# Foreword

The *2008 Tax Statistics* publication is an important milestone for National Treasury and the South African Revenue Service (SARS).

The availability of comprehensive tax revenue data is the cornerstone upon which appropriate tax policy and effective tax administration are predicated. Equally, the availability of disaggregated tax revenue data is important for academic research and analysis by private sector economists and other interested parties.

The often heated discourse on economic policy, public sector expenditure priorities and the role of taxes to promote growth and equity needs to be underpinned by rigorous analysis. It is our hope that this publication will make a contribution to enhance the quality of research and analysis and help to support evidence based policy formulation.

The buoyancy in tax revenue collections over the past decade has been the result of a combination of tax reforms, improved tax administration and tax compliance and robust economic growth. Tax reforms have been characterised by a reduction in marginal and average tax rates, the broadening of the tax base, the closing of various tax loopholes and improved tax administration.

It is generally acknowledged that the tax system should be fair, efficient and certain. In addition, taxes and tax incentives are often used to change price signals and thereby influence the behaviour of taxpayers, consumers and producers. The use of excise duties to also take into account the negative externalities associated with tobacco products and alcoholic beverages, in addition to serve as a source of revenue for this fiscus, is well known. Increasingly, the tax system will also be used to help address negative environmental externalities, in particular climate change.

Improvements in tax revenue collection have given government the space to continually look at ways to improve the efficiency, fairness and effectiveness of the tax system and how tax revenues are deployed, to ensure that the welfare of all citizens is addressed.

This publication provides an overview of disaggregated tax revenue data for the period 2002/03 to 2005/06. It contains data on revenue collections with the focus on the three main tax instruments: personal income tax (PIT), corporate income tax (CIT) and value-added tax (VAT). It also includes a brief summary of customs revenue by main tariff heading.

Given that this is the first publication of its kind for South Africa, the scope and quality of data will undoubtedly improve over time. The more we interact with users and become familiar with their needs, as well as consistently enhancing SARS' data capturing processing and systems, the greater the improvements will be. We hope that the data contained in this publication will form the basis for more in-depth analysis and debate that will also inform the refinement of the publication in future.

Finally, we would like to express our appreciation to the Tax Policy Unit of National Treasury and the Revenue Analysis Unit of the South African Revenue Service for their efforts to ensure the publication of the *2008 Tax Statistics*.

# About this publication

This *2008 Tax Statistics* publication is an overview of tax revenues for the period 2002/03 to 2005/06. In some instances aggregate revenues for early and later periods, where available, are provided.

This publication is intended to fill a void in relation to the public availability of tax revenue data at a more disaggregate level. Many commentators and analysts have, over the years, requested tax revenue data at a more disaggregate level.

*Chapter 1: Overview of revenue collections* provides a summary of aggregate tax revenue collection trends in South Africa.

*Chapter 2: Personal income tax* gives an overview of assessed personal income tax (PIT) revenues of registered individual taxpayers. It provides information on taxable income by income categories, age, gender, source of income, fringe benefits, allowances and other deductions. It should be noted that a large percentage of income taxpayers (standard income tax on employees (SITE)-only taxpayers) – those with taxable income below R60 000 per year) are not reported on in this chapter. SITE-only taxpayers do not have to register with the South African Revenue Service (SARS) and are not required to file annual tax returns. Although larger in number, their contribution to total PIT revenues is small.

*Chapter 3: Corporate income tax* is an overview of corporate income tax (CIT) revenues. Information on taxable income by income category, sector and type of business entity is provided.

*Chapter 4: Value-added tax* gives an overview of value-added tax (VAT). It gives a breakdown of VAT receipts and refunds by sector, type of business entity and payment category. In a separate section, it also analyses the topical issue of VAT concessions.

*Chapter 5: Customs/import duties* provides information on the customs value of imported goods by product type in terms of the Harmonised System<sup>1</sup>, second digit level (chapter-level), as well as VAT, customs/import duty, *ad valorem* excise duty revenues on imported goods.

All statistics are based on the income, expenses, deductions and other items reported by taxpayers and traders in their tax returns. Information on the sector (industry) classification is based on the classification as declared by taxpayers, based on their main source of income. Trade classification data is based on the classification as declared by the trader, based on the Harmonised System.

Disaggregated income tax data is based on assessed PIT and CIT returns. Given the time delay in the submission of tax returns by some taxpayers and the time taken to assess such returns, the latter year's statistics are lower than that of earlier years. Where figures have not been rounded, discrepancies may occur between the numbers of the component items and the totals in the tables. The disaggregated income tax data was extracted from SARS' systems in July 2007<sup>2</sup>.

Where figures have not been rounded, discrepancies may occur between the numbers of the component items and the totals in the tables. Where there is a single year e.g. 2005, this refers to the tax year and where the year has a forward slash e.g. 2004/05, this refers to the fiscal year.

An electronic version of this publication (as well as the Excel tables) is available for download on both the websites of National Treasury ([www.treasury.gov.za](http://www.treasury.gov.za)) and the South African Revenue Service (SARS) ([www.sars.gov.za](http://www.sars.gov.za)).

---

<sup>1</sup> The Harmonised System Nomenclature, also known as the International Convention on the Harmonised Commodity Description and Coding System (Harmonised System) is, essentially, the system according to which all internationally traded products, components, or commodities are classified. This international system is currently used by 200 countries and customs or economic unions, which account for about 98 per cent of world trade.

<sup>2</sup> We would like to thank the University of Pretoria for their assistance with the processing of the data.

## Overview of revenue collections

### ■ Introduction

In 2007/08, the consolidated South African tax revenue of all three spheres of government was an estimated 29.1 percent of GDP or R599.3 billion.

Nationally collected taxes dominate the South African taxation system, accounting for 95.6 percent of total South African tax revenue (or 27.8 percent of GDP) in 2007/08. Provinces account for just under 1 percent of total South African tax revenue (0.2 percent of GDP) and local government around 3.6 percent of total South African tax revenue (1 percent of GDP).

This chapter gives an overview of:

- South African tax revenue
- National taxes
- Registered taxpayers
- Budget revenue and revenue performance
- Main sources of tax revenue
- Tax revenue by main category
- Tax relief
- Tax rates
- Roles of National Treasury and SARS.

### ■ South African tax revenue

Table 1.1 shows total South African tax revenue from the three spheres of government - national, provincial and local - with the corresponding percentages of GDP. Total South African tax revenue increased from R302 billion in 2002/03 to R599.3 billion in 2007/08. The total South African tax revenue as a percentage of GDP increased from 25.2 percent in 2002/03 to 29.1 percent in 2007/08.

National tax revenues are derived from three major taxes: personal income tax (PIT), corporate income tax (CIT) and value-added tax (VAT). Combined, these account for around 80 percent of total (national) budget revenue, with the fuel levy, excise and customs duties accounting for around 12 to 14 percent of total national budget revenue.

Provincial tax revenues account for less than 1 percent of total South African tax revenue and around 0.2 percent of GDP. The bulk of provincial tax revenue is derived from motor vehicle licences, with some revenue being derived from casino (gambling) taxes and liquor licences. Provincial tax revenue has increased from R2.8 billion in 2002/03 to R4.9 billion in 2007/08.

1. Source: South African Reserve Bank and Statistics South Africa.

2. Provincial numbers taken from the Provincial Budgets and Expenditure Review. All numbers relating to 2007/08 are budget numbers.

3. Local government numbers taken from the Local Government Budgets and Expenditure Review.

The financial year of the municipalities starts on 1 July to 30 June of the following year.

Regional service levies were abolished in 2006/07. Numbers up to 2005/06 have been audited, are pre-audited for 2006/07 and budgeted for 2007/08.

Local government (municipal) own tax revenue has decreased from 5.6 percent in 2002/03 to around 3.6 percent of total South African tax revenue in 2007/08. The decrease is mainly due to the termination of the regional services council (RSC) levies in 2006/07. Local government tax revenue accounts for around 1 percent of GDP. All local government tax revenue is derived from property rates and RSC levies prior to 2005/06. *Table 1.1.1<sup>1</sup>* provides a breakdown of provincial and local government tax revenues.

The rest of this publication focuses on national taxes only, as provincial and local government taxes are reported in other publications like the Local Government Budgets and Expenditure Review released earlier in 2008 and the Provincial Budgets and Expenditure Review published released in 2007. Both are available on National Treasury's website.

## National taxes

Section 213 of the Constitution requires that all money received by the national government be paid into the National Revenue Fund, except for money reasonably excluded by an act of Parliament. South Africa also collects customs and excise revenue on behalf of the Southern African Customs Union (SACU).

<sup>1</sup> Tables numbered in italics are included at the end of the chapter.

One of the first tax reforms instituted by the government after 1994 was the creation of the South African Revenue Service (SARS), which is a dedicated agency established to administer and collect taxes. The national tax base has grown substantially since 1994, with more people being tax compliant. National Treasury is responsible for the tax policy framework and it works closely with SARS to ensure that tax policy and tax administration are well aligned. Section 12(1) of the Public Finance Management Act (1999) (PFMA) requires that: “The South African Revenue Service must promptly deposit into a Revenue Fund all taxes, levies, duties, fees and other moneys collected by it for that Revenue Fund, in accordance with a framework determined by the National Treasury”.

