2021/22 DEBT MANAGEMENT Report

1. FOREWORD

Mr Ismail Momoniat
Acting Director-General

The period under review (2021/22) ended with the materialisation of multiple risks that resulted in elevated risk-off sentiment and aggressive capital outflows from emerging markets. These included geopolitical risks that are typically relegated to the bottom of global investors' minds. The US Federal Reserve's incorrect assessment of inflation in previous years led to heightened global volatility, wiping out any gains in most asset classes while being a boon for commodities.

The calendar year began on an ominous note with US inflation at 7.5 per cent in January 2022, its highest level since 1982. This jolted financial markets, which saw a sharp sell-off and market participants beginning to expect larger than previously expected rate hikes. Commodity prices started the year positively – led by gains in zinc, copper, nickel, and oil – as demand continued to outstrip supply.

Locally, real GDP growth for 2021 was 4.9 per cent as the economy rebounded from COVID-19 lockdown restrictions, while the economy was forecast to grow at 2.1 per cent in 2022. The unemployment rate increased to a record 35.3 per cent in the fourth quarter of 2021, with decreases in employment observed mainly in the manufacturing and construction sectors. To address immediate needs and plan for the future, government extended the social relief of distress grant and plans to spend 59.4 per cent of non-interest expenditure on addressing poverty and unemployment over the medium term. The annual consumer price index (CPI) increased to its highest level in four years (5.93 per cent), prompting the South African Reserve Bank (SARB) to increase the repurchase (repo) rate by 25 basis points to 4 per cent in January. The repo rate was increased by another 25 basis points in March 2022.

Ratings agencies remained concerned about South Africa's increasing debt levels and possible breaches in expenditure ceilings. However, strong fiscal performance in 2021 resulted in positive changes in ratings outlooks. In December 2021, Fitch affirmed its local and foreign currency rating at BB- and changed its

2021/22 **DEBT MANAGEMENT** Report

1. FOREWORD

outlook from “negative” to “stable”. The main risks to the ratings are the deterioration of economic growth, larger support to state entities, increasing unemployment and large capital outflows that may detract from government’s fiscal consolidation plans.

The 2022 calendar year began with emerging markets on the receiving end of positive carry trade as global fund managers sought exposure to currencies that produce commodities. South Africa benefited from this despite the volatility that characterised 2021. This optimism was short-lived as it became clear that borrowing costs would increase faster than expected. Russia began moving troops to the Ukrainian border, verifying US intelligence reports that had previously been ignored. Within a week of the invasion, local bond yields weakened by 90 basis points while foreign holders for March 2022 decreased to 28.6 per cent of total holdings, from 29.1 per cent in the previous month.

Despite this sharp sell-off and volatility in 2021, government was able to fund its borrowing requirement of R388 billion through domestic long-term loans of R290 billion, foreign issuances of R80 billion, the use of cash balances amounting to R74 billion and net issuance in short-term loans of R7.9 billion. Issuance continued to be concentrated at the front end of the curve to reduce the weighted cost, while switches were used to reduce refinancing risk. Foreign loans were raised primarily through non-marketable loans from multilateral development banks. A planned foreign market issuance was delayed to 2022/23 owing to poor market conditions.

Government is on track to reduce its debt-service costs as a result of its fiscal strength and its effort to consolidate debt. Debt-service costs are forecast to average 4.9 per cent over the medium term. The borrowing requirement is expected to start moderating in 2024/25. Government is committed to ensuring debt sustainability by managing debt in a way that minimises the impact on the stock of debt and reduces the cost of borrowing.

Mr Ismail Momoniat

Acting Director-General

2. THE SOUTH AFRICAN DEBT CAPITAL MARKET

LISTING ACTIVITY IN THE PRIMARY DEBT CAPITAL MARKET

As at 31 March 2022, the total nominal amount outstanding for debt instruments listed on the Johannesburg Stock Exchange (JSE) stood at R4.3 trillion. This was R548.9 billion higher than the R3.8 trillion as at 31 March 2021. The domestic debt capital market remains an important source of financing, especially for national government, which is the highest contributor to the total outstanding debt listed on the JSE.

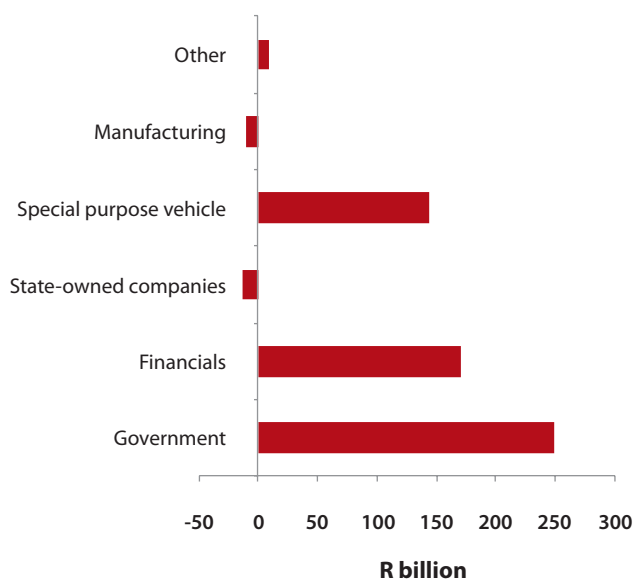

However, this was R13.7 billion lower than the R562.6 billion increase in 2020/21. Municipalities, state-owned companies, and the manufacturing sector were the largest contributors to the lower increase in 2021/22, with municipalities reducing their outstanding amount by R18.3 billion, state-owned companies reducing theirs by R14 billion and the manufacturing sector reducing its outstanding amount by R10.9 billion. Government increased its outstanding amount by R249.6 billion, financial institutions by R170 billion and special-purpose vehicles (SPVs) by R144.5 billion.

Figure 1: Primary listing of debt securities on the JSE, 31 March 2022

Primary listing by sector

Net change in listing nominal value by sector

Sources: JSE, National Treasury

2021/22 DEBT MANAGEMENT Report

2. THE SOUTH AFRICAN DEBT CAPITAL MARKET

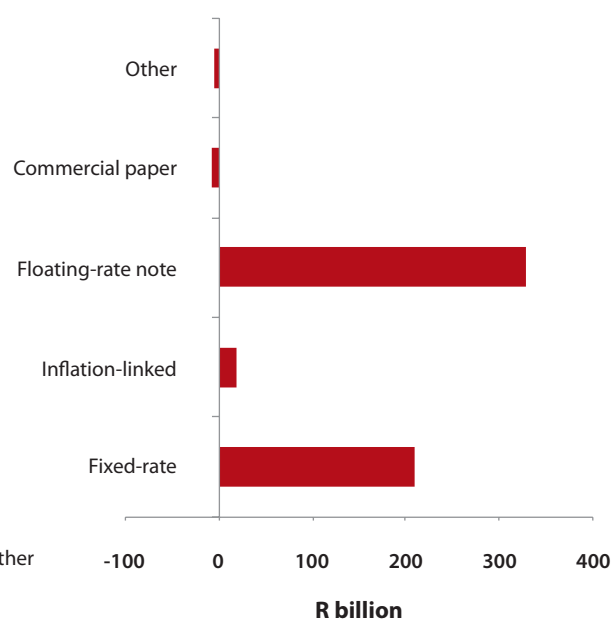

As at 31 March 2022, government debt accounted for about 70.8 per cent of listed debt, 3.7 per cent lower than the 74.5 per cent recorded on 31 March 2021. The next-largest sectors were financials with listings of 15.8 per cent and state-owned companies with listings of 6.6 per cent as at 31 March 2022.

