's development impact and to bridge the infrastructure gap.

At the end of November 2013, the bank had an establishment of 496 funded posts, of which 401 were filled. The number of posts decreased from 839 in 2010/11 to 496 in 2013/14 as a result of the restructuring and phasing out of the development fund, and the transfer of the Siyenza Manje project to the Department of Cooperative Governance and Traditional Affairs. The number of filled posts is expected to increase to 496 over the medium term. The bank used consultants to perform the organisational review process and to assist management with the implementation of the revised strategy, as these skills could not be sourced from within the bank.

Building on the results of the organisational and strategic review, the bank's spending focus over the medium term will be on supporting its development finance objective by providing financial support to the infrastructure sectors. This financial support will expand and enable the delivery of basic and social services; provide and build human and institutional capacity; and promote broad based economic growth, efficiency, fixed capital formation and regional integration.

The bank's spending focus over the medium term will also be on financing initiatives across South Africa and other SADC countries, mainly in energy, roads and drainage, water and sanitation, and ICT, with the aim of creating jobs and building capacity for economic growth. Thus, the projected increase in loan disbursements over the medium term of over R1 billion is expected to accelerate the bank's delivery on its development mandate. A general impairment provision based on funding activities is included in the forecast for the period 2014/15 to 2016/17. This will rebuild the bank's asset base and allow loan disbursements to increase.

## **Government Pensions Administration Agency**

### **Mandate and goals**

The Government Pensions Administration Agency provides pensions administration services to the Government Employees Pension Fund in terms of the Government Employees Pension Fund Act (1996), the Temporary Employees Pension Fund Act (1979), the Associated Institutions Pension Fund Act (1963), the post-retirement medical subsidies as provided for and regulated by Public Service Coordinating Bargaining Council resolutions, military pensions in terms of the Military Pensions Act (1976), injury on duty payments in terms of the Compensation for Occupational Injuries and Diseases Act (1993), and special pensions in terms of the Special Pensions Act (1996). The agency also provides pensions administration services on behalf of the National Treasury. It is mandated to ensure that benefits are paid on time, maintain accurate information on benefits paid and payable pension benefits, communicate with members, and build relationships with employer government departments.

The agency's overarching goal is to achieve greater client satisfaction through improved service delivery, and through service level agreements that have been drawn up to monitor service delivery targets for administering the processing and paying of benefits, including the improvement of turnaround times.

The agency's strategic goals over the medium term are to:

- ensure that customers and clients are satisfied
- modernise benefit administration to improve efficiency
- ensure that employees are satisfied, efficient and effective
- transform the agency's operational effectiveness by modernising systems
- build mutually beneficial partnerships with employer departments.

## Expenditure trends

The Government Pensions Administration Agency receives 93 per cent of its revenue from the Government Employees Pension Fund and 7 per cent from National Treasury as a transfer. Revenue increases across the seven-year period due to the allocation of funds to the agency for the modernisation programme.

The agency's spending in 2013/14 increased significantly due to the modernisation projects in the business enablement programme. The projects aim to improve service delivery by enhancing the agency's information technology infrastructure, optimising its office space and employing 44 new personnel as client service agents. The project allowed the agency to deploy mobile offices to remote areas of the country in order to reach those fund members, pensioners and beneficiaries who had to travel long distances to the agency's offices. It also automated the payment of benefits, which reduced errors and turnaround times. 27 employer departments were signed on to the e-channel system.

The agency's spending focus over the medium term will be on finalising the modernisation programme by rolling out the retiring member campaign, which aims to raise awareness about the process for exiting the pension fund process. The agency intends to appoint an additional 422 employees over the medium term to support the modernisation programme's new business processes, capacitate the agency's mobile offices, and run

the retiring member campaign. Expenditure on compensation of employees is projected to increase over the medium term as a result.

The modernisation programme also increased spending on computer services and consultants between 2010/11 and 2013/14. However, as the programme is set to come to an end over the medium term, expenditure on these items is expected to decrease accordingly. The agency also plans to control increases in expenditure on goods and services by implementing cost saving measures. These include installing video conferencing facilities to reduce the cost of travel and accommodation, and implementing voice over internet protocol to reduce communication costs.

## Land and Agricultural Development Bank of South Africa

### Mandate and goals

The mandate of the Land and Agricultural Development Bank of South Africa, as a development finance institution, is to address agricultural and rural development in South Africa. The bank operates in the agricultural and agribusiness sectors and is regulated by the Land and Agricultural Development Bank Act (2002) and the Public Finance Management Act (1999). The bank is expected to play a pivotal role in advancing agricultural and rural development.

The bank's strategic goals over the medium term are to:

- continue to increase its development focus by building more support structures for emerging farmers and strengthening the agriculture value chain
- increase the amount of development lending in its loan book by R5 billion
- create 360 000 new job opportunities and maintain an average of 250 000 jobs annually through lending activities
- contribute to the equitable ownership of agricultural land, in particular the increase of ownership of agricultural land by historically disadvantaged individuals
- promote agrarian reform, land redistribution and development programmes aimed at historically disadvantaged people.

1. Rand million.

## **Expenditure trends**

The Land and Agricultural Development Bank of South Africa generated 97.2 per cent of its revenue between 2010/11 and 2013/14 from interest on loans and the provision of support services. Total revenue increased between 2010/11 and 2013/14 due to a well managed borrowing plan, a sustainable loan book strategy that accelerated disbursement loans to emerging markets, the reclassification of suspended income, and a drop in the lending rate. Over the medium term, revenue is expected to increase to enable the bank to deliver on its development projects, such as the disbursing of short, medium and long term loans to the agricultural sector and the provision of support for farmers. An additional R50 million will be received from the Department of Agriculture in 2014/15 to enable the bank to support the implementation of the retail emerging market model.

The spending focus over the medium term will be on: financing emerging farmers; growing the investment portfolio and delivering better performance from investments; promoting equitable ownership of agricultural land, in particular the increase of ownership of agricultural land by historically disadvantaged persons; and agrarian reform through the use of land redistribution and development programmes aimed at historically disadvantaged individuals.

The bank is making strides in delivering on its development mandate to achieve the target of R6 billion disbursed by 2016/17. Together with the Department of Rural Development and Land Reform, the bank finalised an agreement for the implementation of the curatorship and emerging farmers support structures, which resulted in the National Treasury recapitalising the bank by R3 billion since 2009/10 to maintain its liquidity programme. The balance of R500 million will be transferred in 2014/15.

The improvement in service delivery is exemplified by the R139 million that was disbursed in 2012/13 to fast track the financing of development farmers through intermediaries such as the Department of Agriculture, Forestry and Fisheries. In addition, 16 of the 238 farms that were identified for resuscitation have been resuscitated by the bank's interventions through a partnership with the Department of Rural Development and Land Reform. The bank also directly disbursed R24 million to emerging farmers in 2012/13, which has enabled farmers who are the bank's clients and who defaulted on their loans, to continue farming.

Expenditure on compensation of employees also increased between 2010/11 and 2013/14 due to the growth in the number of professional employees hired to improve service delivery. Spending on this item is expected to grow at an average rate of 5.6 per cent over the medium term mainly to provide for inflation related adjustments to salaries as the number of personnel is expected to remain constant over this period. The bank had a funded establishment of 594 posts, of which 48 were vacant as at 30 November 2013. The vacancies were mainly due to natural attrition. As the bank builds internal capacity across the seven-year period, spending on consultants decreases accordingly as activities previously performed by consultants are taken over by the bank's own staff.

Interest payments were the largest spending item in expenditure on goods and services between 2010/11 and 2013/14 and related to the funding instruments used to fund the loan book. The drop in interest payable between 2010/11 and 2012/13 was attributable to the decline in the prime lending rate and an increase in the loan book of just more than R2 billion over the same period. Interest expenses increased to R822.8 million in 2011/12 because the loan book grew significantly, which saw funding liabilities increase by R6 billion. Over the medium term, interest expenses continue to represent 74.0 per cent of total spending and are expected to increase as the bank continues to expand its operations.

## **Public Investment Corporation**

### **Mandate and goals**

The Public Investment Corporation manages assets for the Government Employees Pension Fund, and is one of the largest investment managers in Africa. The corporation is mandated to invest funds on behalf of its clients, based on the investment mandates as agreed with each client and approved by the Financial Services Board. The corporation's clients are public sector entities, most of which are pension, provident, social security, development and guardian funds. The corporation is a registered financial services provider.

The corporation's strategic goals over the medium term are to:

- grow the property assets under its management

- outperform integrated development plan benchmarks
- streamline its property management business
- incorporate environmental, social responsibility, and governance principles into the property investment process
- enhance its management capabilities.

## Expenditure trends

Most of the revenue received by the Public Investment Corporation is generated from fees for managing the assets of clients, including the Government Employees Pension Fund. Revenue increased between 2010/11 and 2013/14 mainly because of an increase in the market value of assets under management, as well as significant growth planned for the unlisted investment model in the Isibaya portfolio. Over the medium term, revenue is expected to rise as management fees are expected to increase in line with the growth in assets under management.

Over the seven-year period, the bulk of the corporation's spending is on compensation of employees, which includes asset managers, investment brokers, property developers and other professionals critical to operations. An increase in funds under management, from R1 trillion in 2010/11 to R1.55 trillion in 2013/14, necessitated a corresponding increase in the establishment, from 329 posts in 2012/13 to 522 in 2013/14. This subsequently increased expenditure on compensation of employees by R320.9 million between 2010/11 and 2013/14, with R252.8 million of this increase taking place in 2013/14 due to the corporation's absorption of the staff from CBS Property Management, which the corporation acquired in 2011, and an increase in the number of asset managers employed. The corporation expects to increase its staff complement to 601 by 2016/17 due to the continued growth on the African continent and the overseas equity and bond markets.

To support the corporation's investment activities, expenditure in the administration programme is mainly on IT upgrades, lease payments for the corporation's offices, and travel and subsistence for site visits to see clients regarding investment and property management issues. Expenditure on goods and services increased from R97.4 million in 2012/13 to R164.0 in 2013/14 and is expected to increase to R250.6 million in 2014/15 due to the corporation's increased mandate to invest in the African continent and overseas, which requires additional spending on travel and other related costs.

The corporation's spending focus over the medium term will be on improving the management of investments outside the country. Personnel numbers will continue to increase significantly over the medium term due to the restructuring of the unlisted investment model programme and growth in the properties business units, which is expected to result in an increase in the number of corporation offices outside the borders of South Africa. This is

expected to increase expenditure from R756.9 million in 2013/14 to R971.1 million in 2016/17, mainly on personnel and IT systems. Spending on consultants increased from R16.9 million in 2010/11 to R35.5 million in 2013/14 as the corporation lacked skills relating to computer services, legal advice, certain investment requirements, and specialised audits. Over the medium term, spending on consultants is expected to decrease from R41.3 million in 2014/15 to R29.8 million in 2016/17 when the implementation of the required IT systems will be complete.

The corporation had a funded establishment of 522 posts, of which 329 posts were filled at the end of 2012/13. The majority of vacant positions are newly created positions as a result of the implementation of the new unlisted model and the restructuring of the property division.

## South African Revenue Service

### Mandate and goals

The South African Revenue Service's mandate in terms of the South African Revenue Service Act (1997) is to collect all revenue due to the state; and to administer trade to support government in meeting its key growth developmental objectives by facilitating legitimate trade, protecting South African ports of entry and eliminating illegal trade and tax evasion. The organisation's purpose is also to contribute to the economic and social development of South Africa through collecting the resources needed by government to meet its policy and delivery priorities. The organisation is also responsible for ensuring maximum compliance with tax and customs legislation and providing a customs service that maximises revenue collection, and protects South Africa's borders and facilitates trade.

The organisation's goals over the medium term are to:

- increase customs compliance
- increase tax compliance
- deploy officers to reach all current and potential taxpayers
- improve the ease and fairness with which it conducts its business
- improve the cost effectiveness and efficiency of its operations
- carry out outreach and education and other compliance activities
- develop and procure mobile registration kits to facilitate the registration of new taxpayers.

### Selected performance indicators

**Table 10.44 South African Revenue Service**

Indicator	Programme/ Activity/Objective	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Revenue collected excluding customs revenue per year <sup>1</sup>	Operations		R651bn	R604.7bn	R672.bn	R714.8bn <sup>1</sup>	- <sup>1</sup>	- <sup>1</sup>	- <sup>1</sup>
Customs revenue collected per year <sup>1</sup>	Operations		R109.2bn	R136bn	R151.1bn	R180.2bn	- <sup>1</sup>	- <sup>1</sup>	- <sup>1</sup>

## Expenditure trends

The operations and administration programmes of the South African Revenue Service together account for over 90 per cent of total spending over the seven-year period. These programmes focus mainly on rolling out importer and exporter solutions by building a new management function for clients that are awarded preferred trader status, strengthening border control and intergovernmental coordination at border posts, and strengthening risk management in customs. This focus has translated to the roll out of the cargo scanners at Beit Bridge border post, the enhancement of the movement control system, and the implementation of the custom risk engine for enhanced compliance with customs legislation.

Approximately two-thirds of this spending is on compensation of employees, mainly for critical skills that the service requires to deliver on its mandate, including audit, IT, and tax administration specialists. The R1.1 billion increase in spending on compensation of employees between 2010/11 and 2013/14 funded an establishment of 14 880 staff, which enabled the entity to: increase border control activities and other customs projects; modernise ICT systems to increase revenue collection efforts through the improvement of on-time filing with e-filing for personal income tax; roll out the re-engineered customs front-end solution, which has improved turnaround time at border posts; implement the new debt management case solution; and effect changes to the value added tax refund process. 571 posts were vacant at the end of November 2013, mainly due to delays in finalising the recruitment process. Where the organisation lacks capacity, consultants are used, mainly for legal, auditing and IT related services. Spending on consultants increased from R111.4 million in 2010/11 to R238.2 million in 2013/14, and is expected to decrease to R205.9 million in 2016/17 as the organisation strives to build internal capacity in these areas.

Operational expenditure over the medium term is reduced by a R1.4 billion Cabinet approval. This reduction in expenditure is not expected to have a negative impact on the performance of the organisation because the entity has an accumulated surplus to continue delivering on its mandate.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Accounting Standards Board** sets standards of generally recognised accounting practice for all spheres of government in terms of section 216(1)(a) of the Constitution and the Public Finance Management Act (1999). It also promotes the effective management of revenue and expenditure, and the assets and liabilities of entities to which the standards apply, and ensures that there is transparent reporting on these. The agency's total budget for 2013/14 and 2014/15 is R10.8 million and R10.4 million.
- The **Cooperative Banks Development Agency** provides for the registration of cooperative banks, supervises and regulates deposit-taking financial services co-operatives, savings and credit co-operatives, community banks and village banks as co-operative banks. The agency also facilitates, promotes and funds

the education and training of cooperative banks personnel. The agency's total budget for 2013/14 and 2014/15 is R16.2 million and R16.8 million.

- The **Financial Advisory and Intermediary Services Ombud** deals with complaints against financial institutions. The agency's role is to resolve disputes between financial service providers and their clients in a procedurally fair, informal, economical and expeditious manner. The ombud's total budget for 2013/14 and 2014/15 is R31.7 million and R37.3 million.
- The **Financial and Fiscal Commission** provides advice to government on relevant legislative authorities regarding the financial and fiscal requirements for national, provincial and local spheres of government in terms of Section 220 of the Constitution. The commission's total budget for 2013/14 and 2014/15 is R40 million and R39.6 million.
- The **Financial Intelligence Centre** combats financial crime such as money laundering and terror financing activities. The agency also ensures that the information it provides to the law enforcement authorities such as the South African Police Service and the South African Revenue Service, is used in a non-partisan manner, particularly where successful prosecution can have a high impact. The centre's total budget for 2013/14 and 2014/15 is R204.4 million and R198.9 million.
- The **Financial Service Board** supervises and regulates the non-banking financial services industry in the following: long term and short term insurance; retirement funds and friendly societies; financial service providers; collective investment schemes; and capital markets. The board also advises the Minister of Finance through various advisory committees comprising industry experts. The board's total budget for 2013/14 and 2014/15 is R564.0 million and R588.7 million.
- The **Independent Regulatory Board for Auditors** develops and maintains auditing and ethical standards that are internationally comparable, provides an appropriate framework for the education and training of properly qualified auditors, inspects and reviews the work of registered auditors, and investigates and takes appropriate action against registered auditors who do not comply with standards and are guilty of improper conduct. The board's total budget for 2013/14 and 2014/15 is R95.5 million and R91 million, including transfers from National Treasury.
- The **Office of the Pension Fund Adjudicator** investigates and determines complaints of abuse of power, maladministration, disputes of fact or law and employer dereliction of duty in respect of pension funds. The adjudicator's total budget for 2013/14 and 2014/15 is R41.8 million and R46.9 million.
- The **South African Special Risks Insurance Association** provides cover for risks such as riots, strikes, political unrest, terror attacks, civil commotion, public disorder and labour disturbances, as defined in the Reinsurance of Material Damages and Losses Act (1989). The association's total budget for 2013/14 and 2014/15 is R1 billion and R979.3 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Drive investment, productivity and transformation in the department's portfolio of state owned companies, to unlock growth, drive industrialisation, create jobs and develop skills.*

### Mandate

The mandate of the Department of Public Enterprises is to exercise shareholder responsibility over the following state owned companies that are central to the developmental objectives set out in the new growth path, the industrial policy action plan and the national development plan: Alexkor, Broadband Infraco, Denel, Eskom, South African Forestry Company Limited, South African Airways, South African Express Airways and Transnet. Except for Denel all the state owned companies are established in terms of their own legislation. The department is the custodian of all legislation relating to the establishment of the state owned companies. The department aims to ensure the sustainability of the state owned companies and supports the government's strategic priorities of economic growth, expanding employment and developing infrastructure.

The department exercises oversight responsibility over the state owned companies to support the delivery of key outcomes outlined in the national development plan. The state owned companies in the department's portfolio are the cornerstone of the economy in supporting the achievement of outcomes. Strengthening of oversight tools is crucial to ensure that the companies are aligned with the state's developmental agenda.

### Strategic goals

2014/15 is the first year of focused implementation of the national development plan. The main goal of the department is to ensure that the state owned companies support the implementation of the national development plan and contribute to the achievement of outcomes outlined in the plan.

The strategic goals of the department over the next five years are to:

- ensure the alignment of state owned companies with developmental outcomes
- promote good corporate governance
- build internal capacity to enhance the department's ability to execute its strategic plan
- stabilise and strengthen the state owned companies, focusing on their balance sheets and funding options
- drive economic infrastructure investment to enhance the capacity of the economy, with emphasis on the strategic integrated projects

- leverage off state owned companies' procurement spend to support industrialisation and transformation.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide strategic management, direction and administrative support to the department that enables the department to meet its strategic objectives.

### Programme 2: Legal and Governance

**Purpose:** Provide legal services and corporate governance systems, and facilitate the implementation of all legal aspects of transactions that are strategically important to the department and state owned companies. Ensure alignment with government's strategic intent by, among others, monitoring the performance indicators of state owned companies.

### Programme 3: Portfolio Management and Strategic Partnerships

**Purpose:** Align the strategies of the state owned companies with government policy and strategy, and monitor and benchmark their financial and operational performance and capital investment plans. Align shareholder oversight with overarching government economic, social and environmental policies, and build focused strategic partnerships between the state owned companies, strategic customers, suppliers and financial institutions.

## Selected performance indicators

**Table 11.1 Public Enterprises**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of shareholder compacts signed per year	Portfolio Management and Strategic Partnerships	Outcome 6: An efficient, competitive and responsive economic infrastructure network	8	7	7 <sup>1</sup>	8	8	8	8
Number of corporate plans reviewed per year	Portfolio Management and Strategic Partnerships		8	8	5 <sup>2</sup>	8	8	8	8
Number of quarterly financial reviews per year	Portfolio Management and Strategic Partnerships		32	31	32	32	32	32	32
Number of departmental projects provided with technical and financial support per year <sup>3</sup>	Portfolio Management and Strategic Partnerships		5	6	–	–	–	–	–

Targets were not achieved in the following areas:

1. Shareholder compacts: South African Airways' targets for shareholder compacts for 2012/13 could not be agreed at the beginning of the financial year due to the department's not accepting the corporation's proposal to budget for a loss. South African Express Airways requested a downward revision of the 2012/13 shareholder compact targets from the targets agreed earlier as the basis for the fleet renewal programme, due to changes in the operating economic environment.
2. Corporate plans: Alexkor: the corporate plan was not assessed due to the board being given an opportunity to revise key performance indicators in line with the shareholder compact, which took longer than anticipated. South African Express Airways: the corporate plan was not signed due to the withdrawal of financial statements for 2010/11, which affected the setting of targets. Transnet: the corporate plan was not signed by the department due to the need for further engagement on the market demand strategy, which was a completely new strategy.
3. This process ceased to exist from 2012/13 as the department re-aligned its programmes.

## The national development plan

The department endorses the national development plan to improve the quality of public services at affordable prices. The department recognises the focus on investment in the economy of 30 per cent of GDP by 2030, and drives infrastructure plans within its portfolio of companies to support the investment driven economic growth strategy.

The department offers strategic direction to the state owned companies with regard to defining market demand, formulating infrastructure plans, addressing capital requirements and financing requirements to achieve the goals of the national development plan to attract private investors and reduce inequality. The department:

- promotes policy and regulatory clarity in sectors in which the state owned companies operate to stimulate investment
- facilitates industrialisation and localisation through leveraging state owned companies' investment capacity and procurement practices to address economic development imperatives
- improves the performance of state owned companies, particularly in relation to their rail and ports infrastructure and the reliable generation, transmission and distribution of electricity
- aims to improve the performance of South Africa's logistics through a shift from road to rail, by growing freight rail market share and improving port operations
- monitors the rollout of state owned companies' capital expenditure programmes in ports, rail and pipelines and improvements in aviation and in defence.

## Expenditure trends

The spending focus over the medium term will continue to be on strengthening and expanding the department's capacity to carry out its oversight role in relation to the state owned companies, and improving internal efficiencies and the functioning of the department. This supports the national development plan's goals of growth, industrialisation, job creation and skills development. To this end, the personnel establishment is expected to increase over the medium term to 265 posts, including 6 graduates and 30 interns. At the end of November 2013 the department had 10 vacancies, mainly due to the scarcity of skills, but these will be filled by 2014/15. This is expected to increase expenditure on compensation of employees, which, at 54.6 per cent, is the largest spending item of the department's budget over the medium term. To carry out the department's high level stakeholder interactions, intergovernmental and coordinating activities, and general oversight role of the government's investment in state owned companies, personnel travel extensively domestically and internationally; and the department relies on the services of consultants who conduct highly technical research in the transport, manufacturing, energy and broadband sectors. As a result, travel and subsistence and consultants are the largest spending items in goods and services, and spending on these items is projected to increase over the medium term.

Between 2010/11 and 2013/14, certain state owned companies, such as Denel and Broadband Infracore, received non-periodic recapitalisation payments, which explains the significant fluctuations in spending in the *Portfolio Management and Strategic Partnerships* programme over this period. Spending in the programme is expected to decline significantly over the medium term as no recapitalisations are contemplated.

## Expenditure trends

The spending focus over the medium term will be on supporting the department in playing its oversight role over state owned companies by providing administrative support to the minister, and corporate and human resource services to the department. The programme will also focus on improving the department's efficiency and productivity by reconfiguring its business, which will enable it to carry out its mandate; and will put in place a three-year rolling evaluation plan to assess the impact of programmes implemented by the department and the state owned companies. Thus over the medium term, the bulk of the programme's allocation will be spent on compensation of employees, who provide technical and administrative support to the department. Spending on this item is projected to grow following the reconfiguration. This will result in the number of personnel increasing from 138 in 2013/14 to 141 in 2016/17. There were 3 vacancies as at 30 November 2013 due to resignations; the vacancies are expected to be filled by 2014/15. The increase in expenditure on compensation of employees between 2010/11 and 2013/14 was due to additional funding for improved conditions of service and to fund the increase in the number of personnel needed to take up roles in the *Strategic Planning, Monitoring and Evaluation* and *Intergovernmental Relations* subprogrammes, which deal with international and intergovernmental issues and performance monitoring and evaluation processes for individual programmes.

Directly related to the growth in personnel is an increase in expenditure on goods and services. Within this, significant items are consultants and professional services. These provide the specialist expertise required particularly in the transport, manufacturing, energy and broadband sectors. Over the medium term, expenditure on consultants is expected to increase due to the reassignment of consultants from the *Portfolio Management and Strategic Partnerships* programme to this *Administration* programme, following the reorganisation of the department's programmes. The consultants support the minister and director general in achieving the department's strategy.

## Programme 2: Legal and Governance

### Objectives

- Ensure effective shareholder oversight of state owned companies by:
  - providing legal services and corporate governance systems
  - facilitating the implementation of all legal aspects of transactions that are strategically important to the department and state owned companies
  - ensuring that financial and operational risk management processes are embedded throughout the department as and when required, over the medium term
  - addressing constraints on state owned companies' contract negotiations and management to improve commercial competence and contribute to economic growth and development on a regular basis
  - providing assistance on developing and negotiating shareholder compact frameworks annually in terms of the Public Finance Management Act (1999)
  - providing guidance on appropriate delegation frameworks between the state owned company boards and executive management on a regular basis
  - advising the minister regularly on the appointment of boards of directors, preparation for annual general meetings, conducting annual reviews of ownership policies, governance, appointments, remuneration, and the performance of the boards and executive management.

### Subprogrammes

- *Management* comprises the office of the deputy director general, which provides strategic leadership and management of the programme's personnel. This subprogramme had a staff complement of 2 in 2013/14.
- *Legal* provides internal legal services and oversight support to sector teams. This entails providing legal services, including transaction and contract management support, to the department, as well as work related to sector teams' oversight of the commercial activities of the state owned companies within their portfolios. In 2013/14, the liquidator of Aventura, appointed in March 2013, was assisted in confirming claims by the

company's creditors. The creditors first met in October 2013 and the liquidator is currently awaiting the convening of a second meeting by the master of the high court, in which the creditors will attempt to prove their claims. In addition, the disbursement of Diabo Share Trust funds continued, with 1 364 beneficiaries successfully tracked and paid. The subprogramme had a staff complement of 11 in 2013/14.

- *Governance* develops, monitors and advises on legislative, corporate governance and shareholder management systems for the department and its portfolio of state owned companies. In 2013/14, the 2013 annual general meeting cycle was successfully coordinated, with seven state owned companies' annual reports tabled and compliant with Public Finance Management Act (1999) requirements. Six state owned companies' memorandums of incorporation were approved in compliance with the new Companies Act (2008). In November 2012, Cabinet considered the new state owned companies remuneration and incentive standards for non-executive directors, executive directors and prescribed officers. This was followed by consultation with national government departments to ensure that the standards addressed the many challenges encountered in the current remuneration model. These consultations have been concluded and refinement of the standards is underway, for resubmission to Cabinet in 2014/15. The new standards will require state owned companies to be more accountable for and transparent about remuneration and incentives. Risk and compliance management is a unit within this subprogramme and it is responsible for developing and implementing risk and compliance management guidelines and systems, providing risk advisory services and overseeing compliance with laws and regulations. In 2013/14, work continued on implementing an integrated system of risk management, in accordance with the approved enterprise risk management framework, policy and strategy, and compliance policy. The department's legislative universe has been established within the unit to ensure compliance with legislation. This unit had a staff complement of 6 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on increasing the programme's capacity to provide legal services and transaction and contract management support; and on facilitating the creation of a legislative framework for the department's mandate to ensure compliance with applicable legislation and enhance corporate governance procedures by state owned companies. As a result, the *Legal and Governance* subprogrammes receive the bulk of the programme's allocation over the medium term. In line with the laws governing state owned companies, the Minister of Public Enterprises is obliged to exercise care in carrying out these responsibilities. Specialist corporate legal expertise is frequently required to assist on issues including proposals by state owned companies, and the assessment of contractual obligations and transactions. Spending on consultants who provide legal services decreased between 2010/11 and 2013/14 as internal capacity to perform this function increased. However, due to an increase in transaction services, contractual arrangements and governance arrangements, spending on legal costs is expected to increase over the medium term.

Over the medium term, 74.5 per cent of the programme's budget is allocated to spending on compensation of employees, with the number of personnel projected to increase from 19 in 2013/14 to 27 posts in 2016/17. The projected increase in the establishment and its effect on compensation of employees is a continuation of the trend observable between 2010/11 and 2013/14. There were 3 vacancies as at 30 November 2013 due to the scarcity of skills in these sector specific areas. However, these vacancies are in the process of being filled.

## Programme 3: Portfolio Management and Strategic Partnerships

### Objectives

#### Energy and Broadband Enterprises

- Strengthen the department's oversight role by ensuring the alignment of shareholder strategic intent in relation to the state owned companies' role in achieving government objectives in the energy and information and communication technology sectors on an ongoing basis.
- Contribute to the enhancement of the performance of state owned companies by:
  - evaluating corporate plans to determine whether state owned companies' performance aligns with agreed key performance indicators, and providing advice and guidance to their boards on an ongoing basis
  - monitoring the implementation of corporate plans and shareholder compacts quarterly
  - assessing shareholder and enterprise risks quarterly, and advising boards on areas of concern.

#### Eskom

- Support the security of electricity supply by:
  - examining Eskom's maintenance plans, operational practices, electricity generation and distribution efficiency, and its reserve margins on an ongoing basis

- ensuring that Eskom supplies electricity by monitoring, evaluating and engaging with Eskom on system security and the new build programme to alleviate constraints on an ongoing basis
- monitoring the rollout of the capital investment programme to ensure it is delivered on time, is of appropriate quality and within budget.
- Ensure the legal and regulatory compliance of Eskom by regularly engaging with relevant stakeholders such as the departments of Energy, Environmental Affairs and Water Affairs and with the National Energy Regulator of South Africa regarding policies and regulations affecting Eskom.
- Reduce Eskom's dependence on funding from the fiscus by monitoring cost escalations for its capital investment programme and operations in order to cost effectively roll out the build programme.
- Exercise oversight to ensure that Eskom's capital investment supports local supplier industries by monitoring the implementation of the competitive supplier development programme and evaluating the company's quarterly reports to assess progress.
- Ensure the care and maintenance of the Pebble Bed Modular Reactor Company in accordance with the Cabinet decision that Eskom is to host the company.

#### *Broadband Infraco*

- Support Broadband Infraco in securing government as an anchor client after the finalisation of the information, communication and technology strategy and the broadband implementation plan, thus contributing to its long term sustainability, which will reduce reliance on government for recapitalisation of the company.
- Support increased access to broadband by:
  - monitoring Broadband Infraco's capital expenditure programmes for rolling out the national long distance backhaul infrastructure on an annual basis
  - monitoring the establishment of broadband access points in major cities and under-serviced areas from 5 in 2011/12 to 18 in 2014/15
  - monitoring the implementation of the national, regional and international investment programme as well as providing strategic financial and transactional analysis including interfacing with investors and strategic stakeholders across the sector on an ongoing basis.

#### **Manufacturing Enterprises**

- Ensure continuous alignment between shareholder strategic intent and the objectives of state owned companies in the defence, mining and forestry sector by annually reviewing their enterprise strategies and mandates in the context of industry and policy shifts, and alert their boards and enterprises to material deviations.
- Support state owned companies in delivering on their outcomes as set out in the shareholder compacts and corporate plans by benchmarking key performance measures annually and analysing quarterly and annual reports in order to assess the extent of progress.
- Collaborate with other state owned companies to contribute to achieving the national economic development objectives.

#### *Denel*

- Oversee the development of a long term growth strategy to achieve financial stability and growth of manufactured export products.
- Leverage off the company's advanced manufacturing capability through securing work packages in support of the industrialisation drive aligned with the industrial policy action plan.
- Monitor the implementation of the turnaround plan over the medium term to ensure Denel's sustainability
- Conclude a study to review strategic equity partnerships with multinational companies to address matters such as intellectual property ownership, market access and broad terms of consolidation of original equipment manufacturers in the defence market over the medium term.
- Conclude a study by 2014/15 to review the economic impact derived from the Rooivalk attack helicopter manufacturing programme and apply benefits and lessons learned to other Denel programmes.

#### *Alexkor*

- Monitor the implementation of Alexkor's strategy on an ongoing basis to diversify into coal and lime mining and monitor the implementation of the pooling and sharing joint venture turnaround strategy to ensure increased production and promote financial stability of the joint venture.
- Develop a collaborative model with the state owned mining company over the medium term.
- Support and coordinate the joint efforts of the departments of Public Enterprises, Mineral Resources, and Rural Development and Land Reform to stabilise the Richtersveld region and use revenues to develop sustainable economic activities linked to the agricultural sector on an ongoing basis.

#### *South African Forestry Company*

- Oversee the implementation of the land restitution strategy for claims over the Komatieland Forests land claims settlement model, to ensure meaningful benefits to the successful land claimants over the medium term.
- Oversee the formulation and implementation of the South African Forestry Company corporate strategy, within the forestry sector over the medium term.
- Engage with the Department of Rural Development and Land Reform to warehouse the South African Forestry Company shares in privatised plantations, in terms of the company strategy over the medium term.

#### **Transport Enterprises**

- Ensure the alignment of the corporate strategies of Transnet, South African Airways and South African Express Airways with government's strategic intent and ensure that these state owned transport companies remain competitive, financially sustainable, and deliver an optimal service to the economy.
- Support Transnet, South African Airways and South African Express Airways in delivering their outcomes by identifying appropriate benchmarks and key performance measures for their respective shareholder compacts and corporate plans and assess their performance on a quarterly and annual basis.
- Create an enabling environment for transport enterprises and ensure an appropriate balance between the enterprises' interests, sustainability and developmental objectives by engaging with policy departments and relevant regulators at least once every quarter to discuss and resolve areas of misalignment; and inform the boards of Transnet, South African Airways and South African Express Airways accordingly.
- Implement the national corridor performance measurement system, over the medium term, which will identify inefficiencies in the logistics systems in South Africa; contribute to increased competitiveness; ensure an appropriate modal split between road, rail and pipeline services; ensure effective utilisation of the existing logistics infrastructure; and identify those areas that legitimately qualify for investment and upgrade.
- Contribute to and facilitate the national transport policy formulation, as and when required, to achieve improvements in passenger and cargo movements.

#### *Transnet*

- Provide oversight of Transnet's implementation of the market demand strategy to optimise the economic impact of infrastructure investments on the economy by monitoring the rollout of Transnet's capital expenditure programme on a quarterly and annual basis to assess any significant deviations from corporate plans and potential cost overruns and time delays on major capital projects; and take necessary action when there are deviations.
- Ensure that Transnet operates an efficient, competitive and responsive transport and logistics system by:
  - reviewing the logistics cost in the economy and finalising the methodology to measure Transnet's contribution to transport costs as a percentage of Gross Domestic Product; this will be completed in March 2016
  - overseeing the introduction of multiple private rail operators on the branch line network to revitalise the rail network, and quantifying the operational efficiency of freight corridors to realise socioeconomic benefits by March 2015

- monitoring the implementation of the competitive supplier development programme to leverage off Transnet’s locomotive fleet procurement for the development of local railway supplier industries by evaluating progress towards achieving localisation targets in the Transnet quarterly and annual reports.

#### *South African Airways and South African Express Airways*

- Monitor and assist with the implementation of South African Airways’ long term turnaround strategy and South African Express Airways’ 20:20 vision strategy, on an ongoing basis.
- Provide strategic guidance as and when required to strengthen the financial positions of South African Airways and South African Express Airways to ensure their long-term sustainability.
- Monitor the development of economic regulation and competition policy applications, over the medium term, to ensure that the achievement of the state owned companies’ strategic objectives is not compromised.
- Support the implementation of transformation at South African Airways and South African Express Airways in support of national policies and economic growth, over the medium term, with a specific focus on skills development; job creation; procurement that supports broad based economic empowerment; and corporate social investments targeted at designated groups such as youth, women, people with disabilities, and cooperatives.
- Lead the formulation of policies and strategies for the sustainability of the airlines and improvements within the aviation sector and related systems over the medium term.
- Monitor the development of the West Africa aviation hub in support of the department’s Africa strategy, which focuses on regional infrastructure development to improve South African aviation.

#### **Economic Impact and Policy Alignment**

- Conduct macro-economic modelling, and research and impact assessments, over the medium term, to ensure that state owned companies are contributing to economic growth; enhance the alignment between national industrial and macro-economic policies and the role of state owned companies; and monitor the implementation of these objectives.
- Develop frameworks and guidelines to ensure that state owned companies comply and align with environmental laws and policies to optimise their role in reducing carbon emissions and developing the green economy, while supporting the companies’ business needs; and monitor the implementation of these objectives on an ongoing basis.
- Develop frameworks and guidelines for the economic and social transformation agendas of state owned companies to ensure their support for and alignment with national policies and economic growth, with a specific focus on skills development, job creation, procurement that supports broad based economic empowerment, and corporate social investments targeted at designated groups; and monitor the implementation and measure the impact of these objectives on an ongoing basis.
- Develop a strategy to guide and optimise the disposal of state owned companies’ non-core property in support of the national economic development objectives of transformation, industrialisation, increased employment, and economic growth; and monitor the implementation and measure the impact of these objectives on an ongoing basis.

#### **Strategic Partnerships**

- Identify and oversee major investment projects, as and when required, by defining at least one catalytic investment to be driven by the department; and oversee the project implementation from pre-feasibility to completion, including the design of relevant compacts.
- Secure funding for major investment projects by developing innovative funding structures and designing associated compacts with relevant partners, on an ongoing basis.
- Leverage off state owned companies’ procurement programmes to drive industrialisation and create jobs by developing overarching procurement leverage policies, overseeing fleet procurement design and implementation, establishing collaborative initiatives between state owned companies and large customers, and developing and implementing capability building programmes and institutions, on an ongoing basis.

## Subprogrammes

- *Energy and Broadband Enterprises* manages the portfolio of state owned companies whose focus is energy and broadband, including Eskom, and Broadband Infraco. In 2013/14, the department supported Eskom with its multi-year price determination application, which determined Eskom's revenue requirements for the next five years. In 2013/14, the department focused on the completion and protection of the state's intellectual property strategy and on monitoring the implementation of the care and maintenance of the Pebble Bed Modular Reactor Company. This subprogramme had a staff complement of 23 in 2013/14.
- *Manufacturing Enterprises* exercises shareholder oversight over Denel, Alexkor and the South African Forestry Company. In 2013/14 the development, and Cabinet approval, of Denel's turnaround plan was monitored, with implementation progressing satisfactorily and the company recording positive financial results. In 2013/14, the department continued to monitor the execution of activities linked to the deed of settlement with the Richtersveld community supported by the transfer of R350 million in 2012/13 to help Alexkor meet all its obligations related to that settlement. The South African Forestry Company's new role as an agent for rural economic development was finalised and the board has been strengthened with the requisite skills in order to carry out their mandate. This subprogramme had a staff complement of 14 in 2013/14.
- *Transport Enterprises* exercises shareholder oversight over Transnet, South African Airways and South African Express Airways. The department closely monitored the implementation of the Transnet market demand strategy capital roll out programme and other key projects. The department was instrumental in setting the parameters for the development of the South African Airways long term turnaround strategy that was finalised in 2013/14. This subprogramme had a staff complement of 21 in 2013/14.
- *Economic Impact and Policy Alignment* aligns state owned companies with overarching government economic, social and environmental policies. The subprogramme is organised into: management, which provides strategic leadership and management of the subprogramme's personnel; environmental policy alignment, which oversees alignment and implementation of state owned companies' strategically important developments, with a special focus on the Eskom and Transnet build programmes, and provides oversight and alignment of the climate change policy framework for state owned companies in support of national policies and the green economy; economic policy alignment, which focuses on appropriate macroeconomic modelling and research to enhance the links between industrial policy, macroeconomic policy and the role of state owned companies; transformation, skills development and youth development, which focuses on the provision of scarce and critical skills by the state owned companies in support of the national skills agenda and the new growth path, as well as optimising the state owned companies' skills training facilities through national skills funding. In 2013/14 the subprogramme analysed and monitored the state owned companies' dashboards and completed a transformation dialogue report. It had a staff complement of 11 in 2013/14.
- *Strategic Partnerships* ensures that state owned companies maintain commercial sustainability and attain desired strategic outcomes and objectives. The subprogramme is organised into: management, which provides strategic leadership and management of the subprogramme's personnel; project oversight, which defines catalytic investments that are to be driven by the department, and oversees project implementation from pre-feasibility to completion; funding mechanisms, which assists in developing innovative funding structures and designing associated compacts with relevant partners; and supplier relationships, which develops overarching procurement leverage policies, oversees fleet procurement design and implementation, including panel reviews, and develops and implements capability building programmes and institutions. This subprogramme had a staff complement of 8 in 2013/14.

## Expenditure estimates

**Table 11.9 Portfolio Management and Strategic Partnerships**

Subprogramme	Audited outcome				Adjusted Appropriation	Average growth rate (%)	Expenditure/total: Average (%)	Medium-term expenditure estimate			Average growth rate (%)	Expenditure/total: Average (%)

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on enhancing capacity to oversee strategic infrastructure projects. This includes training staff and developing new project management tools to improve oversight of the current build programme. Because of the need to provide effective oversight of the state owned companies, spending on compensation of employees increased between 2010/11 and 2013/14 and is expected to continue to increase over the medium term. The increase in the number of personnel from 90 in 2013/14 to 97 in 2016/17 is

attributed to additional approved and funded posts, which come into effect in 2014/15 to strengthen the strategic oversight function of the department on infrastructure projects. As at 30 November 2013 there were 4 vacancies due to new positions created, which will be filled by 2014/15. The department makes use of consultants for specialised services in transport, manufacturing and broadband sectors, which, notwithstanding the increased capacity in the department, is still a necessity. Due to the realignment of functions expenditure on goods and services is expected to decrease over the medium term.

In the *Energy and Broadband Enterprises* and *Manufacturing Enterprises* subprogrammes, expenditure decreased significantly between 2011/12 and 2013/14, and is expected to decrease over the medium term due to once-off recapitalising payments in 2012/13 to the state owned companies. Between 2010/11 and 2012/13, a total of R473.2 million was paid to Denel for claims under an indemnity agreement, while Denel received a further R700 million in 2012/13 for recapitalising the entity. In 2010/11, R36 million was paid to Alexkor to establish a joint venture with the Richtersveld community under an out of court settlement for land claims. A further R350 million was allocated to the entity in 2012/13 to address liabilities in terms of the deed of settlement and other obligations. Between 2010/11 and 2011/12 a total of R60 million was transferred to the Pebble Bed Modular Reactor Company to comply with statutory requirements for the decommissioning and dismantling of the fuel development laboratory and implementation of the care and maintenance programme. Broadband Infraco received R138.6 million for capital and operational costs; this is reflected as a payment for financial assets during 2010/11.

## **Other public entities and agencies**

### **Overview: 2010/11 – 2016/17**

#### **Alexkor**

Alexkor was established in terms of the Alexkor Limited Act (1992) in order to mine marine and land diamonds in Alexander Bay. The company and the government reached an out of court settlement in 1998 with the Richtersveld community over the community's land claim. The settlement provides for the formation of a joint venture between the company and the community, whereby Alexkor retains its marine mining rights and the Richtersveld Mining Company, on behalf of the community, remains the holder of the land mining rights. Alexkor and the Richtersveld Mining Company have placed their marine and land mining rights under the control of the joint venture. The settlement also directs government to upgrade the Alexkor township to municipal standards in order to transfer the township to the Richtersveld local municipality.

Since 7 April 2011, all diamond sales were for the account of the pooling and sharing joint venture. Alexkor has no other income generated from operations apart from its 51 per cent share in the joint venture. The company posted a profit of R29.7 million, compared to a loss of R14.0 million in 2012/13. Alexkor was recapitalised by R350 million in 2012/13. This had a positive impact on the company's financial statements. As a result, Alexkor's profitability improved significantly from the previous year.

Alexkor's main focus has been the sustainability of the joint venture and it was given the mandate to investigate alternative investment opportunities outside the Richtersveld area and the mining of other minerals. This is to negate the risks of depending on returns from the joint venture. To date, Alexkor has identified coal and limestone mining operations as focus areas by partnering with other state owned companies.

Alexkor's focus, apart from diversifying, will be on fulfilling the 2007 deed of settlement obligations. There are only two remaining obligations: the handover of the township to the Richtersveld municipality, which was expected to be transferred in 2013/14; and the settling of the rehabilitation liability, which will create jobs over the 15 year life of environmental rehabilitation.

#### **Broadband Infraco**

Broadband Infraco was established in 2007 in terms of the Broadband Infraco Act (2007) as a state led intervention to introduce competition in the telecommunications market and to contribute to increasing access to broadband services, including in underserved areas. It has invested in a national long distance fibre optic network, building on the foundation of the fibre optic assets deployed by Eskom on power transmission lines

and Transnet on railway lines. Broadband Infraco launched its services to the market in November 2010 after obtaining an electronic communications network services licence in October 2009. By March 2013, Broadband Infraco had deployed and commissioned 13 125 kilometres of network.

In addition to national connectivity, the other major cost component of capital expenditure for the company has been the international connectivity, which includes the rollout of the West Africa coast cable system. The system will reduce broadband costs, increase bandwidth capacity, and ensure regional connectivity for South Africa and other African states. To this end, the company has concluded an agreement with the Council for Scientific and Industrial Research with the assistance of the department. The objective is to support the Square Kilometre Array project and other research projects through this investment in cable systems.

In 2006/07, a capital transfer of R1.3 billion was made to Broadband Infraco for establishment and operational costs. This was made up of R627 million in 2006/07, R377 million in 2008/09, R208.5 million in 2009/10, and a final transfer of R138.6 million in 2010/11. There have been no further transfers to the company since 2010/11, and the company has been able to generate cash flows to complement shareholder funding. The company is also expected to play a significant role in terms of broadband infrastructure roll out and the objective of achieving universal broadband access by 2020. This will require the company to have access to additional resources to contribute to this goal. Broadband Infraco continues to explore funding options and institutions to address its funding gaps in terms of capital investment to ensure that its network meets the service level requirements, reach, and performance of its existing and future customer base. Significant reinvestment in the Broadband Infraco network needs to be undertaken in order to address end of life and technology upgrades so as to meet customer expectations which will enable revenue growth and diversification.

## **Denel**

Denel was incorporated as a private company in 1992 in terms of the South African Companies Act (1973). Its sole shareholder is the South African government.

Denel has made some progress towards ensuring its sustainability. In the past three financial years, the company has posted positive results despite tough market conditions, including cuts in defence spending due to the global economic downturn. A turnaround plan was approved in 2012/13 by Cabinet, indicating the positive steps Denel has taken to return to profitability. This turnaround is anchored on revenue growth through: export contracts and maximising opportunities from the local client, cost containment, strengthening stakeholder relations, and risk sharing partnerships with global clients and suppliers.

Denel Aerostructures, which has been negatively affecting Denel's performance over the years, continues to reduce its losses and is on a course to sustainability. With the foundation laid by the A400M military transport plane price renegotiation and restructuring efforts, Denel Aerostructures has managed to secure additional contracts and continues to explore additional work packages with both current and new original equipment manufacturers.

Denel's financial position has improved with this recent positive financial performance. The R700 million recapitalisation received in 2012/13, and the rollover of the R1.9 billion government guarantees for five years, has allowed Denel to restructure the debt, purge the default risk and improve working capital management. This bodes well for the company's ability to raise the high working capital requirements anticipated as a result of the new contracts, potential and secured.

## **Eskom**

Eskom's mandate is to generate, transmit and distribute electricity to industrial, mining, commercial, agricultural and residential customers and redistributors. The company is governed by the Eskom Conversion Act (2001).

Eskom generates 95 per cent of the electricity used in South Africa, and 45 per cent of the electricity used in Africa. Eskom's reserve margin has been steadily declining since 1999 due to a lack of significant investment in generation capacity and an increase in economic growth, leading to increases in electricity demand. In recent years, Eskom has had to rely on shifting maintenance of the power plants to meet demand, and to address the constrained power system to avoid shedding load. The consequence of this has been an increase in maintenance backlogs and a decline in power plant performance.

Working closely with the government, Eskom has since introduced a recovery plan, which includes securing enough primary energy (the coal stockpile to be greater than the 48 day level) to avoid the incident of 2008 that led to widespread load shedding; the returning to service of power plants that were previously mothballed; and increasing the maintenance done at power stations. This has resulted in the average capacity reserve margin increasing (to be more than 14 per cent commercially available), and the maintenance outage backlog being significantly reduced from the levels seen in previous years.

Additionally, Eskom has since 2004 been undertaking a capacity build programme to increase capacity and ensure the secure and reliable supply of electricity. Completed projects between 2005/06 and 2012/13 include all the returned to service power plant units in Komati, Camden and Grootvlei, and the completion of the two open cycle gas turbines. As a result, Eskom installed and commissioned 6 017 Megawatts of additional generating capacity into the system, installed 4 686 kilometres of transmission networks, and increased its transmission substation capacity by 23 775 megavolt amperes. In 2013/14, the Eskom capital expenditure programme added 260 Megawatts of additional capacity to the national grid, built 787 kilometres of transmission lines, and installed 3 580 megavolt amperes of transformation capacity. Eskom also electrified 144 558 homes. The focus for 2013/14 has been on finalising the revenue application with the energy regulator and developing a response based on the revenue determination; securing the balance of the required funding to complete the new build programme; improving the rollout of the new build programme; improving operational performance and maintenance of assets to ensure security of supply; assessing the entity's role in the implementation of the 2010 integrated resource plan; and developing the appropriate investment plan for Eskom's future build programme. As at 31 September 2013, 88 per cent of the required funding had been secured, which will ensure that the build programme continues uninterrupted. However, this may change as Eskom reprioritises and responds to the revenue shortfall following the electricity price increase decision.

In support of the commitment to introduce independent power producers, Eskom had contracted capacity of 1 135 Megawatts from independent power producers as at the end of March 2013. Over the period between 2011/12 and 2018/19, Eskom's build programme is estimated at about R330 billion. Eskom plans to deliver an additional 11 126 Megawatts of capacity into the system, which will go a long way towards addressing the current constraints. The company continues to play a key role in demand side management with the successful implementation and execution of the comprehensive suite of integrated demand management solutions that will exceed targets set by shareholders and the National Energy Regulator of South Africa.

Over the long term, Eskom's planned capacity expansion programme is expected to double capacity to 80 000 Megawatts by 2026, with a budget over that timeframe of more than a trillion rand. This will include the power stations Medupi, Kusile and Ingula.

As its sole shareholder, Eskom has hosted the Pebble Bed Modular Reactor Company since 1 April 2012 to minimise costs and ensure implementation of its care and maintenance in accordance with a Cabinet decision. The reactor was mandated to research and develop nuclear energy, and was funded wholly by the government. The project was established in 1999 as a nuclear architect engineering company that was to design and licence a standardised nuclear heat supply system and pebble fuel, and develop and market small scale, high temperature reactors locally and internationally.

Cabinet approved that the company be placed into care and maintenance to protect its intellectual property and assets while ensuring that no additional funding will be required from government. The department is monitoring the implementation of this care and maintenance.

### **South African Forestry Company Limited**

The South African Forestry Company Limited's mandate is to ensure the sustainability of forests under its management, and to play a catalytic role in the realisation of the state's afforestation, rural development and transformation goals. The company remains certified through the Forestry Stewardship Council for forestry plantation and chain of custody.

The company's performance over the past three financial years has worsened as a result of a slow recovery in its primary market, the residential construction sector, as well as rigid business structures. This has seen the company's cash reserves reducing over this period, with its cash generation from operations under strain from

the above factors. Despite this, the company's solvency remains solid; this ensures that it continues trading as a going concern. This will be critical when the company begins its capital investment programme.

The company has expanded its rural development contribution, as it assumes its role as a rural development agent. This has resulted in the signing of social compacts with communities surrounding its operations, with some already being implemented. The main areas of these corporate social investments are in education, recreational centres, health care, and enterprise development.

## **South African Airways**

South African Airways is South Africa's national air carrier, which operates a full service network in the international, regional and domestic markets, from its head office at OR Tambo International Airport.

The airline has developed a long term turnaround strategy to ensure the long term sustainability of the airline and reduce its reliance on government for financial support. The airline is in the process of refining an implementation plan for the strategy, though it has started with some of the initiatives that require implementation, such as the review of strategic code share agreements and its route network. The airline is also focusing on achieving its strategic objectives as defined in its shareholder's compact to ensure it achieves a sustainable capital base and financial efficiency, led by a focus on commercial and operational efficiencies and effectiveness.

The airline continues to be affected negatively by increasing oil prices and the deteriorating exchange rate, as most of the operating costs are denominated in United States dollars. This is exacerbated by operating fuel inefficient aircraft, high airport and navigation charges, as well as increased competition from carriers from the Middle East. These factors have a significant impact on the financial performance of the airline.

Over the medium term period, South African Airways will focus on improving its procurement processes and compliance with the Public Finance Management Act (2008) to reduce irregular, fruitless and wasteful expenditure.

## **South African Express Airways**

The airline operates regional and domestic flights from OR Tambo International Airport, King Shaka International Airport, and Cape Town International Airport, serving secondary routes in South Africa and the continent. South African Express Airways operates regional routes to Botswana, Namibia, the Democratic Republic of the Congo, Zimbabwe, Zambia and Mozambique. It also provides feeder air services that connect with South African Airways' network.