The South African income taxation system is a residence based system, which means residents are taxed on their worldwide income, irrespective of where their income was earned. Non-residents are, however, taxed on their income from a South African source. Foreign taxes on foreign income are credited against the South African tax payable on foreign income.

## ■ Registered taxpayers

The number of taxpayers registered as individuals, companies and trusts for income tax and employers for pay-as-you-earn (PAYE) and vendors for VAT are shown in table 1.2. It must be noted that the figures for registered taxpayers for income tax purposes exclude an estimated 4 million formal employees (standard income tax on employees (SITE)-only taxpayers) earning an annual taxable income below R60 000 from employment only, who are not required to register with SARS.

**Table 1.2: Registered taxpayers, 2002/03 – 2007/08**

Number	Individuals <sup>1</sup>	Companies (CIT) <sup>1</sup>	Trusts <sup>1</sup>	PAYE <sup>1</sup>	VAT <sup>1</sup>
2002/03	3 415 432	814 894	254 593	252 589	506 098

2006/07	4 764 105	1 218 905	374 411	349 077	677 153
2007/08	5 204 805	1 584 002	384 747	379 675	745 487
<b>Percentage year-on-year growth</b>					
2003/04	10.6%	0.3%	11.5%	8.8%	6.0%
2004/05	9.0%	14.2%	12.4%	10.2%	7.8%
2005/06	8.8%	13.1%	8.1%	9.0%	9.6%
2006/07	6.4%	15.5%	8.6%	5.7%	6.9%
2007/08	9.3%	30.0%	2.8%	8.8%	10.1%

1. Excludes cases where status is in suspense, estate and address unknown.

The tax year for individuals starts on 1 March and ends at the end of February the following year. The tax year for companies is normally the financial year of the company for financial reporting purposes.

- *Individuals:* The number of registered individual taxpayers has increased from 3.4 million in 2002/03 to 5.2 million taxpayers in 2007/08. The percentage year-on-year growth has declined from 10.6 percent in 2003/04 to around 9.3 percent in 2007/08.
- *Companies:* The number of companies registered for income tax has nearly doubled from 814 894 in 2002/03 to over 1.5 million in 2007/08. The percentage year-on-year increase ranges from 0.3 percent in 2003/04 to 30 percent in 2007/08.
- *Trusts:* The number of registered trusts has increased from 254 593 in 2002/03 to 384 747 in 2007/08.

- *PAYE*: The number of taxpayers registered for PAYE has increased from 252 589 in 2002/03 to 379 675 in 2007/08.
- *VAT*: The number of registered VAT vendors has increased from 506 098 in 2002/03 to 745 487 in 2007/08. The percentage year-on-year growth has increased from 6 percent in 2003/04 to 10.1 percent in 2007/08.

## Budget revenue and revenue performance

Between 2002/03 and 2007/08, (national) tax revenue collections have (with the exception of 2003/04) exceeded budget estimates. This strong revenue performance is the result of robust economic growth, higher commodity prices and improvements in the effectiveness and efficiency of tax administration. The tax base has been broadened and tax compliance has improved.

Budget revenue consists of national tax revenue, and non-tax revenue less payments to Botswana, Lesotho, Namibia and Swaziland (BLNS countries). 98 percent of budget revenue is accounted for by tax revenue while 2 percent is non-tax revenue. (See table 1.3.) National budget revenue has increased as a percentage of GDP from 22.6 percent in 1994/95 to 27.1 percent in 2007/08.

Gross nominal tax revenue increased from R282.2 billion in 2002/03 to R572.9 billion in 2007/08, a cumulative percentage increase of 15.2 percent per year.

**Table 1.3: Total budget revenue, 1994/95 – 2007/08**

## The Southern African Customs Union

South Africa is one of the five signatories to the SACU agreement, together with Botswana, Lesotho, Namibia and Swaziland. SACU's five member countries apply a common external tariff and have similar customs and excise legislation, the same excise duties on imported and locally manufactured goods and the same import duties on imported goods. Excise and customs (import duty) revenues are pooled and distributed among the SACU members based on a formula. South Africa currently administers this revenue pool and makes quarterly payments to the BLNS countries.

Table 1.4 is a summary of contributions “paid into” the SACU pool by the individual countries. South Africa collects a significant amount of customs and excise revenues on behalf of BLNS countries. Customs duties are paid to South Africa on goods imported by BLNS countries from abroad and transported via South Africa in bond to the BLNS countries. In addition, since 2002/03, excise duties have been collected at source. Excise duty is paid in South Africa on excisable goods exported from South Africa to BLNS countries.

**Table 1.4: Contributions to SACU pool, 2000/01 – 2007/08**

1. Contribution by South Africa includes some collections on behalf of BLNS countries.

Table 1.5 shows how the revenues are allocated based on a revenue share formula. The revenue share accruing to each member state is calculated based on three components:

- a share of the customs pool
- a share of the excise pool
- a share of a development component.

These three components are then distributed as follows:

- The customs component is allocated according to each country’s share of total intra-SACU trade, including re-exports.
- The excise component, net of the development component, is allocated on the basis of GDP.
- The development component is set at 15 percent of the total excise pool. The share accruing to each member country is calculated based on the country’s GDP per capita compared to the average of SACU’s GDP per capita. The development component ensures that poorer countries, that is countries whose GDP per capita falls below the SACU’s per capita average, are compensated by the other relatively well off member states.

**Table 1.5: Share received from SACU pool, 2000/01 – 2007/08**

1. Includes amounts allocated to South Africa, the balance of the "surplus/deficit" for that fiscal year and allocations to the SACU Secretariat.

## Main sources of tax revenue

The contribution of the different types of taxes as a percentage of total tax revenue collections has changed over the period. (See table 1.2.1 and figure 1.1.) PIT, as a percentage of total tax revenue, increased from 39.5 percent in 1994/95 to a high of 42.6 percent in 1999/00 and has since decreased to 29.5 percent in 2007/08. On the other hand, CIT, as a percentage of total tax revenue, has increased from 10.5 percent in 1994/95 to 24.5 percent in 2007/08.

Nominal corporate income tax revenue increased from R55.7 billion in 2002/03 to R140.1 billion in 2007/08, a cumulative percentage increase of 151.4 percent or 20.2 percent per year. The headline corporate income tax rate was reduced from 35 percent in 1994/95 to 30 percent in 1999/00, 29 percent in 2005/06 and 28 percent in 2008/09. Thus, corporate income tax revenues increased while the headline corporate income tax rate decreased.

Nominal customs revenue increased cumulatively by 181.5 percent between 2002/03 and 2007/08, or 23 percent per year, while revenue from the general fuel levy increased cumulatively by only 54.8 percent between 2002/03 and 2007/08, or 9.1 percent annually.

It should be noted that these numbers and percentages include inflation. Much of the increase in nominal tax revenues has been due to higher economic growth, higher commodity prices, improved tax administration and tax compliance.

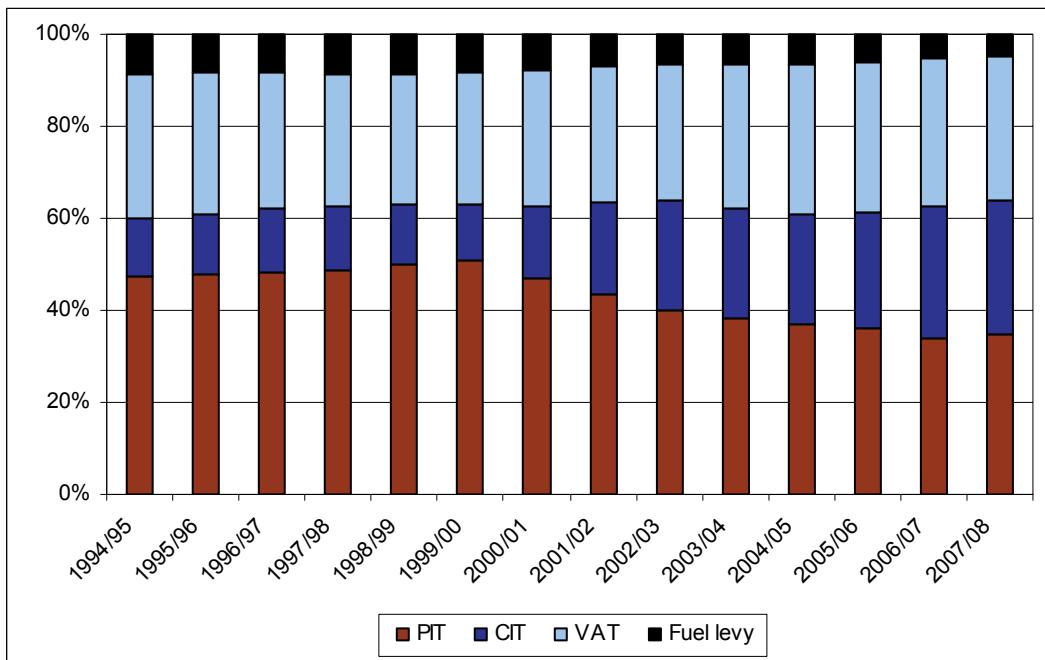

**Figure 1.1 Composition of main sources of tax revenue, 1994/95 – 2007/08**

Table 1.3.1 and figure 1.2 show the main sources of tax revenue as a percentage of GDP. PIT, as a percentage of GDP, was around 9 to 10 percent in the 1990s, fluctuating at around 7.9 percent of GDP over the last few years, and increasing slightly to around 8.2 percent of GDP in 2007/08. CIT, as a percentage of GDP, has increased from 2.4 percent in 1994/95 to 6.8 percent in 2007/08. VAT, as a percentage of GDP, was around 7.4 percent in 2006/07 and 2007/08, after being stable at around 5.8 percent during the 1990s and early 2000s.