Figure 2: Composition of primary listings by instrument, 31 March 2022

Primary listing by sector

Net change in listing nominal values by sector

Sources: JSE, National Treasury

By a considerable margin, fixed-rate bonds comprised the largest part of total primary listings. This was mainly because government, the largest issuer of listed debt, mostly issues fixed-rate bonds. As at 31 March 2022, fixed-rate instruments accounted for 66.7 per cent of total listed debt, lower than the 70.8 per cent recorded on 31 March 2021. As shown in Figure 2, floating-rate notes are the second-most issued instrument, accounting for 19.9 per cent of primary listings. In nominal terms, floating-rate notes had the highest increase, approximately R329.4 billion, followed by fixed-rate bonds, which increased by R211.3 billion. Inflation-linked bonds were the most issued instrument, accounting for 13 per cent of the primary listings and a net year-on-year increase of R19 billion.

2. THE SOUTH AFRICAN DEBT CAPITAL MARKET

Figure 3: Sectoral composition of primary listings of debt securities on the JSE, 31 March 2022

Sources: JSE, National Treasury

Figure 3 illustrates the preference for issuing floating-rate notes outside of government and state-owned companies. Floating-rate notes provide a reliable source of funding while investor demand is high, and the credit spread increase in their portfolios is seen as having the potential to generate higher returns during higher interest rate cycles.

2021/22 DEBT MANAGEMENT Report

2. THE SOUTH AFRICAN DEBT CAPITAL MARKET

SECONDARY MARKET ACTIVITY IN SOUTH AFRICAN BONDS¹

There was a slight recovery in secondary market trading activity in 2021, resulting in trading volumes increasing from R31.7 trillion in December 2020 to R33.9 trillion as at 31 December 2021.

Repo transactions are an efficient source of money-market funding, providing investors with a range of options for investing surplus cash and helping to avoid settlement failures. As at 31 December 2021, the repo market accounted for 71 per cent of total trading volumes in the interest rate market, representing a 5.4 per cent year-on-year increase. Standard trades accounted for 28.3 per cent of total trades in the secondary market, with a decrease of R945.5 billion, while other trades accounted for 0.7 per cent, decreasing by R93.4 billion. Repo trades, however, increased by R3.3 trillion.

Repo market

Repos are classified as money-market instruments, normally used to raise short-term capital. For the party selling the asset (usually fixed-income securities) and agreeing to repurchase it in the future, it is a repo; for the party on the other end of the transaction, buying the security and agreeing to sell in the future, it is a reverse repo agreement. If the seller defaults during the life of the repo, the buyer (as the new owner) can sell the asset to a third party to offset loss. The asset, therefore, acts as collateral and mitigates the credit risk that the buyer has on the seller.

¹ Due to the availability of the source data, information provided in this section is as at 31 December 2021 and not 31 March 2022.

2. THE SOUTH AFRICAN DEBT CAPITAL MARKET

Figure 4: South African bond market turnover, 2003-2021

Sources: JSE, National Treasury

The turnover ratio measures a bond market's liquidity and is used to assess which bonds are most traded. The ratio shows the extent of trading in the secondary market relative to the total amount outstanding. The larger the amount of trading activity, the higher the turnover ratio.

As shown in Figure 5, the R2023 bond (7.75%; 2023) had the highest turnover ratio of 23 times, followed by the R186 bond (10.5%; 2025/26/27) with a turnover ratio of 22 times. The high turnover on the R2023 bond can be attributed to the lower amount outstanding than the longer maturity fixed-rate bonds. Contributing factors are that the bond is nearing its maturity and has been a source bond in government's switch auction programme. On the other hand, the R186 bond has the highest turnover (R8.2 trillion), followed by the R2048 bond (8.75%; 2047/48/49) with a turnover of R5.2 trillion, leading to higher turnover ratios.

2021/22 DEBT MANAGEMENT Report

2. THE SOUTH AFRICAN DEBT CAPITAL MARKET

Figure 5: Government bond turnover ratios, 31 December 2021

Sources: JSE, National Treasury

Among the inflation-linked bonds, the I2025 bond (2%; 2025) had the highest turnover ratio of eight times during 2021. Overall, inflation-linked bonds have a lower turnover than fixed-rate bonds because investors, particularly pension funds, tend to buy and hold these instruments to hedge against inflation.

ELECTRONIC TRADING PLATFORM

National Treasury, along with a multi-stakeholder group comprising the JSE, Strate, primary dealers, the SARB and the Financial Sector Conduct Authority, with technical assistance from the World Bank, launched the electronic trading platform (ETP) for government bonds in July 2018. The aim of the ETP is to improve liquidity, price discovery and transparency in the domestic government bond market.

All nine primary dealers are required to quote prices on the following obligatory bonds: R186 (10.25%; 2025/26/27), R2030 (8%; 2030), R2035 (8.875%; 2035); R2040 (9%; 2040) and R2048 (8.75%; 2047/48/49). They are also obligated to quote firm and executable current bids, and ask prices/yields on the platform in

2. THE SOUTH AFRICAN DEBT CAPITAL MARKET

specified amounts per maturity basket and specified spreads. National Treasury incentivises primary dealer participation on the ETP by allocating a portion of the non-competitive bids based on the volumes traded by each primary dealer on the platform.

Figure 6: Electronic trading platform daily volumes and trades, January 2021 to December 2021

Source: MTS

In 2021, the daily volume traded remained unchanged at R1.7 billion. However, the average number of trades per day increased from an average of 40 in 2020 to 77 in 2021. As expected, there were fewer trades in December 2021 because of the holiday season.

2021/22 DEBT MANAGEMENT Report

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

BORROWING REQUIREMENT

Government's gross borrowing for 2021/22 improved during the COVID-19 pandemic, attributable to higher-than-anticipated revenue collection and lower spending. Consequently, government's gross borrowing requirement – the budget deficit including maturing loans – decreased significantly, from R547.9 billion in the 2021 Budget to a preliminary outcome of R388.6 billion.

To finance the gross borrowing requirement, government adjusted its financing strategy to lower the impact on debt and debt-service costs. This included reducing the financing of the gross borrowing requirement by R64 billion, arising from a bumper revenue collection in 2021/22 (R14 billion was effected on Treasury bills and R50 billion on domestic bonds). The revised 2022 Budget showed that Treasury bill financing further decreased by R1.8 billion to R6.8 billion, and domestic bond funding decreased by a further R44.7 billion to R285.3 billion. Funding from international financial institutions was revised upwards, from the US\$3 billion projected in the 2021 Budget to a projected US\$5.3 billion in the 2022 Budget.

Table 1 shows the preliminary outcome of financing government's gross borrowing requirement. This was financed through a net reduction in domestic short-term loans of R8 billion, domestic long-term loans of R290.3 billion and foreign loans of R31.3 billion. Cash and other balances of R74.8 billion were used to finance part of the borrowing requirement during the year.