The airline's 2010/11 financial statements were restated in August 2012. This followed a misstatement in relation to value added tax recoverable, and amounts owing from South African Airways of R48 million. Further errors and omissions were identified by management but could not be substantiated to the satisfaction of the auditors, resulting in a disclaimer of opinion for the restated 2010/11 annual financial statements. This has affected the airline's ability to raise funds without government support.

The slowdown in the economy also affected the airline's ability to generate profits, and it reported a loss of R187 million in the restated 2010/11 annual financial statements after four previous consecutive years of profit generation. Although South African Express Airways began replacing its aged fleet, the process was suspended after receiving 7 of the 24 planes due to liquidity challenges, which were exacerbated by the economic slowdown. The disclaimer of opinion on the 2010/11 annual financial statements also resulted in financial institutions suspending any further financial support on the strength of the balance sheet. Although the restated 2010/11 annual financial statements resulted in equity declining from R1.2 billion to R462 million, the gearing was still within industry standards. However, the disclaimer of opinion resulted in the airline approaching government for temporary support in the form of a guarantee, as it was unable to borrow on the strength of its balance sheet. A guarantee of R539 million was granted in March 2013. The company has also subsequently tabled the 2011/12 and 2012/13 annual reports, and has no outstanding annual reports due for tabling. There have been improvements in the audit reports issued on the airline's annual financial statements, from a disclaimer of opinion for the 2010/11 and 2011/12 annual financial statements to a qualified audit report for the 2012/13 annual financial statements. The airline is aiming for an unqualified audit report in the next financial year.

The airline's joint venture with a local partner in the Democratic Republic of Congo, Congo Express, which began in February 2010 as part of the implementation of the African hub strategy, was dissolved in September 2010. This was despite efforts by South African Express Airways to address issues of financial and operational performance in order to improve the joint venture prospect. Lessons learnt from the failed operation will be used in all future implementation of the African hub strategy.

The focus over the medium term will be on expanding the airline's operations in the African market and on establishing Durban as a regional hub. To date, operations between Lusaka and Durban, and Harare and Durban, have commenced. Furthermore, the airline intends to strengthen its balance sheet through the generation of profit and cash flow. The airline will also strive to restore confidence in its financial position and performance over the medium term and beyond.

## **Transnet**

Transnet's mandate is to assist in lowering the cost of doing business in South Africa, enabling economic growth, and ensuring security of supply through providing appropriate port, rail and pipeline infrastructure in a cost effective and efficient manner, within acceptable benchmarks.

The anticipated economic recovery post the recession has not gained as much momentum as was expected. However, despite the prolonged economic slowdown, Transnet has continued to post a strong financial performance over the past three years. Revenue grew by an average rate of over 16 per cent per year during the period under review, from R37.9 billion in 2010/11 to R50.2 billion in 2012/13. Net profit average growth for the same period was only 2.4 per cent per year. This was due to major increases in operating expenses, especially in fuel and electricity.

In 2012/13, Transnet introduced the market demand strategy, which aims to increase capacity through infrastructure investments and efficiency improvements in order to meet customer demand and recapture lost volumes. The strategy is underwritten by a rolling capital expenditure programme of just over R300 billion for the seven year period, which is expected to create 588 000 new job opportunities over the same period. From 2011/12 to 2012/13, Transnet spent a total of R71 billion on capital projects. It will spend a further R121 billion between 2013/14 and 2015/16, most of which will be spent on the rail division in order to replace the aged locomotive and wagon fleet.

In spite of the increased funding acquired for capital investments over the past few years, the company's balance sheet has remained very strong with a current gearing ratio of 45.6 per cent. This indicates Transnet's ability to raise more funds in the debt markets. In accordance with the market demand strategy, two thirds of the capital programme will be funded from cash generated from operations, and the remaining third from external funding sources.

Freight rail volumes grew from 181 megatons in 2010/11 to 207 megatons in 2012/13, an average annual growth of 7 per cent. Container volumes, however, only had an average annual growth of 4 per cent over the same period. The lower growth in container volumes was due to depressed demand as a result of the economic slowdown. Pipeline volumes were also affected by the economic slowdown, as total volumes pumped decreased from 18 billion litres in 2010/11 to 15.9 billion in 2012/13. It should be noted that the 2010/11 volumes were significantly higher due to the increased economic activity related to the 2010 FIFA World Cup.

The focus of Transnet over the medium term will be on recapturing rail friendly volumes from road traffic by replacing the aged locomotive fleet and employing modern technologies to improve on efficiencies. Transnet will also be ensuring that complementary capacity is created at the ports in line with the strategy of creating capacity ahead of demand.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Lead the modernisation of the public service, through a generally applicable framework of norms and standards, to improve service delivery.*

### Mandate

The Department of Public Service and Administration draws its mandate from section 195(1) of the Constitution, which sets out basic values and principles that the public service should adhere to, and the Public Service Act (1994).

The department's mandate is to:

- transform and modernise the public service
- oversee changes to the structure of the public service
- improve the effectiveness and efficiency of the public service and its service delivery to the public
- establish norms and standards for human resources management and development, conditions of service, labour relations, IT and service delivery
- issue directives and regulations for the public service
- formulate the national anti-corruption strategy
- exercise oversight over the State Information Technology Agency.

### Strategic goals

The department's strategic goals over the medium term are to:

- ensure that compliance with all the public administration and public service policies and regulations improves
- continue to provide support and targeted interventions to support departments in achieving the required levels of compliance

- improve citizens' satisfaction levels as measured against specific service delivery criteria
- strengthen departments' organisational structures and business processes to enable more effective service delivery
- enhance the use and efficiency of ICT as a resource that enables government to better communicate with and deliver integrated services to the citizens of South Africa
- improve the efficiency of human resource management and development practices, norms and standards
- improve citizen engagement and public participation in policy development and feedback provision on the delivery of government services
- intensify the fight against corruption through the implementation of anti-corruption policies and interventions
- contribute towards improved public service and administration in Africa and the international arena through sharing lessons and best practices.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide policy, strategic leadership and overall management of the department.

### Programme 2: Human Resource Management and Development

**Purpose:** Develop, implement and monitor public service human resource management policies.

### Programme 3: Labour Relations and Remuneration Management

**Purpose:** Develop, implement and maintain public service labour relations and compensation policies. Ensure coordinated engagement with organised labour.

### Programme 4: Public Sector Information and Communication Technology Management

**Purpose:** Develop, implement and monitor public service information communication technology policies and norms and standards that enable citizen centred services.

### Programme 5: Service Delivery and Organisational Transformation

**Purpose:** Promote the service delivery and organisational transformation framework of the public service. Engage in interventions and partnerships to promote efficient and effective service delivery.

### Programme 6: Governance and International Relations

**Purpose:** Improve participatory governance, strengthen the fight against corruption and engage with international partners in the field of public administration.

## Selected performance indicators

**Table 12.1 Public Service and Administration**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of departments submitting annual human resource development implementation plans per year	Human Resource Management and Development	Outcome 12: An efficient, effective and development oriented public service and an empowered, fair and inclusive citizenship	100	45	82	137	153	153	153
Number of departments equipped with tools and skills in employee health and wellness policies per year	Human Resource Management and Development		46	45	120	115	138	150	153

Table 12.1 Public Service and Administration

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of provincial and national departments supported in the implementation of human resource management and development policies, directives and guidelines per year	Human Resource Management and Development	Outcome 12: An efficient, effective and development oriented public service and an empowered, fair and inclusive citizenship	- <sup>1</sup>	45	120	50	50	60	60
Number of expenditure review and research reports produced per year	Labour Relations and Remuneration Management		- <sup>1</sup>	- <sup>1</sup>	2	3	4	4	4
Total number of Thusong service centres providing citizen focused services	Public Sector Information and Communication Technology Management		- <sup>1</sup>	70	102	90	100	100	100
Number of departments in which quality methodologies on business process management have been rolled out per year	Service Delivery and Organisational Transformation		- <sup>1</sup>	45	2 <sup>2</sup>	10	14	14	14
Number of national and provincial departments in which training in Batho Pele principles is conducted per year	Service Delivery and Organisational Transformation		- <sup>1</sup>	14	17	20	20	20	20
Number of departments assisted with organisational development interventions per year	Service Delivery and Organisational Transformation		20	88	20 <sup>3</sup>	15	15	15	14
Number of departments supported with capacity building and assistance with the development of delegations per year	Service Delivery and Organisational Transformation		- <sup>1</sup>	196	169	60	10	10	10
Number of national and provincial departments supported with the development of service delivery improvement plans per year	Service Delivery and Organisational Transformation		- <sup>1</sup>	- <sup>1</sup>	128	59	62	60	60
Number of departments in which employee satisfaction surveys are conducted per year	Governance and International Relations		4	1	4	5	10	10	10
Number of international governance and public administration projects implemented through departments and international agencies	Governance and International Relations		2	6	0 <sup>4</sup>	4	4	4	4
Number of international bilateral and multilateral engagements facilitated and coordinated per year	Governance and International Relations		2	4	12	4	4	4	4

1. Indicator was introduced after 2010/11 or 2011/12.

2. The initiative targeted all departments when it began in 2011/12. Thereafter, training was provided on request, hence the decrease from 2011/12 onwards.

3. The department expects a lower number of departments to require assistance for organisational development because a large number were assisted in 2011/12.

4. Nothing was achieved due to projects not being approved.

## The national development plan

The goals of the national development plan include building a capable and developmental state and fighting corruption. This requires a state that is able to play a developmental and transformative role, a public service driven by a developmental agenda, excellent intergovernmental relations, and experienced, competent public servants.

The Department of Public Service and Administration, along with other departments and entities within this vote, plays a key role in building the capacity of the state to drive development and transformation and deliver high quality services. By focusing on strengthening organisational structures and developing norms and standards, these departments and entities enable the state to be supported by an efficient and effective public service and improve service delivery and access.

Over the medium term, the department will contribute to the achievement of the national development plan priorities by building a professional public service cadre through reviewing the public service human resource developmental strategic framework, providing support for improvement in the extent and depth of skills for public servants, and capacity building and mandatory training for public service senior management at the

National School of Government. The department also aims to enhance the labour relations framework and monitor the revised disciplinary code and procedures, develop and assist government departments with the implementation of frameworks and methodologies on service delivery improvement plans, improve social cohesion, and respond timeously to citizen complaints.

## Expenditure estimates

## Expenditure trends

The spending focus over the medium term will be on realising an efficient, effective and development orientated public service and an empowered, fair and inclusive citizenship (outcome 12) through the continuing realignment of the department's activities with the ministerial delivery agreement. Together with the other departments within the vote, the department will put measures in place to professionalise the public service, combat corruption, and promote ethical behaviour and integrity across the public service. To this end, the department has repositioned the Public Administration Leadership and Management Academy (PALAMA) and renamed it the National School of Government. The school will receive transfers from the department through the *Service Delivery and Organisational Transformation* programme to enhance and improve the training and continuous professional development of public servants. In addition, through the *Governance and International Relations* programme, the department will support capacity building initiatives in the Public Service Commission to address constraints in the commission's monitoring and evaluation programme. The commission receives an additional Cabinet approved allocation of R26.2 million over the medium term for this purpose.

The department receives additional funding of R10 million in 2014/15 for the Presidential Public Service Remuneration Review Commission, which was established in 2013/14 to review the remuneration policy framework of the public service and establish the appropriateness of remuneration and conditions of service of public servants. Of this amount, R6.3 million is allocated to compensation of employees, and R3.7 million is allocated to goods and services, particularly consultants, travel and subsistence and venues and facilities. In addition, the department has established the government employees housing scheme, an initiative to encourage government employees to become homeowners that is set to be implemented over the medium term. The department also plans to establish an office of norms and standards to ensure that government departments comply with the regulatory frameworks and norms and standards determined by the Minister of Public Service and Administration. All these initiatives are expected to lead to higher staff numbers and therefore spending on compensation of employees, which is set to increase significantly between 2013/14 and 2016/17.

Over the medium term, the department is to effect a Cabinet approved budget reduction of R27 million on non-essential goods and services across all programmes as a result of constant underspending in this area.

## Expenditure trends

The spending focus over the medium term will be on providing policy, strategic leadership and overall management of the department and public entities reporting to the Minister for Public Service and Administration; and supporting the overall functions of the department, including financial and human resource management support. Therefore, the *Ministry* and *Corporate Services* subprogrammes, which perform these functions, are the largest spending vehicles over the medium term.

Spending in the *Ministry* subprogramme increased significantly between 2010/11 and 2013/14, particularly on compensation of employees and related goods and services, such as travel and subsistence. This was mainly due to an increase in the staff complement from 36 in 2010/11 to 55 in 2013/14 in this subprogramme. The additional capacity was needed to support the department's oversight of public entities and national departments in the same vote in order to achieve the goals set out in the national development plan.

Spending in this subprogramme is expected to continue to increase as a result of funds reprioritised to it to provide for ministerial communication projects that the department will be undertaking over the medium term to promote and brand department work for public consumption.

In addition, the programme has been involved in a number of policy initiatives, which include the establishment of the office of norms and standards and the government employees housing scheme, which will be carried out in the *Governance and International Relations* and *Labour Relations and Remuneration Management* programmes. As a result of increasing personnel numbers over the medium term, the department plans to acquire additional office accommodation, which accounts for the significant increase in spending projected in the *Office Accommodation* subprogramme over the same period.

Cabinet approved budget reductions of R18.3 million over the medium term are to be effected on non-essential goods and services items, such as catering, administration fees and travel and subsistence, and this is reflected in the decrease in spending in the *Financial Administration* and *Internal Audit* subprogrammes over the same period.

## Programme 2: Human Resource Management and Development

### Objectives

- Improve the competency levels of senior management in government by supporting the implementation of the directive on compulsory capacity development and mandatory training days for public service senior managers by March 2015.
- Contribute to building a capable public service by developing policies, regulations, and prescribing procedures to support and improve human resource planning, employment practices and employee performance management systems on an ongoing basis.
- Contribute to the health, safety and positive morale of public service employees by providing support to increase the number of government departments implementing employee health and wellness policies from 115 departments in 2013/14 to 153 departments by March 2017.

- Contribute to building a professional and equitable public service cadre by reviewing the current public service human resource development strategic framework vision 2015 to align it with the national development plan and the new growth path by March 2015.
- Ensure that training and development interventions in the public service are responsive to government priority skills areas by providing a framework or model that will identify priority skills to inform departmental training budgets by March 2015.

## Subprogrammes

- *Management: Human Resource Management* provides for administrative support and management of the programme. In 2012/13 and 2013/14, strategic guidelines and administrative support were provided to enable the development of objectives, the prioritisation of projects and outputs, and the determination of resource requirements. This subprogramme had a staff complement of 4 in 2013/14.
- *Senior Management Services* ensures that there is a professional management service in the public service. This entails establishing and implementing competency based management through developing transversal employment policies, prescripts and guidelines and other career practices for senior management service members. In 2013/14, departments were supported in implementing competency based assessments for senior managers. Stakeholders were also engaged to solicit inputs for the draft directive on compulsory capacity development and mandatory training days for senior managers in the public service. Departments will be trained on the appropriate use of competency assessments results in 2014/15. This subprogramme had a staff complement of 7 in 2013/14.
- *Human Resource Planning, Performances and Practice* develops policies, prescripts, processes and systems; and provides advice and support to departments in implementing improvements to human resource planning, employment practices and employee performance management. In 2012/13, departments were supported through workshops on their roles pertaining to the strategy to improve recruitment and reduce vacancy rates. In 2013/14, the main focus areas were monitoring, analysing and reporting on recruitment and vacancy trends in the public service and compliance of senior management service members in signing performance agreements. This subprogramme had a staff complement of 14 in 2013/14.
- *Diversity Management* develops policies and guidelines on employment equity in the public service that are intended to remove barriers of access into and within the workplace for designated groups, and prevent direct and indirect discrimination against designated groups. This subprogramme also monitors and reports on the achievement of Cabinet approved employment equity targets on race, gender and people with disabilities by public service institutions. In 2012/13, 5 consultation workshops were conducted with national and provincial departments and civil society organisations dealing with gender related issues. In 2013/14, 3 advocacy workshops were conducted to introduce the policy on prevention of sexual harassment. This subprogramme had a staff complement of 8 in 2013/14.
- *Employee Health and Wellness* promotes and manages health and wellness in the public service and improves the occupational health and quality of work life through a holistic and integrated employee health and wellness strategic framework, related policies, guidelines and monitoring and evaluation plans. This subprogramme also coordinates government's mainstreamed response to HIV and AIDS, which is a focal point of the Southern African Development Community (SADC). In 2013/14, the National Public Service Sports Day was held and the implementation of 4 employment health and safety policies was monitored. This subprogramme had a staff complement of 6 in 2013/14.
- *Human Resource Development* aims to improve the competency levels of public servants through targeted capacity development activities, including internships, learnerships, compulsory courses and skills programmes designed to ensure a constant pool of productive and contributing employees through appropriate policies, prescripts, advice and support. In 2013/14, the focus was on monitoring and reporting on the implementation of internships, learnerships and artisan programmes; drafting a framework for the use of departmental training budgets; and developing a methodology to measure the depth of skill levels in the public service. This subprogramme had a staff complement of 9 in 2013/14.
- *Integrated Financial Management Systems* develops and supports the implementation of, and manages the integrated financial management system's human resource module. In 2013/14, the department was assisted in maintaining and enhancing the human resource management module, and the Free State Department of

Education and the Western Cape departments of economic development and tourism were supported in addressing challenges surrounding the implementation of the module. In addition, a fundamental review of the integrated financial management system solution architecture was conducted in conjunction with the National Treasury and the State Information and Technology Agency. This subprogramme had a staff complement of 5 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on building a capable public service by measuring the depth of skills levels in the public service, improving recruitment policies and reducing the vacancy rate, and developing retention strategies for department heads and senior management service members. This is set to be achieved through supporting 60 national and provincial departments with the implementation of human resource

management and development policies, directives and guidelines per year; supporting the implementation of the directive on compulsory capacity development and mandatory training days for public service senior managers; and by developing policies, regulations, prescribing procedures to support and improve human resource planning, employment practices and employee performance management systems. In addition, the department expects to increase the number of departments submitting annual human resource development implementation plans from 137 in 2013/14 to 153 in 2016/17. These activities are carried out in the *Human Resource Planning Performances and Practice*, *Senior Management Services* and the *Human Resource Development* subprogrammes, mainly through the allocations to compensation of employees.

The department is also working in collaboration with the National Treasury on developing the integrated financial management systems, which will replace the numerous inadequate and outdated systems employed by the public service with a single solution aligned with the legislation, policies and directives informing the management of public sector organisations. The department is responsible for the development of the human resource management module of the system. As part of the piloting project, the module was implemented in the department between 2010/11 and 2013/14, which explains the increase in spending in the *Integrated Financial Management Systems* subprogramme over this period.

The programme has a funded establishment of 53 posts, of which 4 were vacant at the end of November 2013, due to normal staff turnover. 2 of these positions are expected to be filled by the end of 2013/2014 and the entire establishment is expected to be filled by 2014/15, with personnel numbers then set to remain constant over the medium term.

The programme budget was reduced by R16.1 million over the medium term, of which R15.3 million has been reprioritised to other programmes, while the balance is to be effected on non-essential goods and services items such as catering, administration fees and travel and subsistence. This explains the decrease expected in the programme's expenditure over this period. The reduction in the budget is not expected to have a negative impact on service delivery.

### **Programme 3: Labour Relations and Remuneration Management**

#### **Objectives**

- Coordinate and oversee the implementation of the Public Service Coordinating Bargaining Council resolutions by:
  - monitoring the implementation of its resolution 1 of 2012 by all the roleplayers by March 2015
  - tabling proposed resolutions for negotiation on the conditions of service for public servants in the Public Service Coordinating Bargaining Council for the three-year period starting in 2015/16.
- Promote home ownership by employees in the public service by overseeing the establishment of the Government Employees Housing Scheme and institutional framework by March 2015.
- Contribute to improved productivity, enhanced and fast-tracked service delivery by ensuring the implementation of the Public Service Charter between the state as employer, sectors of civil society and citizens by March 2015.
- Contribute to improving the management of discipline within the public service by enhancing the labour relations framework and negotiating the revised disciplinary code and procedure by March 2015.

#### **Subprogrammes**

- *Management: Labour Relations and Remuneration* provides administrative support to and management of the programme. In 2012/13 and 2013/14, strategic guidelines and administrative support were provided to enable the programme to develop objectives, prioritise projects and outputs, and determine resource requirements. This subprogramme had a staff complement of 3 in 2013/14.
- *Remuneration and Market Analysis* develops, implements and maintains policies, practices and systems on remuneration. Work on the personnel expenditure review started in 2012/13 and was finalised in 2013/14. A new remuneration policy for the public service was also drafted in 2013/14. The focus for 2014/15 is set to be on obtaining approval for this policy and circulating it for implementation by national and provincial

departments. Audits on the selected occupational specific dispensations will also be performed in order to determine a way forward. This subprogramme had a staff complement of 9 in 2013/14.

- *Conditions of Service* focuses on the development, implementation and maintenance of policies and practices on general and macro benefits. In 2014/15, the development and establishment of the Government Employees Housing Scheme and institutional framework will be facilitated, with the objective of promoting home ownership in the public service. Work on this project began in 2012/13. Actuarial models for the revised housing policy were developed and related market surveys were completed in 2013/14. This subprogramme had a staff complement of 11 in 2013/14.
- *Labour Relations and Negotiations* develops, implements and maintains policies and systems on labour relations issues for the public service and ensures coordinated collective bargaining on the Public Service Coordinating Bargaining Council and the General Public Service Sectoral Bargaining Council. In 2012/13, a multi-term wage agreement on salaries and improvement of other conditions of service was negotiated and concluded. In 2013/14, the focus was on implementing the Public Service Coordinating Bargaining Council resolution on the revised disciplinary code and procedure for the public service. This subprogramme had a staff complement of 11 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term is on determining the sustainability of the occupation specific dispensation model as an incentive strategy to attract, motivate and retain essential service professionals in the public service. These objectives are expected to be achieved through conducting occupation specific dispensation audits in the *Remuneration and Market Analysis* subprogramme. The audit will mainly be funded from the reprioritisation of savings identified in other programmes. R23.8 million has been reprioritised to this programme over the medium term, of which R7.3 million is in relation to the occupation specific dispensation audits and will impact on spending on goods and services such as travel and subsistence and consultants. R15.8 million has been reprioritised to the *Labour Relations and Negotiations* subprogramme for backlogs identified in disciplinary cases in national departments and user licences for case management. This explains the increase in expenditure in this subprogramme over the medium term, and particularly in 2016/17, when additional employees will be appointed for this purpose.

In addition, during the 2013 adjustments budget process, the department established the Presidential Public Service Remuneration Review Commission to review the remuneration policy framework of the public service to assess the appropriateness of remuneration and conditions of service. Additional funding of R13.6 million was provided for the establishment of the commission in 2013/14 and a further R10 million is allocated for the continuation of the commission's activities in 2014/15. This explains the significant increase in spending on compensation of employees and personnel numbers in 2013/14. The overall spending and the number of filled posts are expected to decrease significantly in 2015/16, as activities relating to the commission are concluded.

In 2011/12, the department established the government employees housing scheme, which is funded through the *Conditions of Service* subprogramme. The scheme is part of government's initiative to promote home ownership among public servants. Expenditure in the *Conditions of Service* subprogramme is expected to decrease over the medium term, as activities relating to the establishment of the scheme are concluded and implementation begins.

To give effect to Cabinet approved budget reductions, R2.7 million over the medium term is set to be cut from spending on non-core goods and services items such as catering and travel and subsistence, which explains the decrease in spending over this period. The reductions will not have an impact on service delivery.

## Programme 4: Public Sector Information and Communication Technology Management

### Objectives

- Improve e-governance by revising the e-government policy and strategic framework, and developing and launching an e-government transversal system for implementation by departments by March 2015.
- Improve the security of government information by launching the minimum information security standards framework and associated standards and monitor their implementation by departments by March 2015.
- Enhance IT governance by developing implementation guidelines to support the implementation of the IT governance framework and monitor its implementation by March 2015.
- Improve the functioning of the State Information Technology Agency by developing mechanisms to address agency related issues as raised by departments and reviewing the shareholder compact and legal and administrative framework of the agency by March 2015.
- Contribute to the improvement of service delivery at Thusong service centres by validating the ICT infrastructure and conducting an impact assessment on improved service delivery at connected centres by March 2015.

### Subprogrammes

- *Management: Public Sector Information and Communication Technology* provides administrative support to and management of the programme. In 2013/14, strategic guidelines and administrative support were provided to enable the development of objectives, the prioritisation of projects and outputs, and the determination of resource requirements. This subprogramme had a staff complement of 3 in 2013/14.

- *E-Government* provides support and leadership to national and provincial departments and the State Information Technology Agency in the development of a government wide architecture and system integration plan. In 2012/13, the green IT policy was finalised with e-waste guidelines as an appendix. Activities in 2013/14 included the development of the draft government wide enterprise architecture framework, which is designed to improve the alignment of ICT planning to the planning of the business, the development of the draft e-government policy framework and the finalisation and adoption of the information security policy framework for the public service. The focus for 2014/15 will be on launching the e-government policy and strategic framework, an e-government transversal system and the minimum information security standards framework and associated standards. Implementation will also be monitored. This subprogramme had a staff complement of 5 in 2013/14.
- *Information and Communication Technology Policy and Planning* develops policies, strategies and regulations on information communication technology across the public service, oversees the State Information Technology Agency, provides secretarial services to the Government Information Technology Officers' Council, and oversees all ICT initiatives in the public service. The free open source software impact assessment, which seeks to address the level of implementation of the related 2007 policy, is being conducted on an ongoing basis. In 2012/13, members of the Government Information Technology Officers' Council were trained on the implementation of the green IT policy. In 2013/14, improvements in the functioning of the State Information Technology Agency were supported with the development of mechanisms to address issues and the review of the shareholder compact and legal and administrative framework of the agency. This subprogramme had a staff complement of 6 in 2013/14.
- *Information and Communication Technology Infrastructure and Operations* supports all national and provincial departments on significant transversal projects and ICT infrastructure related projects. In 2013/14, the Batho Pele gateway call centre was upgraded, ICT infrastructure at 89 of the 96 connected Thusong service centres was validated, IT service management standards were developed, a corporate governance framework of ICT policy was developed and a directive on compliance with the framework was issued by the minister. This subprogramme had a staff complement of 9 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on continuing to implement information management and e-government policies in the public service, ensuring the effective operation of the Thusong service centres, and coordinating and managing the Government Information Technology Officers' Council. These objectives will be achieved through increasing the number of Thusong service centres providing citizen focused services from 90 in 2013/14 to 100 in 2016/17, reviewing and implementing various policies related to information management and e-governance in the public service, and coordinating and managing the council and portal. In addition, the department aims to develop and launch an e-government transversal system, which is set to be implemented by all national departments by March 2015. These activities are carried out in the *Information and Communication Technology Policy and Planning*, and *Information and Communication Technology Infrastructure and Operations* subprogrammes, mainly using the funds allocated to compensation of employees, as well as goods and services, particularly computer services.

The department hosts the annual Government Chief Information Officers' Council summit to keep abreast of developments in IT and gain insights into how the quality of service delivery can be raised. Due to the lack of sponsorship in 2012/13, the department had to pay for half the costs related to the hosting of the summit. This resulted in the significant increase in spending between 2011/12 and 2012/13 in the *Information and Communication Technology Policy and Planning* subprogramme, particularly on goods and services, such as travel and subsistence and catering. The department plans to implement cost saving measures and scale down the cost of the summit over the medium term. Expenditure in this subprogramme is therefore expected to decrease over this period, mainly on goods and services items, such as travel and subsistence and catering. The decrease in spending on these items can also be attributed to the R1.1 million Cabinet approved budget reductions effected over this period.

In addition, R20.3 million over the medium term has been reprioritised from this programme, specifically from goods and services such as consultants and computer services, due to the decision to limit the use of consultants and the frequent underspending of the computer services allocation. These reductions explain the below inflation growth expected in the overall programme budget over the medium term.

## Programme 5: Service Delivery and Organisational Transformation

### Objectives

- Facilitate the implementation of service delivery quality improvement initiatives by assisting national and provincial departments with the implementation of frameworks and methodologies on service delivery improvement plans, business process mapping and standard operating procedures, unit costing and geographic mapping by March 2015.
- Provide support in the organisational development and transformation of departments by:

- revising existing legal instruments, frameworks, methodologies and directives on delegations, organisational design and change management within the public service by March 2015
- assisting sector departments as and when requested, to develop sector specific organisational structures and conducting reviews on the efficiency of organisational structures and assessing functional capacity by March 2015
- providing advocacy programmes for organisational development practitioners by March 2015.
- Enhance the professionalism and morale of public servants by focusing on minimum productivity measures required and strategies to acknowledge service delivery improvement efforts by March 2015.
- Contribute towards the improvement of service delivery in government by ensuring effective citizen participation and engagement, responding timeously to citizens' complaints and providing redress using citizen interfacing mechanisms by March 2015.
- Encourage innovative service delivery in the public sector by investigating, testing and piloting at least 2 sustainable innovative service delivery models and solutions per year for replication and mainstreaming.

## Subprogrammes

- *Management: Service Delivery and Organisational Transformation* provides for administrative support and management of the programme. In 2012/13 and 2013/14, strategic guidelines and administrative support were provided to enable the development of objectives, the prioritisation of projects and outputs, and the determination of resource requirements. This subprogramme had a staff complement of 3 in 2013/14.
- *Service Delivery Planning* coordinates and facilitates service delivery improvement initiatives such as the development and implementation of a service delivery planning framework in departments. In 2012/13, a service delivery planning toolkit was successfully institutionalised in all national and provincial departments. The R1.2 million operational budget in 2013/14 was mainly used for consultations and support for the determination of unit costing in the health, human settlement and education sectors. This subprogramme had a staff complement of 4 in 2013/14.
- *Service Delivery Improvement Mechanisms* supports interventions and partnerships that improve efficiency and effectiveness. A study on productivity management began in 2012/13 and will be concluded in 2013/14. In addition, a Batho Pele impact assessment was conducted within the Department of Human Settlements under the umbrella of Public Service Month in 2013/14. The African Public Service Day celebrations and a conversation on service delivery issues were also hosted. Planned activities for 2014/15 include improving the professionalism and morale of public servants by focusing on minimum productivity measures required, and developing strategies to acknowledge service delivery improvement efforts. This subprogramme had a staff complement of 14 in 2013/14.
- *Organisational Development of the Public Sector* focuses on the organisational development of the public sector. In 2012/13, research studies were undertaken and concluded in a draft uniform job grading policy framework for the public service. In 2013/14, the implementation of the standardised delegation templates across the public service was monitored and reported on and departments were assisted in developing sector specific structures. This subprogramme had a staff complement of 16 in 2013/14.
- *Community Development and Participation* ensures the smooth coordination and implementation of the community development workers programme in the public service and the promotion of citizen participation. In 2012/13, community development worker empowerment workshops were held in each province. This was followed by a national conference at which senior government leaders, including the president and ministers, consolidated their views on how community development workers should convey government messages and information to citizens. In 2013/14, wards were profiled and the citizen engagement strategy and Know Your Rights campaign were showcased in the Mpumalanga, Limpopo and North West Provinces. This subprogramme had a staff complement of 5 in 2013/14.
- *Change Management Process and System* promotes cultural change in the public service and coordinates the dissemination of lessons for improving service delivery. The key focus in 2013/14 was on developing a framework to improve the morale of public servants. Other deliverables included a project on the modernisation of government and the development of a change management framework. In 2014/15, activities are set to include providing support to and transforming departments by revising existing legal

instruments, frameworks, methodologies and directives on change management. This subprogramme had a staff complement of 6 in 2013/14.

- *Integrated Access Mechanisms* facilitates community development through providing access to government services. In 2012/13, a national and metro accessibility study focusing on the spatial location and access to government service point was conducted. A study on the geographic accessibility of Thusong service centres in metropolitan areas was also completed. This subprogramme had a staff complement of 3 in 2013/14.
- *National School of Government* aims to enhance the quality, extent and impact of public sector management and leadership development through collaboration with other training service providers, compulsory training programmes, and the facilitation of training for all spheres of government. This subprogramme's total budget is transferred on a monthly basis to the National School of Government.
- *Centre for Public Service Innovation* unlocks innovation in the public sector and creates an enabling environment for improved and innovative service delivery through capacity development activities. The annual innovation conference was hosted in August 2013 in Gauteng and the annual Centre for Public Service Innovation Public Sector Awards ceremony was held in November 2013. This subprogramme had a staff complement of 23 in 2013/14.
- *Public Service Sector Education and Training Authority* develops a coordinated framework for providing public service education and training. This subprogramme's total budget is transferred on a quarterly basis to the Public Service Education and Training Authority.
- *Batho Pele* manages and promotes the Batho Pele programmes in the public service. In 2012/13, capacity building workshops were held in 6 provinces as part of the institutionalisation of the Batho Pele programme. In 2013/14, a toolkit and methodology was developed for conducting a productivity study in the public service and a Batho Pele advocacy programme was also conducted in both national and provincial departments. The focus as per the national priorities was the provincial and national Departments of Health, Education and Human Settlements. To ensure the effective implementation of service delivery improvement programmes, the refocused institutionalisation of the Batho Pele principles will be prioritised in 2014/15. This subprogramme had a staff complement of 6 in 2013/14.

**Expenditure trends**

The spending focus over the medium term will be on continuing to enhance the quality, extent and impact of public sector management and leadership development, coordinating frameworks for providing public service education and training, and transforming, reforming and using innovation to improve the effectiveness, efficiency and the level of service delivery in the public service. These objectives are set to be achieved through providing training on Batho Pele principles to 20 national and provincial departments per year, supporting 60 national and provincial departments on the development of the service delivery improvement plans per year, and testing and piloting at least 2 sustainable innovative service delivery models and solutions per year for replication and mainstreaming. These objectives are provided for by funds allocated to the *Centre for Public Service Innovation, Service Delivery Improvement Mechanisms* and *Organisational Development of the Public Sector* subprogrammes, particularly on compensation of employees.

Another focus area will be on repositioning PALAMA as the National School of Government to meet the objectives of the public service as set out in the national development plan and the ministerial service delivery agreement. The repositioning of the academy is intended to increase the coverage of government's education, training and development programmes from the current 2 per cent to reach the entire public service. These objectives will be funded from a transfer payment to the *National School of Government* subprogramme.

As part of the Cabinet approved budget reductions, the programme reduced spending mainly on goods and services, such as catering, administration, and travel and subsistence, by R2.4 million over the medium term. The programme also reprioritised R31.5 million, mainly on goods and services such as advertising, computer

service and venues and facilities, as part of cost saving measures to fund departmental priorities in other programmes. These budget reductions are the reason for the significant decrease in spending on goods and services over the medium term.

## **Programme 6: Governance and International Relations**

### **Objectives**

- Contribute to greater alignment of public administration across the 3 spheres of government for strengthened administration and service delivery by developing enabling policy and legislative frameworks by March 2015.
- Contribute to government's fight against corruption in the public service by introducing the public sector integrity management framework and support investigations and disciplinary processes relating to corruption cases by March 2015.
- Ensure South Africa's compliance with the African Peer Review Mechanism by:
  - managing and implementing the African Peer Review Mechanism's national programme of action by March 2015
  - preparing and submitting progress implementation reports and coordinating the second generation country review process by March 2015.
- Contribute to the transformation agenda of the global public service by:
  - participating in continental governance and public administration initiatives by March 2015
  - advancing South-South cooperation, establishing and managing North-South relations and participating in global governance forums by March 2015.
- Ensure accountability and transparency in national and provincial departments by implementing a monitoring and evaluation framework for public service regulations and policies by March 2015.

### **Subprogrammes**

- *Management: Governance and International Relations* provides administrative support and management of the programme. In 2013/14, strategic guidelines and administrative support were provided to enable the development of objectives, the prioritisation of projects and outputs, and the determination of resource requirements. This subprogramme had a staff complement of 3 in 2013/14.
- *Integrity and Ethics Management* is responsible for establishing and implementing strategies for fighting corruption and improving ethical conduct in the public service. In 2012/13, Cabinet approved the ethics and integrity framework for the public service, which includes the financial disclosure system for all public servants; restrictions for public servants doing business with government; strict regulation on public servants performing other remunerative work and restrictions on acceptance of gifts by public servants. The outputs and activities for 2013/14 include the rollout of the electronic disclosure system across government for implementation in April 2014, monitoring and reporting on the implementation of the public sector integrity management framework and the implementation of the anticorruption communication awareness campaign. This subprogramme had a staff complement of 11 in 2013/14.
- *International Cooperation* establishes and maintains bilateral and multilateral relations on governance and public administration by coordinating and facilitating South Africa's engagement with and contribution to continental and international discourses on governance and public administration for improved service delivery. In 2012/13, Cabinet approved the African Charter on the Values and Principles of Public Service and Administration, the department participated in the South Africa-Democratic Republic of Congo Bi-National Commission and a memorandum of understanding was signed with China. The department also participated in several international conferences, including the 15th International Anti-Corruption Conference in Brazil. In 2013/14, South Africa was represented on the African Training and Research Centre in Administration for Development board, the South African Association for Public Administration and Management participated in the tenth forum of Commonwealth heads of African public service in Botswana and the department participated in the biannual Africa Public Service Day celebrations. This subprogramme had a staff complement of 13 in 2013/14.

- *Monitoring and Evaluation* manages a system for monitoring and evaluating public service regulations and related policies that enables transformation in the public sector. The main accomplishments for 2013/14 include the conducting of a citizen report card survey in sampled municipalities, a pilot for an employee satisfaction survey in the public service in Mpumalanga and Gauteng, and the quarterly production and circulation of the strategic human resources performance reports to facilitate improvement of the quality of PERSAL data. This subprogramme had a staff complement of 11 in 2013/14.
- *African Peer Review Mechanism* ensures the domestication and mainstreaming of policies, standards, and practices of the African Peer Review Mechanism programme, contributing towards political stability, high economic growth, sustainable development and accelerated subregional and continental economic integration. The operational budget for 2013/14 was mainly used on consultations in preparation for the tabling of the third national report on the implementation of the programme of action of the African Peer Review Mechanism and expenditure in relation to the open government partnership project. This subprogramme had a staff complement of 11 in 2013/14.
- *Integrated Public Administration Reforms* works towards greater public administration and service delivery alignment through facilitating the introduction of enabling legislative and policy frameworks, stakeholder liaison and programme coordination. In 2013/14, the needs assessment concept document for train service centres began and work on the Public Administration Management Bill progressed to its introduction to Cabinet after an extensive countrywide consultative process. In addition, the Thusong service centre in Soweto was managed and monitored. This subprogramme had a staff complement of 9 in 2013/14.
- *Public Service Commission* funds are transferred to the Public Service Commission, which oversees and evaluates the functioning of the public service with a view to establishing good governance and best practice principles. This subprogramme's total budget is transferred monthly to the Public Service Commission.

## Expenditure trends

The spending focus over the medium term will be on strengthening the Public Service Commission's capacity to monitor and evaluate government departments' compliance with the nine constitutional values. The department will achieve this objective by facilitating the transfer payment to the commission. The commission receives Cabinet approved additional funds of R26.2 million over the medium term. This is reflected in the transfer to departmental agencies.

The department also aims to establish the office of standards and compliance in the *Monitoring and Evaluation* subprogramme over the medium term. The office will provide technical assistance, advisory services and strategic interventions in the public service to ensure that national and provincial departments comply with the regulatory frameworks and norms and standards determined by the minister. The establishment of this entity is expected to result in an increase in the number of funded posts in this programme from 64 to 89 over the medium term. As a result, expenditure on compensation of employees is expected to increase at an average annual rate of 14.9 per cent over the same period.

To give effect to Cabinet approved budget reductions of R1.7 million over the medium term, the department is to reduce spending mainly on non essential goods and services, such as catering, administrative fees, and travel and subsistence.

The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.

### Aim

*Promote constitutional values and principles of public administration in the public service.*

### Mandate

The Public Service Commission derives its mandate from section 196 of the Constitution and is tasked and empowered to, either of its own accord or if it receives any complaint, investigate, monitor and evaluate the organisation and administration of the public service. The mandate also entails the evaluation of the performance of government programmes. The commission is also required to promote measures throughout the public service and to Parliament and the provincial legislatures that ensure effective and efficient performance within the public service, and to promote the values and principles of public administration as set out in the Constitution.

### Strategic goals

The commission's strategic goals over the medium term are to:

- enhance accountability and ethics in public administration
- improve service delivery by government and ensure that standards of equity, effectiveness, efficiency and economy are met
- contribute to a successful developmental public administration.

### Selected performance indicators

**Table 12.18 Public Service Commission**

Indicator	Programme	Outcome	Past			Current	Projections

			1 117	1 582	1 963	2 600	2 800	2 700	2 800
Number of cases reported on the national anti-corruption hotline referred to relevant departments and investigated per year	Integrity and Anti-Corruption								
Percentage of financial disclosure forms received and scrutinised	Integrity and Anti-Corruption		88% (7 587)	62% (5 786)	100% (8 342)	100%	100%	100%	100%
Number of ethics and anti-corruption research reports per year	Integrity and Anti-Corruption		1	8	7	9	4	4	4

1. The number of public administration investigations has been split to show full scale and desktop investigations conducted. Full scale investigations involve field research on information collected when departments are visited, whereas desktop investigations are based on information provided by the department.

## Objectives

- Enhance the ability of departments to investigate grievances of employees in the public service through the monitoring of the resolution of grievances by investigating and finalising all grievances lodged with the Public Service Commission each year.
- Monitor and evaluate compliance with the principles governing public administration by evaluating the management practices and service delivery performance and undertaking at least 1 programme evaluation per year.
- Investigate and improve public administration practices by concluding 20 audits and investigations into public administration practices per year by 2015/16, and making recommendations to departments on how to promote good governance on an ongoing basis.
- Monitor and raise awareness of potential conflicts of interest among managers by managing the financial disclosure framework through official correspondence and annual reporting on non-complying managers to increase compliance to 100 per cent by 2015/16.
- Contribute to the fight against corruption through ongoing management of the national anti-corruption hotline for the public service.

## Programmes

- *Administration* manages the office of the commission and provides centralised support services. In 2013/14, key activities included the virtualisation of the server and the upgrading of the email system to ensure active synchronisation and easy access for all Public Service Commission employees. This programme had a staff complement of 114 in 2013/14.
- *Leadership and Management Practices* promotes sound public service leadership, human resource management, labour relations and labour practices. This programme is divided into the *Labour Relations Improvement* and *Leadership and Human Resource Reviews* subprogrammes. In 2012/13, the commission concluded 104 cases and closed 138 of the 619 grievance cases lodged. This programme had a staff complement of 58 in 2013/14.
- *Monitoring and Evaluation* enables the department to establish a high standard of service delivery, monitoring and good governance in the public service. This programme comprises 2 subprogrammes: *Governance Monitoring*, which promotes good governance and improves governance practices in the public service; and *Service Delivery and Compliance Evaluations*, which strives to promote improved service delivery through public participation and the monitoring of quality audits. In 2013/14, public service barometer reports, which provide a coherent and sustained analysis of the state of compliance with constitutional values and principles, were produced. In addition, deeper assessments of 15 departments against these values and principles were approved. This programme had a staff complement of 58 in 2013/14.
- *Integrity and Anti-Corruption* undertakes public administration investigations, analyses and refers cases of alleged corruption to the respective departments for investigation, and scrutinises the financial disclosure

forms of senior managers to ensure integrity-driven public service and administration. The programme comprises 2 subprogrammes: *Public Administration Investigations* and *Professional Ethics*. The compliance rate with regard to the submission of the disclosure forms for 2012/2013 was 84 per cent, or 7 930 submissions, by the end of May 2013, while 5 095 cases of alleged corruption reported to the national anti-corruption hotline were closed in 2013/14. This programme had a staff complement of 70 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will continue to be on conducting anti-corruption work, strengthening investigative capacity, and promoting the judicious management of resources. To achieve these objectives, the commission will continue to monitor and evaluate government departments' compliance with the nine constitutional values in order to maintain and improve the standard of professional ethics in the public

service and the efficient use of public service resources by public servants. The department also expects the number of cases reported on the national anti-corruption hotline referred to respective departments and investigated per year to increase from 1 963 in 2012/13 to 2 800 in 2016/17. These activities are supported by the budget allocated to the *Integrity and Anti-Corruption* programme, particularly on compensation of employees.

Cabinet approved additional funding of R13.6 million in 2014/15, R6.1 million in 2015/16 and R6.5 million in 2016/17, to mitigate capacity constraints in the commission, particularly in the monitoring and evaluation and internal administrative functions. Consequently, personnel numbers are expected to increase from 255 in 2012/13 to 317 in 2016/17 and expenditure on compensation of employees is projected to increase accordingly.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

Provide or coordinate the provision of training and management development interventions that lead to improved performance and service delivery in the public sector.

### Mandate

The National School of Government derives its mandate from the Public Service Amendment Act (2007). In terms of the act, the school is required to ensure that public servants are capacitated in the leadership, management and administrative competencies that are central to creating a developmental state. The operational activities of the school are located within the National School of Government training trading account, a separate public entity. The National School of Government was proclaimed under a presidential proclamation in 2013 to replace PALAMA.

The school's strategic goals over the medium term are to:

- rapidly respond to changes in the public sector capacity development arena through proactive monitoring and research
- progressively increase and expand the academy's client base by 10 per cent annually within the three spheres of government and other organs of state
- determine appropriate funding mechanisms to support the academy's training and operations and to ensure the correct level of funding and utilisation of the funds in line with delivery targets
- enhance the marketing and visibility of the academy's products and services within the three spheres of government and other organs of state
- deliver training to officials within the three spheres of government and other organs of state through structured collaborative partnerships and within a coherent cooperative governance framework
- develop common norms and standards for public sector training and development within the confines of a coherent policy framework

- develop the academy into a high performance organisation by improving organisational and administrative efficiencies.

### Selected performance indicators

The National School of Government's selected performance indicators are discussed under the National School of Government training trading account.

### Objectives

- Improve the capacity of the state to deliver services by raising the skills levels of civil servants through the competency based training of 38 000 civil servants per year over the medium term.
- Improve the quality of training by accrediting 6 courses per year on a rolling schedule over the medium term.

### Programmes

- *Administration* facilitates the overall management of the school and provides support services for its organisational functions. In 2013/14, administrative support was provided to enable the achievement of objectives such as providing sound financial management, human resources management and communication services. Over the medium term, the focus will continue to be on these outputs. This programme had a staff complement of 89 in 2013/14.
- *Public Sector Organisational and Staff Development* facilitates transfer payments to the training trading account for management development and training public sector employees. This programme's total budget is transferred in full to the training trading account.

## Expenditure trends

The spending focus over the medium term will be on continuing to transform the National School of Government, which was launched and renamed in October 2013, into a new organisation geared to meet the objectives of the public service as set out in the national development plan and the ministerial service delivery agreement. The school aims to provide education, training and development programmes in the public service to improve the performance of public servants and service delivery. The school's new business philosophy and practices are expected to increase the coverage of government's education, training and development programmes from a current 2 per cent to the entire public service over the medium term. This ambitious goal will require the school management to plan for and recruit appropriate personnel and other resources for developing, implementing, and managing the school's training programmes and objectives.

The activities required to transform the school are provided for in the budget allocated to the *Administration* programme, which is expected to grow at an average annual rate of 5.6 per cent over the medium term, with personnel numbers expected to remain at 89 over the same period. The school's management faces a critical challenge in planning and managing the change agenda of the school within the available resource capacity over the medium term.

## Public entities and other agencies

### State Information Technology Agency

#### Mandate and goals

The State Information Technology Agency is governed by the State Information Technology Agency Act (1998). The act separates the agency's services into mandatory services and non-mandatory services. The mandatory services include the provision and maintenance of transversal information systems, and data processing or associated services for transversal systems. The act mandates the agency to consolidate and coordinate the South African government's IT resources to achieve cost savings through economies of scale, increased delivery capabilities and enhanced interoperability of systems. The agency is committed to leveraging IT as a strategic resource for government, managing the IT procurement and delivery process to ensure that government receives value for money and using IT support delivery of e-government services to all citizens.

The agency's strategic goals over the medium term are to:

- significantly improve service delivery to its clients
- prioritise citizen focused projects
- attain best practice in people management and leadership
- overhaul internal and external communications to improve transparency, visibility and image
- build an appropriate organisational structure and team to achieve its strategic objectives

- maintain financial sustainability.

## Expenditure trends

Following Cabinet approval of a turnaround framework in March 2010, the State Information Technology Agency was repositioned as the government's prime systems integrator mandated to provide an integrated and collaborative IT service. This resulted in the restructuring of the organisation, which included the retrenchment of senior officials and impacted on the agency's operations. Agency revenue in respect of the sale of goods and services is expected to decrease in 2014/15 as a result of these turnaround activities.

The spending focus over the medium term will be on finalising the implementation of the agency's turnaround strategy, which is aimed at overhauling financial structures, customer service, internal processes and skills retention issues to counter challenges that the agency has been experiencing. The strategy has resulted in an overall restructuring of the agency's senior management positions. As a result, the agency projects a decrease in its spending between 2013/14 and 2014/15, mainly due to a decrease in the collection of revenue. The agency is in the process of filling the 375 vacancies in its funded establishment and expects to have a full staff complement by the end of 2013/14, with most of the new employees appointed in a lower salary band than their predecessors. A gradual growth in revenue is expected from 2015/16 onwards as all vacant posts will have been filled and the new appointments would have gained the required experience. The decrease in revenue collection will have an impact on the agency's spending, which is also expected to decrease over the same period. Consultants are mainly used for the specialised service of grading of positions in line with industry best practice.

Overall expenditure is expected to increase from 2014/15 onwards, in line with revenue growth and the increase in the net surplus percentage. The agency plans to use its increased revenue to upgrade its ICT infrastructure to ensure sustained service delivery for its clients.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- **The National School of Government training trading account** functions within the National School of Government as a mechanism for the partial recovery of the costs of training programmes. The branches of the trading account directly facilitate and monitor the provision of leadership development and management training at all 3 levels of government, in collaboration with provincial academies and local government training entities. The account's total budget for 2014/15 is R186.4 million.
- **The Public Service Sector Education and Training Authority** implements sector skills plans to develop appropriate skills in the public sector, develops and registers public sector learning programmes, acts as an education and training quality assurance body for the public sector, and distributes skills development levy funds. The entity's total budget for 2014/15 is R29.4 million.

Executive authority Minister in the Presidency: National Planning Commission

Accounting officer Statistician General of Statistics South Africa

Website address [www.statssa.gov.za](http://www.statssa.gov.za)

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Provide a relevant and accurate body of statistics by applying internationally recognised practices to inform users on the dynamics in the economy and society.*

### Mandate

Statistics South Africa is a national government department accountable to the Minister in the Presidency: National Planning Commission. The activities of the department are regulated by the Statistics Act (1999), which mandates the department to advance the production, dissemination, use and coordination of official and other statistics to assist organs of state, businesses, other organisations and the public in planning, monitoring, and decision making. The act also requires that the department coordinate statistical production among organs of state in line with the purpose of official statistics and statistical principles.

### Strategic goals

The department's strategic goals over the medium term are to:

- expand the statistical information base by increasing its depth, breadth and geographical spread through the production of economic, social and population statistics
- enhance public confidence and trust by developing and enhancing qualitative and methodological standards, maintaining business and geographic frames, managing relationships with stakeholders, and conducting research
- improve productivity and service delivery by integrating fieldwork and data processing operations, providing management support, and implementing effective governance and administration
- lead the development and coordination of statistical production in the national statistics system by coordinating and providing statistical support for the production of official statistics
- invest in the learning and growth of the organisation by investing in human, information and organisational capital
- promote international cooperation and partnerships in statistics by participating and contributing to national, continental and international statistical activities and forums.

## Programme purposes

### Programme 1: Administration

**Purpose:** Manage the department, and provide centralised support services and capacity building. Coordinate statistical production among organs of state in line with the purpose of official statistics and statistical principles.

### Programme 2: Economic Statistics

**Purpose:** Produce economic statistics to meet user requirements in line with internationally recognised practices.

### Programme 3: Population and Social Statistics

**Purpose:** Produce population, demographic, labour market and social statistics to meet user requirements in line with internationally recognised practices.

### Programme 4: Methodology, Standards and Research

**Purpose:** Provide expertise on quality and methodology for official statistics, standards for conducting surveys, and business sampling frames. Conduct policy research and analysis on emerging policy matters.

### Programme 5: Statistical Support and Informatics

**Purpose:** Using technology in the production and use of official statistics to enable service delivery programmes. Promote and provide better access to official statistics.

### Programme 6: Statistical Collection and Outreach

**Purpose:** Provide statistical information to support policy makers. Manage stakeholders and provide effective communication services. Promote statistical development and cooperation in South Africa, Africa and the world.

### Programme 7: Survey Operations

**Purpose:** Provide data collection and processing support to produce official statistics. Conduct independent household survey monitoring and evaluation activities.