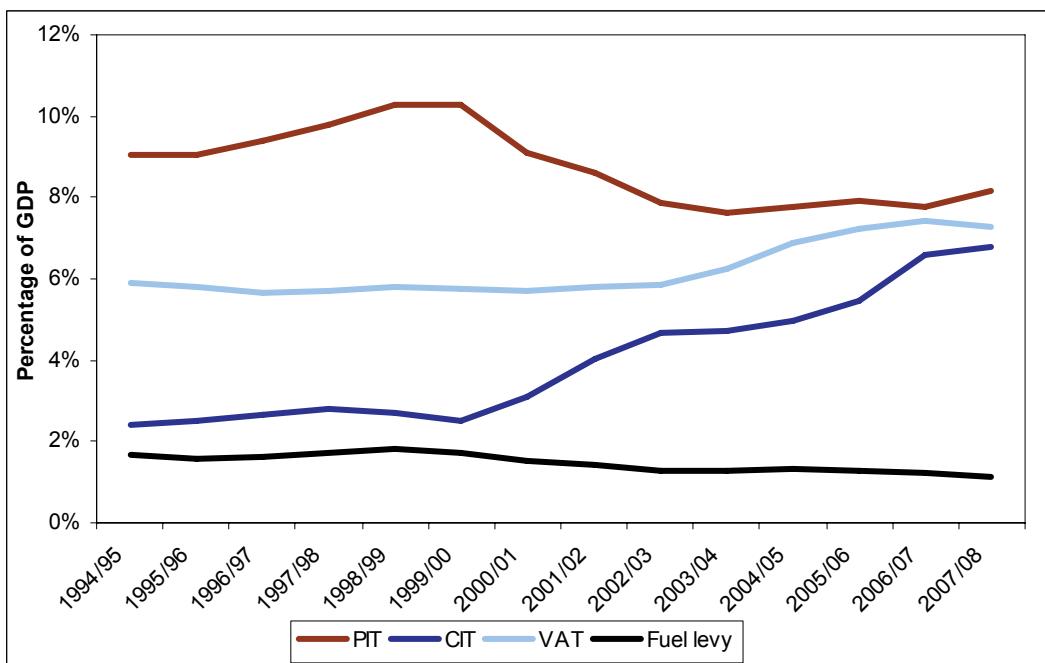

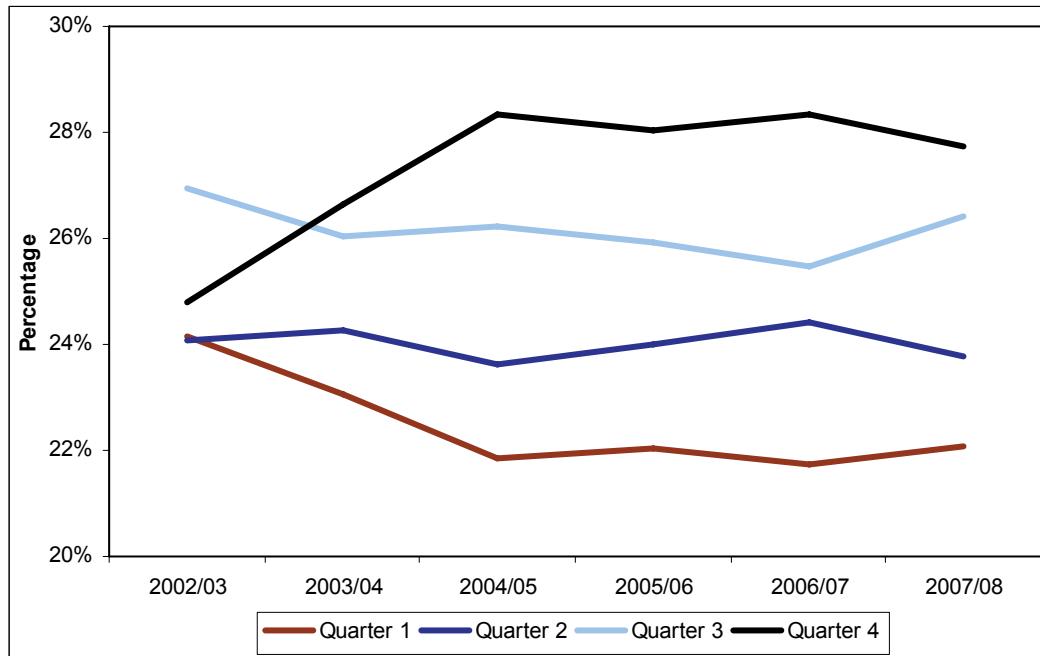

**Figure 1.2 Main revenue sources as percentage of GDP, 1994/95 – 2007/08**

Table 1.4.1 and figure 1.3 show the monthly and quarterly trends in the collection of tax revenues. The peaks in the different quarters, namely June, September, December and March, are largely due to provisional corporate tax payments.

**Figure 1.3 Net quarterly tax revenue collections, 2002/03 – 2007/08**

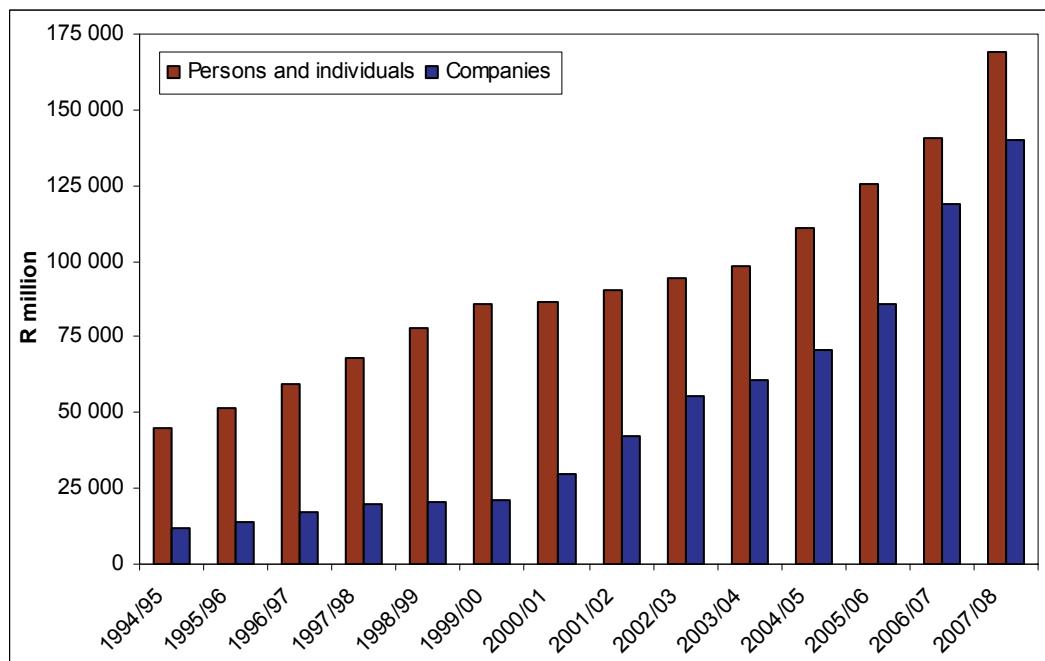

## Tax revenue by main category

Table 1.5.1 and table 1.5.2 show tax revenue by main category.

### Taxes on income and profits

Table 1.6.1 shows that taxes on income and profits comprise of the following tax instruments:

- *Persons and individuals:* Income tax is the government's main source of income and is levied in terms of the Income Tax Act (1962). Income tax is levied on residents' worldwide income, with appropriate relief to avoid double taxation. Non-residents are taxed on their income from a South African source. Tax is levied on taxable income that, in essence, consists of gross income less exemptions and allowable deductions. On average around 95.5 percent of taxes on persons and individuals is from PAYE. (See table 1.6.2.)
- *Companies:* Between 2002/03 and 2004/05, companies were taxed at a rate of 30 percent, between 2005/06 and 2007/08 they were taxed at a rate of 29 percent and in 2008/09 at a rate of 28 percent. A special formula tax applies in the case of gold mining companies. Small business corporations (those with an annual turnover of less than R14 million) benefit from graduated tax rates of 0 percent on the first R46 000 taxable income (equal to the PIT tax threshold), 10 percent from R46 001 to R300 000 taxable income, and R25 400 plus 28 percent on taxable income in excess of R300 001. Table 1.6.3 shows the breakdown of corporate income taxes.