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

Table 1: Financing of national government gross borrowing requirement, 2021/22

Source: National Treasury

DOMESTIC SHORT-TERM BORROWING

Domestic short-term borrowing comprises Treasury bill issuance and borrowing from the Corporation for Public Deposits. National Treasury conducts weekly Treasury bill auctions and borrows from the Corporation to meet its funding requirements and alleviate short-term liquidity pressures. Treasury bill net issuance was budgeted at R9 billion in the 2021 Budget. However, better-than-anticipated tax revenue collection in 2020/21 and the first quarter of 2021/22 led to a downward adjustment in the weekly Treasury bill auction level by R830 million, from R12.5 billion to R11.7 billion from May 2021.

Regardless of this reduction in weekly issuance, Treasury bill funding remained under pressure in the wake of future inflation expectations and the higher short-term interest rate trajectory. The pressure was highlighted by weak demand, and various under-subscriptions and under-allotments during the year. Treasury bill issuance closed 2021/22 with a shortfall of R1.2 billion relative to the revised budget figure of R6.8 billion.

2021/22 DEBT MANAGEMENT Report

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

The net issuance in Treasury bills was more pronounced on the 182-day and 364-day instruments. Details of the 2021/22 weekly Treasury bill auctions, including the allocated amount for each maturity, can be found in Annexure D and Annexure E.

Table 2: Domestic short-term borrowing, 2021/22

R million	Opening balance	Net change	Closing balance
Corporation for Public Deposits	70	2	72
Treasury bills	455 971	-8 007	447 964
91-day	15 335	-6 651	8 684
182-day	70 981	1 826	72 807

Total	456 041	-8 005	448 036

Source: National Treasury

Treasury bill auction performance

Treasury bill auction performance remained weak and volatile during 2021/22 owing to existing supply levels and uncertainty around the direction of the monetary policy rate. Rising inflation, both globally and domestically, led to the SARB's hawkish stance on the monetary policy rate and curbing inflation to within the target range of between 3 per cent and 6 per cent.

The repo rate increased by 75 basis points between November 2021 and March 2022. An upward trend was subsequently observed in the weighted Treasury bill rate, averaging 90 basis points in 2021/22 (see Figure 7).

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

Figure 7: Repo, Treasury bill and subscription rates, 2021/22

Source: National Treasury

2021/22 DEBT MANAGEMENT Report

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

Table 3 shows the gross issuance and total under-allotments of Treasury bills. As a result of market volatility, R6.2 billion (about 1 per cent) of the total gross issuance was not allotted.

Table 3: Treasury bill auction under-allotments, 2021/22

R million	Gross issuance ¹	Under- allotment	Percentage of gross issuance underallotted
91-day	45 132	-8 668	-19,2
182-day	145 029	3 189	2,2
273-day	199 904	1 164	0,6
364-day	217 108	-1 892	-0,9
Total	607 173	-6 207	-1,0

1. Gross issuance takes into account the total amount of issuance rolled-over to the Treasury bill portfolio from 2020/21

Source: National Treasury

Table 4 provides a summary of the auction bid-to-cover ratios and effective yields. Government can increase or reduce the amount on offer in line with its funding requirements and market conditions. On average, Treasury bill auctions were 2.1 times oversubscribed. However, most of the Treasury bill maturities were undersubscribed in several weekly auctions, with the 91-day maturity having the lowest subscription of 0.0 times (no bids) at a single auction, followed by the 364-day maturity at 0.5 times.

Table 4: Treasury bill auction analysis, 2021/22

	91-day	182-day	273-day	364-day

Lowest	3,5	4,1	4,6	4,7
Average	3,9	4,7	5,2	5,3

Source: National Treasury

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

Corporation for Public Deposits

The Corporation for Public Deposits is a wholly owned subsidiary of the SARB. Its main function is to invest surplus cash received from provincial governments and selected state-owned companies. Government uses these funds to finance a portion of its borrowing requirement and for bridging finance. To finance short-term cash shortfalls, provincial governments may borrow from the corporation for amounts up to predetermined limits.

Government used the facility only to perform its intra-day roll-up in 2021/22. The intra-day roll-up is a standing instruction between National Treasury and the SARB to maintain government's main account with the reserve bank at a zero balance. There were no borrowings from the Corporation for Public Deposits in 2021/22.

DOMESTIC LONG-TERM BORROWING

Domestic long-term borrowing comprises the issuance of fixed-rate, inflation-linked and retail savings bonds. Fixed-rate and inflation-linked bond auctions are conducted weekly in line with a predetermined auction calendar. Fixed-rate bond auctions are conducted through a panel of primary dealers. Inflation-linked bond auctions are open to all members of the JSE. Retail savings bonds are available to South African citizens through the South African Post Office and the RSA Retail Savings Bonds website. In 2021/22, a total nominal amount of R307.2 billion was issued in domestic long-term bonds (excluding RSA Retail Savings Bonds).

Fixed-rate bonds

During 2021/22, a total nominal amount of R255.3 billion was issued in fixed-rate bonds. Of this, R196.5 billion was issued in the 49 weekly competitive bond auctions, while the remaining R58.8 billion was raised through non-competitive auctions. As a result of higher-than-expected revenue collection, which lowered the gross borrowing requirement, weekly bond auctions were decreased by R1.5 billion and R500 million in 2021. This brought the weekly fixed-rate bond auction levels to R5.1 billion for 2021/22. Non-competitive auctions were decreased from 100 per cent to 50 per cent of the weekly fixed-rate bond auctions.

Owing to the volatility caused by the COVID-19 pandemic, issuances were mostly concentrated at the short end of the curve: 55.6 per cent of the issuances were between the two-year and 14-year maturities. As a

2021/22 DEBT MANAGEMENT Report

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

result of the low cash prices on the R209 bond (6.25%; 2036) and R214 bond (6.5%; 2041), these bonds were not issued in 2021/22.

The R2035 bond (8.88%; 2035) was the highest issued bond for the year with R28.2 billion, followed by the R2032 bond (8.25%; 2032) with R27.6 billion. National Treasury decided to stop issuing the R2023 bond (7.75%; 2023) as it was maturing in 2023. The R186 bond (10.5%; 2025/26/27) was also the least-issued bond as it is approaching maturity. The average bid-to-cover ratio for 2021/22 was three times.