## Selected performance indicators

Number of producer price index releases per year	Economic Statistics		12	12	12	12	12	12	12
Number of releases on labour market dynamics per year	Population and Social Statistics	Outcome 2: A long and healthy life for all South Africans	4	4	4	4	4	4	4
Number of releases on living circumstances, service delivery and poverty	Population and Social Statistics		-2	-2	-2	-2	7	4	4

**Table 13.1 Statistics South Africa**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of releases on the changing profile of the population per year	Population and Social Statistics	Outcome 2: A long and healthy life for all South Africans	18	17	17	17	17	17	17
Number of municipalities demarcated per year <sup>2</sup>	Statistical Support and Informatics	Outcome 8: Sustainable human settlements and improved quality of household life	164	- <sup>3</sup>	- <sup>3</sup>	- <sup>3</sup>	234	8	30

1. The annual release is now incorporated into the third quarterly release.

2. This is a new indicator, which will take effect in 2014/15.

3. No enumerator areas were demarcated between 2011/12 and 2013/14.

## The national development plan

The national development plan highlights the need for South Africa to build a state that is capable of playing a developmental and transformative role. This requires the state to have the capacity to formulate and implement policies that serve the national interests, focus on overcoming the root causes of poverty and inequality, and build the state's capacity to fulfil its developmental role.

Statistics South Africa contributes to building a capable and developmental state by leading and partnering with other government departments in statistical production systems to provide accurate and quality statistical information on economic, demographic, social and environmental developments to enable the state, business and the public to make informed decisions. Statistical information therefore provides decision makers with the evidential knowledge to inform planning, monitoring and evaluation, and policy development by measuring development outcomes, thereby contributing to the building of a capable and developmental state.

Over the medium term, the department will strive to improve the quality of its work by implementing international statistical standards, building statistical capability and capacity, investing in the streamlining of statistical operations and strengthening its partnerships with other government departments with regard to statistical production systems.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on streamlining statistical operations to inform evidence based decision making and strengthening the department's statistical production partnerships with other government departments. The department expects to do this over the medium term by expanding the statistical information base and increasing the supply of official statistics, continuing to maintain the production of macroeconomic, social and population statistics. This includes publishing the GDP estimates, providing information on private sector business enterprise and government, and providing statistical information on primary, secondary, tertiary and transport sectors of the economy.

This focus is reflected in the significant proportion of the department's budget allocated to the Administration, Economic Statistics, Population and Social Statistics, Statistical Support and Informatics and Statistical Collection and Outreach programmes over the medium term. This is specifically reflected in spending on the goods and services that enable staff to do their work, and explains the significant amount allocated over the medium term to compensation of employees, office accommodation related costs, and computer services.

At the end of November 2013, the department had a staff establishment of 3 430 posts. The 348 vacancies were mainly due to the difficulties experienced in finding candidates with the appropriate specialised skills. Due to the labour intensive nature of survey activities, the staff establishment is projected to increase to 3 735 posts over the medium term, mainly in the *Statistical Collection and Outreach* programme.

The 12.1 per cent projected increase in spending in the *Administration* programme and on goods and services in 2014/15 relates to an additional Cabinet approved allocation of R139 million for the unitary fees for the

department's new building, which is to be built through a private public partnership. Additional Cabinet approved amounts of R282.2 million in 2014/15 and R134.9 million in 2015/16 are allocated as capital contribution fees for the new building project. The new building will be able to house the entire department's head office employees, who currently occupy three buildings.

Cabinet approved budget reductions of R3.7 million in 2014/15, R3.7 million in 2015/16 and R28.9 million in 2016/17 are to be effected mainly in spending on travel and subsistence, and are expected to impact on the technical support provided for social statistics surveys in the provincial and district offices. Thefts and losses investigations and fraud and corruption awareness campaigns in the provincial and district offices are also likely to be affected.

### Infrastructure spending

Spending on infrastructure increased from R7.3 million in 2012/13 to R7.5 million in 2013/14, and is expected to increase to R870.6 million over the medium term. The allocation earmarked for infrastructure will be used for the construction of the department's head office. Of the total, R437.4 million is earmarked for the private partnership unitary fee, while R417 million is earmarked for capital towards the project. R14.8 million was spent on advisory services for the project between 2012/13 and 2013/14. The department is currently awaiting National Treasury's approval of the public private partnership agreement.

2. Rand million.

## Expenditure trends

The bulk of the programme's allocation over the medium term is spent on payments for capital assets, operating leases and other office space related costs in the *Office Accommodation* subprogramme; and on compensation of employees, travel and subsistence, and other related costs in the *Corporate Services* and *Financial Administration* subprogrammes. Over the medium term, the spending focus will be on completing the new head office building project and maintaining the personnel capacity to provide support services to the department. As such, spending on buildings and other fixed structures, operating payments, and training and development are projected to increase significantly over the medium term. The expected increase is particularly pronounced in 2014/15, where the *Office Accommodation* subprogramme receives an additional allocation of R421.2 million

for spending on buildings and other fixed structures. The additional allocations provide for the unitary payments and capital contribution fees for the new premises.

At the end of November 2013, the programme had 99 permanent vacant posts due to difficulties experienced in attracting candidates with the relevant specialised skills and restructuring in terms of the grading of posts. Permanent posts were also frozen in order to fund stipends for the internship programme. While the high vacancy rate impacts on performance and staff satisfaction levels, the department expects to fill the vacant posts over the medium term.

Consultants are used for auditing, designing the strategy for the development of statistics, and playing an advisory role in the new building project. Once the construction of the building is completed, spending on consultants is projected to decrease from R17.8 million in 2013/14 to R15.7 million in 2016/17.

Cabinet approved reductions of R1.4 million in 2014/15, R1.4 million in 2015/16 and R10.6 million in 2016/17 are to be implemented in travel and subsistence and are likely to impact negatively on investigations into thefts and losses, and fraud and corruption awareness campaigns in the provincial and district offices.

## Programme 2: Economic Statistics

### Objectives

- Inform economic planning, monitoring and decision making in relation to national, provincial and local government, and public stakeholders by:
  - providing ongoing accurate, relevant and timely economic statistical information through the application of internationally recognised practices
  - publishing quarterly and annual GDP estimates providing information on 10 industries of the economy
  - publishing monthly, quarterly, annual and periodic statistical releases on industry, trade and financial statistics in the private and public sector.
- Provide information for inflation targeting and on the changing cost of living by:
  - improving the measurement of price changes in the economy through the application of internationally recognised standards and practices on an ongoing basis
  - publishing monthly statistical releases on the consumer price and producer price indices.

### Subprogrammes

- *Programme Management for Economic Statistics* provides strategic direction and leadership in this programme. Key activities in 2012/13 and 2013/14 included the signing off of more than 400 statistical releases and reports, the updating and monitoring of the implementation of the economic statistics strategy, and maintaining relations with key partners in the national statistics system. This subprogramme had a staff complement of 3 in 2013/14.
- *Short Term Indicators* provides information on turnover and volumes in various industries in the economy through the publication of monthly, quarterly and annual statistical releases. A key activity in 2012/13 and 2013/14 was the conducting of 14 business surveys in the mining and quarrying, manufacturing, electricity, gas and water, construction, trade and transport industries. In 2012/13, key outputs included 150 statistical releases on 10 industries. By the end of September 2013, 76 statistical releases on 10 industries had been published. This subprogramme had a staff complement of 100 in 2013/14.
- *Structural Industry Statistics* provides periodic information on the income and expenditure structure of industries by publishing periodic statistical information. A key activity in 2012/13 was the conducting of business surveys focusing on, among others, the agricultural, manufacturing and services industries. In 2012/13, 7 periodic statistical reports were produced on selected industries. By the end of September 2013, a periodic statistical report on the construction industry had been published. This subprogramme had a staff complement of 127 in 2013/14.
- *Price Statistics* provides information on the level of inflation by producing the consumer price index and various producer price indices. Key activities in 2012/13 included the collection of consumer and producer

prices from retail stores and manufacturing companies, the rebasing of the consumer price index and the re-engineering of the producer price index. In 2012/13, both indices were published monthly, including the rebased and re-engineered versions. By the end of September 2013, 6 consumer price and producer price indexes had been published. This subprogramme had a staff complement of 202 in 2013/14.

- *Private Sector Finance Statistics* tracks the financial performance of private sector organisations. Key activities in 2012/13 and 2013/14 included the completion of quarterly and annual business surveys on private sector spending. Key outputs in 2012/13 included quarterly and annual releases on financial statistics of private sector enterprises. By the end of September 2013, 2 quarterly releases on the financial statistics of private sector enterprises had been published. This subprogramme had a staff complement of 97 in 2013/14.
- *Government Finance Statistics* tracks public sector spending. A key activity in 2012/13 and 2013/14 was the compilation of quarterly and annual statistical information on national, provincial and local government spending. Key outputs in 2012/13 included quarterly statistical releases on financial statistics of municipalities and 8 annual releases on financial and non-financial statistics of municipalities and other government spending, such as extra budgetary accounts and funds, capital expenditure of the public sector and higher education institutions. By the end of September 2013, 2 quarterly releases on the financial statistics of municipalities and 6 annual releases on government spending had been published. This subprogramme had a staff complement of 29 in 2013/14.
- *National Accounts* produces GDP data and other integrative statistical products. Key activities in 2012/13 and 2013/14 included the compilation of national accounts statistics and research on national accounts. Key outputs for 2012/13 included: quarterly and annual GDP estimates; annual GDP per region estimates; biannual supply and use tables; and research documents on environmental economic and satellite accounts and the social accounting matrix. By the end of September 2013, 2 quarterly releases on the GDP estimates had been published. This subprogramme had a staff complement of 18 in 2013/14.
- *Economic Analysis* integrates and analyses information from various internal and external data sources. Key activities in 2012/13 and 2013/14 included research on different economic sectors and factors affecting economic activities, and the release of flash GDP estimates. Key outputs in 2012/13 included 4 research reports and the quarterly flash GDP estimates. Key outputs in 2013/14 included a research report on GDP based on the income approach and 2 quarterly flash GDP estimates. This subprogramme had a staff complement of 11 in 2013/14.

2. Rand million.

## Expenditure trends

Between 2010/11 and 2013/14, expenditure in the *Economic Analysis* subprogramme increased significantly as a result of the department producing more research and technical papers on the calculation of GDP estimates and developing a new suite of five producer price indexes, which replaced the traditional single index. The new indices are aligned with international best practice and enhance users' understanding of how prices are transmitted through the economy. The projected outcome of GDP reform is the weighting and rebasing of GDP related data. Expenditure in the *National Accounts* subprogramme also increased significantly to fund an increase in capacity to produce quarterly GDP estimate reports on 10 sectors of the economy, independent annual GDP estimates on 34 sectors of the economy, and regional GDP estimates.

The spending focus over the medium term will be on producing statistics on inflation levels, public sector financial performance and spending, and sectoral information on the economy. This is expected to contribute to sound economic planning and decision making, particularly with regard to government policies and actions, and is mainly provided for in spending on compensation of employees.

At the end of November 2013, the programme had 47 permanent vacant posts. This programme employs economists and survey statisticians, who are in high demand. There is significant movement of staff due to the number of promotional opportunities and resignations. The number of permanent posts is expected to decrease from 688 in 2013/14 to 602 in 2016/17 as 67 posts will be moved to the *Labour Statistics* subprogramme within the *Population and Social Statistics* programme.

Consultants are used for research on satellite and environment accounts and GDP income and production, as the department does not have specialised permanent staff for this work. Consultants are engaged mainly for the national accounts capacity building project. Spending on consultants increased from R185 000 in 2010/11 to R7 million in 2013/14 and is expected to decrease to R4.9 million in 2016/17. Cabinet approved reductions of R440 000 in 2014/15, R438 000 in 2015/16 and R3.4 million in 2016/17 have been implemented on travel and

subsistence. The reductions are set to impact on the collection of questionnaires for manufacturing and transport surveys.

## Programme 3: Population and Social Statistics

### Objectives

- Inform social and economic development planning, monitoring and decision making for use by both the public and private sectors by:
  - providing accurate, relevant and timely statistical information through the application of internationally recognised standards and practices on an ongoing basis
  - publishing quarterly, annual and periodic statistical information on the labour market, employment and earnings, vital registrations, poverty levels, living conditions and service delivery, as well as population dynamics and demographic trends.

### Subprogrammes

- *Programme Management for Population and Social Statistics* provides strategic direction and leadership for the programme. Key activities in 2012/13 and 2013/14 included the release of the Census 2011 results, the signing off of statistical releases and reports, oversight of the implementation of the population and social statistics strategy and maintaining relations with key partners in the national statistics system. This subprogramme had a staff complement of 8 in 2013/14.
- *Population Statistics* publishes population statistics collected through population censuses and surveys. Key activities in 2012/13 pertaining to Census 2011 included quality assessments of data collected, and the preparation of the basic documents which were used at the launch of the census results. Key outputs included the main statistical release; releases on how the count was done and key results; fact sheets; and a census in brief document. Key activities in 2013/14 included conducting research and analysis on census and survey data and publishing thematic reports. By the end of September 2013, thematic reports on ageing and youth had been published with additional reports on disability and education planned. This subprogramme had a staff complement of 23 in 2013/14.
- *Health and Vital Statistics* publishes statistics on births, deaths, marriages, divorces, tourism and migration, based on administrative records. Key activities in 2012/13 and 2013/14 included the compilation of monthly and annual statistical information on vital events. Key outputs in 2012/13 included monthly publications on tourism and migration; annual publications on mortality and causes of death, recorded live births, marriages and divorces, tourism and documented immigrants; and a thematic report on health. By the end of September 2013, 6 monthly releases on tourism and migration and an annual report on tourism had been published. This subprogramme had a staff complement of 16 in 2013/14.
- *Social Statistics* provides information on living conditions, domestic tourism and crime through household surveys. Key activities in 2012/13 and 2013/14 included testing and implementing a new continuous data collection methodology for household surveys and conducting general household, domestic tourism and victims of crime surveys. Key outputs in 2012/13 included 6 annual releases and reports on domestic tourism, living conditions and crime. By the end of September 2013, a report on a feasibility study on crime against business had been published. This subprogramme had a staff complement of 18 in 2013/14.
- *Demographic Analysis* collates and analyses data from censuses and other surveys, as well as administrative data to compile mid-year population estimates and generate a knowledge base on social and population themes. A key activity in 2012/13 was the compilation of sub-provincial estimates and municipal facts sheets based on Census 2011 and key outputs were the municipal fact sheets showing key indicators for each municipality, district and province. Key activities in 2013/14 included the compilation of mid-year population estimates and the conducting of thematic research and analysis on fertility, age and gender structure, mortality and migration. By the end of September 2013, the mid-year population estimates had been published. This subprogramme had a staff complement of 11 in 2013/14.
- *Labour Statistics* provides information on employment levels in the formal, non-agricultural sector and labour market trends in South Africa. In 2012/13 and 2013/14, key activities included conducting quarterly

surveys on employment and earnings and labour market trends. In 2012/13, key outputs included an annual statistical report and quarterly releases on survey findings. By the end of September 2013, 2 quarterly reports on employment and earnings and 2 quarterly reports on labour market trends had been published. This subprogramme had a staff complement of 98 in 2013/14.

- *Poverty and Inequality Statistics* is discussed in more detail below.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on producing population and social statistical information that aids in monitoring social and demographic changes, underpins policy development and supports the statistical infrastructure of the country. This is reflected in the significant allocations to the *Poverty and Inequality Statistics*, *Health and Vital Statistics*, *Labour Statistics* and *Demographic Analysis* subprogrammes, where reports on quarterly employment estimates, annual mortality and causes of deaths, and annual population estimates are produced.

The production of these statistics is labour intensive, which explains why a significant amount of the budget over the medium term is allocated to compensation of employees. At the end of November 2013, the programme had 29 permanent vacant posts. The posts were vacant due to difficulties experienced in attracting candidates with the relevant skills. The recruitment process for some posts is currently under way and the department expects to fill them over the medium term. The high vacancy rate has a negative impact on performance and staff satisfaction. Over the medium term, the number of permanent posts is expected to increase from 168 to 210 as a result of the movement of the quarterly employment component from the *Price Statistics* subprogramme in the *Economic Statistics* programme to the *Labour Statistics* subprogramme in this programme.

As the department does not have the specialised staff, the programme uses consultants for enhancing medical practitioners' knowledge regarding the completion of death notification forms, and providing technical and analytical support for the production of poverty statistics. Spending on consultants is expected to decrease from R5 million in 2013/14 to R3.9 million over the medium term, as the programme aims to reduce its reliance on their services. Cabinet approved reductions of R396 000 in 2014/15, R397 000 in 2015/16 and R3.1 million in 2016/17 on travel and subsistence will have an impact on the provision of technical support on the social statistics surveys in the provincial and district offices.

Between 2010/11 and 2012/13, expenditure in the *Population Statistics* subprogramme was mainly on the Census 2011 project and conducting quality assessments of the data collected. Expenditure decreased significantly in 2013/14, after the project was concluded.

## Subprogramme: Poverty and Inequality Statistics

This subprogramme provides information on poverty levels and income and expenditure trends among the population of South Africa. The subprogramme is also responsible for providing appropriate and statistically reliable information on households' acquisition and consumption patterns, and expenditure patterns in all types of settlements. The organisation intends to implement a rolling collection methodology. Key activities in 2012/13 included the compilation and publication of reports on different elements of the poverty profile. Key activities in 2013/14 included the compilation of a report on poverty trends, a poverty index and South African indices of multiple deprivation. At the end of September 2013, the poverty index and South African indices of multiple deprivation were on track to be published. This subprogramme had a staff complement of 34 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on conducting the living conditions survey, a household survey visiting sampled households over a 12 month period. Completing the conditions surveys requires significant spending on compensation of employees, and travel and subsistence for the employees who conduct, compile, analyse and publish the surveys. These two expenditure items make up 70.1 per cent of the subprogramme's expenditure in 2016/17 and are also the main reasons for the increase of 8.3 per cent in spending on compensation of employees and goods and services between 2013/14 and 2016/17.

At the end of November 2013, there were 12 vacancies, due to the high demand for skilled employees in this sector. The department expects to fill these vacant posts and some are currently in the recruitment process. The staff establishment is projected to increase from 23 to 36 posts over the medium term, mainly due to the labour intensive nature of survey activities.

Consultants are used to provide technical and analytical support for the production of poverty statistics. Beyond providing technical and analytical support, consultants transfer skills related to the production of poverty statistics to the permanent staff. The expected completion of the skills transfer is reflected in the projected decrease in spending on consultants over the medium term.

Between 2010/11 and 2013/14, expenditure decreased significantly following the completion of the income and expenditure survey in 2011/12.

## Programme 4: Methodology, Standards and Research

### Objectives

- Improve the comparability and accuracy of statistical information by annually reviewing and evaluating methodological compliance in survey areas and applying appropriate quality criteria, standards, classifications and procedures to the statistical value chain.
- Ensure accurate and reliable statistical information for users by the regular use of a sound business sampling frame to draw annual samples for all economic surveys.
- Provide statistical support and advice to policy makers by annually conducting policy research and analysis on emerging policy matters and producing annual research papers on the economy and society.

### Subprogrammes

- *Programme Management for Methodology, Standards and Research* provides strategic direction and leadership for the programme. Key activities in 2012/13 and 2013/14 included monitoring the implementation of the cluster strategy and maintaining relations with the South African Revenue Service on the business register. This subprogramme had a staff complement of 11 in 2013/14.
- *Policy Research and Analysis* provides integrated statistical advice and support for policy planners and development practitioners, and participates in knowledge research and innovation on key development themes. Key activities in 2012/13 and 2013/14 included research and analysis and the compilation of research papers. Key outputs in 2012/13 included 12 research papers and by the end of September 2013, 10 such reports were on track to be completed. This subprogramme had a staff complement of 7 in 2013/14.
- *Methodology and Evaluation* provides technical expertise on methodologies and technical solutions for producing official statistics and conducting reviews of surveys. Key activities in 2012/13 and 2013/14 included the provision of methodological support to survey areas through drawing samples for economic and social surveys and developing technical solutions for these areas. Key outputs in 2012/13 included the provision of comprehensive methodological support to the survey areas, the implementation of a sample rotation, 6 methodological research reports and the post-enumeration survey for Census 2011. By the end of September 2013, comprehensive methodological support had been provided to survey areas and 17 technical solutions had been developed. This subprogramme had a staff complement of 75 in 2013/14.
- *Survey Standards* develops standards, classifications and definitions for surveys undertaken by the department. Key activities in 2012/13 and 2013/14 included developing, reviewing and updating standards, classifications and definitions for surveys. Key outputs for 2012/13 included new and updated statistical standards on, among others, the economic statistics questions database, a household statistics classifications database and an updated concepts and definitions database. By the end of September 2013, a set of standards on non-profit institutions had been published. This subprogramme had a staff complement of 7 in 2013/14.
- *Business Register* maintains and improves the sampling frame for economic statistics. Key activities in 2012/13 and 2013/14 included the surveying of large businesses, the compilation of reports on performance and quality indicators for the business register complex, and the provision of sampling frames. In 2012/13, a survey of large businesses with a response rate of 93 per cent, quarterly reports on performance and quality indicators for the business register complex, the final business sampling frame snapshot and a common sampling frame were completed. By the end of September 2013, surveys of large businesses were in progress, 2 quarterly reports on performance and quality indicators for the business register complex had been compiled and 2 quarterly snapshots had been completed. This subprogramme had a staff complement of 74 in 2013/14.

## Expenditure estimates

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing technical expertise on the methodologies and technical solutions for the production of official statistics, and maintaining and improving the sampling frame for economic statistics. This is supported by spending in the *Methodology and Evaluation and Business Register* subprogrammes, which comprise the bulk of the programme's expenditure over the medium term. Expenditure in these subprogrammes allows the department to maintain the business register, which serves as a foundation of economic statistics. It also allows the department to provide technical expertise on methodologies and technical solutions for producing official statistics, conduct reviews of surveys through methodology and evaluation, and develop standards, classifications and definitions for surveys undertaken. This is reflected in spending on compensation of employees and goods and services, such as communication and travel and subsistence.

At the end of November 2013, the programme had 21 permanent vacant posts, as the system developers and methodologists it employs are in high demand in the labour market. The number of permanent posts is expected

to decrease from 167 to 125 over the medium term. This is mainly as a result of the application and database development component moving to the *Business Modernisation* subprogramme under the Statistical Support and Informatics programme, where it has been deemed more relevant.

Cabinet approved budget reductions of R106 000 in 2014/15, R109 000 in 2015/16 and R841 000 in 2016/17 are to be implemented on travel and subsistence costs. This is set to impact on the collection of data to update and maintain the business sampling frame.

Between 2010/11 and 2013/14, spending in this programme increased by 18 per cent, mainly due to capacity building for expanding the methodological support provided to various surveys as well as the establishment of an integrated business registration system. This increase is reflected in the Survey Standards, Policy Research and *Analysis and Business Register* subprogrammes. To expand the methodological support provided to various surveys and establish an integrated business registration system, spending was mainly focused on communication and travel and subsistence.

## Programme 5: Statistical Support and Informatics

### Objectives

- Ensure a reliable sampling frame for household surveys by updating the spatial frame and database annually.
- Support the department's production of official statistics by upgrading and maintaining ICT infrastructure and ensuring 90 per cent of network availability for users at all times over the medium term.

### Subprogrammes

- *Programme Management for Statistical Support and Informatics* provides strategic direction and leadership for the programme. Key activities in 2012/13 and 2013/14 included developing a geospatial strategy for Statistics South Africa, driving the development of an IT governance framework, monitoring the implementation of the work programme and maintaining relations with key partners in the national statistics system. This subprogramme had a staff complement of 3 in 2013/14.
- *Geography Services* provides a mapping and information service to the department and other users. Key activities in 2012/13 and 2013/14 included the provision of mapping and information services to the survey areas and the development of mapping products. Key outputs in 2012/13 included the provision of maps to household survey areas and the development of a digital census atlas for the launch of the Census 2011 results. By the end of September 2013, survey areas had been assisted through map reading training, the provision of a mapping and information service and improved digital census atlas functionality. This subprogramme had a staff complement of 47 in 2013/14.
- *Geography Frames* provides a sampling frame for household surveys and censuses. Key activities in 2012/13 included the updating and capturing of new information on the spatial information frame as collected through the Census 2011, the creation and maintenance of points, the assigning of addresses, and place name and enumeration area demarcation. Key outputs included an updated spatial information frame, with 500 000 new points created and 358 000 addresses assigned. By the end of September 2013, the process of updating and capturing new information had progressed, with over 2 million points being created, more than 4 million points being maintained and 68 000 addresses being assigned. This subprogramme had a staff complement of 42 in 2013/14.
- *Publication Services* provides editing, publishing and distribution services to survey areas. Key activities include editing, designing and producing publications as required by the organisation and making statistical databases available electronically in time series based on user needs. Key outputs included the compilation and distribution of 269 publications, the design of 197 products and the editing of 288 products. The subprogramme played a significant role in the preparation for the launch of Census 2011 and the dissemination of its findings. By September 2013, 358 products had been edited, 170 products had been designed and 96 statistical databases had been made available electronically in time series based on user needs. This subprogramme had a staff complement of 44 in 2013/14.
- *Data Management and Technology* provides technology infrastructure for the department and supports data management across statistical series. Key activities in 2012/13 and 2013/14 included the updating of IT

infrastructure and the provision of IT services to the department. Key outputs in 2012/13 included the implementation of 2 data protection systems, 2 infrastructure initiatives and the provision of IT services to the department. By the end of September 2013, network management initiatives had begun and were on track to be implemented. This subprogramme had a staff complement of 51 in 2013/14.

- *Business Modernisation* improves data and information management across the department by modernising the way business is conducted and supported by technology, as well as developing systems applications. Key activities in 2012/13 and 2013/14 included research into new technology, management of the enterprise architecture and the development of systems to improve business processes. Key outputs in 2012/13 included 2 research papers on WiFi and enterprise architecture and 2 workflow schemes for corporate services. By the end of September 2013, a new web portal for Statistics South Africa had been launched and 17 new systems had been developed for statistical areas. This subprogramme had a staff complement of 11 in 2013/14.

## Expenditure estimates

## Expenditure trends

The spending focus over the medium term will be on providing IT infrastructure and support services to the department. This focus is reflected in spending on computer services and payments for capital assets within the *Data Management and Technology* subprogramme. The department aims to ensure uninterrupted network availability for users at all times and to maintain standard geographical frames within the *Geographical Frames* subprogramme. 500 000 dwelling points will be maintained across 45 municipalities in 2014/15, with another 500 000 planned for 2015/16. Expenditure related to the maintenance of geographical frames is projected to grow by 10.7 per cent between 2013/14 and 2016/17. In addition, the *Business Modernisation* subprogramme will develop an Android application that will ensure the modernisation of the statistical production systems used by the department. Spending will increase mainly on compensation of employees and goods and services over the medium term.

At the end of November 2013, the programme had 24 vacant posts. The filling of some of these posts was delayed following a labour dispute over the implementation of occupation specific dispensation for the geographic information system job category. Other posts are in the process of being filled. The number of permanent posts is expected to increase from 203 to 260 over the medium term. This increase is mainly as a result of the movement of the application and database development component.

Cabinet approved reductions of R143 000 in 2014/15, R143 000 in 2015/16 and R1.1 million in 2016/17 are to be effected on travel and subsistence. This will impact on the assignment of addresses to dwellings and the maintenance of place names.

Expenditure increased between 2010/11 and 2013/14 to accommodate for data management and technology services, the maintenance of a sample dwelling frame for the collection of social statistics, and support for Census 2011 and other surveys.

## Programme 6: Statistical Collection and Outreach

### Objectives

- Increase awareness and the use of official statistics by government and the public by:
  - reaching out to stakeholders and responding to user enquiries, improving accessibility and ease of use of statistical information, educating users and conducting publicity campaigns on an ongoing basis.
- Manage external and internal communications on statistical matters by issuing daily, weekly and monthly information updates through the media on an ongoing basis.
- Provide regular and integrated data collection services and disseminate quality statistics to provincial and local stakeholders and the public, by ensuring an average annual collection rate of 85 per cent.
- Ensure alignment with international standards, best practice and statistical skills development by increasing participation, sharing and learning in international statistical initiatives on an ongoing basis.

## Subprogrammes

- *Programme Management for Statistical Collection and Outreach* provides strategic direction and leadership for the programme. Key activities include managing the provincial and district offices, managing strategic communications and stakeholder relations, representing the organisation on international forums and maintaining relations with key partners in the national statistics system. This subprogramme had a staff complement of 7 in 2013/14.
- *International Statistical Development and Cooperation* manages relations with international statistical agencies, promotes statistical development in Africa and builds partnerships. Key activities in 2013/14 included providing leadership and technical support in the development of strategy documents, developing guidelines and tools for statistical development in Africa, hosting various international events and study tours and driving the Young African Statisticians programme. Key outputs in 2013/14 included the standards and guidelines document for the African Charter on Statistics, an assessment tool for statistical legislation in Africa, and a framework for the national strategies for the development of statistics in Africa, which was adopted by the coordinating committee for African statistical development. By the end of September 2013, the department had participated in continental initiatives in civil registration and vital statistics and preparations were under way for the ninth Africa Symposium on Statistical Development. This subprogramme had a staff complement of 20 posts in 2013/14.
- *Provincial and District Offices* is discussed in more detail below.
- *Stakeholder Relations and Marketing* maintains relations with stakeholders across the country. Key activities include marketing statistical products, educating and empowering stakeholders on the use of statistical products, handling user enquiries and conducting a stakeholder satisfaction survey. Key outputs in 2012/13 included responses to 3 838 user enquiries, the development and distribution of Census 2011 data and products, and more than 4 million visitor sessions and 1.3 million documents downloaded from StatsOnline. By the end of September 2013, 2 000 StatsOnline user enquiries had been responded to, 707 242 visitor sessions had been logged and 813 403 documents had been downloaded. In addition, 9 ISIBalo statistical development series had been hosted in the provinces. This subprogramme had a staff complement of 42 in 2013/14.
- *Corporate Communications* manages external and internal communications in the department. Key activities include managing internal communication of departmental activities, developing communication campaigns, advertising, liaising with the media, and implementing communication strategies for activities carried out by the department. Key outputs in 2012/13 relating to Census 2011 included the census results launch; the training of more than 100 media staff; and the development of new, informative and educational census products. By the end of September 2013, 126 StatsToday newsletters had been published and distributed along with weekly Pulse publications, a variety of press releases had been issued, and a number of press conferences had been hosted. This subprogramme had a staff complement of 20 in 2013/14.

2. Rand million.

**Expenditure trends**

The spending focus over the medium term will be on increasing the efficiency and effectiveness of survey operations by providing integrated data collection and dissemination services, and promoting the use and coordination of official statistics to provincial and local stakeholders. This focus is reflected in spending in the *Provincial and District Offices* subprogramme, mainly on compensation for employees.

Between 2010/11 and 2013/14, spending went towards the collection of 191 710 questionnaires with an average response rate of 89 per cent, the maintenance and updating of 1 784 primary sampling units for the spatial information frame, and the launch of the Census 2011 results in all provinces. Expenditure is set to continue to

grow at 6.4 per cent over the medium term to support the programme objectives. This increased spending will go to the remuneration of fieldworkers, the printing of questionnaires and courier services.

At the end of November 2013, the programme had 93 permanent vacant posts, the majority of which were in provincial offices. The number of permanent posts is expected to increase from 1 225 in 2013/14 to 1 511 over the medium term.

Cabinet approved budget reductions of R1 million in 2014/15, R1 million in 2015/16 and R7.8 million in 2016/17 are to be implemented on travel and subsistence. This is expected to impact negatively on centralised data collection. A finance committee has been established to oversee the acquisition of goods and services.

Between 2010/11 and 2012/13, the Census 2011 project necessitated the enhancement of data collection and publicity in relation to the census results. This accounts for the significant increase in expenditure, which was mainly on fleet services as a result of the decentralisation of fieldwork to the provincial offices. In addition, the department increased spending on advertising, travel and subsistence and communication to support the publication of the census results.

### Subprogramme: Provincial and District Offices

This subprogramme aims to increase the efficiency and effectiveness of survey operations by providing integrated data collection and dissemination services, as well as promoting the use and coordination of official statistics to provincial and local stakeholders. Key activities in 2012/13 included administering survey instruments, raising the profile and status of statistics at provincial and municipal levels, coordinating the Maths4Stats project, and providing training on the statistical quality assurance framework. Key activities for 2013/14 included conducting household surveys, maintaining the spatial information frame, disseminating statistical information and building statistical capacity. By the end of September 2013, approximately 114 032 questionnaires had been collected, 111 primary sampling units had been maintained, 9 South African statistical quality assessment framework training sessions had been held, 47 stakeholder workshops and 62 Maths4Stats training sessions had been conducted, 14 fact sheets and 3 indicator reports had been distributed, and statistical advice and technical support had been provided to 46 provincial departments and municipalities.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on increasing the efficiency and effectiveness of survey operations by providing integrated data collection and dissemination services, as well as promoting the use and coordination of official statistics to provincial and local stakeholders. Spending is expected to increase by 6.1 per cent over the MTEF period due to the increased demand for statistical information in the household surveys. Using funds allocated over the medium term, the subprogramme will conduct 5 household surveys: the living conditions survey, quarterly labour force survey, victims of crime survey, general household survey and domestic tourism survey. It also aims to provide statistical support to national statistics system partners and develop educators by conducting 216 Maths4Stats workshops between 2014/15 and 2016/17. The increase in expenditure is as a result of the provision made for fieldworkers who will collect data for the living conditions survey. As a result, there is an increase in expenditure on goods and services over the medium term for travel and subsistence, operating payments and fleet services.

Expenditure in the subprogramme increased between 2010/11 and 2013/14, mainly due to support services for data collection for Census 2011, and the dissemination and promotion of the findings. Spending was mainly on compensation of employees and goods and services, such as travel and subsistence, communication, stationery and printing, and operating payments.

At the end of November 2013, the subprogramme had 76 vacant posts, mainly in the provincial offices, due to high staff turnover. District offices have limited posts as contract workers are normally used for the data collection activities that take place in these offices on a periodic basis. Over the medium term, the funded and filled establishment will grow to 1 410, which includes 250 contract posts and 25 employees transferred from different programmes to the *Provincial and District Offices* subprogramme. The 250 contract posts budgeted for salary level 2 are mainly for the periodic fieldwork done for all surveys.

## Programme 7: Survey Operations

### Objectives

- Increase the statistical information base for use by government, the private sector and the general public by conducting a population census and large scale population survey every 5 years or as determined by the Minister in the Presidency: National Planning Commission.
- Ensure the efficiency and effectiveness of survey operations conducted by the department by coordinating household survey operations with an average collection rate of 85 per cent on an annual basis.
- Improve the quality and timeliness of the editing and processing of statistical data by standardising the use of IT within the department on an ongoing basis over the medium term.

## Subprogrammes

- *Programme Management for Survey Operations* provides strategic direction and leadership to the programme. Key activities include driving the timely processing of census data, compiling a survey operations strategy, monitoring targets in the work programme and maintaining relations with key partners in the national statistics system. This subprogramme had a staff complement of 2 in 2013/14.
- *Census and Community Survey Operations* is discussed in more detail below.
- *Household Survey Operations* coordinates and integrates collection activities across surveys. Key activities include coordinating the maintenance of the master sample and data collection for household surveys (general household, quarterly labour force, domestic tourism, victims of crime, and other periodic surveys). In 2012/13, the collection of 195 282 questionnaires for household surveys and 1 848 primary sampling units for the master sample was coordinated. By the end of September 2013, 114 032 questionnaires had been collected. This subprogramme had a staff complement of 39 in 2013/14.
- *Corporate Data Processing* manages the editing and processing of data. Key activities include the processing of the master sample and household surveys. Key outputs in 2012/13 include the maintenance of 1 786 primary sampling units for the master sample and the processing of 603 985 questionnaires for the various surveys. By the end of September 2013, 9 837 primary sampling units for the master sample had been maintained and 652 469 questionnaires had been processed. This subprogramme had a staff complement of 224 in 2013/14.
- *Survey Coordination, Monitoring and Evaluation* monitors and assures the quality of field operations of household surveys and censuses. Key activities include the monitoring and evaluation of household surveys. A monitoring and evaluation report on Census 2011 was compiled in 2012/13 on both the census and post-enumeration survey operations. At the end of September 2013, monitoring and evaluation reports had been compiled on the victims of crime, and general household and national household travel surveys. This subprogramme had a staff complement of 30 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on coordinating and integrating survey operations, and data processing to improve their efficiency and effectiveness. The coordination and integrated collection activities will mainly be undertaken across household surveys while the processing of data will be conducted across household surveys and administrative data. This approach is set to improve efficiency as spending on travel and subsistence, fleet services and advertising is expected to decrease over the medium term. Spending in the *Corporate Data Processing* subprogramme will increase significantly, mainly as a result of increased demand for data on mortality and causes of death.

At the end of November 2013, this programme had 37 vacant posts, most of which were survey statistician posts. These are expected to be filled by the end of 2013/14. The number of permanent posts is expected to decrease from 375 in 2013/14 to 366 over the medium term. This decrease is mainly as a result of internal restructuring, which will see positions open up at the provincial level. Cabinet approved budget reductions of R260 000 in 2014/15, R259 000 in 2015/16 and R2 million in 2016/17 are to be implemented on travel and subsistence. This will impact on the quality of monitoring and collection of surveys, such as the general household survey.

The declining expenditure between 2010/11 and 2013/14 is attributed to the finalisation of Census 2011 in October 2011, and the processing and dissemination of the results in October 2012. Spending is expected to decrease further over the medium term. The expenditure decline in this programme, mainly seen in the *Census and Community Survey Operations* subprogramme, is attributed to the decline in the activities related to the quality assurance of the Census 2011 results.

## Subprogramme: Census and Community Survey Operations

This subprogramme conducts periodic population censuses or large scale population surveys. Key activities in 2012/13 included driving and coordinating the processing activities of Census 2011. Key outputs in 2012/13 included 15.8 million Census 2011 questionnaires scanned and processed over 8 months. The census results were released in October 2012, a year after collection. A key activity in 2013/14 was the coordination of the planning of the next census or large scale population survey. By the end of September 2013, research had

been conducted on ICT methodology, field operations methodology, payment strategy, and data processing and sampling methodologies. This subprogramme had a staff complement of 182 in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on conducting periodic population censuses or large scale population surveys, such as the general household survey, quarterly labour force survey, domestic tourism survey, victims of crime survey and other periodic surveys.

At the end of November 2013, the subprogramme had 16 permanent vacant posts, most of which were survey statistician posts. Some of these posts are set to be filled by the end of 2013/14. The staff establishment is set to decrease from 182 posts to 45 posts over the medium term, mainly due to the periodic nature of survey activities and the movement of the project management office to the *Programme Management for Survey Operations* subprogramme.

Spending decreased significantly between 2010/11 and 2013/14 as a result of the finalisation of the census project in October 2011, as well as the dissemination of the results in October 2012, and is set to decrease further over the MTEF period as quality assurance activities relating to the census results wind down. The subprogramme had a staff complement of 182 posts in 2013/14.

The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.

### Aim

*Contribute to sustainable economic development and enhance job creation by preserving, protecting and developing South African arts, culture and heritage to sustain a socially cohesive and democratic nation.*

### Mandate

The Department of Arts and Culture derives its mandate from the following legislation:

- the Heraldry Act (1962)
- the Culture Promotion Act (1983)
- the National Archives and Record Service of South Africa Act (1996)
- the Legal Deposit Act (1997)
- the South African Geographical Names Council Act (1998)
- the Cultural Institutions Act (1998)
- the National Council for Library and Information Act (2001)
- the National Heritage Resources Act (1999)
- the Use of Official Languages Act (2012)

Broadly, this legislation mandates the department to:

- develop and promote arts and culture in South Africa and mainstream its role in social development
- develop and promote the official languages of South Africa and enhance the linguistic diversity of the country
- improve economic and other development opportunities for South African arts and culture nationally and globally through mutually beneficial partnerships, thereby ensuring the sustainability of the sector
- develop and monitor the implementation of policy, legislation and strategic direction for the identification, conservation and promotion of cultural heritage.

## Strategic goals

The department's strategic goals over the medium term are to:

- create 150 000 decent jobs in arts, culture and heritage by March 2016
- implement targeted programmes that are geared towards human capital development in the arts, culture and heritage sector by 2014
- enhance access by citizens and public institutions to accurate, reliable and timely information in their language of choice through the provision of archives, libraries and language services
- entrench linguistic diversity in a manner that facilitates equitable cultural expression by citizens and communities
- enhance the capacity of the sector through equitable and sustainable development, and the protection and preservation of arts, culture and heritage through policy development, legislative promulgation and implementation
- align public sector art, culture and heritage institutions around a shared vision, a common mandate, and strong governance and accountability.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide leadership, management and support functions of the department.

### Programme 2: Institutional Governance

**Purpose:** Coordinate and manage all cross-cutting functions of the department and its public entities and provide support and oversight to these public entities.

### Programme 3: Arts and Culture Promotion and Development

**Purpose:** Promote and develop arts, culture and languages.

### Programme 4: Heritage Promotion and Preservation

**Purpose:** Preserve and promote South African heritage, archival and heraldic heritage, and funding of libraries.

## Selected performance indicators

Number of community libraries upgraded per year	Heritage Promotion and Preservation	Outcome 12b: An empowered, fair and inclusive citizenship	56	51	37	40	45	50	55
Number of new community libraries built per year	Heritage Promotion and Preservation	Outcome 1: Improved quality of basic education	10	13	14	16	17	18	19

1. This figure includes both pre- and post-summit engagements. The increase in 2012/13 was due to community conversations leading up to and after the 2012 National Social Cohesion Summit.

2. New indicator due to the implementation of the Mzansi golden economy strategy, hence no historical data.

3. New indicator; data only available from 2011/12.

4. All schools will have flagpoles and flags by the end of 2015/16.

## The national development plan

The national development plan emphasises the importance of arts and culture activities in nation building and social cohesion. According to the plan, heritage and culture are important for understanding the past, analysing the present and planning for the future. Art has the ability to facilitate dialogue, heal and restore pride, and deliver an imaginatively expressed critical representation of ourselves that challenges us all to do better. The department aims to integrate arts, culture, language and heritage into all spheres of national life and this will find expression in the revised draft White Paper on Arts, Culture and Heritage.

Dealing with the challenges of unemployment, poverty and inequality is critical to building social cohesion. In 2012, the department hosted the national summit on social cohesion resulting in 12 declarations, which will be followed-up in the 2014 report back summit. The second declaration is a recommendation to work towards the implementation of the national development plan as a long term vision.

The national development plan also mentions the potential contribution of cultural and creative industries to small business development, job creation, and urban development and renewal. In giving effect to these focal areas, the department has developed and adopted the Mzansi golden economy strategy. The primary objective of this strategy is to chart the role of the arts and culture sector in job creation and economic development. Under the leadership of the department, the quantification of the contribution of the arts and culture sector to economic development has begun and will continue into the medium term. This will be done through the development of an arts and culture observatory, which is responsible for the development of key indicators, collecting cultural statistics and analysing trends to allow global comparability, and using this information to inform future policy and resource allocation decisions. The observatory will also serve as a library for all reports pertaining to the sector.

In line with the plan's emphasis on the need to improve schooling and education and improve the quality of life in rural areas of South Africa, the department, together with the Department of Basic Education, will continue to make a tangible contribution to exposing learners to arts, culture and heritage over the medium term. Arts practitioners will be placed in schools to improve the teaching of arts. This will not only ensure that a substantial number of artists will be employed but will also expose learners to career opportunities in the arts, as well as develop audiences and consumers through exposure to and participation in the arts.

The building of arts, culture and heritage infrastructure such as libraries, heritage monuments and arts centres, in rural areas, will continue to be a priority of the department. Such infrastructure, apart from developing and investing in rural areas, will also create much needed jobs, with local residents being given opportunities to maintain infrastructure.

## Expenditure trends

Together with the cultural and creative industries sector, the department is committed to ensuring that the arts sector contributes to inclusive economic growth and social cohesion. Therefore, the department's spending focus over the medium term will be on implementing the Mzansi golden economy and the national social cohesion strategies through the *Institutional Governance* and *Arts and Culture Promotion and Development* programmes. Access to community library services will be broadened through the *Heritage Promotion and Preservation* programme's funding of a recapitalisation programme that provides and enhances community library infrastructure, facilities and services.

Over the medium term, spending in the *Heritage Promotion and Preservation* programme in particular is expected to use a significant proportion of the department's allocation and is projected to grow significantly. This is due to the transfers of the community library services' conditional grant to provinces, which received additional allocations in the 2013 budget, and transfers to heritage institutions, particularly for new capital works projects. The transfers for capital works projects are mainly for legacy projects under construction, including the Sarah Baartman Centre for Remembrance, the memorial site for JL Dube and the memorial site for OR Tambo.

Cabinet approved budget reductions of R10.6 million over the medium term have been effected mainly in spending on Mzansi golden economy strategy projects, which reduced spending on goods and services by R7.6 million over the period, and the transfer to the National Arts Council of South Africa, which was reduced by R3 million over the period due to slow spending.

The department had a funded establishment of 500 posts and 80 posts were additional to the establishment. As at 30 November 2013, 507 were filled. In addition to permanently employed staff, the department also appointed 23 interns in August 2013 and 36 contract workers, who are mainly employed to do clerical work in the ministry and are paid from the budget allocated to spending on compensation of employees.

### Infrastructure spending

In addition to the normal refurbishments, restorations, upgrades and maintenance projects at museums and playhouses, the department began the construction of a number of presidential projects categorised as legacy projects. These legacy projects have increased capital spending from R281 million in 2010/11 to R475.5 million in 2012/13, mainly driven by the construction and completion of the Ncome Museum in KwaZulu-Natal and the monument to commemorate the Matola Raid in Mozambique. Infrastructure spending on legacy projects is expected to increase from R71.2 million in 2013/14 to R82.1 million in 2016/17 as new construction projects begin, including the construction of the Sarah Baartman Centre for Remembrance, the memorial site for JL Dube and the memorial site for OR Tambo. A number of small projects on upgrading, restoration and maintenance of existing museums, performing arts institutions, archive and library buildings are also under way, at an estimated total cost of R1.2 billion over the medium term.

## Expenditure trends

The spending focus over the medium term will be on centralising security services for the effective management of the contract, improving the department's technology platform, providing for the overall management and administration of the department, and seeing to the department's office space needs. These functions are carried out by the *Management, Corporate Services* and *Office Accommodation* subprogrammes, which explains the significant proportion of the department's budget taken up by these programmes over the medium term. The bulk of the *Corporate Services* subprogramme spending over the medium term will be on computer services, property payments and agency and support/outsourced services.

Spending in the *Office Accommodation* subprogramme grew significantly between 2010/11 and 2013/14 due to rental increases in office accommodation leases. In improving the department's technology platform, over the same period, spending on machinery and equipment increased by 49.8 per cent due to the replacement of obsolete computers, and the procurement of servers and storage. Spending on agency and outsourced services fluctuates between 2010/11 and 2013/14 due to increased internal audit and IT services costs in 2010/11 and 2012/13, with spending on this item growing substantially over the medium term due to the outsourcing of ICT and internal audit services. Spending on computer services is also expected to grow at an average of 43.5 per cent over the medium term, mainly due to increased State Information Technology Agency data line and user charges.

At the end of November 2013, this programme had 212 filled posts, of which 59 were additional posts; and 43 posts were vacant because the department is unable to find suitable candidates. The vacant posts are in the process of being filled.

## Programme 2: Institutional Governance

### Objectives

- Develop, manage and maintain arts, culture and heritage infrastructure by:
  - annually developing and implementing a user asset management plan for the department
  - increasing the number of infrastructure oversight visits conducted from 29 visits in 2013/14 to 40 in 2014/15.
- Strengthen the institutional governance of arts and culture public entities by:
  - increasing the number of councils and boards that are fully constituted from 92 per cent in 2013/14 to 100 per cent in 2014/15
  - signing shareholder compacts with 26 arts and culture public entities annually
  - increasing the number of site visits conducted from 25 in 2013/14 to 28 in 2014/15.

- Coordinate and manage monitoring and evaluation within the department and across its public entities through:
  - the development of a comprehensive three-year rolling monitoring and evaluation plan by March 2014
  - annually receiving, analysing and tabling all 104 quarterly reports and annual reports for all 26 arts and culture public entities for 2013/14, as well as those of the department.
- Build and strengthen continental and international relations for the promotion and development of South African arts, culture and heritage through the servicing of cultural agreements, by increasing the number of events participated in from 20 in 2013/14 to 25 in 2014/2015.

## Subprogrammes

- *International Co-operation* assists in building continental and international relations for the promotion and development of South African arts, culture and heritage. The department will continue to participate in cultural season exchanges with other countries. Only 1 cultural season per year was hosted in 2012/13 and 2013/14, but 2 per year are planned from 2014/15. This subprogramme had a staff complement of 25 in 2013/14.
- *Social Cohesion and Nation Building* is discussed in more detail below.
- *Coordination, Monitoring, Evaluation and Good Governance* provides sector wide monitoring and evaluation, and coordinates institutional development and governance for arts and culture public entities. In 2013/14, shareholder compacts between the Minister of Arts and Culture and the chairpersons of all 26 public entities were signed. This subprogramme had a staff complement of 21 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on coordinating and managing all cross-cutting functions of the department and its institutions. These functions include implementing the national social cohesion strategy, providing support and oversight to public entities, and building continental and international relations for the promotion of South African arts and culture. The increase in spending in the *International Co-operation* subprogramme between 2010/11 and 2013/14 was due to the establishment of new partnerships with other countries, with the department hosting and participating in cultural seasons and multilateral and regional forums. A cultural season's programme was introduced with China and the United Kingdom in 2013/14, which will continue into 2014/15 and 2015/16. Due to the success of the season's programme, this programme will be expanded further over the medium term with the department planning to attend and participate in 4 regional forums and 3 cultural seasons.

The strong growth in spending in the *Coordination, Monitoring, Evaluation and Good Governance* subprogramme between 2010/11 and 2013/14 was driven by the filling of 5 priority management posts, as well as increased travel, in order to strengthen the department's monitoring and evaluation of infrastructure projects. The department conducted 29 oversight visits in 2013/14 and these will be increased to 40 oversight visits in 2014/15, with the number of oversight visits remaining constant over the medium term. Filling of posts in this programme also accounts for the strong growth in spending on compensation of employees and goods and services during this period. The number of personnel is expected to increase from 51 in 2013/14 to 54 by 2016/17, mainly due to the filling of critical vacant posts.

## Subprogramme: Social Cohesion and Nation Building

This subprogramme is responsible for the implementation of the national social cohesion strategy and the mainstreaming of targeted groups in arts, culture and heritage, including arts and culture in schools. Following

Cabinet approval of this strategy, the National Social Cohesion Summit was held in 2012/13 in Kliptown, Soweto, with the aim of affording citizens and sectors of society the opportunity to contribute to the implementation of a practical programme. Social cohesion advocates were appointed in 2013/14 as ambassadors to promote the ideals of social cohesion and nation building and the promotion and advancement of the national social cohesion implementation framework. The department planned 30 community conversations for 2013/14, and will hold a report back summit in 2014/15. In collaboration with the Department of Basic Education, the department will be placing artists in schools and rolling out other collaborative programmes, with the aim of mainstreaming arts and culture to support career choices in the arts. The target is to increase the number of artists placed in schools from 200 in 2013/14 to 240 in 2014/15. This subprogramme had 14 staff in 2013/14, and this number is set to decrease to 11 over the medium term, due to the sharing of secretarial services.

## Expenditure trends

The spending focus over the medium term will be on implementing the national social cohesion strategy through the hosting of national social cohesion summits, the promotion, and advancement of the national social cohesion implementation framework, the holding of community conversations/dialogues, and the funding of projects that support arts, social development, and youth. The bulk of this subprogramme's budget over the medium term is consumed by transfers to non-profit institutions for the rollout of arts, social development and youth projects. The department supported 12 arts, social development, and youth projects in 2012/13, which decreases to 11 projects supported by 2016/17, based on available funding. A community conversation is a structured civil discourse aimed at providing a safe space in which people come together for thoughtful

discussion and dialogue about shared past, present, and future values. This also accounts for the 67 per cent growth in spending on travel and subsistence between 2010/11 and 2013/14.

The significant growth in spending in this subprogramme, between 2010/11 and 2013/14, is attributed to spending on goods and services, which was driven by the hosting of the National Social Cohesion Summit in July 2012. The department plans to host a social cohesion report back summit towards the end of 2014, with the aim of tracing and gauging progress on the implementation of the 2012 summit's resolutions. The increases in spending on contractors between 2010/11 and 2013/14, and on agency and support/outsourced service fees over the medium term, were due to the appointment of service providers to produce and distribute to citizens a social cohesion manual and toolkit on how to implement the summit resolutions, and to collect inputs for the 2014 national social cohesion report back summit. The department distributed 16 000 social cohesion manuals and toolkits in 2013/14. Over the medium term, spending on operating payments is expected to decrease substantially, due to the correction of the allocation for the social cohesion summit to agency and support/outsourced services in this period. The decrease in the number of staff in this subprogramme from 14 in 2013/14 to 11 over the medium term does not impact on spending on compensation of employees, as an additional senior manager was appointed in place of the secretarial positions that were abolished.

## Programme 3: Arts and Culture Promotion and Development

### Objectives

- Implement Mzansi golden economy strategy objectives in terms of job creation, social cohesion and sector development by:
  - increasing the number of jobs created in cultural events from 28 000 in 2013/14 to 28 400 in 2016/17
  - increasing support provided to touring venture projects that deal with art exhibitions, plays and public art performances that are intended to expose audiences in various cities to the arts, from 13 projects supported in 2013/14 to 25 in 2016/17.
- Build capacity in the arts and culture sector through targeted skills development programmes by awarding 90 bursaries over the medium term.
- Create an integrated and collaborative approach to growth and transformation of the arts and culture sector by supporting 4 exhibition platforms in 2013/14.
- Ensure that all official languages have equal status and that people are empowered to communicate in a language of choice through:
  - the translation and editing of 1 108 documents in official and foreign languages in 2014/15
  - the promotion of access to services and information through human language technology developments and activities, in all 11 official languages by 2015/16
  - the provision of specialised terminologies in 6 domains (main subject areas such as mathematics, science and life skills) by 2015/16
  - building capacity in language practice by providing bursaries in this field of study, the number ranging from 342 bursaries in 2011/12 to 336 in 2013/14.