**Figure 1.4 Taxes on income and profits – PIT and CIT, 1994/95 – 2007/08**

- *Capital gains tax (CGT)*: CGT was introduced in October 2001. It forms part of the income tax system (collections are reflected under persons and individuals, and companies) and is based on capital gains made on the disposal of assets.
- *Secondary tax on companies (STC)*: STC is levied at a rate of 10 percent (12.5 percent prior to 1 October 2007) on profits of companies distributed by way of dividends.
- *Tax on retirement funds (TRF)*: TRF was a tax levied on the gross interest, net rental and foreign dividend income of retirement funds - in other words, pension, provident and retirement annuity funds. TRF was abolished in 2007.
- *Other*: Includes interest charges on overdue tax.

### Taxes on payroll and workforce

- *Skills development levy*: The skills development levy is a compulsory levy to fund training by companies. SARS administers the collection of this levy in consultation with the Department of Labour. The rate is 1 percent of a company's total payroll and is payable by employers that are registered with SARS for employees' tax purposes and which have an annual payroll of more than R500 000 (R250 000 before 1 August 2005).

### Taxes on property

Table 1.7.1 shows that taxes on property comprise of the following tax instruments:

- *Donations tax*: Donations tax is levied at a flat rate of 20 percent on the value of the donation. The first R100 000 donated in each year by a natural person is exempt from donations tax. In the case of a taxpayer who is not a natural person, the exempt donations are limited to casual gifts not exceeding R10 000 per year in total. Dispositions between spouses and donations to certain public benefit organisations are exempt from donations tax.

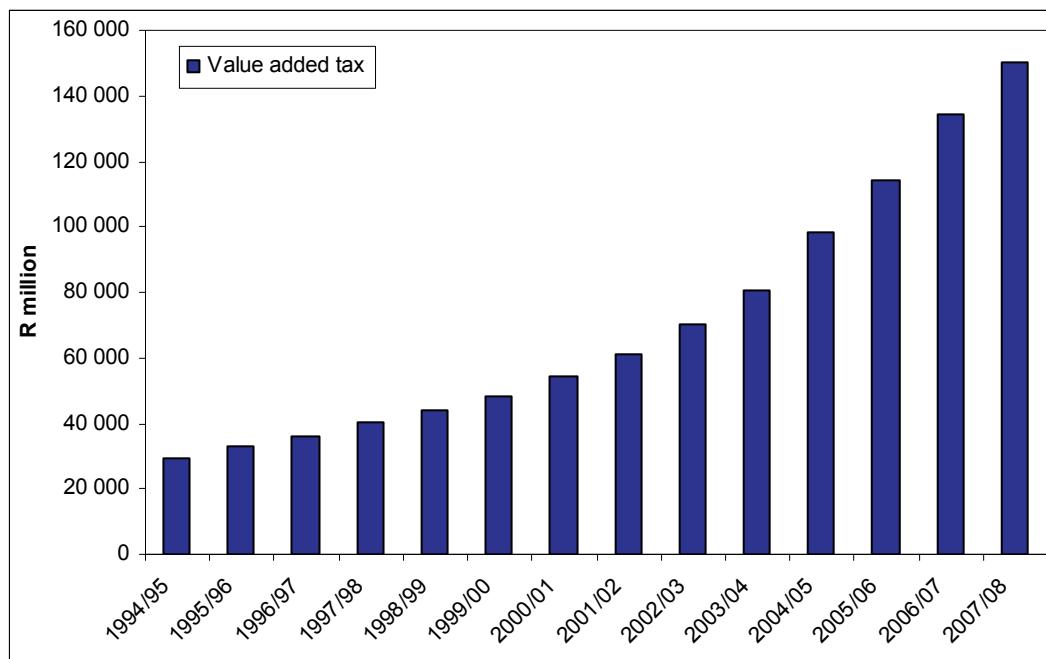

- *Estate duty*: For the purposes of estate duty, an estate consists of all property of the deceased including deemed property, such as life insurance policies and payments from pension funds wherever situated. However, the estate of a deceased non-resident consists only of his or her South African assets. The duty, at a rate of 20 percent, is calculated on the dutiable amount of the estate. Certain admissible deductions from the total value of the estate are allowed.
- *Uncertificated securities tax (UST)*: UST is payable in respect of the change in beneficial ownership of listed securities (securities transfer tax (STT) on the transfer of securities as from 1 July 2008). It is levied at a rate of 0.25 percent.
- *Transfer duties*: Transfer duty is payable by individuals when they acquire property at the rate of 5 percent of the value above R500 000 and at 8 percent of the value exceeding R1 million. When property is acquired by a person other than an individual, such as a company or trust, transfer duty is payable at a rate of 8 percent of the value. All transactions relating to the supply of goods (property) that are subject to VAT are exempt from transfer duty.

### Domestic taxes on goods and services

Table 1.8.1 shows that domestic taxes on goods and services comprise of the following tax instruments:

- *Value-added tax (VAT)*: VAT is levied at a standard rate of 14 percent on most goods and services subject to certain exemptions, exceptions and zero-ratings, provided for in the Value-Added Tax Act (1991). VAT is levied on the supply of all goods and services rendered by registered vendors. VAT is also levied on the importation of goods and services into South Africa. (See table 1.8.2 and figure 1.5.)

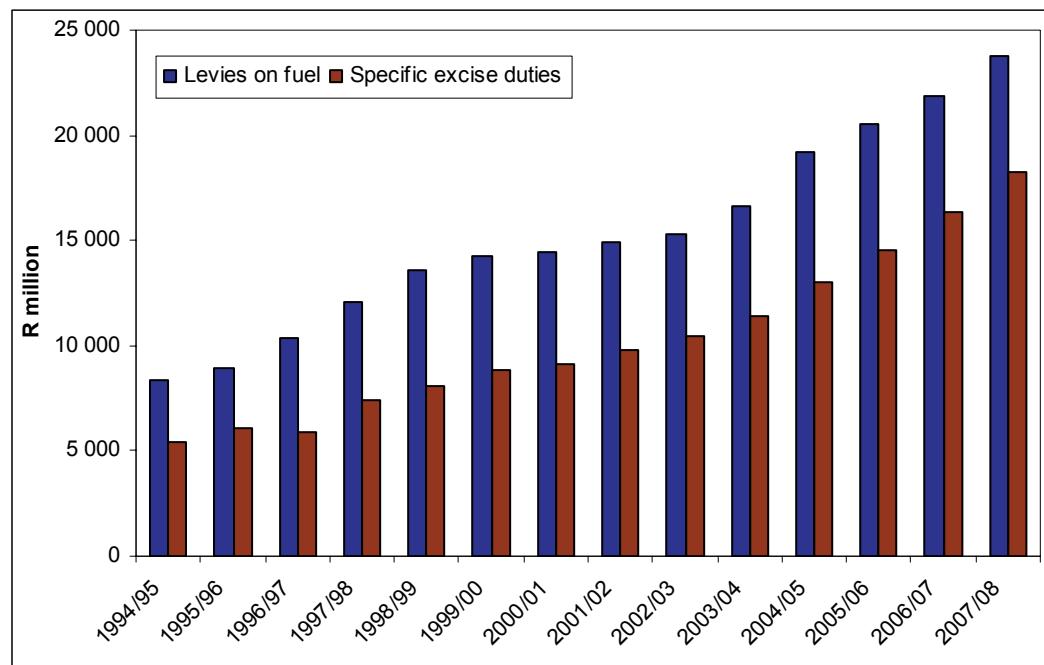

**Figure 1.5 Domestic taxes on goods and services – VAT, 1994/95 – 2007/08**

- *Excise duties*: Excise duties are levied on certain locally manufactured goods and on their imported equivalents. This duty is levied as a specific duty on tobacco and liquor, and as an *ad valorem* duty on cosmetics, televisions, audio equipment and motor cars. Relief from excise duty is available where excisable products are exported. (See figure 1.6.)

- *Fuel levy:* The fuel levy is a specific excise tax imposed in terms of the Customs and Excise Act (1964). Relief is available through a diesel refund system for farming activities, forestry, mining, offshore vessels, harbour vessels, locomotives used for rail freight, and large electricity generation plants. (See figure 1.6.)

**Figure 1.6 Domestic taxes on goods and services – Levies on fuel and specific excise duties, 1994/95 – 2007/08**

- *International air passenger departure tax:* Fee-paying passengers departing on international flights pay a tax of R120 per passenger and passengers flying to Botswana, Lesotho, Namibia and Swaziland pay R60 per passenger.
- *Environmental levy:* The current environmental levy is essentially a tax on certain types of plastic shopping bags. The levy aims to encourage the sustainable use of these bags.