Figure 8: Issuance of fixed-rate bonds (excluding non-competitive bid auctions), 2021/2022

Source: National Treasury

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

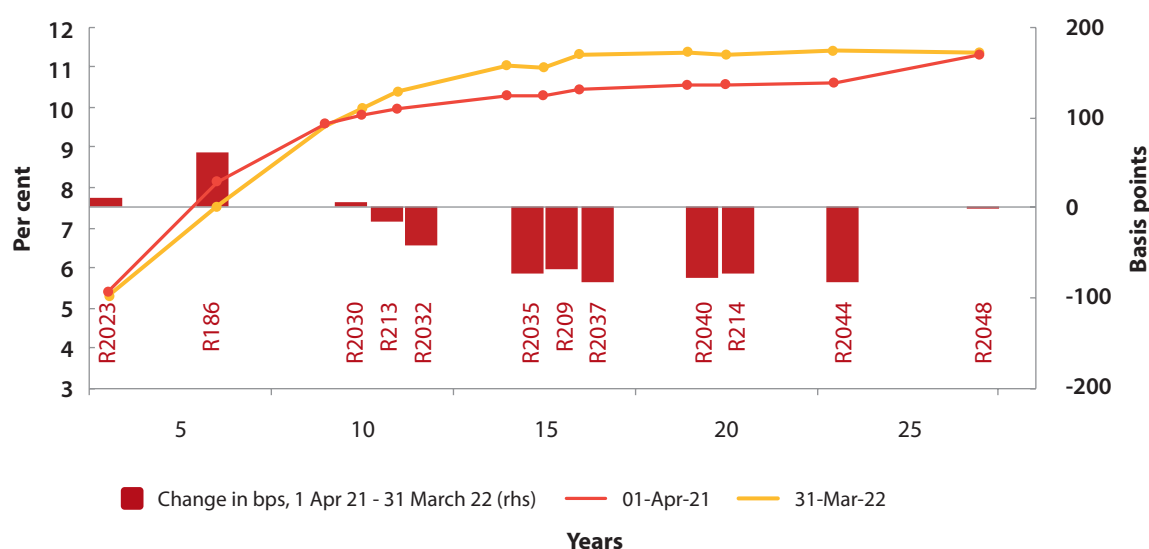

Yields curve movement

At the beginning of 2021/22, financial asset prices were recovering from the second wave of the COVID-19 pandemic, although emerging markets were still affected by volatility. The market battled with rising treasury yields in the US and other major economies as they continued to recover from the impact of the pandemic.

The volatile environment continued into the second half of the year because of uncertainties about inflation in the US, underscored by surging energy prices, global supply problems and the inability of central banks to convince the market that the rise in prices was temporary, resulting in many removing their bond-buying programmes. The SARB announced rate hikes against the backdrop of higher inflation and a host of local issues with long-term effects on the economy, including load shedding.

The SARB's intervention resulted in the strengthening of the curve significantly after these developments. On average, across all fixed-rate bonds, the curve strengthened by 38 basis points from 1 April 2021 to 31 March 2022.

DEBT MANAGEMENT

Report

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

Primary dealers

The primary dealer panel is a group of banks that buy government bonds at weekly fixed-rate bond auctions. Investors buy government bonds by submitting their bids at the auction through primary dealers, who are obliged to adhere to certain terms and conditions that can be found on National Treasury's investor relations website (<http://investor.treasury.gov.za>). Below are the banks on National Treasury's primary dealer panel:

- ABSA
- Citibank
- Deutsche Bank
- FirstRand Bank
- HSBC
- Investec
- JPMorgan Chase
- Nedbank
- Standard Bank

Primary dealer performance

Government's primary dealer panel comprises nine international and domestic banks. These primary dealers are required to distribute government bonds, make markets, and provide liquidity in the secondary market. The performance of the nine primary dealers is shown in Figure 10. The top two primary dealers took up 46.7 per cent of the amount in the auctions conducted during the year.

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

Figure 10: Primary dealer participation in fixed-rate bond auctions, 2021/22

Source: National Treasury

Non-competitive bid auction performance

Non-competitive bid auctions

Primary dealers are entitled to take up an additional 50 per cent of the successful allocation amount at the same yield at which the fixed-rate competitive auction is settled. The non-competitive auction window is open for 48 hours immediately after the auction. The 50 per cent is split between ETP (30 per cent) and primary auctions (20 per cent). As a result of higher-than-expected revenue collection in 2021/22, which lowered the gross borrowing requirement, non-competitive bid auction allocations were decreased from 100 per cent to 50 per cent from April 2021 to March 2022.

A total of R58.8 billion was raised through the issuance of the fixed-rate bond at non-competitive auctions. The R2032 bond (8.25%; 2032) and R2035 bond (8.88%; 2035) were the most in-demand bonds of 2021/22, accounting for 28.5 per cent of the total non-competitive take-up by primary dealers. The R2048 bond (8.75%; 2048)

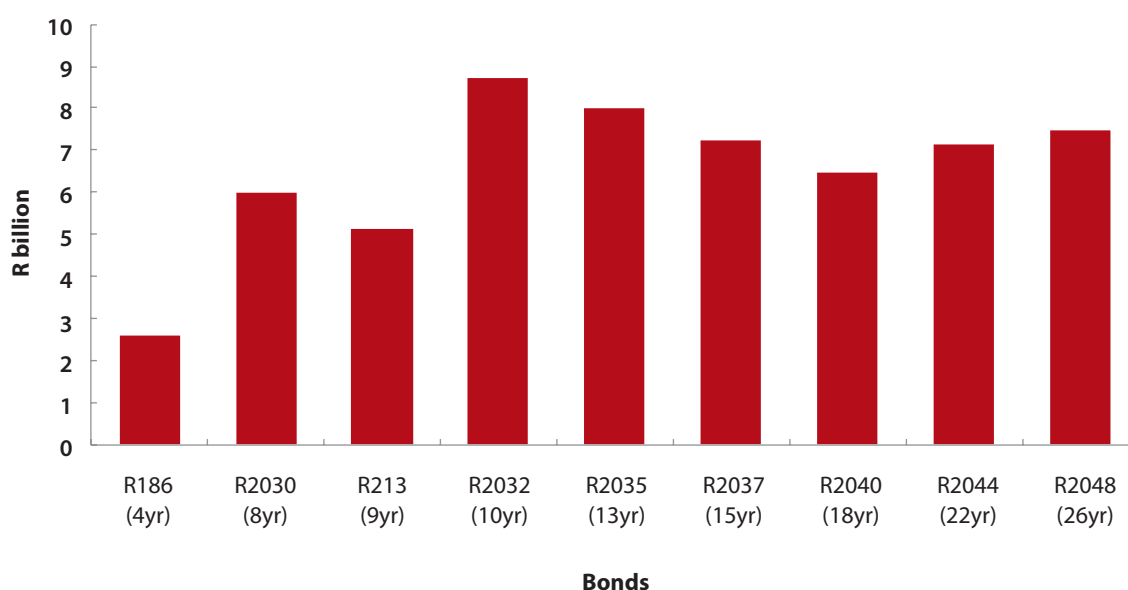

2021/22 DEBT MANAGEMENT Report

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

had the third-highest demand with a take-up of 12.7 per cent. The R186 bond (10.5%; 2025/26/27) and R213 bond (7%; 2031) had the lowest non-competitive take-up in the fixed-rate bond auctions as a result of limited issuance.

Figure 11: Non-competitive bond auction performance per bond, 2021/22

Source: National Treasury

Inflation-linked bonds

A nominal amount of R51.9 billion was issued in the 48 inflation-linked bond auctions held in 2021/22, with an average bid-to-cover ratio of 2.3. Inflation-linked bond auction levels decreased by R600 million in April 2021. With a nominal amount of R13.2 billion, the I2046 bond (2.5%; 2046) was the most issued, followed by the I2050 bond (2.5%; 2050) with a total issuance of R12.6 billion. The R2025 bond (2%; 2025), with a nominal amount of R4.3 billion, was the least issued. At 5.46, the I2029 bond (1.875%; 2029) had the highest bid-to-cover ratio, followed by the I2033 bond (1.875%; 2033) at 3.08. The I2038 bond (2.25%; 2038) had the lowest bid-to-cover ratio of 2.27.