### Subprogrammes

- *National Language Services* promotes the use and equal status of all official languages. This entails the review of the national language policy, the development of language terminologies and human language technology, translation and publishing services in all official languages, and the awarding of bursaries. In 2013/14, 336 bursaries were awarded to full time and part time university students studying languages and other related disciplines. There are plans to offer 320 bursaries for full time study in 2014/15. This subprogramme had a staff complement of 69 in 2013/14.
- *Pan South African Language Board* transfers funds to the Pan South African Language Board, which creates an environment that is conducive to developing, using and promoting the 11 official languages, as well as the Khoi, Nama, San and South African sign languages. This subprogramme's total budget is transferred in full to the board in quarterly tranches.

- *Arts and Cultural Development* is discussed in detail below.
- *Performing Arts Institutions* transfers funds to performing arts institutions, which provide a platform for the artistic and cultural expression of artists and those interested in performing arts. This subprogramme's budget is transferred in full in 4 tranches to performing arts institutions for operations and capital works and to Business and Arts South Africa for its operations.
- *National Film and Video Foundation* transfers funds to the National Film and Video Foundation in support of skills, local content, and local marketing development in South Africa's film and video industry. This subprogramme's total budget is transferred in full on a monthly basis to the foundation.
- *National Arts Council* transfers funds to the National Arts Council, which financially supports the various disciplines of arts and culture, guided by funding criteria that promote government objectives. This subprogramme's total budget is transferred in full to the council on a monthly basis.
- *Capital Works of Performing Arts Institutions* funds and administers capital grants to playhouses for maintenance and other capital projects. This subprogramme's total budget is transferred in full to entities based on approved plans.

## Expenditure trends

The spending focus over the medium term is on mainstreaming the role of arts and culture in social and economic development and providing financial support to performing arts institutions and cultural industries and events. Thus, the bulk of the budget over the medium term is allocated to implementing sector strategies and supporting sector programmes and projects and organisations, including activities in community arts centres, and programmes in the performing arts institutions. The decrease in spending in the *Capital Works of Performing Arts Institutions* subprogramme between 2010/11 and 2013/14 was due to the reclassification of expenditure from this subprogramme to the performing arts institutions receiving these funds, to enable them to manage capital work upgrades and maintenance at these institutions.

Cabinet approved budget reductions of R7.6 million over the MTEF period are to be effected on goods and services, and on transfers to the National Arts Council due to slow spending, which is expected to result in projects being rolled out over a longer period.

Growth in spending in the *Pan South African Language Board* subprogramme between 2010/11 and 2013/14 was due to additional funds allocated in the 2012 Budget to address the sustainability and viability of the entity. Spending in the *National Film and Video Foundation* subprogramme grew significantly over the same period due to additional allocations in the 2011 Budget to develop the local film industry and create jobs.

This programme has a funded establishment of 95 posts and 2 posts additional to the establishment. At the end of November 2013, this programme had 94 filled posts and 1 vacant funded post. The growth projected in expenditure on compensation of employees over the medium term is mainly due to improvements in conditions of service.

## Subprogramme: Arts and Cultural Development

This subprogramme implements the majority of projects for the Mzansi golden economy strategy and supports the creative industries by developing strategies, participating in various stakeholder forums, supporting projects and providing training. The number of cultural events supported increased from 19 in 2012/13 to 22 in 2013/14, while 16 touring ventures were supported in both years. In 2014/15, there are plans to support 22 cultural events and 20 touring ventures.

## Expenditure trends

The spending focus over the medium term will be on mainstreaming the role of arts and culture in social and economic development by implementing Mzansi golden economy strategy projects. Due to inadequate internal capacity and skills, the strategy is implemented by external service providers, resulting in the significant spending on goods and services, in particular on agency and support/outsourced services, between 2010/11 and 2013/14, and on contractors over the medium term.

This subprogramme's budget over the medium term is allocated to implementing and expanding Mzansi golden economy work stream projects. Accordingly, a spike is projected in spending on goods and services over the medium term, due to a shift of funds for Mzansi golden economy projects from transfers to households towards agency and support/outsourced services. The transfers to households allocation is projected to decline over the medium term as a result. Spending in respect of Mzansi golden economy projects is accounted for in transfers to departmental agencies and accounts and non-profit institutions, and agency and support/outsourced services. These projects account for the significant increase in spending on transfers and subsidies over the medium term. The number of jobs created through cultural events increased from 25 850 in 2012/13 to 28 000 in 2013/14. At the end of November 2013, the subprogramme had 29 filled posts and 1 vacant funded post.

## Programme 4: Heritage Promotion and Preservation

### Objectives

- Transform South Africa's heritage and heraldry landscape through targeted legacy projects and geographical name changes by supporting 9 legacy or monument heritage projects over the medium term.
- Build capacity and enhance the skills base in the heritage sector by promoting heritage studies through increasing the number of bursaries awarded from 31 in 2011/12 to 120 in 2014/15.
- Promote national identity, nation building and social cohesion by:
  - commemorating and hosting 7 national days and historic events in 2014/15
  - popularising national symbols by increasing the number of flags distributed from 100 000 in 2012/13 to 200 000 in 2014/15, most of which will be used for the 20 years of democracy celebrations.
- Facilitate the creation of 22 500 decent jobs in arts, culture and heritage by March 2016 through the support of events and campaigns in the crafts, books and publishing, music, design, film and visual arts sectors.
- Transform South Africa's heritage, archives and library sectors by:
  - safeguarding and managing archival materials by digitising and compiling inventories of collections, including 4 audiovisual formats in 2014/15
  - promoting archival and library resources and services and improving access through awareness and other outreach programmes by conducting 4 archival outreach programmes in 2014/15
  - ensuring the proper management of records in governmental bodies through evaluation of 56 file plans in 2014/15
  - providing adequate and modern infrastructure for archives and libraries through the building of 17 new community libraries and the upgrading of the national archives and records service system in 2014/15.

### Subprogrammes

- *Heritage Promotion* funds a range of heritage initiatives and projects, such as Heritage Month; the repatriation of South African culture and heritage objects; and the Bureau of Heraldry, which registers symbols, popularises national symbols through public awareness campaigns and coordinates the national orders awards ceremony. In 2013/14, 100 000 handheld South African flags were distributed. This subprogramme had a staff complement of 140 in 2013/14.
- *National Archives Services* acquires, preserves, manages and makes accessible public and non-public records with enduring value. In 2013/14, 3 archival outreach programmes were presented at a cost of R558 000. This subprogramme had a funded staff complement of 105 in 2013/14.
- *Heritage Institutions* funds and determines policy for declared cultural institutions and heritage bodies by ensuring that funds to the institutions are used to preserve, research, protect, and promote heritage. This subprogramme's total budget is transferred in full to the institutions on a monthly basis.
- *National Library Services* funds libraries and institutions, and develops related policy. The bulk of this subprogramme's budget is used for transfers to the National Library of South Africa, the South African Library for the Blind and Blind South Africa. This subprogramme had a staff complement of 8 in 2013/14.
- *Public Library Services* transfers funds to provincial departments for the community library services conditional grant for constructing and upgrading libraries, hiring personnel and purchasing library materials. This subprogramme's total budget is transferred in full to provinces based on business plans. In 2013/14, 40 libraries were upgraded and 16 new libraries were built.
- *Capital Works* funds and administers capital allocations for the construction and maintenance of heritage infrastructure, new commemorative structures under national legacy projects, and grants to the National Library of South Africa and the South African Library for the Blind for maintenance and other capital projects. Funds are awarded annually based on entity business plans. This subprogramme's total budget is either transferred in full to approved institutions, or paid to the Department of Public Works.
- *South African Heritage Resources Agency* transfers funds to the South African Heritage Resources Agency, whose key strategic objectives are developing and implementing norms and standards for managing heritage

resources. This subprogramme's total budget is transferred in full to the South African Heritage Resources Agency on a monthly basis.

- *South African Geographical Names Council* transfers funds to the South African Geographical Names Council, which is an advisory body that facilitates name changes by consulting with communities to advise the Minister of Arts and Culture. This subprogramme's total budget is transferred in full to the council on a monthly basis.
- *National Heritage Council* transfers funds to the National Heritage Council, whose mandate involves enhancing knowledge production on heritage and ensuring the promotion and awareness of heritage. This subprogramme's total budget is transferred in full to the National Heritage Council on a monthly basis.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on implementing archival and cultural heritage policy to promote social cohesion, and providing community library services through the community library services conditional grant transfers to provinces. An average of 48.1 per cent of the budget is transferred to the provinces for the provision of community library services. This transfer is projected to grow strongly over the medium term due to additional allocations from the 2013 Budget to build 51 new and upgrade 135 existing libraries, hire personnel and purchase library materials.

Between 2010/11 and 2013/14, the significant growth in spending on agency and support/outsourced services was due to the appointment of consultants to provide oversight over the implementation of the conditional grant, and supporting the department to monitor and evaluate the performance of provinces. The hosting of commemoration and national days, such as Heritage Day celebrations, accounts for the increased spending in the *Heritage Promotion* subprogramme between 2010/11 and 2013/14. This resulted in strong growth in spending on goods and services over this period, mainly due to the contracting of artists and performers for events, event promoters, audio visual services, and stage and sound. This also accounts for significant growth in spending on contractors over the MTEF period.

Over the medium term, spending on heritage legacy infrastructure projects is expected to increase from R126.9 million in 2014/15 to R163.4 million in 2016/17 to fund legacy projects that are under construction, including the Sarah Baartman Centre for Remembrance, the memorial site for JL Dube and the memorial site for OR Tambo.

This programme has a funded establishment of 154 posts and 9 posts additional to the establishment for interns. At the end of November 2013, the programme had 150 filled posts and 4 vacant funded posts. Growth in expenditure on compensation of employees over the medium term is mainly due to improvements in conditions of service.

## Public entities and other agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The following officially declared **heritage institutions** are dependent on annual transfers from the Department of Arts and Culture: Freedom Park; Northern Flagship Institutions, Pretoria; Iziko Museum, Cape Town; Natal Museum, Pietermaritzburg; Bloemfontein National Museum; Die Afrikaanse Taalmuseum, Paarl; The National English Literary Museum, Grahamstown; the Voortrekker Museum, Pietermaritzburg; War Museum of the Boer Republics, Bloemfontein; William Humphreys Art Gallery, Kimberley; Luthuli Museum, Stanger; and Nelson Mandela Museum, Mthatha. Total transfers in 2014/15 amount to R448.7 million, including capital works.
- The Department of Arts and Culture oversees various **libraries**, including the National Library of South Africa, a statutory body; the South African Library for the Blind; and Blind South Africa. Total transfers to the libraries in 2014/15 amount to R126.4 million, including capital works.
- The **National Arts Council of South Africa** facilitates opportunities for people to practice and appreciate the arts. The council also promotes the general application of the arts in the community, fosters the expression of national identity by means of the arts, promotes freedom in the practice of the arts, and gives historically disadvantaged people greater access to the arts. The council's total budget for 2014/15 is R91.9 million.
- The **National Film and Video Foundation of South Africa** develops and promotes the film and video industry in South Africa. The foundation promotes local film and video products, supports the development of and access to the industry, and addresses historical imbalances in infrastructure, skills and resources in the industry. The foundation's total budget for 2014/15 is R111.6 million.
- The **National Heritage Council of South Africa** engages heritage stakeholders in public and private institutions, including the various organs of civil society, mobilises debates and builds awareness about heritage. The council's total budget for 2014/15 is R55.9 million.
- The **Pan South African Language Board** is a constitutional institution that promotes an awareness of multilingualism as a national resource and supports previously marginalised languages. It is mandated to investigate complaints about language rights and violations from any individual, organisation or institution. The board's total budget for 2014/15 is R83.5 million.
- The following **performing arts institutions** receive annual transfers from the Department of Arts and Culture: the State Theatre, The Playhouse Company, Artscape Theatre, The Market Theatre, the Performing Arts Council of the Free State and the Windybrow Theatre. In addition to the annual transfer from the department, these entities also generate their own revenue through entrance fees, donor assistance and sponsorships. Total transfers in 2014/15 amount to R319.2 million, including capital works.
- The **Robben Island Museum** is a schedule 3A public entity established in terms of the Cultural Institutions Act (1998), and was declared a World Heritage Site by the United Nations Educational, Scientific and Cultural Organisation in 1999. The museum's total budget for 2014/15 is R94.5 million.
- The **South African Heritage Resources Agency** is the national administrative management body for the protection of South Africa's cultural heritage. The agency's main functions include managing the national estate through partnerships with other bodies to promote an integrated heritage resources management system. The agency's total budget for 2014/15 is R47.4 million.

The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.

### Aim

*Develop, maintain and support a South African school education system for the 21<sup>st</sup> century.*

### Mandate

The Department of Basic Education derives its mandate from the following legislation:

- the National Education Policy Act (1996), which inscribed into law the policies, the legislative and monitoring responsibilities of the Minister of Education, as well as the formal relations between national and provincial authorities
- the South African Schools Act (1996), which promotes access, quality and democratic governance in the schooling system and makes schooling compulsory for children between the ages of 7 and 15 years, to ensure that all learners have right of access to quality education without discrimination
- the Employment of Educators Act (1998), which regulates the professional, moral and ethical responsibilities of educators, as well as the competency requirements for teachers.

### Strategic goals

The department's work is aligned with the government outcome to provide an improved quality of basic education (outcome 1). In line with this, the department's strategic goals over the medium term are to:

- improve the quality of teaching and learning
- improve the quality of early childhood development
- track progress across the education system through regular assessment
- ensure a credible outcomes focused planning and accountability system
- promote learner wellbeing.

## Programme purposes

### Programme 1: Administration

**Purpose:** Manage the department and provide strategic and administrative support services.

### Programme 2: Curriculum Policy, Support and Monitoring

**Purpose:** Develop curriculum and assessment policies, and monitor and support their implementation.

### Programme 3: Teachers, Education Human Resources and Institutional Development

**Purpose:** Promote quality teaching and institutional performance through the effective supply, development and utilisation of human resources.

### Programme 4: Planning, Information and Assessment

**Purpose:** Promote quality and effective service delivery in the basic education system through planning, implementation and assessment.

### Programme 5: Educational Enrichment Services

**Purpose:** Develop policies and programmes to improve the quality of learning in schools.

## Selected performance indicators

**Table 15.1 Basic Education**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of new learners enrolled in the Kha Ri Gude mass literacy campaign per year	Curriculum Policy, Support and Monitoring	Outcome 1: Improved quality of basic education	609 199	660 924	678 661	673 743	669 600	547 200	543 600
Number of learners who complete the Kha Ri Gude course per year	Curriculum Policy, Support and Monitoring		486 000	612 450	628 839	538 994	535 680	437 760	434 880

Number of public ordinary schools moderated through school based integrated quality management system evaluations per year	Teachers, Education Human Resources and Institutional Development		7 160	8 407	9 500	8 000	8 000	8 000	8 000
Number of Funza Lushaka bursaries awarded per year	Teachers, Education Human Resources and Institutional Development		10 074	8 733	11 455	14 512	13 500	13 000	12 500
Number and percentage of Funza Lushaka bursary holders graduating each year	Teachers, Education Human Resources and Institutional Development		2 266 (85.1%)	2 486 (93.3%)	2 553 (86%)	3 262 (90%)	3 262 (90%)	3 262 (90%)	3 262 (90%)
Total number of learners captured by the learner unit record information tracking system	Planning, Information and Assessment		10 million	12.6 million	8.9 million	11.9 million	11.9 million	11.9 million	11.9 million
Total number of schools interacting with learner unit record information tracking system	Planning, Information and Assessment		24 000	20 500	20 500	24 365	24 365	24 365	24 365

Table 15.1 Basic Education

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of schools built and completed in the accelerated school infrastructure development initiative project per year	Planning, Information and Assessment	Outcome 1: Improved quality of basic education	- <sup>2</sup>	- <sup>2</sup>	17	60	100	150	183
Number of schools evaluated through the national education evaluation development unit per year	Planning, Information and Assessment		- <sup>3</sup>	74	134	150	230	230	230
Number of districts evaluated through the national education evaluation development unit per year	Planning, Information and Assessment		- <sup>3</sup>	4	15	30	26	26	26
Number of learners fed a meal each school day per year <sup>4</sup>	Educational Enrichment Services		8.1 million	8.9 million	9.2 million	8.7 million	8.7 million	8.7 million	8.7 million
Number of Grade 12 learners enrolled and writing the national curriculum statement examination in mathematics who achieve either a diploma pass or a bachelor pass with a mark of 40% or higher in this subject	Educational Enrichment Services		15 000	24 478	24 478	22 003	23 416	26 125	29 168
Number of Grade 12 learners enrolled and writing the national curriculum statement examination in Physical Science who achieve either a diploma pass or a bachelor pass with a mark of 40% or higher in this subject	Educational Enrichment Services		6 000	13 651	13 651	17 395	19 500	21 000	23 000

1. This is a new indicator as reflected in the department's annual performance plan.

2. The projects associated with these indicators started in 2012/13.

3. No data in these years, as the indicator began in 2011/12.

4. Learners receiving meals from provinces are excluded from 2013/14 onwards.

## The national development plan

The department's action plan and vision for schooling in 2025 and the national development plan's proposals for basic education are complementary. Both focus on the need to improve the quality of education on an ongoing basis. Schools should be adequately and appropriately supported to increase capacity for improved performance, and the department has a number of initiatives in place to best achieve this. Key interventions have been made in improving equity in the provision of quality basic education, ranging from poverty mitigation measures to the provision of hot meals and high quality learner support materials.

The plan calls for resources to be made available to teachers and schools to support learning, with the focus on improving literacy, numeracy, science and language outcomes. To this end, the department will print and deliver 24.8 million volume 1 and 2 workbooks for grades 1 to 9 to 23 673 schools in 2014. In addition, the department will provide 3.2 million Grade R workbooks over the four school terms in 2014 to benefit 810 000 learners in 16 189 public schools in 11 official languages. The department is also piloting the Grade 1 Incremental Introduction of African Languages workbooks and reading books for foundation phase learners to 501 schools across all provinces. Since 2011/12, approximately 114 million books in all the official languages have been distributed to learners across the country at no cost to their parents.

Providing nutritious meals to learners in schools improves attendance and learning capacity, thus ensuring that poor learners can continue to access schooling and have a meaningful school experience. 8.7 million learners

benefited from the school nutrition programme in 2013/14 and the focus in 2014 will be on strengthening and monitoring the programme to ensure that the stipulated criteria are met.

The national development plan calls for 450 000 Grade 12 learners to achieve university entrance passes with mathematics and physical science by 2030. Although the number of Grade 12 learners passing these key subjects has steadily increased, there are still too few taking and passing the subjects to achieve the goals set out in the national development plan. Although the number of Grade 12 mathematics and science candidates at Dinaledi schools has been declining, the number passing these subjects has steadily increased. In 2013, there were 30 719 mathematics passes out of 46 459 candidates, a pass rate of 66 per cent. There were 25 567 physical science passes out of 35 135 candidates, a 72.8 per cent pass rate. However, both the number of candidates and passes need to increase in the period ahead if the plan's goal of trebling university entrance passes by 2030 is to be achieved.

The national development plan calls for all children to have access to at least two years of quality early childhood development before starting Grade 1. In line with this call, there has been an increase in the number of five-year-olds attending educational institutions towards the target of universal access to Grade R by 2014. By 2012, 90 per cent of children entering Grade 1 had been exposed to reception grade schooling, a testament to the massive expansion in access to Grade R over the last four years. The provision of Grade R workbooks to 910 000 learners in 2014 will ensure that those accessing the reception grade are provided with quality learning materials.

It is critical that the expansion of the Funza Lushaka bursary scheme is complemented by ensuring that all graduates are absorbed into the schooling system and deployed in areas of shortage such as mathematics, science and technology, as well as in the foundation phase (especially teaching in African languages), and to rural areas. Expanding and strengthening the Funza Lushaka bursary scheme is in line with the proposal in the national development plan to produce more and better qualified teachers. It is expected that approximately 3 262 graduates will have qualified in 2013 for placement in 2014.

Significant progress has been made in ensuring that more schools comply with the basic level of infrastructure. The department is committed to providing safe drinking water, hygienic and sufficient toilet facilities and electricity, and for all inappropriate structures to be eradicated by 2016/17, in line with the national development plan's objective that all schools meet minimum infrastructure standards for sanitation, classrooms, and libraries by 2016. 433 schools are set to be built over the MTEF period through the accelerated school infrastructure delivery initiative, which is funded by the school infrastructure backlogs grant.

In line with the objective of improving the performance of the education sector, the national education evaluation and development unit adopted a different model for conducting evaluations in 2012. The more focused approach involves a team of two evaluators spending an average of seven days evaluating and compiling a report for each school. A fully capacitated unit is expected to evaluate 230 schools in each year of the MTEF period.

## Expenditure estimates

**Table 15.2 Basic Education**

## Expenditure trends

The spending focus over the medium term will be on accelerating the delivery and improvement of school infrastructure projects through transfers from the education infrastructure grant to provinces and payments for capital assets from the school infrastructure backlogs conditional grant, where the department will take responsibility for the delivery of projects. These grants account for the bulk of spending increases over the medium term, particularly in the *Planning, Information and Assessment* programme. Increased spending on these grants grew the department's overall expenditure by 15.4 per cent in 2012/13 and 18.2 per cent in 2013/14 in support of government's commitment to ensure that learning and teaching take place in safe and secure buildings.

To give effect to Cabinet approved budget reductions, R1.2 billion over the medium term has been reduced from spending on the school infrastructure backlogs grant and R1.4 billion over the medium term has been reduced

from the education infrastructure grant. The reductions to the school infrastructure grant align this allocation more closely with the ability of the sector to deliver school infrastructure and extend the deadline for addressing the school infrastructure backlog by one year, from 2015/16 to 2016/17. Despite these reductions, the education infrastructure grant is expected to grow by an average annual 14.8 per cent over the medium term, thereby ensuring that school infrastructure delivery by provincial education departments remains a priority.

After infrastructure, spending on operating payments is the second largest item of expenditure over the medium term. Spending on this item mainly provides funding for: the Kha Ri Gude mass literacy project, which aims to provide an additional 1.8 million adults with an opportunity to become literate over the medium term; and workbooks for grades 1 to 9 to improve learner performance in the foundational learning areas of literacy and numeracy. The Kha Ri Gude project expects to reach the initial target of 4.7 million adult learners by 2016, after which the programme will begin to wind down. Cabinet approved reductions of R10 million in 2014/15, R130 million in 2015/16 and R140 million in 2016/17 have been effected on the project in anticipation of this.

The department has a funded establishment of 797 posts, of which 749 were filled at the end of November 2013. The number of filled posts increased from 725 in 2012/13 to 749 in 2013/14, due to appointments in home schooling in the inclusive education directorate in the *Curriculum Policy, Support and Monitoring* programme. In addition, the *Curriculum and Professional Development Unit*, a new subprogramme in the *Teachers, Education Human Resources and Institutional Development* programme, is expected to become fully operational at the end of 2013/14. The department had 4 posts additional to the establishment at the end of November 2013. These posts are used in the ministry, mainly for project management. In order to comply with the frameworks for the Dinaledi schools and technical secondary school recapitalisation conditional grants, 6 project managers will be appointed in 2014/15 to assist with monitoring performance and spending in the provinces.

The 2014 Budget includes Cabinet approved additional allocations of R213 million in 2014/15 and R67 million in 2015/16 for the new conditional grant for the occupation specific dispensation for therapists in the education sector, R53 million in 2014/15 and R40 million in 2015/16 to be added to the education infrastructure grant for the repair of school infrastructure damaged by disasters, as well as the following additional Cabinet approved reductions:

- R231 million in 2014/15, R479 million in 2015/16 and R456 million in 2016/17 from the school infrastructure backlog grant
- R1.4 million in 2014/15, R1.4 million in 2015/16 and R1.5 million in 2016/17 to be effected through implementing efficiency measures on expenditure on goods and services across all programmes
- R284 million in 2014/15, R630 million in 2015/16 and R554.5 million in 2016/17 from the education infrastructure grant.

### Infrastructure spending

The education infrastructure grant is used to supplement the infrastructure programme in provinces to accelerate construction, maintenance, upgrade and rehabilitation of new and existing school infrastructure. The grant is also used to enhance capacity to deliver infrastructure projects in education. R26.4 billion over the medium term is allocated to this grant.

The school infrastructure backlogs grant was introduced in 2011/12. It aims to eradicate and replace inappropriate school infrastructure, such as mud school buildings and other unsafe structures. It also aims to ensure that all schools have access to basic services, such as water, sanitation and electricity. R8 billion has been allocated to this grant over the MTEF period to replace inappropriate infrastructure in 510 schools, and provide water to 1 120 schools, sanitation to 741 schools and electricity to 916 schools. Between 2013/14 and 2014/15, 160 schools with inappropriate infrastructure are to be replaced, with a further 433 planned for replacement between 2014/15 and 2016/17.

R734.9 million over the MTEF period has been allocated for the technical secondary schools recapitalisation conditional grant to build, refurbish and resource new and existing teaching spaces, including technology workshops and classrooms. 19 new workshops are set to be built, 166 workshops are set to be refurbished, 226 workshops are set to be appropriately equipped and 2 732 technology teachers are set to be trained in 2014/15.

## Expenditure trends

The bulk of spending in this programme over the medium term is in the *Office Accommodation* subprogramme, from where the public private partnership unitary fee for the office building the department occupied in February 2010 is paid.

The increased expenditure in the *Department Management* subprogramme in 2013/14 was mainly due to the additional costs associated with interventions in Eastern Cape and Limpopo in 2011/12, when the department took over the management of the provincial education departments in these provinces. This required additional oversight related expenditure, which accounts for the increases in spending on goods and services items, such as consultants and travel and subsistence, in that year. The interventions also explain the decrease in expenditure in the *Ministry* subprogramme in 2012/13, as funds were shifted from that subprogramme to the *Department Management* subprogramme. In addition to assisting with the interventions, consultants were contracted to provide advice on legal matters, such as the gazetting of minimum norms and standards for school infrastructure.

The department has a funded establishment of 300 posts for this programme, of which 252 posts were filled at the end of November 2013. These vacancies are mainly due to delays in recruitment after internal promotions and natural attrition. The department plans to fill them by the end of 2013/14 and over the medium term. There were 4 posts filled additional to the establishment and these are mainly for project management activities.

The department has reprioritised funding from the *Planning, Information and Assessment* programme to this programme to fund the newly created technical support unit in the *Department Management* subprogramme. This accounts for the increased expenditure on consultants providing business and advisory services over the medium term. This unit will support the coordination and implementation of the sector wide programme of action. This in turn will provide technical support to provinces for the improved delivery of key initiatives.

## Programme 2: Curriculum Policy, Support and Monitoring

### Objectives

- Improve overall educational performance in the long term by increasing the number of five-year-old learners enrolled in publicly funded Grade R classes in public and independent primary schools and community based early childhood development sites from 734 650 in 2011 to 950 000 learners by 2014/15.
- Reduce the number of illiterate adults in South Africa by 4.7 million by 2015/16 through the Kha Ri Gude mass literacy campaign.
- Increase literacy and contribute to job creation by recruiting and training 41 870 volunteer educators for the Kha Ri Gude mass literacy campaign in 2014/15.
- Improve the learning and teaching of critical foundational skills by developing, printing and distributing literacy/languages, numeracy/mathematics, and English first additional language workbooks to all learners from grades R to 9 each year.
- Improve the quality of mathematics, science and technology education in order to increase the number of matric mathematics and science passes at all Dinaledi schools by providing additional learner and teacher support materials as well as additional training for mathematics and science teachers and monitoring the performance and participation of all Dinaledi schools in these subjects over the MTEF period.
- Improve the capacity of technical secondary schools to contribute to skills development and training in the country by providing the following assistance in 2014/15:
  - building 19 new workshops in technical schools to support the technical subject offerings
  - refurbishing, upgrading and re-designing 166 existing workshops in technical schools to comply with safety laws and regulations and minimum industry standards
  - installing new equipment at 226 workshops in technical schools
  - providing training in the practical elements of the various technical subjects to 2 732 technical school teachers.

### Subprogrammes

- *Programme Management: Curriculum Policy, Support and Monitoring* manages delegated administrative and financial responsibilities, and coordinates all monitoring and evaluation functions. This subprogramme had a staff complement of 3 in 2013/14.
- *Curriculum Implementation and Monitoring* supports and monitors the implementation of the national strategy for learner attainment framework, which aims to monitor and improve quality and teaching, particularly in mathematics, science, technology and languages, in all schools from grades R to 12. In 2014/15, R111 million will be used to support mathematics, science and technology programmes through the Dinaledi schools conditional grant. This subprogramme had a staff complement of 54 in 2013/14.
- *Kha Ri Gude Literacy Project* expands the provision of basic literacy education to adults. There were 42 371 registered volunteer educators, supervisors, coordinators and monitors in 2013/14. R429 million was used to pay stipends to these volunteers, who enabled 673 743 adults to gain literacy and numeracy skills. This subprogramme had a staff complement of 11 in 2013/14.
- *Curriculum and Quality Enhancement Programmes* is discussed in more detail below.

## Expenditure trends

The spending focus over the MTEF period will be on improving curriculum delivery, particularly through ensuring access to high quality learner and teacher support materials. Workbooks for grades R to 9 are developed and distributed through the *Curriculum and Quality Enhancement Programmes* subprogramme. The workbooks are complemented by the Dinaledi schools and technical secondary schools conditional grants in the *Curriculum Implementation and Monitoring* subprogramme, providing more focused support to selected schools in mathematics, science and technology. Additional allocations for these grants account for the growth in expenditure in the *Curriculum Implementation and Monitoring* subprogramme, which is also reflected as transfers and subsidies to provincial departments.

Spending on the *Kha Ri Gude Literacy Project* subprogramme increased between 2010/11 and 2013/14, mainly due to additional allocations for the project through the introduction of the expanded public works incentive grant in 2011/12. As additional funds could be accessed through this grant if specified job opportunity targets for volunteer facilitators are met, this increased expenditure on goods and services over this period and is expected to have the same effect in 2014/15. With an allocation of R1.8 billion over the medium term, this project has to date provided 2.9 million adults with the opportunity to become numerate and literate in one of the 11 official languages. In 2013/14, the project registered 673 743 additional learners and provided a stipend to 42 371 volunteer facilitators. As the project expects to reach the initial target of 4.7 million literate adults by 2015/16, its allocation has been reduced by R280 million over the medium term as it will begin to wind down as a mass based intervention.

## Subprogramme: Curriculum and Quality Enhancement Programmes

The subprogramme supports programmes that enhance curriculum outcomes in the basic education system. A key project is to ensure the development of literacy, numeracy and mathematics workbooks for grades R to 9 and that these workbooks are printed and delivered to learners. Other activities include curriculum enhancement programmes using ICT, establishing e-learning in schools and evaluating school performance. The establishment of the e-learning unit and development of e-learning resources in mathematics and science will promote and increase the participation of learners in these subjects. This subprogramme had a staff complement of 27 in 2013/14.

2. Rand million.

## Expenditure trends

The bulk of spending in this subprogramme goes towards the workbooks project, through which the department ensures access to quality learner support materials. The project is responsible for the bulk of the increase in spending on goods and services between 2010/11 and 2013/14. Using the allocation of R859.3 million in 2013/14, 53 740 860 literacy and numeracy workbooks for grades R to 9 were developed and printed in all 11 official languages in preparation for 2014.

The scope of the project will be expanded over the medium term to include the development and printing of Braille workbooks. This will be funded from the savings of R2 million realised from bringing the development of workbook content in-house, thus eliminating the need to spend on consultants.

## Programme 3: Teachers, Education Human Resources and Institutional Development

### Objectives

- Improve school management by developing the South African standards for principals by the start of 2015 to define the role of school principals and key aspects of their professionalism, image and competencies; and by establishing learning networks for principals in June 2014 where they can share good practice in management and leadership.
- Improve teacher performance in mathematics and English first additional language by providing self-appraisal tools and an updated guide of available teacher development programmes in these subjects to teachers in 2014/15.
- Improve the quality of teaching and learning by ensuring an adequate supply of young, inspired and qualified recruits in the system by awarding 13 500 Funza Lushaka bursaries to prospective teachers in 2014/15.
- Improve classroom management, teaching and learning over the medium term by ensuring that 80 per cent of learners are in a class with not more than 45 learners in 2014.
- Strengthen teaching and learning by monitoring the implementation of the integrated quality management system through 8 000 school visits by external moderators in 2014/15, and providing each school with a report on the moderators' findings and recommendations.

### Subprogrammes

- *Programme Management: Teachers, Education Human Resources and Institutional Development* manages delegated administrative and financial responsibilities, and coordinates all monitoring and evaluation functions. This subprogramme had a staff complement of 3 in 2013/14.

- *Education Human Resources Management* is responsible for education human resources planning; provisioning and monitoring; educator performance management and development; whole school evaluation, and education labour relations and conditions of service. In 2013/14, R41.2 million was spent on the integrated quality management system project, in which 68 external moderators monitored teacher evaluations at 8 000 schools countrywide and issued monitoring reports with recommendations to each of them. This subprogramme had a staff complement of 88, including 68 moderators appointed on an annual contract, in 2013/14.
- *Education Human Resources Development* oversees the integrated strategic planning framework for teacher education and development in South Africa and translates it into a wide range of teacher development materials and collaborative professional development activities; directs the teacher recruitment campaign and improves district support to schools for effective teaching and learning. In 2013/14, R894 million was spent on the Funza Lushaka teacher bursary programme, which provided bursaries to 14 512 students, of which approximately 3 262 will enter the teaching profession in 2014. This subprogramme had a staff complement of 43 in 2013/14.
- *Curriculum and Professional Development Unit* manages and develops innovative programmes for an effective teacher development system. This entails curriculum research, teacher development research and teacher development implementation. In 2014/15, the diagnostic assessment and teacher education development ICT system will be implemented to provide easy access to professional development courses, at a cost of R5.4 million. The tools and short courses for the system were developed in 2013/14. This subprogramme had a staff complement of 4 in 2013/14.

## Expenditure trends

As a means of ensuring an adequate supply of qualified recruits to the education system, the department offers Funza Lushaka bursaries to prospective teachers. The bursaries are provided through the National Student Financial Aid Scheme, which is the main reason for increases in spending over the MTEF period. The scheme aims to address the shortage of teachers in specific areas, such as mathematics, science and technology. Spending on the bursary scheme, reflected in transfers and subsidies, increased from R424 million in 2010/11, when 10 074 bursaries were awarded, to R893.9 million in 2013/14, when 14 512 bursaries were awarded. This also accounts for the increase in spending in the *Education Human Resources Development* subprogramme over the same period. The department expects to award a further 39 000 bursaries over the medium term at a cost of R3 billion.

In 2013/14, R41.2 million will be used to conduct 8 000 school visits to monitor the implementation of the integrated quality management system. Some of this was spent on travel and subsistence, which fluctuated between 2010/11 and 2011/12 due to a delay in the filling of vacancies before 2011/12. The balance was for compensation of employees.

This programme received additional funding of R280 million in the 2014 Budget for the implementation of the occupation specific dispensation for therapists in the education sector through a new conditional grant to provinces.

Expenditure on consultants is expected to increase over the medium term as consultants will be appointed to support the activities of the newly established *Curriculum Professional Development Unit* subprogramme, which is expected to expand over the period. Most of the 14 vacancies in the programme at the end of November 2013 were in this unit and will be filled by the end of 2013/14 and over the medium term, when the unit becomes fully operational. Due to slow spending and to give effect to Cabinet approved budget reductions, the programme's budget over the medium term has been reduced by R1.1 million, mainly from consultant and professional services in the *Curriculum and Professional Development Unit* subprogramme. The reduction will have a minimal impact on service delivery as the unit is in the process of becoming fully operational by 2014/15.

## Programme 4: Planning, Information and Assessment

### Objectives

- Improve the delivery of school infrastructure over the MTEF period by providing oversight and support to provinces through quarterly reporting on schools' furniture needs and deliveries, the national education infrastructure management system and the education infrastructure grant.
- Contribute to improved teaching and learning through improving and upgrading infrastructure by:
  - building 510 schools to replace all unsafe structures
  - providing electricity to 916 schools
  - providing water to 1 120 schools
  - providing sanitation to 741 schools by 2016/17.
- Improve literacy and numeracy by administering literacy and numeracy tests for all grade 3, 6 and 9 learners each year, and providing a detailed report on learner performance in these grades.
- Contribute to improved learner performance in Grade 12 in 2014/15 by providing a diagnostic report, which identifies the specific areas of poor performance in selected subjects with appropriate remedial measures suggested, and repeat this annually over the MTEF period.

### Subprogrammes

- *Programme Management: Planning, Information and Assessment* manages delegated administrative and financial responsibilities, and coordinates all monitoring and evaluation functions. This subprogramme had a staff complement of 3 in 2013/14.
- *Financial Planning, Information and Management Systems* develops systems and procedures to support and maintain the integrated education management systems based on unit record information; monitors and reports on the implementation of the education information policy in the basic education sector; and monitors the implementation of national norms and standards for school funding. In 2013/14, provinces were supported in using the learner unit record information and tracking system and the integrated education management information system more effectively, at a cost of R13.7 million. This subprogramme had a staff complement of 41 in 2013/14.
- *School Infrastructure* is discussed in more detail below.
- *National Assessments and Public Examinations* is discussed in more detail below.
- *National Education Evaluation and Development Unit* facilitates school improvement through systematic evaluation. The unit evaluates how district offices and provincial and national departments monitor and support schools, school governing bodies and teachers. This entails identifying critical factors that inhibit or advance the attainment of sector goals and school improvement, and making focused recommendations for addressing the problem areas that undermine school improvement and the attainment of sector goals. The unit will have evaluated 230 schools, 26 districts and all provincial offices by the end of the 2013/14 at a cost of R6.6 million. This subprogramme had a staff complement of 26 in 2013/14.
- *Planning and Delivery Oversight Unit* assists the department in meeting objectives by monitoring the planning and delivery of selected priorities and assisting provinces with this. The unit works with provinces to ensure that provincial initiatives are aligned with national priorities, and provides institutional support for

their effective delivery. R43 million was spent towards this in 2013/14, mainly for salaries and travel and subsistence. This subprogramme had a staff complement of 30 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on the delivery of school infrastructure to meet the minimum basic school infrastructure norms and standards as laid out by government by 2016/17. The bulk of expenditure in this programme is therefore on the education infrastructure grant and school infrastructure backlogs grant in the *School Infrastructure* subprogramme. A significant amount is also spent in the *National Assessments and Public Examinations* subprogramme.

The spending in the rest of the programme is mainly on developing systems and procedures to support and maintain the integrated education management systems over the MTEF period through the *Financial Planning, Information and Management Systems* subprogramme. This is mainly reflected as expenditure on computer services, including the national education infrastructure information management system, which provides information on the status of school infrastructure across the country, and on reporting on the implementation of the education information policy in the basic education sector in the *National Education Evaluation Unit* subprogramme.

The increased spending on travel and subsistence over the medium term is for the monitoring and oversight of the delivery of school infrastructure in the *School Infrastructure* subprogramme. Spending on this item also grew due to increased activity in the *National Education Evaluation Unit* subprogramme. A further 230 schools and 26 districts are set to be evaluated in 2014/15.

Expenditure on consultants increased between 2010/11 and 2013/14, due to technical assistance requirements for the management and implementation of the school infrastructure backlogs grant. Spending on consultants is expected to continue to increase over the MTEF period as the school infrastructure programme is expanded. At the end of November 2013, this programme had 182 funded posts, 171 of which were filled. The rest are used for moderators and examiners as required.

## Subprogramme: School Infrastructure

This subprogramme uses funding from the school infrastructure backlogs grant to eradicate infrastructure backlogs by providing water, sanitation and electricity to schools that do not have these utilities and replacing school buildings constructed from inappropriate material, such as mud. The education infrastructure grant provides co-funding for the ongoing infrastructure programme in provinces to allow for the provision of current infrastructure requirements, which includes the maintenance of existing stock and new infrastructure where required. These two grants, together with contributions by provincial education departments, are to ensure that all schools will meet the national minimum uniform norms and standards for public school infrastructure by 2016/17. Through the school infrastructure backlogs grant, 44 new schools have been completed and handed over to communities in Eastern Cape and 16 schools are expected to be completed by March 2014, at an estimated cost of R1 billion for 2013/14. 100 more schools are planned for 2014/15. This subprogramme had a staff complement of 5 in 2013/14.

## Expenditure trends

The bulk of the expenditure in the subprogramme goes toward school infrastructure, which is why R7.9 billion has been allocated to the school infrastructure backlogs grant over the MTEF period. In addition, R26.4 billion over the medium term will be transferred to provinces through the education infrastructure grant. The school infrastructure backlogs grant aims to eradicate and replace inappropriate school infrastructure, such as mud school buildings and other unsafe structures. It also aims to ensure that all schools have basic services, such as water, sanitation and electricity. Over the medium term, these funds will be used to replace inappropriate infrastructure in 510 schools and provide water to 1 120 schools, sanitation to 741 schools and electricity to 916 schools across South Africa.

To give effect to Cabinet approved budget reductions, R1.2 billion over the medium term has been reduced from spending on the school infrastructure backlogs grant and R1.5 billion from the education infrastructure grant. The reductions to the school infrastructure grant align this allocation more closely with the ability of the sector to deliver school infrastructure and extend the deadline for addressing the school infrastructure backlog by one year, from 2015/16 to 2016/17. Despite these reductions, the education infrastructure grant continues to grow over the medium term at an average annual 14.8 per cent, thereby ensuring that school infrastructure delivery by provincial education departments remains a priority.

## Subprogramme: National Assessment and Public Examinations

This subprogramme promotes and administers national school assessments in grades 1 to 6 and Grade 9, and public examinations in Grade 12, by setting and moderating all examination papers; moderates the Grade 12 life orientation school based assessment at provincial and national levels; monitors the examination writing processes in all provinces; and oversees the annual national assessments. Performance trends in all national

examinations and assessments are published each year to provide reliable and valid data on learner performance that will support the improvement of the quality of basic education. More than 7 million learners in grades 1 to 6 and Grade 9 in 20 000 schools in South Africa wrote the annual national assessment tests to determine literacy and numeracy competency in 2013/14 at an estimated cost of R225 million. To validate school level marking, centralised moderation of a sample of 3 scripts per class and subject for grades 3, 6 and 9 in each school was conducted at 24 centres across all nine provinces. Learner performance in these assessments is used to inform the type and scale of interventions required to improve literacy and numeracy levels. In addition, 198 Grade 12 question papers were written at 6 699 examination centres by 707 136 full and part time learners in the 2013 national senior certificate examination, and school based assessments, including Grade 12 life orientation, were moderated at provincial level to determine the reliability of the assessments.

## Expenditure trends

The spending focus of this subprogramme is to set, print and moderate question papers for the national senior certificate, senior certificate examinations and the annual national assessments, which accounts for the high proportion of expenditure on travel and subsistence for examiners and moderators, as well as on stationery and printing. The increase in the transfer to the Umalusi Council for Quality Assurance in General and Further Education and Training, reflected under transfers and subsidies to departmental agencies and accounts, is to ensure that the entity is fully funded to deliver its mandate and will no longer require provincial departments to pay for the issuing of certificates.

This subprogramme had a staff complement of 77 at the end of November 2013. Staff members oversee the administration associated with the setting, printing and moderating of all the nationally set and examined question papers.

## Programme 5: Educational Enrichment Services

### Objectives

- Improve learner health and wellness by increasing the number of learners benefiting from the integrated school health programme, ensuring that all learners in primary, secondary and identified special schools in quintiles 1 to 3 are provided with nutritious meals in 2014/15.
- Improve learner safety by ensuring that the 14 375 public schools are linked to their local police stations.
- Promote a culture of reading among learners by increasing the number of ordinary public schools participating in spelling bee contests from the current 150 schools to 250 by 2014/15.

### Subprogrammes

- *Programme Management: Educational Enrichment Services* manages delegated administrative and financial responsibilities, and coordinates all monitoring and evaluation functions. This subprogramme had a staff complement of 3 in 2013/14.
- *Partnerships in Education* mobilises partners and stakeholders in support of education in an attempt to make education a societal issue; manages policy, programmes and systems on the creation of a safe and cohesive learning environment that promotes holistic learner development; facilitates sport and enrichment programmes in schools through collaborative programmes with various stakeholders, including other government departments, international donors, non-governmental organisations, businesses and provincial education departments; and develops and monitors policies and programmes to promote gender equity, non-racism, non-sexism, democratic and constitutional values in education, and an understanding of human rights and the promotion of social cohesion in public schools and school communities. Key activities include the implementation of sport and enrichment programmes (which include literacy programmes) and the partnership protocol between the department and the South African Police Service, which links local police stations to schools, each at an approximate cost of R645 000 in 2013/14. This subprogramme had a staff complement of 26 in 2013/14.
- *Care and Support in Schools* manages policies on the overall wellness of educators and learners through the provision of nutritious meals to learners every school day and the promotion of learner access to public services, such as health and poverty alleviation interventions. By the end of 2013/14, R5.2 billion will have been spent on feeding 8.7 million learners in primary, secondary and identified special schools in quintiles 1 to 3. This subprogramme had a staff complement of 33 in 2013/14.

## Expenditure trends

The spending focus over the medium term is to enrich the educational experience of learners and teachers. The bulk of the department's contribution here is through conditional grant transfers to provinces, with the national school nutrition programme in the *Care and Support in Schools* subprogramme being the key initiative aimed at improving access and learning. The nutrition programme received an increase in allocations between 2010/11 and 2013/14 to expand the national school nutrition programme to include all primary and secondary learners in quintiles 1 to 3.

In 2013/14, 8.7 million learners were fed on school days at a cost of R5.2 billion. This is a decrease from the 9.2 million learners fed in 2012/13, and is due to the additional learners being fed by provincial departments from their own budgets in that year. To ensure that the level and quality of feeding is sustained in line with government's overall anti-poverty strategy, this grant continues to dominate programme expenditure over the medium term, with allocations increasing from R5.2 billion in 2013/14 to R6.0 billion in 2016/17.

To give effect to Cabinet approved budget reductions, the department will reduce spending in this programme by R3.2 million over the medium term on the administration portion of the national school nutrition programme grant. These reductions are to be mainly effected in spending on travel and subsistence through implementing efficiency measures such as reducing the size of teams that travel on oversight visits and ensuring that teams share vehicles. The reductions will not impact negatively on service delivery.

At the end of November 2013, the directorate had a funded establishment of 68 posts, for personnel to provide oversight and support for the implementation of the national school nutrition programme conditional grant. 6 positions were vacant, mainly due to natural attrition. The department expects to have filled these vacancies by the end of 2013/14.

## Public entities and other agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Education Labour Relations Council** promotes and maintains good relations between employer and employee. The council's total budget for 2014/15 is R58 million.
- The **South African Council for Educators** is responsible for the registration, promotion and professional development of educators; and for setting, maintaining and protecting their ethical and professional standards. The council's total budget for 2014/15 is R53.6 million.
- **Umalusi Council for Quality Assurance in General and Further Education and Training** sets and maintains standards in general and further education and training through the development and management of the general and further education and training qualifications framework. The council's total budget for 2014/15 is R127.3 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Provide leadership and coordination of health services to promote the health of all people in South Africa through an accessible, caring and high quality health system based on the primary health care approach.*

### Mandate

The Department of Health derives its mandate from the National Health Act (2003), which requires the department to provide a framework for a structured uniform health system within South Africa. The act sets out the functions of the three levels of government as they relate to health services. The department contributes directly to achieving the government outcome which calls for a long and healthy life for all South Africans (outcome 2).

### Strategic goals

The department's strategic goals over the medium term are to:

- prevent disease and reduce its burden, and promote health
- improve health facility planning by implementing norms and standards
- improve financial management by improving capacity, contract management, revenue collection and supply chain management reforms
- develop an efficient health management information system for improved decision making
- improve the quality of care by establishing the Office of Health Standards Compliance, which will monitor compliance of all health facilities with standards and improve clinical governance
- re-engineer primary healthcare by: increasing the number of ward based outreach teams, contracting general practitioners, and district specialist teams; and expanding school health services
- make progress towards universal health coverage through the development of the National Health Insurance scheme, and improve the readiness of health facilities for its implementation
- improve human resources for health by ensuring adequate training and accountability measures.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide overall management of the department and centralised support services.

### Programme 2: National Health Insurance, Health Planning and Systems Enablement

**Purpose:** Improve access to quality health services through the development and implementation of policies to achieve universal coverage, health financing reform, integrated health systems planning, reporting, monitoring and evaluation, and for research.

### Programme 3: HIV and AIDS, TB and Maternal and Child Health

**Purpose:** Develop national policy, and coordinate and fund health programmes for HIV and AIDS and sexually transmitted infections, tuberculosis, maternal and child health, and women's health. Develop and oversee the implementation of policies, strengthen systems, set norms and standards, and monitor programme implementation.

### Programme 4: Primary Health Care Services

**Purpose:** Develop and oversee the implementation of legislation, policies, systems, and norms and standards for: a uniform district health system, environmental health, managing communicable and non-communicable diseases, health promotion, and nutrition.

### Programme 5: Hospitals, Tertiary Health Services and Human Resource Development

**Purpose:** Develop policies, delivery models and clinical protocols for hospitals and emergency medical services. Ensure alignment of academic medical centres with health workforce programmes.

### Programme 6: Health Regulation and Compliance Management

**Purpose:** Regulate the procurement of medicines and pharmaceutical supplies, including food control, and the trade in health products and health technology. Promote accountability and compliance by regulatory bodies and public entities for effective governance and the quality of health care.

## Selected performance indicators

Table 16.1 Health

Indicator	Programme	Outcome	Past			Current	Projections

Table 16.1 Health

Indicator	Programme	Outcome	Past			Current 2013/14	Projections		
			2010/11	2011/12	2012/13		2014/15	2015/16	2016/17
Measles (second dose) immunisation coverage annualised <sup>3</sup>	HIV and AIDS, Tuberculosis, Maternal and Child Health	Outcome 2: A long and healthy life for all South Africans	81%	85.3%	82.7%	90%	90%	90%	90%
Proportion of infant first polymerase chain reaction test positive within 2 months after birth out of all babies tested	HIV and AIDS, Tuberculosis, Maternal and Child Health		3.5%	4%	2.5%	2.5%	2%	2%	2%
Cervical cancer screening coverage annualised	HIV and AIDS, Tuberculosis, Maternal and Child Health		52.2%	55%	55.4%	56%	58%	60%	62%
Primary health care utilisation rate (Average number of primary health care visits per person per year)	Primary Health Care Services		2.4	2.5	2.5	2.8	2.9	3	3

1. No historical data, as the indicator was introduced in the 2013/14 annual performance plan.

2. Performance in 2010/11 has been revised from what was published in the ENE 2013 due to backdated capturing of some information.

3. Performance in 2010/11 has been revised from what was published in the ENE 2013, as the target was mistakenly published instead of actual performance.

## The national development plan

In relation to health, the national development plan articulates nine goals that broadly endorse a health system which raises life expectancy, reduces infant mortality and the occurrence of HIV and AIDS, and significantly lowers the burden of disease. The plan highlights demographics and disease burden, health systems and the social and environmental determinants of health as being key areas in the country's health system that need to be addressed. Achieving the plan's objectives for the health sector will require a fundamental reform in the country's health system. To this end, the department will focus on priority areas that include: infrastructure; human resources and management capacity, and norms and standards for staffing; accountability in planning and budgeting; capacity and systems in financial management; health financing; and key strategic institutions.

The department's 10-point plan and strategic goals are in alignment with the nine goals identified in the national development plan. These are:

- average male and female life expectancy at birth increased to 70 years
- tuberculosis prevention and cure progressively improved
- maternal, infant and child mortality reduced
- significantly reduced prevalence of non-communicable chronic diseases
- injury, accidents and violence reduced by 50 per cent from 2010 levels
- health system reforms completed
- primary health care teams deployed to provide care to families and communities
- universal health coverage achieved
- health posts filled with skilled, committed and competent individuals.

In line with the plan's vision for the reduction of mortality, the department will be implementing a number of interventions to address the causes of maternal, child and infant mortality. Over the medium term, the department will scale up family planning services to reduce unplanned pregnancies and improve women's health. One of the interventions for reducing non-communicable diseases involve the department establishing a national health commission to reduce the burden of non-communicable diseases. The deployment of primary health care teams and the implementation of the intersectoral integrated school health programme will also improve health promotion and the prevention of diseases. In line with plan's vision of strengthening the health system, the department will be placing emphasis on the quality of health care in South Africa by establishing the independent Office of Health Standards Compliance as a public entity in 2014/15.

The following key actions have been identified for reducing the burden of HIV and AIDS and tuberculosis: improving access to antiretroviral treatment; reducing new infections through expanding medical male circumcision services; and preventing mother to child transmission, thereby reducing HIV mortality rates.