### Taxes on international trade and transactions

Taxes on international trade and transactions mainly comprise of customs duties:

- *Customs duties:* Customs or import duties are levies imposed on goods imported into South Africa. Import duties are imposed as a means to protect certain local producers. They also include anti-dumping and countervailing duties.
- *Miscellaneous customs revenue:* This primarily comprises customs duties that have yet to be allocated to the appropriate duty types.

### Stamp duties and fees

- Stamp duty is levied on leases of fixed property and until June 2008 on the registration of transfer of unlisted marketable securities.

### State miscellaneous revenue

- This is revenue received by SARS in respect of taxation that cannot be allocated to specific revenue types.

### Other revenue collected by SARS

- *Unemployment Insurance Fund (UIF) contributions:* The UIF provides short term relief to workers when they become unemployed or are unable to work because of maternity or adoption leave, or illness. It also provides relief to the dependants of a deceased contributor. The bulk of contributions to the UIF is collected by SARS and transferred to the fund, which is administered by the unemployment insurance commissioner.
- *Road Accident Fund (RAF):* SARS is responsible for the collection of the RAF levy on petrol and diesel.

### Other taxes

- Provincial governments impose taxes such as motor vehicle licence fees and gaming (gambling) taxes. Local governments partly finance the provision of municipal services by levying rates on the value of immovable property.

## ■ Tax relief

Both individuals and companies have benefited from the tax relief over the last few years. However, most of the tax relief has accrued to individuals. *Table 1.9.1* provides a summary of tax relief.

Changes in tax policy between 2002/03 and 2006/07 included significant personal income tax relief, through adjustments to the personal income tax brackets and the primary and secondary rebate thresholds, and a marginal reduction in the headline corporate income tax rate.

The effectiveness of tax administration continued to improve during this period. This was supported by measures to improve the fairness of the tax system by closing down various tax loopholes and enhanced efforts at ensuring tax compliance.

## ■ Tax rates

*Table 1.10.1* shows the maximum marginal tax rates for the major tax instruments. The maximum PIT tax rate has remained constant at 40 percent. The headline CIT rate was reduced from 30 percent to 28 percent. PIT relief was provided over the last five years by significantly adjusting the income tax brackets while leaving the marginal tax rates unchanged.

## ■ Roles of National Treasury and SARS

### National Treasury

The Tax Policy Unit within National Treasury advises the Minister of Finance on the formulation of tax policy and is also responsible for drafting tax legislation, tax revenue analysis and tax revenue forecasting, in consultation with SARS.

The Tax Policy Unit aims to design tax instruments that fulfil revenue-raising objectives, achieve efficiency and equity objectives, and support redistributive and social policy objectives. In designing tax policy, there is close co-operation between SARS and National Treasury; consultation with other stakeholders, both the public and private sector, is also viewed as important.

### **South African Revenue Service**

The South African Revenue Service Act (1997) (the SARS Act) gives SARS the mandate to:

- collect all tax revenues that are due to the fiscus
- ensure maximum compliance with relevant legislation
- provide a customs service that will maximise revenue, facilitate trade and protect ports of entry against smuggling and other illegal trade.

SARS' main functions are to:

- collect and administer all national taxes, duties and levies
- collect revenue that may be imposed under any other legislation, as agreed between SARS and an organ of state or institution entitled to the revenue
- provide protection against the illegal importation and exportation of goods
- facilitate trade
- advise the Minister of Finance on tax revenue matters.

SARS is responsible for collecting a wide range of taxes:

- Personal income tax (PIT), including capital gains tax (CGT)
- Corporate income tax (CIT), including CGT
- Value-added tax (VAT)
- Customs/import duties
- Excise duties
- Donations tax
- Transfer duty
- Estate duty
- Stamp duty (until March 2009)
- Uncertificated securities tax (securities transfer tax from 1 July 2008)
- Skills development levy
- Unemployment insurance fund (UIF) contributions
- International air passenger departure tax
- Donations tax
- Fuel levy
- Environmental levy
- Other taxes.

## Operating cost of SARS

The operating cost to revenue ratio is an indication of the efficiency with which revenue is collected. However, this ratio is influenced by the tax bases of the different taxes collected and systems development costs. *Table 1.11.1* shows that this ratio is around 1 percent.

## Personal income tax

### ■ Introduction

Personal income tax (PIT) is one of government's main sources of income. Income tax is levied on residents' worldwide income, with appropriate relief to avoid double taxation. Non-residents are taxed on their income from a South African source. Tax is levied on taxable income that, in essence, consists of gross income less exemptions and allowable deductions. (Taxable capital gains also form part of taxable income.)

Individuals generally receive most of their income as salary/wages, pension/retirement payments and investment income (interest and dividends). Some individuals may also have business income which is taxable as personal income (for example, sole proprietors and partners).

This chapter gives an overview of:

- Personal income tax rates
- Tax returns and individual taxpayers
- Taxable income and tax assessed
- Individual taxpayers with business income
- Individual taxpayers' allowances, deductions and fringe benefits.

### ■ Personal income tax rates

The relative tax burden of all individual taxpayers - low, middle and high income earners - has reduced since 1999/00. The top marginal income tax rate for individuals decreased from 45 percent in 1999/00 to 42 percent in 2000/01 and to 40 percent in 2002/03. During this period the personal income tax brackets were increased significantly, which more than compensated for any fiscal drag.

Table 2.1 illustrates the percentage increase in the personal income tax brackets between 2002/03 and 2008/09. The top personal income tax bracket increased from R240 001 in 2002/03 to R490 001 in 2008/09, a cumulative increase of 104.2 percent. During this period, the bottom income tax bracket increased by 205 percent. The primary rebate increased by 70.4 percent, which resulted in a similar increase in the income tax threshold (the level of annual income below which no income tax is payable) for individuals aged younger than 65 years from R27 000 to R46 000 per year. For individuals aged 65 years' old and above, the income tax threshold increased by 73.5 percent from R42 640 to R74 000 per year.

From 2002/03 to 2007/08, over R60 billion was granted in personal income tax relief across the board, for all income groups. This suggests that because the individual tax burden decreased, the disposable income of most taxpayers improved.

**Table 2.1: Personal Income Tax (PIT) brackets, 2002/03 and 2008/09**

Rand	2002/03		2008/09		Marginal PIT rates	Cumulative percentage increase
<b>Brackets</b>	–	40 000	–	122 000	18%	205.0%
	40 001	80 000	122 001	195 000	25%	143.8%
	80 001	110 000	195 001	270 000	30%	145.5%

Age 65 and over		42 640		74 000		73.5%

## Tax returns and individual taxpayers

It should be noted that information on the number of individual taxpayers relates only to those taxpayers who are required to register with SARS. A large number of formal sector workers – those earning taxable income below R60 000 per annum (commonly referred to as SITE only taxpayers) – are not required to register with SARS. During the 2005/06 tax year there were an estimated 4 million formal workers with annual taxable income below R60 000.

Standard income tax on employees (SITE) is not a separate kind of tax. SITE represents payments towards an employee's income tax liability and in cases of employees subject only to SITE, the tax deducted from their remuneration by their employers, is their actual income tax liability. SITE generally applies as a final tax for individuals:

- whose annual net remuneration does not exceed R60 000
- who do not receive a travelling allowance
- who do not receive any other income.

Employees who pay SITE-only do not normally need to register for income tax or submit tax returns. The tables do reflect some of these registered individual taxpayers with taxable income below R60 000. A few individual taxpayers in this category are in fact registered due to claims for retirement fund contributions or medical expenses, prior year trading income or other non-SITE income, or assessed losses brought forward from previous tax years.

Although SARS does have some information on these individuals, detailed information on their characteristics and income distribution patterns is not available for inclusion in this publication. It should also be noted that for individuals below 65 years of age, in 2005/06, the income tax threshold below which no income tax was payable was R35 000.

The number of individuals registered for income tax (excluding SITE only taxpayers as indicated above) has grown from 3.6 million in 2002/03 to 5.3 million in 2007/08 (See table 2.2). After growing at a rate of about 10 percent in 2003/04, this rate has averaged at around 8.3 percent between 2004/05 and 2005/06.

The number of individuals liable to submit income tax returns increased from 3.5 million in 2002/03 to over 4.8 million in 2006/07. The percentage of individual taxpayers assessed at the time the data was extracted (July 2007) was 95.1 percent in 2002/03, 92.3 percent in 2003/04, 87 percent in 2004/05 and 71 percent in 2005/06. The tables in this chapter are based on these assessed returns.

**Table 2.2: Number of Individual taxpayers, 2002/03 – 2007/08**

Number	Registered <sup>1</sup>	Liable to submit returns <sup>2</sup>	Assessed	Percentage assessed
2002/03	3 628 263	3 526 339	3 352 190	95.1%
2003/04	3 991 236	3 836 422	3 542 006	92.3%
2004/05	4 321 354	4 145 746	3 605 378	87.0%
2005/06	4 683 821	4 530 820	3 215 192	71.0%
2006/07	5 005 807	4 866 117		
2007/08	5 318 441			

1. Number of individuals registered as at 31 March of each year.

Includes coded cases where status is in suspense, estate and address unknown.

2. Liable taxpayers are those who are liable to submit a return for a specific tax year.

Cases can be on register and active for other years, but might not be active for the specific tax year.