Source: National Treasury

Real yields movement

As with the yield curve for fixed-rate bonds, the curve for inflation-linked bonds weakened at the beginning of the year but strengthened later on, moving in tandem with fixed-rate bonds. Between April 2021 and March 2022, the curve strengthened by an average of 22 basis points.

Scrip lending facility

As a lender of last resort, National Treasury is obligated to support the market for government bonds by acting to avoid settlement failures and subsequent systemic risks. The scrip lending facility is available on the ETP for over-the-counter interest rate and currency derivative market transactions. It is used only if other avenues of obtaining the scrip have been exhausted. As such, the facility is available strictly to primary dealers. Other market participants can access it only through the JSE.

Compared to 2020/21, there was an increase in demand for the facility in 2021/22. A nominal amount of R7.7 billion was taken, representing a 48 per cent increase from the R3.7 billion taken in 2020/21. Figure 14 provides a breakdown of the use of the scrip lending facility per bond. Most of the demand was on the inflation-linked I2029 bond (1.875%; 2029), followed by both the fixed-rate bonds, R2030 (8%; 2030) and R2023 (7.75%; 2023).

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

Figure 14: Scrip lending facility, 2021/22

Bond switch auction programme

Government's bond switch auction programme has been successful in managing its refinancing risk during a period of protracted weak economic growth. Since the start of the programme in February 2015, R254.5 billion has been switched out of the following bonds: R203 (8.25%; 2017), R204 (8%; 2018), R207 (7.25%; 2020), R208 (6.75%; 2021) and R2023 (7.75%; 2023).

The bond switch programme was reviewed and reintroduced in 2021/22. The revised programme aims to provide transparency and reduce speculation around the switch auctions. Part of the revised programme included uploading the switch auction calendar and terms and conditions on to National Treasury's investor relations website. A total of 13 switch auctions were conducted in 2021/22, with R48 billion switched out of the R2023 bond.

2021/22 DEBT MANAGEMENT Report

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

Retail savings bonds

The objective of retail savings bonds is to diversify government's long-term funding sources and promote a culture of household savings. As at 31 March 2022, the total outstanding amount increased by R2.3 billion in 2021/22, from R8.6 billion to R10.9 billion. As a result of an average interest rate of 7.43 per cent for the period under review and an ongoing marketing strategy that included increased digital and social media presence, retail savings bonds managed to exceed the target of R2.5 billion by R600 million as at 31 March 2022.

In addition to conventional retail savings bonds, as at 31 March 2022, the Government Employees Housing Scheme's internal-linked savings facility had received R2.1 billion.

Retail savings top-up bonds

The top-up bond pilot was launched on 26 July 2021 exclusively for National Treasury employees as part of the Savings Month initiative. The purpose of the pilot was to test and assess the stability of the new back-office system over six months. During this time, 51 employees invested a total of R361 100. Although the retail bonds directorate anticipated higher participation from staff, no major problems were encountered during the pilot, which was deemed a success.

Financial cooperatives retail savings bonds

National Treasury launched financial cooperatives retail savings bonds in October 2011 to provide a secure savings instrument that cooperative financial institutions (CFIs) and cooperative banks could invest in. The bonds offer competitive interest rates, calculated biannually. Additional features consider the uniqueness of the financial cooperatives model. Through top-ups, the model allows for the preservation of capital and early withdrawals with no fees, charges or penalties. The CFIs that continue to save in retail savings bonds have accrued notable interest on their capital amounts. The Cooperative Banks Development Agency encourages CFIs to invest in this investment vehicle as it is risk-free and provides guaranteed financial growth.

2021/22 DEBT MANAGEMENT Report

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

Table 6 shows that, as at 31 March 2022, R13.1 million was invested in CFI retail savings bonds through 27 investments.

Table 6: Summary of financial cooperatives retail savings bonds, 2021/22

Bond	Average rate	Capital	Investments
FC01	4,99%	1 086 996,81	3
FC02	3,00%	1 223 534,13	1
FC03	5,56%	10 747 791,27	23
		13 058 322,21	27

Source: National Treasury

Interest rates on fixed-rate, inflation-linked and financial cooperatives retail savings bonds are derived from the respective government bond and Treasury bill yields. The interest rates for the fixed-rate and financial cooperatives retail savings bonds are reviewed monthly and those for the inflation-linked retail savings bonds semi-annually. During 2021/22, fixed-rate retail savings bond rates decreased by 175 basis points for two-year terms, 225 basis points for three-year terms and 350 basis points for five-year terms. In the case of inflation-linked retail savings bonds, the two-year term decreased by 100 basis points, and there was no net movement for the three-year and the five-year terms, which increased by 100 basis points.

Foreign long-term borrowing

To meet its foreign-currency commitments, government issues debt in global capital markets to set benchmarks and diversify funding sources. It was envisaged that US\$3 billion was to be issued in 2021/22. However, following the intensified geopolitical crisis that arose on 24 February 2022 when Russia invaded Ukraine, issuance was deferred to 2022/23. Over the medium term, government plans to raise an additional US\$11 billion in global capital markets.

Government continued to access cheaper concessional financing from international financial institutions and development banks to meet foreign-currency commitments. Market funding will be replaced or complemented with lower-cost funding from international financing institutions where these opportunities exist. As per Table 7, the following amounts were received from multilateral development banks, the International Monetary Fund and the World Bank:

- With no conditions attached, in January 2022 the World Bank approved a budget-support loan of US\$750 million to South Africa to support government's response to the fiscal, public health and socioeconomic impact of the COVID-19 pandemic.

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

- Loans of US\$1 billion (June 2021) and US\$1.06 billion (November 2021) were issued under the New Development Bank's COVID-19 emergency programme to fund government's health and social response to the pandemic.

Table 7: Borrowing from international finance institutions

Institutions	Disbursement date	Interest rate	Terms (years)	Grace period ¹ (years)	Amount (US\$ billion)

Interest and redemption payments on long-term loans

Figure 16 shows the composition of government's interest and redemption payments for 2021/22. The payments are split between domestic and foreign long-term loans, and retail savings bonds.

In 2021/22, interest payments and redemptions for domestic and foreign debt amounted to R333.4 billion (R268.1 billion and R65.3 billion, respectively). The R212 (2.75%; 2022) fixed-rate bond was redeemed in January 2022 with an outstanding amount of R57.7 billion. Monetary authorities followed by the foreign sector had the largest percentage holdings of the bond.

Government cash balances

In managing cash, government's primary objective is to ensure that it has enough to meet its financial commitments as they become due. Part of effective cash management entails ensuring that government is able to meet its financial obligations and that weekly borrowings are predictable and stable.

Government's total cash balances include deposits held by commercial banks and the SARB. Cash deposits with the SARB include rand deposits in the sterilisation account and foreign currency deposits in the foreign currency accumulation account. Sterilisation deposits comprise excess cash deposits made with the SARB to counter the effects of increased money supply as a result of the accumulation of foreign currency reserves. These funds will be used in future to reduce government's gross borrowing requirement and the cost of funding. As at 31 March 2022, the balance in National Treasury's sterilisation deposit account was R41 billion.