South Africa is embracing universal health coverage, as espoused in the plan, through the establishment of the national health insurance scheme. The department will soon publish a white paper on national health insurance. The ultimate benefit of the insurance scheme is that it will ensure that all South Africans, irrespective of their socioeconomic status, have access to good quality and affordable health services.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

3. Includes periodic payments to board members who do not form part of the establishment.

## Expenditure trends

The spending focus over the medium term will continue to be on increasing life expectancy and reducing the burden of disease by revitalising hospitals, providing specialised tertiary services, and preventing and treating HIV and AIDS. Thus, the bulk of the department's budget over the medium term is allocated to transfers of: the health facility revitalisation, national tertiary services, and health professions training and development grants in the *Hospitals, Tertiary Health Services and Human Resource Development* programme; and the comprehensive HIV and AIDS conditional grant in the *HIV and AIDS, TB, Maternal and Child Health* programme. Spending on the HIV and AIDS conditional grant is set to increase over the medium term to allow the department to put 500 000 new patients on antiretroviral treatment each year. The 2014 Budget provides a further Cabinet approved additional allocation of R1 billion in 2016/17 for the department to continue to provide the public greater access to antiretroviral treatment, which explains the significant increase projected in spending in the *HIV and AIDS, TB, Maternal and Child Health* programme in that year. In addition, the programme receives a Cabinet approved additional allocation of R200 million in both 2014/15 and 2015/16 through a newly formed component of the national health grant to provide for the rollout of the human papilloma virus vaccine, which protects women and girls against cervical cancer. Once the rollout of the vaccine is under way, it will be funded through the provincial equitable share in 2016/17.

Together with a Cabinet approved additional allocation of R30 million in 2014/15 for a national survey on health demographics, the national health insurance component of the national health grant is set to increase spending in the *National Health Insurance, Health Planning and Systems Enablement* programme significantly over the MTEF period. This component of the grant provides for an expansion of the scheme's pilot programme in 10 districts, including contracting general medical practitioners, which explains the significant increase expected in spending on contractors over the medium term.

The *Hospitals, Tertiary Health Services and Human Resource Development* programme receives Cabinet approved additional allocations of R70 million over the MTEF period for capital assets for the forensic chemistry laboratories and for commissioning the new laboratory in Durban. The health facilities revitalisation component of the national health grant is set to continue increasing this programme's expenditure over the medium term as the department continues to revitalise hospitals, which is the reason for the increase in spending on payments for capital assets. However, allocations are reduced as a result of Cabinet approved reductions of R200 million, R254.8 million and R249.5 million over the medium term due to slow spending. These allocations will be reviewed as capacity improves. The programme receives a further R2 million through the health facilities revitalisation grant, which is transferred to provinces, to repair health infrastructure damaged by disasters. An additional R274 000 in 2013/14 was also allocated for this purpose. Spending in the *Health Regulation and Compliance Management* programme is projected to increase significantly over the medium term to strengthen the Medical Research Council's research programmes and to allow the Office of Standards Compliance, which is currently a subprogramme in the department, to employ

additional staff to establish itself and build its inspectorate function. This is set to increase the department's establishment from 1 500 in 2013/14 to 1 535 in 2014/15. From 2014/15, the Office of Standards Compliance is set to become a standalone public entity.

### Infrastructure spending

The department's infrastructure spending is funded through two conditional grants: the provincially delivered health facilities revitalisation grant and the nationally delivered health facility revitalisation component of the national health grant. The total spending on conditional grants for infrastructure projects was R5.5 billion in 2012/13 and unaudited figures put expenditure in 2013/14 at R5.5 billion. R19.1 billion is budgeted for infrastructure projects over the MTEF period.

#### Mega projects

There are currently 7 mega projects being implemented by national or provincial departments, funded by conditional grants. Each project has a total estimated cost of more than R1 billion. R919.7 million was spent on these projects in 2012/13 and constituted 16.6 per cent of overall infrastructure expenditure. King George V Hospital in KwaZulu-Natal is scheduled for completion in 2013/14, while Natalspruit Hospital in Gauteng was completed in 2013/14 and is to be commissioned early in 2014/15. R2.8 billion has been allocated over the medium term for the remaining 5 mega projects.

#### Large projects

There are currently 50 large infrastructure projects being implemented by the national or provincial departments funded by the conditional grants. Each project has a total estimated cost of more than R250 million, but less than R1 billion. In 2012/13, the provincial departments spent R2.5 billion on large projects, or 44.9 per cent of overall infrastructure expenditure. In 2013/14, the projects to build hospitals in Zola in Gauteng, Ladybrand in Free State, and Upington in Northern Cape were completed and are currently being commissioned. Over the MTEF period, R9 billion has been allocated for the remaining large health infrastructure projects.

#### Small projects

R2.1 billion spent by the provincial departments of health on small projects, such as the construction and upgrading of clinics, community health centres and nursing colleges, makes up the remaining 38 per cent of overall expenditure in 2012/13. Over the medium term, the small projects will involve the installation of mobile doctors' consulting rooms in the national health insurance pilot districts, as well as minor maintenance of health facilities carried out by students at further education and training colleges. R7.3 billion will be invested in small projects over the medium term.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will continue to be on providing for the department's accommodation and corporate services needs. This is why operating leases and compensation of employees are the programme's largest spending items across the seven-year period. Filled posts over the medium term are expected to decrease to 488 in 2014/15, where they are set to remain over the medium term, which is why expenditure on compensation of employees is set to grow only marginally over the period. The decrease is mainly due to the shifting of programme managers from this programme to their respective line function programmes. At the end of November 2013, there were 24 vacant posts due to natural attrition.

Audit costs have increased sharply, from R14.7 million in 2010/11 to R25.6 million in 2013/14, due to the introduction of a mid-year audit of performance information. Office accommodation costs rose significantly in 2011/12 due to the payments to the Department of Public Works for the upgrade to the Civitas building, which the department has since occupied.

Spending in the *Financial Management* subprogramme over the medium term aims to support effective management and accountability in the department and assist all nine provincial health departments to improve audit opinions. Spending in the *Management* subprogramme in 2014/15 is set to decrease slightly due to the shifting of the staff and office costs of the deputy director generals to their respective programme budgets.

## Programme 2: National Health Insurance, Health Planning and Systems Enablement

### Objectives

- Monitor the prevalence of HIV and AIDS by conducting the 2014 national HIV survey in October and November 2014, and publishing the reports of the 2013 national HIV survey by December 2014.
- Complete the system design for a national integrated patient based information system by March 2019, to progressively implement an electronic health record system required for the national health insurance.
- Improve the use of information for planning by progressively expanding access to the national health information repository and data warehouse over the MTEF period.
- Improve access to essential medicines by maintaining a less than 3 per cent stock out level for drugs on the essential drugs list, tuberculosis drugs and antiretroviral medicines over the medium term.
- Implement the building blocks of the national health insurance by piloting components of the insurance policy in 10 health districts over the MTEF period.
- Regulate the cost of health care in South Africa by establishing a pricing commission that will create a platform for funders and providers of health services to negotiate prices of service providers in the private health sector by 2016/17.

- Provide stewardship and leadership for improving health outcomes through working with international development partners such as the Southern African Development Community (SADC), African Union (AU), United Nations (UN) agencies, the India-Brazil-South Africa (IBSA) and the Brazil-Russia-India-China-South Africa (BRICS) group of countries, and improving bilateral and multilateral relations, over the medium term.

## Subprogrammes

- *Programme Management* provides leadership to the programme in order to improve access to quality health services through the development and implementation of policies to achieve universal coverage, health financing reform, integrated health systems planning, reporting, monitoring and evaluation, and research. This subprogramme has 3 filled posts.
- *Technical Policy and Planning* provides advisory and strategic technical assistance on policy and planning, and supports policy implementation. In 2012/13, the department expanded the development of the national health information repository and data warehouse. The purpose of the repository is to create a national health information centre where information from different repositories will be stored and updated on a regular basis. Data and information from the repository were used to produce health profiles for all 9 provinces and 52 districts. The system was further expanded in 2013/14 with a focus on the use of the repository through scenario planning models. This subprogramme houses technical assistants, who are not on the fixed establishment of the department.
- *Health Information Management, Monitoring and Evaluation* develops and maintains a national health information system, commissions and coordinates research, implements disease notification surveillance programmes, and monitors and evaluates strategic health programmes. In 2012/13, a concerted effort was made to strengthen research and development. The department began with the implementation of recommendations from the national health research summit by funding 13 doctoral scholarships and an independent audit of 33 research ethics committees was commissioned on behalf of the National Health Research Ethics Council. In 2013/14, the Centre for Scientific and Industrial Research was commissioned to produce a normative standards framework for health information systems in South Africa and the result was approved by the National Health Council. In addition, HIV prevalence trends at national, provincial and district level continued to be monitored through the implementation of the annual antenatal sentinel HIV and herpes simplex prevalence surveys. This subprogramme has 48 filled posts.
- *Sector-wide Procurement* is responsible for the selection of essential medicines and equipment, the development of standard treatment guidelines, the administration of health tenders, and the licensing of persons and premises that deliver pharmaceutical services. Substantial progress has been made on medicine procurement, with almost all medicine tenders now awarded nationally. Significant cost savings have resulted, including with the awarding of the national antiretroviral tender. In 2012/13, initiatives were introduced to reform procurement systems for essential medicines. These included tender reforms, the development of systems for direct delivery and the awarding of tenders for service providers of chronic medicines. A key achievement in 2012/13 was the successful awarding of medicine tenders, which resulted in the saving of R2.1 billion. This subprogramme has 43 filled posts.
- *Health Financing and National Health Insurance* develops and implements policies, legislation and frameworks for the achievement of universal health coverage through the phased implementation of the national health insurance; commissions health financing research, including into alternative healthcare financing mechanisms for achieving universal health coverage; develops policy for the medical schemes industry; provides technical oversight over the Council for Medical Schemes; and provides technical and implementation oversight for the two national health insurance conditional grants. The cluster also comprises the directorate for pharmaceutical economic evaluation, which implements the single exit price regulations, develops policy and implements initiatives in relation to the dispensing of medicine and logistical fees. Over the medium term, the initiatives implemented through the pilot districts will be expanded to improve access and quality health care. In 2012/13 and 2013/14, a draft white paper on national health insurance and a draft national health insurance bill were developed. The Minister of Health conducted road shows involving a range of stakeholders in each of the national health insurance districts. The white paper on national health insurance will be tabled in Parliament, with further legislation and

regulations will be developed and implemented in the coming years. This subprogramme has 23 filled posts.

- *International Health and Development* develops and implements bilateral and multilateral agreements with strategic partners such as the SADC, AU, UN agencies, as well as other developing countries and economic groupings of countries such as India-Brazil-South Africa and Brazil-Russia-India-China-South Africa (BRICS), to strengthen the health system; manages processes involving the provision of technical capacity and financial assistance to South Africa; strengthens cooperation in areas of mutual interest globally; coordinates international development support; and profiles and lobbies for South Africa's policy position internationally. In 2012/13, the implementation of the Cuban medical brigade was facilitated to provide health services and training in Sierra Leone under the South Africa-Cuba-Sierra Leone trilateral project. Regarding the management of cross-border tuberculosis, the SADC heads of government signed the declaration on tuberculosis in the mining sector. This subprogramme has 37 filled posts.

<sup>1</sup> Data has been provided by the department and may not necessarily reconcile with official government personnel data.

<sup>2</sup> Rand million.

## Expenditure trends

The spending focus over the medium term will be on working towards attaining universal health care coverage by overseeing 10 national health insurance pilot projects, and conducting health economics research, particularly on the rollout of national health care and alternative health care financing mechanisms. These activities will be carried out through the *Health Financing and National Health Insurance* subprogramme, in which expenditure grew significantly in 2012/13 and 2013/14. The pilot projects began in 2012/13 and were funded through transfer payments. However, in 2013/14, the national health conditional grant was established to provide funding for the pilot projects and funds were shifted accordingly, from spending on transfers to spending on contractors to provide for general medical practitioners contracted to the projects.

The significant increase projected in expenditure in the *Health Information Management Monitoring and Evaluation* subprogramme in 2014/15 is due to a once-off allocation of R30 million for the South African demographic health survey. Used to collect population based health data, the survey is normally carried out every five years but has not been conducted since 2003/04.

Spending in the *International Health and Development* subprogramme increased from 2010/11 to fund a new health attaché position in Cuba, provide for more students sent to Cuba for medical training, and cover an increase in annual membership fees to the World Health Organisation. Spending in the *Sector-wide Procurement* subprogramme is set to increase at a slower rate over the medium term as the payment of

members of the Traditional Healers Council, who were appointed at the end of 2012/13, has been reallocated from 2014/15 to the *Hospital, Tertiary Health Services and Human Resource Development* programme.

The number of posts in this programme is expected to decrease slightly, from 161 to 155 in 2014/15, where it is set to remain over the medium term. This is why expenditure on compensation of employees is expected to decrease in 2014/15 and increase slightly thereafter. There were 5 vacant posts at the end of November 2013 due to natural attrition.

## **Programme 3: HIV and AIDS, TB, and Maternal and Child Health**

### **Objectives**

- Implement strategies such as the maternal, neonatal, child, women's health and nutrition strategic plan (2012-2016); the campaign for accelerated reduction of maternal mortality in Africa strategy and recommendations of the national confidential enquiry on maternal deaths and national perinatal morbidity and mortality committee in order to:
  - reduce the maternal mortality ratio to 215 per 100 000 live births by 2019
  - reduce the infant mortality rate to 24 per 1 000 live births by 2019
  - reduce under-five mortality rates to less than 34 per 1 000 live births by 2019.
- Protect girls from cancer of the cervix by vaccinating 80 per cent of Grade 4 girls in 2014/15 through the integrated school health programme.
- Improve health and educational outcomes among school-aged children by ensuring all children in quintile 1 and 2 public schools are receiving preventative health care by 2019.
- Improve access to antiretroviral treatment for HIV and AIDS by providing access to treatment for an additional 500 000 patients per annum to reach the target of 5 million patients accessing treatment by March 2019.
- Contribute to the reduction of new HIV infections by performing 5 million medical male circumcisions by 2019.
- Improve tuberculosis treatment outcomes by increasing the new pulmonary cure rate to 85 per cent by 2017.

### **Subprogrammes**

- *Programme Management* supports the policy development, implementation and coordination of health programmes for HIV and AIDS and sexually transmitted infections, tuberculosis, maternal and child health, and women's health. This subprogramme had a staff complement of 5 in 2013/14.
- *HIV and AIDS* develops national policy and administers national HIV and AIDS and sexually transmitted infection programmes. This entails coordinating the implementation of the 2012-2016 national strategic plan on HIV and AIDS, sexually transmitted infections and tuberculosis. In 2012/13, emphasis was placed on the key strategic objectives of scaling up a combination of prevention interventions and improving quality of life by providing appropriate treatment to those living with HIV and AIDS. Just under 9 million people were tested, 422 262 males were circumcised, 612 118 new patients began treatment and a fixed dose combination of antiretroviral triple therapy was introduced to improve both access to treatment and patients' adherence to treatment. This subprogramme funds stipends of 36 000 community health workers providing services that include adherence support to more than 1 million patients who are on antiretrovirals. In 2014/15, the uptake of medical male circumcision will be improved by increasing the number of sites that conduct circumcisions, fast tracking the procurement of circumcision packs and recruiting doctors. This subprogramme has 61 filled posts.
- *Tuberculosis* develops national policies and guidelines, and sets norms and standards for tuberculosis. In line with the 20-year vision outlined in the new 2012-2016 national strategic plan for HIV, sexually transmitted infections and tuberculosis, core interventions will be scaled up, including intensified case finding and the rollout of rapid diagnostics using GeneXpert technology. The plan instructs that key populations with an elevated risk of being infected with tuberculosis and HIV be prioritised for enhanced

support, including miners, children and inmates in correctional services facilities. Tuberculosis cure and defaulter rates continued to improve. In 2012/13, the tuberculosis cure rate was 73.8 per cent (and 75.2 per cent in first quarter of 13/14), compared to 73.1 per cent in 2011/12. The defaulter rate was 6.1 per cent in 12/13 and 5.9 per cent in the first quarter of 13/14, compared to 6.8 per cent in 2011/12. This subprogramme had 18 filled posts.

- *Women's, Maternal and Reproductive Health* develops and monitors policies and guidelines, and sets norms and standards for maternal and women's health. Key initiatives include reducing maternal mortality using the recommendations from the ministerial committee on maternal mortality and the South African campaign on the accelerated reduction of maternal and child mortality in Africa strategy. Interventions will include: deploying obstetric ambulances, strengthening family planning services, establishing maternity waiting homes, establishing kangaroo mother care facilities, taking essential steps in managing obstetric emergency training for doctors and midwives, and strengthening infant feeding practices. In 2012/13, 44 per cent of pregnant mothers received antenatal care at primary health care facilities within their first 20 weeks of pregnancy, an improvement on the 40.2 per cent achieved in 2011/12. 55.4 per cent of women older than 30 years had been screened for the cancer of the cervix at least once in the last 10 years. There are indications that the subprogramme is positively affecting health outcomes. For example, the Medical Research Council's 2012 report on rapid mortality surveillance shows a significant reduction in mortality rates in South Africa: the under-five mortality rate decreased from 56 deaths per 1 000 live births in 2009 to 42 in 2011, and the infant mortality rate per 1 000 live births decreased from 40 in 2009 to 30 in 2011. This subprogramme has 22 filled posts.
- *Child, Youth and School Health* is discussed in more detail below.

## Expenditure trends

The spending focus over the medium term will be on providing for the treatment of HIV and AIDS by making transfers of the comprehensive HIV and AIDS conditional grant through the *HIV and AIDS* subprogramme. This subprogramme has grown significantly since 2010/11, and has lowered child mortality rates by reducing mother to child HIV transmission from 3.5 per cent to 2.5 per cent, increased antiretroviral treatment coverage by an average of 500 000 new patients per year, increased the number of medical male circumcisions, lowered adult mortality rates, and maintained HIV testing at consistently high levels.

The comprehensive HIV and AIDS grant is set to continue growing at an average annual rate of 14.2 per cent over the medium term to strengthen HIV and AIDS testing and prevention programmes and increase the number of people on antiretroviral treatment. In support of the programme's HIV and AIDS treatment and prevention strategy, the programme receives an additional R15 million in 2015/16 and R15.8 million in 2016/17 for the transfer to the South African National AIDS Council to support the implementation of the 2012-2016 national strategic plan on HIV, sexually transmitted infections and tuberculosis. In addition,

expenditure on medical supplies, mainly male and female condoms, is projected to increase at an average annual rate of 15.9 per cent over the medium term.

The growth in spending in the *Women's, Maternal and Reproductive Health* subprogramme since 2010/11 was due to the expansion of women's health activities, such as supporting the deployment of obstetric ambulances, strengthening family planning services and establishing maternity waiting homes to ensure that the relevant millennium development goals are being met.

The programme had 14 vacancies at the end of November 2013. The number of employees, mainly at the lower salary levels, is expected to decrease slightly from the current 137 in 2013/14 to 132 in 2014/15 due to the reprioritisation of posts to align the organisational structure with the department's strategic direction.

### Subprogramme: Child, Youth and School Health

*Child, Youth and School Health* develops and monitors policies and guidelines, and sets norms and standards for child health. Over the medium term, key initiatives will be implemented in line with the maternal and child health strategic plan. These include the continued rollout of the integrated school health programme to cover all learning phases, prioritising underserved and under-resourced schools, and strengthening the immunisation programme. Empirical evidence shows that South Africa has managed to reduce child mortality in the last five years. This is a positive outcome emanating from the scale-up of prevention of mother to child transmission of HIV, the rollout of antiretroviral therapy, new child vaccines (pneumococcus and rotovirus) and other child survival programmes. In 2012/13, the president launched a multisectoral school health programme. To support its implementation, a communication strategy, a recording and reporting system, a toolkit for school governing bodies and a memorandum of understanding between the departments of basic education, health and social development are being developed. In addition, a training package was developed for school health nurses, with training taking place in all provinces. In 2014/15, the fight against cervical cancer will be intensified through the provision of human papilloma virus vaccinations to Grade 4 girls. This subprogramme has 22 filled posts.

## Expenditure trends

The bulk of the subprogramme's budget over the medium term is allocated to the introduction of the vaccination against the human papilloma virus in 2014/15 and 2015/16, which is why spending on medical supply inventory is set to increase significantly in those years. The subprogramme receives additional amounts of R200 million in both 2014/15 and 2015/16 for this purpose. However, from 2016/17, the grant will be transferred through the provincial equitable share, which is why expenditure in the subprogramme is set to decrease significantly in that year. With these additional allocations, the department aims to provide the vaccine to 80 per cent of Grade 4 girls in 2014/15.

The decline in expenditure between 2010/11 and 2013/14 was a result of once-off allocations in 2010/11 for the start-up of new pneumococcal and rotavirus vaccine programmes, which are now funded from provincial health budgets.

The number of filled posts is expected to increase from 22 to 25 over the medium term, which will bring the subprogramme in line with the approved organisational structure. Spending on compensation of employees is set to grow at an average annual rate of 7.2 per cent over the medium term as a result. As at the end of November 2013, the subprogramme had 3 vacant posts, which were caused by natural attrition.

## Programme 4: Primary Health Care Services

### Objectives

- Improve intersectoral collaboration with a focus on 6 pillars of a healthy lifestyle to reduce non-communicable diseases by establishing a National Health Commission by March 2016.
- Improve access to health care through the expansion of ward based outreach teams to 2 912 teams in 23 rural districts by March 2019.
- Develop strategies to ensure and scale up the number of primary health care facilities that are fully compliant with national core standards to 2 050 by March 2019.
- Eliminate malaria by 2018 by reducing local malaria transmission cases to 0 per 1 000 population at risk, through the continued implementation of the malaria elimination strategy.
- Strengthen epidemic preparedness and response through an intensive capacity building programme and establish outbreak response teams in all districts by 2015/16.
- Reduce micronutrient deficiencies by increasing coverage of Vitamin A supplementation to children aged 12-59 months and strengthening the fortification programme over the medium term.
- Improve infant and young child feeding practices by promoting breastfeeding in health facilities and communities on an ongoing basis.
- Ensure improved delivery of service by standardising emergency medical service activities and service delivery models on an ongoing basis, so that clients receive acceptable, affordable and efficient emergency services.

- Ensure improved pre-hospital care to health care recipients by enhancing training within emergency care on an ongoing basis.
- Reduce mortality and morbidity from chronic non-communicable diseases, mental illness and oral health through improved prevention and control interventions, thereby reducing premature mortality by 20 per cent by 2020.
- Improve health services for people with disabilities by increasing rehabilitation services to people with disabilities by 10 per cent by 2017.
- Increase quality, accessibility and life expectancy through expanding the integrated chronic disease management model to 50 per cent of public health facilities by 2019.

## Subprogrammes

- *Programme Management* supports the development and implementation of legislation, policies, systems, and norms and standards for a uniform district health system, environmental health, communicable and non-communicable diseases, health promotion, and nutrition. This subprogramme has 3 filled posts.
- *District Services and Environmental Health* promotes, coordinates and institutionalises the district health system; integrates programme implementation using the primary health care approach; coordinates delivery of environmental health including monitoring and delivery of municipal health services; and implements the stream of primary health care re-engineering on ward based outreach teams inclusive of community based services. The programme develops norms and standards for all aspects of the district health system, primary health care and environmental health services. In 2012/13, 945 ward based outreach teams were established. The supervisory rate was increased from 66 per cent to 76 per cent and 51 out of 52 district health plans were received, 5 more than in 2011/12. In 2013/14, the department implemented a formal reporting system for ward based outreach teams. As at the end of the third quarter of 2013/14, there were 1 566 teams registered on the district health information system, of which 673 reported routine activities. This subprogramme has 22 filled posts.
- *Communicable Diseases* develops policies and supports provinces to ensure the control of infectious diseases, and supports the National Institute of Communicable Diseases, a division of the National Health Laboratory Service. The incidence of malaria has decreased to 6 613 cases and 64 deaths in 2012/13 compared to 8 746 cases and 82 deaths in 2011/12. The department is on track to achieve the objective of completely eliminating malaria by 2018 through the implementation of the malaria elimination strategy. The cumulative incidence for confirmed local cases was 0.18 per 1 000 at risk (n=919) and 0.28 (n=1404), including in cases of unknown origin in 2012/13. This subprogramme has 18 filled posts.
- *Non-Communicable Diseases* establishes policy, legislation and guidelines; and assists provinces in implementing and monitoring services for chronic non-communicable diseases, disability, elderly people, eye care, oral health, mental health and substance abuse and injury prevention. Over the medium term, legislation will be introduced to Parliament on regulating alcohol marketing. Campaigns will be run to prevent the risk factors for non-communicable diseases. A five-year strategic plan for the prevention and control of non-communicable diseases embracing 10 targets agreed on at the national summit for non-communicable diseases in 2011 was published in 2013/14. In addition, the national mental health policy framework and strategic plan (2013-2020) was finalised. Implementation of this plan, including setting up district mental health teams and improving mental health infrastructure and human resources, will be facilitated. In 2012/13, more cataract surgeries were undertaken through partnerships with non-governmental organisations that provided foreign ophthalmologists to assist with surgery waiting lists. This subprogramme has 35 filled posts.
- *Health Promotion and Nutrition* formulates and monitors policies, guidelines, and norms and standards for health promotion and nutrition. In 2012/13, the subprogramme completed a roadmap for improving nutrition in South Africa. Among others, an infant and young child feeding policy was developed. Regulations to control marketing of infant food in the same year were published. Coverage with vitamin A supplements for children from 12-59 months was 48 per cent in first quarter of 2013/14. Over the medium term, the focus will be on developing and implementing strategies aimed at reducing the incidence of obesity and stunting; and strengthening implementation of the nutrition roadmap and health promotion

policy and strategy. Efforts to encourage screening for non-communicable diseases will be strengthened. Over the medium term, emphasis will be placed on promoting health literacy in areas such as infant feeding, reducing obesity and improving infant growth monitoring. This subprogramme has 23 filled posts.

- *Violence, Trauma and EMS* formulates and monitors policies, guidelines, and norms and standards for the management of violence, trauma and emergency medical services. In 2013/14, the strategic plan for violence and injury prevention was developed and policy guidelines for the management for sexual assault and related offences were finalised. Both the plan and guidelines will be implemented to reduce the burden of violence and injury prevention on the health sector. This subprogramme has 8 filled posts.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on promoting health, preventing non-communicable diseases such as hypertension and diabetes, and combating malaria and vector borne diseases in South Africa and the SADC. As such, *Non-Communicable Diseases* and *Communicable Diseases* subprogrammes are expected to be the largest spending items in the programme over the MTEF period. Pursuing these objectives requires significant spending on compensation of employees, consultants, and travel and subsistence, which is why a large proportion of the programme's budget is allocated to these items over the medium term.

The significant increase in spending in the *District Services and Environmental Health* subprogramme in 2011/12 was due to the once-off payment of R24.8 million for the health facilities audit carried out, which increased expenditure on consultants and professional services. The audit was carried out to establish baselines for future inspections by the Office of Standards Compliance and to enable comparison between facilities.

In 2012/13, spending in the *Communicable Diseases* subprogramme was higher due to the rollover of funds to purchase avian flu influenza vaccines, which were needed in the provincial departments due to the severity of the epidemic. The increase in spending in the *Violence, Trauma and EMS* subprogramme in 2013/14 was mainly due to a once-off allocation for emergency services to cover for the 2014 African Nations Championship.

## Programme 5: Hospital, Tertiary Health Services and Human Resource Development

### Objectives

- Improve management and accountability for hospital services at the local level through the amendment of delegations and the introduction of hospital board regulations over the medium term.
- Accelerate the delivery of health infrastructure by:
  - applying health infrastructure norms and standards for all levels of health services at all stages of the development cycle over the medium term
  - conducting cost modelling for all components and levels of health facilities, including capital and maintenance over the medium term
  - maintaining a project management information system for projects and programme monitoring and oversight over the medium term.
- Achieve a well managed and productive workforce through the implementation of the national human resources for health strategy over the medium term.
- Implement human resources for health norms and standards using the workload indicators for staffing needs approach to improve human resources management and planning over the medium term.

- Develop and implement a national nursing education policy to promote a uniform approach to nursing education and training over the medium term.

## Subprogrammes

- *Programme Management* supports the development of policies, delivery models and clinical protocols for hospitals and emergency medical services. It also supports the alignment of academic medical centres with health workforce programmes. This subprogramme has 3 filled posts.
- *Health Facilities Infrastructure Management* coordinates and funds health infrastructure to enable provinces to plan, manage, modernise, rationalise and transform infrastructure, health technology, hospital management and improve the quality of care. It is also responsible for two conditional grants for health infrastructure: the provincial health facility revitalisation grant and, since 2013/14, the infrastructure component of the national health grant. In 2012/13, guidance was provided on infrastructure planning and design through the infrastructure unit systems support and 32 sets of national infrastructure norms, standards, guidelines and benchmarks for all levels of health care facilities were developed. In addition, the project monitoring information system was configured, tested and piloted. In 2013/14, 3 health infrastructure related conditional grants (hospital revitalisation, health infrastructure, and nursing colleges) were merged into 2 grants of which 1 was transferred to provinces and 1 implemented by the national department. This subprogramme has 15 filled posts.
- *Tertiary Health Care Planning and Policy* focuses on the provision of tertiary specialised hospital services in a modernised and reconfigured manner; identifies tertiary and regional hospitals that should serve as centres of excellence for disseminating quality improvements; and is responsible for the management of the national tertiary services grant. The purpose of the grant is to provide strategic funding to enable provinces to plan, modernise, rationalise and transform the tertiary hospital services platform. In 2012/13, tertiary services (especially the central hospitals) and training grants were coordinated and monitored; and the Health Leadership and Management Academy was assisted in developing training programmes for hospital managers. In addition, a literature review was done on granting autonomy to central hospitals. A new costing and funding model and regulatory framework for central hospitals is being developed in 2013/14. This subprogramme has 6 filled posts.
- *Hospital Management* deals with national policy on hospital services by focusing on developing an effective referral system to ensure clear delineation of responsibilities by level of care, providing clear guidelines for referral and improved communication, developing specific and detailed hospital plans, and facilitating quality improvement plans for hospitals. Priority areas for hospital improvements include: cleanliness; infection prevention and control; patient safety; drug management and availability of medicines; waiting times; and staff attitudes. In 2012/13, the classification of hospitals in terms of levels of care was gazetted and implemented. In addition, 104 hospital chief executives were appointed within the new framework and they attended an induction workshop. This subprogramme has 6 filled posts.
- *Human Resources for Health* is responsible for medium to long term human resources planning in the national health system. This entails implementing the national human resources for health plan, facilitating capacity development for sustainable health workforce planning, and developing and implementing human resources information systems for planning and monitoring purposes. The bulk of this subprogramme's budget is transferred to provinces through the health professions training and development conditional grant, partly based on the historical distribution of medical student numbers. In 2012/13, workload indicators for staffing needs were drafted with technical support from the World Health Organisation. Implementation of human resources for health norms and standards began in all 9 provincial departments, with a focus on the national health insurance pilot districts. Approximately 97 facilities were sampled and assessed using the workload indicators tool in collaboration with World Health Organisation experts. Provinces were trained on the workload indicators model and methodology, and this was followed by the development of implementation plans. In addition, the Minister of Health launched the Health Leadership and Management Academy and a public health education fund was created in partnership with the private sector. The Cuban medical training programme was also expanded. By the end of December 2012, 920 South African students had travelled to Cuba for medical training. This subprogramme has 39 filled posts.

- *Nursing Services* is a new subprogramme responsible for developing and overseeing the implementation of a policy framework to oversee the development of required nursing skills and capacity, developing nursing norms and standards, and facilitating the development of the nursing training curriculum to ensure that nurses are appropriately skilled and utilised appropriately and effectively. Over the medium term, the focus will be on the rollout and implementation of this strategy. This subprogramme has 2 filled posts.
- *Forensic Chemistry Laboratories* is discussed in more detail below.

<sup>2</sup> Rand million.

## Expenditure trends

This is the largest programme of the department due to the three large provincial grants and the one national conditional grant that fall under it. The spending focus over the MTEF period will continue to be on planning for health infrastructure and strengthening tertiary services. As the bulk of this work is done at the provincial level, 91.8 per cent of the programme's allocation over the MTEF period is transferred to provinces.

The health facility revitalisation grant, managed by the *Health Facilities Infrastructure Management* subprogramme, has been allocated R16.3 billion over the MTEF period.

The health facilities revitalisation component of the national health grant, which was established in 2013/14, is an indirect grant to which R3.1 billion has been allocated over the MTEF period. The department plans to use these funds to deliver infrastructure on behalf of provinces. In its first year, the grant was used to build doctors' consulting rooms at national health insurance pilot sites, upgrade nursing colleges, rehabilitate clinics in pilot districts, and purchase equipment. Due to slower than anticipated spending, Cabinet has approved reductions on the national health grant of R704.3 million over the medium term.

Expenditure in the *Tertiary Health Care and Planning* subprogramme mainly consists of the national tertiary services grant, through which tertiary hospitals receive subsidies to provide specialised services. A new model that will price tertiary services more accurately and provide a basis for the interprovincial funding determination is being developed. The slight decrease in spending in the *Hospital Management* subprogramme was partly due to the violence and trauma components being shifted to the *Primary Health Care Services* programme.

Spending on compensation of employees grew at an average rate of 24.5 per cent between 2010/11 and 2013/14. The number of employees is projected to increase from 208 in 2013/14 to 291 in 2014/15, where it is set to remain in the outer years of the MTEF period. This increase is due to the recruitment of forensic analysts and other forensic staff, particularly for the new laboratory in Durban. There were 5 vacant posts at the end of November 2013 due to natural attrition.

## Subprogramme: Forensic Chemistry Laboratories

This subprogramme is responsible for the analysis of blood alcohol for drunken driving analysis (ante- and post-mortem), toxicology analyses of biological fluids and human organs in the event of unnatural deaths (murder and suicide), as well as analyses of foodstuffs. Results obtained are used in court cases. In drunken driving cases, a turnaround time of 90 days has been set by the criminal justice review committee. Perishable foodstuffs need to be analysed within 30 days and non-perishable foodstuffs within 60 days to ensure the legal procedure can be completed successfully. The 2013/14 targets for completed samples are as follows: 110 000 for blood alcohol, 3 400 for toxicology and 3 500 for food analysis. At the end of the third quarter, 57 745 blood alcohol, 2 055 toxicology and 12 845 food analyses were completed. This subprogramme has 137 filled posts.

### Expenditure trends

In 2012/13, the forensic pathology services grant was shifted to provinces and phased into the provincial equitable share, significantly decreasing the expenditure of the subprogramme. Capital spending has been increasing to reduce the backlogs in forensic chemistry tests in order to assist in the criminal justice system processes. In 2013/14, a fourth forensic chemistry laboratory was set up in Durban. As the Durban facility comes on board in 2014/15, expenditure on goods and services is projected to increase. In 2014, the forensic chemistry laboratory in Pretoria will also be moved to a bigger building, which will require equipment to be moved and re-commissioned. This explains the increase expected in expenditure on goods and services projected over the medium term.

Establishing the Durban forensic chemistry laboratory requires the procurement of additional equipment for blood alcohol analyses. In addition, redundant equipment needs to be replaced in the three currently operational forensic chemistry laboratories in Cape Town, Johannesburg and Pretoria within the next

three years. Thus R70 million is added to the capital budget over the medium term to provide for this equipment and explains the significant increase in expenditure on payments for capital assets over the medium term.

The staff establishment is set to increase significantly, from 137 in 2013/14 to 207 in 2014/15. The increase is mainly due to the recruitment of forensic analysts to address backlogs in forensic chemistry laboratory tests. As a result, expenditure on compensation of employees is projected to grow at an average rate of 20.3 per cent over the medium term. 5 posts were vacant as at 30 November 2013 due to natural attrition.

## **Programme 6: Health Regulation and Compliance Management**

### **Objectives**

- Improve oversight over health entities and statutory health professional councils by ensuring that governance and management framework reports are produced biannually, and by monitoring their performance and producing performance feedback reports on an ongoing basis.
- Improve quality of care by monitoring the compliance rate of all public health establishments against the national core standards on an ongoing basis.

### **Subprogrammes**

- *Programme Management* provides leadership for this programme by supporting the development of regulation for procurement of medicines and pharmaceutical supplies, food control and the trade in health products and health technology. It provides oversight to regulatory bodies and public entities for effective governance and quality of health care. This subprogramme has 5 filled posts.
- *Food Control* regulates foodstuffs and non-medical health products to ensure food safety. This entails developing and implementing food control policies, regulations, and norms and standards. Over the medium term, focus will be placed on continually developing, finalising and publishing regulations in line with the relevant provisions of the Foodstuffs, Cosmetics and Disinfectants Act (1972). In 2012/13, the nutrient profiling model was finalised and published to ensure that health and nutrient claims could be evaluated, and to identify foodstuffs with an unhealthy nutrient profile. A working document on labelling regulations was developed, with 7 sets of regulations drafted and published either for comment or finalised. There was also participation in 10 activities related to the Codex Alimentarius Commission. This subprogramme has 13 filled posts.
- *Pharmaceutical Trade and Product Regulation* regulates the sale of medicines, through an assessment of their efficacy, safety and quality. The South African Health Products Regulatory Authority should be fully established over the medium term. In 2012/13, the number of applications for medicine registrations finalised increased by 46 per cent compared to 2011/12. Finalised applications include both registrations and rejections (423 registrations and 160 rejections in 2011/12 and 734 registrations and 117 rejections in 2012/13). The registration of antiretroviral medicines was fast tracked, resulting in a number of fixed dose combination antiretrovirals being made available to patients in the public sector in 2013/14. A 40 per cent reduction of the backlog in the finalising of applications for generic medicines was achieved and the backlog in the finalisation of applications for new chemical entities was significantly reduced. 115 new chemical entities were finalised in 2012/13 against 33 registered in 2011/12. Of the 115 registered, 54 were from the backlog. This subprogramme has 131 filled posts.
- *Public Entities Management* provides policy frameworks for health public entities and statutory health professions councils with regard to planning, budgeting procedures, ownership, governance, remuneration, accountability, and financial reporting and oversight. The bulk of its budget is transferred to the South African Medical Research Council, the National Health Laboratory Service and the Council for Medical Schemes. In 2012/13, the compliance and implementation of laws and regulations applicable to these entities and councils was monitored and the Interim Traditional Health Practitioners Council of South Africa was established to regulate traditional health practitioners. A governance report focusing on the corporate governance status of the entities was produced in 2013/14. The report also focused on compliance with the Public Finance Management Act (1999) and highlighted areas of non-compliance. Several regulations were promulgated into law under the various pieces of legislation establishing the

statutory health professional councils and a functionality report on the forum of statutory health professional councils was produced. This subprogramme has 4 filled posts.

- *Office of Standards Compliance* deals with quality assurance, development and inspections for compliance with national standards, patient complaints; and radiation control. This entails logging and tracking complaints; developing and disseminating standards and audit tools; inspecting health establishments and radiation installations for compliance, and issuing importation licences for ionising radiation irradiating apparatus and for radioactive equipment and sources. In 2012/13, the National Health Amendment Health Act (2013) was signed into law. The board of the Office of Standards Compliance was inaugurated in January 2014 and on the 1 April 2014 the office will start to function as an independent public entity. The subprogramme comprises compliance inspections, quality assurance and radiation control. The purpose of the quality assurance and improvement section is to ensure that the public health system implements the actions needed to improve the quality of care and patients' experience of care, including better responses to complaints. Successes in complaints management based on proactive follow-up systems have seen the response rate of within 25 working days climb from 40 per cent to 57 per cent and further to 75 per cent (for first 3 quarters of 2013/14) over the past 3 years. This subprogramme has 84 filled posts.
- *Compensation Commissioner for Occupational Diseases and Occupational Health* is responsible for the payment of compensation to active and former workers in controlled mines and works who have been certified to be suffering from cardio-pulmonary-related diseases as a result of workplace exposure in the controlled mines or works. Over the medium term, the focus will be on reengineering business processes to ensure sustainability; reducing the turnaround period in settling claims, amending the Occupational Diseases in Mines and Works Act (1973); and improving governance, internal controls and relationships with key stakeholders. The subprogramme also oversees and manages the Compensation Commissioner for Occupational Diseases trading entity. In 2012/13, 12 242 mineworkers underwent medical examinations to assess whether they were eligible for compensation. In 2013/14, processes in the commissioner were closely linked with those of the Medical Bureau of Occupational Diseases to provide a more efficient transition from certification to compensation. This subprogramme has 104 filled posts.

2. Rand million.

**Expenditure trends**

Most of the programme's budget is transferred to public entities, the largest of which are the Medical Research Council and National Health Laboratory Service. A key focus over the medium term will be on improving the quality of health services and health products through the establishment of the Office of Health Standards Compliance as a public entity.

Spending in the *Pharmaceutical Trade and Product Regulation* programme has increased significantly since 2010/11 to reduce the large backlogs in medicine registration and to prepare for the establishment of the South African Health Products Regulatory Authority. This is an independent public entity that will ultimately replace

the Medicines Control Council. This increase in expenditure provided for a 40 per cent reduction in the backlogs on applications for generic medicines.

Over the medium term, spending in the *Public Entities Management* subprogramme is projected to grow significantly to strengthen the capacity and outputs of the Medical Research Council. Expenditure in this subprogramme increased in 2013/14, partially due to the reallocation of the payment of members of the Interim Traditional Healers Council to this subprogramme from the *National Health Insurance, Health Planning and Systems Enablement* programme.

The programme's overall staff complement is set to increase slightly, from 357 in 2013/14 to 363 in 2014/15 and then remain stable over the medium term. Spending on compensation of employees is set to increase at an average rate of 17.6 per cent over the medium term as a result. There were 11 vacant posts at the end of November 2013 due to natural attrition.

## Public entities and other agencies

### National Health Laboratory Service

#### Mandate and strategic goals

The National Health Laboratory Service was established in 2001 in terms of the National Health Laboratory Service Act (2000). In terms of the act, the service is required to: provide cost effective and efficient health laboratory services to all public sector health care providers, other government institutions and any private health care provider in need of its service; support health research; and provide training for health science education. It is the largest diagnostic pathology service in South Africa, servicing over 80 per cent of the population through a national network of 268 laboratories.

The key strategic goals over the medium term are to:

- develop a new service delivery model that is more affordable for the public sector
- determine a best fit service delivery model
- deliver high quality, customer focused service
- align resources, support services and infrastructural development for service delivery
- become the laboratory services employer of choice
- prioritise innovation and research so that it is relevant, appropriate and leading edge
- become a leading resource for information on health
- drive stakeholder collaboration
- position the service as the provider of choice for national health insurance
- protect the community and environment.

#### Selected performance indicators

1. Rand million.

## Expenditure trends

The National Health Laboratory Service receives its income from providing laboratory tests to patients who are predominantly from public hospitals. Revenue from the provincial hospitals is approximately 98 per cent of total revenue received. Tariff increases for laboratory tests are approved by the Minister of Health and have consistently been below inflation. In 2013/14, the minister approved a 4 per cent increase, which was only effective from December 2013, resulting in lower revenue of R139 million for the first eight months of the year. Included in the medium term budget are transfers from the Department of Health of R125 million in 2014/15, R129 million in 2015/16 and R136 million in 2016/17 for the National Institute for Communicable Diseases and the National Institute for Occupational Health, which are divisions of this entity.

The service has budgeted for a 5 per cent inflationary increase in tariff prices over the medium term, despite a moderate 2 per cent increase in volume for CD4 tests and a 16.3 per cent increase in volume for viral load tests. Although there is no increase in tuberculosis diagnostic tests, tuberculosis microscopy is being progressively replaced by the more expensive but much more rapid GeneXpert test. Spending increases have been partly driven by increasing volumes of the more expensive tests, such as viral load and GeneXpert.

Spending over the medium term will focus on improving quality and turnaround times, and reducing the costs of laboratory tests for the customer. The budget for the current year has decreased by 8 per cent from 2012/13 due to the impairment of the KwaZulu-Natal provincial branch debt relating to short payment for services from 2010/11. The increase of 35.5 per cent in expenditure from 2011/12 to 2012/13 is mainly due to the R800 million in respect of the KwaZulu-Natal debt impairment. The entity's debt problem continued to escalate, with a total debt of R3.9 billion at the end of November 2013. The major contributor to this debt is the KwaZulu-Natal branch, which accounts for 66 per cent, or R2.6 billion, of total debt. This is having an effect on capital and other payments of the entity. A new financing model for the service is being researched.

Over the medium term, the staff complement is expected to remain at 7 134. After excluding the impairment, the entity's labour costs would have been 42.5 per cent of the total expenditure. This is a decrease from 52.2 per cent in 2011/12. The entity has achieved savings by decreasing labour headcount from 7 250 in 2011/12 to 7 134 in 2012/13 through not filling non-critical vacant posts. These savings will primarily be used to keep annual test price increases below inflation.

## South African Medical Research Council

### Mandate and strategic goals

The South African Medical Research Council was established in terms of the South African Medical Research Council Act (1969 and 1991). The Intellectual Property Rights from Publicly Financed Research and Development Act (2008) also informs the council's mandate. The council is required to promote the improvement of health and quality of life through research and development. Research and innovation are primarily conducted through council funded research units located within the council and in higher education

institutions. The council's strategic focus is determined in the context of the priorities of the Department of Health and government. The council's research therefore plays a key role in responding to government's key outcome 2 (a long and healthy life for all South Africans).

The council's strategic goals over the medium term are to:

- administer health research effectively and efficiently in South Africa
- lead the generation of new knowledge and facilitate its translation into policies and practices to improve health
- support innovation and technology development to improve health
- build capacity for the long term sustainability of the country's health research.

## Selected performance indicators

expected to account for 22.4 per cent of the total budget over the medium term. This is a decrease from the 25 per cent of the total budget the programme accounted for between 2010/11 and 2013/14. The decrease is in line with the council's objective to reduce the share of administration costs, while at the same time ensuring efficiency through the process improvement projects.

Reductions in staff costs between 2012/13 and 2013/14 were due to the revitalisation process that was initiated in this period. In terms of the process, the council sought to take responsibility for supporting and funding all intramural and extramural medical research in South Africa, with a greater share going to extramural research units at universities. Intramural research has been prioritised to address the 10 most common causes of death and their risk factors in South Africa. This change in emphasis necessitated a reduction in the number of council intramural units and staff from 759 in 2012/13 to 663 in 2013/14. The revitalisation process will have been completed in 2013/14, after which staff numbers will increase to 688 in 2016/17, based on project requirements. Spending on compensation of employees is expected to increase over the medium term to provide for the increase in personnel numbers. At the end of November 2013, the council had 15 vacancies, which the entity expects to fill over the medium term.

### **Other public entities and other agencies**

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Compensation Commissioner for Occupational Diseases in Mines and Works** was established in terms of the Occupational Diseases in Mines and Works Act (1973). Its main statutory functions include: administering the Mines and Works Compensation Fund to compensate ex-miners disabled by occupational lung disease; determining and recovering levies from controlled mines and works; awarding benefits to miners and ex-miners suffering from occupational lung related diseases; and investing levies collected and interest earned from investments. The commissioner's total budget for 2014/15 is R255.1 million.
- The **Council for Medical Schemes** is the national medical schemes regulatory authority established in terms of the Medical Schemes Act (1998). The council's vision for the medical scheme industry is that it is effectively regulated to protect the interests of members and promote fair and equitable access to private health financing. The council's total budget for 2014/15 is R123.1 million.

The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.

### Aim

*Develop and support a quality higher and vocational education sector. Promote access to higher and vocational education and skills development training opportunities.*

### Mandate

The Department of Higher Education and Training derives its mandate from the following pieces of legislation:

- the Higher Education Act (1997), which provides for a unified and nationally planned system of higher education
- the Adult Basic Education and Training Act (2000), which provides for the establishment of public and private adult learning centres and for the governance of public centres
- the Further Education and Training Colleges Act (2006), which provides for the governance and funding of further education and training colleges
- the Skills Development Levies Act (1999), which provides for the imposition of skills development levies
- the Skills Development Act (2008), which enables the creation of the National Skills Agency, the establishment of the Quality Council for Trades and Occupations, and the regulation of apprenticeships, learnerships and other matters relating to skills development
- the National Education Policy Act (1996), which provides for the formulation of national policies in general and further education and training, curriculum assessment, and language policy and quality assurance
- the Employment of Educators Act (1998), which regulates the conditions of service, discipline, retirement and discharge of educators, and everything relating to educators employed by the state in further education and training institutions and public adult centres.

## Strategic goals

The department's strategic goals over the medium term are to:

- increase the number of skilled youth by expanding access to education and training for the youth
- ensure that capacity is built for post-school education and training institutions for the effective provision or facilitation of learning
- increase the number of students successfully entering the labour market once their training is complete
- increase the capacity for research, development and innovation to enhance economic growth and social development
- develop a college curriculum that is responsive to the demands of the marketplace and that is able to transform and adapt quickly and effectively to changing skills needs, with an emphasis on artisan training
- institute a credible institutional mechanism for skills planning to support an inclusive economic growth path
- ensure a highly effective, professional and efficient administration based on good corporate governance practices.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide overall management and administration of the department.

### Programme 2: Human Resource Development, Planning and Monitoring Coordination

**Purpose:** Provide strategic direction in the development, implementation and monitoring of departmental policies and the human resource development strategy for South Africa.

### Programme 3: University Education

**Purpose:** Develop and coordinate policy and regulatory frameworks for an effective and efficient university education system. Provide financial support to universities, the National Student Financial Aid Scheme and national institutes for higher education.

### Programme 4: Vocational and Continuing Education and Training

**Purpose:** Plan, develop, evaluate, monitor and maintain national policy, programmes, assessment practices and systems for vocational and continuing education and training, including further education and training colleges and post-literacy adult education and training.

### Programme 5: Skills Development

**Purpose:** Promote and monitor the national skills development strategy. Develop a skills development policy and regulatory framework for an effective skills development system.

## Selected performance indicators

**Table 17.1 Higher Education and Training**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of students enrolled in higher education institutions per year	University Education	Outcome 5: A skilled and capable workforce to support an inclusive growth path	816 400	886 033	938 201	935 710	994 067	1 022 593	1 051 693

Number of artisan learners competent each year	Skills Development		11 778	10 000	8 655	12 000	13 000	14 000	15 000

## The national development plan

The national development plan views the expansion of the higher education and training sectors as critical to achieving the envisaged inclusive economic growth. To this end, the plan aims to have 10 million university graduates in the country with a minimum of a bachelor's degree by 2030. In line with the plan's vision, the 2013 White Paper for Post-School Education and Training seeks to promote higher education and training as an expanded, effective, coherent and integrated system and to increase the targets set for enrolments and graduates by the department in higher education institutions. Over the next 3 years, the aim is to have approximately 3 million students enrolled in higher education institutions.

Bursaries are made available to deserving poor students through the National Student Financial Aid Scheme to expand enrolments in further education and training colleges to ensure that South Africa produces the required mid-level skills to support a growing economy. This also ensures that learners from poor households are well represented among those that enter and succeed at universities. For the period 2010/11 to 2012/13, there were 1 353 256 student enrolments at further education and training colleges and it is expected that approximately 2.3 million students will be enrolled in these colleges over the next 3 years. The department has set a target to nearly double headcount enrolment in colleges by 2015/16 to 1 million, with additional funding from the National Skills Fund. This funding is only available until 2015/16, after which enrolment is expected to drop to 500 000.

The national development plan recognises the critical role that artisans will play in ensuring that economic and development goals can be met, and has set a target of producing 30 000 qualified artisans per year by 2030. In support of this objective, and in an attempt to encourage growth of this sector, 2013 was declared the year of the artisan and extended to the decade of the artisan as from 2014. The department intends to increase the number of competent artisans by 1 000 per year to be able to meet the plan's 2030 target.

## Expenditure trends

The spending focus over the medium term will be on increasing the number of skilled youth by expanding access to higher and further education and training, particularly for poor students. This will be done by providing loans and bursaries, particularly towards qualifications that equip graduates with skills that are in scarce supply. In addition, the 23 sector education and training authorities and the National Skills Fund will

focus their spending on increasing the number of artisans and on focused skills training opportunities in line with the third national skills development strategy. The bulk of the allocation to fund these objectives is allocated to the *University Education* and *Vocational and Continuing Education and Training* programmes, which make transfers to higher education and further education and training institutions and the National Student Financial Aid Scheme. As a result of funding these programmes, the department expects that by 2016/17, 1 051 693 students will be enrolled in higher education institutions and 191 251 students will graduate, and headcount enrolments at further education and training colleges will increase from 345 566 in 2010/11 to 650 000 in 2013/14.

Spending in the *University Education* programme over the medium term is expected to grow, mainly due to an increase in the allocations for university subsidies, the establishment of two new universities, and additional loans and bursaries awarded by the National Student Financial Aid Scheme. Funded through a transfer from the programme, the scheme receives a Cabinet approved additional allocation of R145 million over the MTEF period to administer the additional funds provided for loans and bursaries at universities and colleges. The department also receives further Cabinet approved additional allocations over the medium term of R159.9 million for the further education and training colleges conditional grant and R104.3 million for subsidies for improved conditions of service for college employees; and R13 million goes to the South African Qualifications Authority for the verification of government employee qualifications.

Cabinet approved reductions of R104.3 million over the medium term are to be effected from the transfer to further training and education colleges and R6.3 million from the transfer to the Council on Higher Education in the *University Education* programme, and R12.3 million over the medium term from spending on goods and services in the department.