## Taxable income and tax assessed

Table 2.3 shows a summary of the number of taxpayers assessed, taxable income and tax assessed by taxable income group. The tax assessed as a percentage of taxable income has declined over the period. This was partly due to PIT relief over the period.

**Table 2.3: Individual taxpayers: Summary of taxable income and tax assessed, 2002/03 – 2005/06**

Number of taxpayers assessed	Taxable income (R million)	Tax assessed (R million)	Tax assessed as a % of taxable income
2002/03	332 804	79 350	23.8%
2003/04	381 457	82 641	21.7%
2004/05	424 813	92 045	21.7%
2005/06	415 551	86 208	20.7%

Further detail by taxable income group is provided in *table 2.1.1<sup>1</sup>* and *table 2.1.2*. In terms of taxable income groups, the largest percentage of taxpayers falls within the R150 000 to R300 000 taxable income brackets, making up 15.9 percent of the total for the 2005 tax year.

In 2005, about 70 percent of taxpayers (those with taxable income between R50 000 to R300 000 per year) accounted for 55 percent of personal income tax. The bottom 25 percent of taxpayers (with taxable income below R50 000) accounted for less than 1 percent of income tax assessed while the top 5 percent of taxpayers (with taxable income in excess of R300 000 per year) accounted for close to 45 percent of income tax assessed.

## By province

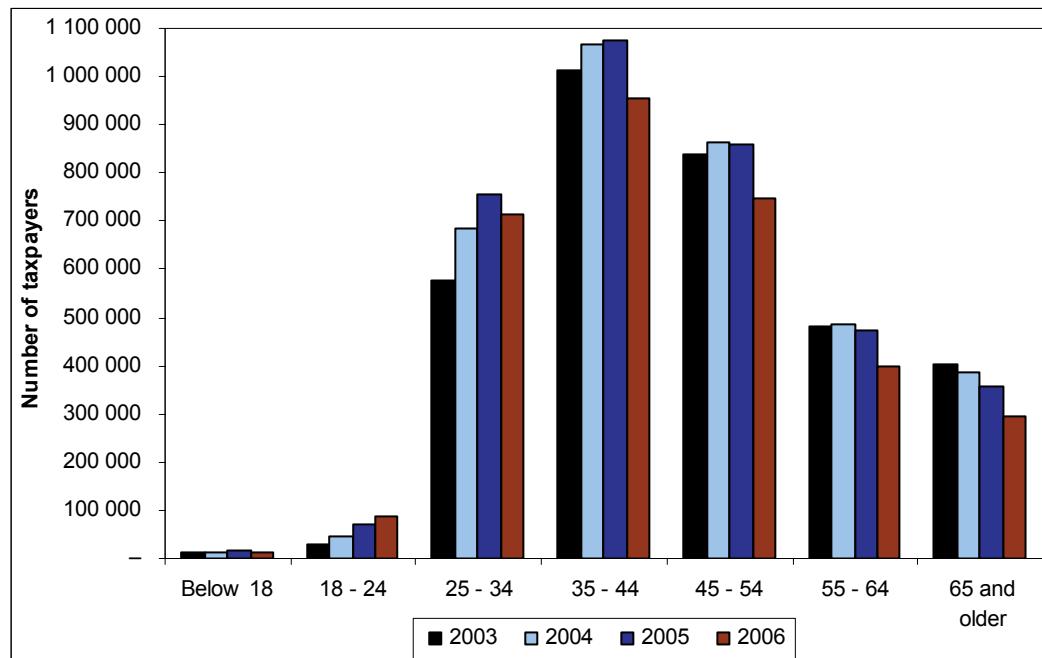

Taxable incomes in the Gauteng province make up almost half of all taxable incomes for persons and individuals. *Table 2.1.3* indicates that around 37 percent of individual taxpayers are registered in Gauteng, while Western Cape has approximately 17 percent of the total registered individual taxpayers. This data is based on the office where the taxpayer is registered and not necessarily the province where the taxpayer resides. These numbers should therefore be viewed as indicative only.

<sup>1</sup> Tables numbered in italics are included at the end of the chapter.

## By age group

*Table 2.1.4* and figure 2.1 give a breakdown of registered individual taxpayers by age group. Around 30 percent of taxpayers are in the 35 to 44 year-old age group, accounting for around 33 percent of total personal income tax assessed.

**Figure 2.1 Numbers of individual taxpayers by age group, 2003 – 2006**

## By gender

Males accounted for almost 58 percent of registered individual taxpayers, 65 percent of the total recorded taxable income earned by registered individual taxpayers and 70 percent of personal income tax assessed. This reflects the uneven income and employment patterns between males and females. Females make up about 43 percent of the working population (StatsSA: 2007).

*Table 2.1.5* shows the breakdown of taxable income and tax assessed by gender over the period.

## By source of income

Registered individual taxpayers employed in the finance, insurance, real estate and business services sector account for the largest share of total income tax assessed from individuals, averaging about 20 percent of the total for the period 2003 to 2006. The number of individuals registered as taxpayers within the sector grew from 545 024 in 2003 to 674 769 in 2006 (24 percent).

*Table 2.2.1* and *table 2.2.2* show the breakdown by source of income; the “other” category as a source of income comprises on average around 13 percent of individual taxpayers. This category includes those who indicated their source of income as “other” (as per the SARS source code) or who left the source of income column blank on the return.

*Table 2.2.3* uses the SARS source of income code as in *table 2.2.1* and classifies it according to the Standard Industrial Classification (SIC). It should be noted that the source of income codes by SARS are not fully aligned with the SIC system used by Stats SA. This means that the numbers per sector in these tables may differ from those published by Stats SA.

*Table 2.2.4* shows the breakdown according to source of income as indicated on the IRP5 form. This is based on the sector indicated by the employer on the IRP5 form.

## ■ Individual taxpayers with business income

Individual taxpayers with business income amounted to about 4.9 percent of total individual taxpayers in 2006 (7.5 percent of the total in 2003). Individual taxpayers with business income derive almost a third of total assessed income (29.9 percent in 2006) from the financing, insurance, real estate and business services sector. This equates to 18.4 percent of the total taxpayers with business income and is closely followed by the medical, dental and other health and veterinary sciences sector, at 20 percent of total assessed income and 23.1 percent of total taxable income.

*Table 2.3.1* and *table 2.3.2* give a breakdown of the sectors in which individual taxpayers with business income are active. On average, just over 20 percent of individual taxpayers with business income recorded negative taxable income (making a loss) over the period.

## ■ Individual taxpayers' allowances, deductions and fringe benefits

### Individual taxpayers' allowances

Travel allowances make up the largest share of allowances for individuals (60.5 percent in 2006). The drop in the share of this allowance from 66.1 percent in 2004 can be partly explained by the changes introduced in 2006 to curb the rise in the abuse of the travel allowance.

*Table 2.4.1* provides a summary of individual taxpayers' allowances. The total allowances amount to R35.7 billion in 2003, R39.3 billion in 2004, R41.8 billion in 2005 and R41.4 billion in 2006. It should be noted that the data for 2006 is incomplete due to the lower percentage returns that were assessed at the time the data was extracted (July 2007).

The more significant allowances are shown per taxable income group in *tables 2.4.2* to *2.4.7*.

### Individual taxpayers' deductions

At 38.8 percent in 2006, contributions to retirement funding accounted for the largest share of deductions by individual taxpayers. The use of this deduction is the highest among individual taxpayers within the R150 000 to R300 000 taxable income brackets.

*Table 2.5.1* provides a summary of individual taxpayers' deductions. The amounts were R44.2 billion in 2003, R49.6 billion in 2004, R53.2 billion in 2005 and R49 billion in 2006. It should be noted that the data for 2006 is incomplete due to the lower percentage returns that were assessed at the time the data was extracted (July 2007).

The more significant deductions are shown by taxable income group in *tables 2.5.2* to *2.5.15*.

### Individual taxpayers' fringe benefits

*Table 2.6.1* provides a summary of fringe benefits. The number of taxpayers receiving fringe benefits was 1 million in 2003, growing to 1.1 million in 2006. Total fringe benefits amounted to R6.4 billion in 2003, increasing to R7.3 billion in 2006.

Medical scheme contributions paid on behalf of the employees form the largest share of fringe benefits in 2006 (35.4 percent), followed closely by the right of an employee to use a company owned vehicle (33.3 percent).

The more significant fringe benefits are shown by taxable income group in *tables 2.6.2* to *2.6.9*.

1. Based on the office where the taxpayer is registered and not necessarily the province where the taxpayer resides. The provincial allocation is thus a reflection of the province in which the taxpayers' office is located.

2. Other includes VIPs and the parliamentary unit.

7. SARS' source of income code is used to classify according to the Standard Industrial Classification (SIC) system. SARS' source of income code is not fully aligned with the SIC system that Statistics South Africa uses.

2. Includes where the source of income was indicated as Other (as per SARS source code) or where the source of income was left blank on the return.