Foreign currency deposits consist of funds borrowed in the international capital markets and/or from multilateral institutions and are used to meet government's foreign currency commitments. In 2021/22, US\$2.1 billion was received from multilateral institutions.

3. NATIONAL GOVERNMENT'S BORROWING REQUIREMENT AND FINANCING

Table 8 shows government's cash balances as at 31 March 2021 and 31 March 2022. In 2021/22, these balances decreased by R77.8 billion to R255.3 billion. The reduction mainly occurred on the tax and loan accounts to fund government's domestic commitments.

Table 8: National government's cash balances as at 31 March 2021 and 31 March 2022

R billion	Mar-21	Mar-22
Reserve bank	134,5	126,3
Sterilisation deposits	41,2	41,2
Foreign currency deposits	93,3	85,1
Commercial banks	198,6	129,0
Tax and loan accounts	198,6	129,0
Total	333,1	255,3

Source: National Treasury

Table 9 shows total foreign currency commitments of US\$2.6 billion in 2021/22. This consisted of redemptions of foreign loans amounting to US\$270 million, and interest on loans and departmental payments amounting to US\$2.3 billion. These commitments were financed by proceeds from foreign currency loans.

Table 9: US dollar flows on foreign exchange deposits, 2021/22

US\$ million	2020/21 Outcome	Revised Budget	Preliminary Outcome

2021/22 DEBT MANAGEMENT Report

4. HOLDINGS OF GOVERNMENT DEBT INSTRUMENTS

HOLDINGS OF DOMESTIC MARKETABLE GOVERNMENT BONDS

South African government bonds are mainly supported by foreign investors, pension funds, monetary institutions and other financial institutions, with a combined aggregate holding of about 92 per cent of outstanding government bonds. Because of low interest rates in developed countries, foreign investors were the largest holders of government bonds at 28.6 per cent as at 31 March 2022, followed by pension funds at 23.8 per cent and monetary institutions at 18.9 per cent.

Figure 17: Historical government bond holdings, 31 December 2011 to 31 March 2022

Sources: Strate, National Treasury

During the year under review, holdings of South African domestic bonds by foreign investors fluctuated from a high of 30.5 per cent in May 2021 to a low of 28.2 per cent between November and December 2021. This was offset by an increase in other financial institutions, as shown in Figure 17. The overall decrease was on the back of devaluations of emerging market currencies, as well as the expectation

4. HOLDINGS OF GOVERNMENT DEBT INSTRUMENTS

of a tightening rate cycle by the US Federal Reserve. The omicron variant of the coronavirus worsened fears that many emerging-market economies would not recover quickly enough from the COVID-19 pandemic.

In nominal terms, though, foreign investor holdings of government bonds increased by R46 billion between March 2021 and March 2022 (see Figure 18).

Figure 18: Foreign investor holdings of government bonds, 31 December 2011 to 31 March 2022

Sources: Strate, National Treasury

Figure 19 shows the holdings of fixed-rate and inflation-linked bonds by investor type as at 31 March 2022. Foreign investors held 33 per cent of fixed-rate bonds, a 4.9 per cent decrease from March 2021. Monetary authorities decreased their holdings from 23.7 per cent to 20 per cent. Official pension funds reduced their holdings of inflation-linked bonds from 46.5 per cent in March 2021 to 46 per cent in March 2022. Monetary authorities' inflation-linked bond portfolio holdings changed marginally, from 17.5 per cent in March 2021 to 14 per cent in March 2022. The percentage held by foreign investors remained relatively low at 4 per cent, up from 2.2 per cent in March 2021.

Foreign sector Monetary authorities Long-term insurers Short-term insurers
Private self-administered funds Official pension funds Other financial institutions Other sector

Sources: Strate, National Treasury

Figure 20 shows holdings of domestic fixed-rate bonds by instrument as at 31 March 2022. At 51 per cent, the foreign sector holds the largest amount of the off-the-run R214 bond (6.5%; 2041). The issuance of the R214 bond was discontinued on the back of remarkable discounted price considerations given the elevated borrowing requirement.

With 52 per cent, monetary authorities had collectively become the largest holder of the near-maturing R2023 bond (7.75%; 2023). The bond formed part of these authorities' high-quality liquid assets. Government commenced switching this bond to longer-dated maturities in February 2015 to avoid refinancing risk.

4. HOLDINGS OF GOVERNMENT DEBT INSTRUMENTS

Figure 20: Holdings of domestic fixed-rate bonds by instrument, 31 March 2022

Sources: Strate, National Treasury

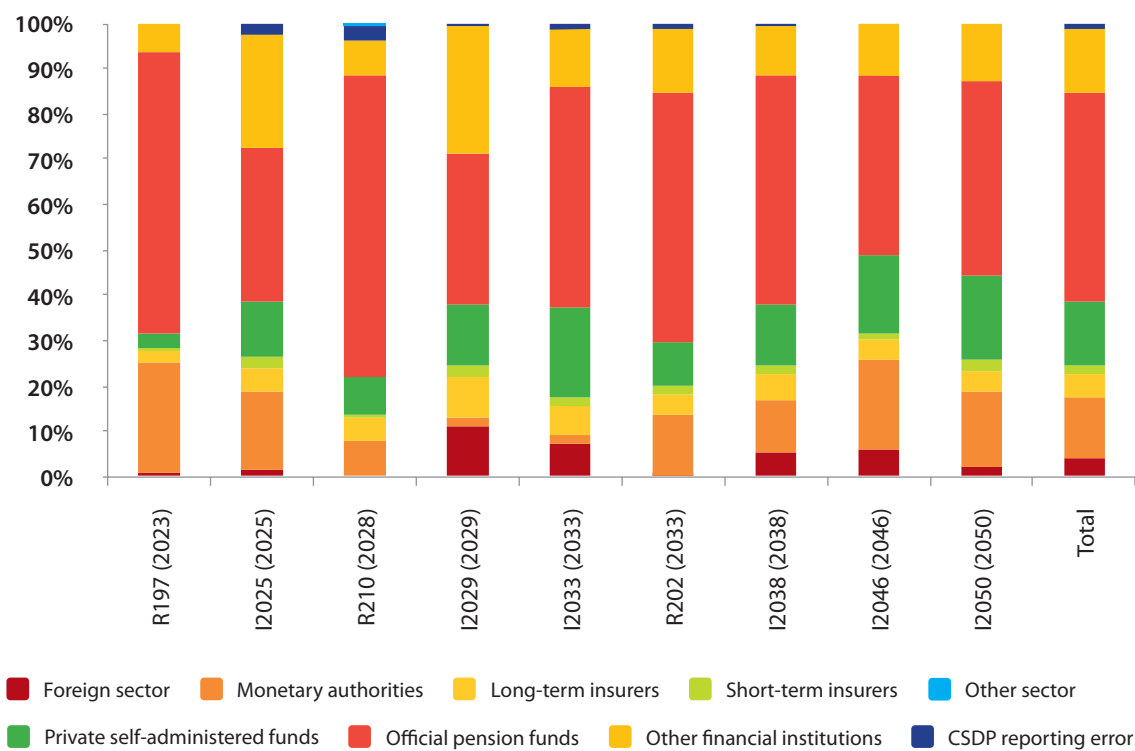

As at 31 March 2022, official pension funds held the largest percentages of instruments across all maturities of inflation-linked bonds. Monetary authorities held marked percentages in shorter and longer maturities.