The department employed an additional 233 people between 2010/11 and 2013/14, the majority of which were at salary levels 7, 9 and 11, and at the end of November 2013 there were 990 filled posts. This was mainly due to the filling of critical vacant positions in the *Administration* and *Human Resource Development, Planning and Monitoring Coordination* programmes after the Department of Education was split into two departments in 2010, which resulted in a 15.7 per cent increase in spending on compensation of employees between 2010/11 and 2013/14. Over the medium term, spending on compensation of employees is expected to grow at a slower rate, as the majority of the funded posts created within the department by the split should have been filled.

### Infrastructure spending

The earmarked grant for infrastructure to higher education institutions is the largest item of spending on infrastructure. R9.5 billion over the medium term has been allocated to this grant for university infrastructure, R2.6 billion of which is to be used for the construction of the two newly established universities in Mpumalanga and Northern Cape. The balance of infrastructure funds are mainly for the improvement of infrastructure for the faculties of architecture and the built environment, engineering, health sciences, life and physical sciences, and teacher training disciplines, and for student accommodation. In addition, funds have been set aside to enable universities to improve their existing infrastructure to ensure easy access for students with disabilities. Most of the infrastructure allocations are earmarked for historically disadvantaged universities. In light of the increased role of ICT in higher education, funds have also been set aside to improve broadband connectivity and general ICT infrastructure at universities. This allocation for university infrastructure is supplemented by commitments of more than R2 billion from the universities from their own funds.

The department has also started a process to build 12 new further education and training college campuses and to refurbish two existing campus sites with funding provided through the National Skills Fund and the sector education and training authorities.

2. Rand million.

## Expenditure trends

The department will focus on providing the required corporate services to the department, ensuring that the *Office of the Chief Financial Officer* subprogramme has the requisite personnel to manage the department's finances and seeing to its accommodation needs. Thus the bulk of expenditure over the medium term is on compensation of employees and property payments and in the *Corporate Services, Office of the Chief Financial Officer* and *Office Accommodation* subprogrammes. These are also the primary areas of increased expenditure over this period.

Over the medium term, the department expects the number of personnel to remain constant. The increase in expenditure on compensation of employees between 2012/13 and 2016/17 is mainly driven by the upgrading of clerical posts in 2013/14, additional funding for improved conditions of services and the filling of critical vacant positions. There were 4 funded vacant positions as at 30 November 2013 as a result of attrition. The vacancies are in the process of being filled.

To provide additional accommodation for personnel after the rapid growth which occurred after the department's establishment in 2010, spending on property payments in the *Office Accommodation* subprogramme is projected to increase by R12.9 million from 2013/14 to 2014/15.

Between 2010/11 and 2013/14, programme expenditure increased mainly due to the appointment of additional personnel and the related goods and services expenditure and capital costs required to establish the department in 2010. In this period, the number of filled posts increased from 190 in 2010/11 to 352 in 2012/13, including 45 interns. To give effect to Cabinet approved reductions, the department will reduce spending by R12.3 million over the medium term on various goods and services items.

## **Programme 2: Human Resource Development, Planning and Monitoring Coordination**

### **Objectives**

- Provide accurate data on skills supply and demand in the country by establishing and maintaining an integrated higher education and training management information system, linking all providers of education and training, and integrating all institutional data into a single system by 2014/15.
- Improve career advisory services by:
  - ensuring that a career development policy and implementation strategy is developed by 2015/16
  - establishing and maintaining a coherent career development service by March 2017.
- Foster productive international cooperation on educational themes across all levels of education by pursuing and strengthening bilateral relations with priority countries annually.
- Promote social inclusion, equity and transformation within the department and its entities by focusing on policy research, monitoring and evaluation in matters relating to race, class, gender, age, disability, geography, HIV and AIDS, and developing and overseeing policy implementation on these matters by March 2015.

### **Subprogrammes**

- *Programme Management: Human Resource Development, Planning and Monitoring Coordination* manages delegated administrative and financial responsibilities, and coordinates all monitoring and evaluation functions. This subprogramme had a staff complement of 3 in 2013/14.
- *Human Resource Development, Strategic Planning and Coordination* provides strategic direction in the development, implementation and monitoring of departmental policies; and coordinates activities in relation to the national human resources development strategy. In 2013/14, key outputs included the development of ministerial guidelines to the national qualifications framework; the establishment of structures and strategic performance plans for the Human Resource Development Council; and the development of the department's annual performance and strategic plans, and associated reporting. This subprogramme had a staff complement of 20 in 2013/14.
- *Planning, Information, Monitoring and Evaluation Coordination* monitors and evaluates policy outputs of the department; coordinates research in the fields of higher education and training; and ensures that education policies, plans and legislation are developed into systems through monitoring their implementation on an ongoing basis. In 2012/13, the focus was on revising policy related to education and training information, developing frameworks for career guidance services, and providing coordinated information on skills supply and demand in the country. After public consultation, the minister published the higher education and training information policy in 2013/14. In addition, a successful project, incorporating a career helpline and a national career advice portal, was undertaken in 2010/11 and extended to the end of September 2014 with further support from the National Skills Fund and the European Union. This subprogramme had a staff complement of 21 in 2013/14.
- *International Relations* develops and promotes international relations; supports the United Nations Educational, Scientific and Cultural Organisation in the higher education subsystem; and manages, monitors and reports on international donor grant funding. In line with the pursuit of African advancement and international cooperation in education and training, R2.9 million was transferred in 2013/14 to the Commonwealth of Learning and the India-Brazil-South Africa Trilateral Commission for membership fees. This subprogramme had a staff complement of 16 in 2013/14.

- *Legal and Legislative Services* manages the legal and legislative services of the department, universities, colleges, sector education and training authorities, and the National Skills Fund with regard to legal and legislative matters. A key activity in 2013/14 was the management of the amendments to skills legislation in relation to the shifting of the further education and training colleges function from the provincial to the national sphere. Over the medium term, this subprogramme will remain responsible for providing legal advice and managing any litigation concerning the department, for drafting regulations and legislation and for providing advice on all departmental protocols and agreements. This subprogramme had a staff complement of 12 in 2013/14.
- *Social Inclusion in Education* promotes access to higher education and participation by all learners in training programmes; manages the development, evaluation and maintenance of policy, programmes and systems for learners with special needs; and monitors the implementation of those policies. In 2012/13, a policy document was developed and submitted to the minister and the oversight committee on transformation and social inclusion. A key output is a report on the implementation of the social inclusion policy framework, which was expected to be completed by the end of March 2014. This subprogramme had a staff complement of 8 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on developing, implementing and monitoring departmental policies, and promoting international relations, as well as supporting the United Nations Educational, Scientific and Cultural Organisation in the higher education subsystem. This requires periodic domestic and international travel and accounts for the level of, and growth in, expenditure on travel and subsistence over the medium term. Spending on compensation of employees is the largest item of expenditure in this programme over the seven-year period. The spending increase of 23.9 per cent between 2010/11 and 2013/14 under this item was as a result of critical vacant positions being filled across all subprogrammes so as to fully capacitate the department after its establishment in 2010. This saw the number of filled posts increase from 42 in 2010/11 to 77 in 2013/14, included 8 interns, and is also the reason for the growth in expenditure across all subprogrammes in this period. There were 3 funded vacant posts at the end of November 2013 as a result of normal attrition. These vacancies are in the process of being filled and will bring the number of personnel to 80 over the medium term.

The significant increase in expenditure in the *Legal and Legislative Services* subprogramme over the medium term is mainly driven by the legal costs related to proposed amendments to skills and further education and training legislation. Spending on consultants was equivalent to 4.2 per cent of the expenditure on compensation of employees in 2012/13, and is expected to increase from R1.4 million in 2012/13 to R2.7 million in 2016/17. Consultants in this programme are mainly used for legal services.

## Programme 3: University Education

### Objectives

- Support universities to increase their graduate output, especially in scarce skills, by providing foundation and teaching development grants to increase the number of:
  - engineering graduates from 9 387 in 2012/13 to 13 000 in 2016/17
  - life and physical science graduates from 5 526 in 2012/13 to 9 000 in 2016/17, and human and animal health sciences graduates from 8 070 in 2012/13 to 10 000 in 2016/17.
- Expand equitable access to and success in higher education by supporting institutions with the annual allocation of grants earmarked for foundation programmes, teaching development and infrastructure development.
- Monitor the performance of all 25 universities annually by providing reliable planning and monitoring data through a quality higher education management information system and updating the student data biannually.
- Enhance and support university research capacity and productivity through the provision of research and development grants to increase the number of graduates of masters programmes from 5 281 graduates in 2012/13 to 6 984 in 2016/17, and of doctoral programmes from 1 576 graduates in 2012/13 to 2 339 in 2016/17.

- Improve access to university education opportunities in Mpumalanga and Northern Cape by overseeing the establishment of universities for these provinces over the medium to long term.
- Expand the provision of initial teacher education and increase the number of newly qualified teachers by increasing the number of institutions providing foundation phase teacher education from 20 in 2012/13 to 21 in 2016/17, and the number of graduates from initial teacher education programmes from 10 543 in 2012/13 to 15 000 in 2016/17.

## Subprogrammes

- *Programme Management: University Education* manages delegated administrative and financial responsibilities, and coordinates all monitoring and evaluation functions for the programme. This subprogramme had a staff complement of 2 in 2013/14.
- *University – Academic Planning and Management* plans and monitors the university system. This entails analysing institutional and national plans, and maintaining programme and qualification combinations. The bulk of this subprogramme's budget is transferred to the National Student Financial Aid Scheme for university and further education and training college student loans and bursaries. Transfers are also made to the Council on Higher Education and Training as well as to the South African Qualifications Authority as contributions to their operations. In 2012/13, a programme qualifications framework and initial spatial plans were developed for 2 new universities: the Sol Plaatje University in Kimberley and the University of Mpumalanga in Nelspruit. By the end of September 2013, 5 of the 6 programmes that are offered at the two new universities had been accredited by the Council on Higher Education and interim heads for the interim management teams for each university had been appointed. Construction on the new infrastructure for Sol Plaatje University had started and refurbishment of existing buildings to accommodate the 2014 academic programmes had begun at both institutions. Sol Plaatje University was formally opened by the president in September 2013, and the University of Mpumalanga was opened in October 2013. These universities opened their doors in January 2014, with 140 students enrolled at Sol Plaatje and 135 students at Mpumalanga. This subprogramme had a staff complement of 19 in 2013/14.
- *University – Financial Planning and Information Systems* coordinates and manages the development and maintenance of universities' information systems and the appropriate funding framework for a diverse university system. Ongoing responsibilities include monitoring and assessing progress reports on the use of earmarked grants, including conducting site visits to all universities twice a year, and ensuring that the higher education information management system is properly maintained with updated data. Outputs over the medium term include a revised framework for university funding, implementing changes to the higher education management information system as a result of new policy initiatives and changes to policy. In 2012/13, a report on the use of funding in relation to success rates in higher education studies at public institutions was produced for each of the 23 institutions. By the end of September 2013, a draft policy on a teaching development grant to improve the quality and impact of university teaching had been developed. This subprogramme had a staff complement of 13 in 2013/14.
- *University – Policy and Development* regulates private university institutions and provides support for the development of universities. Ongoing responsibilities include monitoring and providing advice to higher education institutions on developing and enhancing research capacity, including strategies to increase the number of postgraduate students by analysing research outputs of all institutions and advising where changes and improvements in terms of funding allocations and funding could be made. The specific focus over the medium term will be on establishing the 2 new universities in Mpumalanga and Northern Cape, for which the names and seat of each university, the names of those appointed of the interim council, and the sites of delivery were officially gazetted in August 2013. The 2013 academic year focused on preparing the institutional, governance and management environment for the first cohort of students in 2014. In 2013/14, a workshop for life orientation teachers was held as a highlight of the Apply Now campaign. This subprogramme had a staff complement of 25 in 2013/14.
- *Teacher Education* develops a responsive and comprehensive national teacher education and development system as a subsystem of the higher education and training system, develops and maintains academic policy for teacher education qualifications in line with the higher education qualifications framework, mentors institutions for adherence to policy, and supports policy implementation to ensure relevant curricula and a

sufficient supply of well qualified teachers for all education subsystems. In 2012/13, a draft policy on further education and training lecturer qualifications was submitted to the Council on Higher Education for comment. In 2013/14, a national workshop was held with universities on the implementation of the policy on professional qualifications for technical and vocational education and training college lecturers. A key output over the medium term will be the finalisation and implementation of policies on teacher education qualifications for the different education subsectors (early childhood development, schooling, vocational education and training, adult education, and university education). This subprogramme had a staff complement of 20 in 2013/14.

- *University Subsidies* transfers payments to universities. The bulk of this subprogramme's budget is used for unconditional block grant transfers to the 25 universities. Funding is allocated to universities based on research outputs, teaching inputs and outputs, and contextual factors such as the number of disadvantaged students enrolled at an institution.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

In line with the strategic goal to increase the number of skilled youth by expanding access to education and training, the spending focus over the medium term will be on transfer payments to higher education institutions in the *University Subsidies* subprogramme. R78 billion will be transferred as subsidies to universities over the medium term. R2.2 billion of this allocation will be allocated to universities for infrastructure development in 2014/15 and an additional R2.6 billion is allocated for capital expenditure for the new universities in Mpumalanga and Northern Cape over the medium term. A further R500.4 million is allocated to this subprogramme for the establishment and administration of these universities over the medium term, including completing the technical work to establish the seats of learning, environmental and economic impact assessments, and academic and space architecture. These two new universities will not only increase enrolment rates at higher education institutions but will also increase graduation rates by providing more on-campus student accommodation and focussed bridging programmes.

The department provides loans and bursaries to support deserving poor students at universities and further education and training colleges through the National Student Financial Aid Scheme, which is reflected in spending in the *University – Academic Planning and Management* subprogramme. Government's commitment towards these loans and bursaries is set to increase from R5.8 billion in 2013/14 to R6.8 billion in 2016/17 in

support of the drive to expand enrolment at universities and colleges. The number of students enrolled in higher education institutions per year is thus expected to increase from 935 710 in 2013/14 to 1 051 693 in 2016/17. The number of graduates each year is also projected to increase from 179 160 to 191 251 over the medium term.

The number of personnel in this programme is expected to increase from 72 posts in 2012/13 to 90 by 2016/17, which includes 10 interns. This increase is mainly due to the filling of critical vacant positions that resulted from the establishment of the department in April 2010. Over the medium term, the growth in expenditure on compensation of employees will mainly be for improved conditions of service and the filling of the 11 funded vacant posts over this period. These posts were vacant at 30 November 2013, mainly as a result of normal attrition and the difficulties experienced in finding candidates with suitable expertise in the higher education sector.

## **Programme 4: Vocational and Continuing Education and Training**

### **Objectives**

- Ensure the continued relevance of further education and training college programmes by supporting the development of a diverse range of high quality and responsive vocational education and training qualifications and programmes over the MTEF period, through consultation with relevant role players.
- Expand the institutional base for the provision of quality post-school education and training by registering new private education institutions and monitoring all the registered private further education and training colleges for compliance and performance each year.
- Improve the vocational qualification rate by increasing the year-on-year certification rate of further education and training college students in vocational programmes by at least 5 per cent in 2015 from the 2011 average baseline of 36.2 per cent, by initiating and supporting interventions such as providing training and support to lecturers.
- Improve the portability of students between colleges, industry and universities of technology by facilitating and supporting partnerships between these institutions over the medium term.
- Ensure credible examinations and assessment practices at further education and training colleges and adult education and training centres by monitoring and supporting examination centres annually.

### **Subprogrammes**

- *Programme Management: Vocational and Continuing Education and Training* manages delegated administrative and financial responsibilities, and coordinates all monitoring and evaluation functions. This subprogramme had a staff complement of 11 in 2013/14.
- *Planning and Institutional Support* provides the framework, coordination and support to further education and training colleges for the management, governance and delivery of vocational and occupational programmes; manages the further education and training colleges conditional grant to all provinces; manages the further education and training colleges subsidies to 50 further education and training colleges; and regulates the provision of education and training by private education institutions offering qualifications in the further education and training band of the national qualifications framework. The bulk of this subprogramme's budget is used for transfers to the 50 further education and training colleges for their operational expenditure. This is done by means of a college subsidy transferred directly to colleges by the department and a further education and training colleges conditional grant to provinces. In 2013/14, 9 further education and training colleges successfully established relationships with higher education institutions to offer programmes at levels 5 and 6 of the national qualifications framework. In addition, training sessions on improving financial management and the strategic and operational planning of further education and training colleges took place for management and support staff. This subprogramme had a staff complement of 38 in 2013/14.
- *Programmes and Qualifications* develops and maintains vocational education and training programmes, provides for implementing the student support services framework, provides leadership and support for training and developing lecturers, and supports the education of post-school adults pursuing general education and training certificates and the national senior certificate qualifications. Key ongoing outputs and

activities include developing national assessment instruments for recognised programmes offered at further education and training colleges, evaluating such programmes, as well as monitoring assessment processes conducted by further education and training colleges and adult education and training centres. In 2012/13, 201 student support services managers and regional offices officials were trained in the implementation of the student support service framework at a cost of R1.1 million, and 708 lecturers were trained to support curriculum delivery at a cost of R2.9 million. In 2013/14, the training of adult education and training practitioners and further education and training lecturers on curriculum delivery and assessment of teaching and learning support took place, at a cost of R1.7 million. This subprogramme had a staff complement of 26 in 2013/14.

- *National Examination and Assessment* is discussed in more detail below.

## Expenditure trends

The spending focus over the medium term will be on making transfers to further education and training colleges, either in the form of the further education and training colleges' conditional grant via provinces, or the college subsidies grant, which was introduced in 2013/14 as a direct contribution to the colleges for their operations. The projected growth in expenditure of the subsidies and grants over the medium term is to allow enrolment in further education and training colleges to increase from 345 566 in 2010/11 to an estimated 500 000 in 2016/17.

The number of personnel in this programme is expected to increase from 177 posts in 2012/13 to 230 in 2014/15, and will remain at this level over the medium term. This increase is mainly due to the filling of posts to facilitate the shifting of the further education and training colleges and adult education and training functions from provincial education departments to the national department.

## Subprogramme: National Examination and Assessment

This subprogramme administers and manages the conduct of national assessment in the further education and training college and adult education and training sector. Key ongoing outputs and activities include national assessment instruments, appointing examination panels and setting, printing and delivering question papers and site based assessment tasks to nationally accredited examination centres for further education and training colleges, and adult education and training centres. Question papers are provided for the 9 examination cycles in an academic year. In 2013/14, a review of learner performance, including a reflection on the challenges raised by the 2012 Umalusi report on the general education and training certificate, was also conducted. Examination centres were monitored during examination writing and marking processes for all the examination cycles. In 2013/14, R131.5 million will be spent on these examination processes. Over the medium term, the focus will continue to be on increasing the certification rates of students in vocational programmes and the delivery of credible examinations, at a projected cost of R417.3 million. This subprogramme had a staff complement of 139 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on the examination and assessment function to address the increased volume of question papers and tasks to be set as well as the increased number of scripts to be marked in line with the increased enrolment expected. The main items affected by the increased volume of work include travel and subsistence of moderators and markers, computer services, and stationery and printing, all of which will increase over the medium term. The increased enrolment between 2010/11 and 2013/14 similarly affected expenditure in those years. A projected 63.6 per cent of the total allocation for compensation of employees in 2013/14 in this subprogramme relates to the remuneration of examiners and moderators, who are not part of the department's establishment.

The increase in personnel numbers from 111 in 2012/13 to 139 in 2012/13 is mainly to provide for the increased administration and oversight responsibilities of the examination and assessment function in the further education and training college and adult education and training sectors. This increase in personnel as well as the increased volume of question papers to be set, moderated and marked, accounts for the growth in expenditure on compensation of employees over the medium term as well as in the period between 2010/11 and 2013/14.

## Programme 5: Skills Development

### Objectives

- Promote quality learning at work and for work by:
  - ensuring that the number of new artisan learners registered for training increases from 21 849 in 2012/13 to 29 000 in 2016/17
  - increasing the number of competent artisans entering the labour market from 8 655 in 2012/13 to 15 000 in 2016/17
  - facilitating professional placements, work integrated learning, apprenticeships, learnerships and internships on an ongoing basis.
- Promote the alignment of skills development outputs with the needs of the workplace and the broader growth needs of the country's economy by approving the strategic plans of the sector education and training authorities, and ensuring that they are in line with the sector skills plans over the MTEF period.

## Subprogrammes

- *Programme Management: Skills Development* manages delegated administrative and financial responsibilities, and coordinates all monitoring and evaluation functions. This subprogramme had a staff complement of 4 in 2013/14.
- *SETA Coordination* is discussed in more detail below.
- *National Skills Development Services* manages projects identified in the national skills development strategy, and advises the minister on national skills development policy and strategy. Over the medium term, a key ongoing activity will be monitoring the implementation of the third national skills development strategy, which charts the way forward for skills development, at a projected cost of R7.2 million. Key activities in this subprogramme in 2013/14 were the hosting of the national skills conference, which was funded through the National Skills Fund at a cost of R5.8 million and the management of the National Skills Authority secretariat at a cost of R4.5 million. This subprogramme had a staff complement of 12 in 2013/14.
- *Quality Development and Promotion* transfers funds to the Quality Council for Trades and Occupations as a contribution to the council's operations. This subprogramme's total budget is transferred to the council.

## Expenditure trends

Excluding the *SETA Coordination* subprogramme, which is discussed in more detail below, the bulk of this programme's expenditure over the medium term is on the transfer to the Quality Council for Trades and Occupations to provide for the entity's operational costs. The entity was established on 1 April 2010 which resulted in the increase in spending between 2010/11 and 2011/12 in the *Quality Development and Promotion* subprogramme, which makes the transfer, provided for the costs incurred to build the entity up to operational capacity.

Between 2010/11 and 2012/13, expenditure decreased mainly because of the cessation of the department's contribution to the National Skills Fund in the *National Skills Development Services* subprogramme as from 2012/13. These funds have been reprioritised to allow the department to fill critical vacant posts, mainly in the *Administration* programme.

The fluctuation in the transfer to the Quality Council for Trades and Occupations between 2010/11 and 2013/14 is because the 2010/11 allocation for the council was carried over to 2011/12, due to a delay in establishing the council in 2010/11 as initially planned. The council's allocation increases by inflation thereafter.

The number of personnel in this programme is expected to increase from 242 posts in 2012/13 to 270 posts in 2016/17, including a provision for 8 interns. This increase is mainly due to the filling of critical vacant positions that resulted from the establishment of the department in 2010. Over the medium term, the growth in expenditure on compensation of employees is mainly to fund the growth in personnel numbers. There were 6 vacant funded posts as at 30 November 2013, mainly as a result of attrition and a failure to attract specialised candidates. These vacancies are in the process of being filled.

## Subprogramme: SETA Coordination

This subprogramme supports, monitors and reports on the implementation of the national skills development strategy at the sectoral level by establishing and managing the performance of service level agreements with sector education and training authorities and conducting trade tests at the Institute for the National Development of Learnerships, Employment Skills and Labour Assessments. In 2013/14, 5 709 tests were conducted at a cost of R38 million. In August 2012, the first ever fully comprehensive definition and list of artisan trade occupations was published. The national artisan moderation body started to take over the accreditation, workplace approval and certificate management process from the sector education and training authorities for all artisan trades in October 2013. The moderation body also issued the first ever set of draft national trade testing regulations that, once implemented in 2014/15, will ensure a single national standardised trade testing system across all public and private accredited trade test centres. This subprogramme had a staff complement of 235 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on supporting the implementation of the national skills development strategy at the sectoral level by establishing and managing the performance of service level agreements with the sector education and training authorities, and conducting trade tests at the Institute for the National Development of Learnerships, Employment Skills and Labour Assessments. The increase in expenditure over the MTEF period, mainly on assets less than the capitalisation threshold for goods required to conduct these tests, will allow for an increase in the number of trade tests conducted at the institute, thereby allowing for the number of artisans found competent in trade tests to increase to 15 000 by 2016/17.

The number of personnel in this subprogramme is expected to increase from 235 in 2013/14 to 266 in 2016/17, including a provision for 10 interns. This increase is due to additional funding for the department to establish full functionality. Over the medium term, the growth in expenditure on compensation of employees is mainly to fund the growth in personnel numbers as the national artisan moderation body becomes fully operational.

## Public entities and other agencies

### National Skills Fund

#### Mandate and goals

The National Skills Fund was established in 1999 in terms of the Skills Development Act (1998). The fund focuses on national priority projects identified in the national skills development strategy and projects related to

the achievement of the purpose of the act, as determined by the director general of the Department of Higher Education and Training.

The fund's strategic goals over the medium term are to:

- support South Africa's human resource development strategy by funding programmes that advance this strategy formulated by the Human Resource Development Council
- promote growth of a public further education and training college system that is responsive to sector, local, regional and national skills needs and priorities
- support the implementation of the third national skills development strategy, and by extension the new growth path and the industrial policy action plan, by directing funding towards programmes that promote the objectives of these strategies
- increase opportunities for the provision of skills development by providing financial support for the development of a skills development infrastructure.

## Expenditure trends

Revenue for the National Skills Fund is mainly derived from the skills development levy collected by the South African Revenue Service and transferred to the fund as direct charges against revenue.

The fund has increased its disbursements since the implementation of the third national skills development strategy in 2011/12. These disbursements are reflected under the grant disbursement programme as transfers and subsidies. The fund disbursed R2.6 billion in 2012/13, including R1.2 billion for bursaries at further education and training colleges, R265 million for projects related to the new growth path and R43 million for projects linked to the industrial policy action plan. The fund plans to continue with the use of its reserves to fund priority areas, and it is therefore expected that these reserves will decline over the medium term. As a result, the fund expects to make disbursements in excess of R6.7 billion in 2013/14 to continue funding the projects outlined above, to fund infrastructure projects that will develop 12 new further education and training college campuses, and to provide bursaries for study in scarce skills areas at universities. While disbursements will continue to be made for multi-year commitments such as bursaries, overall grant disbursements for projects are expected to decrease from R6.7 billion in 2013/14 to R3 billion in 2016/17, since the third national skills development strategy is expected to come to an end in 2015/16.

Between 2010/11 and 2013/14, the increased spending on compensation of employees was mainly due to new appointments made with the establishment of provincial offices in 2012 to broaden the fund's presence across South Africa, as well as to provide the required capacity for the fund to become a fully independent public entity. This also accounts for the related increases in goods and services. There were 59 filled posts at the fund at the end of November 2013. The fund's staff establishment is expected to increase to 137 employees over the medium term so that the requisite support structures to establish the fund as a schedule 3A public entity can be put in place, and the additional capacity required to monitor and evaluate the increased number of projects being funded can be established. This increase in personnel also accounts for the increased expenditure on compensation of employees over the medium term.

## National Student Financial Aid Scheme

### Mandate and goals

The National Student Financial Aid Scheme, established in terms of the National Student Financial Aid Scheme Act (1999), is responsible for administering and allocating loans and bursaries to eligible students, developing criteria and conditions for granting loans and bursaries in consultation with the minister, raising funds, recovering loans, maintaining and analysing a database, and undertaking research for the better use of financial resources. The scheme also advises the minister on student financial aid in general, and performs other functions assigned to it by the minister.

The organisation's strategic goals over the medium term are to:

- provide funding to eligible students
- maximise recoveries and increase the funds available for loans and bursaries
- implement the approved centralised financial aid systems and the new student centred operating model.

## Expenditure trends

The National Student Financial Aid Scheme generates revenue mainly from transfers received from the Department of Higher Education and Training. It also receives funds from the Department of Basic Education for the Funza Lushaka bursaries for prospective teachers, from the Department of Social Development for bursaries for prospective social workers, and from the National Skills Fund and selected sector and education training authorities. Over the medium term, the projected rise in revenue will increase the number of students in universities that the scheme is able to assist, from 194 504 in 2012/13 to a projected figure of 236 420 in 2016/17, and will increase the number of further education and training college bursary recipients each year from 188 182 in 2012/13 to 291 925 in 2016/17.

The spending focus over the medium term will continue to be on the provision of loans and bursaries to disadvantaged students at higher education institutions and further education and training colleges, which is reflected under transfers and subsidies. The establishment of the central applications process in 2013/14 requires once-off expenditure on the development and testing of an integrated system to accommodate the central application and administration of loans and bursaries, which accounts for the higher goods and services expenditure in 2013/14. This system will be piloted in 2014/15 and implemented across all universities over the medium term. The high goods and services expenditure in prior years is due to the inclusion of a portion of loans provided as goods and services, as prescribed by the auditor-general at the time. This approach has been revised and all loans and bursaries are now reflected under transfers and subsidies.

Expenditure on compensation of employees is expected to increase at an average annual rate of 18.3 per cent over the medium term as new posts are filled in the two outer years to phase in the new student centred operating model. The entity will increase both the number of operational staff and also the number and level of senior management to meet the increasing volume of loans and bursaries being granted annually, and therefore the resulting cumulative increase in total loans and bursaries (both by value and number) under the scheme's administration. This will see staff numbers increase from 160 in 2012/13 to 318 by 2016/17. Consultants are mainly used to cover senior finance and IT positions when these become vacant and only until the positions are filled.

## Sector education and training authorities

### Mandate and goals

The mandate for the sector education and training authorities is derived from the Skills Development Act (1998). This includes the implementation of national, sector and workplace strategies to develop and improve the skills of the South African workforce; integrate those strategies within the national qualifications framework contemplated in the South African Qualifications Authority Act (2008); provide the learnerships that lead to recognised occupational qualifications; and fund skills development.

The strategic goals flow from the third national skills development strategy and include:

- establishing a credible institutional mechanism for skills planning

- increasing access to occupationally directed programmes
- promoting the growth of a public further education and training college system that is responsive to sector, local, regional and national skills needs and priorities
- addressing the low level of youth and adult language and numeracy skills to enable additional training
- encouraging better use of workplace based skills development
- encouraging and supporting cooperatives, small enterprises, worker initiated programmes, non-governmental organisations and community training initiatives
- increasing public sector capacity for improved service delivery, and supporting the building of a developmental state.

## Expenditure trends

The sector education and training authorities receive revenue from the skills development levy, which is collected by the South African Revenue Service and transferred to these entities as a direct charge. Other revenue is mainly from interest earned on investments.

The sector education and training authority grant regulations, which came into effect on 1 April 2013, prescribe that these authorities are allowed to spend 10.5 per cent of skills levy income on administration, 20 per cent on mandatory grants, and 49.5 per cent on discretionary grants.

Total expenditure reflects an increase over the medium term period as grant disbursements in support of the third national skills development strategy increase. The authorities' disbursements will focus on artisan apprenticeships, learnerships, internships and bursaries, as well as partnerships with further education and training colleges, universities, universities of technology, and the labour market to facilitate work integrated learning and graduate placements.

The increased expenditure on compensation of employees between 2010/11 and 2013/14 is mainly due to the establishment of offices in rural areas and at further education and training colleges as sector education and training authorities seek to improve access to their programmes. This expansion also accounts for the increased expenditure on goods and services in items like computer services and operating leases. Expenditure on these items grows more modestly over the medium term as the various sector authorities become more settled after the previous growth period.

A surplus of R2.1 billion is reflected for 2013/14 and is expected to increase to R2.5 billion by 2016/17.

## Other public entities and agencies

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **Council on Higher Education** implements the higher education qualifications framework by generating and setting standards and other quality assurance functions, and monitors and evaluates the achievement of South African higher education policy goals and objectives. The council's total budget for 2014/15 is R48.1 million.
- The **Quality Council for Trades and Occupations** was established in terms of the Skills Development Act (1998) and became operational in 2010. The primary functions of the organisation are to design, develop and maintain occupational standards and qualifications, to submit them for registration on the national qualifications framework, and to ensure the quality of occupational standards and qualifications and learning in and for the workplace. The organisation's total budget for 2014/15 is R48.4 million.
- The **South African Qualifications Authority** ensures access, quality, redress and development for all learners through an integrated national framework of learning achievements. The organisation's total budget for 2014/15 is R84 million.

The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.

### Aim

*Play a significant role in reducing unemployment, poverty and inequality through pursuing the objectives of full and productive employment and decent work for all, including: employment creation and enterprise development; standards and rights at work including equality of opportunities; social protection; and social dialogue.*

### Mandate

The Department of Labour derives its legislative mandate from the Constitution which is given effect to through a number of acts which regulate labour matters in South Africa. The most important of these are the Labour Relations Act (1995), the Basic Conditions of Employment Act (1997), the Employment Equity Act (1998), and the Occupational Health and Safety Act (1993).

The policy mandate of the department is to regulate the labour market through policies and programmes developed in consultation with social partners, which are aimed at:

- improving economic efficiency and productivity
- facilitating employment creation
- promoting and enforcing sound labour relations
- eliminating inequality and discrimination in the workplace
- alleviating poverty in employment
- enhancing occupational health and safety awareness and compliance in the workplace
- attaining labour market flexibility to balance the competitiveness of enterprises with the promotion of decent employment.

### Strategic goals

Over the medium term, the Department of Labour will focus mainly on promoting decent employment through inclusive economic growth (outcome 4). To address these strategic priorities, the department will:

- implement the Decent Work country programme
- rebuild the public employment services programme for the effective facilitation of employment

- contribute to decent employment creation by helping to improve working conditions, health and safety, employment conditions and productivity in the workplace
- strengthen the labour inspectorate
- restructure sheltered employment factories
- implement the revised labour legislation that aims for labour market flexibility which balances enterprise competitiveness with decent employment
- strengthen the institutional capacity of the department to improve the quality of its service delivery and increase access to its services.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide management, strategic and administrative support services to the ministry and the department.

### Programme 2: Inspection and Enforcement Services

**Purpose:** Realise decent work by regulating non-employment and employment conditions through inspection and enforcement to achieve compliance with all labour market policies.

### Programme 3: Public Employment Services

**Purpose:** Provide assistance to companies and workers to adjust to changing labour market conditions and to regulate private employment agencies.

### Programme 4: Labour Policy and Industrial Relations

**Purpose:** Facilitate the establishment of an equitable and sound labour relations environment and the promotion of South Africa's interests in international labour matters through research, analysing and evaluating labour policy, and providing statistical data on the labour market and providing support to institutions that promote social dialogue.

## Selected performance indicators

**Table 18.1 Labour**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17

Number of work seekers registered on the Employment Services of South Africa system per year	Public Employment Services		472 179	553 883	600 259	500 000	550 000	600 000	600 000
Percentage (and number) of work seekers registered on the system provided with employment counselling per year <sup>2</sup>	Public Employment Services		- <sup>2</sup>	40% (222 956)	59% (264 068)	50%	50%	50%	55%
Number of work seekers placed in registered employment opportunities per year	Public Employment Services		12 801	96 505 <sup>3</sup>	16 171	19 000	20 000	21 000	22 000
Number of existing sectoral determinations reviewed	Labour Policy and Industrial Relations		4	5	6	4	4	6	2

1. This indicator is dependent on the number of cases reported; hence data for a specific year is only available in the following year.

2. New indicator started in 2011/12.

3. Data for 2011/12 cannot be disaggregated. Includes work seekers referred to the Unemployment Insurance Fund and the Compensation Fund.

## The national development plan

The national development plan prioritises increased employment through economic growth; improved functioning of the labour market through reforms focusing on increasing labour absorption; and enhanced workplace dispute resolution to advance healthy labour relations. In line with the plan's goals of enhancing productivity and eliminating inequality, the department will continue to focus on facilitating increased employment and ensuring decent working conditions. Specifically, this entails widening access to employment; transforming protected employment factories into viable, sustainable businesses; providing citizens' access to work seeker services and employment counselling; enforcing equality and compliance with labour regulations in the workplace; and providing support to the Commission for Conciliation, Mediation and Arbitration to strengthen labour dispute resolution.

Through its employer and work seeker services, the *Public Employment Services* programme aims to contribute to an increase in employment to 11 million jobs by 2030, which is the national development plan's target.

Plans for the medium term are also in place for the implementation of employment schemes for the youth and other vulnerable groups, to facilitate access to employment, contribute to maintaining employment or provide opportunities for self-employment. The department also facilitates the employment of foreign labour with scarce skills, provided that employers will facilitate the transfer of such skills to locals to improve their employability.

## Expenditure estimates

## Expenditure trends

The spending focus over the medium term will be on professionalising the inspectorate in the *Inspection and Enforcement Services* programme to ensure employers adhere to Decent Work principles and vulnerable workers are protected; building capacity in the *Public Employment Services* programme to implement the Employment Services Bill, which aims to provide free public employment services and regulate private employment agencies; and expanding access to the services provided by the Commission for Conciliation, Mediation and Arbitration to meet the increasing demand for dispute resolution services. As such, approximately 62.4 per cent of the department's budget over the medium term has been allocated to spending on compensation of employees and goods and services, while 26.6 per cent constitutes the transfer payment to the Commission for Conciliation Mediation and Arbitration.

The department receives Cabinet approved additional allocations of R64.5 million in 2016/17 for specialist labour inspector posts in the *Inspection and Enforcement Services* programme, and R35.5 million for IT posts in the *Administration* programme. The department is to effect Cabinet approved reductions on compensation of employees of R106.3 million in 2014/15 and R107.2 million in 2015/16, and the reprioritisation of R537.8 million over the medium term. The reductions will be realised through vacant funded posts not being filled, and this will have a minimal impact on service delivery.

While filled posts are expected to remain at 3 289 and unfunded vacant posts at 82 for the first two years of the MTEF period, the additional allocations are expected to allow the department to increase the number of filled posts to 3 482 in 2016/17.

### Infrastructure spending

Spending on the department's various small infrastructure projects, which are at different stages of completion, decreased by 44.4 per cent, from R9 million in 2012/13 to R5 million in 2013/14. Spending on infrastructure over the medium term is expected to remain low as only fees for consultant and professional services on new projects will be paid.

In 2012/13, the department appointed a new subcontractor to finalise the Rustenburg labour centre project, which was completed in November 2013 and will be occupied once the installation of IT and telephone cables is complete. The project had a total allocated budget of R5 million, of which R718 000 was spent in 2013/14.

Because of its urgency, the project to repair the air conditioning system at Laboria House will be implemented as a separate project funded by the department. The Bloemfontein sheltered employment factory project was completed in 2013/14 and the Silverton sheltered employment factory repair and maintenance programme is in the repair phase and is still valid for one year. The planning for repair and maintenance programmes for all sheltered employment factories has been completed and some will be put out to tender in 2014/15. The Port Elizabeth sheltered employment factory project will be funded by the Department of Public Works and will run for three years.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on building capacity in the office of the chief information officer in order to establish and enhance the IT operating model. This is funded in part by an additional allocation for IT personnel of R35.5 million in 2016/17, which allows for an increase in the total number of filled posts to 1 305 in that year. The significant growth in spending on computer services between 2010/11 and 2013/14 was driven by the department taking over the provision of IT services at the end of the public private partnership contract in 2012/13. Spending on consultants was equivalent to 22.9 per cent of total spending on compensation of employees in 2013/14, and is projected to constitute 3.4 per cent of spending on compensation of employees over the medium term. Consultants funded through this allocation will be used mainly for specific technical tasks such as the implementation of the new IT operating model, the organisational review and redesign project, and business advisory services to the chief financial officer.

However, the total number of filled posts is expected to remain unchanged in 2014/15 and 2015/16 as the department reduces spending on compensation of employees by R77.4 million over this period. This is to give effect to part of the Cabinet approved reductions to the department's budget. The reductions are not expected to have an impact on service delivery as they are effected on vacant funded posts in 2014/15 and 2015/16. The posts will be reinstated and filled in 2016/17.

The spending focus will also be on implementing the organisational review and redesign project, which aims to improve service delivery by ensuring that all strategic positions are filled, overlaps and duplication of functions are minimised, and reliance on consultants is reduced. The organisational review project aims to ensure that the department works as a single efficient unit optimally positioned for enhanced service delivery. Expenditure on the organisational review and design is reflected in spending on consultants and professional services in the *Management* subprogramme.

The R215 million available for reprioritisation comes from the revision to the cost sharing arrangements for services delivered by the department, the Unemployment Insurance Fund and the Compensation Fund. The revised arrangement sees the department's share being reduced as the two funds are expanding their services at provincial offices. The reprioritised amount was thus taken from compensation of employees, and earmarked for spending in 2013/14 and over the medium term to fund strategic priorities elsewhere in the programme and department. These include the creation of posts to manage the departmental fleet, which accounts for the significant growth in spending in the *Office of the Chief Financial Officer* subprogramme in 2013/14; and the implementation of the occupation specific dispensation for registered career counsellors in the *Public Employment Services* programme.

## Programme 2: Inspection and Enforcement Services

### Objectives

- Protect vulnerable workers and ensure adherence to Decent Work principles, by:
  - inspecting 183 870 workplaces in 2014/15
  - settling at least 75 per cent of labour related complaints within 14 days of registration of the complaint.
- Promote equity in the workplace and ensure the transformation of the labour market by increasing the number of workplaces inspected for substantive compliance with employment equity legislation from 269 in 2012/13 to 517 in 2014/15.
- Promote social protection by:
  - reducing accidents and injuries in the high risk sectors (iron and steel, construction, chemicals, and agriculture and forestry) by increasing the number of inspections conducted on compliance of workplaces with the Occupational Health and Safety Act (1993) from 18 000 workplaces inspected in 2012/13 to 20 609 workplaces by 2014/15
  - auditing 150 entities registered in terms of the Occupational Health and Safety Act (1993) to determine compliance with the Act in 2014/15
  - conducting 13 440 workplace audits to determine compliance with the Unemployment Insurance Act (2001) in 2014/15.
- Strengthen the department's institutional capacity by developing and implementing competency and induction programmes for existing and new inspectors over the MTEF period.

### Subprogrammes

- *Management and Support Services: Inspection and Enforcement Services* manages the delegated administrative and financial responsibilities of the office of the deputy director general: inspection and enforcement services, and provides corporate support to line function subprogrammes in the programme. This subprogramme had a staff complement of 41, including 30 pupil inspector posts, in 2013/14.
- *Occupational Health and Safety* promotes health and safety in the workplace by regulating dangerous activities and the use of plants and machinery, through inspections, to ensure compliance with the Occupational Health and Safety Act (1993). The number of workplaces in high risk industries audited to determine their compliance levels in terms of occupational health and safety legislation was 59 700 in 2013/14, increasing from 26 333 workplaces audited in 2012/13. This subprogramme had a staff complement of 32 in 2013/14.
- *Registration: Inspection and Enforcement Services* registers incidents relating to labour relations and occupational health and safety matters, as reported by members of the public, and communicates these to the

relevant structures in the *Compliance, Monitoring and Enforcement* subprogramme for investigation. In 2012/13, 110 252 complaints were received and 67 per cent or 73 786 were settled within 14 days of receipt. This subprogramme had a staff complement of 427 in 2013/14.

- *Compliance, Monitoring and Enforcement* is discussed in more detail below.
- *Training of Staff: Inspection and Enforcement Services* defrays all expenditure relating to staff training in the programme to easily identify this expenditure for reporting purposes. In 2012/13, 69 client service officers were trained in the basic conditions of employment, occupational health and safety and Compensation for Occupational Injuries and Diseases Act (1993) and 283 shop stewards received training in relation to the Occupational Health and Safety Act (1993) and regulations at a cost of R4.4 million.
- *Statutory and Advocacy Services* gives effect to the legislative enforcement requirements and educates stakeholders on labour legislation. In 2012/13, 4 occupational health and safety awareness raising campaigns in the forestry, hospitality and constructions sectors, which included 5 seminars and 3 training sessions on the regulations for major hazardous installations, were held at a cost of R1.2 million. This subprogramme had a staff complement of 4 in 2013/14.

## Expenditure trends

The spending focus over the MTEF period will be on conducting occupational health and safety inspections, enforcing labour legislation, and registering labour relations and occupational health and safety incidents as reported by members of the public. Spending on compensation of the employees who perform these functions thus constitutes the bulk of expenditure in this programme and is also the main contributor to increases in spending across the seven-year period. The strong growth in spending in the *Training of Staff: Inspection and Enforcement Services* subprogramme arises from the intensive training of labour inspectors on amendments to the labour laws in 2013/14, with a resultant decrease in spending by this subprogramme over the medium term, as the training tapers off. The training will enable the labour inspectors to effectively inspect compliance with current labour laws and amendments thereto.

Spending in the *Registration: Inspection and Enforcement Services* subprogramme increased significantly between 2010/11 and 2013/14 as the department increased capacity to provide efficient registration services for labour relations and occupational health and safety obligations. The decrease in spending in this subprogramme over the medium term is due to the reprioritisation of funds from spending on compensation of employees to the *Public Employment Services* programme. Approximately two-thirds of spending on compensation of employees relates to staff employed in the *Compliance, Monitoring and Enforcement* subprogramme, which is discussed in further detail in the section that follows.

## Subprogramme: Compliance, Monitoring and Enforcement

This subprogramme ensures that employers and employees comply with labour legislation. This is done through regular inspections and follow-ups on reported incidents. In 2012/13, an estimated 141 731 workplace inspections were conducted to ensure compliance with labour legislation. Of these, 240 were employment equity inspections and 87 795 were workplace inspections, compared to 90 000 workplace inspections and 340 employment equity inspections in 2013/14. The department plans to conduct 150 audits on entities to ensure compliance with the Occupational Health and Safety Act (1993) in 2014/15. These entities include diving training schools, asbestos contractors and first aid training organisations.

**Expenditure trends**

The spending focus over the medium term will be on strengthening the department's capacity to conduct inspections and enforce compliance with labour regulations. This explains the projected increase in the number of filled labour inspector posts and travel expenses related to workplace inspections. This, in turn, explains the expected increase in spending on compensation of employees, fleet services and travel and subsistence over the medium term. In focusing spending this way, the department expects to increase the number of workplace inspections from 150 040 in 2013/14 to 183 870 in each year of the MTEF period. Rising fuel prices and the introduction of the e-tolling system are expected to increase travel related expenditure over the medium term, which is expected to reduce the number of inspections the department can perform within the constraints of the allocated budget.

The decrease in spending on travel and subsistence between 2010/11 and 2013/13 is mainly a result of fewer workplace inspections conducted in 2012/13 as 31 labour inspector posts were vacant. In an effort to strengthen capacity to enforce compliance with labour regulations, 14 vacant posts were filled in 2013/14, which increased spending on compensation of employees in that year.

To give effect to Cabinet approved budget reductions, the department has cut the allocation for spending on compensation of employees by R69.6 million in 2014/15 and R67.6 million in 2015/16. As the cuts have been made on vacant funded positions, inspections will continue as planned. An additional R69 million in 2016/17 will allow for these posts to be reinstated and filled.

**Programme 3: Public Employment Services****Objectives**

- Reduce unemployment by registering and placing unemployed people in decent work by:

- increasing the number of registered work seekers matched and placed from 16 171 in 2012/13 to 20 000 in 2014/15
- increasing the percentage of targeted registered work seekers with competencies to secure employment through employment counselling interventions from 50 per cent in 2013/14 to 55 per cent in 2014/15
- protecting vulnerable work seekers through the regulation of private employment agencies in 2014/15.
- Contribute to increasing employment opportunities for people with disabilities by 1 450 in 2014/15 by providing funding to the Deaf Federation of South Africa, the National Council for Persons with Physical Disabilities, the South African National Council for the Blind, the Pretoria Workshop for the Blind, the Natal Society for the Blind, the Natal Blind and Deaf Society, the Cape Town Society for the Blind and the Worcester Society for the Blind.
- Protect employment by providing financial support to Productivity South Africa to promote increased productivity, competitiveness and social plan interventions on an ongoing basis.
- Contribute to reducing unemployment by ensuring that South African citizens receive employment preference over migrants through the ongoing assessment of migrant applicants' skills levels and making recommendations to the Department of Home Affairs in the issuing of corporate and individual work visas.

## Subprogrammes

- *Management and Support Services: Public Employment Services* manages delegated administrative and financial responsibilities; coordinates all planning, monitoring and evaluation functions; and provides corporate support to line function subprogrammes. In 2013/14, this subprogramme had a staff complement of 83, including senior managers in the *Employer Services* and *Work Seeker Services* subprogrammes.
- *Employer Services* facilitates the registration of vacancies, disseminates scarce skills information, issues immigrant corporate and work permits, tracks the numbers of migrating skilled South Africans, oversees the placements of work seekers, responds to companies in distress, facilitates a social plan aimed at companies in distress, and regulates private employment agencies. In 2012/13, 153 applications for work permits were received and responded to within 30 working days. This subprogramme had a staff complement of 265 in 2013/14.
- *Work Seeker Services* is discussed in more detail below.
- *Designated Groups Special Services* facilitates the funding of transfers to national councils to provide employment for people with disabilities. This subprogramme's total budget is transferred in quarterly tranches to the South African National Council for the Blind, the Deaf Federation of South Africa and the National Council for Persons with Physical Disabilities in South Africa.
- *Sheltered Employment Factories and Subsidies to Designated Workshops* provides subsidies to sheltered employment factories to assist in providing employment for people with disabilities who cannot be placed in the mainstream economy.
- *Productivity South Africa* transfers funding to Productivity South Africa to promote workplace productivity, competitiveness and social plan interventions. This subprogramme's total budget is transferred in quarterly tranches to Productivity South Africa.
- *Unemployment Insurance Fund* provides for the possible future funding of the Unemployment Insurance Fund.
- *Compensation Fund* provides for costs incurred through claims from civil servants for injuries sustained on duty or occupation related illnesses and diseases, and provides for the funding of claims from the Compensation Fund. In 2012/13, spending on the administration costs of civil servants' claims amounted to R14 million for 3 569 363 claims.
- *Training of Staff: Public Employment Services* defrays all expenditure relating to staff training in the programme to easily identify this expenditure for reporting purposes. In 2012/13, 300 staff members were trained in various courses, including project management, minute taking, report writing and office administration at a cost of R1.3 million.

## Expenditure trends

The spending focus over the medium term will be on enhancing the department's capacity to implement the Employment Services Bill once it is promulgated and on managing the implementation of the turnaround strategy for sheltered employment factories. To this end, spending in the *Sheltered Employment Factories* and *Subsidies to Designated Workshops* subprogramme grew significantly between 2010/11 and 2013/14 due to additional funding allocated in the 2013 Budget for the turnaround strategy for sheltered employment factories. In addition, the employment services system was improved to include online registration for employers, work seekers and mobile self-registration centres. The mobile self-registration centres intervention is aimed at increasing job creation and facilitating placements in decent employment. The number of work seekers placed in registered employment opportunities per year increased from 16 171 in 2012/13 to 19 000 in 2013/14.

*The Management and Support Services: Public Employment Services* subprogramme increased the department's capacity to provide employer, registration and placement services. This subprogramme accounts for the increased spending on compensation of employees between 2010/11 and 2013/14. Over the seven-year period, spending on transfers to non-profit institutions is set to grow substantially as the department implements its approved 2013 policy on transfers to non-profit institutions in an effort to facilitate access to employment for people with disabilities.

Over the medium term, this programme receives additional funds of R83.4 million through a reprioritisation of funds from spending on compensation of employees in the *Inspection and Enforcement Services* programme to spending on compensation of employees in this programme. The reprioritisation is to fund the occupation specific dispensation for career counsellors from 1 April 2014 and improved conditions of service. This will lead to increased spending on compensation of employees over this period. R15.9 million over the medium term has also been reprioritised within spending on goods and services, from communication, property payments and travel and subsistence to provide employment services projects.

## Subprogramme: Work Seeker Services

This subprogramme registers work seekers, retrenched workers, work vacancies, and training and income generating opportunities on the employment services system; and facilitates access to employment and income generating opportunities for the unemployed and underemployed. In 2012/13, 600 259 work seekers were registered on the Employment Services of South Africa system.

## Expenditure trends

The spending focus of this subprogramme is on increasing the number of work seekers registered and facilitating access to employment and income generating opportunities. The aim is to reduce unemployment and contribute to the national employment target of 11 million jobs created by 2030. Spending on compensation of employees between 2010/11 and 2013/14 grew at an average annual rate of 60 per cent, due to the transfer of staff to this subprogramme from the *Employer Services* subprogramme to enhance the effectiveness of this subprogramme. Spending on compensation of employees is expected to stabilise at 8.6 per cent over the medium term due to salary adjustments for career counsellors. Increased spending on advertising, travel and the hiring of venues and facilities in respect of roadshows for the registration of work seekers accounts for the 97.3 per cent growth in spending on goods and services between 2010/11 and 2013/14, and is expected to moderate to 4.9 per cent over the MTEF period.

The subprogramme's expenditure, which includes items such as communication, travel and subsistence, is expected to increase to R125.9 million in 2016/17 to provide for the implementation of projects emanating from the Employment Services Bill. These include the development of systems and regulations for private employment agencies responsible for job matching and placing work seekers, enhancements to the Employment Services of South Africa system to facilitate an increase in the number of employment opportunities registered, and the rollout of employment schemes to enhance work seekers' employment opportunities and their employability. The targets for the number of work seekers registered on the Employment Services of South Africa system is expected to increase from 500 000 in 2013/14 to 600 000 in 2016/17.

The subprogramme receives R24 million for improved conditions of service over the medium term, from the reprioritisation from spending on compensation of employees in the *Administration* programme. As at 31 March 2013, the programme had a funded and filled establishment of 316 posts, which increased to 327 posts in 2013/14 and is expected to remain stable over the medium term.