**Table 2.2.4: Individual taxpayers: Tax assessed by source of income as on IRP5 forms, 2003 – 2006**

## Corporate income tax

### ■ Introduction

For the period under review, there was a decline in the headline corporate income tax (CIT) rate. South African companies also pay secondary tax on companies (STC), a tax based on declared dividends. This tax rate was 12.5 percent for most of the period under review and was reduced to 10 percent in October 2007.

Not all taxes paid in a tax year are attributable to income earned in the same year, due to the system of provisional tax payments and tax returns being submitted and assessed long after the end of the tax year. Also, companies have financial years that may differ from the fiscal or calendar year, as companies are free to choose the period for their financial year (which is normally their tax year).

The South African tax system is residence based, meaning that South African residents are taxed on their worldwide income. A company that is incorporated in or effectively managed from South Africa is a South African resident for income tax purposes.

Tax on capital gains is included in company tax revenue, which means that capital gains tax is not recorded as a separate revenue item but included in corporate income tax.

Different sectors of the economy have different effective tax rates due to specific tax dispensations and deductions. Examples are the gold mining formula, farming deductions and valuation, insurance allowances and valuation. Small business corporations with a turnover of not more than R14 million have a special tax dispensation in the form of a graduated income tax rate table.

This chapter gives an overview of:

- Number of companies
- Provisional tax payments by tax year
- Types of companies
- Taxable income and tax assessed by taxable income group
- Taxable income and tax assessed by sector (industry)
- Companies with assessed losses or profits
- Tax assessed by main sector.

### ■ Number of companies

There are over 2 million corporations (1.6 million close corporations, 400 000 private companies and 40 000 public companies) registered with CIPRO<sup>1</sup>. About 30 to 35 percent of registered companies are dormant.

---

<sup>1</sup> The Companies and Intellectual Property Registration Office.

The number of companies registered for income tax purposes increased over the period from 1.2 million in 2002/03 to nearly 2.2 million in 2007/08. On average, only around 65 percent of these companies were liable to submit tax returns.

At the time the data was extracted (July 2007), the percentage of companies that were assessed with respect to 2002/03 was 66.8 percent, 58 percent for 2003/04, 47.4 percent for 2004/05 and 29 percent for 2005/06. (See table 3.1).

**Table 3.1: Number of companies, 2002/03 – 2007/08**

Number	Registered <sup>1</sup>	Liable to submit returns	Assessed	Percentage assessed
2002/03	1 221 273	756 680	505 484	66.8%
2003/04	1 283 155	855 683	496 522	58.0%
2004/05	1 438 539	993 761	471 513	47.4%
2005/06	1 629 288	1 025 871	297 781	29.0%
2006/07	1 830 147	1 248 936		
2007/08	2 182 638			

1. Includes coded cases where status is in suspense, estate and address unknown.

## ■ Provisional tax payments by tax year

The majority of provisional tax payments from companies are received during March, June, September and December. Provisional taxes for any given tax year are paid in three instalments: the first is due six months into the company's tax year; the second at the end of the tax year; and the third six months after the end of the tax year (unless the tax year ends at the end of February, then the third is due seven months after the end of the tax year).

This is illustrated by the following example: A company with a March year-end, in respect of its 2006 tax year will have made its provisional payments in September 2005 (first payment), March 2006 (second payment) and September 2006 (third payment).

The due dates for the 2006 tax year (for all companies) fall over three fiscal years, as illustrated in table 3.2.

**Table 3.2: Companies: Example of provisional tax payments**

Date due	Company financial year-end 2006												Fiscal year	Number of payments
	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec

30-Apr-07										2006 3rd				
31-May-07											2006 3rd			
30-Jun-07												2007/08	3	

It is also important to note that payments are not received in the month that they are due for a variety of reasons. These include:

- Adjustments (Paragraph 19(3)<sup>2</sup>) are made to first and second provisional payments of companies, which then result in delays in collecting the tax in the month that it is actually due.
- Companies sometimes pay their obligations late (or even early).

Under the provisional tax payment system, taxes for a specific tax year are paid over a number of fiscal years as indicated in table 3.3. In 2006/07 for example, more than 90 percent of the eventual tax liability was paid over two tax years: about 57 percent in the specific tax year and about 35 percent in the following year.

**Table 3.3: Companies: Provisional tax payments by tax year paid, 2000/01 – 2006/07**

1. Due to timing differences these figures do not balance to actual provisional tax collections reflected in Table 1.6.3.

Tables 3.1.1<sup>3</sup> to 3.1.3 show a breakdown of the provisional tax payments by sector.

## ■ Types of companies

Table 3.2.1 shows the breakdown of the number of companies assessed by type as well as by negative, zero or positive taxable income.

<sup>2</sup> Paragraph 19(3) of the Fourth Schedule to the Income Tax Act allows the Commissioner to call upon the taxpayer to justify an estimate made by the taxpayer, or to provide particulars of income and expenditure or any other particulars that may be required for the year of assessment in respect of which the provisional tax payment is being made. If the Commissioner is not satisfied with the estimate, he may increase it to an amount that he considers reasonable.

<sup>3</sup> Tables numbered in italics are included at the end of the chapter.

Close corporations (CCs) account for nearly 67 percent of the total number of companies assessed in 2005. Private companies constituted 27 percent, while listed, unlisted and “other” companies made up more than 6 percent of the total number of companies assessed.

## ■ Taxable income and tax assessed by taxable income group

*Table 3.3.1* shows taxable income and tax assessed by taxable income group for all companies. While the total number of companies assessed decreased over the three years from 505 484 in 2003 to 471 513 in 2005, the amount of tax assessed increased from R51.1 billion to R59 billion. Given the time delay in the submission of tax returns by some taxpayers and the time taken to assess the returns, the latter year’s statistics are lower than that of earlier years.

It is interesting to note that the percentage of companies with a positive taxable income is increasing, from 25.7 percent in 2003 to 31 percent in 2006.

*Table 3.3.2* shows that while more than 75 percent of the income tax assessed is paid by large companies with taxable income exceeding R10 million, these companies represent only 1.2 percent of the companies assessed for income tax purposes.

## ■ Taxable income and tax assessed by sector (industry)

*Table 3.4.1* shows the taxable income and tax assessed by sector for all companies.

*Table 3.4.2* uses the SARS source of income code as shown in *table 3.4.1* and classifies it according to the Standard Industrial Classification (SIC). It should be noted that the SARS source of income codes are not fully aligned with the SIC system used by Statistics South Africa. This means that the figures in these tables may be different from those published by Stats SA.

There was an increase in the number of companies registering positive taxable income, from 129 778 in 2003 to 134 766 in 2005. (See *table 3.4.3* and *table 3.4.4*.)

*Table 3.4.5* shows the companies reporting negative taxable income, while *table 3.4.6* shows companies reporting zero taxable income. Sectors with an increasing number of companies reporting zero taxable income include catering and accommodation, construction, and social and related community.

## ■ Companies with assessed losses or profits

*Tables 3.5.1 to 3.5.3* show the total number of companies and those with assessed losses or profits by sector.

Around 72 percent of the companies had assessed losses; 37 percent of these companies were in the financing, insurance, real estate and business services sector and around 12 percent in the retail sector.

## ■ Tax assessed by main sector

*Tables 3.6.1 to 3.6.16* show for each of the tax years (from 2003 to 2006) the tax assessed and the number and percentage of companies assessed by main sector and taxable income group.

## Value-added tax

### ■ Introduction

Value-added tax (VAT) is levied at a standard rate of 14 percent by registered vendors on most goods and services subject to certain exemptions, exceptions and zero-ratings provided for in the Value-Added Tax Act (1991). VAT is also levied on the importation of goods and services into South Africa.

This chapter gives an overview of:

- Number of registered VAT vendors
- Domestic VAT: Payments and refunds
- Turnover
- The debate around current VAT concessions.

### ■ Number of registered VAT vendors

The number of vendors registered for VAT shows a steady increase of 8 percent per year over the past five years. (See table 4.1.)

**Table 4.1: Number of registered VAT vendors, 2002/03 – 2007/08**

Number	Registered <sup>1</sup>	Active vendors	Percentage of registered
2002/03	506 098	487 736	96.4%
2003/04	536 281	507 203	94.6%

### ■ Domestic VAT: Payments and refunds

Table 4.1.1<sup>1</sup> and table 4.1.2 show the number of vendors, payments and refunds per sector. The largest number of VAT vendors in 2005/06 was in the financing, insurance, real estate and business services sector (32.5 percent), followed by the agriculture, forestry and fishing (12.9 percent) and the retail trade (10.4 percent) sectors.

<sup>1</sup> Tables numbered in italics are included at the end of the chapter.

Companies in the mining and quarrying sector constitute 0.5 percent of the number of vendors and 3.8 percent of the total gross VAT payments for 2005/06, but are a negative contributor to net VAT (after refunds). The financing, insurance, real estate and business services sector made the largest gross domestic VAT payments in 2005/06, totalling R37.9 billion (29.1 percent).

### **By payment category**

The requirement for monthly VAT payments applies primarily to larger vendors with taxable supplies (turnover) in excess of R30 million per year.