2021/22 DEBT MANAGEMENT Report

4. HOLDINGS OF GOVERNMENT DEBT INSTRUMENTS

Figure 21: Holdings of domestic inflation-linked bonds by instrument, 31 March 2022

Sources: Strate, National Treasury

Holdings of retail savings bonds

An estimated 69 per cent of active investors in retail savings bonds are older than 50. This may be attributed to older investors saving for retirement and therefore benefiting from monthly payments.

2021/22 DEBT MANAGEMENT Report

5. GOVERNMENT DEBT PORTFOLIO AND RISK METRICS

GOVERNMENT DEBT PORTFOLIO

Government debt is influenced by the budget balance and market variables, including prevailing interest, exchange and inflation rates. Government debt is presented on gross and net bases. Table 10 shows that, in 2021/22, the domestic net loan debt decreased by R160.2 billion (4.2 per cent) when compared to the 2021 Budget. Domestic cash balances increased by R109.1 billion (179.4 per cent). Foreign net loan debt also decreased by R31 billion (8.9 per cent), whereas the foreign cash balances decreased by R23 billion (19.2 per cent). The net loan debt (debt less cash balances) was 63.6 per cent of GDP over the same period.

Table 10: Total government debt, 2021/22

R billion	Budget	Revised budget	Preliminary outcome
Domestic debt			
Gross loan debt	3 916,7	3 852,4	3 865,6
Cash balances	-60,8	-145,5	-169,9

Debt-service costs

The cost of servicing government debt is influenced by the volume of debt, new borrowing and a range of market variables. Table 12 shows that debt-service costs in 2021/22 amounted to R268.1 billion, debt-service cost was 4.3% as a percentage of GDP. This was R1.6 billion lower than initially budgeted, mainly as a result of the decrease in the gross borrowing requirement.

2021/22 DEBT MANAGEMENT Report

5. GOVERNMENT DEBT PORTFOLIO AND RISK METRICS

Table 12: Debt-service costs, 2021/22

R billion	Budget	Revised budget	Preliminary outcome

Funding portfolio indicators

Table 13 presents funding portfolio benchmark indicators as they relate to domestic fixed-income funding instruments. The focus on the high volume of debt, sovereign credit risk and associated costs has an influence on these indicators, as well as on the need to link various components of the desired and existing stock of sovereign debt.

In this regard, modified duration, which acts as a proxy for yield curve risk, measures the degree of price sensitivity relative to small changes in yields. The target range for this indicator is between 5.5 per cent and 7.5 per cent for fixed-rate bonds, and between 9 per cent and 12 per cent for inflation-linked bonds. The issuance strategy contributes to the market's overall duration and therefore prompts the system's sensitivity to interest rates. This is helpful in terms of the sovereign's aggregate credit risk, and thus demand, for certain segments of the yield curve.

The relative strength in the 12-year-plus bucket, and a reduction of about 70 basis points in ultralong-end yields, is the corollary of the duration-sensitive issuance plan that was introduced in 2019/20. This paradigm shift revealed the need for liquidity management instruments such as floating-rate notes.

5. GOVERNMENT DEBT PORTFOLIO AND RISK METRICS

The weighted cost of funding indicates the cost at which South Africa borrows. The benchmark for this is more than 85 per cent of annual domestic funding and is the reference yield upon which bond auction levels are predicated. The indicators share a positive relationship in that a higher modified duration implies a higher cost of funding. This was evident in 2021/22 as the higher weighted cost of funding for fixed-rate bonds was associated with a relatively higher modified duration. Even so, the weighted cost of funding was lower than the targeted 10.07 per cent for fixed-rate bonds and 4.17 per cent for inflation-linked bonds in 2020/21 and 2021/22.

This is the outcome of a duration- and demand-sensitive issuance plan, which channelled 77 per cent of fixed-rate bond issuance into the 3-year to 15-year maturity bucket while considering peculiarities related to the inflation-linked bond market. The weighted cost of funding of 3.84 per cent for inflation-linked bonds was associated with a higher weighted average term to maturity (13.65 years) in 2021/22. This was a result of favourable repricing on the real curve because of expectations of rising inflation during the period under review. The increase in the repo rate in 2021/22 resulted in an increase of 44 basis points on the weighted cost for Treasury bills. The share of foreign debt as a percentage of total government debt remains within the defined currency risk exposure of 15 per cent.

Table 13: Funding benchmark indicators

Proposed funding benchmark indicators	Benchmark	31 March 2022
Weighted modified duration (fixed-rate bonds and liquidity management instrument) (%)	5,5 - 7,5	6,23
Weighted term-to-maturity (fixed-rate bonds and liquidity management instrument in years)	9,5 - 14	11,47
Weighted cost of funding (fixed-rate bonds and liquidity management instrument) (%)	10,07	9,88
Weighted modified duration (inflation-linked bonds) (%)	9 - 12	4,69
Weighted term-to-maturity (inflation-linked bonds in years)	12,5 - 15,5	13,65
Weighted cost of funding (inflation-linked bonds) (%)	3,82	2,61

5. GOVERNMENT DEBT PORTFOLIO AND RISK METRICS

Maturity profile

Figure 23 shows changes in the country's maturity profile in the domestic bonds market by reflecting the year-on-year growth rate between 2020/21 and 2021/22. The overall growth rate of domestic debt was 9 per cent. In nominal (absolute) terms, in one year, fixed-rate bonds such as the year-8 R2030 (8%; 2030) bond absorbed an additional R40 billion, and the 10-year R2032 (8.25%; 2032) bond absorbed an additional R48 billion. Still, inflation-linked bonds reflected higher growth rates – 29 per cent (maturing in 2029) and 28 per cent (maturing in 2046). The additional inflation-adjusted nominal amounts were R10 billion for the I2029 (1,875%; 2029) and R25 billion for the I2046 (2,5%; 2046).

Inflation beta (risk) is relatively lower in newly issued instruments such as the seven-year I2029 bond, in which 38 per cent of the R10 billion increase is attributable to inflation accruals. The R2023 (7,75%; 2023) bond had a negative growth rate of 39 per cent because of the ongoing switch programme. This has reduced yield curve risk, resulting in a higher cost of funding, associated with higher borrowing requirements for purposes of financing upcoming bond redemptions.

5. GOVERNMENT DEBT PORTFOLIO AND RISK METRICS

Government maturity profile

The affordable cash redemption line, as identified by the smoothing curve, indicates government's ideal affordability level for the repayment of debt, as shown in Figure 24. Any amount above this line poses refinancing risk (albeit not immediate) and has to be switched. As at 31 March 2022, R48.025 billion was successfully switched out of the R2023 bond (7.75%; 2023).

2021/22 DEBT MANAGEMENT Report

5. GOVERNMENT DEBT PORTFOLIO AND RISK METRICS

Sovereign risk assessment

As COVID-19 restrictions were lifted and the economy opened gradually within a supportive external environment, South Africa's economy recovered quicker than expected. This also led to improved fiscal performance which has been viewed as positive by ratings agencies.