## Programme 4: Labour Policy and Industrial Relations

### Objectives

- Improve the status of vulnerable workers by:
  - reviewing 8 sectoral determinations on appropriate minimum wages and conditions of employment by March 2017; 2 determinations in the contract cleaning and the domestic worker sectors by March 2015; 4 determinations in the farm worker, forestry, private security and wholesale and retail sectors by March 2016; and 2 determinations in the hospitality and the taxi sectors by March 2017
  - investigating 3 new sectors (funeral undertaking, abattoir sector and gardening services) by March 2017.
- Promote equity in the workplace by addressing income disparities along racial and gender lines by:
  - promoting the relevant provisions of the Amended Employment Equity Act (1998) and its employment equity regulations, endorsing the principle of equal pay for work of equal value across all occupational levels of the workforce through the assessment of 30 companies on income differentials by March 2015
  - assisting employers in identifying income disparities based on race and gender by conducting 7 income differential assessments per quarter.
- Manage the implementation of the Labour Relations Act (1995) by extending 18 collective agreements within 60 days from the day of receipt, and registering labour organisations within 90 days of receiving a completed application.
- Implement a research, monitoring and evaluation agenda in specific areas identified in the labour market by conducting at least 4 research projects by September 2014 and releasing 4 reports on labour market information and statistical analysis by September 2014.

### Subprogrammes

- *Management and Support Services: Labour Policy and Industrial Relations* manages delegated administrative and financial responsibilities, coordinates all planning, monitoring and evaluation functions, and provides corporate support to line function subprogrammes. This entails managing the proper implementation of all human resources related matters, ensuring effective and efficient procurement of goods and services, as well as dealing with budget planning and expenditure control. This subprogramme had a staff complement of 16 in 2013/14.
- *Strengthen Civil Society* makes transfers to various civil society organisations that provide resources, support and expertise to improve the independence and self-reliance of workers and employers, with the aim of strengthening the capacity of workers and employers to contribute to a stable and smoothly functioning labour market. Portions of this subprogramme's total budget are transferred to various civil society organisations such as the Ditsela Workers' Education Institute, Workers College Natal and the Confederation of South African Trade Unions.
- *Collective Bargaining* manages the implementation of the Labour Relations Act (1995) by developing policies and practices that promote sound labour relations. This entails extending collective agreements and registering labour organisations within 90 days. By the end of September 2013, 10 collective agreements were extended with an average turnaround time of 52 days and the applications of 78 labour organisations were processed within 48 days. This subprogramme had a staff complement of 30 in 2013/14.
- *Employment Equity* promotes equity in the labour market by strengthening the implementation, monitoring and enforcement mechanisms of the Employment Equity Act (1998). In 2013/14, 30 income differential assessments were conducted, 8 each for the first and second quarters, and 7 each for the third and fourth quarters, at a total cost of R1 million. This subprogramme had a staff complement of 19 in 2013/14.
- *Employment Standards* protects vulnerable workers in the labour market by administering the Basic Conditions of Employment Act (1997). In 2013/14, hospitality and taxi sector determinations were reviewed at a cost of R1.4 million. In addition, a feasibility study on establishing a funeral sector determination was done in 2013/14 at a cost of R250 000. This subprogramme had a staff complement of 17 in 2013/14.
- *Commission for Conciliation, Mediation and Arbitration* transfers funds to the Commission for Conciliation, Mediation and Arbitration, which promotes fairness in the workplace through dispute prevention and dispute resolution services. This subprogramme's total budget is transferred in full to the commission.

- *Research, Policy and Planning* supports the department's policy formulation and legislation drafting functions. This entails conducting research and managing commissioned research projects that are aimed at monitoring and evaluating working conditions and policies affecting the labour market in South Africa and elsewhere, and identifying relevant labour market interventions and policy options. In 2013/14, R7.2 million was spent on the following research projects: the extent of utilisation of bargaining council agreements exemption by businesses; progress made towards the reduction of working hours to a 40-hour week; assessing knowledge levels about the work of the Department of Labour and its communication campaigns; investigating employment counselling approaches for designated groups; and attitudes of unemployed work-seekers towards certain jobs. This subprogramme had a staff complement of 10 in 2013/14.
- *Labour Market Information and Statistics* collects, collates, analyses, and disseminates internal and external labour market statistics about changes in the South African labour market that impact on legislation; and triggers further research on labour matters. By June 2013, the report on job opportunities and unemployment in the South African labour market and the annual labour market bulletin had been completed. The reports on industrial action and annual administrative statistics will be completed by March 2014. In 2013/14, this subprogramme had a staff complement of 95 across provinces, including the head office.
- *International Labour Matters* facilitates bilateral and multilateral cooperation between the department and its partners internationally to exchange information and best practices on labour market issues. This subprogramme transferred the following funds in lieu of South Africa's affiliation fees for 2013/14: R681 843 to the African Regional Labour Administration Centre and R15 million to the International Labour Organisation. This subprogramme had a staff complement of 19 in 2013/14.
- *National Economic Development and Labour Council* transfers funds to the National Economic Development and Labour Council, which promotes economic growth, participation in economic decision making and social equity through social dialogue. This subprogramme had a staff complement of 1 in 2013/14.

## Expenditure trends

The spending focus over the medium term will be on protecting vulnerable workers by reviewing and making sectoral determinations, promoting sound labour relations and equity in the labour market, as well as enforcing and monitoring the Employment Equity Act (1998). This focus is reflected in the transfers to the Commission for Conciliation, Mediation and Arbitration and the National Economic and Labour Council, as well as under goods and services in travel, advertising and venues and facilities. The focus on promoting sound labour relations will continue, with a particular emphasis on the resolution of industrial action and the reduction of tension and violence in the labour market. The bulk of the programme's budget continues to be transferred to the Commission for Conciliation, Mediation and Arbitration for dispute prevention and resolution services. In the 2013 Budget, the commission was allocated additional funds to address increasing caseloads arising from

amendments to the labour laws; the rollout of a web based case management system; expansion of access to dispute resolution services as well as a job saving unit and the aforementioned accounts for the increased spending on the transfer to the Commission between 2010/11 and 2013/14.

R16 million over the medium term has been reprioritised from goods and services in the *Research, Policy and Planning* subprogramme due to the overlap of research projects, which reduced the number of planned projects in a year. Of the R16 million, R14.3 million will be used in the *International Labour Matters* subprogramme to provide for the rising affiliation fees for the International Labour Organisation subprogramme, to cover the cost of implementing amendments to the Labour Relations Act (1995) and work relating to labour tenants in terms of amendments to the Basic Conditions of Employment Act (1997) in the *Employment Standards* subprogramme. Of the 27 conventions ratified by South Africa, 25 are in force, 2 have been denounced, and 3 have been ratified in the past 12 months. In addition, R7.5 million over the medium term is reprioritised from the *Inspection and Enforcement Services* programme to this programme for 4 additional posts, of which 3 will be in the *International Labour Matters* subprogramme.

The total number of personnel in this programme is expected to increase from 173 posts in 2012/13 to 194 filled posts in 2016/17, with a corresponding increase in spending on compensation of employees. This forms part of the effort to capacitate the programme to promote sound labour relations and equity in the labour market.

Spending on consultants was equivalent to 10.6 per cent of total expenditure on compensation of employees in 2013/14, and is expected to grow from R6.7 million in 2014/15 to R7.8 million in 2016/17 due to the commissioning of six research reports. As research topics and requirements vary from year to year, it is more cost-efficient for the department to engage external research specialists as consultants than to employ permanent staff. In 2013/14, this programme contracted three consulting companies to undertake three research projects.

## **Public entities and other agencies**

### **Commission for Conciliation, Mediation and Arbitration**

#### **Mandate and goals**

The Commission for Conciliation, Mediation and Arbitration is an independent and autonomous organisation that was established by the Labour Relations Act (1995) to ensure fair labour practices. The commission's mandate to deal with workplace disputes as effectively and efficiently as possible is derived from the act's purposes, which include the advancement of economic development, social justice, labour peace and the democratisation of the workplace.

The commission's strategic goals over the medium term are to:

- enhance the role of the commission in the labour market through the provision of effective dispute resolution under the auspices of the bargaining councils and private agencies
- provide support and assistance to local, regional and international organisations
- facilitate social dialogue and economic development on identified labour market issues locally and internationally
- deliver excellent service rooted in social justice, ensuring a balance between quality and quantity
- enhance and entrench internal processes and systems for optimal deployment of resources
- entrench an organisational culture that supports delivery of its mandate.

## Expenditure trends

The spending focus over the medium term will be on improving service delivery, as well as expanding access to dispute resolution services. Increased spending from 2013/14 and over the medium term is attributed to additional allocations approved in the 2013 Budget for increasing caseloads arising from labour law amendments, expanded access to the commission's services through the rollout of the web based case management system to labour centres and bargaining councils, the establishment of a dedicated employment security unit to take forward the training layoff scheme, and the opening of new offices in the Vaal triangle area in Gauteng and in Welkom in Free State. The latter two developments account for the growth in spending in the institutional development programme, at an average annual rate of 128.2 per cent between 2012/13 and 2013/14.

Spending by the commission is driven by the number of cases referred to it. The increase in the number of jurisdiction case referrals from 143 652 cases in 2013/14 to 207 029 cases in 2016/17 accounts for the increased spending on goods and services and compensation of employees over this period. The growth in spending on compensation of employees between 2010/11 and 2012/13 is attributed to the filling of existing vacant posts to improve service delivery, more back office support, and inflationary salary adjustments. Spending in the social services programme grew at a rate of 18.4 per cent between 2010/11 and 2013/14 due to project costs for the implementation of the labour legislation amendments, and is set to grow strongly over the medium term due to increasing caseloads arising from these labour legislation amendments.

The commission's main source of revenue is the annual transfer it receives from the department. Total revenue grew at an average annual rate of 13.7 per cent from 2010/11 to 2013/14 due to an increase in transfers to provide for the heavier case load and the expansion of services. The increase in revenue, driven by the increase in transfers, also allowed the commission to open two new offices, roll out the web based case management system to bargaining councils and labour centres and hear more labour dispute cases. Revenue is set to moderate to 9.1 per cent over the medium term.

Between 2010/11 and 2013/14, revenue from other sales grew at an average annual rate of 19.8 per cent, mainly driven by the demand for Commission of Conciliation, Mediation and Arbitration gazetted services available to the public, such as the resolution of disputes with pre-dismissal arbitration, and the oversight of elections or ballots held by trade unions or employers' organisations. Between 2011/12 and 2013/14, other non-tax revenue fluctuated as a result of changes in the rate at which interest is earned on investments.

The commission aims to reduce its operational overheads by cutting printing and electricity costs through raising awareness of its greening project, identifying cost savings for travel and accommodation and monitoring spending at cost centres against approved budgets. Spending in the corporate governance programme between 2010/11 and 2012/13 decreased at an average annual rate of 26.5 per cent due to cost saving measures implemented on communication and travel and accommodation.

The number of personnel in this entity is expected to increase from 441 in 2012/13 to 494 in 2014/15, mainly due to funding allocated to address the increasing case loads and the establishment of new offices. This also accounts for the significant increase on compensation of employees and goods and services in respect of case

disbursement costs especially the payment of part-time commissioners in this period. The number of personnel is set to stabilise at 494 over the medium term.

## Compensation Fund

### Mandate and goals

The Compensation Fund administers the Compensation for Occupational Injuries and Diseases Act (1993). The main objective of the act is to provide compensation for disablement caused by occupational injuries or diseases sustained or contracted by employees, or for death resulting from such injuries or diseases.

The fund's strategic goals over the medium term are to:

- provide an efficient social safety net
- enhance the quality of, and access to, services provided in terms of the act through the decentralisation of these services to all provinces, and conduct campaigns to educate employees about the act
- improve revenue collection
- integrate the fund with government's comprehensive social security reforms
- strengthen corporate governance
- intensify the implementation of the rehabilitation and reintegration policy framework.

## Expenditure trends

The Compensation Fund's main source of revenue is the levies payable by employers based on a determined percentage of the annual earnings of their employees. The Compensation for Occupational Injuries and Diseases Act (1993), however, makes provision for a minimum assessment to ensure that the assessment is not less than the administration costs incurred. The increase in total revenue between 2010/11 and 2013/14, is as a result of increased compliance by employers in submitting their annual return on earnings for assessments, revenue from debt collection and increased return on investments. Total revenue collected is expected to slow to an average annual rate of 5 per cent over the medium term.

The spending focus over the medium term will be on making timeous payments to all deserving and qualifying beneficiaries as stipulated in the Compensation for Occupational Injuries and Diseases Act (1993), as well as finalising the decentralisation project aimed at ensuring easy access to compensation fund services throughout South Africa, which began in 2010.

Spending on compensation of employees increased significantly between 2010/11 to 2013/14, due to the restructuring process taking place within the fund. The process involves employing more skilled personnel and finalising the decentralisation project to provinces. In 2012/13, the fund processed and paid 325 502 claims compared to 205 150 in 2011/12 and the increase was mainly due to these improvements. At the end of November 2013, there were 772 filled posts against a funded establishment of 1 334 posts.

The notable decrease on payment of interest, interest, dividends, and rent on land between 2010/11 and 2013/14 is as a result of the timeous payment of invoices by the fund. Goods and services spending grows much higher

than inflation over the seven year-period, mainly due to the concomitant costs of filling vacant posts and increased relocation and resettlement costs arising from the transfer of staff to various provinces. The expenditure increase over the medium term is in line with performance projections of the fund, in terms of which the number of claims registered and finalised per year is estimated to grow from 295 200 in 2013/14 to 741 456 by 2016/17. The projected strong growth in transfers and subsidies paid over the medium term is as a result of the fund contracting a service provider for the processing of claims.

Over the medium term, spending on benefits paid or transfers and subsidies is estimated to grow at an average annual rate of 13.0 per cent due to:

- a review and adjustments to existing benefit structures including a 6 per cent increase to monthly compensation pension
- a 7 per cent increase to the salary ceiling from R292 032 to R312 480 per annum for assessment purposes
- the minimum earnings increasing by 7 per cent from R3 406 to R3 645 per month for the lump sum payments of temporary total disablement benefits and permanent disablement benefits
- maximum earnings increasing by 7 per cent from R24 336 to R26 040
- the minimum payment being increased to R1 000 per month for all pensioners, widowers and widows.

The fund is continuously implementing effective cost control measures that target administrative costs such as catering, venues and facilities and travel. The fund is finalising the permanent deployment of staff to all provinces, which will also decrease the amount of expenses related to travel and subsistence.

The fund plans to fill 75 per cent of vacant posts over the medium term as services are decentralised to the provinces.

## Unemployment Insurance Fund

### Mandate and strategic goals

The mandate of the Unemployment Insurance Fund is to contribute to the alleviation of poverty by providing effective short term unemployment insurance to all workers who qualify for unemployment and related benefits as legislated in the Unemployment Insurance Act (2001). The fund is financed by contributions from employees and employers as legislated in the Unemployment Insurance Contributions Act (2002).

The fund's strategic goals over the medium term are to:

- improve governance and strengthen the institutional capacity of the fund
- meet all the targeted service levels and turnaround times in the processing of applications
- contribute to government anti-poverty initiatives through investing mandated funds in socially responsible investments and expanding poverty alleviation programmes
- improve stakeholder relations.

## Expenditure trends

Over the seven-year period, the Unemployment Insurance Fund receives 68.9 per cent of its total revenue from unemployment contributions. The fund projects that over the medium term it will generate on average 71.5 per cent of its revenue from unemployment contributions due to an anticipated increase in contributors to the fund as the economy recovers, and 28.5 per cent from non-tax revenue in the form of interest from investments.

Over the medium term, the fund will focus its spending on paying benefits to qualifying persons and implementing poverty alleviation schemes to assist unemployed workers registered on the fund's database.

Spending on compensation of employees grew at an average annual rate of 17.2 per cent between 2010/11 and 2012/13, mainly due to the implementation of the new organisational structure, the appointment of payroll auditors and general salary adjustments. The new organisational structure will allow the fund to reduce spending on consultants over the medium term as a greater proportion of functions, such as IT services, internal audit and risk management, are to be done in-house. These changes account for the expected increase in spending on compensation of employees over this period.

Between 2010/11 and 2013/14, spending on goods and services grew at an average annual rate of 16.7 per cent, mainly due to increased spending on lease payments at service delivery points in provincial offices as the fund decentralises its services; increased commission paid to the South African Revenue Service for collection of Unemployment Insurance Fund contributions, which is in line with increases in revenue collected; and the provision of in-house IT services following the termination of the IT public private partnership in November 2012.

Unemployment insurance claims grew between 2010/11 and 2012/13, due to increased retrenchments arising from the prevailing unfavourable economic conditions in the country. Transfers and subsidies or benefits paid over the medium term are projected to grow at an average annual rate of 22.9 per cent, compared to growth of 14.5 per cent between 2010/11 and 2013/14. This growth is a result of the recommended benefit improvements contained in the draft Unemployment Insurance Fund Amendment Bill of 2012. The bill proposes a number of benefit improvements, including the extension of the number of credit days from 243 to 365 days; the extension of the claim period of death benefits from 6 to 18 months; the provision of full benefits to women who miscarry; the extension of the period from 6 to 18 months during which dependants can claim deceased contributors' benefits; and a reduction of the number of days for the claiming of illness benefits from 14 to 7 days.

The fund fulfilled its mandate in 2012/13 and paid R6 billion in claims to 731 131 beneficiaries of which:

- R4.7 billion was paid to 581 074 claimants for unemployment benefits
- R254.2 million was paid to 20 986 claimants for illness benefits
- R765.9 million was paid to 106 339 claimants for maternity and adoption benefits
- R320.6 million was paid to 22 732 claimants for dependant benefits.

The fund continued with cost saving measures in 2013/14 to reduce air travel, the use of shuttle services, car rental, accommodation, catering costs and the number of meetings held. Further measures have led to less audit work being done externally and consequent savings realised on audit fees.

The fund has an approved funded establishment of 1 706 posts, which increased to 1 718 posts from 2013/14 onwards. 96 posts were vacant at the semi-skilled and skilled levels at the end of November 2013 as a result of recently created prioritised new posts. To reduce delays in appointments, the fund has amended its recruitment and selection processes to ensure that appointments are made immediately once internal processes are completed. Six consulting firms were used for IT services, internal audit and risk management in 2013/14 but this will be reduced over the medium term as in-house capacity is built.

### **Other public entities and agencies**

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **National Economic Development and Labour Council** requires organised labour, organised business, community based organisations and government to work as a collective to promote the goals of economic growth and social and economic equity. The council's total budget for 2014/15 is R28.1 million.
- **Productivity South Africa** aims to improve the productive capacity of the economy through interventions that encourage social dialogue and collaboration between government, labour and business. The entity's total budget for 2014/15 is R43.1 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Ensure protection against vulnerability by creating an enabling environment for the provision of a comprehensive, integrated and sustainable social development service.*

### Mandate

The White Paper for Social Welfare (1997) sets out the principles, guidelines, policies and programmes for developmental social welfare in South Africa. It has provided the foundation for social welfare in the post-1994 era. The Department of Social Development is not established in terms of a single act; several pieces of legislation determine its mandate:

- The Social Assistance Act (2004) provides a legislative framework for providing social assistance. It sets out the different types of grants payable as well as the qualifying criteria. It also makes provision for the establishment of the inspectorate for social assistance.
- The Non-Profit Organisations Act (1997) establishes an administrative and regulatory framework within which non-profit organisations can conduct their affairs, and provides for their registration by the department.
- The Older Persons Act (2006) establishes a framework for empowering and protecting older persons, and promoting and maintaining their status, rights, wellbeing, safety and security. It provides for older persons to enjoy good quality services while staying with their families in their communities for as long as possible. It also makes provision for older persons to reside within residential care facilities if they are unable to stay with their families.
- The Children's Act (2005) sets out principles relating to the care and protection of children, and defines parental responsibilities and rights. It deals with early childhood development and early intervention, children in alternative care, foster care, child and youth centres and drop-in centres, and the adoption of children.
- The Prevention of and Treatment for Substance Abuse Act (2008) regulates substance abuse services and facilities.

- The White Paper on Population Policy for South Africa (1998) is aimed at promoting the sustainable development of all South Africans by integrating population issues with development planning in all spheres of government and all sectors of society.

## Strategic goals

The department's strategic goals over the medium term are to:

- review and reform social welfare services and financing
- improve and expand early childhood development provision
- deepen social assistance and extend the scope of the contributory social security system
- enhance the capabilities of communities to achieve sustainable livelihoods and household food security
- strengthen coordination, integration, planning, monitoring and evaluation of services.

## Programme purposes

### Programme 1: Administration

**Purpose:** Provide leadership, management and support services to the department and the sector.

### Programme 2: Social Assistance

**Purpose:** Provide social assistance to eligible individuals in terms of the Social Assistance Act (2004) and its regulations.

### Programme 3: Social Security Policy and Administration

**Purpose:** Provide for social security policy development and fair administration of social assistance.

### Programme 4: Welfare Services Policy Development and Implementation Support

**Purpose:** Create an enabling environment for the delivery of equitable developmental welfare services through the formulation of policies, norms and standards, and best practices, and support to implementing agencies.

### Programme 5: Social Policy and Integrated Service Delivery

**Purpose:** Support community development and promote evidence based policy making in the department and the social development sector.

Number of people accessing food through food security programmes each year	Social Policy and Integrated Service Delivery	Outcome 7: Vibrant, equitable and sustainable rural communities with food security for all	– <sup>4</sup>	377 998	555 957	700 000	1 million	1.3 million	1.4 million

1. New function, which only began full operation in 2011/12.

2. Groundbreakers refer to young people aged 18 to 25 who are recruited to work on implementing the loveLife programme for one year.

3. Mpintshis are volunteer peer motivators who work with Groundbreakers.

4. No data in this year as food bank programme became fully operational in 2011/12.

## The national development plan

The national development plan identifies social protection as a priority area. Social protection, which is being coordinated by the Department of Social Development, is included in the priority outcomes of government. The national development plan commits to achieving a defined social protection floor. This is a set of basic social security guarantees which secure protection aimed at preventing or alleviating poverty, vulnerability and social exclusion. This means that households who have not achieved the basic standard of living are assisted and highlights the state's obligation to provide social assistance to those who need it. In line with the plan's commitment, the social grant system continues to be a major anti-poverty programme of government, providing income support to millions of poor households. By the end of the MTEF period, 16.5 million citizens are projected to receive social grant payments.

The plan further advocates that social welfare services be expanded, funding for non-profit organisations reviewed, and more education and training expanded for social service practitioners. To this end, over the medium term, the department will focus on transforming the social welfare system through legislative and policy reform, while funding models for non-profit organisations are being re-evaluated. The department also plans to award social work scholarships to develop and enhance the capacity of social service professionals over the medium term.

The plan supports social security reforms that are being considered by government, including mandatory retirement contributions. It emphasises the need for some social protection of the working age population including through enhancing public employment programmes such as the expanded public works programme. The department is responsible for coordinating job creation across the social sector. The plan also highlights gaps and strategies that government must pursue to effectively build a human capital foundation for the country through the early childhood development programme. This is a key developmental intervention for young children and the department will focus on improving the quality and coverage of early childhood development services by expanding access to nutritious food, care and stimulation programmes. A comprehensive package of early childhood development services is currently being developed.

The department will play a key role in developing mandatory contributory social security systems to enable compulsory contributions by workers during their working years to provide for retirement benefits, which reduces their reliance on the state old age grant. This policy reform is central to the national development plan's priority of comprehensive social security reform. The department will continue to play a key role in various government forums aimed at ensuring the implementation of outcome 13 (social protection).

2. Rand million.

## Expenditure trends

The spending focus over the medium term will continue to be on making payments of social assistance grants to the elderly, war veterans, people with disabilities, and children through the *Social Assistance* programme. These payments take up 94 per cent of the department's allocation over the medium term. These grants aim to boost the income of poor households, which bear the brunt of unemployment, poverty and inequality that persists in South African society. The department expects to pay social grants to 16.5 million beneficiaries by the end of 2016/17.

Between 2010/11 and 2013/14, spending in the *Social Assistance* programme increased significantly as a result of government's decision to extend the age of children eligible for the child support grant to 18 years and to equalise the old age grant at 60 years for men and women.

Over the medium term, less increase in expenditure on social assistance grants is expected as coverage of affected groups improves and ineligible beneficiaries are removed from the system. The removal of ineligible beneficiaries resulted in savings of R2 billion in 2013/14 following an initiative that took place between March 2012 and July 2013 to re-register recipients to capture their biometric identification and to root out fraud and corruption in the administration of social assistance transfers. As a result of a lower than projected number of beneficiaries, Cabinet approved a budget reduction of R530 million in 2014/15 from the social assistance transfers.

The 2014 Budget includes Cabinet approved additional allocations of R50 million each year over the MTEF period for the construction of substance abuse treatment centres in Northern Cape, Eastern Cape, North West and Free State. The allocations in the *Welfare Services Policy and Implementation Support* programme are distributed as follows: R21 million in 2014/15, R2.5 million in 2015/16 and 2016/17 for planning, norms and standards and scoping related to the construction of the centres, and monitoring at the national level; and R29 million, R47.5 million and R47.5 million, over the medium term, as a schedule 5 conditional grant to provinces for the construction of the treatment centres. The social grant budget in the *Social Assistance* programme is set to increase by R1.2 billion in 2016/17.

The department had a funded establishment of 784 posts, of which 106 were vacant at the end of 2013/14, mainly due to posts being temporarily suspended as a result of departmental restructuring. The vacancies were mainly at salary levels 1-10. The aim of the restructuring was to redesign or abolish certain posts to redirect funding towards priority posts that will better align with the mandate of the department.

## Expenditure trends

The bulk of this programme's spending over the medium term goes towards compensation of employees, which constitutes on average 55.7 per cent of the budget, and operating leases for office accommodation, which

constitutes on average 23.8 per cent of the goods and services allocation. Spending on this programme increases steadily over the seven-year period, mainly due to the building of capacity in the oversight function of the department in the *Internal Audit* subprogramme. The additional capacity was required to enable the department to fulfil its operational support and oversight role over the South African Social Security Agency and the National Development Agency.

In addition to corporate services responsibilities, the *Administration* programme coordinates the department's strategic vision and provides overall monitoring support through the *Department Management* subprogramme. The programme had a funded establishment of 360 posts, of which 53 were vacant as at the end of November 2013 due to posts put on hold because of the organisational restructuring process. The aim of the restructuring was to redesign or abolish certain posts and redirect funding towards priority posts. The number of people employed in the programme is expected to increase to 334 by 2016/17, as some of the funded contract posts additional to the establishment, are converted into permanent funded posts in areas such as IT, communication and internal audit in order to strengthen the department's internal capacity.

## Programme 2: Social Assistance

### Objectives

- Ensure the provision of social assistance to eligible beneficiaries where their income and assets fall below the set thresholds by extending income support to:
  - 3 308 078 older persons by 2016/17, from 2 845 422 in 2012/13
  - 1 112 816 disabled persons by 2016/17, from 1 153 810 in 2012/13
  - 11 392 098 children by 2016/17, from 11 213 352 in 2012/13
  - 143 583 children with serious disabilities who are beneficiaries of a care dependency grant by 2015/16, from 128 912 in 2012/13
  - 563 191 foster children by 2015/16, from 514 892 in 2012/13.

### Subprogrammes

- *Old Age* provides income support to persons above the age of 60 earning an annual income of below R61 320 where they are single, and R122 640 where married, and whose assets do not exceed R884 400 if single, and R1.8 million if married. As at 30 September 2013, 2.9 million people were in receipt of the old age grant.
- *War Veterans* provides income support for the men and women who fought in World War II and the Korean War. As at 30 September 2013, 509 veterans were in receipt of the grant.
- *Disability* provides income support for persons with permanent or temporary disabilities earning an annual income below R61 320 if single, and R122 640 if married, and whose assets do not exceed R884 400 when single and R1.8 million when married. As at 30 September 2013, 1.1 million disabled people were in receipt of the grant.
- *Foster Care* provides grants for children placed in foster care through court orders in terms of the Children's Act (2005). As at 30 September 2013, 549 021 foster children were in receipt of the grant.
- *Care Dependency* provides income support to caregivers supporting a child who is mentally or physically disabled where they earn an annual income below R160 800 if single, and R321 600 if married. 126 275 care dependent children were in receipt of this grant by the end of September 2013.
- *Child Support* provides income support to primary caregivers of children under 18 where the caregiver earns an annual income below R37 200 if they are single, and R74 400 if they are married. As at 30 September 2013, 10.9 million children were in receipt of this grant.
- *Grant-in-Aid* is an additional grant to the recipients of the old age grant, disability grant and war veteran's grant who require regular attendance from another person due to their physical or mental condition.
- *Social Relief* provides temporary income support, food parcels or other forms of relief to those facing undue hardship.

## Expenditure trends

The child support, old age and disability grants make up the bulk of the programme's expenditure over the medium term, and reflect government's commitment to supporting the most vulnerable in society by providing income support. The number of social assistance grant beneficiaries decreased from 15.9 million in March 2013 to 15.6 million as at December 2013 due to the re-registration process where ineligible beneficiaries were removed from the grant system.

To give effect to Cabinet approved budget reductions, the department cut spending by R2 billion in 2013/14 and R530 million in 2014/15, mainly due to lower projections for beneficiary numbers following the re-registration process where 640 000 grants were suspended and cancelled.

Expenditure on social assistance grants is expected to increase over the medium term mostly due to inflation related adjustments to the grant values of the individual grant types and a slight growth in beneficiary numbers over the period. The department expects that the number of beneficiaries will increase to approximately 16.5 million by the end of March 2017. The number of elderly persons receiving the old age grant is projected to grow at 3 per cent each year over the medium term, in line with population growth for that age cohort. In contrast, growth in the number of children eligible for the child support grant will slow down due to the levelling off of the child population and full implementation of the extension to 18 years.

Between 2010/11 and 2013/14, expenditure in this programme grew significantly mainly due to the extension of the child support grant to 18 year-olds and the equalisation of the old age grant at 60 years for men and women. In 2011/12, the means test (the threshold income level above which a potential recipient is disqualified from receiving the grant) for the adult grants was increased as part of the broader social security reform process. Due to the greater public awareness generated about these grants, expenditure on the grant-in-aid and care

dependency grant is projected to increase over the MTEF period. Inflationary increases to grant values are also factored into MTEF expenditure projections.

## Programme 3: Social Security Policy and Administration

### Objectives

- Oversee, ensure and monitor the efficient and effective administration of social grants by the South African Social Security Agency over the MTEF period by:
  - monitoring monthly social grant beneficiary take up rates and expenditure
  - updating social grant beneficiary and expenditure projections every month.
- Provide an effective, efficient and accessible social assistance appeals service by adjudicating 70 per cent of appeals lodged within 90 days of their receipt by 2016/17.
- Improve access to social assistance by:
  - finalising the development of policy addressing income support for orphaned children who are cared for by relatives by 2014/15
  - developing policies on the universal provision of older persons and child support grants by 2014/15 and 2015/16
  - designing a support package for youth that focuses on job placements by 2015/16.
- Improve access to social security for the working age by:
  - researching feasibility and policy options for a guaranteed employment scheme by 2015/16
  - researching feasibility and options for inclusion of informal sector workers in social security by 2015/16
  - establishing a social assistance inspectorate by 2015/16.

### Subprogrammes

- *Social Security Policy Development* provides for the development and review of social assistance policies and legislation, and for the development of policies and legislation for contributory income support to protect households against lifecycle contingencies such as unemployment, ill health, retirement, disability or death of a breadwinner. In 2013/14, research was conducted into developing a social budget and the feasibility of providing social assistance support for orphaned children cared for by relatives. In 2014/15, discussion papers on policy options for the universalisation of the old age and child support grants will be completed. Further work in developing a support package for unemployed youth will be undertaken, together with policy options for the inclusion of informal sector workers in social security. This subprogramme had a staff complement of 43 in 2013/14.
- *Appeals Adjudication* provides a fair and just adjudication service for social assistance appeals. As at 30 September 2013, 800 appeals cases were adjudicated, of which 384 were within 90 days. Over the medium term, an integrated appeals business information system will be developed to facilitate the efficient management of appeal cases to ensure reduction of the number of cases that are older than 90 days. This subprogramme had a staff complement of 55 in 2013/14.
- *Social Grants Administration* provides for the South African Social Security Agency's operational costs for administering social grants, including the agency's own operations, the management information system and reimbursing payment contractors.
- *Social Grants Fraud Investigations* provides funding for fraud investigations conducted by the South African Social Security Agency in partnership with law enforcement agencies. This entails transferring funds to the agency, which is also increasing its own internal capacity to handle fraud cases.

## Expenditure trends

The spending focus over the medium term will continue to be on making transfers to the South African Social Security Agency as the grants administering entity, to provide for administration costs related to the payment of social assistance grants.

The programme transfers 98.6 per cent of its allocation over the medium term to the agency for it to improve its fraud management system and ensure that social assistance grants are paid to an estimated 16.5 million beneficiaries by 2016/17. Social grant administration costs constitute 5.9 per cent of the budget for social assistance grants, as reflected in spending in the *Social Assistance* programme in 2010/11, but are expected to decline to 5.2 per cent in 2016/17, partly due to efficiencies from the new payment contract implemented in 2012/13.

In 2010/11, the department hosted the international social security conference, which resulted in significant growth in expenditure in the *Social Security Policy* subprogramme that year. Expenditure in the *Appeals Adjudication* subprogramme declined between 2010/11 and 2013/14, due to improvements in handling appeals and reduced litigation costs from social assistance appellants. Over the medium term, this subprogramme is to develop an integrated appeals business information system, which is expected to speed up turnaround times by increasing the proportion of appeals adjudicated within a period of 90 days to 70 per cent in 2016/17.

Between 2013/14 and 2016/17, expenditure on consultants is equivalent to 33.5 per cent of the programme's budget allocation for compensation of employees. Expenditure on consultants includes payments to panel members for the social grant appeals adjudication process and for the establishment of the social assistance inspectorate. The inspectorate will provide an oversight mechanism over the South African Social Security Agency for grants administration. Its main function will be to ensure the integrity of the social assistance framework and systems. This would be achieved through structured and systemic assessments of legislative compliance, investigating financial misconduct, and implementing interventions to combat leakage and fraud associated with the social assistance administration system under the *Social Security Policy Development* subprogramme. In the same period, expenditure on compensation of employees is expected to increase as the programme increases the number of personnel employed to perform the inspectorate and appeals functions.

The programme had a funded establishment of 98 posts as at 30 November 2013, 24 of which are vacant. The vacancies are mainly as a result of the length of time involved in establishing the inspectorate, which is expected to be operational as from 2015/16. Once fully established by 2016/17, the programme expects to have 94 employees.

## Programme 4: Welfare Services Policy Development and Implementation Support

### Objectives

- Promote a standardised approach to the delivery of social welfare services by:
  - revising the policy on financial awards to service providers, particularly non-profit organisations, by March 2015/16
  - conducting an in-depth review of the 1997 White Paper on Social Welfare by March 2015/16
  - drafting legislation on the professionalisation and regulation of social service practitioners by 2016/17
  - increasing the number of social work graduates from the scholarship programme from 1 352 in 2012/13 to 2 449 in 2016/17.
- Create an environment that enables the protection and promotion of older persons' rights by:
  - ensuring compliance with norms and standards, on an ongoing basis, for conditionally registered community based care services and residential facilities
  - implementing the active aging programme
  - reviewing the Older Persons Act (2006), to determine if it still addresses the needs of older persons, by March 2016.
- Protect and promote the rights of people with disabilities by:

- drafting legislation dealing with services to people with disabilities by March 2015
- developing norms and standards for residential facilities by March 2015.
- Facilitate improvement of early childhood development services by:
  - expanding access to early childhood development programmes, nutritious food, early learning and parental programmes by 2016/17
  - finalising a comprehensive early childhood development package of services for children from birth to school going age including the first 1 000 days by 2014/15
  - developing a policy framework for early childhood development programmes and partial care by 2014/5.
- Strengthen child protection services through the implementation of child care and protection measures by:
  - increasing the number of children adopted by 10 per cent each year from 2014/15 to 2016/17
  - developing guidelines for the registration of drop in centres in terms of the Children’s Act (2005) by 2014/15
  - facilitating the implementation and monitoring of the transformation plan for child and youth care centres in all provinces on an ongoing basis
  - increasing the screening of people working with children, against part B of the child protection register, from 30 000 screened by March 2014 to a total of 60 000 by March 2015
  - facilitating and continually monitoring the implementation of the Isibindi model (of community child and youth care) in all provinces by 2015/16
  - creating awareness on children’s rights and responsibilities through commemorative days such as Child Protection Week, and implementing parental support programmes by 2014/15.
- Facilitate the implementation of the 2012 White Paper on Families by establishing and strengthening national and provincial forums by 2014/15, including the 20th anniversary celebration of the family and capacity building on the implementation of the White Paper on Families (2012) in all provinces.
- Contribute to a reduction of incidences of substance abuse in communities by:
  - expanding the provision of treatment and prevention services in all provinces over the MTEF period
  - monitoring the progress registered by national departments involved in implementing the national anti-substance abuse programme of action by 2016/17
  - capacitating 120 stakeholders to roll out the implementation of the Prevention of and Treatment for Substance Abuse Act (2008) by 2014/15
  - ongoing monitoring of the implementation of the national drug master plan
  - establishing 4 new substance abuse treatment centres by 2016/17
  - initiating the national education and awareness campaign against substance abuse by 2014/15.
- Contribute to reducing incidences of social crime by:
  - monitoring and supporting quality assurance and accreditation processes for diversion programmes in terms of the Child Justice Act (2008) by 2016/17
  - facilitating and monitoring implementation of an integrated social crime prevention strategy over the MTEF period
  - facilitating and supporting implementation of probation case management for children and youth over the medium term.
- Improve the provision of victim empowerment services in provinces by:
  - drafting legislation on victim empowerment support services by 2014/15
  - finalising and implementing a policy framework for the accreditation of services and programmes run by organisations rendering services to victims of human trafficking by 2014/15
  - finalising and implementing an inter-sectoral strategy for victim empowerment by 2014/15
  - establishing 10 victim empowerment programme green door facilities where victims of crime and violence can access basic emotional containment services for a period of not more than 6 hours by 2014/15.
- Develop and facilitate implementation of responsive and focused youth development by:

- reaching 550 000 youth through social and behaviour change programmes by 2014/15 through Lovelife and other programmes
- training 3 240 youth on leadership by 2014/15
- ensuring 450 youths participate in skills development programmes by 2014/15
- hosting community dialogues for 3 000 young people by 2014/15
- ensuring participation of 1 200 young people in leadership camps by 2014/15
- establishing 6 youth forums by 2015/16.
- Promote psychosocial wellbeing to reduce vulnerability to HIV and AIDS and tuberculosis in targeted key populations, and strengthen community-based organisations by:
  - reaching 1 900 000 beneficiaries through psychosocial support programmes by 2014/15
  - training 1 340 home and community based care givers by 2014/15
  - facilitating 180 community conversations on HIV and AIDS by 2014/15.

## Subprogrammes

- *Service Standards* ensures the transformation and standardisation of social welfare services by developing and coordinating policies and legislation that promote integration, quality driven and professional social welfare service delivery. In 2012/13 and 2013/14, progress was made in developing national baseline costing models for social welfare services. In 2012/13, a draft policy for social service practitioners was also developed. A key project in 2014/15 will be the review of White Paper for Social Welfare (1997). This subprogramme had a staff complement of 24 in 2013/14.
- *Substance Abuse* is discussed in more detail below.
- *Older Persons* develops, supports and monitors the implementation of policies, legislation, norms and standards for social welfare services to elderly people. In 2012/13 and 2013/14, 1 427 community based care and support service points were accessed by elderly people across the provinces. 412 residential facilities have been registered and are being assessed for compliance with norms and standards. Each year, the Golden Games are held to promote active ageing and the rights of the elderly. Over the medium term, the focus will be on reviewing the Older Persons Act (2006). This subprogramme had a staff complement of 8 in 2013/14.
- *People with Disabilities* develops, supports and monitors the implementation of policies, legislation, and norms and standards for social welfare services to people with disabilities. In 2012/13, the department obtained approval for the policy on social development services to persons with disabilities. Policy guidelines on residential facilities have also been developed. Planned activities in 2014/15 include developing a legislative framework regulating services to people with disabilities. This subprogramme had a staff complement of 8 in 2013/14.
- *Children* develops, supports and monitors the implementation of policies, legislation, norms and standards for social welfare services to children. The focus in 2013/14 was on the finalisation of the early childhood development audit. Over the medium term, an early childhood development policy and a comprehensive programme for children from birth to school going age will be developed. The focus will also be on working towards legislative alignment and harmonisation with municipal by-laws and provincial legislation on early childhood development, especially on infrastructure development and management. This subprogramme had a funded staff complement of 59 in 2013/14.
- *Families* develops, supports and monitors the implementation of policies, legislation and programmes to strengthen families. In 2013/14, the White Paper on Families (2012) was approved by Cabinet. An integrated parenting framework has also been approved, and family development programmes have been developed. A key activity over the medium term will be the implementation of the White Paper on Families (2012). This subprogramme had a staff complement of 9 in 2013/14.
- *Social Crime Prevention and Victim Empowerment* is discussed in more detail below.
- *Youth* develops, facilitates and supports the implementation of strategies and programmes to mobilise youth for effective participation in social change and leadership programmes, and to increase their skills levels for employability. By the end of September 2013, 1 267 youth had participated in youth dialogues, 4 598 in mobilisation and outreach programmes, 11 472 had been reached through youth centres and 3 634 had

participated in skills development programmes. By the end of December 2013, 1 800 youth had attended provincial pre-youth camp summits and 1 000 had attended the national youth camp. Over the medium term, the department intends to host biannual youth camps to provide a platform for youth to interact and share their experiences. This subprogramme had a staff complement of 7 in 2013/14.

- *HIV and AIDS* develops, supports and monitors the implementation of policies, programmes and guidelines to prevent and mitigate the impact of HIV and AIDS in line with the government's strategic 2012-2016 plan. By March 2013, 156 funded home and community based organisations had received management training, with 321 reporting into the monitoring and evaluation reporting system. These will both be ongoing focus areas over the medium term. In 2012/13, 501 229 households received psychological support services, while 665 799 orphaned and vulnerable children, 10 268 child-headed households and 36 253 youth-headed households received psychosocial support. In that same year, 2 650 home and community based care workers were trained. In 2013/14, a target of 500 000 youth to be reached through social and behaviour change programmes was set, with 263 561 youth reached by end of September 2013. This subprogramme had a staff complement of 34 in 2013/14.
- *Social Worker Scholarships* provides full scholarships for students studying social work. In 2013/14, 4 750 students received scholarships whilst 4 154 students will receive scholarships in 2016/17.

## Expenditure estimates

## Expenditure trends

Increasing the number of social workers is essential for providing an improved and standardised approach to social welfare services and is the programme's spending focus over the medium term. Through the *Social Worker Scholarships* subprogramme, the department provides scholarships which are administered by the National Student Financial Aid Scheme, to increase the number of social work students. The department expects to award scholarships to 4 154 students in 2016/17.

Through the *HIV and AIDS* subprogramme, which focuses on youth development and HIV prevention, the department makes transfer payments to loveLife to increase the number of HIV and AIDS awareness prevention and management programmes, including training 540 Groundbreakers and 2 700 mpintshis, who implement social and behaviour change programmes, each year.

The increase in expenditure in the *Youth* subprogramme in 2012/13 and in 2013/14 was due to the additional funding requirements of the youth camp events. Spending in the *Children* subprogramme has grown, with additional allocations in 2012/13 and 2013/14. These allocations are for the early childhood development audit to facilitate the implementation of government's outcomes on quality basic education and for systems to facilitate the rollout of the Isibindi model, a community based model of responding to the needs of orphaned and vulnerable children.

A key cost driver in the *Older Persons* subprogramme is the Golden Games, in which older people participate and compete in various sporting activities in order to promote active ageing. In 2012/13, the department carried all costs relating to the Golden Games as provincial budgets could not accommodate the event. In 2014/15, and 2015/16, the decrease in expenditure in the *Older Persons* subprogramme is due to cost sharing arrangements between provincial departments and the national Department of Sports and Recreation.

Between 2010/11 and 2013/14, the department embarked on a series of outreach programmes, which require a lot of travelling to various provinces, to increase public awareness of social development services offered by the department. As a result, the travel and subsistence expenditure under goods and services grew at an average annual rate of 33.2 per cent in this period. Spending on travel and subsistence was also driven by the department's obligation to travel to all provinces, in order to monitor policy implementation. Expenditure on consultants, the largest item within goods and services, is expected to increase in 2014/15, with additional funding of R21 million allocated for assistance in the planning, monitoring and scoping of projects to build substance abuse treatment centres.

The programme has a funded staff establishment of 193 posts, 15 of which were vacant at the end of November 2013 due to restructuring. The number of people employed in the programme is expected to increase to 187 by 2016/17 from 178 in 2013/14. Some of the identified vacant posts have been suspended as the department intends to abolish or redesign these posts. How this will be done depends on the new organisational structure, which is in the process of being approved. The estimates for the number of posts over the MTEF may change, based on the outcome of the restructuring process.

The trends in expenditure in the *Substance Abuse* and *Social Crime Prevention and Victim Empowerment* subprogrammes are discussed in the section that follows.

### Subprogramme: Substance Abuse

This subprogramme develops, supports and monitors the implementation of policies, legislation, norms and standards for the prevention and treatment of substance abuse. In 2012/13, a treatment model for substance abuse was developed and amended regulations in terms of the Prevention of and Treatment for Substance Abuse Act (2008) were finalised. In 2013/14, a series of television and print media advertisements were flighted as well as door-to-door campaigns on the dangers and effects of substance abuse in an effort to reduce incidences of substance abuse. The Prevention of and Treatment for Substance Abuse Act (2008) was proclaimed by the president and related regulations promulgated by the Minister of Social Development. The national drug master plan was approved by Cabinet in 2013/14 and implementation will be monitored until 2017/18. Over the MTEF period, four new public treatment centres will be constructed.

This subprogramme had a staff complement of 9 in 2013/14.

### Expenditure estimates

2. Rand million.

## Expenditure trends

Spending is expected to increase over the medium term as a result of a Cabinet approved additional allocation of R150 million over the MTEF period for the establishment of public substance abuse treatment centres in Northern Cape, Eastern Cape, North West and Free State. The Prevention of and Treatment for Substance Abuse Act (2008) prescribes that each province must have at least one treatment centre. There are currently only seven public treatment centres in four provinces and these are located in the cities. R29 million in 2014/15 and R47.5 million in 2015/16 and 2016/17 will be transferred to provinces as a schedule 5 conditional grant for the planning and construction of new substance abuse treatment centres in Northern Cape, Eastern Cape, North West and Free State. In addition, R21 million in 2014/15 and R2.5 million in 2015/16 and 2016/17 is allocated to the department to assist with the planning, norms and standards and scoping work for the treatment centres and to monitor their construction. This is evident in the growth on the budgetary allocation for consultants.

A once-off additional allocation of R20 million was provided in the 2013/14 adjustments budget for anti-substance abuse campaigns resulting in increased expenditure in advertising and the printing of campaign materials. The Prevention of and Treatment for Substance Abuse Act 70 (2008) encourages a preventative approach to substance abuse. The allocation for this was also informed by the increase in the number of incidences of substance abuse and related social ills as reported frequently in the media and as witnessed in presidential visits to drug ridden communities. In 2014/15, the subprogramme aims to reduce the demand for substances in communities by providing prevention services and monitoring the implementation of the national anti-substance abuse programme of action in the 9 provinces. This subprogramme had a funded staff establishment of 9 posts with no vacancies expected at the end of November 2013. The number of people employed over the medium term is expected to remain constant.

## Subprogramme: Social Crime Prevention and Victim Empowerment

This subprogramme develops, supports and monitors the implementation of policies, legislation and programmes to protect, empower and support victims of crime and violence as well as child, youth and adult

offenders. Key achievements in 2012/13 and 2013/14 include the implementation of the policy framework for the accreditation of diversion services; the approval of an integrated social crime prevention strategy; the development of the gender based violence manual; the development of the policy framework for the accreditation of services and programmes for victims of human trafficking; approval of the national policy guidelines and an intersectoral strategy for victim empowerment. In 2013/14, a 24-hour command centre was established to contribute towards the prevention of gender based violence and improve response services to its victims. The command centre provides comprehensive, integrated, consistent, coordinated and timely support and counselling services to victims of violence. The command centre also provides access to immediate telephonic counselling services and prompt referrals to social workers who can provide follow up psychosocial support to victims.

Over the MTEF period, the focus will be on strengthening and evaluating the pilot national command centre for victim empowerment, implementing an integrated social crime prevention strategy action plan and implementing the South African integrated programme of action addressing gender based violence.

This subprogramme had a staff complement of 22 in 2013/14.

2. Rand million.

## Expenditure trends

Funds have been reprioritised in 2013/14 and over the MTEF period towards the establishment of a national gender based violence command centre, which will manage gender based violence cases. The command centre will respond to and intervene in all gender based violence incidents reported. The increased expenditure on consultants is as a result of the piloting of the centre through the department's partnership with a private partner. This also explains the increase in expenditure in the *Social Crime Prevention and Victim Empowerment* subprogramme in 2013/14 and over the MTEF period.

The spending focus in the *Social Crime Prevention and Victim Empowerment* subprogramme over the medium term will be on managing the command centre, drafting legislation on victim support services and enhancing the implementation and monitoring of social crime prevention and gender based violence programmes. The department will support the development of provincial victim empowerment programme services, such as the provision of temporary shelter and care, as well as counselling and life skills training, which also receive additional funding at the provincial level to expand places in shelters for victims of abuse. Expenditure in this subprogramme between 2010/11 and 2013/14 increased due to the implementation of the Child Justice Act (2008), which requires the development of diversion programmes. These programmes are for children who are awaiting trial or have been sentenced to compulsory residence in secure care facilities. They provide personal development services such as life skills training, substance abuse detoxification, anger management and vocational skills such as plumbing, motor mechanics, brick laying and welding. This subprogramme had a funded staff establishment of 25 posts, 3 of which were vacant at the end of November 2013 due to restructuring. The number of people employed is expected to remain constant over the medium term, at 22 employees.

## **Programme 5: Social Policy and Integrated Service Delivery**

### **Objectives**

- Facilitate community based research and planning by profiling 300 000 households in poverty by 2014/15.
- Strengthen social development service delivery in identified local municipalities by:
  - conducting community dialogues in 180 areas by 2014/15
  - conducting social mobilisation in 24 local municipalities by 2014/15.
- Build research, evidence based policy making and social policy capacity and expertise within the department by:
  - training 50 policy makers per year in social policy and social policy analysis by 2016/17
  - reviewing and developing at least 1 evidence based policy per year by 2016/17
  - implementing a research coordination and management strategy by 2014/15.
- Coordinate the implementation of social cluster public employment programmes such as the expanded public works programme by creating 64 320 job opportunities by 2014/15. Of these, 33 307 will be expanded public works programme jobs, 3 199 full time equivalents and 27 814 will be non-expanded public works programme jobs. This is an increase from a baseline of 55 576 total job opportunities in 2013/14.
- Improve access to adequate and nutritious food for vulnerable households and individuals by:
  - facilitating the establishment of food distribution centres, community food depots and community food and nutrition development centres in Mpumalanga, Northern Cape and Free State by 2014/15
  - facilitating the linkage of local food producers to social relief distress food distribution centres and community food and nutrition development centres by 2014/15.
- Create an efficient and enabling environment for the registration and compliance monitoring of non-profit organisations by:
  - processing 95 per cent of all non-profit organisation applications within 2 months of receipt by 2014/15
  - adjudicating 80 per cent of non-profit organisation appeals within 3 months by 2014/15
  - ensuring the approval of a policy for the amendment of the Non-profit Organisations Act (1997) by 2015/16
  - training 3 000 non-profit organisations on governance and compliance with the Non-Profit Organisations Act (1997) in 2014/15
  - training 300 provincial officials on non-profit organisation governance and compliance with the Non-Profit Organisation Act (1997) by 2014/15.
  - conducting non-profit organisation road shows in all 9 provinces
- Promote the implementation of government's population policy by:
  - continuously increasing awareness and building capacity to integrate population factors into development plans and programmes

- increasing understanding of the state of South Africa’s population by producing annual thematic reports on progress made with the implementation of the population policy.