Around 90 percent of vendors submit returns on a bi-monthly basis (see *table 4.2.1*). *Tables 4.2.2 to 4.2.5* provide a breakdown of the various sectors' payments and refunds for the different payment periods.

### **By type of enterprise**

Corporations (companies and close corporations) formed the bulk of VAT vendors in 2005/06 (66.3 percent in 2005/06), followed by individuals – sole proprietors (23.9 percent). Corporations accounted for 89.3 percent of gross domestic VAT collections. (See *table 4.3.1*.)

## **■ Turnover**

For 2006/07, 47.1 percent of VAT vendors registered voluntarily; this means they had an annual turnover of less than R300 000. About 67 percent of VAT vendors had a turnover of R1 million or less, accounting for 1.6 percent of net domestic VAT collections. The top 5 percent of VAT vendors had an annual turnover in excess of R14 million and accounted for 73 percent of the total net domestic VAT collections. It should be noted that less than 1 percent of vendors had an annual turnover greater than R100 million and this category accounted for 44 percent of the net domestic VAT collections. (See *table 4.4.1*.)

### **Current VAT concessions**

Based on the 2005/06 Income and Expenditure Survey (IES)<sup>2</sup> the poorest 10 percent of households spend on average 34.9 percent of their income on food, beverages and tobacco as opposed to 8 percent for the top 10 percent of high-income households. (See *table 4.5.1*.) The zero-rating of 19 basic foodstuffs and illuminating paraffin was intended to alleviate the impact of VAT on the poor. The basic food items are: brown bread, maize meal, samp, mealie rice, dried mealies, dried beans, lentils, pilchards, milk powder, dairy powder blend, rice, fresh vegetables, fresh fruit, vegetable oil, milk, cultured milk, brown wheaten meal, eggs, legumes and pulses<sup>3</sup>.

- *Bread and cereals* account for 27.8 percent of the poorest 10 percent of household expenditure on food, beverages and tobacco. The corresponding figure for the top 10 percent of households is 10 percent and 18.9 percent for all households. (See *table 4.5.2*.)
- *Meat* accounts for 19.8 percent of the poorest 10 percent of household expenditure on food, beverages and tobacco. The corresponding figure for the top 10 percent of households is 21.3 percent and 22.8 percent for all households.
- *Vegetables* account for 11.7 percent of the poorest 10 percent of household expenditure on food, beverages and tobacco. The corresponding figure for the top 10 percent of households is 7.5 percent and 9 percent for all households.
- *Milk, cheese and eggs* account for 8 percent of the poorest 10 percent of household expenditure on food, beverages and tobacco. The corresponding figure for the top 10 percent of households is 10 percent and 9 percent for all households.

2. Statistics South Africa.

3. Value-Added Tax Act (1991), Schedule 2, Part B.

While the VAT zero-rating of basic foodstuffs (and paraffin) is targeted to assist the poor, higher income households also benefit from these concessions. As the non-poor spend significantly more on food, high income households receive greater VAT relief in rand terms. The Katz Commission found that the highest income households benefit approximately six times more in monetary terms than the poorest households. The zero-rating reduces the VAT burden of the poorest households by about 18 percent, compared to a 6 percent reduction for the highest income groups. However, of the total estimated revenue forgone due to the zero-rating, only about a third benefits households in the bottom half of the income distribution<sup>4</sup>.

### **Impact of VAT zero-ratings**

Further, empirical evidence based on household spending patterns suggests that existing VAT zero-ratings and exemptions, almost in all cases, confer substantially more benefits on higher income than on lower income groups. There are very few concessionary items where the absolute spending by lower income expenditure groups exceeds that of higher income expenditure groups. This is particularly true of some “basic foodstuff” items where the share of expenditure by the low income expenditure quintiles is relatively low, given the pattern of income inequality in South Africa<sup>5</sup>.

Table 4.5.3 indicates that the bottom 50 percent of households based on income, account for only 31.9 percent of the total expenditure on food, beverages and tobacco. The top 20 percent of households based on income, account for 37.8 percent of total expenditure on food, beverages and tobacco.

With the exception of maize meal, bread flour and maize rice, the savings derived by higher income groups from current zero-ratings are generally substantially higher than those enjoyed by lower income groups. In absolute terms the total savings from current VAT concessions enjoyed by the high and very high expenditure groups are estimated to have exceeded that accruing to the very low and low expenditure groups by almost R2 825 million in 2006<sup>6</sup>. It should be noted that suppliers of maize meal and fresh milk benefit more from the current zero-rating than consumers, whereas the bulk of the zero-rating benefits in respect of rice and brown bread accrue to consumers.

### **Efficacy of VAT zero-ratings**

It needs to be noted, however, that revenue lost through zero-rating has to be made up elsewhere, most probably through a higher VAT standard rate or higher personal income taxes.

Arguments in favour of VAT zero-rating are based on the assumption that it results in lower absolute and relative prices of zero-rated goods than would have been obtained otherwise. But it is unrealistic to assume that the full benefit of zero-rating will accrue to the consumer in the form of lower prices. The extent of the price change will depend on the market structure and the relevant price elasticities of supply and demand. Even when the differential tax treatment of goods has significant immediate effects on relative prices, these effects normally diminish over time as shifts in demand from taxed goods to non-taxed substitutes tend to raise the prices of non-taxed goods. Also, a significant number of poor consumers purchase their basic necessities from informal businesses that are not VAT vendors or businesses that are subject to limited competition. This is true especially in rural areas, but also applies to urban informal settlements where consumers effectively have limited alternative sources of supply. In such cases the benefits of a VAT zero-rating are unlikely to be passed on to consumers. A prime example is paraffin, where very little of the VAT zero-rating benefit has been passed on to the poor despite the subsequent price regulation measures - the nationally prescribed maximum retail price.

### **Implications for tax compliance and administration**

Differentiated VAT rates involve an increase in compliance costs for businesses, particularly small businesses. A firm that deals in products with different rates, for example, a grocer that sells zero-rated milk along with standard rated soft drinks, has to keep separate accounts for the different rated items. International experience indicates that firms with multiple-rate outputs have up to double the compliance costs of firms with single-rate outputs<sup>7</sup>.

- 4. *Katz Commission: Interim Report of the Commission of Inquiry into certain aspects of the Tax Structure of South Africa (1994) pg 113*
- 5. *National Treasury: The VAT Treatment of Merit Goods and Services (2007) pg 115.*
- 6. *Ibid.*
- 7. *Crossen S.: VAT in South Africa: Single, Dual or Multiple Rate Structure? (1999) pg. 8.*

It is apparent that relief through VAT zero-rating assists the poor modestly in absolute rand terms, while benefiting the non-poor by substantially greater amounts. There are compelling arguments against further VAT zero-rating of goods in a context where expenditure programmes can provide effective relief from poverty and where such programmes are under-funded or not appropriately targeted.

The impact of VAT on the poor should be considered alongside other components of public expenditure and other forms of tax, most notably the income tax system which is in its design infinitely more suited to address the distributional objectives of government. Further attempts to provide relief to the poor through VAT exemptions and zero-ratings are likely to be both unsound in terms of tax policy and ineffective in terms of social policy. Instead of trying to amend and distort the VAT system, its strengths should be used to generate revenue that will enable the government to help the poor in more effective ways, such as targeted expenditure programmes in the form of social grants. This would be a more positive approach than manipulating VAT to the point where its merits as a revenue-productive, neutral tax instrument are eroded<sup>8</sup>.

## Customs/import duties

### ■ Introduction

Customs/import duties are imposed on some goods that are imported into South Africa. Import duties are imposed to protect local producers. In addition, excise duties are also imposed on selected imported goods. Excise duties are also imposed on similar goods that are produced in South Africa.

This chapter gives an overview of customs VAT, customs duty, Duty 1-2B.

### ■ Customs VAT, customs duty, Duty 1-2B (*Ad valorem* excise duties on imports)

*Table 5.1.1<sup>1</sup>* and *table 5.1.2* show the customs value of imports, customs VAT, customs/import duties and excise duties on imports by sector.

“Machinery and mechanical appliances, electrical equipment” is the category that accounts for the largest value of goods imported, followed by “mineral products” and then “vehicles, aircraft, vessels and associated transport equipment”.

Import/customs duty revenues (including specific excise duties on alcohol and tobacco products) are mostly derived from the following categories: “vehicles, aircraft, vessels and associated transport equipment”; “textiles and textile articles”; “prepared foodstuffs, beverages, spirits and vinegar”, “tobacco”; “machinery and mechanical appliances, electrical equipment”; and “footwear, headgear, umbrellas, sun-umbrellas and walking sticks”.

*Ad valorem* excise duty revenues (Duty 1-2B) are mostly derived from the “vehicles, aircraft, vessels and associated transport equipment” category and the “machinery and mechanical appliances, electrical equipment” category.

---

<sup>1</sup> Tables numbered in italics are included at the end of the chapter.

1. Duty 1 - 2B refers to the ad valorem excise duties on imports.

2. As per Bill of Entry processed and not actual revenue collected.

3. The majority of the not assigned group constitutes MDP imports.