On 21 May 2021, S&P Global affirmed South Africa's long-term foreign debt rating at BB- and its local currency debt rating at BB. The agency maintained a "stable" outlook. On the same day, Fitch affirmed the country's long-term foreign and local currency debt ratings at BB- and maintained a "negative" outlook. Both agencies highlighted that longstanding structural constraints are expected to continue to hinder economic growth. High and rising government debt and high inequality are also key to the weak ratings.

Following multiple ratings downgrades in 2020 brought on by the COVID-19 pandemic and its associated effects, South Africa's credit ratings have begun to stabilise. On 15 December 2021, Fitch affirmed the country's non-investment ratings at BB- and revised its outlook from "negative" to "stable". The agency indicated that the revision of the outlook reflects a faster-than-expected economic recovery, surprisingly strong fiscal performance and significant improvements to key GDP-based credit metrics following the rebasing of national accounts.

After the 2022 Budget was tabled amid better-than-expected economic performance, on 1 April 2022, Moody's affirmed the country's long-term foreign and local debt credit ratings at Ba2 and revised its outlook from "negative" to "stable". The agency cited that the key driver for the revision was the improved fiscal outlook, which increases the likelihood of government's debt burden stabilising over the medium term. In addition, over the past two fiscal years, government has shown the ability to reprioritise its spending while staying committed to fiscal consolidation.

Ratings agencies remain concerned about South Africa's low economic growth, the slow pace of implementing economic reforms, and socioeconomic inequalities that complicate policy efforts and intensify tensions that fuel political risk. In addition, the country continues to grapple with a large debt burden, and financially weak state-owned companies that continue to strain public finances despite government's increasingly limited financial support to them.

5. GOVERNMENT DEBT PORTFOLIO AND RISK METRICS

Table 14: South Africa's solicited credit ratings, 2021/22

Rating agency	Moody's		Fitch		S&P	
Date of review	1-Apr-22		15-Dec-21		21-May-21	
	Current rating	Previous rating	Current rating	Previous rating	Current rating	Previous rating
Foreign currency credit rating	Ba2	Ba2	BB-	BB-	BB-	BB-
Domestic currency credit rating	Ba2	Ba2	BB-	BB-	BB	BB
Outlook	Stable	Negative	Stable	Negative	Stable	Stable
	Both foreign and domestic currency credit ratings are two notches below investment grade		Both foreign and domestic currency credit ratings are three notches below investment grade		Foreign currency credit rating is three notches below investment grade while the domestic currency credit rating is two notches below investment grade	

Sources: Moody's, Fitch, S&P Global, National Treasury

Ratings agencies indicated that credit ratings upgrades are unlikely in the short term. However, the following factors could lead to a positive outlook:

- A clear and credible path towards stabilising the government debt-to-GDP ratio over the medium term.
- Increased confidence in economic growth prospects that are sufficient to support government's efforts to reduce the budget deficit and address the country's high levels of inequality and unemployment.
- Substantially improved job creation and productivity, leading to higher real per-capita GDP growth.
- Agreements with trade unions that lead to the substantial moderation of future increases in the wage bill.

Conversely, the following factors could lead to further downgrades:

- Continued rise in the government debt-to-GDP ratio and failure to formulate a clear and credible path towards stabilising this ratio.
- Persistently weak GDP growth that continues to undermine government's efforts to reduce the budget deficit and increases the socioeconomic pressures that result from the country's high levels of inequality.
- Any indication of diminished access to funding at interest rates that would further endanger the sustainability of government's debt.

6. INVESTOR RELATIONS

Investor roadshows

National Treasury runs an active investor relations programme and, each year after releasing the Budget Review in February and the Medium-Term Budget Policy Statement (MTBPS) in October, conducts domestic and international roadshows with the SARB. The aim of these roadshows is to strengthen relationships with investors and keep them informed about economic, fiscal, political and social developments in the country.

Because of COVID-19 travel restrictions, in 2021/22 National Treasury and the Reserve Bank engaged domestic and international investors through global investor calls. The MTBPS was presented in October 2021 and the Budget Review in February 2022.

National Treasury also conducts frequent meetings with investors throughout the year and provides information about funding programmes and strategies via the JSE's Stock Exchange News Service.

Investor relations website

Launched in June 2011, National Treasury's investor relations website (<http://investor.treasury.gov.za>) provides relevant information to institutional investors. This includes bond auction calendars, historical results for auctions, sovereign credit ratings and reports, holdings of domestic government bonds, policy documents, economic indicators, details of pending events, investor presentations and links to other relevant websites.

Marketing and promotion of RSA Retail Savings Bonds

COVID-19 lockdown restrictions prevented National Treasury from participating in physical promotions in 2021/22. As such, all expos planned for the period under review were postponed to 2022/23. Nevertheless, the department continued with digital marketing campaigns by using email and various social media platforms. Plans are in place to enhance the RSA Retail Savings Bonds website to include blogs and podcasts.

2021/22 DEBT MANAGEMENT Report

7. ANNEXURES

Annexure H: Glossary

Auction	A process whereby participants can submit bids to purchase a given amount of a good or service at a specific price.
Bid-to-cover ratio	A ratio used to express the demand for a particular security during auctions. It is calculated by dividing the total amount of bids received by the total amount of bids accepted.
Benchmark bond	A bond that provides a standard against which the performance of other bonds can be measured. Government bonds are almost always used as benchmark bonds.
Bond	A certificate of debt issued by a government or corporation guaranteeing the payment of the original investment plus interest on a specified future date.
Liquidity	The ease of converting an asset to cash.
Primary dealer	A firm that buys government securities directly from a government with the intention of reselling them to others, thus acting as a market maker for the securities.
Primary listing	The main exchange on which a stock is listed.
Refinancing risk	The possibility that a borrower will not be able to refinance by borrowing to repay existing debt.
Secondary market	A market in which an investor purchases a security from another investor rather than from the issuer, subsequent to the original issuance in the primary market. It is also called the aftermarket.
Sterilisation deposit	Operations by central banks to mitigate potentially undesired effects (currency appreciation or inflation) of inbound capital. The South African Reserve Bank "sterilises" excess cash created in the money market when purchasing foreign currency.
Strate	Share Transactions Totally Electronic Limited is the authorised central securities depository for the electronic settlement of financial instruments in South Africa.
Switch programme	A liability management exercise where short-term debt is exchanged for long-term debt. The purpose is to reduce near-term exposure to refinancing risk by exchanging short-term debt for long-term debt.
Yield	A financial return or interest paid to the buyers of bonds. The yield considers the total of annual interest payments, the purchase price, the redemption value and the amount of time remaining until maturity.
Yield curve	A graph showing the relationship between the yield on bonds of the same credit quality but different maturity at a given point in time.

7. ANNEXURES

Annexure I: Abbreviations and acronyms

CFI	Cooperative financial institution
COVID-19	Coronavirus disease
CPI	Consumer price index
CPD	Corporation for Public Deposits
ETP	Electronic trading platform
Fitch	Fitch Ratings
GDP	Gross domestic product
JSE	Johannesburg Stock Exchange
LIBOR	London interbank offered rate
Moody's	Moody's Investors Service
MTBPS	Medium-Term Budget Policy Statement
Repo	Repurchase
RSA	Republic of South Africa
S&P Global	S&P Global Ratings
SARB	South African Reserve Bank
Strate	Share Transactions Totally Electronic Limited
US	United States of America