## Subprogrammes

- *Social Policy Research and Development* provides strategic guidance on social policy development, coordination and evaluation; and supports the department’s responsibilities in the United Nations (UN), the United Nations Educational, Scientific and Cultural Organisation (UNESCO), the African Union (AU) and the Southern African Development Community (SADC) in areas relating to social policy, research and evidence based policy making. In 2013/14, 350 officials from the national and provincial departments and municipalities had been trained in social policy and policy analysis. In that same year, 6 evidence based policies were formulated; 4 research and policy briefs produced and reviewed; and a research coordination and management strategy approved. This subprogramme had a staff complement of 2 in 2013/14.
- *Special Projects and Innovation* provides for the coordination, incubation and innovation of departmental and social cluster initiatives such as the expanded public works programme. In 2012/13, the social sector expanded public works programme achieved 171 668 work opportunities, which is 92 per cent of the target. By the end of the third quarter of 2013/14, the social sector had created 148 905 work opportunities against a full year target of 255 000 with women and youth as main beneficiaries. Transfers of R1 million will be made in 2014/15 and 2015/16, and R1.1 million in 2016/17 to Soul City for the Kwanda television programme. The department facilitated the establishment of 5 Kwanda sites to ensure the provision of integrated social services to communities. This subprogramme had a staff complement of 9 in 2013/14.
- *Population Policy Promotion* supports, monitors and evaluates the implementation of the population policy by conducting research on population trends and dynamics, raising awareness on population and development concerns, and supporting and building technical capacity to implement the policy. In 2012/13, the subprogramme’s key focus areas were the adolescent sexual reproductive health rights campaign, research, 20 local youth dialogues and 10 intergenerational capacity building sessions. This work will be upscaled over the medium term with 50 intergenerational adolescent sexual reproductive health rights dialogues and 20 intergenerational capacity building sessions for community leaders planned. In 2013/14, the focus was mainly on the 15 year review of progress with the implementation of the Population Policy (1998-2013), which coincided with the 20 year review of the implementation of the programme of action that emanated from the 1994 International Conference on Population and Development in Cairo. Other focus areas entailed finalising the framework strategy on Adolescent Sexual and Reproductive Health and Rights, with a focus on young people; disseminating research findings at local level; and enhancing understanding to integrate population factors into development plans, especially at local level. This subprogramme had a staff complement of 40 in 2013/14.
- *Registration and Monitoring of Non-Profit Organisations* provides for the registration of non-profit organisations in terms of the Non-Profit Organisations Act (1997). By the end of September 2013, 97.7 per cent (7 440 out of 7 612) of applications had been processed within 2 months and 113 016 organisations had been registered, with 778 officials trained in non-profit organisation governance and legislation in the provinces. In addition, 1 290 non-profit organisations had been trained against a 2013/14 target of 2 500. This subprogramme had a staff complement of 67 in 2013/14.
- *Substance Abuse Advisory Services and Oversight* monitors the implementation of intersectoral policies, legislation, norms and standards for substance abuse, and monitors and provides support for implementing the national drug master plan through the Central Drug Authority, whose secretariat is the department’s responsibility. A key output in 2013/14 was cabinet approval of the national drug master plan, with monitoring of its implementation planned over the medium term. This subprogramme had a staff complement of 5 in 2013/14.
- *Community Development* develops and implements policies, strategies, guidelines and programmes to contribute towards the building of sustainable, vibrant and healthy communities free from poverty and hunger. As part of professionalising community development, new qualifications were developed and accredited. In 2012/13, the focus was on the development of the occupational framework with the support of the Health and Welfare Sector Educational Training Authority. By September 2013, 8 institutions of higher learning and other stakeholders had attended workshops on the new community development qualifications.

By September 2013, 143 community development practitioners had been trained in integrated development planning and the use of the sustainable livelihood toolkit and 214 community based organisations had been trained in facilitating community development. By 30 September 2013, 299 271 households had been profiled and 13 581 change agents identified, out of which 2 203 were linked to job opportunities while others were linked to 468 funded cooperatives. By September 2013, 46 144 households were accessing food through departmental food security programmes and 481 561 people accessed food through the South African Food Bank and community nutrition and development centres. This subprogramme had a staff complement of 28 in 2013/14.

- *National Development Agency* provides grants to civil society organisations to implement sustainable community driven projects that address food security, early childhood development and create employment and income opportunities. The agency also focuses on building capacity in non-profit organisations.

## Expenditure trends

Building sustainable, vibrant and healthy communities is this programme's largest area of spending. This work is carried out by the National Development Agency. Through a transfer payment it receives from the department, the agency implements sustainable community driven projects that provide support to non-profit organisations working on early childhood development, food security, employment creation and income opportunities.

Between 2013/14 and 2016/17, expenditure is expected to increase due to the additional allocation provided for food security through the Food for All programme carried out in the *Community Development* subprogramme. Non-profit organisations will administer the food relief programmes to various households. This is expected to result in 1.4 million people being fed through numerous hunger relief initiatives such as food banks and community nutrition development centres by 2016/17.

To increase public awareness of its services, the department conducted a series of outreach programmes between 2011/12 and 2012/13, which contributed to the increase in spending on travel and subsistence and booking of venues in the *Community Development* subprogramme. The growth in spending on goods and service items such as venues, travel and catering in 2012/13 was as a result of spending in a series of non-profit organisation dialogues and a non-profit organisation summit to facilitate engagement between government and non-profit organisations. The transfer allocation to the National Development Agency was significantly reduced in 2010/11 because the entity had accumulated large cash reserves over the past years.

The department has reprioritised R10 million for each year of the MTEF period from the South African Social Security Agency as an additional allocation to the *Registration and Monitoring of Non-profit Organisations* subprogramme to improve the management of the non-profit organisation database, make the process to register non-profit organisations more efficient, support non-profit organisations with registration and increase workforce capacity. A large number of non-profit organisations had been deregistered or had not met registration requirements, while delays were experienced in registering those who do meet requirements. The allocation will therefore improve the capacity of the non-profit organisation unit to reduce backlogs and provide improved support in the registration process. As a result of the reprioritisation, spending increases mainly in travel and subsistence for provincial visits to offer registration support to unregistered non-profit organisations and compensation to process registration applications.

The programme had a funded staff establishment of 133 posts, 14 of which were vacant at the end of 2013 due to the restructuring. These are non-essential lower level posts whose compensation funds will be utilised to fill essential line function posts. The number of people employed expected to reach 130 by 2016/17, accounts for the expected increase in spending on compensation of employees over this period.

## Public entities and other agencies

### South African Social Security Agency

#### Mandate and goals

The South African Social Security Agency Act (2004) provides for the establishment of the South African Social Security Agency, whose objectives are to ensure the effective and efficient administration, management and payment of social assistance. The core business of the agency is to administer and pay social assistance transfers. The agency has a large network of centres in provinces where citizens can apply for social grants. It also manages a large payment system to over 16 million beneficiaries monthly.

- The agency's strategic goals over the medium term are to:
  - improve the effectiveness and efficiency of the administration of the social assistance programme
  - ensure that eligible beneficiaries receive benefits due to them
  - improve the quality of service delivery by:
    - achieving a fully integrated and automated social assistance system
    - ensuring that the agency is optimally capacitated for service delivery
    - decreasing the incidence of payment of fraudulent grants.
- Other key focus areas over the medium term include improvements in the administration of social relief of distress, and to the management information system, the call centre, and the agency's infrastructure.

#### Selected performance indicators

The administration programme provides leadership, as well as management and support services, which include management information systems.

The benefits administration and support programme provides an efficient and effective grant administration service to implement social protection floors. These are a set of basic social security guarantees which secure protection aimed at preventing or alleviating poverty, vulnerability and social exclusion.

The programme manages the full function of grant administration from application to approval and beneficiary maintenance, benefit payment, customer care, strategic direction and guidance pertaining to grant operations. It monitors and evaluates improvements, innovations and service delivery networks and offers strategic guidance and support to ensure that an effective and efficient social security customer care service is provided to beneficiaries in a dignified manner. It also provides payment vendor and service point management, formulates grant projections to ensure the adequate availability of funds to be transferred to beneficiaries, and is responsible for disability administration and management. A new payment contractor tender awarded has resulted in significant savings. Biometric identification of grant recipients has been introduced, re-registration campaigns conducted, and anti-fraud campaigns intensified. This has resulted in significant savings in social grant payments amounting to R2 billion in 2013/14 (Grant savings are showing in the department's *Social Assistance* programme).

## Expenditure trends

The strategic focus of the South African Social Security Agency remains the administration, management and payment of social assistance grants. Thus, the bulk of expenditure over the medium term is on compensation of employees and payments towards the cash contractor who has been contracted to disburse grant monies to beneficiaries. These two items on average make up about 34.9 per cent and 31.7 per cent of the total budget over the medium term. Furthermore, the agency will focus on making citizens' dealings with government easier, through better delivery and coordination of services. The agency is investigating options to build its own capacity as the paymaster, doing away with third party payment services.

A key focus point and cost driver of the agency in 2012/13 and 2013/14 was the re-registration project driven by the benefits administration support programme. The main aim was to root out fraud and corruption in the social grant system and lay the platform for a new payment solution. All social grants beneficiaries, including children, were required to re-register for their social grants. Included in this process was implementing a biometric based payment system. The agency embarked on significant media and communication campaigns to inform beneficiaries of the re-registration process. By December 2013, about 640 000 social grants that were being disbursed to ineligible beneficiaries were cancelled and suspended as a result of the re-registration project. This resulted in a R2 billion saving in that year.

The appointment of a single cash contractor in 2012/13 has not only reduced the cost of paying out social grants from an average of R32 to a standard fee of R16, but also transformed how social grants are paid out. All beneficiaries are provided with a biometric and pin enabled bank card which they can use to withdraw their social grants from ATMs and at points of sale such as local supermarkets. They are no longer required to collect their social grants in cash from a pay point. Looking ahead, the agency has appointed an advisory committee to assist with the development of a new payment system that will result in the South African Social Security Agency administering social grant payments on its own instead of relying on payment contractors. Payments to cash contractors make up the bulk of expenditure in goods and services under this programme.

Expenditure in the benefits administration support programme is also driven by the statutory requirement that the agency is obliged to meet. The Social Assistance Act (2004) requires the agency to perform certain activities in relation to the administration of grants, such as reviewing the status of grant beneficiaries to determine their eligibility status. The agency will ensure that the backlog in reviews is dealt with, targeting 2.6 million beneficiaries by 2014/15. A key project under this programme has been the standardisation project which began in 2011/12. By the end of 2012/13, all but three offices were implementing the four-step standardised grant process, resulting in 91 per cent of applications being processed within 21 days.

A key initiative under the administration programme has been the agency's approach to fraud management. In 2012/13, 78 per cent of fraud cases were investigated and 98 per cent of suspicious grants were verified for validity. The monetary value of cases finalised amounted to R59.4 million. In its drive to enhance accessibility of services, the agency has a significant geographic footprint of local offices throughout the country. Lease payments therefore make up a sizeable portion of the goods and services expenditure in this programme. The agency's focus will also be on enhancing its service delivery environment through continual improvements to its

local offices and pay points. 310 pay points and 72 local offices will be improved in each year over the MTEF period. The work of the agency is driven by ICT costs related to the social pension payment system which is budgeted for under this programme and makes up the bulk of the spending in computer services. Over the MTEF period, the agency will continue to modernise social grant administration and payments through numerous ICT interventions such as automating the grant application process, biometrically authenticating social pension payment system users, integrating different grant administration systems and enhancing interfaces with other government departments such as the Department of Home Affairs' national identification system.

After two years of overspending as a result of personnel related costs, the entity turned around its financial position from an accumulated deficit in 2010/11 to a surplus of R1.1 billion by end of 2012/13. These costs are expected to decline over the medium term as the entity invests in the development of its payment systems and technologies, and because of an increase in filled posts to build its own capacity as the paymaster, doing away with third party payment services.

In a drive to improve service delivery, the agency embarked on a standardisation of business operations across provinces. This led to the development of a new capacity model, which resulted in 1 489 prioritised posts being filled in 2011/12, including those of 300 extended public works programme workers who assist with queue management and enquiries. There has been a marked improvement in service delivery to beneficiaries, in particular the turnaround time from application to approval. The majority of the posts were filled within the benefits administration support programme. At the end of November 2013, a total of 9 313 posts were filled out of 10 188 funded posts, leaving 875 vacant funded posts. The posts were vacant because of the delay in the filling of the posts, following a human capacity assessment drive which was undertaken to determine the requisite capacity and possible trade-offs on the posts.

### **Other public entities and agencies**

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- The **National Development Agency** grants funds to civil society organisations for development projects for poor communities and for strengthening the institutional capacity of other civil society organisations that provide services to poor communities. It also promotes consultation and dialogue between civil society and the state, debates policy development and does research. The agency's total budget for 2014/15 is R190.9 million.

The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.

### Aim

*Transform the delivery of sport and recreation by ensuring equitable access, development and excellence at all levels of participation, thereby improving social cohesion, nation building and the quality of life of all South Africans.*

### Mandate

The department is established in terms of the Public Service Act (1994). Its legal mandate is derived from the National Sport and Recreation Act (1998), which requires it to oversee the development and management of sport and recreation in South Africa. The act also provides the framework for relationships between the department and its external clients. This includes the department's partnership with the South African Sports Confederation and Olympic Committee, which is key to improving South Africa's international ranking in selected sports. The act also ensures that South Africa contributes to sport, physical education and social cohesion by legislating on sports participation as well as on sports infrastructure.

### Strategic goals

The department's strategic goals over the medium term are to:

- increase citizens' access to sport and recreation activities
- oversee the transformation of the sport and recreation sector
- ensure that more athletes achieve international success
- develop enabling mechanisms to support sport and recreation
- ensure that sport and recreation are used as tools to support social cohesion and nation building.

### Programme purposes

#### Programme 1: Administration

**Purpose:** Manage the department and provide overall strategic and administrative support services.

**Programme 2: Active Nation**

**Purpose:** Support the provision of mass participation opportunities in sport and recreation.

**Programme 3: Winning Nation**

**Purpose:** Support the development of elite athletes.

**Programme 4: Sport Support**

**Purpose:** Develop and maintain an integrated support system to enhance the delivery of sport and recreation.

**Programme 5: Infrastructure Support**

**Purpose:** Regulate and manage the provision of sport and recreation facilities.

**Selected performance indicators****Table 20.1 Sport and Recreation South Africa**

Indicator	Programme	Outcome	Past			Current	Projections		
			2010/11	2011/12	2012/13	2013/14	2014/15	2015/16	2016/17
Number of national school sport championships supported per year <sup>1</sup>	Active Nation	Outcome 12: An efficient, effective and development orientated public service and an empowered, fair and inclusive citizenship	1	1	1	1	1	1	1
Number of major international events receiving intra-governmental support per year	Winning Nation		9	19	12	5	4	4	4
Number of sport and recreation bodies receiving financial support per year	Sport Support		61	54	68	60	60	60	60

1. The department has revised their programme budget structure to align it to the national sport and recreation plan; the broad strategic document for the sports sector in South Africa. The new indicators have been included to ensure alignment with this plan.

**The national development plan**

The national development plan recognises that sport plays an important role in promoting nation building, social cohesion and a healthy lifestyle. The department will therefore continue to provide opportunities for participation indirectly, through financial support to national sports federations, and directly by offering opportunities for participation in sports promotion projects. These include the national youth camp, the national indigenous games festival, the annual Big Walk and the Golden Games. The department plans to provide more focused support to 60 specifically identified and recognised sport and recreation bodies over the medium term, for maximum impact.

The plan specifically encourages school sport, which is viewed as an integral part of the holistic development of the learner. In partnership with the Department of Basic Education, the department will continue to coordinate a schools league programme, in which schools will participate in the league's 5 competition levels, culminating in the South African national school sport championship each year.

## Expenditure trends

The spending focus over the medium term will be on increasing participation in school sport, and developing sport clubs and sporting hubs within communities. The main areas of expenditure will therefore be the *Active Nation* programme, which consists mainly of transfers of the mass participation and development grant to

provinces, and the *Sport Support* programme, from which transfers to sport federations are made. This expenditure accounts for the dominance of transfers and subsidies in departmental expenditure. The need to provide the necessary oversight in relation to the actual use of these transferred funds accounts for the growth in expenditure on travel and subsistence over the MTEF period.

Overall expenditure decreased between 2010/11 and 2013/14, following the completion of the 2010 FIFA World Cup projects, and is expected to decrease further between 2013/14 and 2014/15, from R1.1 billion to R970.4 million, due to the once-off allocation of R158.5 million in 2013/14 for the 2014 African Nations Championship.

There were 42 vacant posts in November 2013, mainly between levels 7 and 10, and the department plans to fill these over the medium term. This explains the projected increase in expenditure on compensation of employees over the MTEF period. Spending on operating leases is also projected to grow, due to the department's planned move to new premises in 2013/14 to accommodate the bigger staff complement.

Expenditure on contractors up to 2015/16 is mainly for payments to tertiary institutions on behalf of athletes receiving scientific support. After 2015/16, spending on contractors will mainly go towards the programme to train coaches, which accounts for the decline in spending on this item over the MTEF period.

Cabinet approved the following adjustments to the department's budget: additional allocations of R3.6 million in 2014/15, R4.2 million in 2015/16, and R5.5 million in 2016/17 to assist the South African Institute for Drug-Free Sport in ensuring that South Africa complies with the World Anti-Doping Agency code; and reductions of R3.4 million over the medium term through implementing efficiency measures, the details of which are discussed in the relevant programme sections.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing corporate and other support services to the department, which accounts for the dominance of the *Corporate Services* subprogramme, and providing for the department's accommodation needs. Thus, the most significant items of expenditure in the programme are compensation of employees, travel and subsistence, and operating leases.

There were 180 funded posts in this programme, of which 109 were filled at the end of November 2013. The department plans to fill the vacant posts over the medium term. The expected growth in expenditure on compensation of employees over the MTEF period is due to the planned filling of key positions, like the chief director in *Corporate Services* and senior finance and budgeting positions in the office of the chief financial officer. Expenditure on travel and subsistence is mainly to provide for trips to and from Parliament and international travel to meetings, sport events and conventions of the United Nations Educational, Scientific and Cultural Organisation and the African Union Sports Council meetings. The spikes in travel and subsistence expenditure in 2011/12 and 2012/13 were due to travel to the Rugby World Cup in New Zealand, the Zone VI Games in Mozambique in 2011/12 and the Olympic Games in 2012/13.

The lease for office accommodation constitutes 7 per cent of the budget between 2010/11 and 2013/14, and is expected to increase over the medium term after the department's expected move to new premises at the end of 2013/14.

Spending on consultants is equivalent to 1.7 per cent of expenditure on compensation of employees in 2012/13. Consultants mainly provide legal and audio visual services, and conduct external auditing investigations.

R1.3 million over the medium term has been reprioritised from the external audit function to expand the internal audit function to support federations, public entities and provinces on the management of the mass participation and sport development conditional grant.

## **Programme 2: Active Nation**

### **Objectives**

- Contribute to improving the overall wellbeing of the nation by stimulating lifelong participation in active recreation through facilitating the delivery of at least 3 programmes (the Big Walk, youth camps and the Golden Games) in 2014/15.
- Contribute to social cohesion by offering innovative opportunities for communities to participate in sport through the delivery of at least 3 programmes (the indigenous games, modified sport and rural sport) in 2014/15.
- Foster lifelong learner participation in sport by developing school sport through the hosting of the South African national school sport championship in 2014/15.
- Facilitate sport and recreation participation and empowerment in partnership with provincial departments through the effective management of the 2014/15 mass participation and sport development conditional grant by:
  - ensuring that provincial grant business plans are aligned with the grant framework
  - monitoring the delivery of outputs to ensure that these are being done in line with the approved business plans.

### **Subprogrammes**

- *Programme Management: Active Nation* manages delegated administrative and financial responsibilities, and coordinates all monitoring and evaluation functions. This subprogramme had a staff complement of 2 in 2013/14.
- *Active Recreation* delivers programmes to improve the health and wellbeing of the nation by providing mass participation opportunities in various formats to cater for a spectrum of participants. In 2013/14, the department hosted the Big Walk and 9 national youth camps at a total cost of R1.6 million, and supported the Department of Social Development in hosting the Golden Games. Campaigns, such as Move for your Health, were also supported and the ministerial advisory committee on recreation was set up. This subprogramme had a staff complement of 5 in 2013/14.
- *Community Sport* delivers sports promotion programmes by focusing on increasing the number of participants in sport and recreation, with an emphasis on disadvantaged communities. The subprogramme also manages the transfer to the loveLife programme, which aims to promote sport and recreation to build an HIV and AIDS free future. In 2013/14, the national indigenous games festival was hosted in Pretoria at an estimated cost of R10 million, and the Nelson Mandela Sport and Culture Day was hosted in Johannesburg in partnership with the Department of Arts and Culture. Rural sport improvement programmes, including ministerial outreach programmes, were implemented and a range of physical activities were offered through the sport and recreation hubs, at a cost of R3.4 million. This subprogramme had a staff complement of 7 in 2013/14.
- *School Sport* supports the delivery of sport programmes to learners in conjunction with the Department of Basic Education. The subprogramme supports the school sport league programme by providing equipment and attire, and coordinates the training of educators in code specific coaching, technical officiating, team management and sports administration with the focus on integrating 16 priority sport codes (including soccer, cricket, rugby, netball and athletics) and indigenous games (morabaraba and jukskei) into the school sport system. The subprogramme is also responsible for hosting the annual national school sport championship and plays an oversight role regarding the support offered to schools by provinces funded from the mass participation and sport development conditional grant. In 2013/14, 11 sports federations were supported in delivering capacity building programmes to educators and a national school sport championship

attended by approximately 7 000 learners was hosted in Mangaung at a cost of R48 million. This subprogramme had a staff complement of 8 in 2013/14.

- *Provincial Sport Support and Coordination* transfers the mass participation and sport development conditional grant to provinces.

## Expenditure trends

The spending focus over the medium term will be on promoting mass participation in sport and recreation through the mass participation and sport development conditional grant, which supports school sport, club development, sporting hubs, sport academies and sport councils and accounts for the dominance of expenditure on transfers to provinces in the programme. An average of 85 per cent of the programme's total allocation over the medium term will be spent on the grant in the *Provincial Sport Support and Coordination* subprogramme. The management and oversight exercised by the department in respect of the grant partially accounts for the increased expenditure on travel and subsistence, which falls under the *Community Sport* and *School Sport* subprogrammes.

School sport remains a priority for the department as it is the bedrock for sport development in the country, as reflected in the growth in expenditure in the *School Sport* subprogramme over the MTEF period. The main activity in this subprogramme is the South African national school sport championship. Staged annually, the event explains the relative significance of expenditure on travel and subsistence and venues and facilities within expenditure on goods and services. The decrease in expenditure in this subprogramme in 2013/14 was due to the once-off shifting of funds to the *Community Sport* subprogramme for the Nelson Mandela Sport and Culture Day.

The programme had a funded establishment of 23, with 1 vacancy, at the end of November 2013. This vacancy is expected to be filled in 2014/15. In addition, contract positions set to be created in 2014/15 to assist provinces in implementing their respective school sport programmes account for the growth in expenditure on compensation of employees over the medium term.

## Programme 3: Winning Nation

### Objectives

- Contribute to nation building by financially supporting, monitoring and evaluating the services delivered by the South African Sports Confederation and Olympic Committee in preparing and delivering South African teams for participation at selected international multi-sport code events on an ongoing basis.
- Promote drug free sport by providing financial support annually to the South African Institute for Drug Free Sport to ensure that South Africa complies with the World Anti-Doping Agency code.
- Encourage the staging of major sport events in South Africa by providing support to sport federations for event bidding and hosting and supporting services for 4 events in 2014/15 in accordance with the approved events calendar.
- Promote sport tourism in South Africa by hosting Ekhaya, the hospitality centre showcasing South Africa, at the 2014/15 Commonwealth Games in Glasgow.
- Support international participation of South African sports people by facilitating all their requests for assistance in acquiring visas and passports in 2014/15 and over the medium term.
- Promote national pride by acknowledging sporting achievements, both contemporary and past performances, through the delivery of recognition systems including: hosting the 2014 Sports Awards, bestowing the green jacket accolade on deserving sports stars, and rewarding exceptional performances achieved throughout 2014/15 with a financial incentive.

### Subprogrammes

- *Programme Management: Winning Nation* manages delegated administrative and financial responsibilities, and coordinates all monitoring and evaluation functions. This subprogramme had a staff complement of 2 in 2013/14.
- *Scientific Support* supports the South African Sports Confederation and Olympic Committee, by means of a transfer payment, to implement measures to prepare Team South Africa for international performances. The subprogramme is also responsible for supporting the South African Institute for Drug-Free Sport, through a transfer payment, to ensure compliance with the World Anti-Doping Agency code. In 2013/14, 41 athletes and coaches were assisted through scientific support programmes at a cost of R15.3 million.

- *Major Events Support* coordinates and manages government's support services for hosting identified major events in South Africa. In 2013/14, the African Nations Championship, Soweto Tennis Open, World Transplant Games, World Gym for Life Challenge, Union Cycliste Internationale Mountain Bike and Trials World Championships, and the World Anti-Doping Agency conference on doping in sport were supported. This subprogramme had a staff complement of 2 in 2013/14.
- *Recognition Systems* provides opportunities for the public acknowledgement of contemporary sports successes as well as those achieved in the past by sporting legends. Events include the annual South African Sports Awards and the Andrew Mlangeni Green Jacket Awards for sporting legends. Financial incentives are also provided for outstanding performances by South African athletes. The annual South African Sports Awards were held at a cost of R17.5 million in 2013/14.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing scientific support to athletes as reflected in the *Scientific Support* subprogramme. In this period, the subprogramme will receive an additional allocation of R13.3 million for the transfer to the South African Institute for Drug-Free Sport. The additional funds are to assist the institute in ensuring that South Africa complies with the World Anti-Doping Agency code.

Expenditure on contractors in the *Scientific Support* subprogramme grew significantly from 2010/11 to 2013/14, due to the department intensifying support for elite athletes through high performance centres in preparation for major events over this period, including the 2012 Olympic Games. The fluctuations in the transfers to non-profit institutions are due to once-off allocations of R84 million in 2012/13 to host the 2013 Africa Cup of Nations, and R36 million in 2013/14 for the 2014 African Nations Championship. As a result, spending in the *Major Events* subprogramme fluctuates between 2010/11 and 2013/14.

The *Recognition Systems* subprogramme was introduced in 2011/12. Expenditure has fluctuated in this subprogramme from inception, mainly due to financial incentives paid to athletes for their achievements at international events in 2011/12 and 2013/14. These payments were made through transfers to the South African Sports Confederation and Olympic Committee and are reflected under transfers to non-profit institutions. As part of Cabinet approved budget reductions, the *Recognition Systems* subprogramme expenditure will be reduced by R3.4 million over the medium term. The impact of this reduction on service delivery will be minimised as private sector donors are brought in to augment funding for the recognition of performances.

The number of personnel in this programme is expected to increase from 17 in 2013/14 to 23 in 2016/17. This accounts for the increase in expenditure on compensation of employees over the medium term as vacant posts are filled to provide the capacity required to support the implementation of the newly endorsed national sport and recreation plan. The department delayed filling these posts to ensure that the new organisational structure would be aligned with this plan.

## Programme 4: Sport Support

### Objectives

- Contribute towards uniting the country by supporting 60 national sports federations and other non-governmental organisations that offer sport and recreation opportunities to all South Africans, in 2014/15.
- Support South Africa's sport developmental goals by activating and managing bilateral relations with countries in the rest of Africa and abroad through actively participating and influencing decision-making in identified multilateral organisations such as the African Union Sports Council, the United Nations, the Commonwealth and the World Anti-Doping Agency, among others, in 2014/15.

### Subprogrammes

- *Programme Management: Sport Support* manages delegated administrative and financial responsibilities, and coordinates all monitoring and evaluation functions. This subprogramme had a staff complement of 1 in 2013/14.
- *International Liaison* coordinates and strengthens bilateral and multilateral sport and recreation relations with international partners to support sport and recreation development in South Africa. Key bilateral agreements reached in 2013/14 include those with Lesotho, New Zealand, Burundi and Australia. This subprogramme had a staff complement of 2 in 2013/14.
- *Sport and Recreation Service Providers* transfers funds to sport and recreation organisations, predominantly national federations; monitors the use of these funds in line with service level agreements signed between the national federations and the department; administers the transfers made to Boxing South Africa and to non-governmental organisations; monitors governance and sport development; and oversees the implementation of transformation programmes in line with the transformation charter and scorecard. 68 recognised sport and recreation bodies were supported in 2013/14 at a cost of R138.6 million. This subprogramme had a staff complement of 3 in 2013/14.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on supporting recognised sport federations through transfers to non-profit institutions in the *Sport and Recreation Service Providers* subprogramme. These transfers constitute 83.6 per cent of the programme's allocation over the medium term and will ensure that 60 sport federations are supported in each year of the MTEF period.

The *International Liaison* subprogramme is projected to have a negative average annual growth over the medium term due to the implementation of efficiency measures in international travel, which include smaller delegations being sent to international events.

The number of personnel in this programme is expected to increase from 6 posts in 2013/14 to 9 funded posts in 2016/17. This accounts for the growth in expenditure on compensation of employees over the MTEF period as the department fills vacant posts that will provide the capacity required to support the implementation of the newly endorsed national sport and recreation plan. The department delayed filling these posts to ensure that the new organisational structure would be aligned with this plan.

## Programme 5: Infrastructure Support

### Objectives

- Improve levels of participation in sport and recreation by facilitating the provision of adequate and well maintained facilities by:
  - conducting an audit of existing sport facilities in 2014/15
  - compiling a national facilities plan to be completed in 2015/16
  - lobbying municipalities to maximise the use of the portion of the municipal infrastructure grant earmarked for building sport facilities each year
  - providing technical assistance to local authorities and other relevant stakeholders for constructing and managing sport facilities to ensure compliance with national standards each year.

### Subprogrammes

- *Programme Management: Infrastructure Support* manages delegated administrative and financial responsibilities, and coordinates all monitoring and evaluation functions. This subprogramme had a staff complement of 1 in 2013/14.
- *Sport and Recreation Facility Management* provides technical assistance to local authorities and other relevant stakeholders for constructing and managing sport facilities to ensure compliance with national standards. The subprogramme also assists municipalities in ensuring that the FIFA World Cup 2010 stadia are well maintained and optimally used. In 2013/14, all 16 requests received for technical assistance from

local authorities and other relevant stakeholders for constructing and managing sport facilities were granted. This subprogramme had a staff complement of 2 in 2013/14.

- *Sport and Recreation Facility Planning* lobbies for, facilitates and coordinates the provision of sport and recreation facilities by municipalities and other relevant institutions. In 2013/14, the department worked closely with the Department of Cooperative Governance and Traditional Affairs, the South African Local Government Association and municipalities to lobby for the building of 72 facilities. Work also began on the national facilities audit, which will be completed by 2015/16 at an estimated cost of R6 million. This subprogramme had a staff complement of 2 in 2013/14.

1. Data has been provided by the department and may not necessarily reconcile with official government personnel data.

2. Rand million.

## Expenditure trends

The spending focus over the medium term will be on providing 18 outdoor gyms to rural areas that have no sport facilities; completing the national facilities audit; and compiling a national facilities plan. This planned expenditure is reflected in the *Sport and Recreation Facility Management* subprogramme, which constitutes 49.5 per cent of total programme expenditure over the medium term. The provision of outdoor gyms to rural areas also explains the expenditure on contractors across the seven-year period. Expenditure in this

subprogramme is expected to increase over the medium term, following the lower than expected spending in 2013/14, which was the result of unexpected delays in the delivery of the outdoor facilities and delays in conducting the facilities audit.

The number of personnel in this programme is expected to increase from 5 posts in 2013/14 to 9 posts in 2016/17. This accounts for the growth in compensation of employees over the medium term as the department fills vacant posts that will provide the capacity required to support the implementation of the newly endorsed national sport and recreation plan. The department delayed filling these posts to ensure that the new organisational structure would be aligned with this plan.

## **Public entities and agencies**

Comprehensive coverage of the following public entities is provided with the more detailed information for the vote at [www.treasury.gov.za](http://www.treasury.gov.za) under the budget information link.

- **Boxing South Africa** administers professional boxing, recognises amateur boxing, creates synergy between professional and amateur boxing, and promotes interaction between associations of boxers, managers, promoters and trainers. The organisation's total budget for 2014/15 is R10.2 million.
- **The South African Institute for Drug-Free Sport** promotes participation in sport without the use of prohibited performance enhancing substances and methods, and educates sportspeople on fair play and the harmful effects of doping. The institute's total budget for 2014/15 is R22.3 million.

*The Estimates of National Expenditure e-publications for individual votes are available on [www.treasury.gov.za](http://www.treasury.gov.za). These publications provide more comprehensive coverage of vote specific information, particularly about goods and services, transfers and subsidies, public entities, donor funding, public private partnerships, conditional grants to provinces and municipalities, expenditure on skills training, a revised spending estimate for the current financial year, and expenditure information at the level of service delivery, where appropriate.*

### Aim

*Contribute to a just, peaceful and safer South Africa through effective and humane incarceration of inmates and the rehabilitation and social reintegration of offenders.*

### Mandate

The mandate of the Department of Correctional Services is derived from the Correctional Services Act (1998), as amended, the Criminal Procedure Act (1977) and the 2005 White Paper on Corrections. The legislation requires the department to contribute to maintaining and promoting a just, peaceful and safe society by correcting offending behaviour in a safe, secure and humane environment, thus facilitating optimal rehabilitation and reduced repeat offending.

### Strategic goals

The strategic goals of the department are to ensure that:

- the efficiency of the justice system is improved through the effective management of remand processes
- society is protected through incarcerated offenders being secured and rehabilitated
- society is protected by offenders being reintegrated into the community as law abiding citizens.

In this way, the department contributes to ensuring that all people in South Africa are and feel safe (outcome 3).

### Programme purposes

#### Programme 1: Administration

**Purpose:** Provide administrative support and strategic leadership to the department.

#### Programme 2: Incarceration

**Purpose:** Provide appropriate services and well maintained physical infrastructure that support safe and secure conditions of detention consistent with the human dignity of inmates, personnel and the public; and provide for the profiling of inmates and the compilation of needs based correctional sentence plans, administration and interventions.

### Programme 3: Rehabilitation

**Purpose:** Provide offenders with needs based programmes and interventions to facilitate their rehabilitation and enable their social reintegration.

### Programme 4: Care

**Purpose:** Provide needs based care services aimed at maintaining the personal wellbeing of all inmates in the department's custody.

### Programme 5: Social Reintegration

**Purpose:** Provide services focused on offenders' preparation for release, the effective supervision of offenders placed under the system of community corrections and the facilitation of their social reintegration into communities.

Percentage of inmates who escape from correctional centres and remand detention facilities per year	Incarceration	Outcome 3: All people in South Africa are and feel safe	0.065% (106/161 021)	0.026% (41/160 103)	0.028% (43/151 517) <sup>1</sup>	0.032% (50/155 836)	0.026% (40/154 278)	0.025% (38/152 735)	0.024% (36/151 208)
Percentage of inmates allegedly assaulted in correctional centres and remand detention facilities per year	Incarceration		3.1% (5 043/161 021)	3.3% (5 284/160 103)	4.5% (6 884/151 517) <sup>2</sup>	2.0% (3 117/155 836) <sup>3</sup>	4.1% (6 325/154 278)	3.9% (5 956/152 735)	3.7% (5 594/151 208)
Percentage of overcrowding in correctional centres and remand detention facilities per year in excess of official capacity	Incarceration		34.9% (41 240/118 165)	35.6% (42 481/118 154)	28.7% (33 953/118 500)	30% (36 015/120 049)	29% (35 114/119 164)	28% (33 628/120 099)	27% (33 277/123 248)
Percentage of offenders who participate in educational programmes measured against the enrolment register for the academic year	Rehabilitation		— <sup>4</sup>	— <sup>4</sup>	— <sup>4</sup>	— <sup>4</sup>	80% (10 505/13 131)	80% (11 554/14 443)	80% (12 708/15 886)
Percentage of offenders who participate in skills development programmes measured against the list of offenders registered for participation (enrolment register)	Rehabilitation		— <sup>4</sup>	— <sup>4</sup>	— <sup>4</sup>	— <sup>4</sup>	80% (6 863/8 581)	80% (7 551/9 438)	80% (8 306/10 381)
Percentage of inmates on antiretroviral therapy (cumulative)	Care		98.9% (8 091/8 178)	69% (6 095/8 819) <sup>5</sup>	96% (11 814/12 321)	94% (16 577/17 636)	95% (19 158/20 166)	96% (21 788/22 696)	97% (24 469/25 226)
Percentage of parolees without violations per year	Social Reintegration		74.9% (28 169/37 609)	76.1% (35 819/47 095)	84.9% (39 269/46 259)	79.6% (38 768/48 703)	80.9% (44 247/54 694)	81.9% (48 781/59 562)	82.9% (53 771/64 863)

1. The denominator decreased due to special remission where a number of inmates were released.

2. The increase in 2012/13 can be attributed to the department identifying the problem of under reporting and intensifying awareness and training sessions to address the matter.

3. The decrease in 2013/14 was based on under reported statistics due to misunderstanding of the indicator. Subsequent awareness and training sessions on technical indicator descriptions have resulted in improved reporting. This has necessitated the review of the baseline, as well as the indicator in 2013/14.

4. The measurement of this new indicator will begin in 2014/15.

5. In 2011/12, only the special category of CD4 counts below 350 were reported on, which included pregnant women, children under the age of five and tuberculosis/HIV co-infected individuals. This resulted in a smaller antiretroviral therapy population being reported on. In the following years, the criteria changed to include all persons eligible for antiretroviral therapy with a CD4 count below 350.

## The national development plan

One of the elements of Vision 2030, as stated in the national development plan, is that people living in South Africa should feel safe at home, school, work, and must enjoy an active community life free of fear. The plan outlines an integrated and interdepartmental approach to building safety, including enhancing the rehabilitation of offenders and thus improving their reintegration into society and reducing recidivism. To help achieve this vision, the department is committed to enhancing public safety by effectively managing remand detention,

reducing the rate of reoffending through apposite offender management and rehabilitation interventions, and facilitating the social reintegration of offenders through the effective management of non-custodial sentences and parole.

2. Rand million.

## Expenditure trends

The bulk of the department's spending goes towards the *Administration* and *Incarceration* programmes for expenditure on compensation of employees and related goods and services items, mainly due to the labour

intensive nature of these programmes. The department's funded establishment of 42 006 posts, with 2 011 posts filled additional to the establishment, is thus important to achieving the relevant performance targets.

Using funds allocated to the *Incarceration*, *Rehabilitation* and *Social Reintegration* programmes, the department plans to reduce the percentage of escapes from a projected 0.032 per cent in 2013/14 to 0.024 per cent in 2016/17; ensure that 80 per cent of offenders registered for participation in education and skills development programmes complete such programmes between 2014/15 and 2016/17; and ensure that the percentage of parolees without violations per year increased from a projected 79.6 per cent in 2013/14 to 82.9 per cent in 2016/17. To support the department in meeting these targets, Cabinet approved the reprioritisation of R72.6 million in 2014/15, R72.8 million in 2015/16 and R77.9 million in 2016/17 from non-essential goods and services items (such as catering, entertainment, consultants, and venues and facilities) to purchase security equipment, replace dilapidated workshop and agriculture machinery and equipment, roll out electronic monitoring, and implement victim-offender dialogues in correctional centres and society.

In order to provide well maintained physical infrastructure that supports safe and secure conditions of detention that are consistent with the human dignity of inmates, R207.2 million in 2014/15, R216.7 million in 2015/16 and R228.2 million in 2016/17 is set aside for the repair and maintenance of correctional and other facilities, while R605.8 million in 2014/15, R603.2 million in 2015/16 and R635.2 million in 2016/17 has been reserved for the upgrading of correctional and other facilities.

There were 2 266 vacancies at the end of December 2013. These vacancies were due to natural attrition and the length of time it takes to finalise recruitment processes. Vacancy levels are expected to drop in 2014/15 due to the decentralisation of post advertisements to regions in 2013/14 as part of the effort to expedite the filling of vacant posts. Spending on consultant services over the entire seven-year period caters mainly for activities for which department personnel do not have the specialist skills, such as the upgrading of IT infrastructure and the maintenance of information systems. Over the same period, provision is also made for the payment of legal services, external and internal audits, and laboratory fees.

The strong growth in spending in the *Rehabilitation* and *Social Reintegration* programmes between 2010/11 and 2013/14 was due to the increased provision of equipment for production workshop and agricultural activities to facilitate the transfer of technical skills to empower offenders upon release from custody, and the pilot project on electronic monitoring to improve the effectiveness of the community corrections system. The replacement of the department's vehicle fleet explains the once-off increase in expenditure on machinery and equipment in 2010/11.

### Infrastructure spending

Spending on infrastructure decreased from R950.9 million in 2010/11 to R803.1 million in 2013/14, and is expected to increase to R863.4 million in 2016/17. The decrease in spending on infrastructure between 2010/11 and 2013/14 was due to spending reductions on buildings and other fixed structures as a result of consistent underspending on capital works projects.

#### *Large projects*

The department has allocated R286.5 million in 2014/15, R255 million in 2015/16 and R460 million in 2016/17 for large infrastructure projects. Over the medium term, 16 correctional facilities will be upgraded and 4 748 additional bed spaces will be created as follows: 634 bed spaces at Ceres, Vanrhynsdorp and Matatiele in 2013/14; 480 bed spaces at Tzaneen, Pretoria C-Max and Maphumulo in 2014/15; 485 bed spaces at Estcourt and Parys in 2015/16; and 3 149 bed spaces at Zeerust, Ingwavuma, Standerton, Nongoma, Nkandla, Lichtenburg, Burgersdorp and Potchefstroom in 2016/17. These additional bed spaces will increase overall bed capacity from 118 500 in 2012/13 to 123 248 in 2016/17.

#### *Small projects*

The department has allocated R526.5 million in 2014/15, R564.9 million in 2015/16 and R403.4 million in 2016/17 for several small projects to be implemented over the medium term. These include: the construction of new parole board offices and additional school facilities; the installation of integrated IT systems, security systems, access gates and visitors' waiting rooms; the installation of standby generators; and the replacement of kitchen equipment, boilers, incinerators, and power, water and sewerage facilities. The decrease in spending on

these projects in 2016/17 is due to the department prioritising more funds towards large infrastructure projects in order to finalise important upgrading projects in these years.

## Expenditure trends

The bulk of spending in this programme over the medium term goes towards compensation of employees and goods and services, to professionalise the department and build capacity in its largest subprogrammes, *Corporate Services* and *Management*. The significant amount spent on staff and staff related costs is due to the labour intensive nature of these subprogrammes. Expenditure on compensation of employees over the medium term is expected to increase due to additional allocations for improved conditions of service. Expenditure on

goods and services, specifically computer services, operating leases and food and food supplies, is expected to decrease due to the functions relating to the payment of accommodation charges for correctional centres and community corrections offices, provision of nutritional services to inmates, and electronic monitoring being decentralised to the *Incarceration, Care and Social Reintegration* programmes from 2014/15 onwards.

The programme had a funded establishment of 6 546 posts, and 999 posts are filled additional to the establishment. The 779 vacancies at the end of December 2013 can be attributed to natural attrition and the length of time it takes to finalise recruitment processes. Vacancy levels are expected to drop in 2014/15 due to the decentralisation of post advertisements to regions in 2013/14, as part of efforts to expedite the filling of vacant posts. Personnel numbers are expected to remain at 6 546 over the medium term.

Spending grew significantly in the *Management* subprogramme, specifically in 2011/12 and 2013/14, as the department upgraded its ICT infrastructure and implemented a departmental master information systems plan, which covers systems development, the upgrade of network and backup systems, and integrating information with other departments in the criminal justice system. The decrease in spending in the *Office Accommodation* subprogramme in 2014/15 is due to the budget for accommodation charges pertaining to correctional centres and community corrections offices being decentralised to the *Incarceration* and *Social Reintegration* programmes.

The increase in spending in the *Internal Audit* subprogramme across the seven-year period is to provide additional capacity and resources for the internal audit unit, while the decrease in expenditure in the *Residential Accommodation* subprogramme is due to the expiry and cancellation of residential contracts from 2012/13 onwards. The replacement of the department's vehicle fleet explains the once-off increase in expenditure on machinery and equipment in 2010/11, while the increases in spending on fleet services in 2013/14 is due to a reclassification of budget items implemented on 1 April 2013.

## Programme 2: Incarceration

### Objectives

- Enhance safety and security in correctional centres and remand detention facilities by:
  - reducing the percentage of escapes from 0.028 per cent in 2012/13 to 0.024 per cent in 2016/17
  - reducing the percentage of inmate assaults from 4.5 per cent in 2012/13 to 3.7 per cent in 2016/17
  - reducing the percentage of unnatural deaths from 0.038 per cent in 2012/13 to 0.033 per cent in 2016/17.
- Provide facilities that will contribute to humane incarceration by:
  - reducing the level of overcrowding from 28.7 per cent in 2012/13 to 27 per cent in 2016/17
  - upgrading at least 16 facilities and creating 4 748 new bed spaces by 2016/17
  - increasing the total bed spaces available in the department from 118 500 in 2012/13 to 123 248 in 2016/17.

### Subprogrammes

- *Security Operations* funds activities aimed at providing safe and secure conditions for all incarcerated persons, consistent with human dignity, and provides protection for personnel and the public. Key activities include security operations and the maintaining, upgrading and acquisition of security technology systems and equipment. There are 243 correctional facilities across the country, with a daily average inmate population of 155 836. In 2012/13, the number of escapes, unnatural deaths and inmate assaults stood at 43, 57 and 6 884. At the end of September 2013, the number of escapes, unnatural deaths and inmate assaults stood at 27, 34 and 3 307, against 2013/14 targets of 50, 42 and 3 117. The subprogramme had a staff complement of 22 849 in 2012/13, and an estimated staff complement of 22 100 in 2013/14.
- *Facilities* funds the construction, upgrading and rental of facilities accommodation as well as payments for municipal charges and payments for the replacement and maintenance of facilities, to support the safe and humane incarceration of inmates. In 2012/13, the stages of completion for the upgrading of three facilities were: Ceres (82 per cent), Vanrhynsdorp (96 per cent) and Tzaneen (89 per cent). By the end of September 2013, progress to completion was: Ceres (82 per cent), Vanrhynsdorp (99 per cent) and Tzaneen

(94 per cent). These facilities are set to open in 2013/14. The subprogramme had a staff complement of 578 in 2012/13, and an estimated staff complement of 553 in 2013/14.

- *Remand Detention* funds the development of a remand detention system and aims to improve the management of remand detainees. Activities include: incarcerating and safeguarding remand detainees in remand detention facilities; ensuring court appearances of remand detainees; developing remand detention policies; and liaising with departments in the justice, crime prevention and security cluster on case flow management. There are 26 dedicated remand detention facilities across the country. The daily average in these and other facilities at the end of September 2013 was 44 652. In 2012/13, the percentage of remand detainees with bail placed under the non-custodial system against remand detainees with bail stood at 5.8 per cent (613/10 551). By the end of September 2013, the percentage of remand detainees with bail placed under the non-custodial system against remand detainees with bail stood at 15 per cent (7 086/47 190), against a 2013/14 target of 11 per cent. The subprogramme had a staff complement of 64 in 2012/13, and an estimated staff complement of 471 in 2013/14.
- *Offender Management* is discussed in more detail below.

## Expenditure trends

The bulk of spending in this programme goes towards compensation of employees and related goods and services items, mainly due to the labour intensive nature of the *Security Operations* and *Offender Management* subprogrammes. Using funds allocated to these subprogrammes between 2010/11 and 2012/13, the department managed to reduce the number of escapes from 106 to 43 and overcrowding from 34.9 per cent to 28.5 per cent.

Over the medium term, the spending focus will be on providing secure facilities that contribute to humane incarceration by reducing overcrowding, the number of escapes, assaults and unnatural deaths, and the period that remand detainees spend in correctional facilities. An increased provision is made for security equipment in 2014/15, while growth in expenditure in the *Facilities* subprogramme between 2013/14 and 2016/17 provides for bed spaces to increase from 118 500 in 2012/13 to 123 248 in 2016/17. At least 16 facilities will be upgraded to increase total bed capacity by 4 748 new bed spaces, resulting in the level of overcrowding decreasing to 27 per cent in 2016/17.

The programme had a funded establishment of 29 233 posts, and 1 008 posts are filled additional to the establishment. The 946 vacancies at the end of December 2013 can be attributed to natural attrition and the length of time it takes to finalise recruitment processes. Vacancy levels are expected to drop in 2014/15 due to the decentralisation of post advertisements to regions in 2013/14 as part of efforts to expedite the filling of vacant posts.

Expenditure on contractors and machinery and equipment increased significantly in 2013/14, due to the increased provision for the day-to-day maintenance expenditure on correctional facilities caused by higher than inflationary increases in building and maintenance materials, and increased provision for security equipment to improve access security control at correctional centres and remand detention facilities.

## Subprogramme: Offender Management

This subprogramme funds administrative activities and operations for correctional services that create an environment that is supportive of the rehabilitation and safety of offenders. These include: risk and profile management of offenders; the work of case management committees, which are responsible for ensuring that offenders with sentences longer than 24 months have correctional sentence plans and that the plans are reviewed and updated; the making of parole placement recommendations to correctional supervision and parole boards; and the supervision of offenders employed in work opportunities based on their skills. In 2012/13, the rate of overcrowding in correctional and remand detention facilities was 28.7 per cent and correctional sentence plans were developed for 97 per cent of offenders serving sentences longer than 24 months. By the end of September 2013, the rate of overcrowding was 30 per cent and correctional sentence plans were developed for 98 per cent of offenders serving sentences longer than 24 months, against 2013/14 targets of 30 per cent and 98 per cent.

## Expenditure trends

With a funded establishment of 5 790 posts and due to its labour intensive nature, the bulk of this subprogramme's spending goes towards compensation of employees. The 237 vacancies at the end of December 2013 can be attributed to natural attrition and the length of time it takes to finalise recruitment processes. The department expects to fill all vacancies in this subprogramme in the last quarter of 2013/14 following the decentralisation of post advertisements to regions as part of efforts to expedite the filling of vacant posts. Personnel numbers are expected to remain at 5 790 over the medium term.

Expenditure on goods and services increased significantly between 2010/11 and 2013/14, mainly due to the improved correctional sentence plans for offenders. These include the assessment, profiling, classification and reclassification of offenders. The increase in spending on fleet services in 2013/14 is due to a reclassification of budget items implemented on 1 April 2013, while the decrease in spending on operating payments in 2013/14 is due to learnerships previously paid under this item now being paid under compensation of employees.

Over the medium term, the focus of spending will be on ensuring that all offenders serving sentences longer than 24 months have correctional sentence plans. Using funds allocated to this programme over this period, from a baseline of 98 per cent in 2012/13, the department aims to ensure that sentence plans are developed for all offenders serving sentences longer than 24 months from 2014/15 onwards.

Over the seven-year period, expenditure on transfers and subsidies comprises of transfers to households to allow for the payment of offender gratuities. Transfers to households decreased between 2010/11 and 2013/14 due to fewer offenders participating in offender labour and skills development programmes than anticipated, as fewer gratuities were paid out. Since then, a national framework on offender labour has been developed in consultation with stakeholders, approved and disseminated to regions for implementation. It is anticipated that

this new framework will help to increase the number of offenders participating in offender programmes for labour and skills development from 2014/15 onward.

## Programme 3: Rehabilitation

### Objectives

- Enhance the level of literacy, education and skills competency among offenders by:
  - maintaining 80 per cent participation rate from 2014/15 onwards in formal education programmes, measured against the enrolment register per academic year
  - maintaining 80 per cent participation rate from 2014/15 onwards in skills development programmes measured against the list of offenders registered for participation.
- Enhance the social functioning and reintegration of offenders into the community by:
  - increasing the percentage of incarcerated offenders and those sentenced to correctional supervision who are involved in social work services from a projected 57 per cent in 2013/14 to 67 per cent in 2016/17
  - increasing the percentage of inmates who are involved in psychological services from a projected 5 per cent increase from the 2013/14 baseline to 16 per cent in 2016/17.
- Enhance the capacity of inmates to make moral decisions by increasing the percentage of inmates who benefit from spiritual services from a projected 52 per cent in 2013/14 to 57 per cent in 2016/17.

### Subprogrammes

- *Correctional Programmes* provides needs based correctional programmes in line with correctional sentence plans, which entail targeting elements associated with offending behaviour, focusing on the offences for which persons are incarcerated; sources, researches and develops new correctional programmes; and monitors and evaluates the implementation of programmes by correctional intervention officials. In 2012/13, 87 per cent of offenders with approved correctional sentence plans completed correctional programmes. By the end of September 2013, 36 per cent of offenders with approved correctional sentence plans had completed correctional programmes, against a target of 60 per cent for 2013/14. The subprogramme had a staff complement of 73 in 2012/13, and an estimated staff complement of 88 in 2013/14.
- *Offender Development* provides programmes and services aimed at developing competencies by providing opportunities for skills and social development. Outputs and services include technical training and education. In 2012/13, 56.8 per cent of eligible offenders participated in adult education and training programmes, 1.6 per cent in further education and training mainstream programmes, 50.3 per cent in skills training programmes, and 33.9 per cent in further education and training college programmes. At the end of September 2013, 44 per cent of eligible offenders were participating in adult education and training programmes, 4.5 per cent in further education and training mainstream programmes, 19.5 per cent in skills training programmes, and 23.4 per cent in further education and training college programmes, against 2013/14 targets of 67.2 per cent, 1.4 per cent, 28.7 per cent and 13.6 per cent. The subprogramme had a staff complement of 1 095 in 2012/13, and an estimated staff complement of 1 422 in 2013/14.
- *Psychological, Social and Spiritual Services* provides needs based programmes and services aimed at maintaining the personal wellbeing of incarcerated persons by facilitating social functioning and spiritual, moral and psychological wellbeing. In 2012/13, 24 per cent of inmates were involved in psychological services, 99 per cent benefited from social work services, and 70.4 per cent gained from spiritual care services. By the end of September 2013, 9.3 per cent of inmates were involved in psychological services, 44.7 per cent benefited from social work services, and 37.8 per cent gained from spiritual care services, against 2013/14 targets of 5 per cent, 57 per cent and 52 per cent, respectively. The subprogramme had a staff complement of 725 in 2012/13, and an estimated staff complement of 735 in 2013/14.
